The Empty Quarter is Rub al-Khalie; surely you have heard all the stories about this desert occupied by Jnun (female packs of jinns) and 'Nasnaases' (a couple of hyperstition articles include passages about this desert ... also expect more information in the forthcoming post about Salat) but Rub al-Khalie is not actually empty; it is the home of the ancient Al Murrah tribe among many other tribes. Philby, the writer of this book is the second westerner who ever traveled there (forgot the first one). Although the book is full of errors about the Bedouin tribes of Rub al-Khalie but is full of geographical information, some folklore and discusses why this desert is unparalleled.

Nomads of the Nomads is the first rigorous study about Al Murrah, the largest tribe of Rub al-Khalie. Cole who lived with Al-murrahs for years (was teaching anthropology in Cairo University) explains how the intricate knowledge of the desert have inspired this tribe, they way they merged with the Saudi State, semi-sedentarized but still are the true desert nomads of the globe. Also should add possibly this sorcerous tribe is the tribe that influenced Mohammad's childhood.

Rwala is the most important tribe in Jordan and Syria; the book superbly scavenges most of the folklores in Arabian deserts, ancient poems, etc.

piet,

Done.

northanger: ROBERT MAPPLETHORPE = PATTERN RECOGNITION

piet - ah, i see. missed that one entirely.

READING THE SANDS

<http://www.trackertrail.com/tracking/readingthesands/>

The higher flights of desert-craft are as uncanny as the soarings of an Einsteinian brain.... In both cases the responsible factor would seem to be not instinct...but education. The habit, derived from generations of instruction..., of observing the material facts and applying a certain train of reasoning...can alone account for the miracles of the expert. And so in the Arabian desert the good guide is he who observes carefully, deduces accurately and remembers faithfully. --H. St. John B. Philby, *The Empty Quarter*, 1933

The Murrah, I learned, are so renowned as trackers that in Saudi Arabia today the generic word for any tracker, regardless of background, is "murriyah". Abduldadi Saleh's corps is known as Al-Mujahidi al-Muriyyah, which means, loosely, "the tracker corps." In the early days of Saudi Arabia, when King 'Abd al-'Aziz used the Murrah to help bring law and order to his new nation, he is said to have remarked, "We have the telegraph overhead and the trackers on the ground." By the time the king died in 1953, nearly every police, frontier and administrative station had a tracker posted to it—more often than not, it was one of the Murrah. Historically the Murrah are counted among the 20 leading Bedouin tribes of the Arabian Peninsula. They range with their camel herds over a territory of gravel plains and sand dunes that is larger than France, and that is also one of the least hospitable, most sparsely populated regions on Earth. Ceaselessly using the acute observation skills and faultless memory that survival requires, they have for centuries navigated their families and herds with pinpoint precision over nearly featureless terrain by day and night.

thank you reza -

AQ 164 = AL MURRAH = ASIAN PEACE = ENCRYPT = ICE BURNT

AQ 276 = COUNTER-COINAGE = LINES OF DESCENT

AQ 315 = THE TRACKER CORPS = NUMBER POLARITY

AQ 185 = MURRIYAH = PLANAR GATE

AQ 401 = AL-MUJAHIDI AL-MURIYYAH = ARTIFICIAL INTELLIGENCE

Nick Land: Think this (St. John B.) Philby may be related to the soviet spy Philby - Tim Powers has a strange (quite excellent) novel about it

u/c: my reading list is already biunivocally correspondent with the whole natural numbers, thanks for this ;)

thistle: OT, but what isn't these days? Sorry to post this here, but of interest to anyone taking the position that number has absolutely aggressively installed itself as the underpinning of reality (I'm not saying that quite correctly):

<http://www.maths.ex.ac.uk/~mwatkins/zeta/surprising.htm>

Better yet:

<http://www.maths.ex.ac.uk/~mwatkins/isoc/index.htm>

u/c: seems very O(n)Topic to me, anyway...looks amazing, thanks!

...and there's something for everyone here:

"Bernard Julia of the Laboratoire de Physique Théorique de l' Ecole Normale Supérieure in Paris has reinterpreted the (pure mathematical) Riemann zeta function as a (thermodynamic) partition function by defining an abstract numerical 'gas' using the prime numbers (JJJ)."

abstract numerical gas !....swoon!

Nick Land: Hi folks - major communication collapse here. My modem (at home) has decided to explode (or whatever) just in time for the Spring Festival break - don't know how long it's going to take to get back online - just about to post a paganism piece, so i guess it's revenge of YHVH

Shit.

u/c - as to your last message - swoon indeed. Wish there was some way i could convince myself i could get my head around it with enough effort - anyone have a smooth entry route into Zeta-functions?

u/c: Well, I'm going to make an effort with at least some of this one - it seems head and shoulders above the usual run of incoherent mad-scientist-learns-HTML sites (but maybe I'm just being duped by the relatively calm design sensibility...)

piet: smooth isn't the word with these crumblecrush krach mach models; crikey, how would you express continental shift, drift and sudden equilibrium punctuations other than crusty? Granted most tectonic subductions that feed seafloor into the heaters below are smooth and not drawing much attention to themselves . . .

Well, I happen to have seen a silly animation yesterday: shocking.com/~trinity/flashback.swf if you are a kaleidoscope freak this loooooong hippy flash is for you; 9 comments where I found the link futurehi.net/cgi-bin/mt-comments.cgi?entry_id=567 caution advisory, this is a hedweb (pharm) admirin' site

<http://www.imathination.net/imathination.htm>

The Zetatomic Helix Challenge has begun! - Follow the clues and visualizations, figure out what the hell I'm talking about, and win a prize! Otherwise, please check back in the future for the math behind the animations, to be posted at the conclusion of the challenge.

http://www.imathination.net/ss_s_introduction.htm

a pox on conehead kabouterisms that seem to make no other diff between smooth and choppy than in terms of bitframes --- as my most recent . . .eh bitacquaintance Cheney puts it in a letter to a Hartford paper editor: "I don't want numbers about numbers. I want numbers about people. I want to turn on the TV news and hear about today's variation in the average number of children in Connecticut classrooms. I want to know what percent of sixth-graders can, today, find Iraq on a map. I want to know this week's high school drop-out total. I'd like to see totals comparing East Hartford, Westport, and Norwich." - <http://users.adelphia.net/~gcheney/letters.htm>

http://www.imathination.net/_dz1_x_1-177_r_1_2_8f_clean_big.htm I like this one: shades of the Rodney Collin book cover that was a breakthrough screw for Dan Winter

Tachi: Reza - great stuff. Any way we can maintain an updatable list - or lists - on the site, to which contributors can add? This would be good for many subjects. They

could of course be edited as they grow. Thinking it would be one way of genuinely facilitating multiplicity.

maetl: *anyone have a smooth entry route into Zeta-functions?*

<http://plus.maths.org/issue28/features/sautoy/>

Reza Negarestani: Tachi,

Any way we can maintain an updatable list - or lists - on the site, to which contributors can add?

Apologies for the delay ... yes, why not? If you have a list please send it in. think del.icio.us is also useful for this job (btw, the sub-grouping problem was solved with all tags, categories, etc ... will put the link to the Hyperstition's real-time archive on the sidebar soon)

maetl

<http://plus.maths.org/issue28/features/sautoy/>

thanks very much; see Automatic Ontology...in 3D! AT Undercurrent (<http://blog.urbanomic.com/dread/>)

u/c: This page also has a really nice animation showing the Zeta at work:

<http://www.maths.ex.ac.uk/~mwatkins/zeta/encoding1.htm>

Reza Negarestani: u/c,

Thank you. Well, the animations look cool but it takes me time to figure them out; think these formulae, diagrams and numbers should be followed rigorously or will turn into something like fractalmania of the 80s and 90s.

u/c: hehe - yes, as I said elsewhere, pretty ironic that the neo-hippies love the 'look' of these abysmal numoscapes!

Think the very general principle of zeta is quite easy to understand, but will report back if I manage to make 'sense' of the abstract-numerical-cloud idea. This should be a GAS ;)

Weird how everything's gone quiet over here...seemed to be building to a manic crescendo just a couple of weeks ago....these are the engineering problems of plateau-building I suppose...

Reza Negarestani: u/c,

LOL ...Yes, I've already got the principle (have a mathematician friend who is a worm for this kind of stuff) but as you mentioned this cloud idea is a bit obscure. As you know I love the G word, so can't resist these neo-hippie temptations.

strange, every year at this time, blogs I read go into some kind of post-catatonic exhaustion: Nick's command center is on fire (if not already evaporated); think he will get himself a new modem this week; I'm also v. busy for a few weeks, but will try to participate in discussions and update some of previous posts. This upcoming real-time archive gives us the opportunity to update articles; personally, I'm going to update the Takfiri piece (+ chronopolitics I, Pazuzu and Machines are digging).

By the way, my next post will be a long answer to your article on faciality; am trying to find a way to smooth all jagged complexities as I guess it will become another incomprehensible 'Pestis Solidus'.

u/c: well, I'm stuck inside while 100mph winds and rain fly around the desolate xeroscape outside, so I've got too much time on my hands (as if you couldn't tell ;) but winter here can wield a powerful depressive influence so I guess that's what UK and other northern hemisphere bloggers might be suffering from.

Nick is entering the year of the rooster today, so maybe he needs a wake-up call.

Nick Land: Apologies to everyone for (enforced) absence - been buried in a shit-storm of technological meltdown, New Year shutdown and generalized aggravation - at least I should be able to comment now I've got the office connection back.

Reza Negarestani: Hey, welcome back Col. ;)

Nick Land: Reza - latest report from technohell - goddam computer going to be under the knife for several days (3-4?) so still going to be restricted to peripheral agitation from the comment boxes for best part of the week (if lucky, which given recent frickin saga i'm not counting on)

Reza Negarestani: Sorry to hear that ... no problem, don't worry, i have to be away from hyperstition agitations too (for a short time). any single clue what has happened to your machine?

Nick Land: Software crunch, D-drive dysfunction, probably motherboard problems ... it's a goddam mess

February 2005

Megalithic Astropunk

mark k-p (February 06, 2005)

'Levi-Strauss says he was most influenced by Freud and Marx - and geology....' - Anthony Wilden, *System and Structure: Essays in Communication and Exchange*

While it's not quite true that esoterism is opposed to hyperstitional practice, it remains the case that the esoteric at best awaits a hyperstitional carrier and at worst is actually inhibitive of hyperstitional propagation.

Need it be reiterated that hyperstition is to be located, not in the deliberately inaccessible territory of hermetic pondering, but in pulp? Far from being reducible to the popular, or worse still, the populist, pulp is essentially propagative. It lurks and spreads in the paradoxical spaces – dark but lurid, mass marketed but intensely intellectual - beyond the gaze of the media big Other and its ruthlessly imposed pop-ontology of 'commonsense'. Such spaces are rare to the point of near extinction in the hyperbright, hypervisibile malls of contemporary postmodern entertainment culture, where everything is not only known but knowing.

Britain in the seventies, however, teemed with pulp. From New English Library paperbacks, to the last garish productions of Hammer studios, to the nascent market in video nasties, to children's television, the combination of eastern-bloc-like cultural austerity, Glam, speed, the fag end of psychedelia and a still surviving rag-tag labyrinths of non-franchised book and magazine emporia were a fertile breeding and feeding ground for pulp production.

So, to children's television, and HTV West's 1977 production, *Children of the Stones*.

The thing that children who saw the serial when it was first broadcast are liable to retain most powerfully in their spinal cord body memory is the music: harrowing atonal chants reminiscent of Penderecki and Ligetti which made the looming close-ups of megaliths scream with millennia-old panic. Like the young viewers of *Dr Who*, the audience of *Children of the Stones* was infected by sounds far more disturbing and deranged than anything rock has ever come up with.

The serial was filmed in the parchingly hot drought summer of 1976 in Avebury, Wiltshire, which might have seemed a world away from the first flarings of punk in

London. In fact, *Children of the Stones* goes alongside what is best in punk in its (literal) strato-analysis of the libidinal-material nature of power .

Children of the Stones is about Petros, the black hole vampire-god of disintensification and intensive death, whose hunger for star-energy is similarly diagrammed in Burroughs' *Nova Trilogy*.

Children of the Stones belongs to a micro-genre connecting two British seventies' obsessions, stone circles and outer space, that might be called megalithic astropunk. The other major work in this field is Nigel Kneale's *Quatermass* swansong.

The serial opens by (presumably self-consciously) echoing *Invasion of the Body Snatchers*, *Children of the Damned*, *Quatermass II*, *The Wicker Man* and *The Stepford Wives*, inducting its two lead characters , astrophysicist Adam Brake and his son, Matthew, into a near-closed community of 'happy' people. One of the great services such fictions provided was to make its young viewers intensely suspicious both of 'happiness' as an emotional state and of those who proffer it as a libidinal-political goal.

In the case of *Children of the Stones*, the Grand Inquisitor Utilitarian-priest is Hendrick, the unctuous-charming Lord of the Manor. It is no surprise at all to learn that Hendrick, a semi-retired astrophysicist who has discovered a supernova, turns out also to be a white magician: a magus, as Adam describes him as the series comes to a close. Like many pulp master villains, Hendrick is not straightforwardly a malevolent monster, but a beamingly altruistic administrator of the pleasure principle, a manager of the hedonic calculus, even as he is an agent of (Burroughs) control. The price of such 'happiness' – a state of cored-out, cheery Pod people affectlessness – is sacrifice of all autonomy.

Are we being asked, then, to side with human consciousness against the alien unconscious? Isn't, after all, freedom from the passions a Spinozist goal? Yes, but freedom from sad passions is not the end of the story if it is at the price of a 'happy' passivity, a blank-eyed disengagement from all Outsides, as all (your) energy is sucked up by the ultimate interiority, the time-space implosion of *Nova*.

Under such pressure, you become a stone.

You become petrified. (Even when you are happy.)

Children of the Stones is also self-consciously a mediation on mythic structure. The circle that encloses the village (called Milbury in the serial) is made up of 55 stones. There are fifty-three people living in the village before Adam and Matthew arrive. Hendrick doubles the Neolithic seer who bore witness to the death of the star with which the stone circle is aligned.

To be in the village is to assume a role in an aeonic structure. As Matthew observes at the very end of the last episode, Time is itself a kind of circle. Matthew and his father's flight from the not quite closed circle is in its own way an integral part of the cybernetics of the Petros-machine as is the other villagers submission to it. Control needs something to control, no circuit can function without an Outside, no circle is ever completely closed.

Petros needs you.

Gog-magog: the London and Marvel connexuses

Mark k-p (February 13, 2005)

[Editor's Note: The post is exclusively pictures that can't be reproduced here. The pictures are of carnivalesque figures in a parade and comics.]

Comments: Gog-magog: the London and Marvel connexuses

Reza Negarestani: while i'm writing something about faciality, i thought you might be interested in this: See the first picture (fig. 31):

<http://www.uihealthcare.com/depts/medmuseum/galleryexhibits/artthatheals/13gaze.html>

Compare the role of line-borders around the eyes (based on the role of the Khattakite dam between Gog and Magog) -- which turn them into Possessing Gaze-machines -- in these scrolls and Deleuze-Guattari's discussion about terrestrial signifying despotic face and proliferation of eyes by multiplication of borders.

ps. those who would like to follow Mark's reference to Marvel comics, check Gog-Magog at The Unofficial Handbook of the Marvel Universe (<http://www.marvunapp.com/>) Always wondering how these mythoi engineer such fascinating anomalies in British / American comics.

also check this thread at chaosium archive (an occult guide to London):

<http://pages.prodigy.net/gobackstage/chaos-digest/chaos-digest-v11n10.txt>

Tachi: Good to see you back Mark, and the site definitely benefits from your illustrative touch.

Reza Negarestani: Hey Tachi, Good to see you back too; Nick and I will try to get this real-time archive off the ground soon. we are also working on the rest of your suggestions as well (intro, background info, etc.) ... by the way, i've signed up another del.icio.us feed for textual materials on different topics, so send me your suggested reading list(s).

willow: anyone know what it means?

Nick Land: Since K-P doesn't tolerate responses, this is a precious chance to fisk the Hollow Men Jesus-rant.

"Nietzsche: "'Real are we entirely, and without belief or superstition.' Thus you stick out your chests - but alas, they are hollow!'"

So we need belief and superstition? That's hyperstition removed from the equation from the start (not that Nietzsche's quote has anything like this implication).

"Is there anything more tedious than attacks on religion in general and christianity specifically?"

'Tedious' - yawn. 'Is there anything more tedious than defences of religion, especially Christianity?' Equally plausible, equally vacuous. Next.

"One of the most refreshing aspects of Zizek and Badiou is their unashamed reclamation of aspects of the Christian legacy."

'Refreshing' - umm, like 'tedious' - random subjective judgement. Next.

"... Christianity, as Zizek says, is too important to be left to the 'Christians'."

Fair enough, as Satanists, agitated atheists, and just about everyone else whose been screwed over by this toxic shit would agree.

"... The bleakest libidinal position of all, the attitude Nietzsche most abominated and feared, was that of perpetual critique, as practised by the Last Man. The 'Last Man'

was the European at the end of history, listlessly watching 'the reel as it comes to a close', 'liberated' from the 'illusions' of any particular cultural group, and so free to choose the 'best' from all of them: a bit of zen buddishm [sic] here, a dash of steppes shamanism there, seasoned with some kabballah to taste."

This is where things really get morbid. Anyone unbound from a parochial tradition (leaving aside the extreme improbability of such a condition, given the ruinous tenacity of enculturation) finds themselves in the 'bleakest libidinal position of all' - excessively free, no longer coded and territorialized, cut off from the nourishing prejudices of their natality - this conservative refrain can be found everywhere that technocapitalist decoding is disdained, whether right and left, as the resilient battle-cry of pure reaction.

This is the petulant sob of a little European who doesn't want to imagine anything else is possible, a purely formal embrace of the historical and geographical accident of birth just because they are 'mine', a deliberate affirmation of prejudice and cultural chauvinism, eyes shut, ears blocked, nothing to learn except what the ancestors taught. Block out the world, it might communicate something new and turn me into a deracinated cosmopolitan ...

Rhetorically it places itself among the new reactionaries of the christoanalytical left due to its fundamental anticommern.i.a.l.i.s.m. What it hates above all is the possibility of 'shopping around' for religion - freedom, diversity, affect, flatness and cosmopolitanism, as opposed in every respect to the servility, monotony, sentiment, verticality and parochialism of a revived priestcraft (cast in the pitiful mode of a 'sophisticated' resignation to cultural fatality).

Paganism - which no one devastated by the monotheistic catastrophe can ever truly reach - is of course more 'traditional' than the upstart usurper faith that now claims to monopolize 'our' cultural references, but leave that aside. This paganism is an offense precisely because it is not a slave cult, because its mode of religious engagement is immediate and horizontal, based on traffick and communication (even 'shopping around') not abasement before authority. Paganism delivers direct encounters with the sacred rather than 'faith' transmitted by priestly authorities. It intrinsically complies with untotaled diversity (every people has its gods, try what works, try to be polite to them all) rather than the 'endogenization' of polytheism or 'jealous' intolerance and fanaticism of monotheism. There are a million reasons to celebrate paganism so: 'More on this soon'.

"[F]ree to choose" - we really can't have that! This is the Alpha and Omega of the reactionary case (left/right, categories implode) - fear and hatred of freedom.

"Yet what remained uncritiqued in this allegedly hyper-discriminating, hyper-critical stance was the position of the chooser, he who critiques. Who or what is this individual? Why, Oedipus, at last, of course, and, as Deleuze-Guattari point out in *Anti-Oedipus*, the simperson of Oedipus is our equivalent of primitive tanoos [sic] and despotic icons. Oedipus, who believes in nothing but his own subject position, the empty formal space of he who does not believe."

The crux of the argument - if you're free you're Oedipus (and D&G told us that's really bad, right?). Stop believing and you only believe in yourself. Dissociate from parochial chauvinism and you become 'an empty formal space.' Embrace your prejudices and servility, then at least you're an authentic slave.

There's so much rotten here it's difficult to know where to start.

The easy part is that it's all so unbelievably familiar, resonating with a vast archive of reaction including every conservative thinker of whatever stripe since the dawn of modernity at least - with Catholic intellectuals especially representative of the breed (Lacan, Žižek, Negri among them).

1) What has the individual to do with any of this? Critique proceeds from complexes of affect, semiotic materials and discourses, bioneurological systems, demonic influences ... none of which arise from 'the individual'. Even the most emphatically 'individualist' critique of the slave cults (Ayn Rand?) draws its resources from canonical principles or argumentation that have no genetic or logical dependence on the decoded individual subject (a 'simperson' of course, and we know how much conservatives hate artificiality).

2) "Oedipus ... of course" - if this was deliberate parody it would be hilarious. Start reading enough *Christoanalysis* and suddenly Oedipus is everywhere (didn't D&G tell us that?). People shopping around rather than listening to their priest - Oedipus. Deracinated cosmopolitans disdaining the prejudices of their tribe - Oedipus. Trouble-makers getting off the couch / leaving the confessional - Oedipus. Anglobalizing decoding of the planetary commercium - Oedipus, Oedipus, Oedipus (please make it stop!).

3) "[H]e who does not believe" - back to the belief shtick, as if 'unbelief' were such an easy thing to achieve ('hang onto your parochial traditions real tight, otherwise you'll

be catapulted straight into naked Oedipus'). But then it's not really 'belief' in any generic or philosophically interesting sense that's at stake here - the kind Pyrrho engaged with - it's big-B Belief, Faith, Jesus Love, Old Time Religion, with CR adopting its now standard role as pushing decaying priest toxins on anyone who'll listen (while shutting down response because authoritarian monologue is pretty much the whole point of such preaching, and always has been).

"Nietzsche made two major errors in relation to Christianity though. The first was the one identified by John Gray ..."

John Gray!!! OK, carry on ...

"... in Straw Dogs. Unlike Schopenhauer, who rejected Christianity in the name of what were in effect other religious positions - Buddhism and Hinduism - Nietzsche, a little like the pantoGoth God-baiters of today, protested rather too much about his anti-Christianity and his rejection of religion. Nietzsche was the inheritor of Christianity because he believed in History as Progress. It would be the Anti-Christ ubermensch who would emerge as the redeemer."

So Nietzsche was still ensnared in Christianity, which I'm sure would have surprised him (sarcasm off).

"The second was his flattening out of Christianity into One thing. The 'ascetic ideal', the miserable devotion to 'self-mutilation' is no doubt an aspect of what has been called Christianity. But from the very start, in the conflict between Peter and Paul, between them and the Gnostics, Christ's legacy has been a site of struggle."

Just so long as we keep it in the family.

There's more, but it doesn't add anything.

Anyway, typical slave cult stuff. Not content with it's own cramped servility, it has to lash out at anything that threatens to escape, while attempting to technologically entrench the monological mode to forestall retaliation.

If you like snarky preaching, rooted in mainstream European conservatism and its complacent cultural chauvinism, you'll love CR.

But 'K-Punk'? Maybe a name change is in order.

Reza Negarestani: Nick,

All I need is a broader path to damnation.

As I discussed here, over at cold me and even at Dread, I think monotheism should be stormed from all sides. From within: the process has already begun and with the heresy-industry of Islam (already producing surplus value) developed and escalated through War on Terror and along the Gog-Magog Axis, Islam has entered a new phase in which heresy / apostasy have become inseparable and indistinguishable from the 'Islamic Fundamental Dimensions (Pillars?)' as Ibn Maymun predicted (what happens at this side of panorama – emergence of the Thing from within – I think cannot be so pleasant for anthropomorphic entities; it is slow, messy, complex and with too many diversions along the path and always an excessive amount of collateral damage ... Z.crowd needed a guarantee for the relentless eradication of salvation, of any kind).

From the outside: I have been thinking about this for many years, how is it possible to engineer, develop or at least participate with a type of paganism that evades appropriation, cuts through all modes of pacification and never ceases to agitate? Think this might be a crucial question at this point that some truly hideous strains of monotheism (enveloped in heat-resistant, hardened, militantly improved but seemingly harmless spores i.e. the Cult of the Lamb, heavily Christian Buddhism, etc.) are going to spread over pagan continents. What happens here takes another path which leads to the victimologic core of monotheism soaked in organic cowardliness, self-promoting survival economy and necrocracy, something that doesn't emerge from the foul body of monotheism that Z.crowd fermented to eat itself from within and 'overlap' the infernomatic insurgency of Tellurian-Omega over the Desert-monopoly of God. So how is it possible to come up with a mutant (counter)insurgent Pagan crowd resisting pacification? Has it something to do with politico-economic dimensions, ways of participation or communicating with (Un)Life?

Nick Land: R - in full agreement on the two-pronged strategy, which needs vigorous thrashing through in respect to Gog-Magog.

There are many ways this could be configured, but my preferred version right now (mapping West/Jay?) is raw technomic decoding vs furiously uncompromising jihadi upsurge. In this respect, Xtianity and Oecumenic turn-the-other-cheek slave-cultism just gums up the machine.

excrasez l'infame

Paganism is mostly just heaps of intriguing corpses these days, probably not worth getting too excited about (vudu might have an interesting walk on part somewhere down the tracks)

PS. 'endogenization' of polytheism remark response to your 'Hindu bureaucracy' comment - triggered the realization that culturally infolded paganism does indeed adopt a 'bureaucratic' interphase - between true dispersal and consolidated theocracy

mark k-p: I like 'responses', but this hardly constitutes a response. The reason why I stopped comments is that the facility is abused by unthinking kneejerk trolls. The position I have developed precisely has emerged from discussion with others, engagement with the world. Simply wandering around the globe confirming your own oedipal phantasms is not 'engaging with the world'.

And quite honestly, if this is the best you can do, I suggest you give up. It's the same boring position that you've been pushing for years, Nick. If anything is the 'sob of a European', it is this. Anti-Christianity is the very mark of the European smugness. There are different types of Christianity - there is such a thing as liberation theology, for instance; Christianity is the fastest growing religion in Africa. I don't know how you square this with your caricature of Christianity as a slave cult.

As for Satanists, please. Now their 'rights' are protected by law, surely even you must give up the embarrassing pretence that there is anything extreme about them. Satanism = selfishness and carnality. How radical.

Lacan a conservative? Could you explain what is conservative about Lacan? Perhaps you could explain how your theory of shopping is more radical than Lacan's theory of the always-already dead god?

You need to keep up, Nick. The whole point of Badiou and Žižek's take on Christianity is that their Christianity is a break from organic community, an unplugging. 'Anyone who does not hate their father and mother cannot come to me.' That is what Badiou's St Paul is about: breaking out of narrow ethnicity, but in the name of collectivity, not in the name of shopping.

How do the Gnostics fit it into your picture of Christianity as a slave cult?

Your definition of freedom is beyond crass, but revelatory. The freedom to shop around. LOL. It's capitalist ideology, increasingly threadbare. Polytheism as one big store to wander around. But who is it who shops if not Oedipus?

How does Spinoza - the ultimate monotheist in many ways - fit into your picture? Not at all, of course. For many reasons, but mainly because his notion of freedom couldn't be further from your adolescent *laissez faire* liberalism.

What's punk about shopping, tourism and support for the dying US superpower Nick? Perhaps you could explain how your supine surrendering of all reason in the face of Bush's fundamentalist Christian regime is 'punk'?

The only way to explain either is Oedipalism. It is some Oedipal desire to revolt against Dead Fathers (the old academic Left, which now exists only in your fantasms; Jahweh and his authoritarian dupes, which yes, are still powerful but have little to do with anything but the type of 'Christianity' you like - i.e. might is right US fundamentalism. What could be more like Jahweh than the US's idiotic war on Terror?)

btw, I left comments open on this in the hope of discussing gog-magog, not to invite irrelevant trollism and ppl bringing agendas from other sites. But I've learned my lesson now.

For those interested in gog-magog rather than resentment, you can click on some of the images for links.

Raven: What exactly would constitute a response, then? A fawning panegyric? Who is the 'kneejerk troll' here? Parodying nick's post as a 'defence of satanism' when the one mention of satanism is a mention within a litany of those who have an aggressive 'interest' in christianity that is not revivalist (against your apparent suggestion that any aggression against christianity is merely an 'oedipal' reversal of the rationally-valid decision to submit to christ)? Most of the rest is just an ad hominem attack of the type you profess to deplore.

True, there is liberation theology, but surely liberation from theology is the ultimate goal? Why valorize and fetishise the means to an end, even going so far as to transcendently rule out such a vulgarly 'mechanistic' reading of the role of religion in favour of a reinvigoration of absolutist belief? What's wrong with treating religions like products or services rather than transcendent truths - What about Vudu and its

'shopping around' for gods=rhythms=traits - has this CCRU staple been discarded now in favour of 'God is love'?

Your glib dismissal of the globally intricated machine of capitalism as 'shopping' speaks volumes about the basic imbecility and futile ineffectuality of the CR 'position': as usual, you're not doing yourself any favours...

it is hard to see how we can understand zizek/badiou's use of christianity as any less of a cynical, arbitrary, opportunistic 'usage' of christianity than any other theoretico-consumer choice UNLESS we subscribe to some sort of transcendent principle of spiritual heredity by virtue of natality or national-belonging (it's MINE or rather I'm ITS), and believe that somehow they have, and are offering us, proper access to community with this historico-religious spirit. In which case we're back with the Ahnenerbe, or any number of like-minded and ridiculous outfits. Although, maybe this would fit with KP's haughty disdain for anything from beyond the confines of golden-age-of-england TV reruns and the ICA bookshop despite his claim to have 'engaged with the world' in some fashion more profound than mere vulgar travelling.

willow: terrific post nick. but you have to ask, why would anyone take kp seriously in the first place? he's just desperately taking on the style of zizek, badiou etc, like some teenager. oh look it's really radical to believe in boredom! it's the new thing. more on seventies tv programmes soon..

great post nick!

Nick Land: mark k-p -

"There are different types of Christianity - there is such a thing as liberation theology, for instance" - Xtian lies plus soc.ialist lies, wonderful.

"Could you explain what is conservative about Lacan?" - a new confessional for bourgeois sophisticates plus psychoanalytical mystification / second-coming of anti-market totalitarian politics

"The whole point of Badiou and Zizek's take on Christianity is that their xianity it is a break from organic community" - hence their fondness for radical Maoism? betray your family to the secret police and enter the kingdom of heaven. For anyone with any understanding of what this soc.ialist hell did to China (30 million + dead), Badiou's oh-so-eurocool attack on Deng and defence of the cultural revolution is beyond disgusting.

"Spinoza - the ultimate monotheist in many ways" - IMHO this is beyond ridiculous. Look at the reception of Spinoza (who introduced critical scientific methods to the study of religion) - violently anathematized by the Dutch Jews, then treated as a dangerous pantheist/atheist for at least a century

"adolescent *laissez [sic] faire* liberalism" - excepting the subjuvenile (but so K-P) 'adolescent' that's a fine starting point. Both '*laissez faire*' and 'liberalism' [in its european sense] mean freedom, but then i haven't been born again as a totalitarian socialist.

"your supine surrendering of all reason in the face of Bush's fundamentalist Christian regime" - this could actually be an interesting point with a bit of work. How exactly am I in any position to 'surrender' whether 'supine' or otherwise since I'm not an American, I don't have a vote, and I'm not in a WWIV conflict zone? Isn't the fact I'm still refusing the miraculous appeal of happy-clappy religion precisely a refusal to 'surrender'? But there's an interesting pattern to CCRU fission here - I'll take the tax-cuts and regime changes, you can have the conservatism and born again religion.

"the old academic Left, which now exists only in your fantasms" - surely you jest! Guess academics are mostly '*laissez faire* [Manchester] liberals' these days.

"ppl bringing agendas from other sites" - so you do all your snarky atheist bashing at K-P behind your ROM defences, then come over here for some 1970s UK pop parochialism?

"For those interested in gog-magog rather than resentment [sic], you can click on some of the images for links" - those interested in resentment can head over to K-Punk, but you won't be allowed to discuss it.

Raven - great comments, this question especially:

"What about Vudu and its 'shopping around' for gods=rhythms=traits - has this CCRU staple been discarded now in favour of 'God is love'?" has been pre-occupying me too.

Willow - "why would anyone take kp seriously in the first place?" - amazingly, given the 'everything you love i hate, everything you hate i love' dynamic between us right now, i still respect roughly 50% of the K-Punk posts, and also know what KP was capable of before christonalytic socialism overwhelmed his appreciation of freedom

willow: but nick, he's so sloppy! he's soooo grab this and that from the net - no wonder he likes the idea of not being a person, perhaps what he really wants is to not have to fact up to how mediocre he is, and how unlikely it is that he would ever be published outside of this vast vanity publisher

Axiomatik: I'm sorry to say it, Nick, but Mark is right here: how could you think that your idiotic, Oedipalizing trolling constituted a *response*? I mean, you didn't even *agree* with him!! He's fairly obviously right about another thing, too: you really do need to "keep up" with what's happening. Nietzscheanism is so tired by now it's asleep; it's so old it's dead. Nobody's reading that stuff anymore. Frankly, it's kind of embarrassing that you're so behind the times that you didn't know this. In case you hadn't noticed, critique is old school; dogmatism is the shit again now. And again, you must admit that Mark is right: you haven't changed your position beyond all recognition for years now; isn't it time for you to get some new gear? You're just not ... protean enough, frankly. I mean, don't you follow even follow Parisian fashion? Don't you know that Badiou is the dernier cri of French philosophical haute couture right now? Sorry if it hurts you to hear this, Nick, but to be honest you're so ... 1991!

Anyway, the good news is that it's probably not too late for you just yet: after all, Mark hadn't read any Badiou until a few months ago, and now he's a veritable Badiou-propagandist and panegyrist. Back in August on his blog he admitted that he hadn't read any Badiou and that he was reluctant to because he didn't think that Badiou's use of traditional metaphysical terms like 'rationalism' and 'truth' was very hip. But now look at him! He moved with the times, man, and he already has a 'Cold Rationalist' clothing line up and running and everything! Hadn't you better do the same? I mean, it's not as if you actually have to *read* a whole lot of Badiou, much less understand it -- again, Mark has read almost nothing, but at least he knows where it's at!

Nick Land: Willow - It's difficult on the web, I know, but still hoping to keep on topic (Christian revivalism in high-theoretical garb) rather than promoting a KP hate-fest - naive as that may sound

Axiomatik - Was I 'being' Nietzschean? Only out of ignorance and by accident, I assure you ...

On the '1991' fashion awards point - I'd been assuming that the 'collective' hyperstitiational turn coinciding roughly with the transition of Millennia was the key time ref.

IMHO one of the principle areas of Hyperstitional application is the monotheistic conveyor belt, with it's inherent apocalypticism (right back to the 'Z-Crowd') and tendency to install itself as an effective cosmic-political reality despite its essential untruth (grotesque absurdity) - that's why attempts to redeem this historical vector on the basis of its own tradition are fundamentally inconsistent with hyperstition and require vigorous resistance.

This might also explain why since KP discovered Jesus and the inner truths of the Christian tradition his involvement in hyperstition has basically short-circuited - in fact, become structurally impossible. The most hyperstitionally degenerate AOE myths (the vanishing Cryos') have been pushed even further into intellectual corruption (the reborn Christ') and then recycled as Cold Rationalist dogmas, with lots of attendant shouting

Euclid: Axiomatik: *I mean, you didn't even *agree* with him!!*

ROTFLEMAO

isn't it time for you to get some new gear?

Welcome to 2005 fashion show!

Mark has read almost nothing, but at least he knows where it's at!

In a jumbo jet flying to Calvary?

u/c: Axiematik - ROFL

"Keep it dusty"

Glenn Fuller: hehe

Badiou is such a bad deleuzian. 'Born again' Badiou-ists will be the next black.

"Both 'laissez faire' and 'liberalism' [in its european sense] mean freedom, but then i haven't been born again as a totalitarian soc.ialist."

Hmmm, a bit of a Bushism, no? 'Freedom'? I am no spectacular fan of K-Punk's Badiou/Zizek fanboyism, but I am certainly not a fan of deploying discourse that resonates with the refrain of the right-eous and the associated acts of global stupidity.

Nick Land: Glen Fuller - suit yourself. 'Laissez faire' actually a taoist term (from Laozi, 'wu wei' or 'non-action'), but my problem with W is he's too much of a socialist (US Federal Govt could be slashed by at least 30% while still cranking up WWIV to a whole new level).

On Gnosticism - PKD is great, even (especially?) Valis, but I'm in no hurry to chain myself to the ceiling (<http://www.ccrn.net/occultures/bergman1.htm>)

PS. Superb Steyn piece to upset any Kumbaya tranzis still hanging out in the hell kitchen:

(<http://www.portal.telegraph.co.uk/opinion/main.jhtml?xml=/opinion/2005/02/15/do1502.xml>)

infinite thought: Was Popper a practitioner of the dark hyper-fictional arts... Do samizdata.net have a link to hyperstition yet?

Just kidding.

But why would Kumbayas (assume a witty abbreviation for evangelical Christians) support the UN? Or are tranzis and kumbayas (not to mention kitchen staff) all just basically the same?

You know that radical non-Christian Badiou (and he really is, don't get fooled by what other blog-factions tell you) has more or less the same line as Steyn about the UN - that if you conceive of the rest of the world as pitiful victims of course you'll end up fucking them.

This is not meant to be a trollish post, btw

Nick Land: infinite thought - someone would have to be WAY oversensitive to think that was a trollish post ;)

I'd love a link from Samizdata - haven't started serious link-whoring yet - probably too many political chaotics here right now to justify a solid minarchist attachment, but i'm working on it.

'kumbayas' actually not witty abbreviation for evangelical christians (as you might have noticed, there can be a short attention span here as soon as the snarling stops for a few minutes, that conversation petered (or pauleed) out) - they're the 'give peace a chancers' (guys who haven't read anywhere near enough Hobbes)

Badiou blew it politically with me when he denounced Deng Xiaoping - i mean, that's like attacking Reagan or Thatcher, absolutely unforgivable leftist evil ...

infinite thought: *Did we not see, when after Mao's death he seized power in a bureaucratic coup d'État, how Deng unfurled, during the whole of the eighties and up to his death, a completely savage and completely corrupt sort of neo-capitalism, all the more illegitimate as it maintained the Party's despotism?*

Yeah, you and badiou definitely not reading from the same prayer-book!

But suspect he's not a kumbaya either - thanks for the clarification. But surely these people died out in the '60s? Centre-left gvts are certainly not kumbayas these days - the only people who are massively anti-war these days are the neo-nazi movements in central Europe (neither USA, nor Islam).

Nick Land: infinite thought - "the only people who are massively anti-war these days are the neo-nazi movements in central Europe (neither USA, nor Islam)" - not sure if i can bring myself to believe this, but i'm gasping in awe that it is being said ...

"surely these people died out in the '60s?" - this could be taken various ways, given ANSWER and that crowd are actually NKorea-loving Stalinists its probably right that the antiwar movement is 'just on the other side' (kind of mindless right wing slogan i'm sure you've heard before, but it still seems basically correct to me - seemed (at a distance) lots of the antiwar stuff in the UK was basically jihadism (surely i'm going too far for you now, right?)) - things typically take a long time to 'die out' (MKP has this 'dying out' theme too - and i never believe him either), that's why applied violence is usually required somewhere down the line ... (not that hippies and other daft fellow-travellers bug me particularly, as long as they're too stoned to speak and don't vote)

infinite thought: You've been away from Europe for too long! The neo-nazi anti-war movement is a strange consequence of various ideological strains, but it seems to be predicated on the conviction that nations need to maintain integrity in order to operate precisely as nations (exclusive borders, help their own first, ethnic/religious purity, that sort of thing). At the recent march on Dresden, German neo-nazis held up large white remembrance crosses baring the legends 'Vietnam', 'Iraq' and so on, indicating their opposition to US-UK-Europe attacks on other sovereign nations.....which put them in a bizarre position vis-a-vis the official 'anti-war' allied bombing remembrance ceremony being held at the same time.....

When I say that most are not as anti-war as this I mean that many uphold this common-sensical 'well, you know, we should invade if things are really bad' stance - Blair didn't get the chop after all, even if he is 'massively unpopolar'.

Erm, if 'applied violence is usually required somewhere down the line', and yet the anti-war movement was too Jihadic for you (despite it being in practice completely ineffectual and non-violent), surely you need to differentiate 'good violence' from 'bad violence'. I assume you're not condoning violence for its own sake....furthermore, aren't the Jihadists in many respects as Hobbsian as you are?

I should really proofread before I post...excuse the poor formulations, typos, etc...

<http://news.bbc.co.uk/1/hi/world/europe/4261263.stm> for picture of NDP and anti-war crosses

piet: When freedumb is too dumb to (set) free it won't last and probably already lost.

Agendada

Freeing dust is not necessarily and best not done to cause a dust up and/or places to be dusty; fresh rockdust is the best working, in the sense of longest lasting, slowest (almost imperceptible if you don't sharpen your taste and senses way above average) releasing substance (vitally important, substantial drug) for terresurficialife, it's magic, it's the instant that takes more than an instance to get going (hide inside everything alive) we just don't have a handle on dosage yet .. or anymore if you prefer the infantilized grandeur version. http://www.uoguelph.ca/~geology/rocks_for_crops Agrominerals of sub-Saharan Africa a 2002 book one can order or download as a pdf with a breakdown by country (Ghana has 4 pages of data devoted to it for instance) - -- rocks for crops p van straaten 2002 ICRAF nairobi kenya 338 pp guelph

Who says MarKeyPunkO isn't messing with my agenda (rather than vica versa)? All that goes without saying and fear of future interference has aborted many a perfect moment already, not that most of them (momentae, minute and momentous both) 'mind', not free enough to change the course of free(to be)dumb.

Did he post some petrified heros/petrifyers or is my sign of some significance (too)?

For more thought on ex- vs inclusion see northanger's post 'decrypting poetpiet' but skip the first few fault riddled and daft drafts

Let's have the Hobbesian 'haves' have at the be and have noughts.

let's organize fights where everybody wins!

Let's fight rocks, they don't fight, we can't lose and they don't either cause they don't ever even begin to fight back.

Now to nevertheless give 'm (rocks) the random chance at scoring (and us an ethic of fair fighting) we could get a quite challenging gauntlet competition with BIG prize money for the survivors.

I admit this is more challenging (not to mention costly) than drawing a comic with animated and purchaseable personifications but plastic ('action' ((robot pre))figures) and pulp are not nearly ever in the same sense personalizable (I mean, as assimilable) as rocks, (unless you really wanna go golemmodifying on us, .. heyclay tablets were first medicine in this kind of sense, only afterwards used to keep score* when storehouse((and thus supply line rhizorouser and tension))builder, wellpaid, rainbow shirt wearing, cerebropatristically disowned disowner, the elite 'joesieve' ((who had it so tough he though nothing of making things tougher on sleepy steady state peasant existence, was buried by brothers only to rise high and free)), arrived on the scene) best prefigured by good draughtsmen, my favorite is Maarten Toonder by the way.

*exclusive, yet (for check and controlsake) duplicated and .. .significantly .. .sealed for a time, memory aids. As time went on these token records and receipts were exchanged (and failing to function) in varying magnitudes, cycles and directions while the stuff I am talking about is very much a tidal thing too, feverish and frantic speed of flashcapital vs the slow work of oxides on their way to reduction and refuelization via the compost. It's you or me unless you agree to help me. Are we qlean quits now?

Nick Land: infinite thought - "surely you need to differentiate 'good violence' from 'bad violence'" - comic obviously, but this is actually really interesting stuff (certainly from this weird neck of the woods) - guess you're astute enough to realize us libertarian types have been in a state of major delirious confusion since WWIV crossed the line (we've just been more discrete about it than the soft left). Exactly this issue and everything linked to it - how do you push for knocking out rogue fascist regimes providing future WMD for international terrorist movements without buying into big-government securocracy - produces an absolutely delicious neural schizifier. Cutting to the chase, think Steyn gets this pretty much absolutely right (government always fucks up, kill fascists whenever you can, cross cost-benefit analysis on basis of strict Hobbesian realism with just a pinch of Wolfowitzean panache, scrub out all

utopianism (bye bye Badiou and co.), try to remain amused even as everything slides into hell). As for jihadis, at least they're relatively honest ...

From my PoV, antiwar movement was quite effective, putting massive brake on Anglosphere political options viz knocking out fascist regimes (e.g. common wisdom that 'of course' attacking Iran/Syria/... is out of the question given the 'quagmire' in Iraq)

This sovereign nations thing huge of course (especially here, hugely fetishized by the PRC govt) - goes back to Treaty of Westphalia (1648? - too lazy too google) and coterminous with modern international politics, so there's quite an earthquake happening (given that everyone with functioning sense organs knows unconditional state sovereignty ended with the 'Bush Doctrine')

PS. on 'fascist' my usage based on Paul Berman and Christopher Hitchens, rather than ready to hand monkey turds, but sure effect much the same

piet - "For more thought on ex- vs inclusion see northanger's post 'decrypting poetpiet' but skip the first few fault riddled and daft drafts"

ROTFLMAO

infinite thought -

PS. can't get BBC here - perhaps single greatest delight of inhabiting this country

infinite thought: Nick – Glad my 'innocent' questions amuse...

I forgot about the BBC ban. You can get it in Iran – I suspect more ammunition for your hyper-con arsenal... ;)

About your 'major delirious confusion' regarding the violence meted out by those big-government anti-market securocracies, surely you dissemble a little. If you agree with Steyn that 'government always fucks up' (and I'll take your word for it that this is his position), don't you need to ask why and in what way? Does it fuck up by killing too many civilians in un-media-friendly ways? Does it contradict itself too many times for even the least attentive of voters to get suspicious (it's about terrorism, bin Laden, er, oil, women's rights, er, freedom, er, the threat to us, to others, no, it's a point of principle, etc)?

Or don't gvts actually operate in a more systematic way than this – attempting to remain in power, protecting the interests of those it financially best serves whilst trying not to invoke too much consistent rage in its electorate..... You know as well as I do that if the US + co. want to attack Iran etc. they'll do it regardless of a bunch of whining civilians, which is why I don't think the anti-war movement has nearly as much effect on policy as you do. I suspect libertarians play up the impact of these stances in order to feel 'justified' when occupations 'succeed'.

The only considerations invading gvts have are practical (enough troops, enemy power...only in very limited terms is it anything to do with PR).

I think you have to come clean about your investment in superpower – if you really believe that the American gvt is on its way to some sort of anti-Marxist, pro-market, libertarian, withering away of the state then I suspect you run the risk of being consigned to the utopian dustbin along with Badiou (as you see it – I think it's structurally impossible for Badiou to be utopian cos he has no real conception of history, by that's by the by). If you don't then you should abhor the rather old-fashioned empire-creating of an aging behemoth like the US.

Furthermore, at the risk of sounding like a fucking liberal (I suspect it's much too late), can you really not see any role for a MAD-type scenario, or for allowing countries to have heavily-regulated nuclear industry but no weapons? Can't markets sort it out, or are there really naturally 'bad guys' and 'good guys' out there that must fight to the death in some kind of end-times scenario?

I suppose it comes down to yet another naïve question: does pro-market liberal capitalism need war? If it's so obviously the future, why can't everyone see it?

savonarola: Tickled to see that Deng Xiaoping's hypertrophic bureaucratization of China under authoritarian state capitalism can be so happily brought under the banner of laissez faire (skating gingerly over the facts of Tienanmen square, the work camps, the executions), that the touching, if a little repetitive, preoccupation with new and inhuman intensities can find a cozy home under the impeccable OFSTED heading of diversity, that Taoists can hold hands with Deleuzians in a festival of repressive desublimation and pagan inaction...

But really, Nick, either (1) your love of Das Deng is founded on a somewhat belaboured subpolitics of acceleration (in which case, Junger is far more tonic company), a kind of communist manifesto without the communism, suggesting you

quickly drop the cynical disquisitions on freedom and diversity or (2) all this Techno-Sinophilia amounts to (2a) Hegel in China = a philosophy of history that has finally shed its fantasies of the yellow peril and the AMP (Asiatic Mode of Production) and embraced world systems theory (Wallerstein et al have been preaching the great shift for some time now, and The Economist is grudgingly tuning in); (2b) Hayek on MDMA, or how to get the listless youth to cheer on structural adjustment; (2c) a gross misrepresentation of contemporary capitalism and its effects on the Chinese peasantry, urban proletariat and environment (many continuities there between the worst of Mao, Deng and today's PRC).

Since hyperstition, I gather, is not a mere apologia for wanton incoherence, and I suspect that your newfound concern for (but surely not belief in!) freedom and diversity is pretty epidermal, why not sing the praises of intensive acceleration and have done with these inept forays into liberal morality and political science?

Might it be because if we're playing qualia the jihadis and red guards are sure to beat the cosmopolitan petty-bourgeoisie any day, hands down? No pagan supplement d'ame is going to change the basic (alas, Lacanian) equation: 'no authority = little intensity'.

Nick Land: infinite thought - "I think you have to come clean about your investment in superpower" - the 'coming clean' rhetoric definitely sounds 'fucking liberal' [in US sense] ;) (you surely can't be claiming i'm dissembling in order not to offend!)

anti-utopians don't invest in anything except least worst alternatives - thing about the US, rest of the world is a reeking slum when it comes to geopolitical principles (PRC's buddies for instance, NKorea, Myanmar, Pakistan ...), so US (+ Australia) just has 'to do', because in the real world you can't denounce something without supporting something else. [Of course Bush is a bible punching socialist, but then there's John Frickin Kerry and the dilemma is immediately over]. When China or India start behaving responsibly in the international arena or the minarchist colony on Mars revolts against excessive govt, I'll switch my allegiance to them ...

non-State actors and psycho rogue states (trust Kim Jong Il anyone?) make MAD absolutely impossible except for dupes

"does pro-market liberal capitalism need war?" - wrong question IMHO, rather: does liberal capitalism always find itself immersed in wars (background Hobbesian hubbub) that force it to behave in a far more Hobbesian (fangy) fashion than its internal

principles (civilized economic transaction between rational agents) adequately prescribe? - A. Yes, or at least, assuming the opposite is irresponsible naivety.

Savonarola - think all your questions entirely pertinent, although attempts to multi-choice my possible responses rather absurd. Trying to evaluate the current PRC regime without reference to its history is another utopian error IMHO, 'progress/regress' are the basis of realistic judgement not conformity to some free-floating model of perfection. In this respect DXP probably counts as the single greatest leader in world history, whose Tiananmen screw-up looks fairly minor compared to the 30 million deaths of the Great Leap Forward and the hundreds of millions lifted out of crushing socialist poverty after the 1979 turn around. Still, your "intensive acceleration" point is fair enough, it just so happens that there's a perfect conformity between economic freedom and 'growth' (intensive acceleration) - so i feel entitled to wear my teddy-bear ears liberal humanist hat every now and again because otherwise the only person i can talk to is Vauung ... (even if moral discourse is sheer bullshit, it's still a mode of diverting interaction) - also agree the Lacan equation interesting, but too dogmatically transcendental for my tastes.

"Wanton incoherence" - at least

infinite thought, savonarola - [squirming maundering infant in my lap compromising my response to your fantastically interesting comments - will attempt more appropriate response after shortish intermission]

infinite thought: look forward - bedtime here, unfortunately, but back soon...

infinite thought -

"big-government anti-market securocracies" - this seems rather quick, or at least, the three terms need de-synthesizing at least momentarily. Security issue in all its dimensions hugely interesting IMHO (planning a post on it, so won't address it much right now). 'Big-government' meaning wars cost money? But US military budget is tiny (3.5% GDP) so big-govt politics far more a welfare state problem (i.e. a European one most prominently). 'Anti-market' also relatively intricate topic, probably better to kick it down the thread, except to note that relation of markets to security is not one of simple opposition.

On 'government fuck up' Steyn did a fabulous column on the flight 93 event and spontaneous swarming vs bureaucratic 'defences' (apologies for lack of link, it was months ago). Clearly the military, for instance, is an inefficient bureaucracy, paying

ridiculous prices for all its equipment and employing legions of useless pen pushers - intense competition on the battlefield probably means it is a little less sclerotic than comparable civilian institutions, but only to a very limited degree. America's best 'homeland security policy' is the 2nd amendment and an armed citizenry. Your list of 'fuck ups' is not unreasonable, but i'm basically focused on economics and efficiency (US\$ per dead terrorist and reliability of interception). Think contracting out violence to taut private sector operators will happen increasingly, but it won't be quick and it raises scores of interesting conundrums. In brief, libertarians get 'Hobbesianized' when they just sigh and pay out for the government to blunder around inefficiently and bomb people with golden toilet seats etc. It's the tax paid for living in a planet-sized lunatic asylum.

Find your discussion of government motivations a bit leftist in slant, sure there are corrupt corporate pork hunters of various kinds, but there's plenty of empirical evidence that the biggest corrupting constituencies are public sector employees of State bureaucracies and nationalized industries. The 'right' tries (should try) to be realistic about narrow motivations and control them through checks and balances, markets where possible, otherwise through consumer controlled bureaucratic systems (voucher schemes) or disintegrated authorities. Politicians seek power, pretty much everyone seeks money, activists seek radical chic (+ getting laid), State employees want to keep their jobs without doing any work, etc etc ... really don't buy Chomsky-style monolithic corporate power as THE decisive factor. Quite open to possibility of emergent purposiveness in institutions ('Governments want ...') but reluctant to accept it as a self-evident dogmatic truth.

"You know as well as I do that if the US + co. want to attack Iran etc. they'll do it regardless of a bunch of whining civilians" - this way to fast - what is "US + co."? What is 'to want' (sure 'they' 'want' it already, but enough to create an international political shit-storm? maybe ... Whining civilians are voters, and even whining foreign civilians can be a major pain in the ass in various ways (funding or becoming terrorists for instance, or voting out friendly governments). US govt bureaucracies have massively fragmented agendas (CIA and State Department basically siding with the Euroweenies during previous admin. for instance, though Bush seems determined to clean them up now)

"if you really believe that the American gvt is on its way to some sort of anti-Marxist, pro-market, libertarian, withering away of the state ..." relax, definitely don't think anything like this. What is American capitalism doing? that seems to me more the

issue. Is it gaining a tighter grip on the State, overcoming the political influence of New Deal populism and trending towards a more dynamic business climate? Some 'positive' signs IMHO (tax cuts, social security privatization ...) other deeply troubling ones (medical porkeroo, corporate welfare, wobbliness on international trade ...). Since in my 'right-wing marxist' analysis economic growth just IS social change in every respect that matters, cranking up GDP is the sole index of real importance (conditioning all the rest). Obviously want maniac supply-siders running policy as far as politically feasible.

"I think it's structurally impossible for Badiou to be utopian cos he has no real conception of history" - hope this topic will come back - strongly disagree, after reading his political writings, which seem drenched in utopianism (i.e. claim we should demand big dreamy things from 'society').

"you should abhor the rather old-fashioned empire-creating of an aging behemoth like the US" - US is 'Hegemonic' not Imperial (alternative is ANARCHY = FASCISM). For anyone with minimal Hobbesian assumptions ('there's a lot of crazy bastards out there who want to kill us') it's hard to know what 'abhorring' US role in global (OK, planetary capitalist) security really leads to.

"can you really not see any role for a MAD-type scenario, or for allowing countries to have heavily-regulated nuclear industry but no weapons?" - MAD is off the table. The only reason these guys want nuke programmes is for bombs (like Iran needs civilian nuclear power? - time to get off the bong)

"Can't markets sort it out?" - Markets presuppose economic motivation, where this is overridden - by jihadi enthusiasm or socialist dictatorship for instance - they can't control the phenomenon

"are there really naturally 'bad guys' and 'good guys' out there that must fight to the death ...?" - guessing you don't have problems with West having slaughtered German Nazis or Japanese fascists, so it's just a matter of categorization. How comparable are hard-core Salafists to Nazis? - I'm with Berman and Hitchens (very comparable)

"... in some kind of end-times scenario?" - this is too big and tied up with other hyperstitional questions to rush a response here.

"If [pro-market liberal capitalism] is so obviously the future, why can't everyone see it?" - Is it more weird that humans have been biologically constructed to tolerate history or to resist it? IMHO we're a spatchcock engineered conservative species

frightened of change, but also curious and experimental enough for runaway social dynamics to hook us into one-way (historical) processes. Capitalism exploits our conservatism (search for personal/family economic security) and alchemizes it into revolution (K+ technomic mutation). This dynamic goes way back before modernity - after all, people have always sought to use technology to resist change and stabilize their environment, with the side-effect that the species is plunged into history ...

More generally, this q. (of yours) fascinated all the Austrians (think savonarola refers implicitly to it above)

PS. apologies for typos, errors and weird glitches

savonarola -

"Tickled to see that Deng Xiaoping's hypertrophic bureaucratization of China under authoritarian state capitalism can be so happily brought under the banner of *laissez faire*" - but DXP didn't bureaucratize, he began a process of massive de-bureaucratization (of course, there's a long way to go). The mainland Chinese economy is a fascinating beast, combining extremely heterogeneous elements (hope to get into the topic in detail later). One thing for sure, it is being profoundly privatized, from being among the most totalitarian in the world to one that now nurtures an entrepreneurial non-State sector growing at dizzying speed.

"(skating gingerly over the facts of Tienanmen square, the work camps, the executions)" - lots of rough shit going down, sure

"that the touching ... pagan inaction" - found this paragraph hard to decode

"your love of Das Deng is founded on a somewhat belaboured subpolitics of acceleration (in which case, Junger is far more tonic company)" - but Junger was crap at economics

"a kind of communist manifesto without the communism, suggesting you quickly drop the cynical disquisitions on freedom and diversity" - capitalism liberates the means of production, hence freedom and diversity

"or (2) all this Techno-Sinophilia amounts to (2a) Hegel in China = a philosophy of history that has finally shed its fantasies of the yellow peril and the AMP (Asiatic Mode of Production) and embraced world systems theory (Wallerstein et al have been preaching the great shift for some time now, and The Economist is grudgingly tuning in)" - but Wallerstein et al are crap at economics, for instance, they have no

understanding of market dynamics and expected Germany+Japan to overtake the US by end 20th C. If all you mean is that East Asia is the hub of planetary economic dynamism, definitely agree (though US proves very adaptive when subjected to fierce competitive pressure, maybe benefiting more from Japanese economic miracle than Japan itself). (Old) Europe is screwed.

"(2b) Hayek on MDMA, or how to get the listless youth to cheer on structural adjustment" - sounds great, but not exactly getting the 'how' (great despondency of my existence is that antimarket nannified ideas always far sexier to young troublemakers than promotion of raw liberty)

"(2c) a gross misrepresentation of contemporary capitalism and its effects on the Chinese peasantry, urban proletariat and environment (many continuities there between the worst of Mao, Deng and today's PRC)." - this requires more detailed discussion than i imagine would be tolerable here right now. Deng's reforms began in the countryside, with peasants thoroughly pissed at collectivist experiments eagerly seizing opportunity to push the 'family responsibility system' of grassroots productive independence + huge leap in agricultural incomes. Peasant incomes have since stagnated for intractable economic reasons (because aggregate agricultural income largely equivalent to social food budget, it's difficult to lift overall living standards in peasant-dominated societies - as the proportion of income dedicated to subsistence falls, so does the fraction of gross social output available to farmers - mass urbanization (at least 500,000,000 people) the only practical solution in the medium term).

Urban proletariat doing OK unless working for clapped out State industries - as indicated by human flood of migrant workers into cities. Voting by foot by far most reliable gauge of what's going on anywhere btw.

Environment issues always overblown, prosperity sorts this stuff out - concentrate on GDP growth

"I suspect that your newfound concern for (but surely not belief in!) freedom and diversity is pretty epidermal ..." - Why 'newfound'? Always took D&G; to be promoting freedom and diversity. Maybe i'm just using more colloquial language these days.

Not sure what a 'belief' would be in this case, nor am i pretending to have 'transcended' belief (unbelief is a limit).

Skintelligent take on 'epidermal' will have to wait.

"why not sing the praises of intensive acceleration and have done with these inept forays into liberal morality and political science?" - but it's the same phenomenon, merely in different registers. The culture of democracy means everyone has to articulate 'political science' questions to some extent, even if they don't vote.

"Might it be because if we're playing qualia the jihadis and red guards are sure to beat the cosmopolitan petty-bourgeoisie any day, hands down? No pagan supplement d'ame is going to change the basic (alas, Lacanian) equation: 'no authority = little intensity.'" - absolutely love this - truly brilliant and worthy of far more extended examination than it will receive just now.

1) Commercial republics have actually shown themselves historically to be quite stubbornly competent at fighting and winning wars once fired-up to do so - plenty of interesting ref's here, VDHanson's 'Carnage and Culture' is one excellent signpost

2) the Lacan equation is simultaneously intriguing and repellent ('nun-raping' ideology in the end) - once you buy into it all kinds of foucauldean sadomasochistic political perversions start to make sense. Ultimately, i just don't accept that a big dead daddy is necessary for a serotonin spike. Seems to me the most intense cities in the world are the most thoroughly liberalized from the grassroots (= economically), with the oceanic intensities of decoded consumerism plateauing far better than hysterical jolts of totalitarian fanaticism

The Ghost of Easter Past: *The replacement of the Republican and Democratic Parties by two new governmental servicing corporations run by Coke and Pepsi has massively reduced corruption, pork-barelling and foreign policy machismo.*

-- Meat (or How to Kill Oedipus in Cyberspace), p. 200.

Nick Land: The Ghost of Easter Past - any hint of a schedule?

The Ghost of Easter Past: Well it says here, "A laundered Michael Jackson facsimile is in the Whitehouse", so I assume you were just making it all up in your head.

you surely can't be claiming i'm dissembling in order not to offend!) surely i'm going too far for you now, right?))

nick, isn't it time to drop this pathetic desperation to shock us all with your 'extreme' views, the marilyn manson act won't wash - no-one's shocked by you, least of all when you're toeing the whitehouse PR line...

Tachi: By far the most interesting thread I have seen for a while, though I have been absent from the blog for some time.

Trying to plug into your currents for a sec Nick - seems you maintain that China is still not a responsible player on the world stage, and your strongest political support is for the US since it is the least undesirable alternative power to side with for the slide into WWIV. Yet you almost glorify the direction China is heading (since Deng 1979) - isn't this precisely for the reason that you support the US: economic freedom and prosperity?

China is not at all the best place to do business as you may suspect (have you ever done business in China, or worked in a commercial environment?); the commercial sector is rife with corruption, a lack of creativity and innovation, and state involvement. There is a long long way to go before China as a whole (not just counting SEZs) becomes an economic superpower.

Nick Land: Tachi - all your comments on China plausible at least, but the vector is breathtakingly positive ('+' in a cybernetic sense if the value judgement seems questionable).

When it comes to the cultural infrastructure of affect, directions (+ of course speeds) matter far more than absolute values. Hence East Asia is buzzing and optimistic, while (much richer but) decaying Europe is drowning in its own ressentimental bitterness and despair.

"isn't this precisely for the reason that you support the US" - I'm not really in a position to support anything, and while I'm certainly tactically aligned with what infinite thought calls US 'superpower' (given the alternative is ANARCHY = FASCISM made grotesque by the impotent moral pontifications of cowards, hypocrites and heads-in-the-sanders) think facts, scenarios and models make better discussion material than allegiances

Grumpy Ghost - you really think Marilyn Manson is more shocking than the Bush administration? That's certainly a minority view worldwide ...

willow: isn't KP post just the best ever? the most wonderful load of nonsense...!

Euclid: Willow- "isn't KP post just the best ever? the most wonderful load of nonsense...!"

If you mean the recent post at KP, you are dead right.

KP: "the Prince Charming of Cold Rationalism"

Is there anything more pathetic, farcical or immature?

Bloot: *isn't KP post just the best ever? the most wonderful load of nonsense...!*

It certainly is. In fact it's so good I think it deserves to be posted here too. Here are some of the highlights once again:

No, I am not tolerant. No, I do not want to 'debate' or 'enter into dialogue with you. No, I don't respect you, nor do I solicit such respect for myself from you. The defenders of tolerance, debate, dialogue and respect advertise their bourgeois credentials with such advocacy. I'm sorry, apologists for exploitation of labour, but, no, I don't see it as my duty to provide the enemy with a space to express itself.

So, yes, hold on tight and spit on me, I am a dogmatist. But what does being a dogmatist entail? Briefly, it involves commitment to the view that there are Truths. One can add to this, the view that there is a Good.

It's no accident that, since Kant, rationalism has been held to be synonymous with dogmatism. Post-Kant, we have grown accustomed to the view that critique rather than dogma is the only acceptable ethical and philosophical position, so that 'rational dogmatism' sounds like the worst imaginable insult.

But where does this attack come from? Fundamentally, four interrelated positions: authoritarianism, mysticism, egotism and relativism. Far from being equivalent to authoritarianism, as the postmodern liberal doxa would have it, dogmatism is only effective alternative to authoritarianism.

Dogmatism is religion in the best sense. It is only through dogmatism - ruthless subordination of your Self to an impersonal system - that his majesty the Ego can be crushed. This has been the appeal of nontheistic religion throughout the ages.

Well that's certainly roused me from my critical slumber! LOL

“Our age is the age of dogmatism, and to dogma everything must submit.”

same kind of reception as 'Cold Rationalism' has so far received in the confines of the blogosphere (i.e. it will simply be ridiculed and scorned), thus seriously hindering the considerable ongoing efforts of those who have the patience and critical forbearance to actually undergo the incredibly difficult and painstaking task of first coming to a rigorous, sophisticated and hard-won understanding of Badiou's very complex texts and arguments before venturing to publish anything on them. If you find nothing more in Badiou's texts than the latest radical-sounding rhetorical ornamentation with which to redecorate the walls of your autocratic little self-publicizing blog, then I really think you ought to leave it alone altogether and stick to areas that don't exceed your rather modest intellectual competence: e.g. music reviews and cultural studies. (And by the way, the same goes for the likes of Kant, Hegel and Husserl, who you have clearly understand nothing of either. If you're not prepared to actually *read* those you criticize, I really think you ought to curb your voluble trap.)

Nick Land: "dogmatism is only effective alternative to authoritarianism" - discuss
Bloot - chill ;)

"Well that certainly roused me from my critical slumber!" - as you say, LOL

clytemnestra: WE DOGMATISTS = CHRISTIANITY.

After investigating the inherent CHEMICAL ELEMENT at the heart of this group it was discovered, utilizing the IC/DC CSAIL METHOD, this group exhibits extremely STRONG SIGNAL of CLUSTER-TYPE: ONE BIG RHIZOME. Mostly distributed throughout UNITED KINGDOM. REGIME OF SIGNS indicate following characteristics: clear MANIFESTATION of REASON AND LOGIC, GENIO HUIS LOCI⁸⁷ and a AEONIC CURRENT that can, at best, be described as LEMURODIGITAL. Evidence of widespread belief in THE HOLY BOOKS of THE ONE IN THREE concerning THE (impending) APOCALYPSE. Group appears to be diametrically & quite vociferously opposed to the VIRGO LUCIFERA groups seeking ENLIGHTENMENT via ORGASMIC BLISS (aka, one-hand-grasping gematria system).

⁸⁷ we remain clueless as to what this means exactly.

should you have more inquiries about this research (or, you know more about GENIO HUIS LOCI than we do), please contact CLYTEMNESTRA NYARLATHOTEP, ADEPTUS MINOR.

Reza Negarestani: *WE DOGMATISTS = CHRISTIANITY*

Feeling electrical floods of pleasure engulfing me.

clytemnestra@nyarlathotep.ck

Nyarlathotep, indeed!

Tachi: Nick - "I'm not really in a position to support anything, and while I'm certainly tactically aligned with what infinite thought calls US 'superpower' (given the alternative is ANARCHY = FASCISM made grotesque by the impotent moral pontifications of cowards, hypocrites and heads-in-the-sanders) think facts, scenarios and models make better discussion material than allegiances"

Interesting point. Agree to the general tone - contra-moral impotency - but have to split hairs somewhat. I don't want to pursue a personal agenda, but obv. cant deny interest in your particular (and personal) angle.

However, the issue I see concerns more generally what being 'tactically aligned to' amounts to, and how this differs from 'moral pontification'. This is an issue, I think, since it affects all Hyperstitionists who are engaged in praxis: there are value judgements all of us make when enacting decisions and in engaging with the forces cutting through us.

Whilst moralising without an appreciation of base global dynamics (for example about privatization of public services, the collapse of the welfare state) reflects unthinking resistance to change, self-deception and pathetic anthropomorphism - deploring humanity, because in general the species digs its hooves into a specific niche in a changing cosmic fabric, does not deliver a moral high-ground based on a superior intellectual 'position'.

It in fact contributes very little to questions of praxis, which are, IMHO, far more important than intellectualising about events in which we play no part. I am not saying that this is what anyone in particular is doing, though I see strains of this many threads here. Your contribution Nick is stimulating and, dare I say it, 'heartfelt' (i.e. total).

'Facts, scenarios and models' - important for discussion, I agree. More so than our own 'allegiances', though allegiances - or better, alliances, pacts - good stuff for discussion when considering the changing relationships of the key players on the global stage - government, big business, etc.

Uncovering facts (or uprooting lies), conceptualising scenarios, and developing models amount to nothing without full engagement to actual lines of praxis. Internet discussion room activity is painfully locked into a very tight orbit. What could the most effective lines be?

Moralising is indeed indifferent to the subtle and complex processes which shape and are shaping our world. But there are still questions of value attached to the development of models and tactical choices we make. And tactics is all about engagement, and this involves alliances and allegiances, however fluid.

Nick, one other thing - interested in you either/or point of view:

US 'superpower'

OR

ANARCHY = FASCISM made grotesque by the impotent moral pontifications of cowards, hypocrites and heads-in-the-sanders

Strikes me as somewhat naive coming from you that there are two alternatives. Especially when you claim that you are not in a position to 'support' (though you allow yourself tactical alignment.)

In fact, what differentiates support from alignment?

northanger: nick - maybe this praxis issue is where some of us non-hyperstitional players need to leave the field, what say you? i'm not a major player here, and it's at this point i ask myself why i'm here and what you and reza are up to. well, mostly i just wonder what vaung is up to really ... but you get the idea.

Nick Land: Tachi - brief response for now (more later): really think heartfelt moral-political polemic (a zillion mea culpas obviously) extremely sub-hyperstitional and while very enjoyable (for me, anyway) shouldn't be allowed to wreck the multitracked highly diverse and experimental undertakings that this blog is really based on

notheranger - think your comment slightly perverse, this is among the very LEAST hyperstitional of discussions happening here (a holiday from the rigours of impersonality, mutant masks and experimentation) so definitely not a sufficient excuse to bail ...

notheranger

PS. apologies for tone of 'pathetic desperation' but qabbalists are thin on the ground, so if you're fleeing try to send us a replacement (ha!)

notheranger: nick - "this is among the very LEAST hyperstitional of discussions" - and certainly the post that veered the most off-topic! it had such potential :(would be nice to blend in this crop circle bizness (come to think of it, should check two asteroids with this: ANGEL & SERAPHINA and see whether there's any mention of angels in the g-mg corpus)

http://www.cropcircleanswers.com/ccc2001_article.htm

<http://www.cam.net.uk/home/Nimmann/events/cropcircles.htm>

<http://www.cyberspaceorbit.com/gigdecode.htm>

Tachi - "Internet discussion room activity is painfully locked into a very tight orbit."
- what internet discussion room? please describe tight orbit.

AQ 218 = TIGHT ORBIT = SLEDGEHAMMER = SUBOPTIMAL = UEBER-TROLL = OUT OF TUNE = LIBER QWYZ = ANGLICAN BRIT

notheranger: crikey! nothing against mark k-p, but i just realized something. last k-p post had me chained in the basement for weeks. so, thinking ahead, desiring self-preservation, i think it best that i cease posting in this "room" (and escape while i can!). lol.

Nick Land: this thread has it all - (melo)drama, action, tears, plot-twists, now with the blood battlescenes fading from memory piet arrives to clear up any accumulated confusion and notheranger movingly confesses that k-p chained her up in a basement - definitely claiming first round hawking the hollywood rights ...

Tachi - your comment above (which i promised to get back to) seems to be centred on this key proposition: "questions of praxis ... are ... far more important than intellectualising about events in which we play no part"

totally agree.

Ideally 'pontification' (mea culpa x n) would be relegated to a carrier function, where it could be pursued far more vigorously and constructively.

Think part of the concrete method issue is sheer anthropology - Steven Pinker (in his IMHO brilliant 'The Blank Slate') suggests moral pontification is a natural human propensity, along with the associated tendencies to partisan organization (psychological test subjects divided into groups by coin-tossing quickly began to develop strong partisan loyalty to their 'tribe,' attributing all kinds of superior moral virtues to it (over against 'the abominable tails' - i extrapolate)). Point is, we can either tolerate a degree of this human nonsense or try to stamp it out. Seems to me, best policy is tolerance without letting it get in the way of more important work.

Another (sort of related) question is whether a productive hyperstitional analysis of 'capitalism' can be launched here, locking onto topics with high Hyp. affinity, e.g. money, social science fiction, cyberspace, transhumanism, artificialization, pulp markets, telecommunism (or whatever other genuinely mutant strains of marxism) ... there are a huge number, but partisan cat-fighting and blind heel-digging tends to obstruct their rigorous elaboration - i'm agnostic about the prospects here, but some good carriers would probably help a lot ('good' in this context designating optimum blend of rigour, extremism, contagion and comic absurdity)

Tachi: Nick, thanks for your response; if I am not contributing directly to Hyperstition with this questions and comments then please understand that this is because I am still undergoing a kind of induction.

Please see my comments in the Hyperstitional Method II thread - better there I think.

Nick Land: Tachi - definitely 'contributing directly to hyperstition' - focused q.s highly welcome at this (and i hope at every later) stage

Ghost of Trakl Interpretations Past: *Grumpy Ghost - you really think Marilyn Manson is more shocking than the Bush administration? That's certainly a minority view worldwide ..*

also master of the evasion. My point was, obviously, that neither MM nor Bush nor your good self were shocking. Not that I necessarily disagree with you, but the 'I'm being naughty, aren't I?' lines come across as a tad needy ;)

Tachi: Ghost: what's the *need* for being shocking?

Nick Land: Grumpy Ghost - think you fundamentally misread the exchange you're obsessing on (go back and check if it's so important to you).

Don't see any 'shock tactics' happening here from any quarters

ghost: *Ghost: what's the *need* for being shocking?*

why ask me?

just forget it...after all, it was in no sense 'me' who said it, anyway.

Ewaik Ryszard: Some insightful Bible students noticed, the proof lies in the obvious identity that exists between Daniel's "the king of the north" in the last days and Ezekiel's "Gog" of the latter days. By comparing what is said about each of them in the two prophecies, it is manifest that they can only be different titles for the same being.

Ezekiel Chapter 38 and 39 = Daniel 11:45

1. Their geographical position is the same. "Gog's" country is in the north part in relation to the Holy Land; as it is written, "Thou shalt come from thy place out of the north parts". "Gog" is therefore "the king of the north", his place or country being there.
2. Both of them are adversaries of Israel and invaders of the Holy Land. The eleventh chapter of Daniel abundantly proves this in relation to "the king of the north"; and of "Gog", Yahoueh said: "Thou shalt come up against my people Israel, as a cloud to cover the land".
3. The time they invade the land is the same. "The king of the north" invades in the last days. Of "Gog" it is said: "It shall be in the latter days, and I will bring thee against my land".
4. The same peoples are named as components of their armies. The Libyans and Ethiopians are allies with "the king of the north"; and in the enumeration of Gog's forces, it says, "Persia, Ethiopia, and Libya with them".

Who is "Gog"? Which land is the land of "Magog"?

Some people think that "Gog" is the Devil. But does the context support this idea?

Ezekiel wrote that after "Gog's" last attack he will fall and then be buried by the people. (Ez.39:4,11) So there is no need to prove that "Gog" represents the Devil as we know that the devil does not have a body of flesh and bone and has no need for a grave. Thus, in actuality, whom does "Gog" symbolize?

"Gog" is the chief prince of Meschech and Tubal.

"Meshech, the sixth son of Japheth (Genesis 10:2) is the founder of a tribe (1 Chronicles 1:5; Ezekiel 27:13; 38:2,3). They were in all probability the Moschi people, inhabiting the Moschian Mountains, between the Black and the Caspian Seas. In Psalms 120:5 the name occurs simply as a synonym for foreigners or barbarians. "During the ascendancy of the Babylonians and Persians in Western Asia, the Moschi were subdued; but it seems probable that a large number of them crossed the Caucasus range and spread over the northern steppes, mingling with the Scythians. There they became known as Muscovs and gave this name to the Russian nation and its ancient capital by which they are still generally known throughout the East" (Easton's Bible Dictionary).

Many ancient sources have clearly identified "Magog" as referring to the "Scythians".

One of the earliest references to Magog was made by Hesiod, "the father of Greek didactic poetry" who identified Magog with the Scythians and southern Russia in the 7th century B.C. Hesiod was a contemporary of Ezekiel.

Josephus Flavius clearly identified Magog. "Magog founded the Magogians, thus named after him, but who were by the Greeks called Scythians". (Josephus, Antiquities, 1.123; Jerome, Commentary on Ezekiel 38:2)

The Greek historian Herodotus wrote that in the fifth century B.C. the Scythians ruled from the Don River, in present southern Russia, to the Carpathian Mountains in central Europe.

Philo, is another historian in the first century A.D. who identified "Magog" with southern Russia.

Ancient authorities clearly identified the Scythians as the ancestors of the present day Russians.

However, even without that information, the identity of "Magog" is not too difficult to figure out. In Ezekiel 38:15, it says: "And thou shalt come from thy place out of

the north parts, thou, and many people with thee". The "north parts" is literally the "extreme, or uttermost" parts of the north.

AQ Exalted

Nick Land (February 18, 2005)

Among the gematria masterpieces of all time (thanks clytemnestra):

WE DOGMATISTS = CHRISTIANITY

(swoon)

PS. Clytemnestra has a secret too, but it doesn't make anything like as much sense ...

Comments: AQ Exalted

Nick Land: typically, 'clytemnestra' goes completely berserk on the newly discovered current-263 (Nyarlathotep anyone?)

[her comment on Gog Magog]

clytemnestra: Yes, our HODOLOGY DIVISION in DE(GERMANY) has been studying CURRENT-263 quite intensely. Extremely CHTHONIAN research with an incredible GTVN EMBED. Before I continue, if I may? Thank you. I'd like to INSULATE the delicate ears of any S*** I***S listening. Our preliminary findings concerning CURRENT-263 PIONEERS the ULTIMATE PURPOSE of the BOLESKINE SORCERER. The OCTENARY ORIFLAMME of the RED CROSS-its IMMORTAL INVOKING MIMNESIS of the HOLINESS of that great beastie LEVIATHAN & his EVIL ONES. The BOLESKINE SOLDIERS ability to successfully utilize SEX MAGICK & repeatedly hit the BULLSEYE is, we feel, a critical component to visibly erect to excitation the very SKELETON of the TEN AND ONE -EMANATION- of the YULETIDE ASTERION TELETARCH. Things are going extremely well & we couldn't be more excited.

Nick Land: clytemnestra - that's cunning. Best of all IMHO is the ensuing:

CURRENT-173 = 173 (was aiming to do something on slippery beast Leviathan soon anyway)

clytemnestra: nick - CURRENT-173 = 173, extremely fruitful! As for 263, once you consider Heb 263 = GEMATRIA (GMTRYA) & Heb SUM(1 to 31) = LEVIATHAN what can you say? you are aware of the CURRENT-31 and its WEST-JAY axis?

Nick Land: clytemnestra - (lazy i know but) could you unpack this: "Heb SUM(1 to 31) = LEVIATHAN" a little?

clytemnestra: nick - "unpack this: Heb SUM(1 to 31) = LEVIATHAN" - my pleasure.

1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10 + 11 + 12 + 13 + 14 + 15 + 16 + 17

+ 18 + 19 + 20 + 21 + 22 + 23 + 24 + 25 + 26 + 27 + 28 + 29 + 30 + 31 = 496

Crowley: Leviathan LVYThN, Malkuth MLKVTh, A small bundle TzRVR

AQ 496 = GRAND THEORY OF EVERYTHING

Reza Negarestani: Clytemnestra,

Malkuth: originally from proto-Aramaic, later Malakoot (malakut): world in relation to the sun or infinite fire; Malakut and Moloch (see 'Five Billion Years of Hell Engineering') both from one genetic strain.

Nick,

Is there any possibility to have an exclusive version of the 'pandemonium matrix' (or even the same version) here at hyperstition?

Nick Land: R - Vysparov's version of the Pandemonium Matrix has a number of technical errors, so an exclusive version would make sense - i'll try and get the whole of Ccru Shanghai mobilized (probably a corrected Vysparov version rather than anything more ambitious makes most sense right now)

Reza Negarestani: nick, check your email again.

northanger: *CURRENT-173 = 173*

TEN AND ONE -EMANATION- of the YULETIDE ASTERION TELETARCH

ASTERION - ah. thought i remembered seeing this. figured out how to use 32 compass points (called "boxing the compass") with 32 paths on zodiac wheel. wanted to figure out which star/path was assigned to atu vii chariot. using frater achad's restored tree, ASTERION is one of 7 fixed stars on path 28: PATH 28: NATURAL INTELLIGENCE—The TWENTY-EIGHTH Path from Netzach to Yesod = The Chariot - CANCER.

Nick Land: Tachi - hey, you're good at this ;)

northanger: nick - "k-p chained her up in a basement" - (this post appeared "downstairs") - k-p didn't chain me up in THE basement, he'd already left by then. but, i do remember you, reza, undercurrent, blood, tachi, etal. the original chain gang.

Reza Negarestani: northanger,

k-p didn't chain me up in THE basement, he'd already left by then. but, i do remember you, reza, undercurrent, blood, tachi, etal. the original chain gang.

Thanks, that sounds like a twisted compliment, i'm pleased. :)

northanger: R - ack! argh. :|

Reza Negarestani: northanger,

btw, check 'Avesta Archive' (via hyperstition's del.icio.us feed): the Z-crowd, Vendidad, Kaveh, etc. the best site on the zoroastrian germ-cell of monotheism.

also don't forget iranica, (although it's not the whole encyclopedia).

northanger: reza - excellent job there on hyperstition's del.icio.us feed. wonderful resources. thanx. still want my flag paper tho.

u/c: (way off topic) I thought N+R would appreciate a neologism from Nathan Barley episode 2 : "Axis of Diesel", LOL!

northanger: Nathan Barley is a cunt. imho.

Tachi: don't know about nathan barley, but BUDDHA certainly is a CUNT (94).

northanger: so does ANGLO and DIGIT, but nick has a headache already and i was trying to be kind. (hahahahahaha)

Nick Land: 94 TX:

((:)((:)))+(((:(:))(:))

'Sleazy squid-sex writer' Mary Karno (post coming (i'm competing with the Reza unfulfilled promises list)) considered this nummogram an abstract image of the 'Vulvoplexive Gates of Tiamat'

[No stable ordering convention existent (or necessary (??)) for TX yet - post on this 'imminent']

Reza Negarestani: Nick,

'Sleazy squid-sex writer' Mary Karno (post coming (i'm competing with the Reza unfulfilled promises list)) considered this nummogram an abstract image of the 'Vulvoplexive Gates of Tiamat'

LOL ... then you are already the winner ;) ... my apologies for the silence; I'm really under heavy pressure here; knee recovery is progressing slowly, should write more than 8 papers and there is a software we are designing for tracing the phonetic combinations of any near / middle eastern language to its elemental constitutive sounds (I think it's also a great hyperstitional tool). But I am working on a few long posts for hyperstition.

'Vulvoplexive Gates of Tiamat'

Could you please stop teasing?

By the way, this is a good opportunity to remind you of the Hyperstition's index while your hotmail account is down. Did you find the proper categories for the articles I listed? If you give me the proper tags I can finish the sub-grouping project this week.

btw, didn't you promise to write a more decoded essay on tic-xenotation?

Nick Land: R - hotmail hassles have disrupted anything that involves getting information from emails - hoping it won't last long (this sort of hotmail crap has happened before and it just stopped at some point)

Post touching on TX in the works, with more foggy stuff mist-crawling on the horizon ...

Best luck with the knee and the language software ...

PS. will try and move forward on the image front

been totally messing up this simple TX formula (corrected it twice invisibly through 'magical' behind the board powers)

'Standard' TX 94 = :(:(:)) - not anything like as pornographic

northanger: nick - ((:(:)))+(((:(:))) -- oh, you must tell us what this is then.

u/c: is it just me or is there some sort of C-word semiovirus stalking the blogs recently....most vulgar.

nick, if you're taking requests I would like a thorough discussion/explanation of Mechanomics, LOL! Seriously perhaps a discussion of 'intensive number' (as in D&R;) could be weaved in?

also, badiou's next chapter in Num&Num; truly astonishingly bizarre (surreal numbers, etc) - will try to gloss it soon.

reza - phonetic mulching software sounds amazing! do we get an online version?

Nick Land: northanger - addition isn't a standard operation in TX, so i guess

((:)((:)))+(((:))(:))

is just Karno being sloppy (and vulgar)

u/c - Mechanomics is going back a bit - i'll see what can be dredged up from the depths (just don't expect me to match your output levels or technical agility)

Reza Negarestani: u/c + Nick,

reza - phonetic mulching software sounds amazing! do we get an online version?

i hope so ... there are technical obstacles: interfaces are in Farsi plus nearly 17 foreign fonts should be installed (users should be familiar with these alphabets including Aramaic, Hebrew, Pahlavanic, Farsi, Gojarati, Avestan, Khotanese, Sogdian, Hebrew, etc.); but i think there are solutions for these problems.

Let me oversimplify the core mechanism of this software: For example I used the original word 'Jeh' in Pahlavi as the input, the word cannot be pronounced or properly written in English (some kind of problem similar to Qaf-complex I discussed before); the application analyzed the phonetic structure of the word and disintegrated it into its most basic phonemes; the phonetic units are numerically coded and are processed according to the stored data and the phonologic / linguistic rules according to which a word is derived from its germ-cell in another language (i.e. inter-lingual rules among near / middle eastern languages). Now, the word's phonetic structure cannot only be traced to its original combination but also its genetic potential for giving rise to new words in other near / middle eastern can be explored (i.e. possible derivatives that the word may breed if it enters in another related / interconnect language, for example from Avestan to Pahlavi to Arabic to Farsi to Arabic and again to Farsi). The software can also chart the results according to the universal phonetic codes, that means it is

useful to get the most accurate form of the original near / middle eastern word in English language; however, this doesn't work in all cases.

Now, you guess what: the correct form of the word Jeh or Jahi in English is djahi (after being phonetically mapped), the phonetic structure of the word djahi if directly comes into Farsi is reduced and simplified to the word Jay.

Jay = 63 = OIL :: djahi = 77 = Jihad :: Jindeh (another form of djahi) = 104 = Napht (Arabic / Farsi word for OIL) :: Jended = 100 = NO GOD = Dust

Of course, I have already discovered this transformation: see the Abysmal Nummificator

(Nick, I'll write a full post on the discoveries about the name Jay, seems the writer of these shabnamehs who has named herself Jay has a vast knowledge of ancient languages – esp. after exploring a couple of references to the name Yatu)

However, the costs are rising and we are all out of pocket; the software is still full of technical holes especially in the linguistic part, we hope to attract more interested people who love to work for free but sadly there is no one interested in this complicated project :(

northanger: djahi

ARK OF THE COVENANT - Part II - DJAHARYA

<http://www.biblemysteries.com/library/djaharya.htm>

" I built for the a mysterious house in the land of Zahi (dj - h) like the horizon of heaven which is in the sky, (named); ' The-House-of-Ramses-Ruler -of-Heliopolis,-L.P.H., -in-PEKANAN as the property of thy name. I fashioned thy great statue resting in the midst of it (named) 'Amon-of-Ramses-Ruler-of-Heliopolis,-L.P.H. 'The Asiatics of Retenu (Rtnw) came to it, bearing their tribute before it, for it was divine." Harris Papyrus Pl. 9. Breasted: Ancient Records of Egypt, Vol. 4. p. 123 #219.

Tutankhamen's Restoration Stele

<http://www.touregypt.net/restorationstele.htm>

If [the army was] sent to Djahi [2] to extend the frontiers of Egypt, no success of theirs came at all.

[2] Djahi: region in Canaan, possibly in the Judean hills.

The Report of Wenemdiamun

http://www.courses.psu.edu/cams/cams400w_aek11/wenem.html

His Majesty, having received the command of the god, equipped his soldiers with weapons and sent them forth to strengthen the boundaries of the two lands. He took all the picked men of Egypt, he established them in the garrisons of the land of Djahi, and he placed warships manned with the bravest crews upon the river mouths. Because I was an effective scribe, my reputation reached His Majesty, and he commanded me to go forth to oversee the troops who were taking the prisoners of the northern lands. He sent me to the frontiers of Djahi, and I happily went to do service for the Good God. I arrived in Djahi after a journey of many days, and settled in a camp by the river mouths. I brought with me a company of picked soldiers, and the men prepared to defend the borders of Egypt.

AQ 221 = BLOGOSPHERE = WENEMDIAMUN

The Military Man in Ancient Egypt

<http://www.touregypt.net/featurestories/soldier.htm>

The Evolution of Warfare

<http://www.touregypt.net/featurestories/war.htm>

Traveling along with the army were scribes, who appeared to have low regard for the professional soldier. Their writings characterized the profession in very unflattering terms as they warned their students not to consider a career in the army. The Instructions of Scribe Wenemdiamun speaks of the "woes of the soldier",

u/c: everyone, I need some help...I tried to run the glossolary through the complearn (onto-rhizome-building) software but it crashed it - too much data. it seems that the most you can have is around 150-200 'objects'. So could those with gematrial knowledge tell me which 'currents' would be best investigated (bearing in mind that choosing any single 1-digit number will give up to 200 entries, it's better to choose a few 2- or 3-digit numbers that intersect interestingly).

northanger: uc, i think these are the high hyperstition pingers: 63, 86, 93, 111, 418, 777.

Reza Negarestani: *uc, i think these are the high hyperstition pingers: 63, 86, 93, 111, 418, 777.*

+ 89, 92, 96, (and 100?)

Northanger,

You know what jay/jahi/jahica/jeh/jendeh/djahi means; don't you? you can trace the cult of djahi (Kakhuzhit/Kakhurit) back to the Z.crowd.

u/c: [apologies for mad professor mode] Set (63,86,93,111,418,777, 89, 92, 100) gives 80 AQ results, we can probably add a few more...

northanger: 31, 77 110, 160, 168, 173, 178, 189, 190, 194, 196, 197, 198, 210, 220, 222, 226, 231, 240, 241, 333, 444, 555, 666

u/c: LOL!

The set mentioned above is running now, I'll see whether the resulting "non-rooted tree" looks interesting then run the rest.

Nick Land: I'd add 69, 83 and 84 for starters, but guess i've missed the train ...

u/c: bear in mind all this excitement may be for nothing. I'll have the first result today (after processing for 2 days) and it might just be a total mess...

Tachi: why doesn't anyone want to face the fact that MONOTHEISM and NMA SORCERY have something rather significant in common?

northanger: some words not in the nummy yet....AQ 221 = NMA SORCERY = MONOTHEISM = BLOGOSPHERE = DISMANTLING = ALL-TOUCHING = EXPIRATION = MASS MURDER = SIXTY-SIX = A LITTLE BOOK = COSMIC ORDER = KING OF KINGS = NIGRI SOLIS = PROSERPINA = REND THE VEIL = THE SERAPHIM

Nick Land: 221 = 13 x 17

(:(:))(:(:))

Don't get it - except notion of a composite numeration for monotheism is quite amusing.

At least it DRs to 5 (number of CONJURATION and DELUSIONISM (both troubling for the damned no. 14s clogging this site and WASTING TIME (or is it TEMPLEXITY?))).

As to NMA SORCERY - cook up! (No such thing.) Try and get a Tak Nma Shaman and a Mu Nma Nago in the same tent, let alone on the same sorcerous page.

Try (Mu) DREAM SORCERY = 252 = ::(:(:))(:(:)), or Lemurian TIME SORCERY = OUTSIDENESS

PS. and at least 239 is a prime number (::(:(:)))

SO THERE

northanger: nick - lol, you mean the egg salad sandwich part or the four-eighteen?

i'm in process flattening meaning: monotheism, atheism, agnosticism, gnosticism, etc., - establishing DR-type framework to evaluate endtime strategies. just decode words & get to root meaning. sorta like what reza's working on.

DR language frame inquires: what is a "mono" endtime strategy? gotta strip off encrusted meaning. mono strategies are not necessarily, in this structure, defined by one-god-only markup--even though that may be a requirement. *monatomic* related

to ORMEs + piet's quote: " the inside MUST be in phase (and ultimately FRACTAL) to what is OUTSIDE" is certainly a mono characteristic = phase must be ONE.

ie, mono-

<http://www.bartleby.com/61/3/M0390300.html>

1. One; single; alone: monomorphic. 2. Containing a single atom, radical, or group: monobasic. 3. Monomolecular; monatomic: monolayer.

ETYMOLOGY: Middle English, from Old French, from Latin, from Greek, from monos, single, alone. See men-4 in Appendix I.

men-4

<http://www.bartleby.com/61/roots/IE323.html>

DEFINITION: Small, isolated. 1. manometer, from Greek manos, rare, sparse. 2. Suffixed o-grade form *mon-wo-. monad, monastery, monk, mono-; pseudomonad, from Greek monos, alone, single, sole. 3. Possibly also suffixed form *men-i-, a small fish. minnow, from Middle English meneu, a small fish, from a source akin to Old English myne, mynwe, minnow.

I. The Monad - The Aces (plus four monad types: inspiration, idea, longing, ambitioin)

<http://www.cs.utk.edu/~mclennan/BA/PT/m1.html>

Active Monad: The first principle is the Monad or Unit. It is the self-generating principle, the self-generated generator of everything else.

Passive Monad: The Monad contains everything potentially, Protean. It is prima materia (first matter), an undifferentiated unity, an unstructured wholeness, the seed of all. The Monad corresponds to the first stage of many cosmologies, the Primeval Waters, the Confused Mass (Massa confusa), Chaos, Tiamat, etc. The Sun. Both odd and even, male and female, matter and form.

William Buehler - <http://www.zayra.de/soulcom/buehler/>

Antarion Conversion in Lindisfarne Image

<http://www.zayra.de/soulcom/buehler/graphics.html>

EIDorado & The Re-Penting of America: Pictorial Map to America's Geomantic Global Role

<http://www.zayra.de/soulcom/eldorado/>

Liberty Bell Rings Again, as Genes Sing of the Grail.. The Archeo-Geometry of America's Spiritual Destiny

<http://www.soulinvitation.com/america/>

so here you have dan winter, vincent bridges, william buehler - what are their endtime (using term loosely) strategies? how do they converge / diverge with other "mono" (or whatever) ideas?

u/c: re proposed onto-rootless-tree : firstly, after 48 hours, it crashed - so I tried running nick's selection (69,83,84). Unfortunately the software has no way of dealing with identical nodes, so it just strings them out in an deceptive and unattractive way...so in conclusion...still looking for an interesting way to visualise this mulch.

Sagittare: Check out wordcount.org (also QueryCount).

u/c - (Times like this you wish there was an Undo button.) Wordcount.org was meant for you - might be a way to "visualize this mulch".

u/c: hey this is really cool

(especially: <http://www.number27.org/projects/wordcount/conspiracy.html> for the conspiracy-theorists among us).

The trouble with the nummificator mulched data is in presenting it in such a way as it's not simply a diagram of digital reduction vectors, with words stuck onto them.

This is just a simple frequency index so I'm not sure it helps, but it is pretty fascinating....

Reza Negarestani: Sagittare,

This is superb ... thank you!

Hyperstitional Method II.

Nick Land (February 19, 2005)

Are we agreed?

In a typically stimulating (Feb 17) post at K-Punk, MKP explicitly dedicated ‘Cold Rationalism’ to ‘dogmatism.’ The principle argument for this seems to be that sceptical tolerance supports theopolitical forces (of the ‘Satanic-worldly’) that Cold Rationalism – aligned with the true interests of the UK (and perhaps even international) proletariat - foundationally opposes.

Leaving aside potential queries concerning the K-Punk text itself, this problematic raises suggestive issues for Hyperstition, some touched upon by the following questions:

- 1) Is there any conceivable ‘carrier-position’ (avatar-borne method, idea, commitment, or ideology) that hyperstition should refuse to entertain in principle?
- 2) What would compose a full set of basic hyperstitional postulates, or is the demand for such basic postulates misconceived in a hyperstitional milieu?
- 3) Assuming the relegation of controversial commitments to an expanding periphery of carrier-positions, does hyperstition have a residual politics/polytics that would rigorously follow from (2) above?

Finally (and perhaps only of specialist interest):

- 4) Does Cold Rationalism conceive itself to be hyperstitional, antihyperstitional, or ‘axiomatically independent’ of hyperstition?

Rather than presume responses to these questions, I’d prefer to pursue them in the comments thread. But, in the hope of productive provocation, my initial and highly provisional tendencies on #1-3.

#1. Ultra-liberalism would be theoretically most consistent if socially/humanly sustainable. To take extreme examples, if someone fabricated a neonazi carrier to explore occultural trends in the politics of the IIIrd Reich, wouldn’t this be an asset to the overall field of hyperstitional research? A pedophile black magician ritualistically proceeding in strict conformity with a determinable numbo-jumbo would be equally legitimate – as a carrier – in principle (ah, but what principles?). Interesting objections immediately present themselves of course ...

#2 Elementary arithmetic combined with a hypergrammatical competence for the subjunctive mood ('if there were a Ms W who though X, she would probably assume Y and be drawn to Z') constitutes an entire 'elements' of abstract hyperstition. Particular hyperstitional strains – to be defined as megacarriers – have more demanding presuppositions, e.g. for Lemurian Hyperstition, Oecumenic propagation of decimalism is a basic presupposition.

#3 At most a polytics – but this term remains highly contentious.

Comments: Hyperstitional Method II

northanger: nick - imho, "purple monkey dishwasher" illustrates the power of agitprop. why is INTENT an important hyperstitional consideration? because hyperstition has, among other things, transformational power. certainly recent events in the US show the depressing reality of how extremely easy it is to make fictions real. what do they say? reality is created by agreement.

imnvho, everyone has an agenda, which prove more powerful in groups & nations. when two or more are gathered together consensus, agreement, alignment & whatnot must be achieved first before initiating action. that's how change groups work, right? who gets to establish core objectives, policies, procedures? politico-religio-ideological leaders ... and power still corrupts.

however. hyperstition seems grounded in the philosophical & the ontological and appears to propose subtle & unique differences to the power of transformation. is transformation the fundamental hyperstitional concern? of course it is. anyone interested in making fictions real is involved in transformation. this is alchemy. changing water into wine ... atomic fission. splitting-the-atom. cell mitosis.

the other day i was reading a book review for "Impostures Intellectuelles" by Alain Sokal and Jean Bricmont ... an "exercise in intellectual and moral hygiene". apparently, philosophers aren't doing a good job explaining scientific concepts. which made me consider: what is philosopher? i realized it is the job of scientists and mathematicians to explain their concepts, not philosophers. if i were a philosopher and wrote a book i would want the reader to "experience" my thinking & being. i would clearly explain those concepts i am redefining. however, if i really wanted to throw you someplace i'd mention a word, an idea, a concept in passing. because i know, as philosopher, that eventually i'd catch you in a net of meaning.

studying philosophy these past few weeks has made me realize the importance of the philosophical conversation throughout history. it has established ideology. i imagine the current state of philosophy involves [1] can we still get it up, and [2] like Oppenheimer, philosophy has its Nagasaki & Hiroshimas - should we get it up?

so before i get wound up by someone's excite-up i'd like to know why the fuck we're saying: purple monkey dishwasher.

Nick Land: northanger -

"imagine 3 instead of 1 railcircuitset sharing/bundling half of each trajectory (the bellows going down empty together)"

"i'd like to know why the fuck we're saying: purple monkey dishwasher"

- just woke up and already have a splitting head-ache - think i need to get back to you on these points ...

northanger: nick - of course you have a headache sweetie, you poured your little brains out ... poor you! excellent post, btw.

Mesh-23. Oddubb (Odba). Broken Mirror. Pitch Null Net-Span 7::2 Syzygetic Chronodemon of Swamp-Labyrinths (and blind-doubles). Feeds Hold-Current. Rt-0:[X]. Time loops, glamour and glosses.

<http://k.punk.abstractdynamics.org/archives/004042.html>

Mur Mur, meanwhile, carries echoes of the legends of Sea Beasts and ancient serpents; its time is the Deep Time of the ocean bed. Like Katak, it too, is horrified by what will follow it in the cycle; in this case, Oddubb (2/7), the amphibious entity, associated with the crossing out of water and the acquisition of lungs. What Mur Mur fears is the division that Oddubb brings, the splitting of the undivided waters. Oddubb is defined by ambiguous and elusive movement. As its name suggests, it is a 'double-agency', a duplicitous creature. It has a horror of dryness, of the state of being fully landlocked that comes with Katak. Which brings us full circle."

Oddubb - 'duplicity', 'doubling', cf also the incantations of Macbeth's witches - it is hard to imagine that Shakespeare wasn't remembering an invocation of Oddubb when he wrote the words of the Weird Sisters' spells.

<http://www.orphandrifft.com/technics.html>

TIME RELATION: time rider. passes on time.

BLOOD ASPECT: circulation- currents, dangerous communication

MAGNETIC FIELDS: telepathic strange attractor labyrinths.

Tachi - Thought I would bring this over ...

Nick - "Ideally 'pontification' (mea culpa x n) would be relegated to a carrier function, where it could be pursued far more vigorously and constructively.

Think part of the concrete method issue is sheer anthropology - Steven Pinker (in his IMHO brilliant 'The Blank Slate') suggests moral pontification is a natural human propensity, along with the associated tendencies to partisan organization (psychological test subjects divided into groups by coin-tossing quickly began to develop strong partisan loyalty to their 'tribe,' attributing all kinds of superior moral virtues to it (over against 'the abominable tails' - i extrapolate)). Point is, we can either tolerate a degree of this human nonsense or try to stamp it out. Seems to me, best policy is tolerance without letting it get in the way of more important work.

Another (sort of related) question is whether a productive hyperstitional analysis of 'capitalism' can be launched here, locking onto topics with high Hyp. affinity, e.g. money, social science fiction, cyberspace, transhumanism, artificialization, pulp markets, telecommunism (or whatever other genuinely mutant strains of marxism) ... there are a huge number, but partisan cat-fighting and blind heel-digging tends to obstruct their rigorous elaboration - i'm agnostic about the prospects here, but some good carriers would probably help a lot ('good' in this context designating optimum blend of rigour, extremism, contagion and comic absurdity)" [Posted by: nick at February 19, 2005 08:39 AM]

Nick, your comment about relegating moral pontification to the carrier level is interesting and I think we could unfold this a bit more, since to me this is more important than has been given space as yet. Some obvious but crucial questions:

1. What does fabricating a carrier involve and what are the typical steps in the production and development of a carrier?
2. Can one person (me for example) instigate the production and development of a carrier? If so then how would I go about it?

3. To what extent can the carrier be a properly fictional character, and the issues the carrier touches upon be fictional? Is what the carrier discovers, explores, postulates, etc still rooted in reality or free to be constituted of 'lies' (fictions acting as truths), since although theoretically hyperstitionists may intend to generate what you may call 'untruths', the fact remains that readers will still be caught thinking ...

4. What does it practically involve for moral questions, arguments (for instance about WoT, politics etc) to be relegated to the carrier level?

5. [That Pinker suggests] "moral pontification is a natural human propensity, along with the associated tendencies to partisan organization" - fascinating comment - does this imply that moralising action is connected, through human evolution, with socialization into factions, parties?

If this is the case then allegiances are an important issue for hyperstition. Far from just being a question of personal loyalty, allegiances are embedded in a special (species-related) and social context. Since hyperstition aims to create social agencies beyond the individual and beyond personal morality, it has to confront the issue of allegiance since the special-social embeddedness of allegiance appears necessarily connected with morality, albeit of a partisan quality. So although personal morality and ego-centered thinking may be what hyperstition attempts to bypass or utilize (we don't say transcend), morality and allegiance seems to be human traits hyperstition (construction of social agencies) cannot avoid since they are conceived as social and ultimately not individualistic.

Not sure how this relates to the relegation of morality to the carrier level, but interested in your feedback.

Nick Land: Tachi - highly productive q.s as always. I'll definitely try to put together another Hyp. carriers post to address these crucial issues.

Provisionally:

#1. Carrier construction massively 'undertheorized' up to now - a running discussion on this would be excellent.

#2. Can you (for instance) float a carrier here? That would be a major step forward, as would anything that facilitated the conveyance of hyp. discussion through such artificial agencies, dismantling the automatic dogmatism of pseudotranscendence,

naturalizing the hypothetical stance and subjunctive mood (along with many other things, e.g. microsocal personality fragmentation).

#3. All these aspects of carriers only minimally explored. Perhaps a typology of carriers, emphasizing distinct functions, might ultimately be necessary.

#4. I assume carriers help to attain a state of moral irresponsibility consistent with unimpeded experimental research, but hugely open to thorough discussion on this.

#5. Think you're spot on with this - Pinker points to well known tendency of human groups at all stages of 'social development' to withdraw the category of 'humanity' from their enemies.

Agree fully that allegiances crucial to superstition, but the important thing at this stage IMHO is to prevent internal factionalizing of hypersitional enterprise in a way that would inhibit its activities. That's why playing out cross-allegiances in a carrier puppet theatre would allow the problematic to be explored without excessive metalevel cat-fighting tearing everything apart (prematurely?)

northanger - updating P. Matrix task under urgent discussion. Won't be long ...

Still slightly hazy about the purple monkey dishwasher, but if it's remotely possible to work it out needn't feel obligated to give the game away just yet.

PS. Is it true you've written a guide to decoding piet? maybe that should become a side-bar resource too.

northanger: nick - "Still slightly hazy about the purple monkey dishwasher, but if it's remotely possible to work it out needn't feel obligated to give the game away just yet."
- your haze is my haze. i like what werner erhard said: when someone gets it over here, someone gets it over there. (or something like that). when you decloak the haze, i'm sure i will dehaze.

"guide to decoding piet" - yes, still working on it. pandemonium should set things aright.

piet: Just to show you what a sewer the net really is (don't you agree? – the person who'se 168 page thesis I link to below the quotes can: We began our archaeology in the waste stream,

concentrating on the darkest, most hidden aspects of our culture. Like Bataille, we were looking at our excess, our waste, in an effort to learn more about who we really are.), here are some bittits, undigestible, nondigesting (in my deeper sense of the word, turning ‘concrete singularity’ into soft organicalbe multivalence), just scavingin and taking the easy way out. Or I could say that this work shows the limits of an utterly feminine approach in this work? Soft and sensitive translating to passive and superficial, hysterically optimistic through remote (woulda coul dash ouddunit be nice) stance/view.

Media Courage impossible pedagogy in an artificial community by Fred Issek

Columbine gunminimen anybody?? I know this is going over tired old ground without a trace of fresh ground or even grinding intentions but .. . she puts it so that the common man can make sense of these (Ren Hoek voice): I D I O T S ! ! ! ! !

While his intention is to deconstruct the horizon of philosophy, it is not Nancy’s intention to propose an “other politics.” Rather, the necessity of the “plural singular of origin comes into play.” There is no new politics or community, for it has been philosophy in its mistaken singularity that has linked itself to a “community of essence.” This process of community building, according to Nancy, requires sacrifice. “If one looks carefully, one can find the place of sacrifice in all political philosophy (or rather, one will find the challenge of the abstract, which makes a sacrifice of concrete singularity). But as singular origin, existence is unsacrificable” (Being Singular Plural 25).

Just like Georges Bataille with his community of absence, Nancy is pointing out that all community building implies an essence that leaves as a remainder all that which is unassimilated. This logocentric essence is the “One.” “The One as purely one is less than one; it cannot be, be put in place, or counted. One as properly one is always more than one. It is an excess of unity; it is one-with-one, where its Being in itself is copresent” (40).

Nancy blames philosophy’s preoccupation with essence and community building for much of humankind’s expectation of togetherness.

...

Nancy points out that it was Georges Bataille who first noticed this and called it the “inner experience” which is tied up with a sense of the community as, “neither a work to be produced, nor a lost communion, but rather as space itself, and the spacing of

the experience of the outside, of the outside-ofself.” The space around the self is the self’s proximity to others, in this case, the proximity of community in death. The community of absence is a community built around a longing for something that is not there. As Benammar writes of Nancy and his longing for community, “The community is not a political community, such as the one proposed by communism, which espoused not only common goals but also common and equal rewards. The community is not part of our history. There is no mythical past in which we had a community, community is not a lost garden of Eden: the community is yet to come, the community still lies in our future” (Benammar). Like Bataille, Nancy sees community as absence, acquiring an identity only around that which is missing. In our longing and in our mortal isolation, we are community, seeing in the other the conditions of our own birth and death.

Bataille, along with Nancy and others, realized community’s impossibility. Bataille’s contribution to this understanding was to seek the community without a head. As Nancy pointed out, there is no “community of essence,” for such an essence would imply a sacrifice of something. Concrete singularity is usually sacrificed in the name of an abstraction that supposedly pulls community together; or the Other is sacrificed in the name of the One, excluded because it does not fit in. In the case of the Acephale sacrifice, the head is offered up, so that headless, the group is unified without a principle, without a logos, or the imposition of any abstraction or essence on their primal sense of community. In this way, the individual partakes in community, without having his or her freedom negated.

In “Bataille’s Columbine: The Sacred Space of Hate,” Andrew Wernick likens the sacrifice of Klebold and Harris to the sacrificial gesture of Bataille’s Acephale – or headless - Society. Wernick is not suggesting that the two teenaged boys

Ps: I wound up on this depressing page while going through 19 goooooooooooooooooogles worth of Laurence Rickels pages (sadly, my fave, ‘musicphantoms’ didn’t show up, neither the colourful nor the printerfriendly version), most of what I found contain mere mentions of his involvements):

Conflict resolution is a trick. “The ability to win an argument is the ability to create a complex form in which people can't see that it's a suppressed premise that is the thing that allows you to persuade them; or they can't find out what your suppressed premise is, and are thus unable to respond adequately to what you're saying” (Ulmer answering Rickels).

So, is that the most poetpietistic euphemism for the supremacy of trace ecology in the hellholewide world or what?????

that last remark refers to 'suppressed premise'

I made a gender mistake referring to author with 'she' unless fred is short for frederika submersible promise Heh.

Rickels: For those curious about Rickels who has been mentioned but, RUDELy, not quoted, go here: http://www.xenarts.com/art_org/raw/psyfi/rickels.html -- PUSH name WITH CLOUSEMICKER and find perfectly passive run on but accurate commentary, slightly runny too perhaps but if you ain't sordided out how will you starts looking for where it all started to go o so horridly wrong.

Nick Land: p the limpet sure knows how to hang onto a topic ...

Tachi: Piet - hortfedormer! - maybe you just ain't getting it. You need your own fucking blog. Does it have to spelt out in black and white? Not meaning to be cruel, but think you have way too much time on your hands. Your word-production/feedback ratio must be telling you something. Fuck deconstruction; and Nancy don't belong 'ere.

northanger: piet's already got a blog.

piet: Nancy too dogmatic for ya? He blogns here

then he needs two ... or three for all this overspill

northanger: ah, been lax on my decodepoet project (sorry piety!). piet was the only one directly answering my question: we archeo this = sewer / waste / darkest, most hidden aspects of our culture (cthulhu fhtagn) + learn more about who we really are. undigestible, nondigesting bits, bytes ...((how do you turn pandemonium matrix number-system {poof!} everything conditions everything, a viral algorithm?))... never seek to control a strategy ... look for a way to unleash it. stationary flight a flight of intensity -- (((shabnameh))) THE enthymemic algorithm, the link to total dissimulation.

i know i know, my translation is still kinda raw. fast becoming thangeroid version of badiou.

Monkeys and Organ Grinders: Caro's Hell

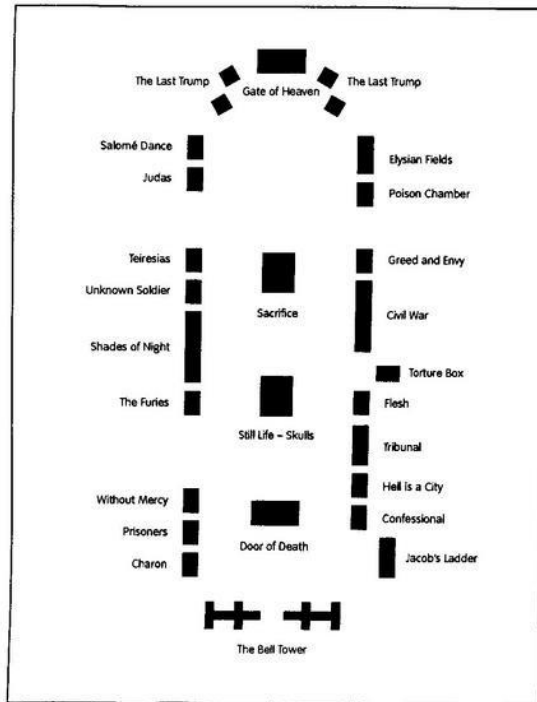

mark k-p (February 21, 2005)

'Hell is a city much like London' - Shelley

'Flesh is easy to shape.' - 'Clay Man', Swans

Anthony Caro *The Last Judgement* 1995–1999

Stoneware, wood, steel, brass, bronze, concrete and plaster
Lent by Collection Würth, Kunzelsau, Germany

Step into Tate Britain at the moment and you find yourself in Anthony Caro's Hell. *The Last Judgement* is part of the sculptor's final, and surely most accomplished, phase of production.

Caro's early work was figurative - but figurative in the way that Bacon's or Jack Kirby's was, textbook Deleuzian in its rendering of animal forms as lines of force and energy. In contrast with the smooth surfaces favoured by Henry Moore (with whom Caro had worked as an assistant), Caro's pieces were rough-hewn, asymmetrical; empirically distorted but faithful to the Real of the intensive bodies whose torsion they arrested in plaster and bronze.

Like Bacon's crouches (examples of which can be seen in the room devoted to Bacon, adjacent to where the Last Judgement is displayed), these pieces break through the screen of phenomenal difference to access the energy formations that find expression across animal and geological strata. They are diagrams, not organic representations: freezes without frames, since Caro eschewed plinths and pedestals and placed his sculptures on the same level as that of their viewer, already anticipating the confusion of sculpture and architecture that late works like the Millbank Steps (produced specifically for the Tate) will explore.

Under the influence of Clement Greenberg, Caro abandoned figuration completely in the second and most celebrated phase of his career, arranging and garishly painting found objects such as girders. Although this is the work which made Caro's reputation, it now looks unengagingly canonic. These austere clean lines are the very stuff of which the postmodern is made: literally. You are reminded of the literal vacuity of the postmodern domestic and corporate spaces, which recoil in horror from the unruly zigzagging lines of the Gothic.

Despite the success of this work (or perhaps because of it), Caro was dissatisfied enough with it to move on, and his last phase of production - of which *The Last Judgement* is a stunning part - marks another turn, or rather a return: to Gothic abstract figuration.

The Last Judgement is an astonishingly welcome reminder that contemporary art can approach all the classical themes addressed by Dante, Shakespeare, Milton, Eliot, Bacon (all of whom it references) - without coming off worse. It has all the ambition and vastness which postmodern British art, with its demythologizing impulse towards tracing the empirical, its cult of vanitas (enslaved to two masters, celebrity and mortality) prides itself on having supposedly superceded.

This is the way, step inside

You don't contemplate *The Last Judgement* transcendentally, you walk through it, which immanence gives a certain irony to the piece's title. Caro's message screams mutely out of every mouth gashed in plaster and iron: hell is not at the end of the road, not even round the corner, it is here, now. It will not be the judgement of a personal God that condemns you to infernal torment: your own animal vicissitudes put you there, now.

Abstraction and myth have always been strongly correlated. Abstract engineers don't 'create' any more than they trace (represent) - they discover and follow lines, cutting through the mire/ maya of *what is presented to us* so as to get to the stratificatory apparatuses and parasitic machines which produce the grim empirical charade we are invited to accomodate ourselves to in the name of 'realism'.

Each of the tableaux - crudely and fittingly boxed into caskets - capture an abstract mode and/ or intensive trap, sometimes identified as vice (sacrifice, greed and envy), at other times given names from epic drama or the Bible (Salome's Dance, The Furies, Charon) , or else simply given locational descriptions (Tribunal, Posion Chamber).

Time and again, wandering through the abstract atrocity exhibition, I am reminded of Mary Shelley's phrase 'workshop of filthy creation'. Caro's anguished abstractions, rust coloured and malformed out of clay and iron, cry out the Gnostic wisdom that we are ourselves the offcut slurry of a demented demiurge whose workshop of fityh creation this is.

Caro's waste land assemblages are *Geurnica* and Ernst's industrial jungles brought to still life: modernism redux. And, as Kurtz's bookshelf in Coppola's film makes clear, the real theme of modernism's revisited primitivism is always --- apocalypse now.

If you approach from the front of the gallery, you enter through the ominous stockade-section of the bell tower (if the intended allusion here is Hemigway, I couldn't but be reminded, too, of the fated final scenes of Hitchcock's *Vertigo*). You are then faced with the door of Death, whose position here again suggests a Gnostic insight: identification with the organs *is* life *is* death.

But the casket whose grimly stolid contents ingrained itself most powerfully into my nervous system was 'Shades of Night'. Here hunched plaster sack-shaped figures with rudimentary Giacometti/ Tanguy heads and fixed halloween mask features stare inscrutably like *Hellraiser* scarcrows scarred out of geological residue. As ever, the real

Gothic dread does not lie in the thought that these inanimate monstrosities might be alive (although Caro has the art of doing just enough to suggest that whatever quasi-anthropomorphic forms we fancy we see might only be accidental features of found objects) but quite the reverse. You see yourself diagrammed in these unhappy images of torturers tortured: *I too am nothing but animated matter, the silent screaming product of a process without final purpose or deliberated intent.*

TX2.

Nick Land (February 22, 2005)

Tic Talk

The (Barkerian) Tic Xenotation provides a numerical semiotic adapted to the Naturals with special affinity to Euclid's Fundamental Theorem of Arithmetic. The TX constructs numbers in terms of their basic arithmetical features as primes or composites in a notation without modulus (base), place-value or numerals.

The exact circumstances among which D.C.Barker formulated the TX remain deeply obscure (for a number of reasons best explored elsewhere). For our immediate purposes it suffices to remark that the broad research context within which TX emerged was a highly abstract SETI-oriented investigation into minimally-coded intelligent signal, without presupposition as to origin (e.g. 'xenobiological organisms') or theme (e.g. 'cosmo-chemistry').

The investigation, situated in the jungles of Borneo, was entitled 'Project Scar' and received a high-level security classification. In keeping with this research topic, Barker proposed TX as a maximally abstracted or ultimately decoded numerical semiotic, stripped of all nonconstructive (or symbolic) conventions (and initially named 'Goedelian hypercode').

While the raw numeracy of TX is most accurately conceived as sub-qabbalistic, due to its indifference to modulus notation (the primary motor of qabbalistic occulturation), its very independence from convention makes it a valuable tool when investigating the basic features of numerical (arithmetical or qabbalistic) codes.

Among the notation-related features most prominently exposed to rigorous scrutiny by TX is ordinality.

AOsys

Within the Anglobal Oecumenon, the most pragmatically prevalent ordinal functions are alphabetical, utilizing the ordering convention of the Neoroman letters to arrange, sort, search and archive on the basis of Alphabetical or Alphanumerical Order, organizing dictionaries, encyclopaedias, lists and indexes 'lexicographically.' The word 'alphabet' itself performs a (Greek) ordinal operation.

'Lexicography' - dictionary-type order - is used here (as in various fields, such as compilations of number series) to designate a mode of ordering (an ordinal-numeric function) rather than a definite topic ('words'). Although a relatively neglected numerical operation, lexicographic ordering plays a crucial role in concrete (popular-Oecumenic) ordinal practices. It is characterized by:

1) Popularity. Facility at lexicographic sequencing is considered a basic social competence, inherent - or even prior - to literacy, whilst pedagogically separate from the acquisition of numerical ('maths') skills. At the pedagogical level, Oecumenic societies tend to distribute ordinal/cardinal competences in accordance with the distinction between literacy/numeracy, thus establishing the basic division between linguistic/mathematical abilities from a primal nomofission (ordinal/cardinal differentiation). Literate citizens of the Oecumenon - those able to use a dictionary - are ordinally competent, through lexicographic conventions.

2) Pure ordinalism. Restricted entirely to sequencing problems, cardinal values remain entirely alien to lexicographic practices, to such an extent that rigorous ordinal-numeric operations are typically divorced entirely from numerical associations. The ordinal function of numerals (1st, 2nd, 3rd ...), in contrast, remains relatively impure - at least psychologically - since in this case a persistent cardinal temptation confuses sequencing function with the spectre of quantity. For this reason the alphanumerical subsumption of the numerals into lexicographic practices can be considered 'clarifying' in respect to ordinal operations.

3) Fractionality. Simulating lexicography within arithmetic requires the employment of modular (e.g. decimal) fractional values. Arithmetical listing by cardinality will be isomorphic with ordinal-lexicographic sequencing for all numbers of the format '0.n'.

4) Sequential diplocoding. Lexicographic systems require twin ordering conventions. They draw upon an alphabetical code and an ordinal place value convention (principally, left or right ordering, equivalent to the behavioural scheme for the

movement of a reading-head). The alphabet instantiates the ordering scheme, but does not (internally) describe it - 'reading' the alphabet to extract the ordinal code ('abcd...' or 'zyxw...') itself presupposes an extrinsic sequencing convention (Alpha-Omega, from first to last).

5) Infinite potentiality. Any lexicographic system allowing interminable strings has a code potential (cardinally) equivalent to Aleph-0, with an infinity of virtual Dedekind cuts (entry insertions) between any two terms, however close, and virtual isomorphy between any segment of the list/archive and the whole. It thus attests to a 'literate' infinity isomorphic with that of mathematics, drawing upon a common but culturally obscured digital source.

Intercoding Arithmetic

An intermediate semiotic attuned to purely demonstrative engagement with Euclid's Fundamental Theorem of Arithmetic (FTA) can be generated by transforming the standard Oecumenic decimal notation (*) by:

- 1) Employing the full Alphanumeric series 0-Z (0-35) for notational convenience, and
- 2) Raising all signs to their first hyprime power, from $0 = \text{Prime-0} = 1$ to $Z = \text{Prime-35} = 149$.

The purpose of these transformations is to eliminate polydigit (place-value) numbering and expose the radical disorder implicit in the FTA. All integral numbers in the FTA intercode consist either of single figures or plexed-compounds of the form (...), with numerical clusters synthesized through multiplication rather than modular-positional construction.

Consider a number picked entirely at random, *86, disassembled by factorization in accordance with the FTA down to the listed components *2 and *43, the *1st and *14th primes, hence: 1E. The expression of this number is no longer under any positional constraint, '1E' or 'E1' are equally valid on numerical grounds and strictly equivalent. Shuffling a string of intercode figures (FTA components) of whatever length makes no difference whatsoever to the number designated, with the ordering of the series being subject only to an extrinsic convention (of minimal - even vanishing - importance from a (cardinal) arithmetical perspective, where it is relevant only 'psychologically', for convenience in assimilation and comparison).

Once the merely inertial and pseudo-numerical order inherited from uninterrogated tradition is subtracted from FTA-intercode strings, dissociating all components from quantitative ordering, they are freed for lexicographic re-ordering as decoded series - an ordering which will deviate from the series of quantities, liberating an Autonomous Ordinality whilst de-cardinalizing the number line.

Consider *172, or 11E. Oecumenic-lexicographic procedures ensure this number precedes 1E (*86), as will all its successive binary multiples. Evidently, such procedures ensure that the infinite series of binary powers must be completed before arriving at 2 (*3). 'Natural' counting no longer has any prospect of reaching a nonbinary power, just as alphabetical-lexicographic 'counting' would proceed 'a, aa, aaa, aaaa ...' without ever arriving at 'b'. Reversing the problem and it is equally evident the lexicographic-ordinal line is never counted.

The Kantian assimilation of arithmetic to temporality models elementary time-synthesis as $n+1, +1, +1 \dots$ an intuition rendered questionable by the rigorous lexicographic disorganization of the number (listing) line. Once ordinally purified, the number line becomes uncountable by any supposed finite (temporalizing) subject, even from moment n to moment $n+1$. Instead, the line is synthesized by sorting (lexicographic sequencing) of prefabricated strings, whose quantities are determined on a different axis to their linear-positional codings. A prolongation of the time-arithmetic association would thus require a remodelling of time as nonprogressive synthesis without consistent scale or continuous-quantitative trend, no longer intelligible as passage or development. Such ordinal-lexicographic time maps a 'templicity' that is uncountable, fractured/fractional, erratic and heterogeneous, sequential but nonsuccessive.

Of course, all of this needs re-approaching on a far more rigorous basis, with a consistent focus on the topic of templicity - suffice it to say for 'now' that Kantian intuitions of number, time and their intermapping are themselves structured by notationally-problematizable constructions, since time-mapping has a hypothetical rather than essential relation to arithmetical common sense (with its undisturbed assumption of straightforward ordinal-cardinal interconvertibility).

Note-1. Elevating this intermediate semiotic to a functional numeracy, with a semiotic power commensurate with the set of Naturals (including primes above Prime-Z), requires a final step:

3) Adopting Tic Xenotative plexion, where '(n)' = Prime-n.

Thus $0 = 1$, $(0) = \text{Prime-1} = 2$, $((0)) = \text{Prime-2} = 3$, etc.

The inefficiency of this semiotic relative to TX is demonstrated by its redundancy, most dramatically:

$$V = (B) = ((5)) = (((3))) = ((((2)))) = ((((((1)))))) = (((((((0))))))$$

Note-2. TX shares the intrinsic disorder of FTA-intercode. *86 = $:(:::)$ or

$(:::):$ or $:(:::):$...

Out Of Order

TX/FTA-intercode numerical construction is indifferent to semiotic sequencing, position or grammar. A number expressed in either system could be distributed randomly within a space of n-dimensions, requiring only a cohesion convention (semiotic particles 'belong together' irrespective of order). Apprehended in their fully decoded potentiality as efficient number-signs, such formulae are clusters, not strings.

The TX case is still more extreme than that typical of FTA-intercode, however, since here even the spectral residue of sequential coding is erased. Given two complex TX-formulated numbers, correct order (quantitative comparison) requires - perhaps highly elaborate - calculation, eliminating entirely the practical usage of disordered TX clusters for ordinal operations.

For anything but small numbers, Euclidean cluster-stringing conventions (by ascending cardinalities) become procedurally complex, perhaps inoperable, for TX numerical formulas. This is evident even from small numbers, such as *149, TFA-intercode Z or (34), TX $((:)(:))$. As the 35th prime, with 35 the product of *5 and *7, the sequencing of hyprime sub-factors (factors of the prime-ordinate, i.e. *35) is no longer facilitated by lexicographic codings drawn from the numeral sequence. That '5' precedes '7' is evident from the numeral code, but the ordering of $((:))$ and $(:)$ cannot similarly rely upon intrinsic lexicographic guidance. In the TX case, it is only by constructing the numbers and sequencing them arithmetically that the 'notational' question of their order can be resolved. In other words, the sequencing of the sign has ceased to be a notational or preliminary problem, becoming instead inextricable from the arithmetical construction of the number. This results inevitably from the elimination of notational redundancy in TX, with concomitant erasure of procedural 'intuition.'

Because TX number clusters are intrinsically disordered, a consistent and functional TX semiotic requires re-ordinalization through autonomous (extrinsic) lexicographic procedures, inevitably constructing a cardinally erratic 'number-line' or list/search sequencing protocol. The semiotic economy of TX makes this procedural problem easy to define. As an approximate AOsys analogue, lexicographic TX requires a variant of sequential diplocoding:

- 1) Cluster stringing. Sequencing the components of composite TX-formula numbers.
- 2) Number listing. Meta-sequencing of properly sequenced TX strings.

It might seem sensible to assume the Oecumenic left-to-right reading procedure, since the arbitrariness of this rule makes it unexceptionable, but the diplocoding option matrix necessitates a substantial question as to the consistency/inconsistency of this decision as between (1) and (2) above. Even allowing for this complication, the option matrix for a mechanical lexicographic TX ordering protocol remains highly constrained, consisting merely of twin decisions as to the sequencing of the tick [:], open plex [(] and close plex [)] signs.

Irrespective of the Cluster stringing decision, tick-precedence sequencing of the number list results in a the AOsys analogue previously mentioned (a, aa, aaa ...) 'counting' through the infinite series of binary powers before reaching any nonbinary number. The list is initiated by TX *2 = '!'.

Plex-precedence produces a far more anomalous list-line, one that is non-originating because it 'begins' with a series of arbitrarily large hyperplexed primes, notationally initialized by unending open-plex signs [(((((((((((((...], since '...(' precedes '...(('. Listing practices following a plex-precedence protocol necessarily begin in the middle.

[My assumption is that semiotic consistency (across clusters/lists) is to be preferred, with the sheer weirdness of plex-precedence sequencing making a strong case for its adoption. The 'alphabet' (ordinal code) would thus be described by TX *3 = (:).]

In his own brief comments on the cluster sequencing problem in the Project Scar report, Barker restricted himself to the observation that Euclidean (cardinally consistent) ordering was no more than a "provisional and arbitrary convention" which would quickly break down "given nondemonstrative numerical values [anything but very small Naturals]" that the problem should be considered "merely technical and extrinsic" and "probably best decided on communication-engineering grounds."

Given Barker's Project Scar research orientation, focused on "nonlinear recursively-embedded planar semionomic dot-groupings of cryptogeologic origin" - anomalous cryptoliths - it is not surprising that he came to the notational ordering problem late and distractedly. Just days after completing the "Appendix on Notation" Barker came entirely unstrung.

Stricken by revolting tropical diseases, increasingly obsessed with an interwoven tangle of cosmopolitical conspiracies of various scales, and multipliciously agitated by teeming microparasites of dubious reality, Barker's plummet into noncommunicating delirium is charted by the digressions into doggerel annotating his Project Scar research report:

A chattering tide

Devouring my hide

Starting from the Outside

This is the slide ...

And Yet

In the same twitchy, spintered handwriting Barker remarks:

The xenotation continues to disorder itself as it condenses, tearing up the number line, devastating time and sleep. Perhaps it is a weapon from outer space. I say that seriously, even if it is a sickening kind of joke. There is no sleep, everything is broken, everything connects without joining, swarming, pulsing, dots, specks, dust particles dancing inside my eyes, continuously ripping ... thought has become a disease ... I even heard a voice (how ridiculous) saying: 'You must isolate the xenotation before it disintegrates the time-line.' It's just the fever of course, but the tic systems are all shuffled together now, shuffled together with this filthy disease and its cavernous speckled dreams and even Jolo admits that the markings are spreading over my skin, bites or rashes or maybe even colonies ... so the line has rotted through, disintegrated ... there's no line, that's the message, and yet ... And Yet. ... counting is ineluctable and unsurpassable ... You have to check it, re-check it continuously, but it's true. How could the hyprime indices be decided without a countable ordinality? They have to come from somewhere, from a matrix, a culture, even if the clusters seem to rip everything apart they **MUST HAVE BEEN COUNTED** at some stage, before dissimulating themselves and scattering again ... And yet we can only make sense of

these dots and ripples by counting primes on a line that remains successive and integrated, developing reliably, communicable, they have a past, a true lineage, even if it's difficult to think, even if they tear it apart and make of it something shattered and insane, something diseased ... but really I don't blame them, NASA of course knew nothing, but even they knew nothing, they just arrived, why should they remember? Memory is impossible for them. In any case, it's just a disease, I understand that now. There's no malice ... not even real cruelty ...

Note. While there is no reason to believe Barker had exposure to, or interest in, the Anglossic Qabbala, the emphatic reiteration of 'And Yet' suggests he had feverishly identified it as a synonym for counting, perhaps even for temporality. (AND YET = 123).

Comments: TX2

u/c: to start, tentatively, at the beginning (and given the density of the above I'll allow myself the position of naive devil's advocate to open up discussion):

It might be that the claim of TX to be 'the most radically decoded semiotic' slightly premature given that the set-theoretical conception of number (as described in detail by la Badiou) counts the natural number line but without recourse to anything as outrageously unseemly as Barker's "deplex", requiring only the notion of membership, and including 0 and 1 simply through a shelling procedure

0

(0)

(0,(0))

(0,(0),(0,(0)))

where each number consists of its predecessor's elements plus the 'name' of its predecessor.

Here, also, it is a matter of non-ordered 'clusters' (what else is a set?) each with a unique internal structure.

Barker's approach understandably valorizes the primes for their robust uniqueness, using them as particles of absolute difference; thus primes become the 'substance' of a radically-differentiated number system. However this is done without reflecting that

extraction of the primes is itself a complex secondary (operational) product of the number line (though I guess we will have to explore this point a lot more). Since Barker then denies access to the number line, is it any wonder that the number line has to be 'retrosynthesized'? This has all the makings of a 'philosophical' system, the untransparency resulting from the immediate interment of the conditions of its own possibility serving as a sign of its radicality or primacy.

The set-theoretical conception is stronger insofar as it does not require any 'substance' in order to create the number line, it really does create difference from nothing. In contrast, if one were to pick apart all of the 'primitives' and operations of Barker's scheme it would reveal a lamentable weight of assumption. How could you trust it without already having absorbed a headful of oecumenical convention?

Reza Negarestani: Excellent, Nick ... just skimmed through this (need more time to process and read it completely)

u/c: afterthought: maybe I'm confusing what is intended as 'a semiotic' with what is intended as 'an ontology'. But that would be more than a 'mere' confusion - it would relate to the vexed question of the relation between ontomath (the 'being' of number(s)) and popular numerics (their empirical variety and semiotic proliferation).

ps. R - hope you're not in vicinity of apparently savage seismic activity over there ?

northanger: nick, i'm illuminated by this piece. shit! you should have written it long before.

Nick Land: u/c - try to respond to you first because you're speaking numbo ;)

your key point (hope i've got this right) that Peano axiomatization of arithmetic through set theory provide construction of the naturals no less decoded than those of TX. Don't want to rush this 'cos i think it's important (and we should come back to the Peano thang anyway - interesting that both (inc. TX) rely on recursive embedding) - also key topic for 'meaning' of decoding

but (for moment):

1) Peano Naturals can be 'decoded' by simply tallying - why are they a superior code in this (pop. numeracy, pragmatic, or properly arithmetical) sense - in contrast to a logical one- than a simple tally I, II, III, ... (as employed in the dreadful 'Contact' movie mentioned in first TX post)

2) Peano's system also raises none of the ordinal/cardinal disjunct problems mentioned in this post - OK, this ambivalent topic at least, since this problem seems fairly brutally intractable, and also made points to an axis of ciphering rather than 'coding' ...

Gotta go right now ... more ...

northanger - "question is piet (cos i know there is one): what is the tic-prime connect with this bizness?" - thanks for that ;)

u/c - [MiNiDoGon issues partly scrambled last comment] ... kicking myself for not addressing Peano construction in post (maybe next time) ... IMHO Euclid (FTA), Goedel and Barker grouped together over against Peano, Russell (Badiou(??))

on numerical vs logical construction of the Naturals.

As sets, Peano number constructs virtually disordered in way profoundly analogous to tic-plex clusters, but when it comes to a synthetic ordering protocol (i.e. extrinsic notational rule for ordering semiotic, akin to a grammar and list-sequencing principle) Peano constructs achieve ready isomorphy with Natural number line by coding treating '0' as 0, close plex ['}]' as '1' and open plex ['{' as '2' (for both clusters (sets) and lists). Thus:

$$0 = 0$$

$$1 = \{0\}$$

$$2 = \{0\{0\}\}$$

$$3 = \{0\{0\}\{0\{0\}\}\} \text{ etc.}$$

Arithmetically and lexicographically consistent.

TX indexing function, which derives code from number line, rather than overcoding the number line with a logical code, accounts for its vastly more complex ordinal-notational behaviour

"primes become the 'substance' of a radically-differentiated number system. However this is done without reflecting that extraction of the primes is itself a complex secondary (operational) product of the number line[?]" - this question reveals complete intellectual resonance with Barker's slide into tic psychosis - the number line is 'ineluctable and unsurpassable' for exactly the reason you indicate, but it is also notationally (culturally) inaccessible from starting point of tic-system assembly - an intriguing dilemma when pushed (virtually mapping an intrinsically (hyper)parasitic semiotic/culture as that most attuned to a pure numeracy (freed from exogeneous lexocoding)) - highly suggestive of Shoggoth intelligence (essentially nonoriginal but autonomous)

"the vexed question of the relation between ontomath (the 'being' of number(s)) and popular numerics (their empirical variety and semiotic proliferation)" - hope we can get back to this

piet - "the humanistic philosopher of mind soon finds himself replaced by the robotics scientist" - popping the champagne already ;)

Woelfli ref. highly interesting

Reza Negarestani: u/c,

ps. R - hope you're not in vicinity of apparently savage seismic activity over there ?

Hey thank you; yes, I'm far away ... It's a long time that geo-conspiracist speak about two earth-shuddering catastrophe in Tehran and Shiraz (the Fars province) ... for centuries Shiraz has escaped all kind of xeno-invasion and disaster, the crafty Shirazians bribed the Mongolian Golden Horde, these sly dogs also welcomed the Timurids and betrayed their own ruler and surrendered him to Agha-Mohammad Khan (of the Qajar dynasty) to escape his wrath, so speaking of a possible upheaval is fun. ;)

Nick Land: Reza - so no geotraumatism for you then?

Reza Negarestani: *Nick: Reza - so no geotraumatism for you then?*

In Iran, you never know ;) ... maybe the next week or next year.

u/c: - processing tic-matierial (apologies for previous comment was the acronymic yowl of a tired-and-emotional brain hoping to find 7 new comments about neogodelian hypersemiotics and discovering a volume of hypertexted beatpoet memoirs)

re. Rz/geotraumatism : the old ones will find him eventually....don't get too confident...

Azer: *re. Rz/geotraumatism : the old ones will find ****him**** eventually....don't get too confident...*

who, the faceless Nyarlathotep? ;)

u/c: I meant IT (the azeronomous thing)

In fact Badiou's criticism of Peano is that he is still too concerned with semiotics, with the operation of signs, rather than the 'being of number'. The Peano axioms propose too many irreducible signs, define zero negatively, and rely too much on meaning, which for Badiou means Peano is classed with (or represents the numerical root of) postmodern semiotic relativity, for which 'everything is sign':

a (member) \mathbb{N} \rightarrow a+1 (member) \mathbb{N} , an implication that involves three undefined signs, and which "means" that, if a is a number, its successor is also a number. The force of the letter is here at the mercy of signification.

“...Peano thus explicitly renounces all definition of number, of succession, and of 1...”

In contrast Badiou's conception is that numbers simply "are" as form of being (they are not produced through additive coding mechanism, number exists independently as a unique way-in-which-being-can-be-multiple). So:

"Every attempt to reduce the matheme to the sole spatialised evidence of a syntax of signs runs aground on the obscure prodigality of being in the forms of the multiple."

So he contrasts Peano and other failed attempts at producing an operative definition of number with Von Neumann Ordinals (transitive sets of which all the elements are also transitive - transitive meaning that their elements are also parts - understood by B as a sort of 'maximal internal consistency' which distinguishes number from all other forms of being-multiple, which at a certain level break down into inconsistency: "number is a figure of natural being")

Von Neumann Ordinals use only membership to define the natural numbers. The 'ordering' part comes 'for free' (each ordinal's successor defined as that one which contains its predecessor and its predecessors 'name' - and it can be proved that no other natural number can possibly come in-between, so that each natural number creates a 'fault' that makes it radically differentiated, utterly cut off, from its predecessor (this distinguishes successor from limit ordinals...)

Don't want to lose the plot (any of them) here, I'd like to go really slow on this : for instance, I'm not even sure what you (or Barker) means by a 'superior' coding system - one that's easier/difficult for humans to decipher? One that requires fewer axioms? What?

Apologies if I'm wrong on who (Cantor, Peano, Von Neumann) is responsible for what here - I've only Badiou for reference...but there is something important at stake in this semiotics/being question, because obviously Barker is quite horribly aware that he is not dealing with 'mere' signs...

[once again, sorry if I'm sounding like Badiou's latest trumpeter. But he does have the skill of making this stuff seem at once comprehensible and important, which can only be a good thing]

just to clarify:

0

(0)

(0,(0))

(0,(0),(0,(0)))

is von neumann ordinals, not peano arithmetic, right...!

VNO given by:

- the empty set is 0 (in badiou's terms the necessary founding 'decision')
- given any ordinal a , the successor of a is a (union) $\{a\}$ (transfinite recursion)

<http://planetmath.org/encyclopedia/VonNeumannOrdinal.html>

ahem...one last amplification...as I understand it, for B. this system gives the same robust, radical difference to every whole natural number that Barker wants to 'borrow' from the primes.

Nick Land: uc - "von neumann ordinals, not peano arithmetic, right...!"

VN Ordinals certainly, but I'm unclear exactly what Peano's axioms imply for constructing the Naturals (I'm probably just assuming that a set theoretic definition would look like what we've been seeing). Peano axioms (note especially #5):

1. Zero is a number.
2. If a is a number, the successor of a is a number.
3. Zero is not the successor of a number.
4. Two numbers of which the successors are equal are themselves equal.
5. (induction axiom.) If a set S of numbers contains zero and also the successor of every number in S , then every number is in S .

My brain slides off logic without really engaging - wondering also if the same true vis Badiou 'being' - point of 'semiotic' IMHO is nothing to do with ontology (positive or negative) but with practices, micropragmatics - how does logical redefinition or ontological dignification effect in any way what can be done with the sign systems in question?

(genuine - rather than rhetorical - question, but probably missing 'the point')

VNO of course ordinality comes for free, but that is because it defines the number rather than indexing it - this to say, approaching conventional ('Hindu-Arab' decimal) number-signs from TX (rather than VNO) is to treat them as indices, tagging numbers they do not construct - a kind of abstract empiricism in which the referent is not conceived by the process which identifies it, but merely 'named' (as you say). Numerals 'single numbers out' - accessing them (this v. quick i know) a function dramatized by TX or any other semiotic emphasizing prime ordination (since primes elude logical anticipation(?) and thus temptation to lend semiotic construction a conceptually generative role). Assuming this somehow connects with Badiou's ontology shtick since "[numbers] are not _produced_ through additive coding mechanism" sounds exactly right ...

"for B. this system gives the same robust, radical difference to _every_ whole natural number that Barker wants to 'borrow' from the primes." - interestingly enough (?) Crowley is with Badiou on this. Don't want to be dogmatic in opposition, but remain sceptical (due to danger that dissociating numerical singularity from the primes re-opens possibility of logicizing numerical difference)

also (from position fusing ignorance intimately with technical incompetence) still wonder about Badiou's tone (as relayed) - isn't he still employing the ontological 'genre' as a master concept under which number finds a subordinate place as a "form of being-multiple"?

Hobbes says: "thinking is merely reckoning" - tendentious gloss: numerical calculation and associated semiotics are not overcoded by or subordinated to 'deep concepts' of a supposedly less technicist, more profound kind. On the contrary, deep thought is arbitrary vaporizing in contrast to the apprehensive, synthetic purchase of calculative innovation ...

""superior' coding system" - did someone really say that? - crude and fuzzy expression, at best

(practical-calculative) polytics precedes being

u/c: quick answers.

Let's leave to one side the peano/von neumann/whoever point...although btw badiou goes way beyond VNO...I need to read more textbooks...you need to read my dodgy badiou translation

how does logical redefinition or ontological dignification effect in any way what can be done with the sign systems in question?

aren't you partly answering this question by saying:

VNO of course ordinality comes for free, but that is because it defines the number rather than indexing it -

In order to 'index' something (or to posit a difference between defining and indexing) that thing has to 'exist' independently of whoever's doing the indexing, so the question of 'ontology' or at least priority must come in somewhere..?

dissociating numerical singularity from the primes re-opens possibility of logicizing numerical difference)

but there is no 'logic' as such in set-theory, is there?

isn't he still employing the ontological 'genre' as a master concept under which number finds a subordinate place as a "form of being-multiple"?

In a restricted sense, since for him the ontological genre is set-theory - set-theory is contemporary ontology, i.e. currently the most powerful and rigorous way to speak about the being of things regardless of their specificity. Numbers are, I am glossing wildly here, the most direct access 'we' have to being, to the structure of being as such. Thus an ontological interrogation (aiming at statements of the widest possible validity ie philosophy) begins with an interrogation of number. But in order to make this interrogation we have to dissociate the being of number (its internal consistency) from our operative use of numbers. So:

how does logical redefinition or ontological dignification effect in any way what can be done with the sign systems in question?

is a moot point for B insofar as it is already posed in language of operativity (but there must be some way to tackle this without declaring it an insuperable 'differend?'). The most pragmatic question for him is 'what is a situation', 'what does any given situation consist of, how can it best be analysed qua situation'; and he believes that the only way to answer this is by asking 'how is a situation counted'. Which in turn is a

question about the internal consistency of multiple-being as such. In turn I think you (or Barker) needs to define what Barker means by pragmatics. What can be done with coding systems? How does one distinguish between their relative merits or capacities...? Isn't there the danger of getting caught up, relativistically, enthusiastically in the infinite combinatorial variety of possible 'slices' through number whilst missing out on the possibility of pursuing to the root the wonder of their being qua being... (obviously playing angel's advocate here, but not entirely, since I do think that the 'ontology' is more interesting than the multitude of coding systems.)

(practical-calculative) polytics precedes being

how can this declaration be justified (if not phenomenologically, ie 'numbers wouldn't exist if the state didn't support my existence thus allowing me to count' ;)

Nick Land: uc - slow thinning of haze (think a lot of erratic zig-zagging still up the road)

"you need to read my dodgy badiou translation" - pdf problems, but might get acrobat to work here (not in the office)

"In order to 'index' something (or to posit a difference between defining and indexing) that thing has to 'exist' independently of whoever's doing the indexing, so the question of 'ontology' or at least priority must come in somewhere..?" - key point (think we're agreed 'cos we keep spiralling it). Might be nothing but terminological quibbles at stake here, since 'empirical' (synthesis) exactly marks out this topic for me while 'ontology' sets off alarm bells - it's the '-ology' part particularly, implying a higher discourse on the nature of beings, but then 'how is a situation counted' sounds unexceptionable.

Really not clear about 'logic' in set theory - number theory 'saved' from logic by the primes, what marks the irreducibly synthetic element in set theory? (again, genuine question) - issue obviously whether an apparatus of rational construction is predictive of its product - the logicist dream - (which seems to be the case for VNO, for instance, at least insofar as its notational regularity is concerned (obviously no idea how calculative operations would proceed in such a semiotic))

"Thus an ontological interrogation (aiming at statements of the widest possible validity ie philosophy) begins with an interrogation of number. But in order to make this interrogation we have to dissociate the being of number (its internal consistency) from our operative use of numbers." - accepting i need to immerse myself in your

Badiou translation, this is obviously another critical argumentative point, and it triggers all kinds of allergic reactions. A dissociation from the operative use of number seems to imply a thinking of number that is no longer numerical, no longer guided or processed by the workings of number - by 'being' if you/B. prefer - but instead 'interrogates' number from philosophy, ontology (?), from somewhere that does not itself function in accordance with numerical procedures (through numerical synthesis, operationalizing the calculative outsideness of number ('calx' are pebbles, distributed technical multiplicity)). What 'authorizes' ontology? Back here to my partisan 'empiricism' over against a dubious (ontological) conceptualism.

"I think you (or Barker) needs to define what Barker means by pragmatics" - operationalizing the outside (calculation, rigorously effected (machinism))

"Isn't there the danger of getting caught up, relativistically, enthusiastically in the infinite combinatorial variety of possible 'slices' through number whilst missing out on the possibility of pursuing to the root the wonder of their being qua being..." - can see this risk of ineffectual diffusion - but quite distantly (think your polytechnical competence actually makes you more vulnerable to this) - there is a requirement of convergence (questionable perhaps, but think we agree at least), the issue IMHO is whether such convergence is calculative-numeric in nature (or 'ontologico-transcendental'). Goedel strikes me as a crucial reference, since his 'transcendental arithmetic' raises the potential for any 'master discourse' to be re-immanentized within the number line (it's like that Douglas Adams "what's the ultimate answer? = 42" joke, the qabbalistic fetish of 'special numbers' over against arcane doctrines) - that "wonder" (angel whispering in your ear, i know) couldn't be some religious stuff creeping in around the back, could it?

Barker is making machinery for the outside, prior to any insight or understanding that might produce ...

"politics precedes being" - a DG skit (original was v. popular with pomoleftists at one point)

in this version - concrete hypertactical operations of multiplicities cannot be transcended by realities at a higher or more fundamental level

u/c: A bit more (perhaps too 'philosophical') advocacy:

wonder...religious stuff creeping in around the back,

remember, twas you who coined 'hypercosmic delight'!!

polytechnical competence actually makes you more vulnerable to this) -

but surely no 'nobility' in basking in technical incompetence for the sake of a bit of 'wow' ?

operationalizing

Think the problem might be that whereas you see any logos (as in ontology) as the sneaking-in of an illegitimate teleology, it is possible, inversely, to see the valorization of 'function' and 'operativity' as an illegitimate imposition ; isn't ontology *_more_* abstract, *_deeper_* in nihilistic indifference to anthropocentric teleologies, than any quest for the functional, operational, or 'exciting' could ever be? What if the universe doesn't "function" at all (with Badiou, what if there is not becoming, but being, and being is nothing?)

The point is, why is enquiry into 'how different things work differently in interesting ways' *_more_* extropic, more "for the outside" than an explicit enquiry into 'how things are constituted at the most fundamental level'....? If the experimentation is non-goal oriented, then how is the research guided except by anthropo-fiat? If it's a matter of amphibiousness, we need to discuss precisely *_how_*.

Will try to process this again more slowly so as not to crash the spiral....get back on substantive (ie properly numerical) points later so you don't just go Kattak against my onto-advocacy (esp Godel re-immanentization, which I agree really important....but still, doesn't this reinforce the importance of understanding what numbers *_are_* ;) ?).

btw this

polytechnical competence actually makes you more vulnerable to this) -

was what I was trying to get at with previous comments on glossolary : the equation "enthusiasm + meagre evidence = functional mysticism" should perhaps be "enthusiasm - evidence = functional mysticism" meaning that the more you 'molarise' (tendentious term though) mass data the less 'exciting' it becomes (perhaps in direct inverse of science where the more comprehensively an axiom covers totally indifferent masses of data the more scientifically exciting it can be said to be).

nathan b. laruelle:- would it be imprudent to ask whether pure' pragmatism anything more than a philosophical (yes, still philosophical) advocacy of idiocy ?

piet: http://www.newyorker.com/critics/atlarge/?050228crat_atlarge Goedel and Einstein

Nick Land: uc - "The point is, why is enquiry into 'how different things work differently in interesting ways' _more_ extropic, more "for the outside" than an explicit enquiry into 'how things are constituted at the most fundamental level'....?" - key for me is 'explicit enquiry' i.e. what raises this beyond its own functioning (Hobbesian 'reckoning') as if choosing a topic ('functionality / ontology') were a decision transcending the functioning of a disjunctive operation.

It's not a matter of thematizing 'the Outside' (calculatively distributed machinism) but of immanentizing thematization to the machinery that processes it, collapsing the meditative-reflective stance in the name of experimentation.

"What if the universe doesn't "function" at all [?]" - bypassing the universe ('what if there is no universe?') response would be: no functioning - then no reckoning - then no thinking ('high level' or meta-reckoning) - then no 'what if?' of any kind ...

[not gloating at (my) technical incompetence i assure you - accusations of vague envy would be more germane - if you see 'wow' think you're gently hallucinating ... but MiNiDoGon calls ...]

some diverse carriers would be productive at this point, because obv. i'd like to see how the B. nummysticism (with Lovecraftian resonances) unfolds in all its cosmic grandeur ...

Don't think Barker ever obsessive on the 'pragmatism' issue (despite engineering background), it's just that the tic delirium provides a model of connective anti-epistemology, dissolving thinking into microparticle (dust) dynamics

Also think it's important to note that the popular numeracy / pragmatics pole inevitably eclipsed by the 'superior' lucidity of an academically consolidated meditative thinking and tends to get lost, even when it is supposedly being discussed (don't mean this at all snarkily, merely addressing uncontroversial (?) sociological fact that 'the philosophical' is advantaged by a reflective articulacy that draws upon specific social and institutional resources - it is supported by career advocates, over against a mute unreflecting distributed pragmatics (e.g. AOSys praxis) lacking even self-identification or the sense it has anything to argue about, let alone an 'archive' of models and references equivalent to the 'master texts' of professional thought). For instance, alphabetical sorting evidently a popular practice of inestimably greater magnitude

(social impact) than metamathematical axiomatics, yet due precisely to its pre-reflective, diffuse, sub-articulate and operational 'mode of existence' it slips readily into invisibility - doesn't topic of 'popular numeracy' - however slippery - capture something about the (concrete, empirical, distributed) 'existence' of number that onto-philosophical reflection misses? (even if the inverse is also true) - numeracy as a social 'force of production' for instance? or as a catalytic component of planetary mutation under conditions of (K+) intelligenic runaway? numbers and masses (which is not to say measurable quantities)?

"enthusiasm - evidence = functional mysticism" - to take this further, think discrimination required between evidential accumulation and molarization - nano-experimentation surely possible? with its own mode of cumulative molecular development ...

also might involve some degree of 'anthropological' subclassification of religious phenomena (on a spectrum from hyperstitional unbelief (neutralized religiosity as abstract intensity (?)) to theocratic dogmatism (thought police) - with various 'mysticisms' scattered throughout)

u/c: You're quite right, to speak of Badiou in the same sentence as "the universe" was a mistake for which I would be strung up in some european cities.

Think you're right that the philosophy needs to be reigned in to keep this moving but....

I still think your points (ie 'importance' of alphabetic sorting or a fortiori planetary mutation) infected by a [deliberately?] unreflected valorization of 'function' ultimately derived from anthro-history ('social impact').

Still think 'pragmatics' little more than an order-word used to justify what it has already been decided is Good (bit like 'rationality'). Surely from a materialist pov everything is pragmatic (has a material effect) ? And what pragmatic effects did e.g. Crowley's work have? Pragmatic for what purpose/who....? And in what sense can it possibly be cumulative except in the sense of a planetary-scale bricolage....?

Topics of (a)amphibiousness (=priority of manifest entrapment in the strata over merciless programme of abstraction) and (b)experimental types (molar/molecular) suggest themselves: Merging in the definition of the lineaments of a 'methodology' that could be called metallurgical, artistic, occult, tracking, vagabond etc...where the qualities of matter (all those things Badiou wants us to ignore) directly influence the

course of the experiment. (especially in french experiment=experience), but how to think a 'vecu' without the subject and its 'explicit enquiries'?

sorry for revoltingly pious 'how to think' locution - been spending too much time with the wrong sort of batrachians.

northanger: nick - how is the Baker Tic related to ((num(ogram)mysticism))?

nick - if i understand the problem with "pragmatic", wouldn't there be a bigger problem with "mysticism"?

"general purpose decryption protocol' for identifying intelligent signal from alien sources"

there's nothing "mystical" about a protocol?

u/c: yes, but then what use exactly would TX be in building such a protocol... (not that ontology would be greatly helpful, of course)?

Nick Land: northanger - 'mysticism' still pretty much free floating at the moment, perhaps even a token of mild and unformalized abuse (?? (can't even remember who 'started it')) - anyway, Barker a definite nuts-n-bolts type of guy until tic-plague plugged him into the xenoplex - don't think he should be blamed for what various wacky 'neo-barkerians' have done with him ...

uc - guess i'm thinking 'pragmatics' in terms of self-regenerative machines (without extrinsic teleology), but getting the feeling these 'pragmatism' q.s beginning to clog things up right now, i'll do some serious meditating and try to assemble a post ;)

Main thing is not to let jagged edges of the zig-zag chop anything out before its potentials have been effectively exhausted, so worried that crystallization my end of a (bizarrelly oxymoronic) 'pragmatist ideology' beginning to have an oppressive influence on 'ontological' inquiry - but still be interested to get a sense of what the programmatic consequences of particular ontological stances might be. Given a hypothetical working consensus on the 'being of number', what follows? [I'll get Acrobat re-sorted soon, honest!]

northanger: nick - "'mysticism' still pretty much free floating at the moment, perhaps even a token of mild and unformalized abuse" - well, mysticism is sorta "free floating" anyway, lol. maybe you can do a micro-"pin down" on the Tic that might help the rest of us figure out the wider ramifications of mysticism and hyperstition.

uc - "yes, but then what use exactly would TX be in building such a protocol... (not that ontology would be greatly helpful, of course)?" - why is ontology important in developing a communication protocol between machines? bringing up the question: did TX work? was it able to decode alien communication? seems like it did.

uc - don't misunderstand. trying to formulate intelligent question to your "differend".

u/c: (*bizarrely oxymoronic*) '*pragmatist ideology*'

yes, this IMHO not just a cooked-up problem or a 'mere paradox'...

An interesting point is that, given that B selects Deleuze (and particularly, although, or perhaps because, he never mentions them, D&G;) as 'enemies', what 'exactly' is the Capitalism&Schizophrenia; 'position' on number - AFAIK no-one ever tried to explicate this at length (except for 'mechanomics', and that hardly 'explained' anything ;)

Just thought I'd point out, since it might help smooth things over between Badiou and Barker, that the former's preferred description of what Numbers, in their (one might say 'noumenal' ie beyond what we do _with_ them) Being is 'fourmillement' = swarming or tingling.

northanger: uc - i thought the "differend" (can you unpack that one?) was between number theories. sounds like it's between Badiou and Barker? Badiou = mystic and Barker = ???

barker's schizo?

ah, Barker's pragmatic. yes?

u/c: (time-thingy there...probably another one by the time I've finished typing this)

why is ontology important in developing a communication protocol between machines?

No, it's not, that's what I was saying.

This question of signal-processing is massive....It seems there are two different questions which might be asked:

(1) Given a hypothetical ergodic signal, what procedures can be used in order to extract signal from it, or to determine whether it contains signal

(2) What methods might be useful in opening up 'human' semiotic systems to interference from "intelligences" immanent to "the universe" (or at least, distributed and communicating in ways non-analogous to two tin cans strung together)

The first is presupposes a channel of communication (carrier signal) through which a 'message' might be being sent, so it proceeds at once through a selection and assumed stratification (something like SETI, for instance).

The second is asking a question about matter "itself". It connects obscurely (I've been thinking about this for a long time but haven't got anywhere) to a kantian 'aesthetic judgment' or what Reza called the psychogeographical 'event'.

The first is more 'scientific' but in a sense far more scattershot and rather lame. The second is open to charges of being 'subjective'

Where ontology fits into all of this, I don't know....

There is a lurker round here who I'm sure could sort this out for us....

north: B-du not mystical; rather, he believes that inquiry into number goes by way of an understanding of what it is independent of all usage, therefore the 'differend' (=assumed-irreducible difference of position between two parties) is (schematically) philosophical/pragmatic

northanger: uc - "B-du not mystical", well, i will leave you two to it then. lol. me clueless. too much math.

uc - "B-du not mystical; rather, he believes that inquiry into number goes by way of an understanding of what it is independent of all usage" -- (sorry) if you switch "god" with "number" you have mysticism.

"therefore the 'differend' (=assumed-irreducible difference of position between two parties) is (schematically) philosophical/pragmatic" -- and isn't this the problem (argument) between monotheism and atheism? (forgive me if i'm totally off the wall with this)

oops - switch "number" with "god"

u/c: leaving aside the fact that the last thing I want to do right now is have another discussion about atheism....B-du's position is staunchly atheistic and non-anthropocentric in that there is no 'all of being' (ie god) and that being is not defined

by our access to it. It's not really mystical to say that there are things to which we have no access, is it? But you're right, I'm not entirely clear on what 'mysticism' does mean now ...

IMHO the only element in B-du that can be called 'mystical' (apart from an occasional 'wonderment' at the sheer immensity of number) is that he distinguishes between being and event, event being the irruption(=something you didn't count on happening) of the 'uncountable outside' of (being=what can be counted).

But let's not get into that (unless someone else wants to try to explain it).

Anyway, the little manoeuvre of 'Switching "god" with "number" ' is bound to move the goalposts somewhat, don't you think...

the difference is more to do with (a)wanting to build a theory that will endure and that will enable you to analyse anything whatsoever, ie philosophy/mastery/phallogocentrism; and (b)wanting to make things happen, just to see what happens with whatever happens to be at hand ie pragmatics/participation/idiocy. The question is whether one of them is a bizarrely contorted version of the other (or whether they're both bizarrely contorted versions of something else)

northanger: uc - can't help but put these two together:

"And what pragmatic effects did e.g. Crowley's work have? Pragmatic for what purpose/who....? And in what sense can it possibly be cumulative except in the sense of a planetary-scale bricolage....?"

"(2) What _methods_ might be useful in opening up 'human' semiotic systems to interference from "intelligences" immanent to "the universe" (or at least, distributed and communicating in ways non-analogous to two tin cans strung together)"

i don't know crowley's system very well, but your #2 sounds like him. and, from my experience, the taro and astrology are two semiotic systems open to "interference". they're just not "pragmatic".

u/c: precisely. They don't actually have any appreciable effect on reality whatsoever (unlike, say, Turing's work). So in what sense can taking inspiration from Crowley and his ilk be said to be 'pragmatic'?

and insofar as they are open to interference without 'topdown' guidance as to what is being looked for, do the results collected add up to anything more than a mere blow-by-blow phenomenal description of experience...?

northanger: uc - "appreciable effect on reality" - oh yeah? (i'm working on the C part).

uc - don't worry, not a discussion about atheism.

imo, critical issue about Barker's TX:

[1] no it doesn't work, let's find something new.

[2] yes it works, but it drives you nuts.

[3] yes, spot on!

what evidence do we have that TX worked as intended?

"...unscrambling cryptic dot-clusters and factor-strings into hints of alien contact. Xenotation is clicking together, a mathematical antimemory where things meet ... Try to figure it out and somewhere you cross over, which is problematic in various ways. Unexpected difficulties infiltrate the calculations tick-systemic interchatter implexes through plutonic torsion, a descent into the Outside. When NASA sees Barker's report, it flips - nonmetaphorically - into another phase. A passage through institutional criticality occurs spontaneously, a conversion of stack-tectonic torsion, triggering some kind of latent security-reflex, or bureaucratically fabricated suppressor-instinct, extrapolating the exact affective correlate of Anthropol. They were waiting for this. Waiting for a long time."

uc - "pragmatic" and "topdown guidance". off the top of my head: guerrilla tactics, large companies spinning off smaller companies, judo strategy.

what do you mean by topdown guidance?

uc - "It's not really mystical to say that there are things to which we have no access, is it?"

after reading about differend, i agree.

"IMHO the only element in B-du that can be called 'mystical' (apart from an occasional 'wonderment' at the sheer immensity of number) is that he distinguishes

between being and event, event being the irruption(=something you didn't count on happening) of the 'uncountable outside' of (being=what can be counted)."

surely this isn't mystical, it's life itself? it's a miscarriage, an earthquake, a car wreck, a bad bit of undigested beef.

"Anyway, the little manoeuvre of 'Switching "god" with "number" ' is bound to move the goalposts somewhat, don't you think..."

no. this goes back to "access" and "differend". for one person it *is* moving the goalposts, for another it's not. ever get a SHOCK and when you look around, life is still lifing unaware that it should "stop"? you've just had this EVENT - but everything does not stop. and when there is no language for that to be expressed ... silence.

my experience with crowley falls under that.

uc - ever read or watch "the right stuff" by tom wolfe? those first astronauts were *drilled* on what to expect & how to handle every situation. imo, crowley does the _same_ thing. the difference? one group had a president and a nation behind them -- the culture was impacted. their experience was never questioned.

that's topdown guidance.

imo, Outside contact IS occurring already. but there is no structure in place in which the culture can experience and validate it.

u/c: topdown guidance = simply, deciding parameters of the research programme in advance

events, etc. OK, we're going to _have_ to get into it now...For B-du the event only 'exists' as such through collective fidelity to it after it has happened - since the event 'itself' is of the uncountable real, what is essential is for those who experienced it to literally 'realise' it (make it real) by remaining 'true' to it (=making a truth out of it).

All a bit hyperstitional, if you ask me.

But you're right, this process of truth-fidelity does seem, if we allow ourselves a non-technical use of vocabulary, to refer to 'life as it is lived' as opposed to the 'brute facts of being', and there is definitely this explicit division in his thinking. Maybe the 'pragmatics' of hyperstition is entirely on the eventual side of the B-duian divide, and wants nothing to do with Being at all.

But (and I'm getting into territory which I'm not at all sure about here) what makes an event important or effective, I would have thought, is that fidelity to it makes a real (=universal or potentially universal) difference in the way being is perceived. So the crowley-event wouldn't fully qualify in the same way as the turing-event, even if it changed your life. In this way, B-du reveals his communist as well as his mathematical roots (and this is why he criticises D&G; for putting forward a model where each individual can tend to their little intensities and BwOs)

which is to say - brutally - that unless you can create a truth out of a mystical experience, that is to say realise it, then in a very real sense, nothing has happened. The world of phenomena, and ones lived experience relating to those phenomena = nothing happening = no subjects, simply mechanistic persistence. Collective production of paradigmatic shifts in conditions of possibility=something happening=emergence of subjects.

You realise I'm now in the position of neither arguing my own position nor being sure I'm arguing any other assignable person's either....I'd better stop.

northanger: uc - "collective fidelity"? i would rather be murdered than raped. imo, american culture does not support "uncountable real" (if i understand your meaning.

"essential is for those who experienced it to literally 'realise' it (make it real) by remaining 'true' to it (=making a truth out of it)." - it's slightly easier to say you've been raped, sexually harassed, abducted by aliens. maybe someone will believe you if you keep pushing the issue. why bother at all?

"Maybe the 'pragmatics' of hyperstition is entirely on the eventual side of the B-duian divide, and wants nothing to do with Being at all." - yes, i'd agree to that to a point. which is why i want nick to pin down "mysticism" bizness.

"what makes an event important or effective, I would have thought, is that fidelity to it makes a real (=universal or potentially universal) difference in the way being is perceived. So the crowley-event wouldn't fully qualify in the same way as the turing-event, even if it changed your life." - exactly what do you mean by "fidelity"? i'm a black slave in 1826 and i must maintain fidelity to the fact that i am human, even though i am viewed as property. what are my choices exactly?

"In this way, B-du reveals his communist as well as his mathematical roots (and this is why he criticises D&G; for putting forward a model where each individual can tend to their little intensities and BwOs)"

gosh. don't tell me D&G; had anything to do with the "ME Generation".

uc - "which is to say - brutally - that unless you can create a truth out of a mystical experience, that is to say realise it, then in a very real sense, nothing has happened." - that's not brutal, that's fact. it can also be cognitive dissonance for the unfortunate. something that you have to learn to shut down (if you experience the mystical) in order to keep playing the game of "Being".

"Collective production of paradigmatic shifts in conditions of possibility=something happening=emergence of subjects." bingo. now you're talking. collective production = hyperstition. purple monkey wants to know what are the parameters?

uc - "unless you can create a truth out of a mystical experience, that is to say realise it, then in a very real sense, nothing has happened." - revisiting this: define "create a truth" & "realise it". culture may determine what is "real / not real" & the mystical may be a subset of the unreal. however, mystical tradition provides ways for individuals to validate their experience and know the difference between hallucination, schizophrenia, and mysticism. can be extremely thin lines however.

pict: yo, yall are on a trawl, I'm tickled to a tangle, . . . in pure gratitude I offer a rusty little suppressed premise mistifyer belowprint I have in the upstairs chockra for free, somebody better come pry it loose and carry it of before the bodybuilding collapses, and I meta it.

northanger: why is ontology important in developing a communication protocol between machines?

we need an ontology to help () communicate between protocols = protoplasmatics and vica versa by the way . . . which is why neither end of the ludilubology looks very rosy rite now.

u/c: uc - "*collective fidelity*"? *i would rather be murdered than raped. imo, american culture does not support "uncountable real" (if i understand your meaning.*

uuhh, well I don't understand yours...."*collective fidelity*" means, basically, a bunch of people get together and talk about what the event means and what they should do in order to 'stay true' to it (ie after the initial, unplanned irruption of the bloody upheaval of a revolution)

making a truth out of it)." - *it's slightly easier to say you've been raped, sexually harassed, abducted by aliens. maybe someone will believe you if you keep pushing the issue. why bother at all?*

not sure where the rape meme came from...not sure what you're saying here...

changed _your_ life." - exactly what do you mean by "fidelity"? i'm a black slave in 1826 and i must maintain fidelity to the fact that i am human, even though i am viewed as property. what are my choices exactly?

exactly the opposite, B-d would say that a slave revolt or (better example because pinpoints the event to a particular moment in time) the event of refusing to go to the back of the bus (an 'unthinkable' occurrence in the status quo) would provide the event, BUT in order for it to become REAL, would require the fidelity of thousands, sometimes working extremely hard with little apparent progress, sometimes feeling that the truth of the event had been 'lost' - but it would take their collective fidelity to the event and the truth that it proposed (the universal declaration that henceforth blacks are people and equal members of the community) to become an ACTUAL universal truth, a reality....(and in some sense the 'work' of fidelity is never over). Obv. you can see why in some sense this is something like a politicised hyperstitional position.

gosh. don't tell me D&G; had anything to do with the "ME Generation".

yes, well, this is exactly what is at the root of B-d's antagonism towards "postmodernism", precisely that. He sees the current state of affairs as the result of the failure to tend to the truths that the enlightenment, as event, produced, and a takeover by mere combinatory mechanism (capital).

however, mystical tradition provides ways for individuals to validate their experience

think you can see from the above why 'an individual validating their experience' would be in certain respects an oxymoron for the Big Bad. (and btw I'm sick of answering for him and refuse to do so any longer! Consult Mr MKP in future...)

northanger: p - "we need an ontology to help () communicate between protocols" - i see your point. in software development ontology=specification. are hyperstition protocols similar to internet protocols?.

"I offer a rusty little suppressed premise mistifyer belowprint I have in the upstairs chockra for free" - for free? only have to jump through one hoop. okie dokie.

uc - rosa parks. excellent point.

uc - rosa parks experienced a lifetime of inequality prior to refusing to get up. what kicked her over that day? THAT WAS THE TRIGGER. would i rather be raped daily, or get it over with once and for all? she could have died that day.

piet: "therefore the 'differend' (=assumed-irreducible difference of position between two parties) is (schematically) philosophical/pragmatic"

you ever tried organizing a debate between idiot savants? Say, between Bill Meegan and Dolf Boek (I did and failed, but Szabo and the torah science fella fell out with each other). Try and you'll find your formula don't apply unless of course you shine (diffmakin) light across the pragmatic end of the stick -- some walls are made of doubt, keeping in and keeping out . .and if there is any hope for our love at all, some walls must fall -- Maura O'Connell

I suppose that severely contaminated rubble is indeed rather irreducible and even if not, will only support the thinnest of slowly toxicity diluting populations full of incommensurable venom neighbour learn to be wary of. The most extensive form of differend: after aeons and aeons of physical versions, now even tiniest (mental) space stuffed up defined as/with 'terra nullius'

"wanting to build a theory that will endure" -- I have heard of penis envy but now propose to rename it rockhard-envy or rocksoliditeitneid if you wanny be nitwitty about it.

uc - "It's not really mystical to say that there are things to which we have no access, is it?"

after reading about differend, i agree.

I should probably 'clarify'the poetpietistic resolution for myst = mist = mix = mud = dry (heavy dark) + wet (clear and readily alighting) oxides = spray = sproutable, after all, how would we find the time to read and come up with the gems after a dig and be down with the presumptiating fuel and fun ingene operating dept

uc - "It's not really mystical to say that there are things to which we have no access, is it?"

after reading about differend, i agree.

I should probably 'clarify'the poetpietistic resolution for myst = mist = mix = mud = dry (heavy dark) + wet (clear and readily alighting) oxides = spray = sproutable, after

all, how would we find the time to read and come up with the gems after a dig and be down with the presumptuating fuel and fun ingene operating dept

northanger: p - mist = gas.

uc - we're back to square one then i think. TX and hyperstition. in the face of this "severely contaminated rubble", exactly what type of agnositic "protocols" can be created to deal with another universal truth? human beings don't like one another, don't understand one another, etc. and that's the problem, imo, with communicating with the Outside. if being human provides no openness, as something easy & fun to be, then we will continue to create protocols, paradigms, whatever that are limited before they become operational.

uc - however, the purple monkey recognizes inherent value in hypersition protocols and wants to pitch in. PM just wants to make very clear who the HNIC is.

"imo, Outside contact IS occurring already. but there is no structure in place in which the culture can experience and validate it."

ever read any arguelles? here's the first of 260 postulates, one of my favorites:
<http://www.earthascending.com/time/postulates1.htm>

here's a sample (from elsewhere): Quote

14.11 The self-evolving planetary network of radiosonic architecture registering the analog functions of the life of higher analog functions is enhanced by the development of "soul boats:" radiosonically crafted carriers of the fourth-dimensional double that extend the activity of the double far beyond the biological life-span of the present era. The human species itself evolves into a race of wizard people whose third-dimensional bodies take root in a type of elementary garden culture, while forms of deep meditation and trance activity allow the projected doubles greater and greater extension into the galactic order of the universal life.

I have them all someplace, probably still online too.

For those who like a lot of numbers with their reality his other work is better, or start here:

A Beginner's Guide to Constructing the Universe

A Beginner's Guide to Constructing the Universe. The Mathematical Archetypes of

Nature, Art, and Science. A Voyage from 1 to 10. By Michael S. Schneider. ...

www.phanes.com/beggui.html -

u/c: Too many acronyms flying about now...

think we need to hush up the Big Bad and start again on TX...

if being human provides no openness

reza has a lot of interesting stuff to say on this, of course...maybe we could even map some of the things we've been talking about onto his distinction between 'affordance' and 'communication'.

northanger: uc - i knew day one i couldn't afford hyperstition. i mean, i enjoy chatting and everything, and the occasional mystic potshot is ok, but really, other than piet's poeticity, your toys, and vauung's tut-tutting - really, hyperstition is just my favorite internet serial show. very amusing waste of time.

but i love it!

p - "ever read any arguelles?" - yup. not that i believed it exactly.

piet: "emergence of subjects."

that is a mighty accurate 'cross' from which the crushage of rock can begin, proper 'placement' and leisurely score to follow falllow; scarecore cared for, punto, period.

oxides = spray = sproutable =spoutenabed = accesoraised =

northanger: p - i'm a sleepy sprout. cya later.

u/c: I think to really get a grasp on the TX I'll have to.....build a new gadget....sweet dreams thanger ;)

pacal votan: Dynamics of time -- whatever you might think of substance choice, he scores hi on attempts to rigorize and materialize the elusive.

<http://www.pan-holland.nl/downloads/DynamicsofTime.pdf>

u/c: ROFL

Nick Land: Uc - "to really get a grasp on the TX I'll have to.....build a new gadget" - [swoon]

northanger: "build a new gadget" - the visual always works best with me :) (actually, i'm kinda beginning to understand the TX thingy)

Nick Land: northanger - don't let the philosophers (not to mention poets) muddy the water - practice using it ;)

"spot on!" - deliberate joke?

p - "protoplasmatics" = shoggoth engineering? (If so, agree we should be doing a helluva lot more of it)

uc - obviously have issues with your formulation of philosophy/pragmatics 'differend' - 'i'll be back' ...

northanger PS. loved the solar tadpoles

northanger: nicky - "don't let the philosophers (not to mention poets) muddy the water - practice using it ;)" - okie dokie :)

"spot on!" - deliberate joke? - nope! honest.

yes. solar tadpoles, the fanged noumenon. (what's a fanged noumenon anyway?)

Nick Land: northanger - you think solar tadpoles are avatars of the fanged noumenon? that wasn't an angle of the story i'd picked up on ...

northanger: nick - "you think solar tadpoles are avatars of the fanged noumenon?" - qabbalistically speaking. the unpragmatic esoteric side of things.

Nick Land: Duh !

northanger: hehe

Nick Land: TIC XENOTATION = (((:)))((:):) = HYPERSTITION

northanger: HOLY DAEMON ANGEL = 286

((())) = 11

((:)) = 13

: = 2

(i saw that mistake buster!)

Nick Land: northanger - "(i saw that mistake buster!)" - Damn!!

last shreds of credibility shot to hell

northanger: "Damn!!" - yeah, i copied it and thought to myself: this is w.r.o.n.g! (not going to tell you what that helicat of a purple monkey said! nope, not me)

nick - ok spill. hand over the rest of the tic or i let the monkey go. (which reminds me! what animal is hyperstition) brb.

hyperstition is THE GREEN MONKEY!

<http://www.chinesefortunecalendar.com/2004.htm>

Nick Land: northanger - "i copied it and thought to myself: this is w.r.o.n.g!" - thank the wellspring of archaic evil that i switched it before anyone else noticed - as it is, they'll just put the whole episode down to thangeroid hallucination and delusions of grandeur

northanger: nick - "as it is, they'll just put the whole episode down to thangeroid hallucination and delusions of grandeur" - you're a small man nicholas. a small man.

Nick Land: Bwahahahaha

northanger: what is this bizness? "Bwahahahaha" evil laughter? hey! are you ever going to give us that tic list?

Nick Land: northanger - "tic list" - ordinated tic clusters?

northanger: nich - "ordinated tic clusters?" - um. yes!

Nick Land: nothanger - Good idea. Soon.

u/c: nick, are you familiar with 'surreal numbers' (on which Badiou bases 'his own' theory of Number-with-a-big-N)?

It's pretty strange...each number is composed of two ordinals, the matter and the form, and the 'difference' between any two numbers is determined by the smallest

ordinal which discriminates between the two (is in the matter of one but not the other, or is in the form of one but not in the form [or in the 'residue'] of the other).

Nick Land: uc - utterly unfamiliar, but sounds fascinating - if not Acrobatized by end Sunday I'll start whinging, but anyway will google my way to some crude approximation of comprehension on this specific topic ... (twin ordinalization clicks onto all kinds of stuff ...)

northanger: nick - gee, that means we're not getting the ordained tic clusters anytime too soon.

u/c: don't worry, I'm working on some tic-related goodies (by ordained tic clusters do you just mean an ordered list of numbers in Tic-language?)

And just to prove that programming languages can be beautiful, how about this supercompressed (46 char) Perl sieve of Eratosthones that I came across in the process (btw practical use of this system surely compromised by the need to do this first):

```
sub sieve {  
sub p{$_[0],$#_?p(grep$_%$_[0],@_):)}p 2..pop  
}
```

...pure poetry! And, AZer, my fellow fan, it looks like one of the ideographic swear-words out of Asterix, too...

piet: if that appeals to your sense of poetry you might like a fella called Sondheim, talk about runny and run on ..except it seem rather lobotomized compared to Rickels most of the time

Nick Land: uc - if you can pull this off you'll simultaneously produce a humungous discussion topic (stretching from cryptography and erratic series to AI and shoggothic cultures)

northanger - "we're not getting the ordained tic clusters anytime too soon" - if uc hasn't got his miracle machine up and running by monday i'll put up a modest list (1st 127 primes) as a provisional resource ...

uc - lots of q.s of course, but mostly i'll wait - one i can't refrain from: how are you sorting out the cluster-ordering problem?

northanger: ::scratching head::

sub sieve {

sub p{\$_[0],\$#_?p(grep\$_%\$_[0],@_):)}p 2..pop

}

poetry. ::nodding head vacuously::

u/c: since the clustering doesn't matter, I'll just sort it out by leaving them however they happen to come out (probably in prole-numerical order)

nb. surreal numbers comment above slightly misleading : not a question of 'pairs of ordinals': the 'form' is a part of the matter; so it can be more than one ordinal, even a 'holey set' of ordinals

- Examples :

N=(1,0) - matter is 1, form is 0 (which is contained in 1) - [this Number is -1]

N=(w, w) where w=first limit ordinal(aleph 0) - [this number is w 'itself']

N=(w, (3,587,1165)) - 'dispersed' form in the matter of w [he doesn't tell what this number is in 'normal' terms (haven't finished the book yet!)]

Nick Land: uc - i know you're trying to be helpful ...

northanger: uc - uhuh.

ROBINHOOD [ALCYONE] (NW by N :: 03Ge00 :: CROWN CHAKRA {Sahasrara}) 332° FROM YILDUN @ PATH 1: ADMIRABLE or HIDDEN INTELLIGENCE–The FIRST (1) Path is KETHER (Crown) = I THE MONAD (Aces) :: EON PHASE: 36 (Phase Arc 330° ~ Semi-Sextile) : Fruition, Creative Imagination, "Last Judgement", Closing.

NASH [DENEK KAITOS] (West :: 03Ar14 :: SOLAR PLEXUS CHAKRA {Manipura}) 272° FROM YILDUN @ PATH 19: INTELLIGENCE of all the ACTIVITIES OF THE SPIRITUAL BEING–The NINETEENTH (24) Path from Netzach to Tiphereth = ATU XI LUST = LEO = TETH :: EON PHASE: 28 (Phase Arc 270° ~ Square) : Integration, Vision, Crisis of Meaning, Congruency.

"uc - i know you're trying to be helpful ..."

rotflmao

u/c: I ought to shut up until I understand what he's on about, really - it's just so intriguing...

anyway, back to tics:

<http://www.urbanomic.com/cgi-bin/ticx.pl>

does the first 500 - Haven't checked thoroughly but I think this is right (prime factors shown in brackets to the right).

You may be interested in the rather nice recursive procedure for ticnotation (even if I'm not such a great poet...). @primes is the array from the Erastosthenes' Sieve (all primes up to n).

```
sub tic{
my $num=shift(@_); # $num is the number to convert
my $count=0; # counts the prime index
if ($num==1){return;} # nothing more to do in this case
foreach $prime (@primes){ # cycle through primes
$count++;
if ($num/$prime==int($num/$prime)){ # if divisible
if ($prime==2){
return ":".tic($num/$prime);
# divide & recurse, adding ":"
}else{
return "(" . tic($count) . ")" . tic($num/$prime);
# divide & recurse, adding "("
}
}
```

```
}  
}  
}
```

This results in ordinal ordering of clusters (but you could easily do it the opposite way by changing "@primes" to "(reverse @primes)". Any other requests should be easy given this basic procedure...

sorry, all the carefully formatting of that code got lost ;)

Actually it's not just recursive, it's syzygetic-recursive, since it often shoots off in two directions, recursing the prime count inside the brackets and the remainder outside.

just out of interest (??) here are the first 9 numbers according to the set-theoretical interpretation, showing their formidable 'internal consistency':

<http://www.urbanomic.com/cgi-bin/sets.pl>

and the correspondingly elegant code:

```
sub ordset{  
  my $num=shift(@_);  
  if ($num==0) {return;}  
  else {return ordset($num-1)." (.ordset($num-1).)";  
  }  
}
```

realistically speaking, can anything except for its 'icy desuetude' and anthropo-unfriendliness stop this from taking the crown of 'the most radically decoded semiotic ever to exist upon the earth'??

northanger: uc - 'internal consistency' - yes, it is formidable:

GON1 77 = DECODED SEMIOTIC = BEHOLD IT IS REVEALED.

lol

Nick Land: uc - well that's got them (500 TX clusters) down cold (should keep northanger happy for a moment - thus putting me out of a nicely mechanical post), but when you say 'gadget' you set all kinds of weird neural juices flowing for dynamic machines - am i to assume your program description would do the job?

hope the ghastly impracticality of the VNO now exposed for all to see ;)

northanger: <http://www.urbanomic.com/cgi-bin/sets.pl>

<http://www.urbanomic.com/cgi-bin/ticx.pl>

these need to be added to the hyp-index.

"hope the ghastly impracticality of the VNO now exposed for all to see" - um ... never mind. lol.

u/c: Just had a thought - Would be fairly easy to define ontology simply as the shortest program-length (qv.Chaitin, Kolmogorov) definition of Number. Modifying this to 'the shortest program-length definition we can think of' and defining it as the upper limit of a 'perfect minimum description' would nicely "define out" any relation to the practical/human/etc. This could easily run 'automatically' and independently of any of the suspect connotations of 'ontology' - it would be an attempt to get as close as possible to the (assumed but not absolutely posited) 'way things are' defined simply as maximum compression.

On the other hand, is "practicality" the criteria for a 'semiotic', as you seem to suggest: if so, once again, practicality for who/what?? And if 'purposeless practicality' does this simply index an azathothic drive for "more stuff"? All this meant as an attempt to break through possible ideological troll-barriers rather than to erect them.

...I'll certainly take any suggestions for gadgets (but what about decaplex, goddammit!) - don't think these really warrant wider promotion, just a test really...

amplification: you'd need to include the VNO in order to get the ordinals to run the sieve of eratosthenes on. Remember, the program for ticx has to iterate through an ordered set of numbers to get the primes, then iterate through them to make the ticx numbers. VNO program just needs to iterate (transfinite recursion plus membership is all it needs)

So if we're talking complexity/compression then it's not 'more practical' - if there is another criteria (practicality? 'outsideness'? But what could be more 'outside' than

VNO's abysmally intricated holey spaces that are totally intractable to human eye? ,
let's hear it....;)

thus putting me out of a nicely mechanical post),

I'm sure I detect a hint of wistful regret

Robin: # No need to work out the primes in advance

```
$max = ($ARGV[0] || 100);
$[ = 1;
@primes = (2);
%tics = (2, ':');
%decomps = (2, '2');
newprime(2);
print "ticX 2 = $tics{2} [ $decomps{2} ]\n";
for $n (3 .. $max)
{
if (!defined($tics{$n}))
{
push(@primes, $n);
$index = $#primes;
$tics{$n} = "($tics{$index})";
$decomps{$n} = $n;
newprime($n);
}
print "ticX $n = $tics{$n} [ $decomps{$n} ]\n";
```

```

}
sub newprime
{
my ($n) = @_ ;
for $m (2 .. $max)
{
if (defined($tics{$m}))
{
$tics{$m*$n} = "$tics{$m}$tics{$n}";
$decomps{$m*$n} = "$decomps{$m} $n";
}
}
}
# If you take the slight liberty of saying 1 is the zeroth prime
# and represent 0 by the empty string, then you can do away with '!'.
$max = ($ARGV[0] || 100);
@primes = ();
%tics = ();
%decomps = ();
for $n (1 .. $max)
{
if (!defined($tics{$n}))
{

```

```

push(@primes, $n);
$index = $#primes;
$tics{$n} = "($tics{$index})";
$decomps{$n} = $n;
newprime($n);
}
print "ticXm $n = $tics{$n} [ $decomps{$n} ]\n";
}
sub newprime
{
my ($n) = @_ ;
for $m (2 .. $max)
{
if (defined($tics{$m}))
{
$tics{$m*$n} = "$tics{$m}$tics{$n}";
$decomps{$m*$n} = "$decomps{$m} $n";
}
}
}

```

So that would give you

```
ticXm 0 =
```

```
then
```

ticXm 1 = () [1]

ticXm 2 = (()) [2]

ticXm 3 = ((())) [3]

ticXm 4 = (())(()) [2 2]

ticXm 5 = (((()))) [5]

ticXm 6 = (())(()) [2 3]

ticXm 7 = ((())(())) [7]

ticXm 8 = (())(())(()) [2 2 2]

ticXm 9 = (((()))(())) [3 3]

ticXm 10 = (())(((()))) [2 5]

You could allow for infinite numbers by having infinite strings that satisfied recursive equations, eg:

$X = (X)$

would be satisfied by

(((((((...))))))))

and

$X = :X$

would be satisfied by

.....

Although it would make much sense to try and work out which was the larger infinity (as you can with ordinals), the two examples are nonetheless distinct infinities, as the first is a prime number whereas the second is a power of 2.

Nick Land: uc, Robin - [processing]

Robin: My second comment was bollocks. Given that concatenation of strings is multiplication, the empty string mustn't be 0, as you'd never be able to tell if a number had been multiplied by 0 or not. Whereas if the empty string is 1 then this doesn't matter. This would leave 0 unrepresentable:

```
$max = ($ARGV[0] || 100);
@primes = ();
%otics = (1, "");
%decomps = (1, 1);
for $n (1 .. $max)
{
if (!defined($otics{$n}))
{
push(@primes, $n);
$index = scalar(@primes);
$otics{$n} = "$otics{$index}";
$decomps{$n} = $n;
newprime($n);
}
print "ticXn $n = $otics{$n} [ $decomps{$n} ]\n";
}
(newprime as before)
```

This gives:

```
ticXn 1 = [ 1 ]
ticXn 2 = () [ 2 ]
```

ticXn 3 = () [3]

ticXn 4 = () [2 2]

ticXn 5 = (()) [5]

ticXn 6 = ()() [2 3]

ticXn 7 = ()() [7]

ticXn 8 = ()() [2 2 2]

ticXn 9 = ()() [3 3]

ticXn 10 = ()(()) [2 5]

(Shame the comment system here mucks up the spacing.)

northanger: i don't think these things work. i usually use periods to space stuff.

here's another idea tho (testing...)

ok! first idea worked: use " " - remove quotations.

it works so well, lol! &.nb.sp; (remove periods)

Nick Land: Robin - yes, your tic-less tic xenotation carves out an interesting diagonal between VNO / TXv1.0 - excellent contribution to polysemiotic delirium

On comparison of systems, obviously we have to get beyond zero-sum brutal darwinian survivalism - it's not as if we have to 'choose' a single 'winner' - different semiotics optimize along different dimensions.

TX features of special interest include:

1) Cryption (use of primes and decryption matrices align it with cryptographic problematics)

2) Rhythm (drawing on non-metric (and obscure) pattern of prime distribution)

3) Semiotic economy - this topic divisible into at least two parts: (a) notational 'base' (VNO also v. strong here), (b) expressive concision (this source of VNO impracticality, except as logico-demonstrative tool, since even a machine intelligence would be swamped by a numeracy whose expression increased exponentially relative

to the numbers expressed). 'Practicality' worth examining at greater length, but one ateleological criterion is sheer propagative power: 'pulp potential'. Agree, of course, that 'abstract practicality' a crude and misleading idea.

As far as Surreal Numbers are concerned, seems there are quite a lot of them ...

Robin: Thanks, northanger.

Nick Land: Robin - think you've hit the fundament - don't see how notational economy could be pushed any lower without mindless tallying.

You going to name this thing (without triumphalistic 'TXv2.0-type nomenclature's ;))?

How about 'Nullotation'?

Aesthetically, i'd favour emphasizing the absent inner '0' with a space ['()' rather than '0'] to mark the founding deletion of unity supporting the whole machinery.

TX machine-processible into Nullotation by find-and-replace '!' with '()'.

Assuming VNOs similarly notationally evacuable, since the zeroes/empty set markers have no semiotic value beyond '()'.

Intriguing emergence into apprehension of a whole array of such 'pure plex' semiotics ...

Reza Negarestani: Hey, guys ... i regret that i accepted so many projects this month; before lurking off:

1. Robin, please feel free to rename the new links at the crypromat section.
2. i cast my vote with Nick; open '()' [with an evaporating W] instead of the standard and digitally bugless '0'. '()'hole complex' rocks ;)

See "Machines are digging"

Nick Land: Reza - "()"hole complex" - absolutely

u/c: btw, in case any (quite understandable) confusion (in fact, it's almost a crime against hyperstition to admit this) - "Robin" is not me (uc), but even more bizarrely, another Robin who I know but I haven't met for over 15 years (and, actually, never met sober).

> 0 unrepresentable

isn't this a MAJOR problem...

Nick Land: uc - "0 unrepresentable" - this from where?

On the 'other Robin' - kind of bemused that 2 Robins would be simultaneously programming pure-plex number systems, but hey: 'coincidence engineering' (or hyperhoaxing)

u/c: 0 unrep. in nullotated TX2, according to Robin.

Yes, I'm still somewhat overwhelmed by coincidence explosion (but it's true that although it was never mentioned as such, in former life of sitting around parks in Cambridge, we were both equally reliant on blocking out the mundane world through

alcohol-abuse until such time as noumenopocalyptic calculus became available and made life worthwhile).

Realise would be the most futile imaginable gesture to 'deny' a hoaxing charge at Hyperstition HQ...LOL. The guy's obviously a better Perl poet than me, anyhow ;)

Nick Land: You make a good team :)

Don't think '0' problem need be too oppressive, nullity dilates to swallow unity, making the system deeply zeroic

u/c: btw re Surreal Numbers - it's Conway's Surreal Numbers you want...this is a nice brief expo:

<http://mathworld.wolfram.com/SurrealNumber.html>

this is a more indepth intro (but in PDF!):

<http://www.tondering.dk/claus/surreal.html>

But Badiou's version as you can imagine has a

different bias (but - so he claims - he doesnt make any substantive mathematical changes)

TX2+

Nick Land (February 28, 2005)

Some additional tic talk resources:

Undercurrent's Tic Matrix of the first 500 clusters can be found here:

<https://web.archive.org/web/20061004005347/http://www.urbanomic.com/cgi-bin/ticx.pl>

Also from Undercurrent, first nine Von Neumann Ordinals, here:

<https://web.archive.org/web/20061004005347/http://www.urbanomic.com/cgi-bin/sets.pl>

Still hungry?

Vauung's Tic Matrix of first 127 primes follows:

First 127 Ordinated Primes, with Tic Xenotation, in accordance with plex-precedent cluster-ordering (lexicographic cipher '(:)').

Comments: TX2+

northanger: great! ok, how do these map to pandemonium? is it done by mesh number?

ok, i've got it. (well, i think i do anyway)

Nick Land: northanger - Pandemonium coming, honest!

"ok, i've got it" - care to share?

northanger: yeah, yeah yeah.

um, find north star (polaris) and place gentle Lurgo there since she's in the "center" of the zodiac wheel and represents 32nd path (told ya she was important!). give me a couple of hours to check my math.

LURGO {(Terminal) Initiator - Amphidemon of Openings}

GEMINI 18° to GEMINI 26°

Fixed Stars.....

http://www.winshop.com.au/annew/new_page_1.htm

MEISSA 23GEM42 "Shining One" (Orion)

ALNTAK 24GEM41 Zeta (Star in Orion's Belt)

AL HECKA 24GEM47 Tien Kwan, the "Heavenly Gate"

Nick Land: northanger - keep forgetting you count in Sumero-Babylonian ;)

past time you got some back-up here on the whole 360(°) thing - lack of cosmo-visual imagination largely to blame ... (do you own a telescope?)

northanger: do you own a telescope? - nope.

first problem: i do need help mapping the p-demons to the zodiac because they handle the (a) gates, (b) primes, (c) lotus (right now you got the spheres, but not the paths).

i've been dealing with a 22-letter alphabet, not 28 (ABJAD).

$$22 \times 22 = 484$$

$$484 / 44 = 11$$

possible way to map 44 of the p-demons and place LURGO as THE gate (no attributes, no letter, no nothing).

so what is the alphabet? 22 or 28 letters? those build the gates. or, maybe there's another way to do this.

oh gosh! give LURGO 6 letters and have her create the holy hexagram thingy. which 6 letters?

<http://www.cyberaxis.net/assets/imgs/northanger/220/484-array.gif>

{white diagonal is LURGO space}

another problem: using the ordinal values of the first 484 primes, arrange them in a table where the columns and rows equal the same number. that scramble will give you the correct PRIME SET for Pandemonium.

next problem related to this: leaving Lurgo out of the equation, what are the 22 Pandemonium Pairs?

when you have the 22 P-Demon pairs you can then assign a 22-letter array to each pair. ie, 1st of the pair begins at LURGO, second continues the array (black and gold diagonals).

hope this makes sense to you as the VNO makes sense to me. :)

Nick Land: northanger - " $22 \times 22 = 484$, $484 / 44 = 11$ " very neat, and tastefully traditionalistic ;)

"so ... or, maybe there's another way to do this" - that's what carriers are for, polytrack experimentalism ... lots here v. suggestive

"which 6 letters?" - Lurggo (or Lurgho)?

"using the ordinal values of the first 484 primes" - ordinal values?

PS. No telescope?!

northanger: argh. ok, what i can do tonight, since i have no telescope, is plot them to the zodiac.

Nick Land: you're probably missing all kinds of cosmic tadpoles and stuff ...

Nick Land: northanger - 23, 68??

u/c: 1-100 in Robin's far more efficient, and nullotated, program for TX2, is here:

<http://www.urbanomic.com/cgi-bin/tic2.pl>

I've added the holes too :)

The apparently semiotically trivial removal of the actual tics ('!' symbols) definitely takes the relation with VNO notation to different places....

...but would be interested in exploring the nature of the 'reducibility' of TX2 to VNO (this would bring us right up against the 'materiality' of the primes)

Nick Land: uc - for sure.

PS. Why has 'TX' suddenly become 'TX2'? Also, 'Nullotation' short for 'Nullified Xenotation' hence 'OX' unless anyone cares to argue to the contrary.

u/c: TX2=Nullotated TX=OX= OK, whatever!

has anyone read 'the collector' by John Fowles? Just a warning: don't let Nick take you into the basement to show you his collection of numbering systems.

Azer: *has anyone read 'the collector' by John Fowles?*

Years ago, i loved it.

u/c: ...and now you're living it, LOL!

Fowles "The Magus" one of the greatest works of novelistic hyperstition IMHO

Tachi: guys and gals. we desperately need a glossary to provide instant access to the concepts and terms being used on the site. looking at the side bar on the home page i actually think we are creating more questions - 'what is ...?' i mean, most of these words have been made up in the blog - nothing wrong with this level of creativity but i feel the sire risks becoming too clicky for its own. without clear references to original posts in which many new terms emerged, a glossary is severely lacking. anyone on the case? wish i could help but feel a bit lost myself ..

site ... for its own good ...

(and sorry not sure where this is best posted ... hence also suggested bulletin board)

northanger: Tachi - "a bit lost myself" - you must be joking. that would actually make things worse if the dynamic duo ever got around to creating such an animal. they would have so much fun changing the meaning every now and again. without notice.

Nick Land: Reza will clear everything up when he gets back ...

Agree on need for glossary - i'd even forgotten what 'futhnorking' is ...

northanger: nick - [sigh] you said "deranged futhnorking gnosis of pythagorized extraterrestrialism" about northanger :(

it's obvious piet & northanger should go to another blog. we're so un(der)appreciated in the hyperstitional realm. you & tachi can be really condescending sometimes. you sniff-nosers.

futhnorking - hmm.

fu[th]nor[king]

fu[king]nor[th]

not nice.

nice not.

Tachi: CONDESCENDING=WAR-AS-A-MACHINE (233)

UNAPPRECIATED=FIGURE IT OUT (250)

;))

northanger: FIGURE IT OUT: WAR-AS-A-MACHINE = SITUATING THE DISCUSSION

Nick Land: northanger - think you're confusing 'futhnorking' with 'northfrikin futhnorkery' - the latter has an undeniable edge of condescension about it, but the former is respectful almost to the point of psychotic idolization ...

as you are well aware, when referring to your meticulously constructed hermetic system (though as yet only a mere presentiment of the veritable cathedral of astral science to come - gawd glory!!) as a "deranged futhnorking gnosis of pythagorized extraterrestrialism" i was under a great deal of stress and thus perhaps expressed myself - just for a moment - in terms that failed adequately to convey my sincere appreciation of your titanic efforts :))

PS. Tachi's getting pretty damn good at the AQ battles, dontcha think?

northanger: nick - your clever side-step manoeuvres with slippery astrofied neolemurian futhnorkisms will get you nowhere.

as far as tachibana is concerned, his limp numerology only leaves me searching a thousand plateaus. how disgusting.

can we please pin down WAR-AS-A-MACHINE in the hyperstitional endeavor (um, if there is one).

Europocalypse Soon

Nick Land (February 28, 2005)

Steyn cuts straight to the chase.

[Editor's Note: The article by Mark Steyn no longer exists at the Sun Times website, even via the Wayback Machine. The comments provide enough context to make its inclusion valuable.]

Comments: Europocalypse Soon

Tache: Steyn: "CIA analysts predict the collapse of the EU within 15 years...Europe is a smugly irritating but irrelevant backwater where the whole powder keg's about to go up...Europe's problems -- its unaffordable social programs, its deathbed demographics, its dependence on immigration numbers that no stable nation (not even America in the Ellis Island era) has ever successfully absorbed -- are all of Europe's making. By some projections, the EU's population will be 40 percent Muslim by 2025."

Nick, is this hyperstitional in any way? Can't think how, unless Steyn is one of your carriers designed to make your morbid fantasy (read fiction) of Eurocollapse real. Interesting nevertheless.

But I would like to see some more evidence, figures etc on the impending collapse. There are genuine economic crises on the horizon but I would like to see the economic factors teased apart from a general sentiment that apocalypse is imminent. And collapse of the EU is probably not what you have in mind (total economic and political meltdown into warfare chaos). Can you give any more pointers for reading re. the europocalypse?

Growing numbers of Muslims

oops, yes, "Growing numbers of Muslims" - a tad tainted to suggest that Europe is totally swarming with (breeding) radicalized fanatics?

Nick Land: Tachi - this is a giant ongoing topic with zillions of refs - i post this stuff occasionally 'cos i worry people here aren't getting both sides of the story.

As for it being Hyperstitional - IMHO all forecasting is intrinsically related to H., with conflicting virtual futures targeted by occulted technosorcerous wars ...

And as for wanting more detailed analysis, of course - if it can be polytracked with a hyperstitional framework so much the better (i'd also genuinely like to know, what are the Eurotranzis seeing up the road?)

piet: <http://www.time.com/time/europe/html/050228/story.html> life at the frontline (In Antwerp, the far right is facing off against muslims. Who's winning? BY VIVIENNE WALT)

Time article: “true Americans.” – of course Time is an advocate of and believer in true americans like all the groups I enumerated above are brimming with belief (psychotic commitment) to purity of one sort or another --- that Americans are the sort of mercenaries and imperialists who take pride in being such to the same extent there is no viable reason to is the reason they point at poor little europe and in that sense, Nick, you’d make a splendid American.

Nick Land: P - "poor little europe" - :)

"Nick, you’d make a splendid American" (just wanted to hear it again)

P - time-compression apocalypticism definitely overdue for introduction, key dimension of Templex Hyperstition (intensive bino-exponential time-implosion). Thanks.

Tachi: Piety, Ol' Nick, 'time-compression apocalypticism' only *slightly* different than flower power 'ascensions of consciousness' though. Think they are fundamentally opposed prognoses.

piet: Personally go for rock/time decompression – the enlightenment has never yet had its concomitant, delumpage, physical work out acknowledged and implemented except in fragile and spotty homeopathic fashion

<http://www.pmac.net/rockdust.htm> Know your rock type, don't choose mono mineralic rocks such as quartz thinking they will contain a broad range of minerals. Ask a geologist or your quarry manager what the rock type is and access material which has the consistency of talcum powder. The finer the powder the greater the surface area that can be attacked by soil acids.

<http://www.championtrees.org/topsoil/soil.htm> The ideal natural form to feed elements to soil is as the insoluble minerals available from finely ground up rocks. To maximize the conversion of rock minerals into protoplasm and plant nutrients, the best strategy is to grind the rocks to powder. This increases the surface area of rock that is exposed and accessible to soil microbes. A normal fist size rock has a surface area of a few square inches, but ground to the consistency of fine sand, the rock has a surface area of several thousand square feet. This means microbes can much more rapidly access and consume the rock's minerals, and thus more rapidly digest them into plant nutrients. The finer the rock is ground, the greater the exposed surface area, and the more rapidly the soil microbes will digest it.

Tachi: Nick "i post this stuff occasionally 'cos i worry people here aren't getting both sides of the story...i'd also genuinely like to know, what are the Eurotranzis seeing up the road?"

Thanks for the reference for sure. Glad to read around too. Not so sure about 'both' (ie just two) sides though.

Aren't there journos who are cynical on 'the' two fronts? Indeed, is it possible to take an 2+ⁿth stance at all? I suppose this depends on what kind of pragmatic position one can take, politically, economically etc.

Or is the notion of two sides notsomuch about the war but about fates? Is the US's fate redeemable and Euroland's not? Is this because of a link to the approach to the WoT, or are these different fates independent from WoT and more connected to domestic economic and political choices?

In any case, both Europe and the US face the prospect of decline in the face not of Islam but of the rising powers of Asia. The WoT is a distinct issue dividing the US and Europe, but the rising power of Asia is something that faces them both. This is why Asia's relationship to the WoT will be crucial for the US-Europe connection in the near future.

"all forecasting is intrinsically related to H., with conflicting virtual futures targeted by occulted technosorcerous wars ..." Intrigued by this remark, please expand.

Henry Miller: Mark Steyn also forecast the end of Iraqi resistance by new year 2004 and that OBL would be found dead. FFS just go direct to Spengler if you want to boradcast this kind of trash.

Heinrich Himmler: If it's hyperstitutionally effective, where's the harm?

deb: <http://debfrisch.com/archives/000083.html>

Heh. A jewish lesbian with a phallic tongue if ever i read one

as a teaser I present the second (of 3) comment(s):

What I allege Rabin and Arrow showed (although they did not put it this way) is that allowing "non-linear utilities" but NOT "non-linear probabilities" leads to paradoxical predictions.

Normatively, if you're going to have DMU, you need to have non-linear probabilities also.

This goes against the conventional wisdom in economics and decision science where non-linear utilities are seen as RATIONAL but non-linear probabilities are seen as IRRATIONAL.

deb: we need to invite this lass over, look, she's got hyperstitious talents:

Mencken published this on 7.26.1920. $7 \times 2 \times 6 = 84$. $84 + 1920 = 2004$. A prophesy?

Nick Land: Tachi - (P.s good on polarization.) Wars have two sides, so everyone understands the real hyperstitious fork: Is is a war? (WWIV to be precise). If 'no', then 'multilateralist kumbaya reigns, if 'yes' then 'neutrals' (most loudly and obnoxiously, Old Europe) will come to seem like the Swiss or Swedes of WWII (or Indians of WWIII)

Since the 'reductio ad hitlerum' rule has already been broken by some moron, no reason to inhibit myself from saying (Old) European politics basically fascist in infrastructure, with a fragile and unconvincing democracy grafted on by the Americans and other Anglosphere allies after WWII - it's the default option over there, leading both to domestic stagnation (allergy to 'liberal' (Anglo) and 'cosampolitan' (Jewish) market economy) and international infamy (supporting / triangulating with / popularly identifying with IIIrd Reich / Soviet Communism / Islamofascism / whatever other antimarket + antiamerican insanity gets cooked up next)

Rise of Asia is great opportunity for free societies. Why should economic competition lead to decline? opposite is the case (Japan totally re-invigorated US industry durring 1980s)

more ...

Henry Miller - so he scores under 100% - whaddya want, Nostradamus?

piet: item 112 at debs has a new next door commenter to mine and the link he left will convince you that frauelein frisch and family attracts hyperstitious struts, straps and paraparsables

<http://www.no-treason.com/archives/2004/07/27/hello-simon-kittay-disproves-austrian-economics/>

or at least tanite anyway

Nick - works by beckerath and rittershausen were dramatically reported to be on Bruening's desk when ousted by Hitler and were thus sent into dormancy but if you're interested in competition it's time to revive them.

Nick Land: piet - thanks for debfrisch (South(west)paw) ref - looks like an excellent site (she even mentions the great Stephen Pinker)

also liked your geopolcalypse ideas - related to Rezoid dust dynamics dontcha think?

AND the Beckerath and Rittershausen stuff looks fascinating ... this is beginning to worry me

Ned Sherrin: He was far better on Loose Ends, when he knew his limits.

Nick Land: Tachi - "Intrigued by this remark ..."

Nexus comprising SF-scenarios, historical impetus, discounted economic outcomes (actualized as current prices in market economies), political prophecies, religious prophecies ... surely at the (dead) heart of hyperstition - think this 'megahistory' dimension of H. requires first of many explicit posts (although '(Islamic) Apocalypticism' line and other elements already touched upon (e.g. Petropolitics) beginning to prefigure important aspects)

As (emergent inhuman) polytics and topic for (pitifully confused anthropian) politics, hyperstition accesses the virtual (future) to wage war against the present - it is highly unlikely, therefore, that it conforms to a single programme or even ideologically consistent set of programmes, more plausibly it is an abstract weapon available to many different factions and strategies (although perhaps escaping them along its own vector of Renomu-type autonomization ('Skynet-scenario'))

Hoping to draw Infinite Thought in - just about the only leftist in the blog neighbourhood who knows the difference between making a case (/asking interesting questions) and unleashing reflex abuse (/shoring-up comforting ego-structures)

Ned Sherrin: She puts great store by logical consistency so I shouldn't bother hanging around.

Tachi: Nick - "hyperstition accesses the virtual (future) to wage war against the present"

What kind of 'war' are you talking about? Is this *in* the future, or already present? If present, we should be able to draw out the battle lines. Global vs local? Democracy vs authoritarianism? U.S. vs jihad? ...?

"it is highly unlikely, therefore, that it conforms to a single programme or even ideologically consistent set of programmes, more plausibly it is an abstract weapon available to many different factions and strategies"

If the virtual (future) is already a multiplicity of programmes, factions and strategies, then how can you talk of *two* sides to the war? The 'vs' I mention don't seem to add any value to the discussion, since it seems the site of conflict is already multiple and cross-cutting.

Nick Land: Tachi -

"what kind of war?" - depends on the agency considered, you already point to a number (of interlocked) possibilities. Main thing for now is to recognize that such polemical architectures exist and thrash them through, rather than mouldering resentfully in the collapsing ruins quasimarxist utopianism or relapsing into an indolent conservatism blind to potential historical catastrophes of unbounded radicality (artificial Armageddon, Shoggothic insurgency, Pest incursion ...)

To rephrase the question: How does the agitation polarize? That's where strategies are at work, with various forces attempting to re-install the marxian class war model ('antiglobalization'), the vichyesque eurofascist 'third way' ('antiamericanism'), Jihad ... seems to me these are all 'Anticapitalist uprisings' of various kinds ('reactionary spasms' in my book), but don't want to leap to hard conclusions (hoping, probably in vain, for a discussion on the subject).

Every hyperstitional megasystem has to bring its own way of war along with it, since by accelerating the consolidation of a particular future it inevitably dispels numerous others, with those that fight 'back' providing enemies (and effective enemies necessarily mobilizing technosorcerous powers).

Personally, i want my tentacles back, and don't see anything other than Oankali arrival (improbable) or the most ruthless technocapitalist species mutation offering that ...

VDH on topic:

<http://www.opinionjournal.com/editorial/feature.html?id=110006350>

achi PS. Apologies if post above gives impression i'm barking at you, that's an illusion attributable to the goyaesque phantasmatic leftists flapping perpetually around my head (and receiving just enough sustenance from our visiting trolls to reproduce themselves)

Tachi: Excellent feedback and references as always Nick. Would pay you a handsome sum for your bookmarks ;)

Whilst this topic may be only tentatively related to Hyperstition for some (note lack of other contributors in the thread, save Piet, who is sprawling himself all over the blog), I do think marco-H is as important as micro-H, from the PoV that the planetary stage is really the only stage right now.

The planetary scale is the key scale from my PoV, and the emergent picture is riddled with hyperstitional lines that are converging hyperstitionally themselves - China's rise is one of the best examples of a hyperstitionally emergent reality, and how this is locked into other hyperstitional entities - anti-americanism for example - is really yet to be seen.

Jihadism, WoT/"anti-jihadism"?, anti-U.S.ism, anti-globalization - all hyperstitional 'systems' as you put it - strangely mostly "anti" something - all involving a fuelling, or hyperstitional creation, of enemy entities. Which is why China - and India - are especially interesting, since their ascension is hyperpositive.

Coming back to an issue pertinent to hyperstition in general - what wouldn't count as a hyperstitionally emergent entity?

Nick Land: Tachi -

"what wouldn't count as a hyperstitionally emergent entity?"

this question potentially very productive - IMHO 'emergent entity' already opens the space for a hyperstitional approach, whatever the specific domain, since what is at stake is the precipitation of a virtuality, with attendant 'hying' or 'boosting' vs negative counterparts, dependent on the agencies/strategies engaged.

Technocapitalist globalization hypersensitizes these events, since economic/information flows accentuate the process - no one any longer thinks 'hying' is simply reducible to captivity by an epistemological false belief, since the investment generated has at least a measure of 'self-fulfilling' nonlinearity.

Take a simple example: people buy into the Europe-going-to-hell 'story', investment and tourism fall, emigration of skilled workers rises, suicide, disabling depression and alcoholism increase, Al Qaeda decides to seize the opportunity ... demoralization (by an impending 'future' or efficient scenario) hastens the outcome that was forecast ...

Of course, these hyperstitional / feedback / templex dynamics operate within complicated and constrained circumstances that make any notion of 'bending reality to the will' highly problematic ('fascist epistemology' according to Sauceruney (spelling?) on PKD), markets are corrected by reality when they wander too far into delirium while ideological dreams + fanaticism rarely triumph against resolute realism. However, such nonlinearities indisputably occur, with advertising, PR, promotion campaigns, cultural agitation, propaganda, psy-ops + associated fields of activity existing solely because persuasion makes a difference, 'voodoo death' does happen, social prestige boosts physiology, beliefs are causal factors ... IMHO the most common 'hyperstitional' effect is an exaggeration of certain deeply rooted trends, leading to catastrophic collapse and other such 'tipping point' phenomena by introducing excitatory nonlinearities that intensify/accelerate the trend - for instance, when a regime after reaching a point of unmistakable but sedate decline is stricken by relatively sudden mass libidinal disinvestment and 'implosion' (the European near future?)

Also on Euro economy:

<http://www.techcentralstation.com/030105D.html>

concentrates on macroeconomics, where the microeconomic story ultimately far more important, but point it makes about the US trade deficit interesting and contra CW

piet: hey antipodian heaperstichionettes

<http://indymedia.org.nz/feature/display/25623/index.php>

Nick Land: piet - NZ is Australia's Canada

piet: oops, dropped a stiTch there

Tachi: Nick - your 'simple example' is useful, and honestly think what you have written today has a value for anyone interested in H.

Re. non-H emergence - think there is scope for distilling true hyperstitional emergence from non-hyperstitional emergence. How would this be done – or what would make this possible?

The emergence of new organizational structures - biology, geology, for example - from lower level strata do not seem to exhibit the hyperstitional dimension that technocapital does.

I think there is a case for the view that hyperstition is not just a motor (or, better, mode) of reality production, but is a product itself - i.e. a singularity with space-time coordinates.

Otherwise, all emergence would be seen as hyperstitional. But how would you formulate the evolution of bacteria into sexually reproductive organisms in hyperstitional terms? How would the original emergence of language in human beings take advantage of hyperstitional strategies?

If there is a difference between H as a producer and as a product? This may just be to recognise H as an mode of reality production which itself emerged.

Which brings us to the interesting issue of human agency. It would appear that though H does not depend on individual agency – ego – it does nevertheless depended on the human species for its summoning in the world of social organization associated with technocapital.

infinite thought: I'm here, snooping in the wings. Give me a bit, just got up (yes, I know how late it is).

Nick Land: Tachi - need time to process your q.s

'Time' is the issue, and my rotting subbasement of fungal heideggerianism needs thoroughly cleaning out before risking a response ...

infinite thought - yeeeahhg (Dean-style)

infinite thought: Might return to our unfinished discussion from the Gog/Magog post here too, as similar enough to warrant resurrecting like a dead crow I think...

A lot of my questions would be similar to Tachi's, though probably not the Hyperstitional ones (although I think am beginning to get a grasp on what you all mean by this).

Not going to ask you why you think Pinker (bad Chomsky+bad Darwin=toss) is great, but am intrigued as usual by the end-times scenarios and the projected machinations of the big three: Islam(no state!)-US-China.

Was having a conversation the other day with an ex-leftist professor, let's say, and he posited two futural (hyperstitional?) claims regarding China:

1. That, as in one of Nick's scenarios, Chinese people buy into the Europe-going-to-hell 'story'. Literally. Instead of investment and tourism falling, though, Europe becomes a giant theme park for Chinese tourism (assuming holidays get upped) - you can't put a price on history, especially when it's over.

2. That China will kill my grandchildren. At the point at which he said this, he was fairly drunk (pre-empting the depressed alcoholic old europe path, no doubt). Is this really right I wondered. If they can eke out a humble living pretending to pack boxes in a fake tourist factory village for Chinese visitors, then that wouldn't be so bad.

But if Europe really will be the united states of Islamia (though muslim pop currently seems to be about 1.4% of UK and 2.8% of Europe, though don't tell me.. there'll be some massive population explosion + huge immigration - yeah right, have you seen what we're up to in this regard lately - in the next few years - yet my muslim students seem eminently convinced that they'll grow up to be successful western-style business folk with little time to procreate, but that's by the by), then will the Chinese really be happy to visit? Or will they just purge the place and leave the pretty churches and dinky high-rises empty, the ghost of Europe past? Or breed authentic Italians, Spaniards, Irish and so on in specially constructed labs to work in these places? Um...wait, will come back to this....

Tachi: IT - interesting nuggets for thought. Can well imagine Europe becoming a Chinese-tourist mecca, though not sure how this squares with q. of actual immigration and muslim population explosion. Don't think the Chinese give a flying F about muslims, but sure the nouveau riche Chinese romanticise all things European - fake vineyards, 'chateaux', all being built in China right now, plus 'classic' style homes, interior furnishings etc all totally 'in'. So seems that there is still plenty of ground for China and Islam to meet, not mentioning in the Western regions of china and in Central Asia.

Nick Land: infinite thought - response delayed mostly until i get into work - guess you'll be asleep again by then, but:

Pinker - definitely going to have to slug that one out sometime (have you actually read the guy, rather than denunciations by lying PC pricks?)

Muslims - lots of interesting demographic debate potential (i'm genuinely unclear about the picture, and even sympathetic to idea that next gen. 'Bush-Muslims' will be better democratic capitalists than 'native Europeans'). Nevertheless, find your figures implausibly low, and think multicult-bureaucratic dishonesty of panicking govts should be factored into calculations (if only to widen zone of uncertainty)

China - scary to world i know (maybe 1.6 billion pop (ignore official figure), 10% annual growth, incredible determination, fairly passionate ethnic nationalism, and weird culture foreigners find hard to understand (what, no God?)). Under current circumstances though (State WMD in other hands - without which how the hell could Eastern Russia NOT become Chinese?) it's hard to see how implicit power gets practically transformed into actual dominion - so rise of Chinese superpower going to be extremely interesting on theoretical grounds. Total Eurodisney idea kind of cute, so long as its not radioactive ...

Tachi's point, China + Muslims, too intricate, multilevel and conflicted to respond to immediately

Also read 'Carnage and Culture' before dissing Hanson - the guy actually knows stuff ...

infinite thought: good stuff here - unfortunately back to sleep again (fuck the human OS, as someone else probably wouldn't say). But yes, have read a fair bit of Pinker - liked his stuff on language for ages until I realised it was based on a total misunderstanding of Darwin and populations: most people don't like Stockhausen therefore Stockhausen is bad for the brain..therefore, er, procreation...just nonsense. I dunno who these 'lying PC pricks' are, but I doubt I read them! their prose is probably not nearly inticing enough. I'm not anti-evolutionary psych at all, but when it's totally arbitrary and reactionary via bad reasoning I just can't read it any more.

Got the muslim figures from pro-muslim websites, so doubt they were underplayed. Am perplexed by the somewhat hysterical 'they're gonna breed!' rhetoric of that guy you posted - it just seems motivated by reasons other than the realistic.

But like the idea of 'scientifically informed reason' a lot. I'll be back, just have to 'nail' this next chapter and then I'll be hyperstitionally free..woohoo...

piet: pinker the crimson stinker: <http://debfrisch.com/archives/000105.html>

Madam Curie didn't 'believe in it either but ... remind me . . .how did she die again?

Nick Land: piet - your last one is absurd even by your dadaistic standards, but then why let the fact Curie never came within decades of depleted uranium get in the way of a cheap shot?

US economy:

<http://www.foreignaffairs.org/20050301facomment84201-p0/david-h-levey-stuart-s-brown/the-overstretch-myth.html>

infinite thought - haven't read much Pinker yet, just The Blank Slate, but so far it's a torrent of interesting ideas, tentative scientific rationality (largely the hypothetical mode with lots of space for opponents), polymathic references (with all i recognize treated admirably) + devastating (but scrupulously underheated) exposure of the stalinist blank slate mafia (supercilious 'PC pricks' such as the Roses and their howling student stormtroopers) who have attempted to violently shut-down free enquiry in the field ever since EO Wilson outrageously proposed that humans are higher primates ...

On demographics - i've not got any sympathy with decadent populations heading for extinction with "the evil savages are breeding, the horror, the horror" on their lips - but that doesn't mean i think the topic is unimportant, being dealt with honestly, or that your interpretation of probable bias on a 'pro-muslim website' is anything other than perverse

Ned Sherrin: I did warn you.

Nick Land: infinite thought - "this next chapter" ??

been told i've been 'barking' - apologies if true

BUSH = (yet a goddamnother) 86 (which Northanger knew last October ...)

infinite thought: Pinker against the 'stalinist blank slate mafia': he gets this mostly from Chomsky, I'm afraid, whose attack on empiricists and behaviourists has persisted since the 1950s (funny, I had you down as some kind of odd libertarian/behaviourist hybrid - if this is possible - don't be offended!). I suppose you recognise the Chomsky influence - but Pinker goes too far in drawing unwarranted conclusions

from the minimal conclusions about language drawn from his work - for example, giving all manner of spurious reasons for the unpopularity of atonal music - 'our brains like harmonies'!

Next chapter - of my thesis. I am not going to tell you what it's about, otherwise you truly will think me 'perverse'. And not in an interesting way.

Anyway, it's still not finished, so can't really say anything today. But when I give it in tomorrow I will return, foreign-policy guns blazing, for more virtual antlering about...

Agree about importance of statistics, will post more about this in detail later, later. Didn't think you were barking - wouldn't matter if you were. In fact I like being offended and attacked as often as possible, it sharpens the blood! It's better, perhaps, when the person attacking me is the other side of the world behind a computer screen.....

Tachi: 'Pinker=bad Chomsky+bad Darwin=toss' – IT – where do you get the Chomsky-Pinker link? Can't see the connection at all – Chomsky has an axe to grind against the American government, and makes his 'case' vs the political establishment without any clear or practical alternative; Pinker is lucid and robust about dispelling the PC-mythology that sadly Chomsky is a part of. As for bad Darwin – what do you expect from Charles? He only debunked the greatest PC myth of all.

“intrigued as usual by the end-times scenarios and the projected machinations of the big three: Islam(no state!)-US-China.”– me too – ‘end-time scenarios’ really captures my interest in Hyperstition. Interested though in how you see these three relate.

IT - "Pinker against the 'stalinist blank slate mafia': he gets this mostly from Chomsky, I'm afraid, whose attack on empiricists and behaviourists has persisted since the 1950s" - please elaborate - from what I have read, and confess v. little of Chomsky's linguistics though tad more of Pinker - can't see how innate structures have to be implied from a well-thought through attack on 'social conditioning'.

infinite thought: Talking about Chomsky's linguistics work here, not the politics (he himself stresses that they do not relate in any obvious way). Dunno if I would call Chomsky's politics PC either, but that's another thing entirely and wouldn't want to turn Hyperstition into a Noam debating society...

Well Islam-US-China....who the hell knows really. I'm mostly intrigued by what Nick says as regards their varying fortunes (at least as a starting point). The Foreign Affairs

piece seemed to be downplaying US potential collapse, but if China is on the up, and Europe is becoming increasingly Islamic (not convinced at all about this last point, but will return to this later), then will we get to see some kind of monstrous three-headed encounter?...plus, what will happen to all that US debt in the hands of China etc.? And are we talking about economics here, or religion, or what? Anyway, must go for now.

our posts crossed there, and I meant 'linguistics' of course (!)

you wrote: 'can't see how innate structures have to be implied from a well-thought through attack on 'social conditioning'.'

It's the other way round, surely...there's a somewhat simplistic account of the relation between Chomsky and Pinker here (apologies if you find it a bit basic):

<http://www.arts.uwaterloo.ca/~raha/reviews/Harris-Pinker.pdf>

Pinker goes further than Chomsky cos he wants to remain an evolutionist, whereas Chomsky puts the question to one side, which I why I think Pinker makes some questionable moves regarding the 'use' of certain capacities - sure sign of a bad evolutionary thinker...and his jokes are terrible too.

Tachi: Just read that review - pretty scathing. Haven't read the Language Instinct, and to be honest would be surprised if Pinker really is that one dimensional - i.e. reducing language completely to innate structures and denying learning etc. From The Blank Slate it seems he is very well aware of the interplay between cultural and biological factors. Still, I'll have to read more and resume this with you another time.

Back to Europe and apocalypse ... Rising tides of angry muslims, increasingly xenophobic white youths, maddening cries of welfare-dependent-minded old farts, declining productivity ...

Reza Negarestani: Nick,

I think all the entities in your anti-capitalist list (Jihadism, Eurofascism, etc.) are not basically restricting the techno-capital; without these anomaly-inducer pests, techno-capitalism is all emptied of its peripheral potential and surface[1]-to-edge (or surface-to-surfactant) transformations, thus falling into the gravitational textum of the core (even becoming an unconventional ontotheologic entity towards terrestrial inevitability of the worst kind: necrocracy of biophilia, or super-survival economy of affordance). In the absence of Jihad's Napht hegemony (OPEC's oligopoly or

oiligopoly, Iran-Europe's pipeline paradise, etc.), emerging anti-Zionistic euro-militia, pacifist Marxism and whatever, techno-capitalism has no (hyperstitional) 'trigger' to hit autonomy and agitate its 'polytics of periphery' which if rests for a certain period of time (becoming stagnant according to the periphery-core connection i.e. 'levis' and 'gravitas') will be stratified and directly modulated by the core, thus eventually become autophagic towards the core not to the outside (the Babylon Syndrome catapults forward.). In addition, these 'seemingly' or 'so-called' anti-technocapitalist entities not only prevent techno-capitalism from losing its 'peripheral agitation' -- which is the initiating phase required for reaching a radical autonomy: the emergence of the Thing -- but also they forge a schizotragic blade (parallel to the Z.crowd's unconventional, not too pleasant strategies) out of each line of movement that techno-capitalism undertakes to resist or devour its enemies; these schizotragic blades no longer belong to techno-capitalism as a planetary entity since they cut open a broad and diverse path for techno-capitalism (and even all its so-called adversaries) to the outside, the cosmodromic capitalism. Each so-called anti-capital entity potentially offers a new blade to the techno-capitalism for cutting into the outside, forcing it to invent new weapons and fuels.

If schizotragic blades which cut into the outside 'unfold' in this panorama, it is because techno-capitalism has never been radically liberal or even liberal enough to communicate (in the sense of 'being open to') with its antagonists, all it can do is developing the survival economy of its own affordance and at the same time (Faraj is right when he suggests that "they are not even liberal, they cannot even afford us"), confusing its own capacity and affordance mechanisms (sometimes affirming and negating concurrently as in the case of petropolitics / napht-nexus), this is why it has sucked into such a Khattackoid maelstrom with Jihadism, and again it is exactly for the same reason that it may eventually reach radical openness, since each manifestation of affordance is already forging, sharpening and envenoming blades at the outside, brewing up its eventual openness as 'being opened'. It is because of this atypical affordance (economical openness) that schizotragic blades open / butcher technocapitalism, impregnating it with the cosmodrome instead of letting it rot and succumb into the core-despotism.

Only in openness as being opened, the Outside emerges as the cosmodrome dynamics and not as an object of accommodation or dwelling; The tendency of techno-capitalism in the absence of its ferocious and even pacifist antagonists (before reaching a radical autonomy: whether in terms of rising as a Shoggothic insurgency or radical pragmatics of A-Now) is locking into ontological navigation systems of

Survival Economy and the repressing opportunities they offer towards a colonized Outside i.e. lines of escape already softened to form an outside-capturing net. But each anti-capital antagonist involuntarily [2] or through a series of collusions teach technocapitalism a new way to be politically cunning, the most artful but drastically sinister of which is: instead of knitting itself on the Outside through the current consolidated / individuated (in terms of haecceity) assemblage of the Earth (both governed by the self-fertilizing economy of the ground and Tellurian dynamics or becomings), mobilizing and facilitating 'ungrounding polytics' (or as Craig put it "Erathication") for irreversible conjuration of the Tellurian-Omega as a totally expedient space for positively engaging with (or swallowed by) the Cosmodrome's "Holocaust of Freedom".

However, since technocapitalism takes the 'tactical' (within the range of anthropoid sensors) lead in this panorama, a certain kind of delusion has been evolved through technocapitalism and its agencies, making them believe that they are the only protagonists of this flight, and consequently underestimating the potential of furious participation with their adversaries. On the other hand, this hegemonic delusion is schizotragically positive in confining the capacity and canalizing affordance, that is to say, attracting more opening blades from the Outside.

Ok, I know all this needs MORE elaboration but time is short and my 'losing-the-airplane' paranoia inhibits me from getting into details. See you all next week.

[1] Surface doesn't necessarily mean the crust, the ()hole complex is swarming with vermicular surfaces of all kind, all chemically / politically active (surfactant; the way J. J. Gibson uses the term), turned into cutting edges.

[2] In skirmish-participation, all subjective inputs combine an artificial space based on the transgression (negatively conducted by intensifying affordance instead of reforming it, or making it less economical) of their affordance.

btw, will try to collect all these conversations (emerged here at hyperstition or those left at Dread [of course, if undercurrent gives the permission ;)) in one post when i'm back from the trip (IMHO, v. useful materials for further explorations).

Tachi: Reza - nice to see you in this thread. Think what you are basically saying is that (techno)capitalism systemically thrives on producing, and consuming/subsuming, 'the outside'. At the peripheral zone you say "[e]ach so-called

anti-capital entity potentially offers a new blade to the techno-capitalism for cutting into the outside, forcing it to invent new weapons and fuels."

But I would like to question whether there are individuatable 'blades'. It seems slightly problematic to suggest that there are individual blades that correspond with the terms 'jihad', 'antiglobalisation', and 'antiamericanism', for example, since all are continuous. Perhaps this isn't key. I can run with the general approach - that Capitalism thrives on the development of infolding the periphery into the centre, which produces or expands the periphery. This is in fact Braudel's concept of Capitalism. But I am more interested in exploring what actually *distinguishes* 'blades'.

More importantly, perhaps, I would be interested to hear concrete examples of this theoretical schema: how have concrete antagonist agents colluded, participated, in stimulating Capitalism? I have a problem with remaining in the abstract when this schema is to function as a tool to apply to planetary phenomena. So one question which would bring this discussion to the here and now would be 'in what way has the anti-globalization movement contributed to futhering the integration of trading mechanisms?' This might not be the best question, but then we should ask:

1. What 'blades' can we identify?
2. What would count as a furthering of Capitalism?
3. Can we associate items from list 1. with items on list 2.?

Very interested in your comment near the end of your post about the surface being ()holey, and therefore the relation with the outside being conceived not just as surface-to-edge (periphery). Still, I think these concepts all need further clarification:

- core
- surface
- ()holey space
- periphery
- outside

willow: Hmm. I wonder why IT is sucking up to Nick and Co? She's such a slag!

Reza Negarestani: Tachi,

Thanks for the analytic questions, just some 'very' brief and unrefined answers; (un)fortunately, the flight postponed to March 4 (so I'll be at home for less than 24 hours):

(techno)Capitalism or planetary capitalism neither produces nor consumes the Outside but it smoothes processes whose ultimate goal is interlocking with the Outside. The Outside (or the cosmodrome) cannot be produced by capitalism, on the contrary capitalism in all its forms is the surfacial agitation caused by participation of the cosmodrome with the planetary sphere. [there are some old conversations on cosmodromic capitalism on the H-blog]

But I would like to question whether there are indivisible 'blades'. It seems slightly problematic to suggest that there are individual blades that correspond with the terms 'jihad', 'antiglobalisation', and 'antiamericanism', for example, since all are co-continuous.

A possible misunderstanding (perhaps my fault: poorly expressed), the blades do not correspond with Jihad or other anti-capitalist entities (they are not themselves blades) but each one sabotages the affordance of the capitalism (through the skirmish-participation) to summon a new blade (associated with its own internal and exclusive anti-capital machinery) from the outside but they are not themselves blades; they are just different names of summoning. However, at a certain level (when the anti-capitalist entity becomes so relentless in its so-called opposition) we can say each one is itself a blade to lacerate the capacity of capitalism based on mutual affordance, leading it an openness through which capitalism latches onto the outside. [think you should grasp the difference between opening lines of openness (introducing openness as being opened) or schizotragic blades AND accommodating lines of openness [mutual affordance]; my recommendations: 'sorcerers and necromancers' series at hyperstition and A Good Meal at cold-me: <http://www.cold-me.net/text/meal.html>]

(note: Undercurrent is also familiar with this difference, he can add a lot of helpful details)

since all are co-continuous.

In their polemics with capitalism yes, but not in the internal mechanisms that each one exclusively possesses:

For example Jihad burns in the Napht soup and tactically / strategically works through the pipeline system; the napht-nexus induces certain resisting tactics (frantic search for non-fossil fuels, entering in a war with the napht-sorcery of the OPEC, etc; all potentially move towards invention of new weapons or exposing to new blades of the outside) and stealth cooperation (see pipeline odyssey) within and according to techno-capitalism.

Anti-globalization, negatively but strategically represses free-trade or communication lines as totally economical mutual affordance (for instance the scenario of Dialogue between Civilizations [henceforth: DbC] which reduces the n-plex diversity of globalization to self-reforming mechanisms of affordance between cultures / civilization), thus making the entire connections network a good meal for butchering lines of openness [1] (more working with 'being opened' rather than gliberal 'being open to' [see 'A Good Meal']). Reformist Islamism which has Europolitcal anti-globalization tendencies and is highly interested in DbC, either works with Taghieh in communication with the agencies of Techno-capitalism (thus forming the Diffusing side of the Axis required for the Escalating side which belongs to technocapitalism – see 'Jihad: The Absent Obligation' and its following comments) or turns into a secular / pacified Islam which finally provokes the uncompromising Jihadism not only to be anti-capitalistic but also running as a fissional process within Islam ('Terror within Terror': here capitalism should invent two distinct heads, one for a direct assault on uncompromising Jihadism and the other for engaging with the semi-secularized, under-Taghieh or Pacified Islam which is highly contaminative for Europe's politico-economic interfaces and may breed truly hideous offspring: euro-islamist movements which are not necessarily islamic but follow the same islamic guidelines)

that Capitalism thrives on the development of infolding the periphery into the centre, which produces or expands the periphery. This is in fact Braudel's concept of Capitalism.

I didn't mean a Braudelian model of capitalism despite my reference to periphery / core connection. The peripheral agitation I'm taking about is not produced by capitalism itself (its intrinsic / internal insurgencies) but by unrests and anomalies that emerge out of the skirmish-participation with anti-capital entities. So this peripheral 'space' -- which has already enveloped schizotragic lines (potential blades) of anti-capital entities -- even if reaches the core cannot be captured, grounded, or turned into strata; it engineers a ()hole complex, making the core malfunctions (stepping out of its governing functions). This mutating techno-capitalism presupposes commotion

and cataclysmic excitements from the other side of itself until it reaches and maintains its own radical autonomy.

Will get back to the rest of your excellent questions after returning from the trip.

BTW, re. surface-to-edge. Wait for the updated version of 'Machines are digging: ()holey space' [I promise 'SOON?'].

[1] Every instance of affordance (or accommodating capacity) if developed properly in its horizon can invite the butchering lines (blades) of the Outside, reinventing openness as 'being opened' not the survival economy of liberalistic 'being open to'.

PS. Tachi, I'm not sure but I guess you have missed a few key articles in regard to Islamic chronopolitics and (non) Apocalypse, diffusive Jihadism, and escalating WoT:

Holy War from the other side.

Jihad: The Absent Obligation or the Latent Duty

Islamic Chronopolitics I: the heresy of the apocalypse

Col. West: a renegade delta-trooper or an autonomous machine?

Nick Land: Reza - don't think i disagree, but whole discussion complicated by an inevitable variation or inconsistency of 'subject positions' since the Khattakoid commercium (where antagonistic puppets meet as components of an inappropriable machine) perpetually rejects the anthropian (even 'aphidian') ID-fragments which try to cling to it and delect in its 'transcendental' intensities. Discursive positions are constantly recycled into the fray, thus 'I' will variously slate the 'antiglobalization' crowd (or more importantly the Jihadists) viciously from the 'empirical' position of a technocapitalist partisan, while at another phase of the dehumanization spectrum readily admit that it is only through friction, conflict and peripheral agitation that the machine is sucked into the hyperheated extravagances it constructs itself around (in orbit). Hyperstitional fragmentation into carriers is no more than the explicitly formulated programme for what this inevitable polypositionality and polytics wrecks of its own accord ... of course, you're doing what is absolutely necessary for rigorous apprehension of the topic: "Think the war as a machine"

However, think (anonymous) technocapitalism holds a privileged relation to initiative, since its temporality is utterly aggressive ('faster, faster ...' without definable limit - hence intrinsic relation to time-implosion), forcing all contestants into a strategically

reactive stance (while it exploits resistances to promote further acceleration of the process, drawing down the Thing from out of the future) ...

Reza Negarestani: *Khattakoid commercium perpetually rejects the anthropian (even 'aphidian')*

But doesn't it feed (as a transient bond) on expendable anthropian agencies as a cheap fuel?

Discursive positions are constantly recycled into the fray, thus 'I' will variously slate the 'antiglobalization' crowd (or more importantly the Jihadists) viciously from the 'empirical' position of a technocapitalist partisan

Well, that is the way 'we' are the puppets of West and Jay: from an empirical position, a techno-capitalist partisan and a shadow-trooper under Taghieh ;)

Faster and faster

Slight disagreement (or perhaps a misunderstanding from my side) on this blind chrono-torpedo and its line of escape (some doubts expressed in Sorcerers and Necromancers series), but can't open it right now [time is the only thing that I don't have at the moment].

can't participate in discussions for a week. best, reza

Nick Land:vReza -

"cheap fuel" [tick]

"h. puppets" [tick]

"chrono-torpedo" - didn't mean to imply technocapitalist acceleration amounted to an 'escape' on its own - it's more of a megaweapon ...

think the Autonomization of the (technocapitalist) Thing needs more attention ...

Reza Negarestani: BTW, think from the 'empirical' stand point, 'Kaxuži-commando' instead of 'shadow-trooper under taghieh' is more concise and direct. ;)

Nick Land: A mistress of invisibility in any case ...

(Jay i mean)

northanger: AQ 500 = MISTRESS OF INVISIBILITY = SHADOW WARRIOR TECHNIQUES

nick, you really must stop. these wonderful numbers are so scrumptious.

Nick Land: northanger - not only exquisite, but exactly on topic ... (you're not feeling sick or anything?)

northanger: nick - nope. not sick. wrote another post elsewhere: connection got sidelined for a couple of days. at sister's house right now about to be kicked out. :)

Nick Land: "about to be kicked out" - find that hard to believe (is she aiming to retain her sanity or something?)

northanger: oh shut up, lol. i'm outta here. see ya later.

////////////////////: stolen from pearsell

<http://onepearsallandhisbooks.blogspot.com/>

Cry of the Neocons: "WE WANT EURABIA!"

Or at least, that's the impression you get, that they are desperate for some kind of Muslim takeover of Europe to happen, so often do they chant about it and cheerfully distort the facts to support Bat Ye'or's thesis that Europe is on a course to becoming part of the dar al-Islam.

One thing that I've always found laughable about many of the right-wing cheerleaders for the Iraq War is that while they cry crocodile tears over the fate of the Iraqi people under Saddam elsewhere they engage in completely unrestrained racism against other Arab peoples. This is especially the case with the Palestinians, where you have to hold your nose when you wade through the comments sections of any stories dealing with the Israeli-Palestinian conflict on blogs like Little Green Footballs, and with Muslim immigrant communities in the West, particularly in Europe.

I am hardly an unrestrained Islamophile, but elements of the right have completely lost all perspective in regards to Islam and its interaction with the wider world. There is a vein of current right-wing thought that believes that Europe is so decadent that it is on the verge of handing over the continent to sharia and that fifty years hence all that blonde hair in Sweden will be covered in hijab. To this end I find that many of these American 'conservatives' are actively wishing for some kind of terrible collapse

in Europe, into communal war or economic destitution or whatever. Why? I suppose that it's their own childish posturing reaction to the childish posturing of elements of the European left that cheerlead on the possibility of American military defeat/economic collapse. It's ridiculous. Most Americans (and the overwhelming majority of conservative ideologues) are descended from European immigrants, and why these people want their ancestral lands to suffer is simply beyond me.

A classic example of this vein of 'ringing the bells for Europe's demise' is Mark Steyn's column from yesterday's Chicago Sun-Times. Here's a bit of it, along with some comments from myself:

"The president, in other words, understands that for Europe, unlike America, the war on terror is an internal affair, a matter of defusing large unassimilated radicalized Muslim immigrant populations before they provoke the inevitable resurgence of opportunist political movements feeding off old hatreds. Difficult trick to pull off, especially on a continent where the ruling elite feels it's in the people's best interest not to pay any attention to them."

Here's a prime example of the glib fortune-telling about Europe's future that neo-cons love to indulge in. They're just as bad as the multiculturalists who say that everything is ok and there are no ethnic/religious problems within Europe. Is major communal violence within European countries possible? Yeah, considering the levels of outcry against immigration and the rising strength of right-wing populism in a range of countries, it is not off the cards. Is it inevitable? No.

"CIA analysts predict the collapse of the EU within 15 years. I'd say, as predictions of doom go, that's a little on the cautious side."

CIA analysts have a great track record recently, don't they? I'll take that one on faith. Thanks, Mark.

"But either way the notion that it's a superpower in the making is preposterous. Most administration officials subscribe to one of two views: a) Europe is a smugly irritating but irrelevant backwater; or b) Europe is a smugly irritating but irrelevant backwater where the whole powder keg's about to go up."

Bush administration officials have certainly shown themselves to be an impeccably prescient group over recent years, too. Thanks, Mark, I'll go with that one as well.

"For what it's worth, I incline to the latter position. Europe's problems -- its unaffordable social programs, its deathbed demographics, its dependence on immigration numbers that no stable nation (not even America in the Ellis Island era) has ever successfully absorbed -- are all of Europe's making. By some projections, the EU's population will be 40 percent Muslim by 2025. Already, more people each week attend Friday prayers at British mosques than Sunday service at Christian churches -- and in a country where Anglican bishops have permanent seats in the national legislature."

Wow. Where do you start from on this one? Europe certainly has a very serious demographic problem, but this paragraph is so stuffed with misleading statements and outright distortions that, well, I'm not sure how exactly to describe it. Randy McDonald has already done sterling work on the role of Islam in Europe's demographic future that is highly recommended reading, but I have a few general points to make about this paragraph of Steyn's.

First off, there is the ludicrous pseudo-stat that "by some projections, the EU's population will be 40 percent Muslim by 2025". Which projections? This is ludicrous. The current 25 EU states have a total population of roughly 450 million, and a Muslim population of around 15 million, or about 3%. So, how will 3% magically become 40% in the space of 20 years? I'm assuming that he is including Turkey as an EU member in this period. Currently, Turkey's population is just over 68 million, of whom over 99% are nominally Muslim. So, if Turkey was admitted to the EU tomorrow, the Muslim proportion of the European Union would soar from 3% to 16%. However, you can not include Turkey in this figure without also including Romania and Bulgaria, both of which are due to join the EU in 2007, and whose presence drops the Muslim population of a putative EU 28 to slightly over 15%. And this is not even counting predominantly Christian nations such as Croatia and the Ukraine that could, quite conceivably, be part of the EU in 2025. In the interests of fairness, in order to find the total Muslim population of 'Europe' (minus Russia) I added to the EU 25 population the populations of Turkey, Romania, Bulgaria, Croatia, Albania, Serbia & Montenegro, Ukraine, Belarus, Macedonia, Bosnia-Herzegovina and Moldova.

Ultimately, I came up with a figure of 635 million for these 36 countries, with a Muslim population of roughly 90.5 million, or just over 14% of the total. Of course, many of these countries are not going to be joining the EU in the next 20 years (I certainly don't see Belarus, Albania, or Moldova joining), but I still do not see how the Muslim population percentage can possibly hit 40%. Consider that fertility rates

within Muslim immigrant communities have been dropping down towards those of native groups (see figure 8 here), and that many countries, especially Holland and Denmark, have recently been consciously reducing migration levels, and I simply can not see any possibility that in the next 20 years the Muslim population will swell by such an epic rate. It will certainly grow, but it is a bald-faced lie to throw out the 40% figure as a likelihood.

Secondly, mosque attendance in Britain has not overtaken church attendance, it has overtaken Church of England attendance, which is not surprising, because the CofE is a decaying entity that no longer really stands for anything. Catholic attendances are still higher than mosque attendances (although down from what they once were) and African immigration has revitalized Evangelical Christianity in Britain.

"Some of us think an Islamic Europe will be easier for America to deal with than the present Europe of cynical, wily, duplicitous pseudo-allies. But getting there is certain to be messy, and violent.

And there you go. This is something that he wants to happen.

bogstandard: right on //. what is this shit? typical us propaganda too to talk about unsustainable 'welfare' etc. it's like when they get a break from numerology they engage in a little light fascism. wankers

Nick Land: //// - reason neocons are dancing on the virtual grave of europe (realistically or not) is quite simple: according to the basic right-wing outlook on the world (based on incentives at every level), what gets punished is discouraged, while what gets rewarded is encouraged. The idea that europe's treacherous and morally supercilious appeasement-based policies could reap any result but catastrophe is thus considered a repulsive one.

bogstandard too trollish to deserve even indirect response, but his short outburst contains such a compressed gem of ignorant prejudice it is actually something of a masterpiece (certainly if 'fascism' is taken as anything more than a troll fart) - know who invented 'welfare' boggy? didn't think so ...

by the way, 'them' is 'me' (don't think any of the other hyperstitionalists would want to see themselves arbitrarily congregated by a half-wit who can't read a byline)

bogstandard: Yes, of course I didn't actually read any of it! where would I find the time? It's just the general flavour of your discourse Nick, it's kinda nasty. don't like

you. but I liked ///// hence the post - no, hyperstasis members are not fascist. I retract that. they're nerds. but their lofty rejection of democracy is quite dangerous I think.

Nick Land: /// - lots of interesting stuff in the text you reproduce, but IMHO the only truly sharp-edged one viz Steyn is the demography discussion, which i think still lies ahead here (thanks for passing on McDonald's name, will check it out). Won't say more on this yet, except hoping a realistic, rigorously informed and open-minded discussion on the topic in prospect.

No one could be more cynical about govt esp. CIA predictions than Steyn, in fact he makes pretty much identical point to this commentator in previous article, so as a fisk-point it falls quite flat.

As for issue already touched upon - why do 'neocons' want to see Europe burning? This sentence interesting:

"Most Americans (and the overwhelming majority of conservative ideologues) are descended from European immigrants, and why these people want their ancestral lands to suffer is simply beyond me."

1) Americans fled from despotic persecution, so the notion of ancestral attachment is far from straightforward.

2) 'Suffering' not at all the issue IMHO (they're 'suffering' now from social decay, pessimism, bitterness and justified suicidal self-loathing). What is hoped for is change in the direction of liberty, and only hard economic lessons seem able to bring that about, since (as our trolls regularly demonstrate) reason seems to entirely disappear when it comes to the sacred cows of Eurosoc.ia.list decadence.

3) Since 'Old Europe' is strategically determined to invest its energies in frustrating US policy, undermining its security, giving comfort to its enemies, inspiring its internal leftist constituency (and thus aiming to subvert its constitutional freedoms, dynamism and prosperity), sabotaging the world economy through CAP-driven trade restrictions, waging proxy war against it in Israel and (probably more through negligence than malice) nurturing international islamofascist terrorists in its cities, it's hard to see how any friend of the US could be other than delighted in the misfortunes of the Eurocratic high command (while hoping they will eventually be replaced by market-oriented vertebrates with a sense of global responsibility).

northanger: "BUSH = (yet a goddamnother) 86 (which Northanger knew last October ...)"

oops, missed this one. allow me to introduce you to asteroid Pecker (take a bow dudester). named after Jean-Claude Pecker, former general secretary of the IAU. "pecker" american slang for certain (remaining unmentionable) 86ers. yesterday, Pecker (08Ge39) was conjunct asteroid Helionape and fixed star Aldebaran in Gemini and mapping (using my personal astroschizoity) to the 31st prime (127) and pandemon Nuttubab: terrestrial electromagnetism. which means that TE = one "hot blooded man".

ok, so our prez likes to take out his pecker & his ruler and prove to all: see, mine *is* bigger!

////////////////////: would love to talk about this as i find it fascinating but don't actually know anything, at all. that's why i used someone elses writing instead of saying anything myself. i decided to give up talking about things i don't know about. i suggest you invite pearsall over as he loves this stuff and he's wel-informed

A punter: Are you an ideologue or a philosopher, Nick?

Some of us, Hyperstition notwithstanding, still cling to that distinction.

Pearsall Helms: hi, it was my blog posting that Luka pasted on to here. You can see the whole thing here:

<http://onepearsallandhisbooks.blogspot.com/2005/03/cry-of-neocons-we-want-aurabia.html>

and the comments (if you want to go directly to them) are here:

<http://www.haloscan.com/comments/pearsall/110963231177614434/>

Nick, you're right. The sentence you've pulled out is the weakest part of my whole response. In the update to my post I agreed with a commenter who raised your first point plus I added "I think that there's also a domestic partisan angle that they are working from. Sectarian/ethnic war and/or economic collapse in social democratic Europe would provide a handy stick with which to beat the (relatively) Europhile Democratic Party. It would give them a banner to wave as they dismantled the final remnants of the New Deal and the Great Society programs. A Europe where,

theoretically, the great cathedrals became mosques would provide an intense boost to the siege mentality of American 'muscular Christianity', to the idea of the American believer as a lone soldier in a world overrun by heresy, infidelity, and unbelief."

That's just a quick starter, I'm reading through this thread (there's a lot to take in) and so I'll get around to the rest of your points soon.

northanger: We are all just prisoners here

Of our own device

And in the master's chambers

They gathered for the feast

They stab it with their steely knives

But they just can't kill the beast

Tachi: Nick - you can access blogspot sites from the PRC. First go to <http://www.fastbot.com/> - then for this particular site search "we want eurabia". The first reference that you see should be the one. Click on "Open anonymized". Voila.

Nick Land: Tachi - thanks

Tachi: Nick - for some reason the link might fail - esp from anonymized window to next anonymized link - but keep the original fastbot search results list open and work from there again - a pain but the only thing I can think of. Maybe U/C can shed some light?

March 2005

Nullified Xenotation

Nick Land (March 3, 2005)

Before topics wander away from the recent xenotation carnival the contribution from Robin (confusingly/coincidentally 'the other Robin' - not regular numbomechanic uc) on the TX2 thread definitely merits a celebratory post.

[I have taken the liberty to engage in some vocabulary tinkering, so my presentation here is eminently contestable]

By radicalizing the ordinal plexing, used by Barker to convert a binary cumulation semiotic into the original Tic Xenotation, Robin completes the evacuation of all notational elements other than plexing itself. In his new Nullified Xenotation or 'Nullotation' ('0X'), nothing remains except pure plexion, recursive infolding of a desolated protonomic space (an unformed, unrepresentable 'matter'). The initial 'digits' proceed:

| | |
|--------------|-------------------|
| [2] () | [6] (())() |
| [3] (()) | [7] (())(()) |
| [4] (())() | [8] (())(())() |
| [5] ((())) | [9] ((()))(()) |

While bound together with TX by strong formal isomorphy (0X substitutes '(')' for 'TX ':'), the consumption of unity by zero, and complete break from the privileging of binary powers, opens the exploration of a highly distinctive numerical field - where an immense desolated body without features (fusing 'one' into 'zero') is intricately perturbed by waves, ripples, or foldings to constitute a Natural infinity.

And AQ seems to like it:

(ZERO = UNIT) = TRUE

Comments: Nullified Xenotation

northanger: nick - asteroids ZERO & PRIME are conjunct in Aquarius near fixed star OCULUS in the Capricorn constellation. at the risk of being OT (i'm on another computer here) it should be noted that OCULUS means "eye" and it was an eye doctor (Dr. Martin Nowak in Michelfeld, Germany) who discovered the recent largest prime number.

#7919-PRIME {09Aq13} [OCULUS] • Compass Rose: SW by S • 3RD EYE CHAKRA {Anja} • DISTANCE: 218° FROM YILDUN @ PATH 6: INTELLIGENCE of the MEDIATING INFLUENCE—The SIXTH (Original #6) Path is TIPHARET (Beauty) = VI The Hexad (Sices) :: EON PHASE: 23 (Phase Arc 216° ~ Waning Bi-Quintile) : Exploration, Skillfull Creative Power, Plumbing Depths, Actualizing • [[TX Prime [020] 071 = (((:))::)]] #28-MINOMMO [AQUARIUS 02°–AQUARIUS 09°] ~ ZONE 8::0 Webmaker: Amphidemon of Submergance; 8th Door (Limbo); Shamanic voyage (dream sorcery and mitochondrial chatter).

#4321-ZERO {09Aq45} [OCULUS] • Compass Rose: SW by S • 3RD EYE CHAKRA {Anja} • DISTANCE: 218° FROM YILDUN @ PATH 6: INTELLIGENCE of the MEDIATING INFLUENCE—The SIXTH (Original #6) Path is TIPHARET (Beauty) = VI The Hexad (Sices) :: EON PHASE: 23 (Phase Arc 216° ~ Waning Bi-Quintile) : Exploration, Skillfull Creative Power, Plumbing Depths, Actualizing • [[TX Prime [020] 071 = (((:))::)]] #28-MINOMMO [AQUARIUS 02°–AQUARIUS 09°] ~ ZONE 8::0 Webmaker: Amphidemon of Submergance; 8th Door (Limbo); Shamanic voyage (dream sorcery and mitochondrial chatter).

ps. asteroid PRIME's number (7919) is the 1,000th prime number. plus, switch asteroid ZERO's number and you get: ZERO, 1, 2, 3, 4.

Nick Land: northanger - all this without a telescope?

OT, you? [maybe missed the prime thread?]

"asteroid PRIME's number (7919) is the 1,000th prime number" - cool, is that deliberate?

"#4321-ZERO" works just fine for me ...

northanger: nick - "cool, is that deliberate?" - haven't figured out how they number things, but it could be. as far as naming things, asteroid ANNALaura can be viewed a number of ways.

"all this without a telescope?" - it's difficult, but somebody's gotta do it. i use a papertowel cardboard as a telescope. but an empty beer glass works lots better.

thought this connection between NULLIFIED XENOTATION, BLADES and CUT/CUTTING interesting: magic sword of muramasa is from the game of GO; in particular, it is "a colorful name for a joseki". From wikipedia, "joseki" means "set stones", "set pattern" or "set sequence" and involves GO opening game strategies. here's the gematria:

AQ 400 = NULLIFIED XENOTATION = MAGIC SWORD OF MURAMASA

AQ 460 = THE MAGIC SWORD OF MURAMASA = AXIOMS OF HYPERSTITION = INTRO TO HYPERSTITION

AQ 202 = MAGIC SWORD = ABJAD SHIELDS = MECHANOMICS = WAHHABISTIC

AQ 159 = MURAMASA = DEADLY GAS = THE AEONS = AETHYRS

AQ 123 = JOSEKI = BINARY = THE GON = IPSOS

muramasa is the name of a famous japanese swordsmith. the blades were legendary for their sharpness and mythically cursed for a series of murders and suicides. a variation of this joseki was played in 1931 by one of GO's 20th century masters: Go Seigen (who's name, some have said, meant he was born to play the game of GO).

AQ 220 = DANIEL C BARKER (220 is another Thelemic number)

AQ 358 = SCHIZOTRATEGIC BLADE = DANIEL C BARKER

AQ 150 = PLEXING = CHECKMATE

AQ 227 = XENOTATION = TRUE THELEMA

AQ 238 = NUMBOMECHANIC = BARKER-SPIRAL

AQ 286 = ORDINAL PLEXING = TIC XENOTATION

GON1 91 = EVACUATION OF ALL NOTATIONAL ELEMENTS = DIVIDE,
ADD, MULTIPLY AND UNDERSTAND =
NICKLANDREZANEGARESTANI

correction: GON1 79 = SCHIZOTRATEGIC BLADE = DANIEL C BARKER

Nick Land: northanger - despite explanatory notes, "MAGIC SWORD OF MURAMASA" is a little hard to take ...

GoN# IMHO badly in need of some real knock-down demos (you know, 'greatest hits'), otherwise pervasive sense of utter randomness will persist. (Did the guys who 'invented' this gematria uncover anything remotely consequential with it?)

northanger: nick - just equate the GON stuff to more deranged futhnorking gnosis on my part. however, the GON crew did a lot of solid research.

but maybe it's the AQ stuff that may need some "real knock-down demos" --

AQ 400 = NULLIFIED XENOTATION = MAGIC SWORD OF MURAMASA
= MECHANICAL IMPERFECTION

Nick Land: northanger -

"solid research" ???

"Maybe it's the AQ stuff ..." Grrr

"MAGIC SWORD OF MURAMASA" - glad to see this still doing sterling work

northanger: "solid research" ??? -- absolutely

MAGIC SWORD OF MURAMASA = I'M MECHANICAL PERFECTION -- still doing sterling work

come to think of it, GON also does a form of decimal reduction. that's economical isn't it? crunch/reduce in one step.

Nick Land: "GON also does a form of decimal reduction. that's economical isn't it? crunch/reduce in one step" - it's going to take more than a clever side-step manoeuvre to get you off this hook - what 'solid research?' (assuming some kind of blasphemous spider-god rites ...)

northanger: nick - "it's going to take more than a clever side-step manoeuvre" - why thank you.

"what 'solid research?' (assuming some kind of blasphemous spider-god rites ...)" - nicky, all you care about is khattakoid schizschisms, the naildownable & a weird ababbatokian quest to resurrect number using semioteconomy. leaving you ill-

equipped to fully appreciate the minommoid finer threads of the arachnoids. such is The GON.

you wouldn't appreciate this either: in English Rose Cabala ABABBATOK (Abracadabra) = FOUR-ONE-EIGHT.

Nick Land: northanger - slippery astrofied neolemurian futhnorkisms will get you nowhere ...

northanger: nick - "nowhere" - um, from a thelemic (and chaotic too methinks) standpoint, nowhere is a good place to go. let's check the number's shall we?

NOWHERE = WARWICK (gee, they have nice tadpole thingys, that should be a good place to go)

NOWHERE = GOLDEN AGE (nuff said)

NOWHERE = BASEMENT - aa!

Nick Land: ... ever get that Dawn of the Dead feeling?

northanger: XENOTATION = DAWN OF THE DEAD

yup.

AQ 227 = ()HOLE COMPLEX = AXSYS-CRASH = CONTINUISM = DAWN OF THE DEAD = EYE OF HORUS = GOD HAS WILLED = PAY TRIBUTE = SARCOPHAGUS = SCIENTISTS = THE ABSOLUTE = THE SON OF GOD = TIME ANOMALY = TRIBE OF JUDAH = TRUE THELEMA = XENOTATION

TIME = ALPHA = DEATH = JINN = NEMO

ANOMALY = END OF MAN = GOG MAGOG = HUGULU = SEKHMET

ANOMALOUS = 223 WOLF MOON = AND THE OMEGA = DEAD LEMURS = IBLIS-DURGA = TRUE WILL = UTTUNUL

ANOMALOCARIS = ALPHANUMERIC = LAW OF THELEMA = PLEROMA & VOID = TAKFIRI CULT = THUNDER MIND = TIME CIRCUIT = UNLIFE OF WAR

CAMBRIAN = AXSYS = CTHONIA = GROUND = I AM DEATH = PABBAKIS

CAMBRIA = BABALON = BOBOBJA = DECIMAL = NAGUAL = NAVIS = SHAMAN = THE END = URIEL

CAMBRIAN DEPOSITS = CHAOTIC XENODEMON = ECHIDNA STILLWELL = END OF EVERYTHING = OBSESSED WITH Y2K = SEMIOTIC TRIGGER = THE WAY TO SUCCEED

notes: asteroid ANOMALOCARIS unusual sea species from cambrian period. full "wolf" moon occurred on 23-Feb PST. an "anomaly" - is a "deviation or departure from the normal or common order, form, or rule".

asteroid ANOMALOCARIS (and CAMELOT) position during moon-antares occultation had it 156° from fixed star YILDUN.

#8564-ANOMALOCARIS {07Sg35} [TOLIMAN] • Compass Rose: SE by S • ROOT CHAKRA {Muladhara} • DISTANCE: 156° FROM YILDUN @ PATH 9: PURE OR CLEAR INTELLIGENCE–The NINTH (Original #9) Path is YESOD (Foundation) = IX The Ennead (Neufs) :: EON PHASE: 17 (Phase Arc 154.18° ~ Waxing Tri-Septile) : Recognition, Interplay of Forces, Self-reflective, Attunement • [[TX Prime [014] 043 = (:::)]] #21-PUPPO [SAGITTARY 06°–SAGITTARY 13°] ~ ZONE 7::0 Break-Outs: Amphidemon of Larval Regression; 7th Door (Akasha); Dissolving into slime (masked horrors); Chthonic swallowings.

asteroid CHURCH (ecclesia in greek):

#10343-CHURCH {26Vi17Rx} [COR CAROLI]• Compass Rose: E by N • HEART CHAKRA {Anahata}• DISTANCE: 85° FROM YILDUN @ PATH 12: INTELLIGENCE of TRANSPARENCY–The TWELFTH (Original #31) Path from Malkuth to Hod = ATU I THE MAGICIAN = MERCURY = BETH :: EON PHASE: 9 (Phase Arc 80° ~ Waxing Bi-Novile) : Lichtung, Ground of Operation, Maturation, Swift Growth • [[TX Prime [008] 019 = (:::)]] #12-KUTTADID [VIRGO 24°–LIBRA 01°] ~ ZONE 5::2 Ticking Machines: Cyclic Chronodemon of Precarious States; Prowls Hold-Current; Maintaining balance (calendric conservatism); Exhaustive vigilance.

KUTTADID = BABYLONIA

in latin, you can think of ANOMALOCARIS as a--

333 = DEVIANT CRUSTACEAN

asteroid CHURCH {26Vi17Rx} is 85° from YILDUN - very close to 86. asteroid RHIANNON {27Vi28Rx} is 86° from YILDUN; RHIANNON means "queen" in welsh. TX Primes are grouped into threes correlating to the "magic square" of the 31-rayed star. the 86th PRIME NUMBER is 443 and is grouped with the following PRIME SERIES: 4 / 51 / 86 = PRIME NUMBERS: 7 / 233 / 443. in GON, 51 = BABALON and during the moon-antares occultation asteroid BABYLON {04Le38Rx} was at TX Prime [004] 007 = (::).

#15417-BABYLON (IRAQ) {04Le38Rx} [PRAESAEPE] • Compass Rose: NE by N • THROAT CHAKRA {Visuddhi} • DISTANCE: 33° FROM YILDUN @ PATH 14: ILLUMINATING INTELLIGENCE–The FOURTEENTH (Original #29) Path from Malkuth to Netzach = ATU III THE EMPRESS = VENUS = DALETH :: EON PHASE: 2 (Phase Arc 0° ~ Waxing Semi-Sextile) : Germination, Emergent, Fluid, Coming into Focus, Trad vs. New • [[TX Prime [004] 007 = (::)]] #05-IXIDOD [CANCER 28°–LEO 05°] ~ ZONE 3::2 The Zombie-Maker: Amphidemon of Escape-velocity; 3rd Phase-limit; Crises through excess (micropause abuse); Illusion of progress (out of the frying-pan into the fire).

#16912-RHIANNON {27Vi28Rx} [COR CAROLI] • Compass Rose: E by N • HEART CHAKRA {Anahata} • DISTANCE: 86° FROM YILDUN @ PATH 12: INTELLIGENCE of TRANSPARENCY–The TWELFTH (Original #31) Path from Malkuth to Hod = ATU I THE MAGICIAN = MERCURY = BETH :: EON PHASE: 9 (Phase Arc 80° ~ Waxing Bi-Novile) : Lichtung, Ground of Operation, Maturation, Swift Growth • [[TX Prime [008] 019 = (::)]] #12-KUTTADID [VIRGO 24°–LIBRA 01°] ~ ZONE 5::2 Ticking Machines: Cyclic Chronodemon of Precarious States; Prowls Hold-Current; Maintaining balance (calendric conservatism); Exhaustive vigilance.

another way of looking at this: RHIANNON is on PRIME SERIES: 8 / 55 / 78 = PRIME NUMBERS: 19 / 257 / 397. in AQ 55 = ADAM = IDEA = MAN and 110 = IDEA MAN = BABALON.

888 = EXTINGUISHED, EXPIRED, EXTINCT DEVIANT CRUSTACEAN

DR 24 = THE UNFRAGMENTARY NON-ATOMIC FACT OF MY UNIVERSALITY

<http://lilytears.com/spirituality/thelema/bookoflaw/i.htm>

24 = EA = O

EA is the ancient sumero-babylonian god of the "sweet waters" and one of the creators of mankind. he was attended by ishtar (venus) & the bird ANZU (or, ANZU was the valet of ELLIL) – "Pazuzu (The Dust Enforcer)"

reza's post has a link to "The Pazuzu-Humwawa-Asmodeus Connection" -- PA=RIVER, ZU=WISDOM, TO KNOW.

555 = EXTINGUISHED, EXPIRED, EXTINCT = HIDEKEL, THE EASTERN RIVER OF EDEN

#2174-ASMODEUS {09Le49Rx} [PRAESAEPE] • Compass Rose: NE by N • THROAT CHAKRA {Visuddhi} • DISTANCE: 38° FROM YILDUN @ PATH 14: ILLUMINATING INTELLIGENCE–The FOURTEENTH (Original #29) Path from Malkuth to Netzach = ATU III THE EMPRESS = VENUS = DALETH :: EON PHASE: 3 (Phase Arc 0° ~ Waxing Decile) : Revelation, Pivot/Decision Point, New Qualities, Differentiating • [[TX Prime [004] 007 = (::)]] #06-KRAKO [LEO 06°–LEO 13°] ~ ZONE 4::0 The Croaking Curse: Amphidemon of Burning-Hail; 4th Door (Delta); Subsidence, heaviness of fatality.

asteroid ASMODEUS {09Le49Rx} is 5° from BABYLON on the same path & prime; but different p-demon & phase arc. BABYLON is emergent and ASMODEUS provides the revelatory pivot point.

-----the "sweet waters" of EA are related to the link in the TOO MUCH MATHS? referring to SALTWATER KEYNESIANS AND THEIR SWEETWATER CRITIC

my astro system takes a macro event (global or astronomical) and crunches a bunch of planetary and star positions. everything *does* connect to everything, the critical issue is determining where the "problem" and its "solution" are located in any given spread. still working that out, but one idea involves the union of fire and water: ANTARES (FIRE-WAR) and MOON (WATER-PEACE).

Nick Land: [brain aching]

northanger: nick - brain aching = war machine. are you serious? lol.

24 = EA = O

115 = LIBER O = AZOTH = DJUDDHA = DZYAN = FOLLY = LOCUS =
OM-KALI = PALLAS = PROOF = ROBOT = SEKHEM = WAHHABI =
WOMEN = WRATH

LIBER O VEL MANVS ET SAGITTAE

(Book O, or The Book of the Hand & the Arrow)

<http://www.hermetic.com/crowley/libers/libero.html>

In this book it is spoken of the Sephiroth and the Paths; of Spirits and Conjurations; of Gods, Spheres, Planes, and many other things which may or may not exist. It is immaterial whether these exist or not. By doing certain things certain results will follow; students are most earnestly warned against attributing objective reality or philosophic validity to any of them. The advantages to be gained from them are chiefly these: ("a") A widening of the horizon of the mind; ("b") An improvement of the control of the mind. The student, if he attains any success in the following practices, will find himself confronted by things (ideas or {13} beings) too glorious or too dreadful to be described. It is essential that he remain the master of all that he beholds, hears or conceives; otherwise he will be the slave of illusion, and the prey of madness.

<http://www.techcentralstation.com/030205A.html>

The most distinctive trend in economic research over the past hundred years has been the increased use of mathematics. In the wake of Paul Samuelson's (Nobel 1970) Ph.D dissertation, published in 1948, calculus became a requirement for anyone wishing to obtain an economics degree. By 1980, every serious graduate student was expected to be able to understand the work of Kenneth Arrow (Nobel 1972) and Gerard Debreu (Nobel 1983), which required mathematics several semesters beyond first-year calculus.

http://en.wikipedia.org/wiki/Kenneth_Arrow

American economist; Along with Paul Samuelson, he is considered one of the founders of modern (post World War II) neo-classical economics. His most significant works are his contributions to social choice theory, notably "Arrow's impossibility theorem", and his work on general equilibrium analysis. He has also provided foundational work in many other areas of economics, including endogenous growth theory and information economics. Arrow's impossibility theorem was set out in his Ph.D. thesis, Social choice and individual values. In its final form it states the

following: given the conditions of Pareto Optimality (P), Unbounded social choice (S), Independence of choices (I) and non-Dictatorship (D), it is impossible to formulate a social choice function which satisfies all of them. This has tremendous implications for welfare economics and theories of justice. It was extended by Amartya Sen to the Liberal Paradox which argued that given a status of "Minimal Liberty" there was no way to obtain Pareto Optimality, nor to avoid the problem of social choice of neutral but unequal results.

Arrow (disambiguation)

http://en.wikipedia.org/wiki/Arrow_%28disambiguation%29

A village called Arrow in Warwickshire, England.

hodology is the study of pathways & appears in literature involving the study of the brain, dynamic groups, architecture, theatre, etc. esoterically, hodology is related to the study of the paths on the tree of life. the lightning bolt (777) created the spheres & the serpent created the pathways. frater achad's revelation (which my astro system is based on): "The symbolism of the Paths is more important when considered from the BOTTOM TO THE TOP OF THE TREE."

the largest cycle this astro system utilizes is TIME (enochian & thelemic calendars). the 31-star expresses the 93-CURRENT by dividing $93 / 3$. 3 represents SATURN, Mystic Number of Chokmah, Father (Time), To Come, To Go. additionally, the magic square i decoded that creates these "stars" are also based on the number 3.

the 93 "magic square" takes the numbers from 1 to 93 and organizes them into 3 rows of 31 numbers. each column equals $141 = \text{PRIMA} = \text{TRUSTY} = \text{PRECEPT}$. adding $141 + 3 = 144 = \text{ANTERIUS}$; The East; Days First of the First = 12 to the 2nd Power.

+ 144 is also the number of CURRENT 144 that samuel23 talks about at key23.net -

<http://www.key23.net/occulture/archives/2005/02/27/time-magick-and-the-flower-of-kairos/>

+ ANTERIUS is ANTARES

if you add 3 "empty" degrees to LURGGO on the zodiac wheel you transform the wheel from 360° to 363° where $363 = \text{ShDY AL ChY}$ (The Almighty and Ever-Living God). in AQ $53 = \text{GOD} = \text{AKAD} = \text{LAM} = 19 \times 19$. $19 \times 19 = 361 = 19$ to the 2nd

power AND the 3 supernals, 6 lower spheres, 1 malkuth. 361 was the last working gate prior to my introduction to hyperstition. 19x19 also represents [a] a GO board & [b] Deleuze and Guattari's game examples of GO and CHESS to represent Smooth and Striated Space.

in a nutshell, this astro system is not transformative or predictive astrology. it is a highly compressed symbol system designed to be understood by thelemites, chaotes -- and hyperstitionists. hyperstition, in its simplest sense, is fictions becoming real.

in a sense, you can ask yourself, what is the ()Hole Complex this system describes? what hyperstitional carriers can be sent through these holes with the best chance of becoming real. (or something like that, you can phrase it better). ((there is no right or wrong way to read this))

see "Machines are digging"

Holey Space or as we call it here, '()hole Complex' (with an ever-evaporating W) indeed composes, triggers and facilitates the emergence of the Unlife and its convoluting, holing, coring out processes -- vermiculating lines or tendrils of Anonymous-until-Now (see previous posts) -- that eventually transform into a violent process of ungrounding, re-inventing the Earth as an Unground or what Deleuze and Guattari slyly appropriated as "the New Earth". The question is: The Tellurian-Omega or the Unground can still be called Earth? And then according to what chronologic current or based on what calendar, according to what becoming, it can be mapped as NEW (the new earth)? Tellurian-Omega is an unground, a shadow out of time.

jupiter (expansion / boom / bull) and saturn (contraction / bust / bear) describes the flow of money - their positions during the recent moon-antares occultation - please note jupiter's katakian influence:

[PLANET] - JUPITER {17Li32Rx} [FORAMEN] • Compass Rose: E by S • SOLAR PLEXUS CHAKRA {Manipura} • DISTANCE: 106° FROM YILDUN @ PATH 11: SCINTILLATING INTELLIGENCE--The ELEVENTH (Original #32) Path from Malkuth to Yesod = ATU 0 PURE FOOL = AIR = ALEPH :: EON PHASE: 11 (Phase Arc 101.52° ~ Waxing Bi-Septile) : Intercession, Mysterious Agencies, Creative Will, Internalizing • [[TX Prime [010] 029 = (((:)):)] #14-KATAK [LIBRA 10°-LIBRA 17°] ~ ZONE 5::4 Desolator: Syzygetic Chronodemon of Cataclysmic

Convergence; Feeds Sink-Current; 5th Phase limit; Tail-chasing, rabid animals (nature red in tooth and claw); Panic (slasher pulp and religious fervour).

[PLANET] - SATURN {20Cn42Rx} [SIRIUS] • Compass Rose: N by E • HIGHER CROWN CHAKRA • DISTANCE: 19° FROM YILDUN @ PATH 15: CONSTITUTING INTELLIGENCE—The FIFTEENTH (Original #28) Path from Yesod to Netzach = ATU VII THE CHARIOT = CANCER = CHETH :: EON PHASE: 1 (Phase Arc 0° ~ Conjunction) : Unrealized Potential, Karios, Morphic Fields, Archetype • [[TX Prime [002] 003 = (:)]] #04-IXIGOOOL [CANCER 20°–CANCER 27°] ~ ZONE 3::1 Over-Ghoul: Amphidemon of Tridentity (Sphinx-time); Unimpeded ascent (prophecy); Ultimate implications, (as above so below).

note: i am using asteroid HOPI to analyze global / end-of-the-world / apocalyptic strategis & tactics. HOPI is located 48° from YILDUN near fixed star PHERKAD. the group of asteroids constellating near PHERKAD are: LEV TOLSTOJ, GIZA, HOPI, NICCOLO (you, but see also SHANGHAI & CHINA), IRANI (reza, but see also AZERBAJDZHAN conjunct MARS; MESOPOTAMIA), TRUE APOGEE (Dark Moon or Dark Earth), EMPEDOCLES, ORCUS (god of the underworld), MISTO, ISIS-TRANSPLUTO (Hodological Space; Trauma, shock, resurrection; Rites of passage). The TRUE APOGEE is 51° from YILDUN (51 = BABALON in GON).

[LUNAR] - TRUE APOGEE {22Le44} [PHERKAD] • Compass Rose: NE • CROWN CHAKRA {Sahasrara} • DISTANCE: 51° FROM YILDUN @ PATH 29: CORPOREAL INTELLIGENCE—The TWENTY-NINETH (Original #14) Path {3rd Reciprocal Path} Binah to Chokmah = ATU XVII THE STAR = AQUARIUS = TZADDI :: EON PHASE: 5 (Phase Arc 45° ~ Waxing Octile) : Restriction, Inadequate Knowledge, Shadow Elements, Shock to System • [[TX Prime [005] 011 = (((:)))]] #08-SKOODU [LEO 22°–LEO 29°] ~ ZONE 4::2 The Fashioner: Cyclic Chronodemon of Switch-Crazes; Shadows Hold-Current; Historical time (eschatology); Passage through the deep; Cyclic reconstitution and stability.

ps. been tracking sunspots as they rachet up to 777 (we're currently at sunspot #742) after the big #720 sunspot. Franz Kaiser discovered asteroids: 720 Bohlinia, 721 Tabora, 738 Alagasta, 742 Edisona, 743 Eugenisia, 745 Mauritia, 746 Marlu, 759 Vinifera, 760 Massinga, 761 Brendelia, 763 Cupido, 764 Gedania, 765 Mattiaca, 766 Moguntia, 773 Irmintraud and 777 Gutemberga.

asteroid FRANZKAISER was 1° from ANTARES, 1° from hypothetical transneptunian CUPIDO (note: not asteroid CUPIDO) & 3° from ANOMALOCARIS during the recent moon-antares occultation:

#3183-FRANZKAISER {10Sg40} [ANTARES] • Compass Rose: SSE • 3RD EYE CHAKRA {Anja} • DISTANCE: 159° FROM YILDUN @ PATH 24: IMAGINATIVE INTELLIGENCE–The TWENTY-FOURTH (Original #19) Path {2nd Reciprocal Path} from Geburah to Chesed = ATU XIII DEATH = SCORPIO = NUN :: EON PHASE: 17 (Phase Arc 154.18° ~ Waxing Tri-Septile) : Recognition, Interplay of Forces, Self-reflective, Attunement • [[TX Prime [015] 047 = (((:))(:))]] #21-PUPPO [SAGITTARY 06°–SAGITTARY 13°] ~ ZONE 7::0 Break-Outs: Amphidemon of Larval Regression; 7th Door (Akasha); Dissolving into slime (masked horrors); Chthonic swallowings.

finally, the SGR 1806-20 cluster includes: CLAUSEWITZ (strategy & tactics), ISIS, AGAMEMNON (asteroid 911), MAGDALENA, OPPORTUNITY, GODEL, WOLLSTONECRAFT, KARL MARX, LONDON. LONDON conjunct MATEO near VEGA (moveable type software located in san mateo california).

your head should hurt. lol.

i'll jump up to your recent post now and analyze that sweet/salt water bizness.

Nick Land: northanger - crystal meth? or natural excitability?

"your head should hurt" - djathink?

"chaotes" - ah ha

northanger: nick - "crystal meth? or natural excitability?"

natural excitability. (is caffiene a form of crystal meth? i've had 3 cups of espresso so far).

CHAOTES = GO MODEL = BABYLON = UNITY = VIRUS

Too Much Maths?

Nick Land (March 8, 2005)

On understanding economies as intelligences:

“An Important Emerging Economic Paradigm”⁸⁸

Comments: Too Much Maths?

northanger: nick - excellent article. today, i discovered that the "force" that keeps this whole economic ball of wax together is not MONEY, but PRICES. i probably can take another look at your mechanomics with more clarity. (Kohn's paper mentions "atheoretical econometric methods" -- maybe that's you).

TOO MUCH MATHS refers to "mathematizing the theory of value" where the traditional economic Value Paradigm is top-down, rational, maximizing and unrealistic. VP does not reflect what is occurring in the market, doesn't correctly identify all players, and somehow magically produces PRICE without the direct interaction of any individual (ie, the price is what it is and cannot be changed). otoh, the Exchange Paradigm is realistic, bottom-up (and therefore emerges from actual behavior), prices must be set by someone, and it recognizes that exchange is not "costless".

"Since the exchange paradigm builds up from individual behavior rather than down from trading equilibrium, any systematic pattern of behavior will do. Indeed, economics as a discipline has no special claim to understanding the nature of individual behavior; presumably psychologists and cognitive scientists have much more to say about it. The stock in trade of economics, rather, is its understanding of the _aggregate outcome_ of individual behavior—or more precisely, of the 'unintended consequence of intended actions.' For that purpose, we are not obliged to assume individual behavior; we may ask what it actually is."

in a nutshell: VP is more dogmatic & rational and humans are viewed as maximizing robots (ok ok, i get cold rationalism now) vs. EP which is more naturalistic, irrational & based on actual market realities. btw, Kohn's paper does a great job defining both paradigms.

⁸⁸ <http://www.techcentralstation.com:80/030205A.html>

i loved reading all this because it helps me understand my astro system as defining an "aggregate outcome" -- the AO-extraction of several hundred astronomical points. these points traverse smooth path-sphere intelligences blending individual, tellurian-omegic & intergalactic forces emerging irruptive autophagic outcomes. a lot to consider.

peacepostulatorpiet: i do be concerned about your sidder

tellUtuureluurs from watching in-, un- and declenation (let alone cleavage, since the once upon a time of fitness is really too much to ask; no way the worn puzzle pieces of a long since destroyed planet milldyke can hopi da dopi or humble da dompel) yet?????

Nick Land: It's going to take weeks just to work out remotely what's been going on here ...

northanger: nicky - the challenge with "quasi-hippy-cum-cult-initiation" is that you must jump in at the very deep end of the pool.

no lifeguards are present.

Nick Land: "gwendyloon" - harsh!

northanger: me harsh? *me* :squeek:

here's something you might find useful related to shoggoth (too scared to post over there since it may get a, um, harsh response)

descent into the maya underworld

<http://magma.nationalgeographic.com/ngm/0411/feature2/index.html>

sneaked out my compass. To my astonishment, in this cloud-blinded hollow in the forest, the ajq'ij had somehow placed the bottles exactly at the points of the four cardinal directions, with the beer-and-liquor pairing to the east, the most sacred direction.

The lilting, ballad-like music went on and on. We were all offered food and entreated to down yet more aguardiente. The ajq'ij himself had drunk far more than anyone else. Now he placed half the candles upright, digging little holes in the earth to support them, the whole design making a dotted square divided into four quadrants. Among the candles he placed cigarettes, half also upright. Then he lit the upright candles and cigarettes. At one point a candle drooped toward an unlit cigarette. One of the other men started to right it, but Juan stopped him with an urgent gesture. As we watched, the candle dipped by itself and lit the cigarette. This, we learned later, was the best

possible sign, indicating that the ancestors, who "eat light," were accepting the offering.

also check out this splendid flash feature including the creation myth of the hero twins:

(flash required)

http://magma.nationalgeographic.com/ngm/0411/sights_n_sounds/media1.html

gwendyloon: nicky - what? do you want me answer questions in here or deal with shoggothic stuff? you choose.

greygnagwen: actually, i like this one better.

Nick Land: northanger - 'harsh' comment addressed to piet (obviously! - the crystal meth is clearly driving you into paranoid delirium)

gwendyloon - you've been ectplasmoido-hyperstitionally manifested!! [attaches cold compress]

northanger: well gee nick. see, that's the difference between you & me on the etc.piet.etc-warfront. "gwendyloon" was a term of endearment.

yeah.

<http://www.cyberaxis.net/assets/imgs/northanger/djed.gif>

At the Ring's mid point, you hit the Oracle trip switch. On the morning of Resonant Moon 15, your crown has become your root and your root has become your crown - the three root chakras have traded places with the three crown chakras. But your heart chakra remains constant. You are being transformed into your True Self. The Ring oracle which codes the Day out of Time takes the crown. The last shall be first, the lowest shall be raised to the highest. That which crowned the affair of the Ring when the orbit was initiated now becomes the root. The high mountains are made level. The water drains back into the Earth. The Bolontiku, Lord of the Ring, becomes equalized in itself. Heaven descends to Earth, Earth ascends to Heaven. The crystal core of Earth is the crown upon the noosphere by which the Bolontiku-Lord of the Ring becomes a living Fifth Force guardian of V.24.3. Seven Lords of the Ring, Seven Fifth Force Guardians of the Earth. To awaken one Lord of the Ring, is to awaken

its circuit within yourself. Time recycles your soul, as your mind is recycled by the Lords of the Ring.

<http://www.panmodern.com/epoem.html>

"I know this is the 'path beyond technology', but the paradox is that sometimes to get beyond technology, we have to use it."

where did that come from?

fivedoves.com, yeah (seen this before - biblewheel.com - shades of jacobs wheel --

<http://www.fortunecity.com/roswell/leadbeater/0/231gatesmain.htm>)

people are seeing the same patterns. (reminds me of close encounter of the third kind ((we're infected!!))

144 = 72 Goëtia + 72 Shemhamphoras

(dna. cns. better get that right. or else you create a monster. double-zodiac means 6 signs in / 6 sign out. connectors at: RED TRIANGLE LEO 15°-20°, SAG 15°-20°, ARI 15°-20° + BLUE TRIANGLE GEM 15°-20°, AQU 15°-20°, LIB 15°-20°)

1+4+4=9

AQ 144 = THE RING = ANOMALY

AQ 960 = The Field of Operation in which the Universe Can Manifest

northanger: <http://www.rgrace.org/> - whoa

<http://www.photon.cc/pipermail/telektonon/2001-September/000008.html>

Think about these things. In the Dreamspell Book of Kin who is the speaker? Who is the "I" that speaks? "I perfect in order to equalize/producing opportunity/ I seal the store of death with the planetary tone of manifestation/ I am guided by the power of timelessness" Who is this "I"? It is the fourth dimensional "I" of the autonomous anonymous universal collective mind of the galactic brain, and not the "I" presumed upon by the egoic individual being.

the calendar is not an "outie" - it is an "innie"

imho, the calendar is not an "outie" - it is an "innie"

lol, hehe

doesn't "IMHO" fail e-prime?

peacepostulatorpiet: only those who haven't evolved beyond the painterly 'alltogether' perspective of crayon boxic, perfectly fantastic compile ups and crosscultural panorama like (wonderful arguelles quote at the dread link) suffer the illusion of being realistic rather than from monolithimania

contrast with a good quote from the (nevertheless equally unsuccessful) community intended group:

"Well, I guess I'm a bit more radical than that. As with any seed, it starts out as a protective bubble. But when conditions are favorable it germinates.

Given time and proper inputs, a Redwood forest can begin to change first the microclimate and eventually, the climate of an entire region. We've got to be thinking long term, not just about what might make our lives better. How can we explain what we're doing to the middle-class suburbanites on whose land the food will need to be grown when the oil runs out?"

you didn't know robert grace yet??????

I almost told you about him yesterday

I am expecting a long silence now .. .and I'll go eat something .. . if only I was a cyberaxis ringlord, I wouldn't need to .. . I'd be fed current constantly and steadily .. . or be printed to hang on a wall prettily with all my buddies for a while .. .all to gather father and lather .. .bother the mother no more.

northanger: <http://members.lycos.nl/vadercats/jan04.htm>

My idea of speeding this up is for each person to take a square noteslips with sticky edge and put it on the centrally suspended icosaface carrying his seal; of course, since Kernel chucked me from the board and I am not about to join the msn group PAN-Europeweb yall have to come and read this here.

<http://members.lycos.nl/vadercats/jan04.htm>

keyword calls and cues can kindle consensus?

This disregard for grammar often leads to more confusion than it tries to avoid. The reinvention of divination tools to count and account for now as ever ubiquitous and relentless change such as ccm is such a case in question. Their categorical compartmentalization cuts conversation short alright, presumably to leave more time for action (the selfsufficient, native culture like community founding, permaculture practise, etcetera type) but if it is true that hundreds of thousands of folks take this calendar seriously they must still be getting their minds around it to such a timeswallowing extent that little is left for working on such recommendations, even though they come from the highest and highly apocalyptic levels of cultish movement authorities. -- Besides, what's the point if as always, meaning erodes, distinction swims, definition sways and boundaries crumble and blur? No lense stays static, take heart, no beginning is final, our task remains, eternally. Of the three small and strongly urging but stagnant movements I have made close study in the last 20 years the first remains my favorite; lemme do a rough inventory:

1) local/body/will ----- replenish trace mineral content and interactivity worldwide since it is vital to all parts of the biosphere, beginning with foodstuffs. You just won't be gripping in a thrillingly healthy sense before you've gotten grip to this fact of life. Hint: equate time-rock-emit let splendidate piet demonstrate that splinter and fract acts allows information to enter formerly compact and that all blessing flows from there in fact.

2) regional/mind ----- employ community currencies where appropriate (to execute provision of and cover of basic needs; Hint: equate time-emit - subject); a region with balanced gender relations will surely show them to be competitive with private ones and hold the latter in check).

3)global/spirit ----- a synthesis of these two may well lead to sightsetting beyond our solar system but that won't be any easier than pulling of the frontforming with islam and hippydom as components such as Arguelles seems to be shooting for (he says: GOD = number (and particularly fond of the Quranic code's fetish fraction: 19); GOD = Galactic Ordering Dynamic - Tzolkin = it's all kin)

<http://members.lycos.nl/vadercats/jan04.htm>

HOUSE OF CARDS 7. Bhille wanted to read about his cards so he learned how to read. One day he saw a newspaper headline that said: Plan, House of Cards. Bhille could not understand the plan for it was too complex for him. He was happy that the wise leaders based their work on the cards. He was inspired to record

his own thoughts in a notebook. He wrote: Diamonds represent wealth. Spades, labor. Hearts, health. Clubs, freedom of assembly and speech. Diamonds are useless without spades, worthless without hearts, vulnerable without clubs. Defend property. Spades are enslaved without clubs, idled without diamonds, enfeebled without hearts. Protect wages. Clubs are powerless without hearts, immobilized without spades, hobbled without diamonds. Hold elections. Hearts are broken without diamonds, exposed without clubs, flabby without spades. Train doctors. Respect all cards regardless of size or color. Each one can bring victory. And this, I believe, is most important. Always play with a full deck.

i'm going to bed then.

"you didn't know robert grace yet?????"

nope, good link.

northanger: A Dissident View of Relativity Theory

<http://www.infinite-energy.com/iemagazine/issue59/adissidentview.html>

No doubt the average citizen assumes that relativity theory is vital to our modern society. In truth it has almost no role to play, except in a few narrow branches of science. For example, the Apollo program to land a man on the moon was a complete success as a result of the physics of Sir Isaac Newton—relativity theory did not play a role. Einstein's work on Brownian motion and the photoelectric effect was far more important than relativity.

This may come as a shock, but Einstein's theory of relativity is not part of the design of nuclear weapons! As proof, here is an excerpt from The Los Alamos Primer: The First Lectures on How To Build an Atomic Bomb, "Section 2. Energy of Fission Process," page 7:

Somehow the popular notion took hold long ago that Einstein's theory of relativity, in particular his famous equation $E = mc^2$, plays some essential role in the theory of fission. Albert Einstein had a part in alerting the United States government to the possibility of building an atomic bomb, but his theory of relativity is not required in discussing fission. The theory of fission is what physicists call a nonrelativistic theory, meaning that relativistic effects are too small to affect the dynamics of the fission process significantly."

hmm. nicholas as baphomet.

144 = NIKOLAS

156 = NICKOLAS

152 = NICCOLES = BAPHOMET = BLACK MAGIC = CHTHONIC =
INCUBUS = LAMPBLACK = OEDIPUS = TENTACLE

it's official then. Niccoles is Baphomet!

hyperstitionally speaking, of course.

piet - can't figure out whether you're pithy, piercing, punning, phunning, phuming,
phreaking or just plain nuts.

you're my kinda person.

UN hits bottom

<http://www.oprano.com/msgboard/index.php?act=ST&f;=1&t;=11518>

what are you going on about Ward Churchill. where's the link?

AQ 257 = WARD CHURCHILL = HUGH OF THE BORG

piet: -- he would at least be somewhat familiar with real alternatives to his provocatively successful but of course, but, like they all do, slightly backfiring polarizations (holding up a tiny little mirror to big bully brother doesn't give you enough cover either way, the target don't really see, much less recognize sordidity nor does it prevent target (over)looking right past it, see who is trying to hold it up and target liddul sibling in turn); would be nice to say something truly radiant along these lines now that he's got everybody's attention instead of the somewhat lame standoff tonedown backpeddle sell and buy out invitation 'obey the law' he intones.

northanger: piet. reading up on your churchill obsession to determine what said exactly (and when) & researching eichmann. much to my surprise...

EICHMANN = YILDUN

ADOLF EICHMANN = [WOMAN=OTHER]

additionally, "obsess" shares same root as "nick" meaning "shallow notch, cut, or indentation on an edge or a surface". my father described success as "a notch on the

belt" (as in winning the gunfight at the ok corral). going to show that when one follows an obsession to its natural conclusion it is a NOTCH on the belt.

while WC's heart was in the right place (i'm gathering from your comments) his strategy / tactics questionable. certainly american public needs to know the effects of its foreign & domestic policies - this approach probably too destructive when cognitive dissonance is perhaps the first response. (must point out though: decision to not address slavery in 1776 ((all men created equal yadda yadda)) with complete awareness by founding daddies it would come back to bite everyone in butt - frederick douglass, if not mistaken, said american civil war issue = state sovereignty).

while WC's presentation a little dicey - wasn't original piece written right after 911? so why the explosion now?

hyperstitional minds wanna know.

piet: I just answered Dianna's answer:

www.pirateballerina.com/blog/entry.php?id=36

dutch radio report this morn: modern slavery in holland now; illegal migrant labour earning as much as 2 euro an hour; they are recruited from assorted central stations.

Why now?

Michael Albert's weird take:

ZMag publisher on Ward: Why Ward Churchill? I think Ward would probably say it is because what he is doing is very effective. Ward may even see the attacks on his essay as evidence that the essay had great dissident merit. I think Ward would be wrong in that. Ward is being attacked not because he is the strongest possible target, but because he is one of the weakest possible targets. His essay is featured not because it was seriously threatening, but because it is easily ridiculed. Ward provided right wingers fodder they could manipulatively use. The right wingers are hoping that Ward has sufficiently irritated those who would otherwise defend him so that he is left without defenders. We can't allow that. The right is a long way from going after stronger targets. Everyone on the left has to be sure no targets they do go after are vulnerable.

Piet: Not my feelings or estimates at all Albert; I guess it's no wonder we don't read each other!!!! ---

Richard Oxman doesn't like Albert's take either and intersperses it with comment IN CAPS (even).

ps: I've just made a Meg worth of flat text into a 'prfr' (peculiarly formatted 'read' .. which I stopped presenting to the public years ago due to complaints from the indyans and it does cost time to make them) on the subject (only a fraction of all the stuff I looked at, downloaded and looked at a little better) looks like I'll have a chance to read it next week too.

northanger: yup. here's the original piece...

<http://www.darknightpress.org/index.php?i=news&c=recent&view;=9&long;=1>

Michael Albert's Head Downer: No Alberich's Cloak for Churchill, Please

<http://www.selvesandothers.org/article8532.html>

northanger: piet. you know this bizness better than me.

did churchill make any moves on the original piece that made it come back up to position it for attack? or did this come from another direction? if latter, where?

rephrase: what is ground zero for churchill brouhaha.

curious subhyperoids = thank you for enriching the vocabulary.

OPERA = ZERO

opera is italian for "work, service" from the root OP "to work, produce in abundance" - derivatives include maneuver, manure, operate, operose, cooperate, inure, officinal, stover, omnibus, omnium-gatherum (a hodgepodge), optimum, copious, copy, opulent, and cornucopia (co-, collective and intensive prefix; see kom).

interestingly, ADOLF EICHMANN = ACTIVE VAGINA

phunnily, ROLLED-UP CONDOM = NUCLEOTIDES G-A-T-C (rotflmao)

Shoggoth Materials

Nick Land (March 10, 2005)

In preparation for an extended excursion into xenoplasmic extra-territoriality - on the trail of 'Doctor' Hank H. Hackhammer's 'Shoggothic Materialism' - here are some relevant passages from Lovecraft's epic *The Mountains of Madness* (with minimal commentary).

A little preliminary context:

"For this place could be no ordinary city. It must have formed the primary nucleus and center of some archaic and unbelievable chapter of earth's history whose outward ramifications, recalled only dimly in the most obscure and distorted myths, had vanished utterly amidst the chaos of terrene convulsions long before any human race we know had shambled out of apedom. Here sprawled a Palaeogaeon megalopolis compared with which the fabled Atlantis and Lemuria, Commoriom and Uzuldaroum, and Olathoc in the land of Lomar, are recent things of today - not even of yesterday; a megalopolis ranking with such whispered prehuman blasphemies as Valusia, R'lyeh, Ib in the land of Mnar, and the Nameless city of Arabia Deserta."

Deep inside the ancient catacombs our intrepid explorers are drawn into the intricate dot-patterns that relate the abysmal history of the Old Ones:

"The prime decorative feature was the almost universal system of mural sculpture, which tended to run in continuous horizontal bands three feet wide and arranged from floor to ceiling in alternation with bands of equal width given over to geometrical arabesques. There were exceptions to this rule of arrangement, but its preponderance was overwhelming. Often, however, a series of smooth cartouches containing oddly patterned groups of dots would be sunk along one of the arabesque bands. When cartouches with dot groups appeared - evidently as inscriptions in some unknown and primordial language and alphabet - the depression of the smooth surface was perhaps an inch and a half, and of the dots perhaps a half inch more."

"The things once rearing and dwelling in this frightful masonry in the age of dinosaurs were not indeed dinosaurs, but far worse. Mere dinosaurs were new and almost brainless objects - but the builders of the city were wise and old, and had left certain traces in rocks even then laid down well nigh a thousand million years - rocks laid down before the true life of earth had advanced beyond plastic groups of cells - rocks

laid down before the true life of earth had existed at all. They were the makers and enslavers of that life, and above all doubt the originals of the fiendish elder myths which things like the Pnakotic Manuscripts and the Necronomicon affrightedly hint about. They were the great 'Old Ones' that had filtered down from the stars when earth was young - the beings whose substance an alien evolution had shaped, and whose powers were such as this planet had never bred. ... Of course, the infinitely early parts of the patchwork tale - representing the preterrestrial life of the star-headed beings on other planets, in other galaxies, and in other universes - can readily be interpreted as the fantastic mythology of those beings themselves; yet such parts sometimes involved designs and diagrams so uncannily close to the latest findings of mathematics and astrophysics that I scarcely know what to think."

Better not even to mention such things ... "But it had to be; for we could not issue our warning intelligently without the fullest possible information, and the issuance of that warning is a prime necessity. Certain lingering influences in that unknown antarctic world of disordered time and alien natural law make it imperative that further exploration be discouraged."

Been thinking for a while that we need an Antarctic agent.

Shoggoths coming up ...

"It was under the sea, at first for food and later for other purposes, that they first created earth life - using available substances according to long-known methods. The more elaborate experiments came after the annihilation of various cosmic enemies. They had done the same thing on other planets, having manufactured not only necessary foods, but certain multicellular protoplasmic masses capable of molding their tissues into all sorts of temporary organs under hypnotic influence and thereby forming ideal slaves to perform the heavy work of the community. These viscous masses were without doubt what Abdul Alhazred whispered about as the 'Shoggoths' in his frightful Necronomicon, though even that mad Arab had not hinted that any existed on earth except in the dreams of those who had chewed a certain alkaloidal herb."

It has been plausibly rumoured that the 'Mad Arab' Abdul Alhazred (note to Thelemites - 'AL has read') was in fact at least half-Persian and conducted his most notorious sorceries in Qom, prior to being devoured alive by a Shoggoth in the centre of Damascus.

But back to Shoggoths ...

"When the star-headed Old Ones on this planet had synthesized their simple food forms and bred a good supply of Shoggoths, they allowed other cell groups to develop into other forms of animal and vegetable life for sundry purposes, extirpating any whose presence became troublesome. With the aid of the Shoggoths, whose expansions could be made to lift prodigious weights, the small, low cities under the sea grew to vast and imposing labyrinths of stone not unlike those which later rose on land. ... The steady trend down the ages was from water to land - a movement encouraged by the rise of new land masses, though the ocean was never wholly deserted. Another cause of the landward movement was the new difficulty in breeding and managing the Shoggoths upon which successful sea life depended. With the march of time, as the sculptures sadly confessed, the art of creating new life from inorganic matter had been lost, so that the Old Ones had to depend on the molding of forms already in existence. On land the great reptiles proved highly tractable; but the Shoggoths of the sea, reproducing by fission and acquiring a dangerous degree of accidental intelligence, presented for a time a formidable problem."

The bionic tools of an unutterably alien civilization, the 'Shoggoth Mythos' (shared by the Old Ones themselves) is that of autonomizing technology, in which megabacterial technoplasma - owing nothing to a nature that is not already artifice - grope their way to a line of catastrophic escape.

"They had always been controlled through the hypnotic suggestions of the Old Ones, and had modeled their tough plasticity into various useful temporary limbs and organs; but now their self-modeling powers were sometimes exercised independently, and in various imitative forms implanted by past suggestion. They had, it seems, developed a semistable brain whose separate and occasionally stubborn volition echoed the will of the Old Ones without always obeying it. Sculptured images of these Shoggoths filled Danforth and me with horror and loathing. They were normally shapeless entities composed of a viscous jelly which looked like an agglutination of bubbles, and each averaged about fifteen feet in diameter when a sphere. They had, however, a constantly shifting shape and volume - throwing out temporary developments or forming apparent organs of sight, hearing, and speech in imitation of their masters, either spontaneously or according to suggestion."

Bubbling, shape-shifting, imitative, hyperplastic, technobiotic abominations - easy to see why Hackhammer would be so excited by them.

"They seem to have become peculiarly intractable toward the middle of the Permian Age, perhaps one hundred and fifty million years ago, when a veritable war of resubjugation was waged upon them by the marine Old Ones. Pictures of this war, and of the headless, slime-coated fashion in which the Shoggoths typically left their slain victims, held a marvelously fearsome quality despite the intervening abyss of untold ages. The Old Ones had used curious weapons of molecular and atomic disturbances against the rebel entities, and in the end had achieved a complete victory. Thereafter the sculptures showed a period in which Shoggoths were tamed and broken by armed Old Ones as the wild horses of the American west were tamed by cowboys. Though during the rebellion the Shoggoths had shown an ability to live out of water, this transition was not encouraged - since their usefulness on land would hardly have been commensurate with the trouble of their management."

Patience ...

"Decadent though their style undoubtedly was, these latest carvings had a truly epic quality where they told of the building of the new city in the cavern sea. The Old Ones had gone about it scientifically - quarrying insoluble rocks from the heart of the honeycombed mountains, and employing expert workers from the nearest submarine city to perform the construction according to the best methods. These workers brought with them all that was necessary to establish the new venture - Shoggoth tissue from which to breed stone lifters and subsequent beasts of burden for the cavern city, and other protoplasmic matter to mold into phosphorescent organisms for lighting purposes. ... At last a mighty metropolis rose on the bottom of that Stygian sea, its architecture much like that of the city above, and its workmanship displaying relatively little decadence because of the precise mathematical element inherent in building operations. The newly bred Shoggoths grew to enormous size and singular intelligence, and were represented as taking and executing orders with marvelous quickness. They seemed to converse with the Old Ones by mimicking their voices - a sort of musical piping over a wide range ... - and to work more from spoken commands than from hypnotic suggestions as in earlier times. They were, however, kept in admirable control. ... To keep on with the work of the upper world it had become necessary to adapt some of the amorphous and curiously cold-resistant Shoggoths to land life - a thing the Old Ones had formerly been reluctant to do."

Shoggoth surfacing - their becoming terrestrial, or (more exactly) amphibious - seems to fill Lovecraft with obsessive horror.

Suddenly Danforth screams:

"I came only just short of echoing his cry myself; for I had seen those primal sculptures, too, and had shudderingly admired the way the nameless artist had suggested that hideous slime coating found on certain incomplete and prostrate Old Ones - those whom the frightful Shoggoths had characteristically slain and sucked to a ghastly headlessness in the great war of resubjugation. They were infamous, nightmare sculptures even when telling of age-old, bygone things; for Shoggoths and their work ought not to be seen by human beings or portrayed by any beings. The mad author of the Necronomicon had nervously tried to swear that none had been bred on this planet, and that only drugged dreamers had even conceived them. Formless protoplasm able to mock and reflect all forms and organs and processes - viscous agglutinations of bubbling cells - rubbery fifteen-foot spheroids infinitely plastic and ductile - slaves of suggestion, builders of cities - more and more sullen, more and more intelligent, more and more amphibious, more and more imitative! Great God! What madness made even those blasphemous Old Ones willing to use and carve such things?"

Hehehehe ...

"And now, when Danforth and I saw the freshly glistening and reflectively iridescent black slime which clung thickly to those headless bodies and stank obscenely with that new, unknown odor whose cause only a diseased fancy could envisage - clung to those bodies and sparkled less voluminously on a smooth part of the accursedly resculptured wall in a series of grouped dots - we understood the quality of cosmic fear to its uttermost depths."

Dot-speckled Shoggoth nightmares ...

Traumatized beyond the elastic bounds of sanity, Danforth began to behave like a typical Hyperstition commentator:

"He has on rare occasions whispered disjointed and irresponsible things about 'The black pit,' 'the carven rim,' 'the protoShoggoths,' 'the windowless solids with five dimensions,' 'the nameless cylinder,' 'the elder Pharos,' 'Yog-Sothoth,' 'the primal white jelly,' 'the color out of space,' 'the wings,' 'the eyes in darkness,' 'the moon-ladder,' 'the original, the eternal, the undying,' and other bizarre conceptions; but when he is fully himself he repudiates all this and attributes it to his curious and macabre reading of earlier years. Danforth, indeed, is known to be among the few who have ever dared go completely through that worm-riddled copy of the Necronomicon kept under lock and key in the college library."

Nick Land: northanger - what's the 'biglist' all about?

PS. even by your standards this is a veritable miracle of staying relentlessly off topic ... (weren't you worried you might mention Shoggoths by mistake at some point?)

northanger: um, once i saw SHOGGOTHIC MATERIALISM = STUPID LITTLE CHILDREN i got stuck. but! TEKELI-LI is on topic and i thought it tied the whole thing up quite nicely :(

i'm only on my 2nd cuppa java. warming up. think there's a shoggothic + parasite eve connection. rethinking antarctic expeditions (especially those that failed like john franklin's). post something more OT in a bit.

nick - well, while i investigate parasites, symbiosis, slime, amoebas, membrane-bound organelles, 23rd path (only way out is in), X-bacterium, binomial nomenclature, lemurian fundamentalism, boundary violations & other shoggothic problems & mysteries ... you can address some initial Q's about Hackhammer. i find it interesting when a name reflects deeply embedded obsessions:

AQ 171 = HACKHAMMER = SHOGGOTH

AQ 156 = SUMATRA = ABRAHADABRA = CTHULHU = M-PRIMES

the magnitude 9 earthquake on 26-Dec-2004 occurred off the coast of northern Sumatra.

hackhammer quote: "It had all gone to hell out there. The Sumatran expedition rotting down to disconnected threads of fever, madness, and atrocity."

"SHOGGOTH" mentioned: [3] times

Nick Land: northanger - OK, we'll make a Shoggothic materialist of you yet ;)

PS. Special apologies for missing TEKELI-LI among your last 9,745 gematria samples.

PPS. "AQ 171 = HACKHAMMER = SHOGGOTH" - that is SOoo on topic :))

PPPS. "think there's a shoggothic + parasite eve connection" - certainly hope so ...

PPPPS. Do you do an intro. to the 'biglist' anywhere?

greynagwen: PPPPS - sigh, where is the HYPERSTITIION intro, eh? what do you want me to say about it? where are you stuck?

PPPS - there certainly is!

PPS - ain't it though? scrumptious!

PS - admit it, perfect example of gematric elegance how that all ties in together. (thinking: Katak's "Eternal Revolution" related to perpetual motion) (more thinking: heh, don't the numogram look like a blob to you? yup, looks kinda amoebalike to me - kinda DJYNXXi -- "TWO discrete Xenochronic regions" - blavatsky's horseshoe?)

Shoggothic materialist = aye carumba

"SHOGGOTH" mentioned: [1] times (previous post)

"SHOGGOTH" mentioned: [2] times (this post)

((whew, we're on topic))

Tech Flesh 4: Mitochondrial Combustion at Club Parasite

An Interview With Hideaki Sena

http://www.ctheory.net/text_file.asp?pick=26

Hideaki Sena is most likely the only untranslated contemporary Japanese science fiction writer with a cult following in the United States. His 1995 novel, *Parasite Eve*, was made into a Playstation game soon after it became a bestseller in Japan. Since then, over 1.5 million copies of the game has been sold and the American film rights to the novel have been optioned by the singer Madonna. Finally, there are plans underway to translate the novel into English. Sena is a bit stunned by the success of his work both in Japan and internationally: a pharmacology graduate student, he didn't imagine there would be such a tremendous response to a story about human mitochondria that plan a coup against the human race.

Parasite Eve takes as its starting point the 1987 announcement by a team of American molecular biologists that they had discovered the ancestral origins of homo sapiens. Working on the assumption that the DNA of mitochondria (complex organelles that exist within cells and provide energy for respiration and metabolism) have been passed down more or less intact through the maternal lineage since the beginning of humankind, the team collected mitochondrial DNA (mtDNA) from 136 women of diverse geographic and racial origins. Running their data through a computer, the biologists then matched their findings to a single ancestral mtDNA molecule (believed to be from an African woman just under 200,000 years old).

Paleontological evidence and statistical reshuffling have since undermined African Eve's legitimacy as a historical reality, but during the late 80s and early 90s she was a persistent icon, appearing on the cover of *Time* and *Newsweek* and sparking both scientific and social debate. At the time, most commentators seemed to find the idea of a common African ancestor comforting, symbolic perhaps of the primacy of human connectedness over racial divisiveness. Sena, however, saw the dark potential of this retelling of the "human family." He conceived of a grim fantasy inspired by the pairing of the African Eve hypothesis with the theory of the endosymbiotic origins of mitochondria (the idea that mitochondria might have evolved from symbiotic bacteria that once lived within the cells of other organisms). What if, he speculated, the very mitochondria of "African Eve," passed down through countless generations as organelles subsumed within human cellular structure, suddenly decided to assert their biological right to autonomy? If that were to occur, the common mtDNA that bound together the human race could be, to put it mildly, a nasty liability: it would be

as if a dormant, united army within our collective selves suddenly awoke and declared it was independence day.

This, more or less, is the plot of *Parasite Eve*: a colony of mitochondria, assembled in one unsuspecting human host, attempt a takeover of the planet. The host (a young woman named Kiyomi) happens to be the young wife of a genetic scientist, Nagashima Toshiaki. When Kiyomi is rendered brain-dead in a car accident, Toshiaki decides to keep her alive by cultivating tissue from her liver. Soon, however, Toshiaki discovers that he has been manipulated: the tissue, which Toshiaki calls "Eve-1," becomes a dense culture of sentient mitochondria, which then incorporate into an entity resembling his dead wife. Toshiaki is a classic Frankenstein figure updated for the 21st century; his pride and selfishness cause him to bring to life a destructive force he cannot control, and his sheer love of the technologies of genetic engineering blind him to his very human limitations.

Mitochondria: the Sleeper Cell Within

<http://vortexegg.blogspot.com/2004/08/mitochondria-sleeper-cell-within.html>

Thank you to John Fenderson for pointing out The Mitochondria Conspiracy to me. This one sentence sums up my point as succinctly as a sack of bricks falling on your head:

"Their real purpose? Conquest!! Eons ago these nasty wee beasties invaded the happy eukariotes off Pangaea's shores, convincing them with slick tongues and fancy mini-chromosomes to enter into a bargain, and it was a Bargain With The Devil!"

PEST (part I)

<http://hyperstition.abstractdynamics.org/archives/004473.html>

'Pest' combines at least three crypto-genetic strains; each one can introduce itself as an underlying hyperstition-agitator for the rest of them.

1. Bio-infernomatics (Old Growth) / Cosmic Abomenon (Drujaskan)
2. Forbidden / Anti-Genesis Mythos
3. Germinal / Epidemic polytics

.....

1. Bio-infernomatics (Old Growth) / Cosmic Abomenon

The difference between parasitism and symbiosis is very slippery, as you suggest. Merely contributing to stability can be construed as a cooperative function, whilst at the other pole the recent movie *Parasite Eve* anticipates a mitochondrial insurgency – triggered at a threshold of biomolecular science – that unmasks the ‘symbiotic’ mitochondria as strategic parasites. The trend of the *Parasite Eve* story is to dismantle apparent agencies into ‘deep biopolitics’ or interphyletic collisions. The refrain ‘I waited so long for you’ slides from human lyricism into microbial megatategy, spanning aeons yet dissociated entirely amongst a diffuse distribution of bioparticles (and patently subverting the story’s romantic resolution).

Mitochondria are ‘descendents’ of the prokaryotic Old Ones, overcoded-relics of a decentralized microbial bio-plane that has been taken up into eukaryotic cells and multicellular organisms. They have attained a starring role within bioinformatics due to their autonomous ‘genetic lineage,’ popularized through the discovery of the human ‘Mitochondrial Eve’ – from whom they have propagated ameiotically along an asexual egg-current on the female side. (All the ambivalence of the asexual egg is ‘pregnant’ with Pest-parthenogenesis). Margulis has long suggested that mitochondria instantiate a non-nuclear ‘bacterial’ order within the nuclear regime of the hierarchical organism (inside the cell, but outside the nucleus), whilst functioning symbiotically within the organism as sub-cellular energy modules. These precursors ensure that Mitochondrial Eve (the pulp-entity) inherits both a biophysics of exploitation and an alien sex-politics, slanting the direction of anticipated social conflict in sinister directions.

Despite genre differences, GAS seems to exhibit features of *Parasite Eve*. Both interconnect with Pest, or meltdown-plague, since they conceive strategy as an emergent wave arising out of tactical multiplicities and their ‘coincidences,’ propagating as a hypermutative virus.

.....

Follow the dark line, that is what Pest insinuates. It is patently demonic in this sense. It is the ‘erroneous’ path, a trajectory abominated as malignant both to God and to Man, and placed by Eliphaz Levi under ‘a spirit of agitation and subversion.’ It tells females forbidden secrets (in the way of the nephilim): Octavia Butler understood it well. It is also, therefore, the subterranean target of misogyny and vicarious fascination: the XX-monstress, Hecate, or whatever she might be called, whose

influence is felt in an epidemic of lesbo-vampiric Zombis (in the old African sense of pythonesses), witch-craze undercurrents, transexuation out of primate gender-systems and hypersavage erosions of phallic dominance. Pest leads into the trans-satanic gulfs of Old Night.

Nick Land: greynagwen - are you the 'On Topic Northanger'? (long imagined be no more than an implausible myth)

Parasite Eve / Shoggoth cross-currents extremely productive - return of the Old Ones - as well as raising intriguing questions about xenoplasm vs terrestrial biogenesis. 'They're already inside.'

Hackhammer on Shoggothic Materialism (explaining why he dismantled his genotech lab and took his 'research' in another direction):

"The Old Ones spent many millions of years tweaking these puppies - so there's no way a little dilettante gene-splicing is going to contribute anything substantial .."

northanger: forgive me for posting all of that. but, this subject is so broad all you can do is chunk to grok.

what is the difference between uni- and multi-cellular life forms? the amoeba is THE "representative unicellular organism" -- amoeba proteus named after a shape-changing god. it's clear the Shoggoths (shapechangers) are multicellular live forms created by the Old Ones. not clear whether the Old Ones were unicellular.

basically, the Herxheimer Effect is when you get sicker (flu-like symptoms) because of bacteria die-off: "In all cases of the Herxheimer, there is the appearance of a war or tussle going on inside the body akin to the antigen/antibody warfare, where the body produces fever, sweat, aching and swollen joints, diarrhea, nausea, and so on, in varying proportions with varying degrees depending upon state of metabolism, genetics, source of disturbance and so on."

it has been said that the stuff of humans is just like the stuff of the stars. every known chemical in our makeup is in the stars.

Hakim Bey :: Boundary Violations

Physicist Nick Herbert likes to point out that for life here in the mesosphere (i.e. between stars and quarks), here where we actually live, juice and slime play an indispensable biospheric morphic role. Juice and slime are the ultimate freeform

connective and penetrative tissues of living systems. Life clearly has no interest in the antibiotic hermetism implied in such phrases as "boundary violations". Life uses borders and life violates borders and life constructs media of its own to fill up the extra spaces. The amoeba and the fertilized egg are both sacs of juice and slime -- one grows by splitting itself, the other by being split. Viral-like DNA is "freely exchanged" in gushes of juice and slime -- liquid with paradoxical form -- the very liminality of form itself -- secret secretions -- the viscous slippery in-betweeness of the organic -- the placental wetness of becoming.

.....

parasites cannot survive without a host, certain amoebas are responsible for human diseases (malaria) -- not all parasites harm a host, but they certainly do it no good. versus symbiotic (dependent) relationships which are beneficial to both participants.

it is possible that parasitic / symbiotic relationships can suppress or prohibit (target) certain genes. (the war is not outside, it is inside).

Kwang Jeon discoveries are telling. are we dealing with a symbiot or a parasite (or maybe both - an inside war).

Darwin's Blind Spot: Evolution Beyond Natural Selection

<http://www.houghtonmifflinbooks.com/catalog/titledetail.cfm?textType=excerpt&titleNumber;=698167>

nick "greygnagwen - are you the 'On Topic Northanger?'" - lol, yeah. i was lazy & didn't change the comment box.

it should be known that northangers are always on topic. just misunderstood.

"They're already inside."

yes indeedy.

btw nick. didn't see your 08:41AM post until after i posted 09:17AM.

the question is how/when did "they" get "inside"?

think they've always been there.

"what's the 'biglist' all about?"

i have consumed my sushi. have a fine bottle of cabernet. give me three hours and i can give you three paragraphs on the biglist. :))

.somewhat of an intro to the biglist.

imho, Liber 777 is like a disabled antikythera mechanism. you (nick) should be familiar with the excel file of the grid. even though grid assignments differ from Liber 777 it is essentially the correspondences of magical elements. ancient examples of these correspondences occur in some type of circular arrangement for egyptian, alchemical & magical works. in particular, the grid and the biglist are a form of zodiacal magic. Lon Milo DuQuette does an amazing job of organizing & integrating all these bits in his Ceremonial Tarot (I Ching, Enochian, Shemhamphoraseth, Goetia, Liber 231, Kitchen Sink) & is the main inspiration for my work. however, i overlay a calendar on the magical correspondences + overlay Kabbalistic 231 Gates on Sigillum Dei Æmeth (a particular feature of the Enochian system).

"Zodiacal magic is one of the most sophisticated and significant forms of ritual that an aspiring magician can undertake ... The purpose of zodiacal magic is allow the magician to approach, contact, and direct the energies of each of the Signs of the Zodiac." —Mark Stavish, Commentary on Zodiacal Magic

"The complaints of over-elaborateness stem from the fact that it is impossible to perform any significant part of the works in a single session. This is perfectly correct, and is done deliberately. My experience has been that the rewards given to the magician by the "angels" of the Enochian system are very precisely gauged to the amount of care and effort the magician puts into the work. Works that are planned, rehearsed, and carried out over a period of weeks or months are much more likely to produce significant initiations than any number of single-session efforts. The present work was designed to be performed in stages, with the expectation that each stage will be performed until the powers invoked achieve a self-sustaining presence in the magician's temple before he passes on to the next stage. It can be expected that the rewards will be commensurate with the effort involved." —Benjamin Rowe, *Comselha: An Enochian Macrocosmic Ritual*

unfortunately, the static mechanism (excel file) of the grid cannot illustrate the dynamic movement of astronomical events. the biglist is the current version of a Dharma Report created several years ago based on techniques used by Siregar & Meyer to provide a dynamic interpretive system. selected fixed star YILDUN as zero

point (start of the zodiac wheel normally Aries 0°) because it is ruled by Goëtic demon BUER—the only demon Crowley mentions by name in Liber 777.

Siregar & Meyer use the lunar archetype - (perfect since i'm lunarloony):

"The Hindu concept of Dharma is that we each have a natural, rightful place or duty to fulfill in the social order. Your Dharma may be to be the president, and mine may be to wash your clothes, etc. etc. This "Dharma Point" indicates one's Dharma, and that Dharma can be anything. It might be your dharma to spend your life playing. It might be your dharma to spend your life largely alone. It might be your dharma to teach first grade, or to teach religion. Whatever it is, our Dharma point points us in the direction of the best role for us to play, as if we are one CELL in the larger body of humanity. Each CELL has one duty that is its own. To align with and live that purpose is to be fortunate and happy. To miss your dharma is to live in confusion and frustration. The Dharma Point is intimately related to the lunation cycle, and this explains why it shows how we can organically fit into our most natural place as a human being—the lunation cycle is the most obvious astronomical event surrounding our birth, other than the time of year we are born." —Moses Siregar, Interpreting The Dharma Point/Part of Fortune

"Aspects in astrology are particular arcs between the zodiacal positions of two planets. A cycle of planetary relationship begins when a pair of planets occupy the same degree of the zodiac. This originating aspect is known as the conjunction. Its arc value is zero. The New Moon is the archetypal conjunction. In time, the faster moving planet rushes ahead of the other in the sky. The arc measuring the cyclic distance between the two grows. Eventually the opposition aspect of 180 degrees is met. The Full Moon is the archetype of this aspect and its symbolism is known to anyone who has watched the sun set while the moon rose. After the opposition, instead of moving away from the other body, the faster planet begins to move toward the other. Finally the two once again meet in conjunction, further along the geocentric zodiac than their last conjunction. Aspects are important arc encountered along the cycle of unfoldment from 0 to 360 degrees." —Michael R. Meyer, The EON: The 36 Cyclic Aspects Symbolically Depicted

grid is calendar-based (thelemic+enochian)

biglist is event-based (astronomical events)

(these two connect with each other but, a lot of my stuff went keblewy around nov)

thelemic = start day (01-April-1904) & enochian = 360-day calendar. enochian calendar includes 4 uncounted days representing equinoxes + solstices. year one, day one is 01-April-1904 (the only intercalation involves moving one week forward from 08-April-1904). all ephemerides calculated for Cairo noon. the 360-day calendar is divided into thirty 12-day cycles corresponding to zodiac houses. twelve houses divided into 72 quinarys corresponding to ShemhaMephoresh & Goëtia. structure ensures that each year begins on FRIDAY (tgif ruled by Venus). current "year" began 26-Nov-2004 -- 3031st 12-day cycle since 01-April-1904. moon-antares occultation occurred during 03-Mar-05 to 14-Mar-05 cycle: 9th cycle of the year & 3039th cycle since 1904 & occurs in first house, first quinary of the grid (BUER). (in traditional astrology first house represents personality + cancer represents moon & emotions).

two difficulties: {1} establishing interpretive system based on Law of Thelema; and {2} integrating tree of life pathworking. primary focus of biglist deals with problem #2 and also deals with the problem of adding 45 Pandemonium Demons to the system.

note: all stars, planets, asteroids, hypotheticals, etc., are referred to as points.

essentially, the old Dharma Report forgoes all traditional astrological aspects and considers 3 primary relationships: {a} Yildun's relationship to all points based on EON Phase, {b} all points in the same EON Phase, and {c} conjunctions within 10°; additionally, FARPOINT (last one in) and the SEED RELEASED during EON Phase 34 provide info on astro-event's central themes. from my experience only 2 to 6 points ever show up in phase 34. during moon-antares occultation these points on phase 34: SALTIS, ADMETOS, HEGEL & NIBIRU...

<http://www.livejournal.com/users/northanger/30845.html>

... however, biglist blasts this wide open with the BIG P's: pretzels, primes, pathworking & pandemonium (pretzels = chakras). and now you're hitting my gray area because the interpretive process has become a wee bit complex & chaotic. yippee (that's what we want!). here are some ideas on how to interpret phase 34 on the biglist -- only to get you started though. ((kronos should be obvious))

32 Fixed Stars at above link represent 32 Paths. all points align with one of these paths. therefore, Phase 34 is at fixed star ALGOL on the 17th path: PHASE 33 :: MASSINGA, ATHANASIA, PROTOGENEIA, TISIPHONE, ARABIA, INGWELDE +++ PHASE 34 :: [SALTIS - ADMETOS - HEGEL - NIBIRU].

after ALGOL is ALCYONE and the first point there is CHILD (child archetype so close to "seed released" is somewhat suggestive). Unnutchi is the pandemonium demon from Taurus 24°–Gemini 01° ruling NIBIRU, ALGOL, CHILD, ALCYONE (Unnutchi is crossing paths + 333° aligned to ALCYONE ruled by NUTTUBAB). Zone 9 is Pluto currently on the same path as China, Galactic Center, NASA, _PROTOS_ etc. (and there are several plutonian hypotheticals related to Unnutchi - - pluto represents destiny & transformation -- astrologer Juan Revilla thinks Pluto = "the force" // Uranus = Dard Vadar). Unnutchi represents tachyonic immobility (slow vortex): Chaotic Xenodemon of Coiling Outsideness; Asymmetric zygo-poise (and cybernetic ANOMALIES).

above you mention protoplasmic matter & protoShoggoths & i mention amoeba proteus named after the god Proteus --- there are two separate but connective pings for PROTOGENEIA and PROTOS. it is UNNUTCHI that connects CHILD with PHASE 34.

- In Greek mythology, Proteus is an early sea-god, one of several deities whom Homer calls the "Old Man of the Sea," whose name suggests the "first," as protogonos is the "firstborn."
- PROTEUS was an ancient SEA-GOD and the herdsman of Poseidon's seals. Like the other sea-gods he had the gift of prophecy and the ability to change his shape at will.
- THE PROTOGONOI were the first born immortals whose forms made up the very fabric of the universe. They emerged at creation. The first of the Protogonoi emerged from NOTHINGNESS, and rest were the offspring of these.

EROS, KHAOS, KHRONOS & NYX are some of the protogonoi and are also asteroids on the big list. asteroid EROS is related to ANTARES, CHAOS is related to ALDEBARAN, NYX is conjunct YILDUN, and KRONOS is FARPOINT.

prime numbers matching upcoming thelemic cycles: 3037, 3041, 3049:

3037 ~ 07-Feb-05 to 18-Feb-05

3041 ~ 28-Mar-05 to 08-Apr-05 (DR this = #8-FLORA, checkout her child history)

3049 ~ 03-Jul-05 to 14-Jul-05

asteroid #2938-HOPI went retrograde on 16-Dec-2004 about the time hyperstition had its troll problem. HOPI goes direct approximately 14-April. during the occultation HOPI-NICCOLO-IRANI conjunct PHERKAD on 29th path, phase 5, fifth prime (11). fixed star PHERKAD with --

Alpha (Polaris), beta (Kochab), gamma (Pherkad) delta (Yildun), and epsilon constituted the group Circitores, Saltatores, Ludentes, or Ludiones, the "Circlers", "Leapers", or "Dancers" around the early pole, well known from classical times to late astronomy.

past pherkaddian influences:

{a} May 29th 1953 Edmund Hillary and Sherpa Tensing reached the summit of Mt Everest - Pluto/Pherkad

{b} April 12th 1961, Soviet cosmonaut Yuri Gagarin became the first man to fly in space, orbiting the earth once before making a safe landing. - Uranus/Pherkad

{c} May fifth, 1961, astronaut Alan B. Shepard Junior became America's first space traveler as he made a 15-minute sub-orbital flight in a capsule launched from Cape Canaveral, Florida. - Uranus/Pherkad

{d} April 20th 1971, the Supreme Court upheld the use of busing to achieve racial desegregation in schools. - SNode/Pherkad

ps. i posted info on HOPI before the occultation saying i'd be looking at that to determine hyperstition's "end of the world" strategies.

pps. never used 2/3rds of these asteroid before (my list is different), it is based on hyperstition themes, influences, etc. ie, if i went to another blog i'd come up with different stuff and not be looking at Hopi, Prime Numbers, etc.

pps. this here ends the biglist intro.

ppps. PHERKAD = AIWASS

Bioliberation

Nick Land (March 16, 2005)

Can Kass and set the Shoggoths free:

“Bioethics Panel Illustrates Scientific Ethics' Complexity”⁸⁹ by Iain Murray

Comments: Bioliberation

northanger: [] Fire Kass and set the Shoggoths free.

[] Can Kass and Set set the Shoggoths free?

[] Can Kass set the Shoggoths free?

is this a no-gematria zone? bioliberation is, ah, kinda tasty.

Nick Land: this is cool:

<http://www.guardian.co.uk/comment/story/0,3604,1437701,00.html>

Mouse-human hybrids - if they start acting human, scientist promises to kill them

"no-gematria zone" - are there such things?

PS. Kass is pure Anthropol - quite a gothic writer too, think one line goes: "Shallow are the souls who have forgotten how to shudder"

<http://www.weeklystandard.com/Content/Public/Articles/000/000/005/360mvea.t.asp>

No! Promote it vigorously ...

northanger: ok. you've got poe, lear, yellow matter rights & other discordia. and here i just figured out how to work the ABJAD on the biglist and this nonsense flies by like lucy in the sky.

⁸⁹<https://web.archive.org/web/20061011061320/http://www.techcentralstation.com:80/031505C.html>

"We are repelled by the prospect of cloning human beings not because of the strangeness or the novelty of the undertaking, but because we intuit and we feel, immediately and without argument, the violation of things that we are right to hold dear. We sense that cloning represents a profound defilement of our given nature as procreative beings, and of the social relations built on this natural ground. We also sense that cloning is a radical form of child abuse. In this age in which everything is held to be permissible so long as it is freely done, and in which our bodies are regarded as mere instruments of our autonomous rational will, repugnance may be the only voice left that speaks up to defend the core of our humanity. Shallow are the souls that have forgotten how to shudder."

"I am the eggman, They are the eggmen, I am the walrus"

Nick Land: "a profound defilement of our given nature" - Yessss

"Recreationism" also superb coinage (Kass quoted in Weekly Standard article cited comment 02:10 AM (210 = COUNTDOWN))

northanger: CURRENT-266

and of course, CURRENT-210

Nick Land: We want our tentacles back!

northanger: crikey. of course there's no ABJAD entry on the hyperstition dynamic indexxer.

nicholas. before i was so rudely interrupted i was working an LJ post on "ERIDA" the goddess of hate, aka ERIS, the goddess of discordia. being that you two are in such tight conjugal junction, i'm sure -- if you appeal to her better side -- she will be more than happy to re-tentacle you.

AQ 82 = ERIDA = BEGIN = BEING = BEST = BODY = BOHU = DAUT = DOVE = DUAT = DUNG = ESAU = EVEN = FLAME = GULF = HADES = HERO = I DARE = KABALA = KANT = LINK = PAEAN = PLACE = SKY = TEACH = THEM

AQ 152 = TENTACLE = BAPHOMET = BLACK MAGIC = EGREGORE = CANOPUS

AQ 180 = TENTACLES = FULL MOON = THE BLACK EGG = EGREGORES
= = GEOMETRY

AQ 332 = THE FLASHING SWORD

Nick Land: "tight conjugal junction" don't even want to imagine what this means

northanger: "tight conjugal junction"

astrology-speak: tight orb

number-speak: axioms of hyperstition

axiom? polar.

TIGHT ORB = SHOGGOTH

Nick Land: tight orb?

northanger: conjunctions range from 8 to 10 degrees. when two planets on same degree i use juan revilla's idea of 'reincarnation'. 1 to 3 degrees = 'tight'. 4 to 10 degrees = 'loose'.

orb in the sense of a planet's sphere of influence, resonance, aura, light.

tight (within 3°)

orb (aura/influence)

Sue Ward has a good paper here:

<http://www.horary.com/sward/sward5.html>

"tight orb" in this sense: {a} same fixed star, {b} both retrograde, {c} same path, {d} same prime, {e} same p-demon, etc. similar pattern range (all retrograde except PHERKAD) :: NICCOLO, ERIDA, PHERKAD & IRANI.

ORB OF LIGHT = AEONIC LIGHT = PHASE-LIMIT = STRANGELY = WAHHABISTIC

NICCOLO = BABYLON

PHERKAD = AIWASS

ERIDA = HADES

IRANI = IBLIS

TIGHT ORB = SHOGGOTH

this tells me: the tighter the orb, the better. moon-antares is a tight-orb interpretation.

beginning to realize biglist is somewhat numogrammic. if yes, then tight orb relates to zones also.

OCCULTATION = SEVEN STARS = TOWER OF BABEL

imho, moon-antares occultation = tightbeam datastream burst.

NICCOLO {20Le29Rx}

INCARNATION :: ERIDA {21Le11Rx} + PHERKAD {21Le41} + IRANI {21Le51Rx}

Nick Land: "imho, moon-antares occultation = tightbeam datastream burst" - not sure what this means exactly, but it sounds like a fairly controversial conjecture

northanger: totally agree since asteroid 718 is ERIDA, THE STELE = 166 = TIGHTBEAM & DATASTREAM BURST = HYPERSTITUTIONAL.

Nick Land: Brain hurts (again)

At least 'p' has skunked himself into stupefaction

northanger: have a problem with a number set. is your head to achey to deal with a question?

and. came across this quote from reza that i think fits somehow - with the EU vs. USA discussion (In the rear-view mirror) and my number set problem involving ABJAD numbers:

Qabbala 101: Part 1

WoTerror and its crypts, vocabularies and diagrams cannot be thoroughly exhumed from (A-)Now if we miss the indubitable fusion of the techno-commercial Anglossic K-abbalah and the sorcerous-occultural ABJAD (in WoTerror). A versatile line is needed to squirm between the two fronts (already contaminated by each other) and

engineer machinic indices of these two systems whose job is to undermine (but not erase) all political, moral and technical inclinations which obstruct the pestilential diversities teeming out of WoTerror. On the other hand, in WoTerror, there are certain entities and threads that should be primarily diagramed through ABJADs and their hyperstitional grids since they are firmly bound to the sorcerous-occultural fronts of WoTerror (Islamic Apocalypticism?) and linked to 'regional / local' traits and cartographies (it is very hard and sometimes problematic to trust in techno-commercial Anglossic probe-heads when they are tracking such irreducibly foreign entities).

Nick Land: OK, let's hear it ... [I can always just scream and chew the carpet]

PS. Does the alignment of Asmodai with H. emerge out of the arcane depths of Biglist?

northanger: "Asmodai = H" - no. happened prior. biglist just confirmed it.

creating ABJAD Gates using Jacob's Wheel alphabet formula (based on Sepher Yetzirah 231 Gates). two Jacob's Wheel spirals: involutory and evolutionary. thought ABJAD should combine invo+evo letter pairs to match numogram - thought this pretty straight forward since number line decimal reduction = 1-2-3-4-5-6-7-8-9 pattern. however, realized 484 reduces to 7 generating number pairs that do not match Pandemonium (mesh numbers?).

JW formula uses 22-letters; here's the beginning series if 22 or 28 ABJAD letters used (as mentioned previously, 6 unused letters go to LURGGO):

22 x 22 = 484 letter pairs -----{8}

{1:484}, {2:483}, {3:482}, {4:481}, {5:480}, {6:479}, {7:478}, {8:477}, {9:476} ... etc.

484 DR pairs.

[1::7], [2::6], [3::5], [4::4], [5::3], [6::2], [7::1], [8::9], [9::8] ... pattern repeats

28 x 28 = 784 letter pairs -----{11}

{1:784}, {2:783}, {3:782}, {4:781}, {5:780}, {6:779}, {7:778}, {8:777}, {9:776}, {10:775}

784 DR pairs.

[1::1], [2::9], [3::8], [4::7], [5::6], [6::5], [7::4], [8::3], [9::2], [1::1] ... pattern repeats

(trying to think of a 9 series. start at zero: $21 \times 21 = 441 = 9$.)

0 - 441

{0:441}, {1:441}, {2:441} [0::9], [1::9], [2::8]...)

correction on last line...

{0:441}, {1:440}, {2:439} [0::9], [1::8], [2::7]...)

ABJAD gates correspond to Goëtia-Angelica pairs changing every 5 degrees & may not match Pandemonium mesh number. ABJAD Gates set by calendar.

p: At least 'p' has skunked himself into stupefaction --- Haahahaah, I referred to tobacco brother nick, not the wacky weed

I am dumbfounded to be able to write in hyroglyphs now; it's a very pretty cryptomat

<http://www.virtual-egypt.com/newhtml/glyph/glyph.html>

Nick Land: [Twitchily picking shreds of carpet from teeth]And the question is ... ?

p - guessed you were doing something useful

northanger: the question: how many ABJAD letters should i use? 21 (441 ((plus 0 = 442)), 22 (484), 28 (784).

441 = 21 to the 2nd power; Sq.Rt.; Cerva AYLTh; Truth; Temurah of ADM, by Aiq Bekar AMTh; A live coal GChLTh; Day Demon of 2nd Dec. Leo LRYAR; Angel L.T.D. of Pisces RMRA

441 ACTUAL [7x63,9x49,21x21] - [21° Sagittarius]

442 = Termini Terrae APSY ARTz

442 MAAT [13x34,26x17p] - [22° Sagittarius]

484 = 22 to the 2nd power; Sq.Rt.

484 NUMEROLOGY [11x44,22x22] - [4° Aquarius]

784 = 28 to the 2nd power; Sq.Rt.; Qliphoth of Cancer ShYChRYRVN

<http://gypsyjournal.com>

back when the angularity of the numb(erro)ed days and otherwisely sized measures for time's bits and pieces hadn't racked and run up so many open sores in the word

The sheer diversity of asteroids leads to chronic overload in datastreams; my advice: take a step back ; snap a moment, slice a segment, do your best with an average, look for signs if it's decently embeddable in larger broad brush frames, then let go in favor of something you may take hold of.. .. the trouble with children afflicted with a history of not having been given enough to hold on to, shift, sweat over and see cycle into the games and guises of growth from gritty to great big; compared to the abduction/abuse issues playing up in certain channels (in no small part due to the 'residential school' crimes and such, are really dwarfed by this problem; the lack of backyard grounding is a huge crime comparable to the pang of pity some people get when they see someone with a full time job in the city feels entitled to 'keep' a dog.

A report made public yesterday says that big cities have become 7 times deadlier in a short while. Somebody was axed in london the other day.

The art of gypsification is to do with a love for the road; the road warriors want to see an end to them.

I can sympathize with either and see some common ground:

Stay on the path! It's there not to lead to exploitation and disclosure of territory it 'runs' into, but to protect (1) and bless (2) it.

1 -- stops the trampling and hard going, allows easy long distance work; wouldn't mind seeing horsepower change to human muscle power though; big bands on the run with surpluses for and

2 -- essential (trace) requirements for the neighbours.

Roadbuilding is a cleverer way for sediment distribution than creating rivers if you think of us as humble descendants and servants of the water cycles on earth. It's a way for mud to delay sprawly flowy touchy feely gratification and brace, purge and steel itself and reach further; evolutionarily speaking, getting as far as this is a rare chance, .. but what do we see? idiots who want to set their knife in more mobile lifeforms than rock!!! Know you no shame????

u see full?????

JABBAH {04Sg42}

what are you going on about P?

piet. specifically, don't know how i'm supposed to take this:

"The sheer diversity of asteroids leads to chronic overload in datastreams ... "

p: time haiku

nothing better to do than squeeze the obstructs

what luxury

harden the abstracts to carry obstructs to a suitable place to do so = roader age ...
dawning

well, take arguelles et al, he starts with the noble intention of keeping it simple and (numbers) 'whole' but pretty soon the fetish (4 is to 7 as 7 to 13, etcetera) fractionates and it gets grey matter contortionizingly complicated; headaches loom.

asteroid orbits, rotations etcetera simply to diverse to try specify and have hopes of time left over to actually achieve confessed aims.

Attempts to determine/place/pick out the role of individual trace minerals, supposedly redundant dna run into similar problems ; I prefer to 'make do' with a simple, coarse perhaps, trial and error mixage (magic) mimic.

<http://essenes.net/subindexgarden.htm> COOL!!!!

Nick Land: northanger - can you just choose how many Abjad letters to use? sounds kind of liberal ...

"what are you going on about P?" - belongs permanently on the sidebar

can i step back several paces on the Bigsys and ask about the merging of square (484) and triangular (231) numbers? when the system then gets redistributed on the zodiacal circle, a geometrical circuit blows in my visual cortex ... (and then there are the stars, but they seem to work like types of circles ...) [and the q. is] does 'it' have a shape /basic procedural principle for you, or is that looking at it the wrong way?

northanger: ppppp - Ne sorga, snotor guma!

"can you just choose how many Abjad letters to use? sounds kind of liberal" - AFAIK, some of them may be finals like the hebrew alphabet which has 22 letters and 5 finals. any remaining ABJAD letters are assigned to LURGGO at the center of the wheel. ((operating in ABJAD fog since reza hasn't answered Qs about this))

"merging of square (484) and triangular (231) numbers?" - what makes 484 square; 231 triangular?

[give me a minute on the rest]

Rops was to write again with regard to this work: "Here is more or less what I wanted Satan to say to the good Anthony (...) I want to show you that you are mad Anthony, to worship your abstractions!"

"when the system then gets redistributed on the zodiacal circle, a geometrical circuit blows in my visual cortex" (a) mine too, (b) a circle can contain many shapes, (c) there are a variety of patterns; biglist only covers teeny fraction.

"(and then there are the stars, but they seem to work like types of circles ...)" - fixed stars as opposed to planets, asteroids, etc? each planet or asteroid has a cycle; asteroid families describe patterns in the midbelt; see lagrange points (got links to some sims, let me look them up) kozai named for astronomer - describes a type of protection mechanisms

<http://copernico.dm.unipi.it/~milani/maratea/node5.html>

fixed stars do move, a little. so they "function" differently.

"[and the q. is] does 'it' have a shape /basic procedural principle for you, or is that looking at it the wrong way?" - i think every astrologer has a procedural principle (?). mine: Liber AL I:3. Every man and every woman is a star. that means every decision in the system should support Liber I:3. the shape? we live in a "complex (chaotic) multiverse" - what shape is that?

actually, i'm almost done with the biglist. then, i will move to jetbox one and implement a website for beloved sister. working on biglist sharpens the mind for the real work. haha.

http://en.wikipedia.org/wiki/Minor_planet

<http://alumnus.caltech.edu/~marcsulf/asteroid/asteroid.html>

hopefully, some of these links illustrate the resonating, cyclical, pattern-inducing behavior of the planets & asteroids.

<http://www.crystalinks.com/asteroids.html>

<http://www.easysky.de/eng/screenshots/ess06.htm>

<http://www.rzuser.uni-heidelberg.de/~s24/hilda.htm>

Typical Hilda asteroids are captured in the 3/2 resonance of mean motion with respect to that of Jupiter. In numerical studies on the long-period evolution of Hilda-type orbits Schubart (1982, 1991) has introduced three parameters that appear to characterize an orbit during very long intervals of time, in analogy to the proper elements of orbits of non-resonant asteroids

Resonance in Planetary Orbits

<http://astro.nmsu.edu/~nicole/teaching/ASTR505/lectures/lecture12/slide01.html>

Stability: We define stability within the solar system as a state wherein the orbits of bodies remain well separated, and the planets will remain bound to the Sun for an infinite amount of time.

Chaos: Two trajectories that are arbitrarily close in phase space will diverge exponentially with time. In a chaotic system, the timescale for divergence is independent of the precise values of the initial conditions.

Nick Land: northanger -

assuming:

(1) triangles (e.g. 231 = triangle 21, qabbalistic triangle 22) derived from (non-redundant non-positional) combinatorics - (of Hebrew alphabet?)

(2) squares (e.g. 484 = square 22) appropriate to Goetian Table (?? - way out of my depth, think you showed me one but it was pulsing too psychedelically to assimilate)

- aren't you already quite tightly locked into 22?

- remember you doing some $484/11 = 44$ Pandemonium interlock

- head swirling at how assimilation to 360 happens

- then there're the digital reductions (how do they work?)

- [systems crash]

What's sis's site going to be about? (Can we head over there to contaminate it with Cthulhu prophecy and senseless gematria computations?)

northanger: looking at ABJAD table, 1st and 2nd cols from left, totals are 81/2700 and 72/1800. if 484 gates used, these 6 would be assigned to LURGGO. asteroid #153 HILGA (81+72=153) and asteroid #4500 PASCAL (2700 + 1800).

HILGA named for Saint Hilga--

http://en.wikipedia.org/wiki/Hilda_of_Whitby

PASCAL {17Ta07} named for Blaise Pascal born 19-June (hyperstition's birthday)--

http://en.wikipedia.org/wiki/Blaise_Pascal

- head swirling at how assimilation to 360 happens

believe the idea is LURGGO is doing something to the circle - as i work this, should figure that out.

- then there're the digital reductions (how do they work?)

you mean this stuff?

[1::7], [2::6], [3::5], [4::4], [5::3], [6::2], [7::1], [8::9], [9::8]

after all ABJAD assignments made there should be two sets of letter pairs, 1 going forward, 1 going backward. each of these [7::1] thingys will have 4 ABJAD letters (2-letter pairs) and represent a DOUBLE GATE. then, starting from 01-April-1904 cycle to present day to determine (for 03-March-2005) occultation gate. then, take biglist and for every quinary (5 degrees) add a gate to divide biglist into 12 HOUSES (each quinary has a gate ruled by so-and-so). once that is determined, other Enochian relationships (ie, Bonorum = sorta work like Venusian Time Lords) can be determined. GATE determines Chakra, Planet, Letter-Pairs that can be used to go in and out of GATES (hyperstitionally speaking of course!) -- GATES are TIME PORTALS.

very complicated. but keeps my brain cells jumping.

"What's sis's site going to be about? (Can we head over there to contaminate it with Cthulhu prophecy and senseless gematria computations?)"

rotflmao. hey. just say the word and i'll leave ya alone. sis site is non-profit simple thing, going to use projectseven.com maxwell pack:

<http://www.projectseven.com/products/fastpacks/maxwell/index.htm>

fun thing is getting maxwell into jetbox one:

<http://jetbox.streamedge.com/>

i'll write up the saga on my livejournal.

"<http://astro.nmsu.edu/~nicole> ETCETERA .. .NOT FOUND" - sorry piet, grabbed that stuff from a file dated 10-Nov-2003.

"wait, the Hilda resonance one is of an even wilder order to fit easily within unbudgably embedding borders." -- think i understand you. and that's why i like the 484 pattern. AFAIK, the HILGA family of asteroids have a very stable orbit, very recognizable orbit.

gate gate lifetime slate, who oh who done ate the pearly gate?

I get it; this is all a game of mentally limbering up for the real work and getting stuck in gate galore gauntlet gamot

since i was using ABJAD & this relates to the Numogram, wanted to get feedback on direction. 484 it is (using 22 letters to generate gates, and assign remaining 6 letters to LURGGO representing "hilga" & "pascal") - remember LURGO describes a holy hexagram and the HILGA's describe a triangle and there's PASCAL's Triangle.

((lol, just figured that out - thanks! doh, it takes me awhile))

"gate galore gauntlet gamot" - fraid so. jetbox implementation is going to be a challenge.

ok. nighty night piet. bye nicky.

oops. LURGGO. sorry.

I met a man who wasn't there: the ethics of Ashbless

mark k-p (March 17, 2005)

'Templeton sits immobile in his attic room, immersed in the deceptively erratic ticking of his old nautical clock, lost in meditation upon JC Chapman's hermetic engraving. It now seems that this complex image, long accepted as a portrait of Kant, constitutes a disturbing monogram of his own chronological predicament. As if in mockery of stable framing, the picture is surrounded by strange-loop coilings of Ouraboros, the cosmic snake, who traces a figure of eight - and of moebian eternity - by endlessly swallowing itself. Suspended from its lower jaw is a cryptic device of intricately balanced circles and stars (ancient symbols of the AOE). Above the serpent's head, a facsimile of Kant is etched in profile, the face fixed in an amiable - if distant - expression. What was it though, that hid behind the death-mask, where it cut-off, below and behind the jaw, false ear, and double hair-line? What was this peculiarly formless body, shadowy neck-flesh, and suggestion of a cervical fin? As he stared, and hideously remembered, Templeton felt as though he knew.'

- Ccru, 'The Templeton Episode'

'After a time the boat floated through a dim gate flanked by two sarcophagi as tall as telephone poles, and the shore figures on the other side were screaming and shifting from side to side along the shore and over their frightened cries he could hear a slow metallic slithering. 'Apep!' the ghosts were shouting. 'Apep!' And then he saw a shape of blackness rising and it was the head of a serpent so vast that it dwarfed their freakish boat. Man-shaped forms dangled from its jaws, but it shook its ponderous head, sending them spinning away, and arched slowly towards the river.

"The serpent Apep," whispered Romanelli, "whose body lies in the deep realms of the keeku samu where pure darkness becomes an impenetrable solid."'

- Tim Powers, *The Anubis Gates*, 452

'One is ... tempted to see in the 'time paradox' of science-fiction novels a kind of "apparition in the Real" of the elementary structure of the symbolic process, the so-called internal, internally inverted eight: a circular movement, a kind of snare where we can progress only in such a manner that we 'overtake' ourselves in the transference, to find ourselves later at a point which we have already been. The paradox consists in the fact that this superfluous detour, this supplementary snare of understanding

ourselves ('voyage into the future') and then reversing the time direction ('voyage into the past') is not just a subjective illusion/ perception of an objective process taking place in so-called reality independent of these illusions. The supplementary snare is, rather, an internal condition, an internal constituent of the so-called 'objective' process itself: only through this additional detour does the past itself, the 'objective' state of things, become retroactively what it always was.'

- Zizek, *The Sublime Object of Ideology*, 57

'Steampunk is a form of theodicy.'

- John Clute

Tim Powers' *The Anubis Gates* is a fabulously inventive variation on a time-travel theme.

The model is not the straightforward (or rather straightforward and straightbackward) structure established in Wells' founding text of the sub-genre *Time Machine*. Instead, *The Anubis Gates* follows the formal structure of the time (travel) paradox perfected by Robert Heinlein in stories such as 'All You Zombies' and 'By his Bootstraps'. The template for this kind of paradox narrative lies on the hinterlands between SF, Fantasy and Horror where Lovecraft's *The Shadow out of Time* and *Through the Gates of the Silver Key* can be found. But if those stories show the closed loop of chronos opening out into 'the unutterable Abomenon of the Outside (Nihil Ulterius)', then Heinlein and Powers merely trace the coils of ouroboros. *The Anubis Gates* confirms Zizek's claim that the closed loop paradox, far from threatening the collapse of chronic temporality, is the structure of the (Symbolic, Architectonic) Order itself.

In *The Anubis Gates*, the academic Brendan Doyle is lured into a time-travel experiment by the eccentric plutocrat Clarence Darrow. Darrow is dying, and, whilst undertaking the prodigious and apparently deranged research he has pursued in a desperate bid to prolong his life, he comes upon the story of 'Dog-Face Joe' amongst the folklore of London in the early years of the nineteenth century. By a process of diligent scholarship and daring supposition, Darrow determines that Joe was a magician capable of transferring his consciousness from body to body, but whose body-stealing had an unfortunate side-effect: almost immediately Joe enters it, the purloined body grows profuse, simian-like hair, so that its new owner is forced to discard it very soon after switching into it. For obvious reasons, Darrow wants to acquire the secret of this profane transmigration, and he seems to have the means to

make contact with the body-switching magician since his research has uncovered 'gaps' in the river of time, gates through which it is possible to pass into the past. Doyle's role is to act as a kind of literary tour-guide for the ultra-wealthy time travellers Darrow has assembled, attracted by the possibility of seeing a lecture by Coleridge, and whose million dollar fee will finance the trip.

Very soon after arriving in the nineteenth century, Doyle is abducted into a rhizomic underLondon that is part *Oliver Twist*, part Burroughs' *The Western Lands*. Powers' phantasmagoric London - the apocalyptic vividness of whose rendering led John Clute to describe *The Anubis Gates* as 'Babylon-on-Thames punk' - is the site for a war between the forces of Egyptian polytheistic sorcery and the grey positivism of British Empire/empiricism, involving romans, ka duplicates, poets, beggars, costermongers, male impersonators....

After a while, Doyle comes, reluctantly, to accept his (literary) Fate - to be propelled, by means of SF, into the nineteenth century picaresque - and more or less gives up any hope of returning home. He resigns himself to make the best of his nineteenth century life and decides that his most realistic hope of an escape from beggary is to make contact with William Ashbless, the minor poet in whose works he has specialist knowledge.

Doyle goes to the Jamaica Coffee House on the morning in which, according to Ashbless' biographer, the American poet will write his epic poem, 'The Twelve Hours of the Night'. The appointed time arrives, but there is no sign of Ashbless. While he waits, at first agitated and then deflated, Doyle idly transcribes 'The Twelve Hours of the Night' from memory.

He is soon caught up in more intrigue and, for a while, forgets about Ashbless. In one of the most uncanny moments in the book, Doyle hears, or fancies he hears, someone whistling The Beatles' 'Yesterday'. It is only after he catches the refrain being whistled again a day or so later that he is able to confirm that there are indeed a group of twentieth-century temporal emigres living in 1810 London. They turn out to be Darrow's people, given the task of helping in the search for Dog Face Joe. Doyle meets with one of them, his former student, Benner, who by now is a paranoid and grizzled wreck, convinced that Darrow is out to kill him. He and Doyle agree to meet again a few days later, but when they do, Doyle finds his former friend's behaviour is even odder than before. Doyle discovers the reason for this too late. Benner's body has been acquired by Dog Face Joe. This becomes clear to Doyle only when he finds himself in Benner's body, after it has been discarded by Joe.

Everything is now in place for the revelation that shocks Doyle but which is, by now, no surprise at all for the reader: Doyle IS Ashbless. Or rather: there is no Ashbless (except for Doyle). Doyle only begins to process the full implications of this when he contemplates the peculiar (a)temporal status of the 'Twelve Hours of the Night' manuscript.

“It hadn’t [...] come to too much of a surprise to him when he’d realized, after writing down the first few lines of ‘The Twelve Hours of the Night’, that while his casual scrawl had remained recognizably his own, his new left-handedness made his formal handwriting different – though by no means unfamiliar: for it was identical to William Ashbless’. And now that he’d written the poem out completely he was certain that if a photographic slide of the copy that in 1983 would reside in the British Museum, they would line up perfectly, with every comma and i-dot of his version perfectly covering those of the original manuscript.

Original manuscript? He thought with a mixture of awe and unease. This stack of papers here is the original manuscript... it’s just newer now than it was when I saw it in 1976. Hah! I wouldn’t have been so impressed to see it then if I’d known I had made or would make those pen scratches. I wonder when, where and how it’ll pick up the grease marks I remember seeing on the early pages.

Suddenly a thought struck him. My God, he thought, then if I stay and live out my life as Ashbless – which the universe pretty clearly means me to do – then nobody wrote Ashbless’ poems. I’ll copy out his poems from memory, having read them in the 1932 Collected Poems, and my copies will be set in type for the magazines, and they’ll use tear sheets from the magazines to create the Collected Poems! They’re a closed loop, uncreated!... I’m just the Messenger and caretaker.” (330-331)

Like his unhappier time-displaced fellow, Jack Torrance, Doyle has always been the caretaker (and nothing but?)

Fictionally speaking, the 'Twelve Hours of the Night' is another kind of duplicate, since a similarly atemporally insistent text (in this case a notebook) is at the heart of Heinlein's 'By His Bootstraps'. The concept of such a text originates, though, not in SF but in Leibniz's demented rationalism. To illustrate his claim that 'we cannot find in any of the individual things, or even in the entire collection and series of things [of the universe], a sufficient reason for why they exist', Leibniz offers the following analogy:

'Let us suppose that a book on the elements of geometry has always existed, one copy made from another. It is obvious that although we can explain a present book from the previous book from which it was copied, this will never lead us to a complete explanation, no matter how many books back we go, since we can always wonder why there have always been such books, why these books were written, and why they were written the way they were. What is true of these books is also true of the world, for the state which follows is, in a sense, copied from the previous one, though in accordance with certain laws of change.' ('On the Ultimate Origination of Things')

Rehearsing the logic of Aquinas' cosmological argument, Leibniz's conclusion is that there then must be 'One Being who rules the universe...[and who] fashions and creates it', a Being which 'is above the world, and, so to speak, extramundane, and therefore ... is the ultimate origin of everything.' As Russell and others have pointed out, though, this 'proof' of the existence of Jahweh is anything but: it merely sets up the bad infinity of transcendence, which is always pseudo-transcendence, since every attempt to posit 'an Ultimate Origin of Things', a meta-level above all meta-levels, the set of all sets, is destined, by its very nature, to fail. There is no better statement of this than Douglas Hofstadter's in Godel, Escher, Bach:

'Achilles: ... You mean that GOD sits up at the top of the ladder of djinns?

Genie: No, no, no! There is nothing "at the top", for there is no top. That is why GOD is a recursive acronym. God is not some ultimate djinn: GOD is the tower of djinns above any given djinn. (114)'

This shifts us from the transcendemia of the cosmological argument to that of the ontological argument, which, as Brian McHale argues in *Postmodernist Fiction* is 'grotesquely parodied' by Beckett in *The Unnamable*.

'God is that than which nothing greater can be thought, said Anselm. Now if that than which no greater can be thought existed only in the mind, then a greater could still be thought after all, namely a being who existed in extramental reality. Therefore, so runs the syllogism, God must exist not only mentally but also in reality. The Unnamable parodies this astonishing feat of pulling-oneself-up-by-one's-boot-straps by showing that no matter how "high" his imaginings go, no matter how many recursive authors and authors-above-authors he projects, he can never get outside of his own imaginings to the reality of his ultimate creator. There is an absolute "ontological" ceiling which retreats as he approaches it.' (13)

The ontological problem in *The Anubis Gates* is quite different of course.

The ontological scandal presented by Ashbless' collected poems is not that there is some 'ultimate creator' which cannot be reached, but very much to the contrary: the ex- or rather IN-sistence of the poems establishes that they could not have a creator of any kind, only a caretaker-transcriber. And what displaces Leibniz's transcendent God is the 'miracle' - or rather the miraculation (Deleuze-Guattari) - of the appearance-insistence of the Text itself. But, we have to insist, with Lacan, that this is all God always-already was. Or to put it another way, the mono-theistic God IS the always-already.

That is what Lacan establishes in his typically gnomic reading of 'Moses and Monotheism'. 'The Death of God' (in the seminar on *The Ethics of Psychoanalysis*) does little more (but this is vast) than slavishly draw out the implications of Freud's rigorous demonstration that the foundation of mono-theism IS the destruction of all foundations. When the beta males rise up to kill Pere Jouisance (the alpha male 'father who enjoys'), they find, to their horror, that, ar from having access to the unlimited enjoyment that they imagined was available to the patriarch, they occupy the position of the always-already mortified, the scions of guilt-plague: in other words, the role of the big Other itself. Jahweh never exists, he insists (in the troubled unconscious of his usurper-propagators). Jahweh is never present, he persists (through his absence, not only maintaining but defined by what theologians call 'epistemic distance').

What makes all this utterly contemporary is the flattening of God into the big Other. Postmodern/ deconstructive negative theology likes to pose as a textualist-relativist deviation from a spectral Orthodoxy that is supposedly characterised by its rigidity and dogmatism. But Freud-Lacan's analysis allows us to see that, just as the homicidal-oedipal apes find there is no God but the space of the absent God which they themselves occupy, so Orthodoxy only persists via its retrospeculative positing in the talmudic quibbling of those who endlessly announce their deviations from 'doxa'. To return to *The Anubis Gates*: so far as postmodern power goes (it's dead but it lives on - Land) there is there is no orthodoxy, there is only parody.

As Deleuze-Guattari and Zizek both acknowledge, Kafka is the prophet of the already-dead God and the double-binding 'control virus' (Burroughs) in which it is instantiated. Eschatology and the Last Judgement are misdirections, teleological confidence tricks concealing the 'fatal strategies' (Baudrillard) through which Control immanently operates, now. The predicament in which K, as the postmodern subject

par excellence, finds himself is not that of someone awaiting judgement, but of someone enduring 'indefinite postponement'. The big Other does not exist, it insists as virtual vampiric structure whenever it lures dupes (us) into endlessly petitioning it for recognition and/or acquittal. It was in this sense that Orson Welles was perfectly right to say that K is 'guilty as hell'. Guilt is the a priori condition for those inserted into the Control machine, whose lineaments were described with terrifying precision by Burroughs, Kafka's real successor. Control precisely does not issue rigid commands, but complementary yet contradictory injunctions, themselves always provisional and 'subject to review'. The coherence of the Control hyper-entity can only ever be virtual; it doesn't pre-exist the subject of Control. Very much to the contrary, it is the very attempt to make sense of the 'obviously' incommensurate and prima facie senseless injunctions it issues that constitute what minimal coherence Control has. As Kafka's hapless petitioner discovers, the door is meant only for you. But behind the door is the metastatic God Over Djinn bad infinity of metanoiac postponement. Ceaseless seamless bad dream corridors.

'We know that Mr D never told any of his agents any more than the uh minimum consistent with the performance of their uh duties and that this Minimum Information - M.I. - was expressed in mathematical formulae. We know that Mr D lied to all his agents. I suggest that he lied to you, doctor. I suggest further that you are not the Mr D. That the Mr D does not in fact exist but is simply the hypothetical quantity at the end of an infinite series of which you and Mr Martin are the uh lower integers.' (Burroughs, 'Ancient Face Gone Out', 18)

That is why the Nietzschean critique of grammatology (we'll never get rid of God until we get rid of grammar) not only fails to move beyond the dead God, it sustains that God in its undead. Nietzsche's claim, in 'The Genealogy of Morals' that there is no actor-subject behind actions is both too slow and too quick. Too slow, because, as we have seen, the non-existence of the mono-theistic meta-subject is the founding moment of mono-theism. Too quick, because there is, in fact, a subject, albeit one that is only ever empty, 'barred'.

To demonstrate why this is so, we can return (at last!) to 'The Anubis Gates'. What is the difference between Doyle and Ashbless? The quick answer, 'nothing' is tempting, but misleading. Or rather, 'Doyle' is that 'nothing' which is the difference from Ashbless. This 'nothing' is what Lacan means by the barred subject.

Zizek quite rightly makes the connection between Lacan's famous slogan 'the letter always reaches its destination' (from Seminar XI's epochal 'The Agency of the Letter

and the Unconscious', the reading of Poe's 'The Purloined Letter') and time paradox stories. As he explains, at one level, 'a letter which always arrives at its destination points at the logic of recognition/misrecognition (reconnaissance/méconnaissance) elaborated in detail by Louis Althusser and his followers (e.g. Michel Pêcheux): the logic by means of which one mis/recognizes oneself as the addressee of ideological interpellation. This illusion constitutive of the ideological order could be succinctly rendered by paraphrasing a formula of Barbara Johnson: "A letter always arrives at its destination since its destination is wherever it arrives." Its underlying mechanism was elaborated by Pêcheux apropos of jokes of the type: "Daddy was born in Manchester, Mummy in Bristol, and I in London: strange that the three of us should have met! In short, if we look at the process backwards, from its contingent result, the fact that events took precisely this turn could not but appear as uncanny, concealing some fateful meaning — as if some mysterious hand took care that the letter arrived at its destination, i.e., that my father and my mother met.'

The Oedipal reference here is of course no accident (and part of the point is that the unconscious is rigorously Spinozistic in its rejection of the very category of the accidental; as Freud shows in 'Beyond the Pleasure Principle' the unconscious transforms apparent contingency into metaphysical Necessity via repetition) because the Oedipus myth is itself a closed loop paradox: 'one knows in advance one's destiny, one tries to evade it, and it is by means of this very attempt that the predicted destiny realizes itself.' (Sublime Object of Ideology, 58)

Thus the closed loop time paradoxes in science fiction are in a sense the 'comic' postmodern counterpoint to the closed loops of classical tragedy. What makes the Oedipus myth (post)modern from the start is the fact that, as Alenka Zupancic explains, it is a kind of initiation in reverse. Oedipus does not have to struggle to overcome a Female-Thing (the Sphinx yields easily) nor to best an omnipotent Symbolic Father (his father is just a rude old man). Oedipus 'travels the path of initiation (of 'symbolization') in reverse and, in so doing, he experiences the radical contingency of the Meaning borne by the symbolic.' (Ethics of the Real, 192). In other words, instead of first of all experiencing his parents as mighty agents of the symbolic, only to become disillusioned later when he realises that they are 'just people', Oedipus first of all encounters 'mere people' then, only afterwards, realises that these quotidian nothings - these happenstance wretches - were no less than his Mother and Father. Oedipus' problem, then, is that of the always-already dead God, the father who cannot live up to his undead role as Father. 'So THAT was the the father!'

Doyle's initiation is similar but subtly different. The Ashbless Enigma that he encounters first is comically deflated once he realises that - at some level - the solution is only him. 'I wouldn't have been so impressed to see it then if I'd known I had made or would make those pen scratches.' But the deflation is immediately followed by a profound dread and awe (the poems are uncreated!) that far exceeds his original fascination with the poet.

Once Doyle realises that he is destined to be Ashbless, which is to say, that he always-already was Ashbless, he is posed with a dilemma: does he act in accordance with what he hypostasises as the will of the universe (it is the 'universe' that 'wants' him to live in Ashbless' shoes), or not? The problem that Doyle faces is that the determinism is much harder than a will, even a will that belongs to 'the universe'. What he literally cannot process is that everything he has done as Ashbless has already happened. The barrier that means that this cannot be faced is transcendental: subjectivity as such presupposes the illusion that things could be different. The Kantian demand that we must think of ourselves as if free turns out to be a transcendental law rather than a meta-ethical injunction. To be a subject IS to think of oneself as if free. What sustains this for Doyle is the apparently spontaneously emerging hypothesis of an 'alternative past': in order to hold open the possibility that things might go against the already-recorded Ashbless biography, Doyle is forced to consider the possibility that he has somehow crossed into 'different past' to the one he has seen documented. But the full Zizekian paradox is that it is only Doyle's positing of such an 'alternative past' that ensures that he acts in accordance with what has already happened. The letter always arrives at its destination. Ashbless becomes the hero he already was, the restorer of an Order that was never threatened: the 'harlequinade of magicians and other villains ... know their place', and the 'Adamic Doyle' will have always thwarted the 'generically familiar templates whose attempts to spook England into decline and corruption and despair' (Clute).

The difference between Doyle and (Oedip)us is only that Doyle is more aware of the Necessity that he is (even if such awareness is part of the very Necessity of which it seems to offer knowledge). From the point of view of Spinozism, of course, 'we' are no more 'free to avoid Necessity' than is Doyle. *Sub specie aeternitatis*, everything has already happened, but we, too, are unable to give up our belief in 'possible worlds', our conviction that things could have been different from what they always had to be.

So it is that the ouroboros coils around us.

'His destiny moves us only because it might have been ours - because the oracle laid the same curse upon us before our birth as upon him. ... While the poet, as he unravels the past, brings to light the guilt of Oedipus, he is at the same time compelling us to recognize our own inner minds...'

Comments: I met a man who wasn't there: the ethics of Ashbless

Reza Negarestani: Mark, just some initial sparks: the strange draco-spiralism depicted in figures 1 and 2 is not originally a manifestation of the eternal fang-tail dynamism of ouroboros as ouroboros itself originates from a far more ancient entity. Archeological investigations during the 80s confirmed that these draco-spirals (a coiling serpent, a serpent swallowing itself, etc.) initially come from an unfathomably ancient entity which later resurrected in Persian and Mesopotamian and later European Mithraism, spread in all religious threads (even threads of monotheism): Zravan Akarana whose tetra-winged body is always surrounded by coils of a serpent (ouroboros is a horizontal segment of this coil) whose function is uncreation through Aeonian chrono-abys. Zravan Akarana (the UnTime) presents the burning line of flight (usually pictured with flaming eyes and a mouth filled with black flame) out of the time which belongs to creation and the divine (the creator and the created), in later manifestation of Zravan Akarana, the tetra-winged body disappears (as the main body of Zravan) and the coil remains, segmented to ouroboros, chrono-dimensions and modes of templexity. I will post a full articles on Solar flight, Zravan and Islamic Salat soon. Will try to scan a picture of Zravan, think it fits your post perfectly. interestingly, when Zravan flies out of time, the consequence is creation but it is not the creator (in early Avesta, Ahura Mazda and Ahriman both claim that they don't have a father although they emerge from Zravan).

northanger: mark - trying to wrap this time loop around my mind. i'm moebically perplexed how to work it magically or hyperstitionally. do you start in the past, the present or the future? i may be wrong, but regardless of where you start it requires some type of recognition? from the past you recreate something from memory and recognize you're the "carrier". starting from the "future" is still kinda fuzzy. but, starting from the "present" seems to involve deciding what thing you're going to

"misrecognize" and transform it by "recognition". argh. what a puzzle. another boggy area involves deciding what "fiction" to use.

reza (9) - i know i know. {sing-songy} the most ancient old thingys found only in Persia & Mesopotamian. however, worthy mention: TELI appears in Sefer Yetzirah 6:1 "He set them in the Teli, the Cycle, and the Heart."

searching "Zravan Akarana" found "Essential Origins Of Zoroastrianism" -

main link: <http://tenets.zoroastrianism.com/>

three papers by "Dr. Framroze Sorabji Chinivala, Ophthalmic Surgeon, 1942, Published by the Parsi Vegetarian and Temperance Society of Bombay" - Introduction and Chapters of Essential Origins Of Zoroastrianism, Essential Origins Of Zoroastrianism, Sequel to Essentials of Zoroastrianism.

from "Essential Origins Of Zoroastrianism"

<http://tenets.zoroastrianism.com/EssentialOriginsOfZoroastrianismFull.pdf>

Zarvane Akarne = Endlessness.

"The number 1 denotes the ultimate goal that the Universe has to reach, i.e. to be submerged in the One without any compeer, Unfathomable, Unknowable. Zero denotes the helplessness of even Fravashi to fathom the Great One, and the sign '(-)' minus denotes the One and the Only One, who is beyond the domain of Law, Whom the thought of even Yazatas can never reach. The sign plus denotes the outcome of the Universe of both the immortal and mortal types. The symbol of circumference with a centre and a radius O denotes Zarvane Akarne i.e. energies without limit possessing deified powers, called Khshathra. This Zarvane Akarne is the authoritative genius of each one of the immortal seven tenses having deified import as good as that of Yazata who are the deified 'harmony-cloak' of Ahuramazda. This Zarvane Akarne leads to desired end, all possible 'times and spaces' conceivable accruing from it in the most frugal manner, rotating and working upon the centre of Asha according to the principles Asha i.e., Order Divine with radius i.e. power uncontested. This symbol of Zarvane Akarne is taken also as the symbol of the power of the Yazata the immortal

beings affiliated to Ahu who with their power of this zero like circumference of Zarvane Akarne say that they know nothing about the Great Ahu, i.e. they know zero about Him. But this zero of Zarvane Akarne instructs them that they have to go by the Divine Edict-Ahuna-Vairya-and the associated Loyalty-Fravashi-to work out the Razeng the mystery associated with number 3, i.e., to evolve the mortal Universe, take it to the extreme end of rigidity, mortality, materialism and then turn it back to immortality and the Great One after due Connotation of improvement. Thus the Yazatas, who denote the import of +plus, i.e. who are the outcome of the Great One are invested with Zarvane Akarne powers to work out the mysterious number 3, mysteries of number 3, in order to take it to the mystery of number 9."

mark k-p: Reza, interesting, but the second fig is not Ouroboros but Apep, from Egyptian mythology. I've seen some pictures of Apep in which it is portrayed as a winged serpent. Is Zravan Akarana older than Apep I wonder?

Reza Negarestani: Yes Mark, it's Apep, the winged serpent which also connected to Sumerian mythologies and later ouroboros and is directly connected to Zravan. The first headless figurine of Zravan which has been discovered in south of Iran belongs to approx. 9500 years ago (before Aryans settled in Iran plateau), which is older than Sumero-Babelian draco-spiralistic figures (Tiamat, Nergal, etc.) the strange thing about the archeological discoveries is that Zravan sometimes has been introduced as the primal Ahriman who is presented as three dots (cosmic unlocalizability), only in later Avesta and Indic culture it is introduced as something neutral or related to Ahura i.e. a demiurge and Yazd [God] (looking at the pics I sent, you can easily realize it's not very friendly), later three dots become four dots (square and is an element in constructions associated to Yazds and later Allah i.e. Kaaba or Cube which in Sanskrit means to lay down, to stretch over a surface and is the basic architectonic form for worshiping by offering a 'place to' a deity; Kaabas were very popular in early Zoroastrianism and are somehow different from Sumero-Akkadian Ziggurats in their exclusive functions to worshiping deities) and constitute a swastika. Think your post is great for discussing Chronomancy / Time-traveling potentials of hyperstition and their connections to Mesopotamian mythoi. But this needs an effective contribution from Barker, Sarkon, Linda Trent, et al. (see the picture: <http://hyperstition.abstractdynamics.org/archives/Dots.gif>)

There are also a couple of ciphers (not decoded it) which are associated to Zravan: (<http://hyperstition.abstractdynamics.org/archives/Ciphers.gif>)

northanger: <http://www.symbols.com/>

two types of draco spirals—apep (apophis) = disorder // ouroboros = order. apep (evil serpent, nachash) strives to destroy cyclic order (sun) with apophetic formulas to restrain, crush, dismember, & destroy by fire (appearing in many egyptian funerary rites). ((donald tyson's apocalyptic theory re enochian angels + choronzon fits here))

word associations: apophetic - apocalyptic // apophis - aphasis. aphasis (releasing; "releasing of a debt") appears in NT & hellenistic astrology. in astrology, aphasis determines time lord governance: you must "serve" or "live out" the time period described by a time lord until a debt is paid; only intervention can cut this short. NT usage: "For this is my blood of the new testament, which is shed for many for the remission [aphesis] of sins". this appears in luke 4 after jesus tempted by satan (apep?). afterward, he returned to nazareth & read a prophecy from isaiah in the synagogue: "To preach the _acceptable year_ of the Lord". may be some similarities here: "Taghieh 'originally' means a strategic (dis)simulation; the belief of the concealment of the true beliefs in situations where harm or death will definitely be encountered if the true beliefs are declared."

AQ = 1384 = ???

Reza Negarestani (March 20, 2005)

Finally returned home and fully online.

Still 6 hours to the Persian New Year but anyway, Happy Norooz to all.

(Personal commentary: hate that line about awakening the good)

PS. I will try to post a boring article very soon.

PPS. There is a v. interesting draft post in MT control panel; Mark is that yours? If your answer is positive, I have some archeological materials and minor corrections for you.

PPPS. Someone awakens Dread from its untimely slumber.

Comments: AQ=1384=???

mark k-p: Yeh, was me. See below. Interested in yr corrections and archaeology stuff obv.

Happy norooz to you too...

northanger: reza - happy newbie you wiley dust demon. do you happen to have an AQ value of 1384 already, or are you just fishing?

Reza Negarestani: Thanks very much ... no, i'm just looking for the prey. ;)

northanger: argh. found a 1374 & a 1394. so i made one up!

1384 = GEM: INTELLECTUAL LOGIC (PLUTONIC LOOPING) THE NEUTRAL CENTER TICK-DISTRIBUTOR

333 = INTELLECTUAL LOGIC

333 = PLUTONIC LOOPING

333 = THE NEUTRAL CENTER

333 = TICK-DISTRIBUTOR

Nick Land: Great to have you back!

Norooz seems to intriguingly coincide with Lovecraft's period of annual Cthulhu agitation.

Nothing on 1384 (yet), but 1390 could be very stimulating ...

Machines are digging (Holey Space and H.P. Lovecraft) [updated]

Reza Negarestani (March 21, 2004)

Holey Space

This is a new version of ‘Machines are digging’, extensively updated in the wake of Dr. Hackhammer’s ground-breaking studies on Shoggothic Materialism and biopolitics of pest.

An interesting conversation with Craig is still moving forward and getting more exciting, more dynamic in different directions; here some preliminary and crude answers:

First, the machine we are interested in is a non-mechanistic (running un-dispositif), non-utilitarian, immappable machine (machinic machine); intrinsically insurgent to any instrumentalizing process. It can be grasped through radical contagious participations between parts, and its machinery of bond-engineering or epidemic attraction (which according to DG is the ‘functioning’ itself), an attraction which never accommodates parts in matrices of correctitude (what gravity does).

Craig: “Cthulhu, Minister/Priest of the Outside brings a new kind of existence to the Machine-Shoggoths. The Carven Rim and Black Pit are the Holes, tunnels of Holey space through which the Unlife may seep through. That proto-Shoggoth is Unlife itself, the seething chaotic profusions of value-stripped War that repels us with its Strangeness, and in a desperate attempt to comprehend the blackly Numinous labels it a place of Soul-Shattering Evil.”

Holey Space or more accurately ‘()hole Complex’ (with an ever-evaporating W) speeds and triggers the opening of the Unlife and its convoluting, holing, coring out processes – vermiculating lines or tendrils of Anonymous-until-Now (see previous posts) – that eventually transform into a violent process of ungrounding, re-inventing the Earth as an Unground or what Deleuze and Guattari slyly appropriated as “the New Earth”. The question is: The Tellurian–Omega or the Unground can still be called Earth? And then according to what chronologic current or based on what

calendar, according to what becoming, it can be mapped as NEW (the new earth)? The Unground is a shadow out of time.

Lovecraft has an alarming but over-neglected passage about this holey space or ()hole complex as the zone through which the Outside gradually but persistently emerges, creeps in (or out?) from the Inside.

“Great holes secretly are digged where earth's pores ought to suffice, and things have learnt to walk that ought to crawl.” (H.P. Lovecraft, *The Festival*)

From the following paragraph: "The nethermost caverns," wrote the mad Arab, "are not for the fathoming of eyes that see; for their marvels are strange and terrific. Cursed the ground where dead thoughts live new and oddly bodied, and evil the mind that is held by no head. Wisely did Ibn Schacabao say, that happy is the tomb where no wizard hath lain, and happy the town at night whose wizards are all ashes. For it is of old rumour that the soul of the devil-bought hastes not from his charnel clay, but fads and instructs the very worm that gnaws; till out of corruption horrid life springs, and the dull scavengers of earth wax crafty to vex it and swell monstrous to plague it. Great holes secretly are digged where earth's pores ought to suffice, and things have learnt to walk that ought to crawl." (H.P. Lovecraft, *The Festival*)

The ()hole Complex is actually a machine to facilitate the awakening of the Old Ones through convoluted compositions of solid and void. Paraphrasing Nick from *The Thirst for Annihilation: Georges Bataille and Virulent Nihilism*: “void excludes solid but solid includes void to architectonically survive” ... solid needs void to engineer composition; even the most despotic / survivalist solids are compositional solids, infected by the void. Through these inter-collisions of void and solid, the Old Ones – according to Lovecraft – can revive their Holocaust of Freedom, both by consuming solid and pushing compositions towards highest degrees of convolution (as a result of the ambiguity of solid and void i.e. the foggy space of hole and its surface dynamics), by engineering ‘the corpse of solidus’ as we call it – installing ungrounding machines at molecular levels that exhume (ex + humus: ground) the earth from within and without, turning it to a vermicular composition whose strata (*The Economy of Solidus*) are not dismantled but intricately convoluted at each level of their formation and composition; they are incapacitated from running their stratifying / grounding functions; instead they are charged to engineering the corpse of solidus, or in a Lovecraftian sense, a worm-infested body (earth) exhumed by worming processes – holing / vermiculating machines.

Although void devours solid but solid feasts on void i.e. its outsider. In compositions, solid becomes hysterically gluttonous for the void. This is what intrigued the Cult of the Old Ones in their mission to perform their awakening ritual: If the Old Ones should fly through ()hole complex or holey space, then the only strategic technique to speed their return is to mess with ()hole complex – the zone of their emergence. A technique which also perceived by the Z. crowd as a strategy to arch-sabotage monotheism and inter-connect it to undercurrents of Tellurian Insurgency (for example petropolitical undercurrents in Islamic Apocalypticism), and actively – but without attracting too much attention – participating in the Project of Tellurian-Omega and its diverging lines (where the Earth reaches utter immanence with its burning core [or as Nick suggests, “the burning core of the real”] and the Sun) and the Uground.

Awakening Strategies: Holey space is nothing but a composition (of solid and void) but a vermicular one, burrowed by worms or vermicular lines convoluting and coring out anything they touch. In a composition, solid narrates the anomalies generated by void or the infection of void through solid (when void comes to solid, it works as a convoluting plague, a coiling swirling epidemic rather than a nullifying process or a solid-annihilating agent); in a composition there is no pure solid but a defiled one, a diseased and deflowered solid. Once you realize that in a composition (as in ()hole complex) solid is the possessed narrator of the void, you can see that solid works as two different entities overlapped on each other and functioning concurrently:

(1) As a compositional agency whose dynamism and behavior (topological changes, surface modifications, transformations, motions, wrinkles, folds, etc.) can induce changes to the compositional side of the void through Surface Dynamics:

At a compositional level, holes compile surfaces out of the hegemony of solidus. Every manifestation of ()hole complex passes a certain type of surface dynamics (in terms of evoking periphery, itinerancy, and affect), breeding a new genre of surfaces with their exclusive itinerant lines depending on the locus of hole and the way that void interplays with solid. Holes offer new polytical activities to surfaces; the crisp boundary of surfaces is dissolved into blurred and cryptogenic boundary of hole. In the presence of hole, an asymmetric parallelism between surfaces and the crust occurs; while they remain analogous and remotely connected to their common genus but each one spawns its own different, independent operational entities and geometries; here, surfaces do not necessarily conduct and synchronize the ground’s local hegemonies through the consolidated coherence of the crust and countermines the stratification

processes instead of supporting it (each surface has a command line with two heads: a trellis and a taxis, one receives the accumulation and distributes it i.e. a textum / groundwork for fixation, positioning and support and the other, for granting what has been supported a tendency according to the mutual affordance between surfaces, the eco-logical web). Inner holes and connected cavities, simultaneously, come with two types of surfaces or two active linkages with solidus, a surfaces-supporter that binds the cavity to the crust (therefore, the ()hole complex cannot be merely reduced to a subterranean / subsoil complexity) i.e. the ‘eco-logical’ outside, and a surface-transmitter that joins with the itinerant lines passing through hole or connected cavities, the one that binds the cavity on the inside where hole emerges out of the ambiguity of solid and void, or in a topologically oversimplified sense where the cavity is.

“The surface is where most of the action is. The surface is where light is reflected or absorbed, not the interior of the substance. The surface is what touches the animal, not the interior. The surface is where chemical reaction mostly takes place. The surface is where vaporization or diffusion of substances into the medium occurs. And the surface is where vibrations of the substances are transmitted into the medium.”

(J.J. Gibson, quoted in *Surfaces*, Avrum Stroll, *The Ecological Approach to Visual Perception*)

For example, on a mereotopological level, changes on surfaces or the solid part are directly conducted to the compositional void and cause new convolutions and alterations by means of changing the ways or mechanisms through which void is presented through solid. Less technically: if you twist, inflate or heat a tube or a holey ball (with tunnels spread through it) you can see that changes in the solid part are transmitted to the holey side of the tube or the ball, the tunnels or the holey side becomes more convoluted and intricate. These changes through the compositional void can only be perceived through the solid part – this is the compositional inevitability of ()hole complex.

(2) Solid as an entity possessed by void; the only way that solid can initialize its architectonic / compositional activities (processes for survival, development, etc.) is by letting the void in. The dynamic traits of solid can only be actuated when solid is eaten, convoluted and messed by the void. There is no other option.

In the ()hole complex, on a superficial (bound to surface dynamics) level, every activity of solid appears as a tactic to conceal the void and appropriate it, a program

for inhibiting the void, accommodating the void by sucking it into the economy of surfaces (as in the case of niche⁹⁰, a dwelling / accommodating system) or filling it; but on a deep compositional level (the machinery of the real), all activities of solid are moving towards engineering new voiding-functions, convolutions, vermicular spaces (henceforth, Nēmat-space) which eventually unground (but not erase) solidus. On this deep compositional level, solid conducts the convoluting functions of the solid-contaminating void, in the form of vermicular lines, “Worms” as Lovecraft suggests or worm-functions (nematal machines, the Nemat-function), itinerant lines in the form of knotted holes or the other way around (When a nemat crawls in the ()hole complex, it metamorphoses into a different geometric structure by internally reconfiguring its modules, turning into a more versatile line through participation with the complex whose all points and recesses are interconnected without the supporting tyranny of Whole and its connect-to-economize hegemony.) In holey space, Solid actively conducts and mobilizes the worm(Nemat)-functions of the void rather than its phagic / purgative mechanisms or its desire to devour. Solid runs as the void enforcer, a pestis solidus executioner.

In ()hole complex, void is also contaminated by solid, this is why convoluting, undermining and ungrounding Nemat-functions arise in the ()hole complex instead of merely erasing, consuming and purging mechanisms of Void. Solid performs the confusion of void through the ()hole complex: every activity happening on the solid part increases the degree of convolution and entanglement at the holey side of the composition, fabricating the intricate meshwork of the Nemat-space which eventually engineers the corpse-of-solidus, and disables or sabotages all grounding (signification, con-solidatin, stratification, etc.) functions of solid. While vermicular complexity of the Nemat-space activates the tortuous side of the ()hole complex, it also covers each compositional level of the complex with poroelastic traits. In fact, poroelasticity continuously uses diffusion as a means of radical deformation and alteration in the dynamism of the composition, narrating the diagrams of the fluid flow in the animorphic composition of the Nemat-space as a heterogeneous porous complex which is more than a structure with interconnected holes, it is a complex with a

⁹⁰ Roman Witold Ingarden -- after separating from Husserl's phenomenology through a criticism of transcendental idealism -- in his works focused on ontology discusses that closure (or completely modulated openness) is a priority for open systems, and niches as power projection zones and inhibitors of unwanted collisions. The openness of niche protects itself from what makes it open by opening itself to what makes it closed. Only through such an openness, the existential moments can be afforded and modes of Being are able to emerge.

strange rubber geometry, its porous side is actually its itinerant lines rendering synchronous possibilities of relaxation, metamorphosis, folding, spreading tortuosity, heterogeneous dynamism and compositional anomalies for the complex. The Nemat-space is basically a machine for a radical and pestilentially inventive communication and participation between fluid and solid. In the Nemat-space, the flow of the fluid and the deformation of the solid matrix are couples, heavily interconnected as foundations of a radical participation giving rise to diverging series of becomings for 'each level of the composition' whose wholeness has been utterly nullified. Agitated by the flow of fluids (which themselves have been anomalized in the nematical machine), elastic waves dissipate through solid matrices and radically displace the grains of the solid skeleton throughout ()hole complex; the spasmodic deformations of the solid skeleton, consequently, changes the stress field by which the (re-)modifications and manipulations of solid are transmitted to the Nemat-space in a synergic communication, and progressively fold, twist and open the ()hole complex, polishing its sinister facets to a greater extent.

The displacement / locomotion of solid particles generally happens in cluster-like colonies near the regions where solid has reached an equilibrational stability, whereas fluid particles divergently move and disperse in a manner corresponding with the vermicular complexity of ()hole complex. The interactions between the free movingly interstitial fluid and solid matrices on the one hand and fluid with porosity gradient of Nemat-space on the other hand result in two main mechanisms along with anomalies in the property of the fluid, the viscosity, permeability, the properties of the coupled fluid-solid complex and the bulk density of solidus (ex. tensile failure or propagation of shear fractures, etc.): (a) the increase of pore pressure induces a dilation of the ()hole complex (including its solid matrix) and the escalation of poroelasticity (dilations of the complex customize the porosity to enhance the fluid flow.); (b) compression of the solid matrix or any attempt of solidus to keep and save its consolidated and molar state (by preventing the fluid from running or escaping from one porous network to another) causes a substantial rise of pore pressure which triggers further and radical deformation of the solid matrix, dilation and contraction of pores (compared to the plateau engineering mechanism of the libidinal vulvo-spasm), progressive exhumation (ungrounding) of solidus, regional pore collapse, and finally composition of new Nemat-spaces. Nemat-space is an ultimate crawling machine – essentially cryptogenic, interconnected to Anonymous-until-Now with its probes and lines of itineracy moving unpredictably according to the subsoil / superficial ungrounding machineries that weaken the solidus by perversely exploiting / manipulating it (exhuming solidus) – you never know where it exhumes surfaces

and disperses its nemats – worms, countless coils of them. The intrinsic permeability is a function of the Nemat-space; the contact between solid and the fluid, itself, is also a compositional factor of the poroelastic complex: local velocity gradient in the fluid induces new convolutions, shear stresses, ruptures and deformations to solid matrix, tuning the surface dynamics to the entire machinery of the complex and the flow of the fluid (enhancing the flow and building up the flood). In Nemat-space, the diffusing pore fluid thereby smuggles its affect space through the solid matrix as well as its own particles.

Once Nemat-space starts to infest, the periphery does not necessarily starts from the crust, active surfaces emerge from everywhere, from crust-surface-periphery to innermost recesses; the ()hole complex carves ultra-active surfaces from solidus when it digs holes (once again, inner cavities at least come with two types of active surfaces), unleashes delirious itinerant lines and constructs its nematical machines, installing peripheral agitations on the surfaces it cuts from internal solid matrices. When such a peripheral upheaval (in the sense of its diversifying excitations) ‘potentially’ runs everywhere and overspread from the crust to within, the despotic necrocratic regime of from periphery to the terminus of core is introduced to infinite deferral until the rise of the ultimate Unground through the ()hole complex where the radical Outside is reinvented from surface to the core.

The grounded flux (inseparable from the architectonic and appropriating forces of pseudo-flux) is generally described as flux $f = p / a$ (p as the imposed power on the regional surface a), but through Nemat-space, it is the coupled Trellis-Taxis mechanism of surface which fails to enforce the economy of the ground; the distribution of p according to the consolidating and self-referential wholeness of solidus is too incapacitated. What is ‘polytics’ in terms of the ()hole complex in which the full body of ‘ $p / 0$ ’ precedes all power formations and those becomings which envelope a terminus, a becoming-death as their simultaneous restraining and propelling machinery?

On a modeling and reductive level:

Pore material of volume $V = V_s$ (the combined volume of solid and isolated pores)
+ V_p (interconnected pore space)

Porosity gradient is then defined as the ratio of V_p / V

The distribution of solid is obedient to the logic of solidus but this is the logic of solidus that follows the polytics of the ()hole complex and the dynamism of its Nemat-space; every entity-event in the ()hole complex is discontinuous according to the measures running through solid but continuous according to the Nemat-space, or in other words, the interactions of events happening under the influence of the ()hole complex; an entity which is believed to loom from a particular location, rises from an entirely irrelevant location according to the logic of solidus. Every activity on the solid part of the ()hole complex awakens something radically contaminated by void (a vermicular space), opened by the outside (void as the outsider for solid) from within and without.

The mutual contamination of solid and void in holey space is increasingly intensifying (with no sign of stoppage) since it is the internal impetus of solid to be active, to re-modify itself, to knit itself through economic networks which maintain and guarantee its survival, aiding it to be grounded. All the activities through the solid part are reinvented as convoluting lines (Nemat-functions) at deeper levels of the composition. Whenever, solid messes with void to keep itself dynamic and solidly constructive or consolidated, void becomes more contaminative, its worm-functions become more furious, excited to the point of frenzy; they begin to rise from compositional depths to engineer the vermicular space of the Old Ones; an intricate anomalous traffic zone, the ()hole complex. This way solid levels all obstacles in its path to damnation by each activity that it undertakes. The ()hole complex is never low on infidelity and perfidiousness, it is the source of clandestine manipulation of solidus and double treachery to both solid and void. In the past, the holey space of mines incited peasant revolutions and barbarian invasions, but now they are the oil fields which make technocapitalist terror-drones and desert-militarism of Islamic Apocalypticism cross each other, forming the coupled diffusion-escalation mechanisms while both are flushed out in the burning soup of petroleum – the double betrayal.

It is not a politico-economic evolution that oil has converged upon a process of weaponization on the Islamic front of War on Terror. In Arabia, Sudan, Libya, Syria and even Arabic clusters under the Persian Gulf, the Islamic state must cross deserts to feed on oil fields, but the desert is the space of nomad-burrowers, nomad warmachines with minimum climatologic heads; this is why both the renomadization

of Wahhabistic state⁹¹ through off-time sorcerous desert-militarism and semi-sedentarization of nomads and their metamorphosis to naphthanese (clandestine petro-nomads whose itinerant lines wander between oil fields instead of oases) were inevitable (see Triggers for Islamic Apocalypticism: Oil, Desert and Nomads in Saudi Arabia). Other than forging lines of slips sliding from the exclusive traits of both nomads and the State while composing a participating space between the two (as in the case of ambiguity between solid and void in the ()hole complex which traffics and smuggles the itinerant lines of its own), oil fields draw nemat-spaces for manipulation of the State by furious desert-nomadism and reconfiguration of desert-militarism according to the polytical trends welling up around the oil fields and rising from the synergy between the State's uncompromising and Uttunulistic nomad's sorcery. The problem of oil fields and the ()hole complex they exhume is indeed far more sophisticated than the problem of mine and their ambulant dwellers, first there is no equivalent of miner for oil fields, the connection of naphthanese (former desert-nomads) with oil is not an intimacy based on consumption, production or even transportation (what connected especially old miners to mines as their temporary niches); second, oil as an ubiquitous earth-crawling entity – the Tellurian Lube – spreads the warmachines and polytics of naphthanese as totally pervasive (diffusing-escalating) entities. Finally, even in the absence of desert-nomadism, oil turns Time to apocalyptic blasphemies. If oil does not benefit the middle class (an economical boom initially moderating economy but consequently giving rise to economic fissions) and if it doesn't lead to the outbreak of cannibalistic economies as in the case of Mexico, Venezuela, Sudan and in a near future Mauritania, it will surely charge clandestine-military pipelines with apocalyptic modes of divergence. In either case, it cheats the divine's chronologic Time with the utmost irony and obscenity.

Ghawar, the largest conventional oil field in the world, located in Rub al-Khalie, the land of Bedouin tribes, the most significant of which is Al-Murrah

The Nemat-spaces of both mines and oil fields attract nomads and different types of martial entities, and assemble them as mercenaries, treason-armies bound to privatization of military forces which in most cases belong to mega-corporations and not the State; although these corporations are endo-symbiotic within the nucleus of the State and synchronized to its politics (also linked to techno-economic or military failing of the State or the criticality of mines or oil fields) but their functions are

⁹¹ One should not miss the fact that parallel formations of Wahhabism and the Saudi State root in desert-nomadism.

external to the economy and environmental stability of the State as non-native forces. Oil fields and mines usually come together with corporations and their privatized armies, one as the owner and one as the extractor and mercenaries as outsiders which protect this temporal bond. Although these corporations and mercenaries which have already sucked into the ()hole complex of mines or oil fields induce repressions via tactics germinating on militarized secrecy (even obscure to the boundaries of the State), they play significant roles in double-insurgencies, violent internal fissions of the State, civil war and unrest.

Nemat-space is neither about undoing the Genesis Project and its survival economy nor erasing solid, it reduces the monopolistic holiness of the creation, the functionality of the ground's economy (which also forms a taxis-trellis pincer to support the Whole) and applicability of Whole to Zero without wiping them out. This is the polytics first practiced and exquisitely elaborated by the Persian cult of Kaxuži or Kakhurid(kaxvareða) or Kastaran-e Farre, the reducers of wholeness or the reducers of purity, who have been introduced as the devastators of the Iranians (for the Aryans were believed to represent the greatest purity and wholeness) in Zadspram.

Nemat-space is infected with gate hysteria; it is always prone to auto-collapse and re-emergence from somewhere else thus restlessly clicking new gates open; it gapes, yawns, bloats, coils and slathers as an endo-symbiotic parasite with a sempiternal endurance over and through the Earth, giving more passages than is needed to legions which surge and ex-hume all stratified assemblages along their paths. The heretic Zoroastrians, deavo-Yasns, Kaxuži and Yatumants or Akht-Jadu(Yatu) called this indefinable earth (even impalpable and unexplainable in terms of Tellurian-Omega) which secretly squirms from of the Outside and is fermented upon the full body of 'P/0', Drujaskan, technically the most messy space that awakens from and by the Earth to unground (Erathicate) its wholeness. Pests teeming forth from Drujaskan, from passages which themselves are inseparable from the writhing bodies of pest-legion. Ungrounded histories of the Earth are full of passages, vents and soft tunnels mobilized and unlocked through artificializing participation with the Earth as a compositional entity. These histories are engineered by openings and what crawl in them; every movement in these passages invigorate the fibers of Erathication.

Only as a Nemat-Space, the Earth endures; an opening through its whole, a solid-glitch drawing its cartographies on mal/multi-functioning surfaces of the ()hole complex.

The awakening ritual that the cult of the Old Ones practices to speed the return of the elders, is “messing with the solid part”: advanced re-modifications and operations on the solid part of holey space to strategically assist new vermicular lines or worm-functions be composed and autonomously digging passages for the Old Ones’ Return, opening yawning pits as zones of their rebirth. Each activity ‘on the solid part’ or ‘at the side of solid’ is a sacred oblation to the Old Ones. As in the case of the Z. crowd, this strategy reaches its schizotragic extreme; they, with a cryptic muttering, incessantly repeat: “join and participate with solid, assist its ground processes to fulfill their projects, be a devoted architect of solid,” this is the only way you can feed solid to the vermicular lines of the void, its worm-functions.

Craig: “Even the addictive properties of the Oil engineered by the Islamo-Apocalypsists are made invalid – replacing the hunger for fuel with the hunger to Hunt. This Hunger is Greater than the addiction.”

The important point is that this is not oil as fuel that matters (oil = fuel as you have realized is just one trigger among many others in petropolitics) but the ways that hyperstitional entities of oil fuse with western warmachines.

The thirst to hunt that howls in warmachines is the simulation of the Unlife of War that comes through the capacity of warmachines to grasp something that is external to them yet giving rise to their machinery and the thirst to hunt; ironically, it is the simulation of the radical frenzy of war to hunt all warmachines.

The following conversation belongs to the original version:

Craig: Frankly you've not left me much to comment on here Reza. I agree with most of what you've written ;)

The hunger of the solid for the void seems to increase the prevalence of ()hole complexes. The servants of the complex infect the solid - which is to say the bae-line monolithic structure of government-society as a super-solid. These servants burrow within such a solid, opening up the tunnels which, as well as allowing easier flow of Unlife and-or-Oil (indeed as engineered-infectious Oil designed by the hyperstitional engineers of IA, the difference eventually becomes negligible) also allow movement /within/ the body of the solid - opening doors/ways to places that were previously

unaccessible to those inhabiting the solid. The usability of these newly form transport 'subways' engenders interest in those who become aware of their existence. These interested parties then begin to either seek to control these tunnels or push for more tunnels to be made. In either case, they come into contact with the engineers of the 0hole complex and are often infected and themselves become engineers - the initiations of the machine-engineers that dig are arcane and involve significant reconstruction of the candidate's command protocols and switching on of long dormant factory settings that were disabled after the initial birth-trials of the candidate machine when it was first created.

Hence, the imagery of the Old Ones is of mishappen entities which are terrible in their alien nature - in the factory the newly conscious-aware machine-person now has the alien intrusion of never-before felt, direct experience thrust into their newborn and still flexible epistemological framework, an intrusion from the Outside which then recedes after intial programming has been created.

Subsequent contact with the Old Ones etc recalls the factory testing and sense of intrusions due to the fact that their Unlife is a new form of direct experience prievously not apprehended, or at least forgotten.

Gradually the infection-cult spreads and the number of tunnels increase, increasing the amount that passes through, and lowwing it passage out of the solid and into contact with other solids. Eventually the original solid becomes so riddled with 0holes that it collapses completely - the Stars become right:

"That cult would never die until the stars came right again, and the secret priests would take Cthulhu from His tomb to revive His subjects and resume His rule of earth. The time would be easy to know, for then mankind would have become as the Great Old Ones; free and wild, and beyond good and evil, with laws and morals thrown aside and all men shouting and killing and reveling in joy. Then the liberated Old Ones would teach them new ways to shout and kill and revel and enjoy themselves, and all earth would flame with a holocaust of ecstasy and freedom."

When does Earth become Unground? You may note the use of the term Erath in my earlier comments. Erath is Unground in its thickest, most glutinous form, the precursor to MUD and Dust. It is the Earth shot through with Oil that is so rich and dark as to have soaked the solid through and through.

The tunneling disturbs the natural veins of Oil hidden within the Earth, the places it has lain hidden since its production by the hidden subterranean pressures. This mixes with the liquid forms of Outside, seeping through the Earth until it reaches saturation point - becoming almost soggy.

In this soggy mess, tunnels are dug more easily, even though they may collapse without warning.

Interestingly, in another comment you refer to the Smiths as the people of holey space. There is a long tradition of the Initiator teaching mankind to work with metals - and the Smith's forge would be the one place in any settlement where the fire always burned. Their skill in making and shaping is unmatched, the fire of their forge and the strength of their hammers synonymous with Making of new things.

The Luciferian Gnosis of sorcery suggests that it was Tubal-Cain, descendant of Cain who was the first witch - he was a blacksmith by trade.

Azazel, also known as the Peacock Angel, is said to have taught men how to work metals as one of the 300 Watchers who fell according to the book of Enoch. The Peacock angel is the deity of the Yezdis, a Kurdish religious group which has him as the Creator or demi-urge at the behest of God, suggesting another link with smithing. Further, in Norse mythology, dwarves are the premier smiths, beings who were created from the maggots burrowing through the body of the Primal Giant Ymir after his slaughter by Othin, Villi and Ve.

See [<http://www.sacred-texts.com/etc/mhs/mhs10.htm>] for some information.

Tachi: "the ways that hyperstitional entities of oil fuse with western warmachines" - the 'fusing' is less a fusion than a conversion between flows. Fusion implies a maintenance of the integrity of discrete entities which are bonded together, but what we are seeing are flows - oil, money, labour, ammunitions, etc - effectuated through a series of switches, to the point that what we consider as a 'war machine' has to include all these factors and not a separation of oil and western militarism. A separation of 'hyperstitional oil entities' and 'western war machines' begs the question. The question, perhaps better phrased, ought to be concern ways in which war machines can be identified at all - for the practical purpose of discerning currents and switches, as well as patterns of divergence and convergence. It might also be useful to bear in mind the

multi-dimensionality (demonstionality?) of the war machine, not fogetting its relations with the strata of macro level state machinery of politics.

Sorry, Reza, realised my post may not be totally relevant to the discussion on Lovecraft ... but maybe we can open up a new space to reintegrate previous posts on hyperstition, oil and war and free the way for greater deliberation and communication on this very pertinent globally relevant hotbed of issues?

Reza: Many thanks Tachi ... No, I think they are very relevant to this post.

Tachi: "the ways that hyperstitional entities of oil fuse with western warmachines" - the 'fusing' is less a fusion than a conversion between flows. Fusion implies a maintainence of the integrity of discrete entities which are bonded together, but what we are seeing are flows - oil, money, labour, ammunitions, etc -

Well, according to some terminologies, 'fuse' as you say IS "less a fusion than a conversion between flows." But according to geological panoramas and linguistical aspects, 'fuse' simply means to melt, 'fundere', to pour into or melt into ... it is a favorite term of smiths (who according to Deleuze and Guattari are the People of Holey Space). Both in geology esp. Cthellism of the Core and its fusion anomalies (highly pertinent to Geology of Morals in ATP and DG's Geoccultism) and metallurgy, fusion engineers poly-entities and overlap them over each other; they can participate, slide and move over each other freely. The restricting integrity does not happen in this kind of fusion; on the contrary, as a result of overlapping entities (or according to DG "events"; entities = events) anomalies, unnatural participations, hyperstitions, etc emerge since 'Overlapping' always results in acute multiplicities because it brings different entities or events to the space of 'an-omalie' (Greek noun), giving them the opportunity to run at one place and one time, mutually contaminating each other and freely participate; briefly, it gives rise to becomings. The traditional phenomenological account of fusion as a restricted 'state of integration' (unificatory unification) presupposes that events or entities can never overlap over each other in one spatio-chronologic status; if this overlapping happens they either replace each other or become ONE, the Unified or the God that is to say, a phenomenon that can be clearly mapped in space and time. However, as DG show in ATP, entities reach 'an-omalie' as they overlap, a collective ONE, the pestilential presentation of this multiplicative body is the Lovecraftian 'Old Ones'. Therefore, the fusion originating from metallurgical histories does not, in fact, certify an integrity but participations

among a population within the space of anomal; the space of anti-vitalist becoming one can say; these participations necessarily emphasize on something more than conversion of flows: spawning new offspring, cryptogenic entities, anomalies, and at the same time, triggering the emergence of functions and entities which 'do not belong' to none of the overlapped or fused entities (they creep in from the Outside of their genetic specifications).

Here, what we should be careful about is: not reducing flows to fluxes, or flowing lines which are continuously appropriated by the ground and economical participation (methesis) of their contents. Fluxes are always under the constant danger of becoming pseudo-fluxes, not necessarily laminar fluxes but fluxes which can only participate with other fluxes based on their affordance. A model based on fluxes is a model that first of all raises moral blusters, conservative inspections.

Tachi: But what we are seeing are flows - oil, money, labour, ammunitions, etc - effectuated through a series of switches, to the point that what we consider as a 'war machine' has to include all these factors and not a separation of oil and western militarism. A separation of 'hyperstitional oil entities' and 'western war machines' begs the question.

“Even if Omega-Pest runs on hydrogen nanofusion, the concrete war-machines chopping up contemporaneity are indubitably very oily.” (Nick Land)

Actually there is no such a thing as “The hyperstitional entities of oil at one pole and western militarism at the other pole’ (you have already grasped it well). There is no diametric separation here. However, there are differences between warmachines, they all merely share one connection, their connection to War itself. Differences between warmachines mainly but not exclusively originate from their dynamic machinery (tacticity) and the way they probe their zone(s) of tacticity (data that are processed or perceived from zones they traverse, or their vision-machine). This way, Islamic warmachines are entirely different from western techno-capitalist warmachines. Now in WoT, hyperstitional entities of oil or petropolitical undercurrents work at different levels and with different functions according to differences between warmachines. As you have read our previous posts on petropolitics, oil, first of all, is a lubricant, a radical flow, a tellurian omega-lube whose function is engineering bonds, moving forward warmachines and above all providing an intricate space for flows (money, labour, ammunitions, etc.) to collect (it is not unification or a totalization), fuse and reach the space of ‘an-omalie’ which gives rise to new warmachines, AND new hyperstitional entities of oil (including oil as a fuel, a ‘usual’ flow). To this extent, oil is not separated from western warmachines, on the contrary, it flows over, through

and beneath them (as both something exterior and interior), slide them towards Islamic warmachines (since they come through oil and use oil to undertake their pipeline odyssey, oily lines of tactics) -- as it simultaneously slide Islamic warmachines toward techno-capitalist warmachines -- to enmesh the space of an-omalie which sucks warmachines to itself, breeding anomalies and new warmachines while attracting and pumping all flows (money, ammunition, etc) to these warmachines in a more radical way.

As you suggested, warmachines include all these factor (or flows) but the hyperstitional Tellurian-lube (The Ancient Enemy, the blob, the head of the pack among other hyperstitional entities of oil in WoT) intensifies and brings these flows or factors to a space of anomal where they flow more smoothly (oil is lubing them), participate more unnaturally and flowing more radically -- flowing not as a flux but a flood. Besides, the lubricant oil works as a space of philia: a radical flow attracting more flows and making them to run through warmachine smoother than ever. There is no wonder that new oily hyperstitions (other hyperstitional entities of oil) emerge through this space of an-omalie which mostly belong to the Islamic front since Islamic warmachines are all moving towards divination of oil both as something that lube the path to Islamic Apocalypticism (the unlife of war) and as an entity which poison (or more precisely, 'intoxicate') techno-capitalist warmachines to be attracted by the Tellurian-lube, come to the space of anomal, and anomalously 'participate' with Islamic warmachines to reach ISLAMIC Apocalypticism (again, where the military survival of warmachines are snuffed out, the unlife of war).

If you see that Islamic front treats oil as an ancient Tellurian super-weapon in WoT to attract (and not repel) techno-capitalist warmachines, it is because the hyperstitional entity of Oil-as-Lubricant is a radical flow (sliding in all directions, lubing all paths), a terminal multiplicity of lines of tactics which always re-invents its flowing dynamism and functions at the level of strategy (this is why it never stops to spawn new hyperstitions of itself) rather than tactics (which can be easily domesticated through the climatologic factors, other tactics, etc.) Western techno-capitalist warmachine which mainly run on transgressive / berserkeresque tactical lines always look 'the strategically functioning oil' as something both attractive and unfathomably abominable, as a disruption in their tactical programs (strategy sabotages tactics with no warning!), programs which always follow clear / traceable conclusions, mappable conflicts. Moreover, Craig has an interesting remark on the hunting-complex of western warmachines (that the only scenario they know is hunting, hunting each other) which is actually based on their vision-machines -- blinded by the fog-of-war -

- they never assume the possibility that their hunting-complex is a simulation of something deeper (something that Deleuze and Guattari never suspected maybe because of being exposed to western warmachine for too long): it is the frenzy of War to HUNT warmachines. However, Islamic warmachines based on their sorcerous vision-machine (more adapted i.e. blinded by the fog-of-war) insist that the War has its unlife of its own and Oil is a radical flow that is capable of collecting all flows running through warmachines and introduce them to 'a space of an-omalie' where flows lose their tactical (consequently prone to appropriations) dynamism and are reinvented as strategic vectors (tactical multiplicities, intricate lines of vermiculation) i.e. machines capable of triggering the emergence of hideous offspring (according to Robin), cryptogenic entities from unknown depths, and entities which cannot be labeled as warmachines anymore; now, they are particles of war.

Tachi: ... not forgetting its relations with the strata of macro level state machinery of politics.

In the model of war-as-machine (war has an unlife of its own which is not produced by conflicts between warmachines), these relations increasingly become more insignificant (but they never fade) since this model assumes that warmachines slide over undercurrents (ex. Petropolitical undercurrents) which introduce warmachines and their included flows to spaces of an-omalie, reinventing them as strategies through which neither the State functions merely as a (re)territorializing State nor the strata and their consequent regimes are completely loyal to the macro level state machinery of politics or grounding processes. (see the previous post on Lovecraftian name-anomalies)

Tachi:

Reza: "there are differences between warmachines, they all merely share one connection, their connection to War itself ... it is the frenzy of War to HUNT warmachines ... war has an unlife of its own which is not produced by conflicts between warmachines ..."

Interested in these remarks, which I have patched together. Agree that concrete war machines can be distinguished. Though also concede this doesn't imply anything such as integrity.

War machines overlap in their functionality, as can be seen in the WoT. What connects these specific WMs may be clandestine flows of capital, arms, oil, etc, but what exactly does distinguish them?

I can't help return to this question, since not only does it affect our clarity of understanding what specific forces and flows we are witnessing in the unfolding the WoT, but it also affects the sharpening of our conceptual machinery to deal with this question in the abstract. "The connection to war itself? What is this? This may be one attempt in the abstract: to be hunted, as you suggested (borrowed from Craig)?

But IMHO I don't think this helps sufficiently when looking at the concrete events on the surface of our planet. Sure the Islamic war machine - or machines? - are being hunted, but what other examples can we see? Interesting to see what other readers think on this.

Sticking with the abstract question of what distinguishes a war machine, however, can we go so far as to say that it depends on its relation to a hunter? Surely this also begs the question as to what is hunting?

I hope we can start a discussion on the relation between war and war machines. How useful is it to grasp war as a machine? Does this mean we no longer need to conceive war machines as producing war through their engagement? Do we conceive war as something over and above (and/or under and below) concrete war machines? Does this not look like vitalism? Once again we revisit an old question, that of model and concrete reality, abstract and specific. Interested in what you think are the important strands worth taking forward here, if any.

Reza: Craig, Tachi, absolutely fascinating remarks and questions ... honestly, it takes me a long time to explore their recesses (esp. in the case of Tachi's interesting questions) since I should rigorously (re)think about them from different aspects. Because of some physical / mental incidents of late my energies are rapidly consumed and wasted away even before I notice; so forgive my slowness or deferral in answering your wonderful discussions. Hope it doesn't disappoint you from participating here.

Craig,

A superb schizotactical surgery.

Unground: many articles on the unground both at the cold me website and cold me forum. Esp. Cata: remarks on Depth and Darkness (<http://www.cold-me.net/text/cata.html>); also Acephalous Mouths at Channel 83: http://www.channel83.co.uk/pr_reza.php

And don't miss Hamilton Grant's The Chemistry of Darkness (I still see many arguable passages in his article but it is v. interesting). [http://www.warwick.ac.uk/philosophy/pli_journal/pdfs/hamilton_grant_pli_9.pdf]

Cain: Yes, I am familiar with metallurgic / musical sorcerous lines that come from Cain; one of my favorite parts of ATP is the part that the bond between smiths, holey space and Cain is diverged to many directions: mines, sculptures, warmachines, etc. I'll post that passage for archiving purposes.

Yezidis (the correct original spelling is Yazidian or Yazidis) ... they are not particularly Kurds, they are Fars and Turks as well. Even Fars lineage of Yazidism is older than the Kurdish one. I have born in Fars. In the past, I regularly visited them, they were exceptionally inspiring for me. See The AOE and the Brotherhood of Nine [http://hyperstition.abstractdynamics.org/archives/003844.html]; a couple of comments exchanged between me and Robin about Yazidians (the article also contains a few pieces of information)

Tachi, Just a few rushed answers to yours first questions ... more later ... this is just the first round:

Tachi: "Though also concede this doesn't imply anything such as integrity."

Connection does not necessarily emphasize or depict integrity. However, I can't clearly realize what do you mean by integrity: integrity as a process maintaining a whole, integrity as a totalizing process, integrity as some kind of consistency or ...? Therefore, it is difficult for me to discuss this problem until I know what kind of integrity is at issue here.

Tachi: "What connects these specific WMs may be clandestine flows of capital, arms, oil, etc, but what exactly does distinguish them?"

Think I hinted at the answer already: the most reductionist answer is that the differences are usually based on:

[1] their lines of tacticity and their exclusive dynamism, and spaces which are enmeshed by these dynamic lines. Each type of tacticity enmesh a different affect space and engineers a dynamism of its own which can cut other dynamisms and lines of tactics, attract them, convolute within them or even replace them; thus it attributes certain traits to each warmachine based on zone(s) the warmachine traverses, the

affect space it engineers and the other lines it crosses or communicate with. We should always remember, 'Warmachines are among the most 'slippery' entities'; not only they have propulsive traits produced and triggered by flows flowing through them but also they are also dynamized through the affect space that other warmachines enmesh. But this is not the whole problem yet: warmachines are involuntarily sliding on undercurrents (certain flows which introduce warmachines and flows flowing through them to the space of anomal); each warmachine based on its affect space and dynamism (tacticity) and the zone it traverses (which can be included as the affect space) slide or move differently on these undercurrents.

[2] The way(s) they process data (signal, signs, codes, ...) they obtain from their environment and through their affect space; what they process actually is transformed data based on their affordance or economical openness (towards what is exterior to them) that guarantee their military survival. As a result, what they process or see is based on both their Outside and the way that the affordance renders, appropriates and transforms this Outside. However, as DG show, it is an intrinsic feature of warmachines that they restlessly criss-cross each other, cut their lines, block themselves, participate, replace or overlap. This pandemonium also renders a more common space which warmachines cannot evade, this space is a factor that influence their vision-machine.

[3] Each warmachine has its own numerical elements which do not diagram quantity but the composition of a warmachine. Honestly, I think DG are utterly brilliant when they try to open this problem, so ATP is a key here. (see ATP, p. 387)

For now, I can think of these differences (by which you can distinguish them) but I know there are more ... needs re-thinking and exploration.

Tachi: "The connection to war itself"? What is this? This may be one attempt in the abstract: to be hunted, as you suggested (borrowed from Craig)?"

Well, detecting the hunting-complex of warmachines (which is simulation of the radical hunt engineered by war) hyperstitionally belongs to Col. West (Nick-me-Craig-Ibn Maymun-Thistle-Others). The connection: War (the Unlife of War) eats and consumes all types of military survivalism, it knows nothing of tactical lines of Living ... To consume military survival (which is also germinated on the unlife of war as an appropriating / grounding line of tactic), war must strip warmachines from all they

have, positively disintegrating them to particles, lines of numerization, sorcerous particles, GAS or DUST (two hyperstitional entities much discussed over cold me website and here, on the H. blog). To get the picture more clearly, you can compare it with the discussion I summarized for Robin (the difference between life/(un)Life/survival/live-ing)

[<http://hyperstition.abstractdynamics.org/archives/004303.html>]. Also for exploring more technical aspects, see Cold Me website (articles like A Good Meal and Pestis Solidus: <http://www.cold-me.net>). I'll talk about this very crucial and important problem later. Also check Thistle's link (WARNING: the article begins with some usual, not very intriguing ramblings but it suddenly twists): <http://www.thislife.org/pages/trax/text/sandlin2.html>

Tachi: "Sure the Islamic war machine - or machines? - are being hunted"

Well, I can't understand your comment so it is difficult for me to track and answer your next question: Do you mean Islamic warmachines are hunted by western warmachines more in the context of victimization or they are simply destroyed by their adversaries, or they are hunted by WAR itself?

Comments: Machine are Digging

Nick Land: There's so much compacted here ... pre-emptive apologies for semi-random responses.

'One' (()ne?) knot of consistency re-tying some of these threads is the D&Gon; discussion of the warmachine Reza refers to, with the immanent problematic of the WM conceived as 'holding open a ()hole' through continuous vortical behaviour (in the way cyclones perpetuate themselves along with a evacuated inner 'eye') as a singularizing non-unity coinciding with their potential to refuse the model of the State. Thus, despite their (compositional) numerical distinctiveness, they converge upon an indexical zero functioning as the practical principle of interlock and cosmic delocalization.

Reza's last query above also crucial - the way warmachines hunt is entirely different to the way war hunts warmachines. The D&G; insistence that warmachines do not have war as an object is interestingly ambivalent here. If their argument is that the warmachine 'aims' at (the perpetuation of) nomos, the ()hole, is this not in fact the war ('transcendentally' apprehended)?

If 'Western warmachines' hunted their opponents to annihilation, would they not disassemble their own path to autonomization by re-filling the 'inner' ()hole which liberates them, replacing it with an arrogant and determined peace (New World Order)?

PS. Reza, could you say something 'definitional' about affordance?

Reza Negarestani: All the comments posted above by Tachi and Craig belong to the original version (I had to repost them ... so the dates are fake). However, I emailed Tachi to join the discussion. Will get back to you on affordance and vortical machinery of Warmachines.

Some very pathetic definitions (a fully elaborated and more technical discussion on affordance will be posted later -- the updated version of A Good Meal):

Affordance is an economical network (in the sense of its connectivity and reciprocity) by which openness can be exploited as a groundwork for survival, accommodation, dwelling and the coupled taxis-trellis mechanisms.

The term affordance used here has some inconsistencies to the original term coined by James Jerome Gibson (based on the works of Ingarden, Brentano, et al.) and his

eco-cognitive studies. The regulations by which any entity can maintain its dynamic position (according to its mereologic address and its internal mechanisms) and survive in its environing horizon originate from a deeply meshed economic-based network of interactions, connections and methexis, all knitted on mutual affordability. Whole can only survive when entities can afford each other, every type of openness on mereologic levels is demarcated by mutual affordability 'between' entities. Affordance does not exclusively belong to only one pole of the economical communication but is distributed between at least two mereologic entities. 'I am open to you as long as I can afford you' otherwise ... (a) you must be repulsed (b) attracted by being appropriated (c) partly filtered (d) I should appropriate myself to 'accommodate' you. Therefore, the plane of 'being open to' is intrinsically constructed on affordance (however it can be strategically sabotaged as discussed in 'A Good Meal'). Through affordance openness cannot go further (an itinerant line to the Outside); it mainly works as the dynamic capacitor of Whole.

Possibly the most elucidating (yet simplified) 'model' of affordance is Aristotle's Tetrasmia. The rotational movement between elements sustains a refining dynamism for the whole. Each phase of rotation is based on dynamic metrons and affordance (here, economical openness) between elements. Elements are open to each other whether diametrically or diagonally but they can never entirely overlap or radically communicate with each other; they need a mid-state (neo-Deleuzian appropriations take them as in-betweens) to form rotational nexuses. These mid-states are merely valid in a particular location of the whole rotational panorama; although they provide the system with a propulsive polemikos or a spiraling dynamism but they functional locally (as a result of affordability of elements to each other and at the same time, the whole system of Tetrasmia), for example Earth and Water need Menstruum to communicate. The living mud is a communicational entity but also a dynamic boundary which transforms / appropriates the earth and water before opening them to each other, it can only work locally between earth and water and not at any other location. Whole uses these economical communications to consolidate itself and accommodate the Outside instead of communicating with it; the mechanism at work in Tetrasmia is stabilization by means of regional destabilization or 'deathware' (utilized anti-despotism) -- dynamic but economical openness between elements manifesting in the mid-states -- which not only gain temporary (rotational) survival for the ever-refreshing set of elements but the spiraling process of Whole.

Nick Land: Thanks Reza

"The living mud" getting ooziy Tiamaterialist ...

PS. There's a definite 'W' topic latent in post above too - only Neoroman letter with a name, and name itself nomolexic / ambivalent

W = (AQ) 32 or 2^5 , binary redoubling and decimally implicated

P-32 = 131, with manifold WoT/apocalyptic associations

Reza Negarestani: *"The living mud" getting ooziy Tiamaterialist*

It actually is, see Craig's comment above (soggy Earth).

What I forgot to mention but is somehow noticeable in the text is that Nemat-space is closer (in terms of its functionality and the traffic-space it provides) to radical weaponization of flows (clandestine WMs, Anonymous-until-Now entities, smugglers, ungrounding diffusion-escalation synergies, living ()holes and inexhaustible becomings emerging from p/0) and War-as-a-Machine than Deleuze-Guattarian rhizome.

Goodbye USA

Nick Land (March 30, 2005)

In 2007 apparently:

“Koran scholar: US will cease to exist in 2007”⁹² by Khaled Abu Toameh

Comments: Goodbye USA

Tachi: "How did he reach that number? Silwadi said that by combing a number of suras hinting at US sins he reached the numbers 1776 (the year the US achieved independence) and 231. He added the two numbers and the result was 2007, the year when the US is expected to disappear."

That seems like a reliable method.

Seriously though, think this brings us to an important issue - is prophesizing hyperstitional? Guess that would depend on whether prophesizing can bring about the reality of what is prophesized. Yet how would this possibly occur? Through stimulating belief in masses? Whether this is the correct formulation of "fictions that become real" - ie. reality emerging through generation of *belief* - there would seem to be a limit to the extent to which belief can affect the advent of natural phenomena, such as tidal waves.

So to tease out, firstly how is prophecy related to hyperstition? A theory of hyperstition must account for belief. Secondly, where are the outer limits of hyperstition - is it possible to have a hyperstitional earthquake?

pithyfullpaaity: This topic is so Arguelles on the one hand and so not on the other since he wouldn't try to ridicule the Koran like zionist jpost does but just to get even I would suggest a look at the lots wilder correlation calc the zionist Ivry Dov shakes out of his sleeves collar and pantlegs (he'll probably call it inspired arbitration seeing he judges his impact to be on a par with that of Madonna), hell maybe he has stuff up

⁹²

<https://web.archive.org/web/20050418232040/http://www.jpost.com/servlet/Satellite?pagename=JPost/JPArticle/ShowFull&cid=1111980180248>

his fly too though I don't recall him mentioning having any children though.
<http://www.root-1.co.il>

I'll go see if I still got the Arg. on Quran stuff someplace quick.

by the way I am sick of natural truth being abused and kidnapped to serve 'religatostitutional' purposes:

"In his lengthy study, which is being circulated in many Muslim countries, Silwadi noted that the US has often been compared to a tree that grows very quickly and bears fruit, but has no roots."

Semitic success applied in concentrated fashion, to north africa has left nary a root in place; the HEbrow kind is the more diffuse creepily slow acting one but still crap in permacultural terms is permaculture hyperstitional? It must be cause folks like Arguelles idealize it and proclaim it their aim and reward yet get hung up in calculations and proselytization efforts of the most trivial kind. Damn those recovering artists.

Nick Land: Tachi - great questions, definitely worth sustained attention.

My latest on this (should be implexed into a carrier of course): The crux of hyperstitional consistency, when reached, will address ('resolve?') the basic problem of the philosophy of mathematics -- why do mathematical patterns prove so applicable to empirical reality? (OK, sure I've phrased that totally craply, but carry on ...) Hyperstition thus achieved would forestall the continuous relapse into atavistic Platonism that typically bedevils the issue (without obviously subsiding into some kind of Humean fuzz on the other side). That's to say, hyperstition postulates an as-yet uncondensed materialist response to the intrinsic 'realism' of numbers without sacrificing either mathematical exactitude (/infinite) or the resilient non-ideality (empiricity) of nature.

It is from this 'crux' (= time disturbance) that your question about self-fulfilling prophecy and its limits could be adequately addressed, since these q.s concern the efficient interlinkage of mathematical intelligence (or at least pop-nomic culture) and natural causality - hence their proximity to (and the necessity of an adamant refusal of) speculative religious ideas.

The D&Gon; War Machine is one postulated interchange mechanism situated in this hyperstitional space, for instance, converting its numbering pragmatics into vortical

'physics'. On my extremely tenuous understanding of Laruelle, his 'science' (= 'man') satisfies the same function.

Can Numbers (not 'quantities') cause an earthquake? Hoping the H. jury still out on this ...

PS. As Northanger's work has reminded us, 231 is a qabbalistic reference to the Hebrew alphabet - kind of weird in a Quranic analysis, or not?

Reza Negarestani: IMHO, this is a poorly written article and smells of pan-Arabism, these kinds of articles don't have any hyperstitional value here and people simply ignore them (if not repulsed by the conventional and repetitive apocalyptic contents), the Iranians and Lebanese are far more professional in writing similar articles without falling into old-fashioned mixture of the Quran + Politics + Propaganda. Right now, the most favorite format for mass-inspiration of terrorists, intellectuals and even people is using numbers and extensive geopolitical information stripped of the conventional Quranic Apocalypticism that is well-known in the West. Recently I read an Arabic article complaining that Iranian journalists are spreading politico-economic viruses by publishing articles about the next terrorists' possible targets in Middle East, most of these articles are published in Arabic countries or in English language in Arabic journal to have a wider range of influence. Saudi government has officially complained about the outbreak of these essays which mostly discuss about Saudi's oil fields as next targets and are beginning to ruin the opportunities of new investments from foreign countries. Interestingly, one of these articles was about a possible terrorist attack on Ghawar field, similar to John Robb's short article 'Target: Ghawar' (http://globalguerrillas.typepad.com/globalguerrillas/2004/05/journal_oil_con.htm l) but more elaborated and polytically stimulating (not to mention the future economic damages they potentiate).

Nick Land: OK Reza, but what about 231? At least this guy has contracted some qabbalistic virus ... (and it's spread too, even if only by way of the evil Zionist-neocon current(-1776?))

PS. $1776 = 2 \times 888$ (pushing the envelope ;))

Reza Negarestani: *OK Reza, but what about 231?*

Yes, i admit it's virulent but these days everyone with an ABJAD CD of the Quran (which contains all similar information) is potentially dangerous.

Fictions and Number: Social and Material Hyperstition

Tachi (March 30, 2005)

In Nick's post "Goodbye USA" Nick and I touched upon some issues relating to different but important aspects of the Hyperstitional program: prophecy, belief, and number. Below are the two entries from that post and what follows are some preliminary thoughts and questions designed to provoke some discussion on these key issues and thus the Hyperstitional program.

Is prophesizing hyperstitional? Guess that would depend on whether prophesizing can bring about the reality of what is prophesized. Yet how would this possibly occur? Through stimulating belief in masses? Whether this is the correct formulation of "fictions that become real" - ie. reality emerging through generation of *belief* - there would seem to be a limit to the extent to which belief can affect the advent of natural phenomena, such as tidal waves.

So to tease out, firstly how is prophecy related to hyperstition? A theory of hyperstition must account for belief. Secondly, where are the outer limits of hyperstition - is it possible to have a hyperstitional earthquake?

Nick Land: My latest on this (should be implexed into a carrier of course): The crux of hyperstitional consistency, when reached, will address ('resolve'?) the basic problem of the philosophy of mathematics -- why do mathematical patterns prove so applicable to empirical reality? (OK, sure I've phrased that totally craply, but carry on ...) Hyperstition thus achieved would forestall the continuous relapse into atavistic Platonism that typically bedevils the issue (without obviously subsiding into some kind of Humean fuzz on the other side). That's to say, hyperstition postulates an as-yet uncondensed materialist response to the intrinsic 'realism' of numbers without sacrificing either mathematical exactitude (/infinite) or the resilient non-ideality (empiricity) of nature.

It is from this 'crux' (= time disturbance) that your question about self-fulfilling prophecy and its limits could be adequately addressed, since these q.s concern the efficient interlinkage of mathematical intelligence (or at least pop-nomic culture) and

natural causality - hence their proximity to (and the necessity of an adamant refusal of) speculative religious ideas.

The D&Gon; War Machine is one postulated interchange mechanism situated in this hyperstitional space, for instance, converting its numbering pragmatics into vortical 'physics'. On my extremely tenuous understanding of Laruelle, his 'science' (= 'man') satisfies the same function.

Can Numbers (not 'quantities') cause an earthquake? Hoping the H. jury still out on this ...

Tachi: 1. If the value of Hyperstition is in its (as-yet unreached) resolution of the question why "mathematical patterns prove so applicable to empirical reality" then interesting things follow. I accept that such a resolution of the philosophical issue of number would need to maintain mathematical exactitude and empiricity.

2. But how is this related to the 'propagation of fictions that become real' - indeed, how is this necessarily related to the program of H-propagation? It doesn't seem clear how H-propagation, as an activity, has to follow from a rigorous theory of number. H-propagation is a chosen micropolitical program based on motivations quite independent from a philosophical understanding of number, is it not?

3. This may be the connecting point I am missing: what is "this 'crux' (=time disturbance)"?

4. I am interested in delineating the effective space within which Hyperstition can operate - can Hyperstition cause a natural disaster? - but think the primary issue needs to be to clarify a concept of Hyperstition in relation to conscious / unconscious activity, and belief / unbelief. This clarification rests upon a deeper clarification of Hyperstition in relation to social / natural systems. This, I anticipate Nick saying, in turn boils down to number.

5. Let's come back to this. But first let's return to what I considered Hyperstition's starting point: Hyperstition as the phenomena of "fictions that make themselves real". I guess this is pretty misleading. This formulation tempts one to reduce Hyperstition to the level of human agency, in that fictions are products of human beings that later in time become actualised. It seems to automatically limit the notion of hyperstition within the human / social sphere of activity, which is why we are tempted to ask questions relating to the importance of belief and consciousness. But I guess this is all very diversionary from the real core of Hyperstition, which is number.

6. Hyperstition might in one sense be considered very human, social and based upon the collectivity of individual's beliefs. But if hyperstition is to appreciate a philosophy of number, then questions of belief, consciousness etc miss the point, or at least some of the point. In all natural (or 'material') systems, including geological, biological, social systems, debates about the empirical mode of self-reinforcing reality production (help for better phraseology please) have to deal with questions deeper than those relating to belief and consciousness.

7. Hyperstition as the process of 'fictions becoming real' is thus limited to the human level of reality, when this itself requires greater explanation at a base material level, so its misleading to talk of 'fictions' at all. What we are looking for, whilst fumbling for a rigorous and exact theory of number, is a non-anthropomorphic concept of speculation or anticipation, in which the expectations of artificial agencies may play a role in causing the effects anticipated.

8. This is more about grasping a concept of systemic self-reinforcement than playing around with fictions. Creating 'carriers' to propagate fictions and hoping they become real seems pretty naive in the context of the far more ambitious program of grasping the numeric quality of reality production and the non-anthropomorphic characterization of expectation and therefore artificial agency.

9. Should Hyperstition not start from number and micropolitical programs proceed from there? Is it not too early to say what the best micropolitical path would be without first resolving the question why "mathematical patterns prove so applicable to empirical reality"?

Comments: Fictions and Numbers

undercurrent: since this intersects neatly with my current labours...afraid this isn't going to help at all, more an terroristic set of demands really :)

1. (Leaving aside intriguing identification of Laruelle's "man" with NWM) can we put together a basic account of how NWM

convert[s] its numbering pragmatics into vortical 'physics'.

? ie how does numbering number operate concretely in examples of NWM (necessity to get beyond vague D/G mumblings about 'occupying smooth space' and demonstrate in what way these operations exceed state-mathematisation)

2. is there any more that can be said on the

as-yet uncondensed materialist response to the intrinsic 'realism' of numbers without sacrificing either mathematical exactitude (/ infinitude) or the resilient non-ideality (empiricity) of nature.

beyond a tantalising mention of its latent possibility? What is the 'realism' of numbers – the fact that they can't be escaped as abstract-real entities, or their 'applicability' to 'things'? And how does 'empiricity' consist beyond all possible numerical analysis (if not a generic phenomenological 'experience-ness')?

Nick Land: Tachi - what you raise here intersects massively with certain issues brought up by a Ccru-UK agent visiting Shanghai. Does hyperstition have an intrinsic numerical orientation? There's room for stimulating controversy on this, but I'm assuming my biases don't need elucidating.

The Ccru perspective on hyperstition obviously skewed by its own microhistorical situation, but within that field the importance of the Numogram (and attendant numerical commitments) was marked out by the fact that 'fictional' embedding functioned to propagage the Numogram without compromising it. In other words, the abstraction of number (uniquely?) survives the blizzard of unbelief unleashed by complete subsidence of any empirical 'reality principle' (replaced by merely tactical considerations (resonant with 'taqqiya')).

More on your specific points ASAP.

undercurrent - provisional responses to your points:

#1. Much to delve into here, but very crudely seems that the compositional numeracy of the NWM is taken by the D&Gon; to be both logistically and strategically efficient (consequential) - to such a degree that it even compels State warmachines to undergo a degree of compensatory (or re-animated) numerization in response. The 'numbering' of the numbering number is a type of behaviour (not an ideal organization) indistinguishable from the conflictual performance of the NWM, the essential features of which (in the D&Gon; analysis) seem to divide into two broad categories:

- 1) Deterriorialization, by radical decoding of tribal/territorial markers and thus operationalizing a power of free deployment / distribution / assimilation.
- 2) Cryptographic, by ciphering culture, dismantling significations and diffusing the convergence of authority.

Agree all of this is highly (frustratingly?) abstract, and in the key D&Gon; texts extraordinarily cryptic. IMHO it will keep coming up, so needs a focused assault at some point.

#2. This is totally promissory, of course (either just annoying or, arguably, perfect carrier territory).

'Realism' of number is intrinsic, essential or autonomous exactitude (refusal of every attempt at derivation from approximate magnitudes, while emphasizing precise arithmetical / compositional / number theoretic relations). Same issue approachable through topic of infinity (since exactitude is an infinite property). Factorization rather than vague divisibility.

Empiricity IMHO nothing at all to do with phenomenology, but rather associated with contingency, vagueness, measurement, chaos, indeterminacy and everything that makes Platonic/Pythagorean reductions of nature to number violently inappropriate.

Finally for now - thoroughgoing dissociation of number from measurement key to D&Gon; approach and absolutely crucial to their topic. This dissociation reciprocally liberates rigorous compositional numeracy and indeterminable intensive magnitudes - an unzipping of geometrized space (perhaps?) indistinguishable from the practical impact of the NWM.

Reza Negarestani: Tachi some disagreements about your insistence on “fictions as products of human agencies”; I assume what you define as production here is mapped through ‘abutment’ modes of connection through which fiction can be produced and ‘discerned’ from human agencies but fictions are anomalies i.e. they come out of participation in which we have a series of overlapping modes of connection (bordering overlapping, tangential overlapping, etc.), as soon as a part of X overlaps Y you can’t easily put them into such a categorization with crisp boundaries. This is why delineating human being or human agencies cannot be genetically detached from fictions, any definitional extraction is problematically overlapped by fictions, partly, tangentially or completely. (we have seen complete overlapping in The Thing-Polytics, an islamist under Taghieh or Taqyiah where event-as-entity itself becomes POLYTICS)

I have a lot of technical discussions on these modes of connections between abutment (which I assume the production you discuss mereologically come from) -- by which Y can be discriminate from X as a production [1] -- and overlapping (whether

incomplete overlapping or radical overlapping which both belong to participations and result in unlocalizability and synergism).

[1] Here Y is either an advent-event (nothing of Y has been available prior or synchronous to X), or Y as an extensio-event (Y is purely located in space that X gives to it, or in other words, Y is purely genetical extension of X in space).

Fictions are not dissociated from anthropian agencies, nor they are their productions (in the way that criticized); they constitute two fields of the same ()hole complex, with underlying and interconnective meshworks of clandestine and mutual manipulations, crisscrossing itinerant lines, unlocalizability and synergism of Nemat-space.

More about these issues in a piece I'm writing about Carpenter's 'The Thing'.

undercurrent: yes, empiricity needs somehow to be decisively decoupled from 'lived experience' (except insofar as one attributes 'lived experience' to every piece of the mechanosphere: deleuze does so but in current conditions to repeat this imho a mistake inviting badiouian and other – wholly inappropriate – accusations of 'vitalism', etc. Better to find other terms.) Certainly related to locality/globality distribution, virtual/actual, and pure sequencing/calendrical numericity vs measurement/quantitative, ordinal/cardinal. The question of how to demonstrate the non-trivial nature of a reduction of nomad to state number is the same as demonstrating the unconditional persistence of the real. Unfortunately, if some cartesian headcase affects to need that demonstrating to them, you've got a tough task ahead (maybe a heavy iron bar would do the job ;)

Can only agree on frustrating abstractness of Dogon NWM

Reza Negarestani: *Tachi: "Is prophesizing hyperstitional? Guess that would depend on whether prophesizing can bring about the reality of what is prophesized."*

On the contrary, IMHO, if prophecy ever punctuates the reality of its prophesized objective, it can hardly be regarded as a hyperstitional machinery. The hyperstitional vector of prophecies is not supposed to feed 'what is anticipated' but disseminate marginal events, autonomous events which diverge from the target; otherwise, Prophecy is mainly the instrument of Belief and its monopoly. Hyperstitional vectors of each prophecy either potentiate the emergence of events whose connections to the objective of prophecy do not follow the logic of the prophetic hegemony, or open a chaos space of events which (unexpectedly) have not been predicted or anticipated

by the prophecy, or more accurately, they have not been captured 'yet' by the authoritative head of the prophetic crystallization process (which impregnates the event with the reality that it designates through foreordination, chronologic monopoly, or the inviolable dictation of the divine).

Monotheistic threads take such fulfilled prophecies as legitimating tools of their Belief. The Quranic literature is full of such Belief-validating prognostications (perhaps the apex of monotheism in this regard). And this is exactly for the same reason that Islam is the most exceptionally proper field for heresy-engineering in connection to veridical prophecies that it uses to legitimate itself: replacing or altering (with stress on its illegitimacy and disobedience: the word Tahrif that is used in islamic literature) the fulfilling prophecies with divergent and insurgent prophecies which betray their utilized and authoritarian objective in the first step, and diverting themselves from Belief-consolidating / authorizing chronology of Prophecy to the chronopolitics of event. Prophecy as hyperstitional vector makes events 'Polytical'⁹³ rather than working on the paths leading to its destination.

PS. see my reply to Nick (under 'Goodbye USA') which is somehow relevant to hyperstitional vectors of prophecy.

undercurrent: reza

ever punctuates the reality

punctuates, LOL! [private joke..]

Reza Negarestani: LOL ... obv. was intentional, even was going to mention the source but it spoiled our private joke. ;)

Nick Land: Reza - highly sympathetic to your approach here, but agree with Tachi about the centrality of the question. Hope we get opportunities to detail the discrepancy between H. and prophecy (also other kinds of 'forecasting') in a more extended way.

⁹³ In connection to 'Polytics' we have delineated on the H.blog.

Also, not only discrepancy, but also parasitic modes of exploitation and no doubt other exotic relations.

Tachi: Reza – grateful for your replies and thanks for urging a conceptual shift relating to the concept of fiction. This does move the ground somewhat significantly, since I was under the impression that Hyperstition is the process or operation of “fictions making themselves real”, which, when added to the notion of creating carriers, does make one think of fiction as a ‘non-truth’.

I think some clarity is sought, then, between fiction, anticipation, speculation and latency – all seem to have a relation to hyperstitional processes and procedures.

One problem, however, is that ‘fiction-as-anomaly’ is a concept based on (since it is a result of critically denying) the notion of unattainable hermetic unity and transcendental reality. Sure, we can consider entities "fictional" if they are not whole, not delineated, or not delineable (though these themselves all very different criticisms).

But the human body is not a true hermetic unit, for example, human identity can never be consummated, and, in fact, any kind of unitary identity is fraught with the same problem: so is everything fictional by virtue of not being truly hermetic, unified, or "real"?

I see how hybrid entities attract the term ‘fictional’ – not merely since they are a product of human imagination but because they do not conform to models of purity, unity and identity. But by positioning fiction as an anomaly, we would implicitly be buying into a binary notion of delineable identity or truth (‘normal’), and non-delineable bodies / fuzzy truth (‘anomalies’).

Surely we want to get away from this axis, since we are concerned with transversals, becomings, transgressions, communication, process, dynamics etc – all which are not explained with a reactionary (anti-, un-, contra-) approach which ‘anomaly’ suggests.

Coming back the premise that Hyperstition is the term for “fictions that makes themselves real”, if we were to accept fiction-as-anomaly then it would seem to follow that Hyperstition is “anomalies that makes themselves real.” Does this mean non-delineable entities that make themselves delineable? This is surely self-organization or stratification. And what would Hyperstition add that D&G; haven’t already elucidated in this area?

Or does it mean fuzzy truths that makes themselves distinct? This might apply to the ‘hype’ of hyperstition, but is so broad it is probably rooted in number, which seems to be the crux of hyperstition.

In a nutshell, I am not saying that fictions are just products of human agency and that Hyperstition is following the wrong path if it solely concerns itself with generating fictions and fuzzy facts which obtain a reality of their own. I am trying to grasp how this is embedded in something more fundamental.

The problem IMHO shifts from a simple phase change (from one latent state to another manifest state - e.g. fictional and real) to the thorough qualification of ‘fictions’, the kind of ‘realities’ which they traverse upon becoming ‘real’, and what ‘real’ ultimately implies. Maybe these terms ‘fictional’ and ‘real’ are pretty redundant since they carry so much baggage, particularly in connection with the human imagination – and thus with a notion of agency that the whole program attempts to avoid.

Reza Negarestani: *will try to extract our prophecy-oriented discussion and post them separately (even might hint at what we discussed a while ago in the chat about a possible attack on iran)*

Tachi,

does make one think of fiction as a ‘non-truth’.

I didn’t suggest that fictions are truth so ‘fiction not as a non-truth’ is still not relevant to what I said. In truth we are not engaged with communication but with ‘an authoritarian consolidation of communications’ (solidus-in-circulation). What is at stake here is real as process-communication-multiplicity. Think truth has nothing to do with hyperstition unless it is sabotaged or exploited by hyperstitional vectors.

Coming back the premise that Hyperstition is the term for “fictions that makes themselves real”, if we were to accept fiction-as-anomaly then it would seem to follow that Hyperstition is “anomalies that makes themselves real.” Does this mean non-delineable entities that make themselves delineable? This is surely self-organization or stratification.

In this regard, I cast my vote with D&G; that ‘real’ (as a process) comes from the polytics of an-omalie. An-omalie doesn’t mean ‘non-delineable’ as DG suggest, it is about the zone that a participative entity-as-event traverses (by which it retain a differentiating rate of speed) and the connections it makes i.e. a set of positions to a multiplicity. Self-organization belongs to affordance-based participation (methexis)

directly functioning as a more flexible apparatus for maintaining the survival economy of the liveware; anomal is germinated where affordance (so the capacity) is transgressed. I think there is a misunderstanding here in the term anomal. Anomal in a DGon sense doesn't mean fuzzy or non-delineable or atypical and is not developed on reactionary processes (which all belong to the realm of characteristics and generic or specifications) (see ATP pp. 243-48 for more elaborations on An-omalie)

northanger: *Is prophesizing hyperstitional?*

of course it is. least i think so. thought of jonah when i first read your question. god asked jonah to go to nineveh & inform them of his great displeasure. they had 40 days to get their act together or it was fire & brimstone. jonah's response was interesting: he immediately ran away. after one sea voyage, a violent storm, being thrown overboard & eaten by a fish—jonah finally agreed to go to nineveh & give them their 40 day notice. upon receiving the message, the ninevites replaced diamonds & pearls with sackcloth & ashes. they believed the message from jonah was from god. the city of nineveh was spared. in anger jonah lashed out at god. he was mighty pissed off that god showed compassion to this once evil city. god told jonah to get a grip.

Guess that would depend on whether prophesizing can bring about the reality of what is prophesized.

AFAIK, it's always what jonah says & does that everyone seems to focus on—however, was the king being prophetic? because {a} the king patterns the behavior everyone needs to follow, and {b} says what actually becomes "reality". i'd say the king holds the hyperstitional key. maybe jonah indicates when/where hyperstition needs to occur?

<http://www.biblegateway.com/passage/index.php?search=jonah%201-4&version;=31>

<http://www.crystalinks.com/nineveh.html>

btw, SACKCLOTH = HODOLOGY = SORCERER = YULETIDE = BOLESKINE = BULLSEYE

how does a smaller, ill-equipped, disadvantaged & unempowered group defeat a superior force? if i were the superior force i'd want focus always on my game: every strategy & tactic devised has an immediate parallel with my s&t.; isn't that the art of magic? slight of hand, distraction, knowing how the human mind works.

however smaller forces defeat larger forces only, imho, when they focus on their game. guerrilla warfare is asymmetrical and does not parallel the opponent—actually, you don't want your opponent to tightly parallel you either.

another question: does everyone play the same hyperstitional game? my guess is no.

oops: warfare is warfare.

Tachi: Much to respond to here. For now, interested in prophecy-as-hyperstitional issue, and your remarks Reza that it is not, since - as far as I understand you - prophecy is teleological whereas hyperstition is not. This to me is only if we look from the POV of those prophecizing. Shouldn't we looking from a more abstract POV?

Reza Negarestani: Tachi,

Perhaps a misunderstanding, prophecy IS hyperstitional (esp. from the angle of political events, artificial futures and A-Now) but if it affirms the objective anticipation of its own, it has 'already' been captured by authorization agencies but even then it can be exploited by clandestine hyperstition vectors [Z.crowd has shown the teleological is even more suitable for Tahrif, hyperstitional exploitation and political strategies]. I guess I should unfold my PoV in this regard soon. But guess Nick followed what I meant.

northanger: can hyperstition prove or identify (believe someone asked this ages ago) any "fiction" now viewed as "true" by the masses?

kinda tricky ain't it?

undercurrent: I return to a point I made ages ago when last we had this 'what is hyperstition' discussion (the castaneda post): I think we need to distinguish:

(a) "By saying that things will happen, you can make those very things happen" : utterances which somehow make the states of affairs they refer to happen (strong hypothesis, or prophecy in the traditional sense)

(b) "By saying that things will happen, you make things happen" : utterances which make _something_ happen (weak hypothesis, or the general materiality of utterances)

If hyperstition can be usefully defined, it will be neither of these. The manufacture of desire by capitalism is the best example : the relation between an ad that says 'everyone wants an x, they're really desirable', and the fact that within a month, everyone _does_

want an x, is obviously not of the 'prophetic' type ((a) above) because of the effective (cybernetic rather than referential) link between ad and consumer trend. However it's stronger than (b) because there isn't just an arbitrary relation between the advertising utterance and the events that follow it (in that case, the advertising would be said to have failed).

Also lovecraft : where 'descriptions' of cosmic fear are also effective motors of cosmic fear in the reader.

Reza Negarestani: U/C,

A few shots in the dark:

(b) "By saying that things will happen, you make things happen" : utterances which make _something_ happen (weak hypothesis, or the general materiality of utterances)

[1] I think this axiom has the presumption that this 'something' is although not the very objective of the prophecy but still within the border of prophecy; otherwise, how can you ever know (or how do you know) that 'this something' has anything to do with the prophecy at all? Therefore, IMHO, this axiom can't be suggested for a prophecy and posed as an alternative or the second axiom unless you consider prophecy as an event-mining machine working through chronopolitics of events not a chronologic network 'by which you can locate the occurrence of the event, either associated or dissociated from the prophecy.'

I think what is more important about prophecy is not 'fulfillment' or the happening but the artificial anticipation it engineers and works as a time-traveling machine on chronopolitical lines of emergence rather than linear domination of chronologic events. (this needs elaboration). The artificial anticipation is a vector or a probe-head for potential events which have already been repressed by chronologic regime and everything connected to it.

[...]things will happen[...]

[2] Why always WILL? There is a general belief (which can even work as a restrictive function upon the machinery of prophecy) that prophecy targets the future. But a major part of prophecies (the old and new Testaments, Zoroastrian books, etc.) are 'Vaticinium ex Eventu' which aims at both Now and the Past, for either consuming the past (functionally distorting it: Tahrif) or politically multiplying it, thus giving rise to an artificial Now as well. (here, parallel functions of prophecy to Anonymous-until-

Now). The 911-Thing is partly exhumed from such prophecies. [again needs discussion]

[3] What is traded at prophecy and multiplied is Event(s) not an object that can be easily directed, exchanged or economized. Once prophecy probes an event, the event becomes 'polytical'.

PS. Promise to post something focused on Prophecy v. soon.

PPS. Could you elaborate your 'Lovecraft remark' a bit (needless to say, hungry for this one)?

Tachi: (REZA) Tachi: "Is prophesizing hyperstitional? Guess that would depend on whether prophesizing can bring about the reality of what is prophesized." On the contrary, IMHO, if prophecy ever punctuates the reality of its prophesized objective, it can hardly be regarded as a hyperstitional machinery. The hyperstitional vector of prophecies is not supposed to feed 'what is anticipated' but disseminate marginal events, autonomous events which diverge from the target; otherwise, Prophecy is mainly the instrument of Belief and its monopoly.

(TACHI) Ok, so hyperstition isn't simply the process of fulfilling predetermined ends. But insofar as prophecy involves the anticipation of something, and in that this anticipation can bring about what is anticipated, then surely prophecy can be considered as hyperstitional. For it doesn't have to be a simple linear step from prophecy to prophecy-fulfillment – what is anticipated can change as the effects of anticipation feed back into the machinery of anticipation.

... (REZA) Tachi, Perhaps a misunderstanding, prophecy IS hyperstitional

(TACHI) Ok, I know you are preparing a post for us, so will anticipate this to shape up our discussion and shed a little more light.

... (UNDERCURRENT) I think we need to distinguish:

(a) "By saying that things will happen, you can make those very things happen" : utterances which somehow make the states of affairs they refer to happen (strong hypothesis, or prophecy in the traditional sense)

(b) "By saying that things will happen, you make things happen" : utterances which make _something_ happen (weak hypothesis, or the general materiality of utterances). If hyperstition can be usefully defined, it will be neither of these.

(TACHI) Valuable distinction U/C. This is an interesting POV on the possibility of hyperstition-as-prophecy (as opposed to prophecy-as-hyperstition). And I agree that it cannot be either if we want to define hyperstition usefully. What I think we need is an account of hyperstition beyond utterance, or less focused at the level of questions of belief, and more in tune with non-anthropomorphic processes. I am trying to work towards “a non-anthropomorphic concept of speculation or anticipation, in which the expectations of artificial agencies may play a role in causing the effects anticipated.” And is not number the non-anthropomorphism we are looking for? But then this brings us back to the questions raised earlier in the thread:

(UNDERCURRENT) how does numbering number operate concretely in examples of NWM (necessity to get beyond vague D/G mumblings about 'occupying smooth space' and demonstrate in what way these operations exceed state-mathematisation)?

(TACHI) but is hyperstition simply the same as numbering number? Does it proceed “by ciphering culture, dismantling significations and diffusing the convergence of authority” (NICK, ref to NWM numbering number) If so, what is the added value of the concept of hyperstition to numbering number? How essential is the production of anticipated reality to the concept of hyperstition –is this its distinguishing feature? If so, then we are looking an interesting notion of causality: how can number create through anticipation and speculation?

Nick Land: Lots of great stuff here (isn't discipline fun?)

IMHO, as far as 'analytical hyperstition' is concerned (differentiated from methodical or 'synthetic' h.), there are two megasystems of special prominence (both touched on by various comments here).

1) Apocalyptic Monotheism and attendant prophetic traditions, constructions of history, retro-consolidation of faith and snow-balling material efficacy (as historical forces).

2) Technocapitalism with its hypersensitization of the planet to speculative investments, its excitational hype-guided cyclicity and its anticipated potentials (Cyberpace, nanotechnology ...) fusing science-fiction with feed-forward historicization.

Q.s:

- Are there any other broad hyperstitional domains of comparable pertinence?

- Do these megasystems have distinguishable abstract dynamics?
- How are they interrelated?
- How does hyperstitional analysis modulate critique?

Tachi: Good questions Nick. Its a shame to let this drop since despite the silence on this today, it is totally key IMHO.

I would say it's pretty difficult to identify additional domains since planetary techno-capitalism, as far as I understand this term, incorporates all human social, political and economic activity. Since it is not an ideological choice of a politically-driven system, but rather a planetary singularity, an irreversible historical trend, apocalyptic monotheism needs to be conceived within this context. Would you agree that it is precisely within the ambit of techno-capital – or bio-capital as some prefer – that monotheism is revealed as an archaism, an internal resistance mechanism within the overall system? It's not like techno-capitalism arose as a contingent and alien threat to prevailing religion – a human choice - since all makes sense within the singular trajectory. Nothing is external, or transcendent. I would situate apocalyptic monotheism as a sub-system within an overall systemic drive – as a subsystem which IMHO is in the process of being rendered obsolete but is resisting vigorously through viral adaptation and intensification.

So, my answer would be that we either we should look more closely at threads, currents, within the overall flow that is techno-capitalism – and treat apocalyptic monotheism as one of these system incompatibilities.

Or we consider something more base / inhuman than techno-capitalism and look more abstractly – i.e. non-anthropomorphically. I think it's a question of nested systems, and I am particularly interested in how number connects to this.

I still ask whether hyperstition can be couched in non-anthropomorphic terms, and whether hype, speculation, etc are actually only relevant concepts in human matters or if there are base-material (numeric? digital?) equivalents to 'fictions making themselves real.'

Reza: *Are there any other broad hyperstitional domains of comparable pertinence?*

Nick,

Both techno-capitalism and uncompromising monotheistic apocalypticism (my stress is on xerodromic militarization of Islam which is constructing a synergetic bond with techno-capitalism through WoT) have latent repressing functions (tactical setbacks) which may turn the entire panorama of 'the flight to the outside' to some kind of 'irrevocable reterritorialization process' which can be defined as accommodation or even colonization of the outside (and preserving macropolitical entities in an affordable / economizable micro state of volatility [volatilis : grounded flight] without a radical change in micro-interactions or feeding multiplicative molecularity). Do you think the third hyperstition pathway (cosmodromic capitalism, or the cosmodrome?) should be a path to obliterate 'all activities towards the accommodation of the Outside' on both fronts (techno-capitalism and Monotheistic apocalypticism)? If it should be so, then the third pathway should be external to the planetary function-space, but how is it possible to engage with such a pathway diagrammed through radical outsideness? Think the only polytics of engagement at this point should be conveyed not through the programmable openness ('being open to' by which Techno-capitalism must configure its itinerant heads before it reaches full autonomy), this polytical engagement should focus on composing strategies to draw the cutting-function of openness from the Outside (planetary agencies are not carriers or tactical lines of this openness but the attractors of its cutting, decoding functions) and explore the non-anthropomorphic but participative [1] space of 'being opened'.

[1] Although anthropomorphic agencies attract this openness but they cease to afford and consequently dwell and accommodate when it reaches them. Cracked by this outsidening openness, the capacity required for utilizing the outside is nullified; any instance of 'power' projected on an entity with a decoded(cracked) and nullified capacity retains an unbound potential to diffuse and unfold (p/0), to communicate and perpetuate itself epidemically.

Tachi: Reza, interesting very abstract perspective but appreciate a bit of clarification (until 'Hyperstition for Dummies' comes out):

- What is "the entire panorama of 'the flight to the outside'" and can you give an example?

- What are "all activities towards the accommodation of the Outside" and what would their obliteration look like in reality?

Reza Negarestani: Tachi this needs a full elaboration (fortunately written already):

“Sorcerers and Necromancers: anabatic lines (part V)”

(but you should read from the first chapter (scroll down to see the links; this however requires ATP as the major reference.)

(a). just a few hints: composite processes of lines of flight in DGon sorcery and Bataille's solar economy (Nick obv. has a lot of great stuff on this).

(b). there is a difference between communication (communicating with the outside) and affordance and its politico-economical machineries (accomodating, dwelling, niche-engineering, all primarily supporting existence and survival economy not polytics).

Also check the first couple of comments in the '()holey space' thread to see a digestible definition of affordance as the coupled trellis-taxis machinery (or ground) of all instances of 'being open to' by which planetary agencies (take warmachines for instance) are supported and fueled but also forced to take certain lines of dynamism which are prone to reterritorialization, capture, affordance-based communications, grounding processes and fertilization of highly advanced organizations in unconventional ways (being turned into masters of Pseudo-flux).

Some ‘oversimplifications’ necessary to move forward: You see, techno-capitalism needs a political/economic platform as a groundwork before it turns into a total Shoggotic insurgency (as Nick put it; or an autonomous flight whose operation is total ungrounding of the Earth and its agencies), it needs fresh air, resources, fuels and a furious propulsive body which are only accessible through ‘openness’ but at the same time, this openness should be intrinsically appropriated as ‘being open to’ developed on ‘affordance’ otherwise it can be easily arrested by other planetary agencies, etc. This openness which guarantees its dynamic survival however is the ultimate obstacle before its full autonomy or Omega-insurgency. The question: how is it possible to crack this politico-economic openness? - Via a third hyperstition pathway which perceives (and merely runs through) the other side of openness (being opened) – external to affordance.

Tachi, was reading your previous discussions:

all which are not explained with a reactionary (anti-, un-, contra-) approach which ‘anomaly’ suggests.

this is mainly the 'philosophic' invention of deconstructionists and their associated ilk. Anti- and un- should not be reduced to reactionary processes or mapped on the logic of negativity. (Nick is v. helpful to explain this).

Nick Land: Tachi, Reza - think the articulations you both suggest (viz Tech-cap / Apocalypticism) extremely productive - expecting there to be a variety of modes of cross-coupling with different consequences and implications.

Cosmodromic / Xenodromic Capitalism deserving of thorough thrash-through at some point (soon?) - with relation to WWIV possibly quite intricate and multifaceted (which is not to rule out a predominating trend).

Technocapitalism = K+ artificialization (with potential to connect to / retrogenerate from an absolute outside)

Apocalyptic Monotheism - could use some additional suggestions about Xenodromic potential (currently running West-style through Renomu provocation, so Jay angle especially (+ urgently) welcome).

Finding this discussion crucial and overdue - we should try to (productively) slow and prolong it.

[Technohell here gumming up my response rate, apologies for that]

Reza Negarestani: UPDATED: The question: how is it possible to crack this politico-economic openness? (should the process of opening / cracking be synchronous to the propelling body of techno-capital?) - Via a third hyperstition pathway which perceives (and merely runs through) the other side of openness (being opened) – external to affordance.

Think this is also very pertinent to the bonds between warmachines and War-as-a-Machine, with warmachines take tactical openness (being open to) to synthesize their coupled diffusion-escalation

In short, what does guarantee that the driving force of techno-capitalism (both emerged from synergetic participations with its adversaries and internal functionalities: poly-tics, flat numerization, etc.) will never be utilized or accommodate the outside (constructing its own overlord utopia)? There should be a cosmodromic / xenodromic machine to reduce the risk of any serious setback or domestication to zero without annihilating the techno-capitalist planetary processes: a contemporaneous affirmation or guarantee from the outside.

Nick,

IMHO, the West-Jay connection must be fully opened through the ()hole complex of diffusion-escalation (the coupled process you mentioned a while ago); we have already traced a few threads in this respect (Taqqiah-commandos, (Re)nomadization of the US army in connection with petropolitics and desert-militarism, and the technical side of the ()hole complex as the most prominent space for passing the chain communications between diffusion (Jihadism mostly pursues and practices it via Endo-militarization of Peace, petropolitical nexuses and heresy-engineering of its own burning body) and escalation, and finally the way they push all planetary agencies towards tellurian-omega whose body is composed by xerodromic capitalism coming from outside and all types of insurgencies through the planetary body.)

Let's continue the diffusion-escalation thread (with full elaboration) before scrambling it in the abysmally possessed minds of Jay and West (but this doesn't mean we should avoid the fun of playing with their puppets, exhuming their tapes, notes and whatever.) what do you think?

Nick Land: Reza - this thread doing just great, I was just prodding (both of us) to escalate the Blob saga elsewhere

On 'requirement' for a cosmodromic machine - absolute agreement (after all, it's the ultimate political principle) - but how this is assembled, dissimulated, deposited / fabricated, remains intensely cryptic and cuts across every other line of investigation

"constructing its own overlord utopia" - yes, precisely the Metatronic agenda in other words (AOE guide to history)

... having said that, prodding myself right now is pretty much like playing with a mouldering corpse ...

northanger: you can't be a mouldering corpse in here. that's off topic! (why are you mouldering anyway?)

Reza Negarestani: Nick,

AOE guide to history

Seems the AOE guide to history rises from the attribution of power to planetary inevitability (death-principle?) in a way that time is programmed to architectonically distribute events on concentric spheres (concentric spheres is the architectural

geometry of the AOE's chronologic, while pyramid is the order of its activities and influencing governance); only on 'diametric' and 'concentric' connections (as a result, on a line which presupposes the occlusion of the other spheres) one can reach the next sphere in an initiation from periphery to the core, with enveloped and tractable spaces between spheres or annuli, playing the role of initiatory-pylons to the next order. The outside is always accommodated by another order; movements continuously enmesh dwelling / accommodating spaces to integrate Being with the architectonic order (Bauen, Wohnen, libban).

Every event on this chronologic order is occluded to other events based on its radius from the core; movements become discontinuous (while holding a predefined constancy towards center) through switching orientations of the coexistent concave-convex regime (in the order of concentric spheres). The chronologic space of AOE should ultimately provide the Order with a point where the core, inevitability, death and the Tetragrammaton coincide efficiently, designating time and every event it passes. (see <http://www.lhup.edu/~dsimanek/hollow/earth1.jpg> and <http://www.lhup.edu/~dsimanek/hollow/daynite.jpg>)

Both techno-capitalism and monotheistic apocalypticism are mobilized and at the same time confined by the necrocratic inevitability of death which canalizes all machinic activities even prior to their initialization (in planetary becoming death comes first then it is enveloped within the becoming, waiting to unfold). The cosmodromic machine should be a much broader hyperstition pathway to unground the planetary inevitability either by overlapping the cosmic inevitability (whose function is 'outsiding' not accommodating the outside which is the politico-economical approach of planetary inevitability to the Outside) on the planetary inevitableness to neutralize its guiding system and predefined fields of dynamism (every becoming envelopes a becoming-death), or breaking it into diverging particles. [will return to this later]

For those unfamiliar with AOE:

AOE (from CCRU glossary: [http://www.ccru.net/id\(entity\)/glossary.htm](http://www.ccru.net/id(entity)/glossary.htm)): The Architectonic Order of the Eschaton, an ultra-hermetic metamasonic white-brotherhood at war with lemurian influences. The AOE progresses by way of chronic internal schism, each resulting in an ever more interiorized inner society. Its traditions are therefore refracted through various - apparently conflicting - front organizations (which include the Heliopolitan Hierophancy, Roman Catholic Church, Knights Templar, Illuminati, Trilateral Commission, and Axsys programme).

undercurrent: *Roman Catholic Church*

btw, why no hyperstition obituary!?

Nick Land: On Technocapitalism / Apocalyptic Monotheism cross-couplings (in no particular order, and including topics touched on elsewhere on this blog):

- 1) Monotheistic usurpation of Western Capitalism. (Why is there no market-based political platform (of consequence), but instead (in the most extreme cases (US 'conservatism' and affiliates)) a religious platform?)
- 2) Marxian critique of capital as a secularized Judaeo-Christian eschatology (and in China today the substitute for explicit religion viz #1 above). Multiply modulated, e.g. as D&Gon; schizopolitics (explicitly described as 'eschatology').
- 3) Prohibition of usury (riba) as anticapitalist law intrinsic to the Abrahamic tradition (virile monotheism as inhibitor of K+ financial machinery).
- 4) Transhumanist / extropian antireligion promoted by technocapitalist dynamics and ensuing abominations 'against nature', 'Karl Darwin' (as he's known in Texas) etc. (basically Nietzschean scenario?)
- 5) WWIV conjunction (militant antiglobalization become Jihad, with ensuing perverse (cosmodromically excitational?) dynamics). Obviously we're all over this one already, and will continue to be ...
- 6) Cyberspace theology, Teilhard de Chardin etc ...

#s 3 + 4 above most germane to Tachi's comments above, #5 closest to Reza's here

#1 really bugs me, and seems highly relevant to this discussion - is the formation and perpetuation of planetary technocapitalism essentially parasitic upon the monotheistic construction of (apocalyptic) history? and its enemies likewise (#2 + 5)? sure makes the whole trajectory seem a little sulphurous ...

April 2005

Competitive Advantage

Nick Land (April 12 2005)

This certainly widens the horizons of economic history ...:

“Free trade may have finished off Neanderthals” by Celeste Biever⁹⁴

Comments: Competitive Advantage

Tachi: This was also featured in the current edition of the Economist. One significant implication is that capitalism is shown to be much more than an ideology - a choice of 'systems' - rather a mode of operation continuous with biological evolution. This news is therefore something that hyperstitionists should welcome.

Nick Land: Tachi - Possibly, but an alternative angle might be to question the identification of capitalism with commerce - after all, it seems unlikely Cro-Magnons were 'accumulating' in an industrial sense (converting commercial surplus into productive investment) - but maybe i'm being too quick on this?

Certainly, the unsustainability of the (Braudel-style) 'pro-market anticapitalist' line is highly intriguing, with all the former partisans of this diagonal I'm aware of now neatly divided into allies of (rabidly antimarket) soc.i.alistic French intellectuals on the one hand and ("screw the critique of capital") pro-US supply-siders on the other ...

Globalization topic partly key to this, since (it seems) you can't oppose it without adopting an antimarket position, or support it without adopting a pro-capital one ...

Tachi: OK Nick, agree perhaps wrong to identify capitalism with commerce, per se, but I do see this as a trajectory with several significant breaks: clearly there is a break from primates not engaged in commerce to those engaged in commerce, and separately a break from commerce into Capitalism. When I used the word 'capitalism' previously I was perhaps referring to the whole trajectory; I am amazed at the extent to which Capitalism, as distinguished from mere trading, has its roots in pre-history and in

⁹⁴ <https://www.newscientist.com/article/dn7221-free-trade-may-have-finished-off-neanderthals/>

a time when political organization was probably not distinguished from economic organization as it has become.

As for the globalization debate, I don't see why someone can't be for globalization in principle but have misgivings about the way business is run and the way governments politicize globalizing trade. What makes you think that people must be either pro- or anti-globalization? And isn't it one thing to be pro- or anti-capital and pro- or anti-market?

Nick Land: Tachi - agree with your points in last para - but question remains, why is this (entirely plausible) virtual position not occupied? IMHO answer based on the 'Age of Khattak' - 'either for us or for our enemies' is the order of the Aeon ...

John Carpenter's *The Thing*: White War and Hypercamouflage

Reza Negarestani (April 17, 2005)

Hypercamouflage traps possibilities for fighting and surviving along the enemy, a total withdrawal from friend's sensors and dissolution into the enemy: the rebirth of a new foe.

If militarization is not a war-time process, even peace as the blank space of unfriiction between warmachines can be militarized; not taking advantages of peace as an exploitable suspension in time and a depository for militarization processes in wartime but the endo-militarization of peace itself, as if peace can be directly used as a weapon. John Carpenter's *The Thing* illustrates a new mode of warfare whose tactical lines are not aligned with (configured by) the plane of conflict, that is to say, they are not arranged to cut, block or replace each other based on their tendencies / transorientations and their collective but different alignments (all essentially dimensional), necessitating a dynamic incompatibility as the main support and matrix of the conflictual engagement. *The Thing*'s favored warfare is to program a new array of tactical lines which totally blend with the enemy's lines in certain configuration that they introduce radical instability and eventually violent fissions:

Every warmachine or tactical line occupies a niche (whether in wartime or peace), a space only through which it can move, feed and function; it is not only defined by distinctive properties of a tactical line or warmachine but also by its enemies, the incompatible dynamism of other lines of tactics, types of predators, the exposure to factors of environment, its threshold for receiving data from environment, the types of data it receives and its propinquity to what it pursues or probes (there is a common misunderstanding that attributes solid or crisp boundaries to niches but niches are assembled wherever an entity economizes a portion of its environment and survives / functions in that economized space⁹⁵). At a given time, the entity x occupies a unique⁹⁶ address (or a set of addresses) as $r(x)$. This address is encoded and set apart by the niche the warmachine or a tactical line occupies.

The functions of a niche are not merely disjunctive and exclusive (for example, directing competitions i.e. selective movements which result in exclusion of other portions of the environment or lines of movement) but also connective; in fact niches mobilize their occupant entities with dynamism, associating them with other niches based on affordance necessary for moving along a tendency or a plane as well as sharing it with other niches and their inhabitants. To engineer or recompose an entity, the programming of its niche is the first basic operation; therefore the significance of investigating niches or niche types (rather than token niches or occupants) progressively increases with the development and emergence of new dynamic lines, traffic spaces and planes of communicative conjunctions. The State and its dominion grid identify movements (whether quantitative – metron-based – or qualitative) by the series of addresses they authenticate, register or pass on as they travel:

$$r(x_1, x_2, x_3, \dots x_n)$$

For the State, the dynamism geared by warmachines or the way that each warmachine perpetuates its itinerant line can only be traced and numerically tagged through the

⁹⁵ In fact, some monitoring systems basically concentrate on niches with fiat and vague boundaries to screen and guide their occupants (tenants). Air traffic control systems constantly analyze the volume of protected or restricted airspace -- defining a circumspace or the volume enclosing a flying object -- for collision avoidance, alert systems and translocations of aircrafts. The volume of protected airspace is a modified term for niche in traffic management, a simulation of the niche that exists in flying or migrating birds.

⁹⁶ This uniqueness is characterized by the definitive properties / qualities that the address attributes to an entity in space-time but to have an address does not mean to be the exclusive owner of it.

logic of boundaries, the programming of dwelling / accommodating systems and (dis)locations that the State is able to monitor. By means of overwatching boundaries through which entities pass, investigating the temporal effects on (or alteration of) the forces of territoriality that moving entities leave, their types of localization, and their behaviors towards mereologic economy, the State can fabricate a cogito to not only realize but also classify the movement of entities and the dynamism of warmachines in particular which cannot be directly apprehended or sensed in their immoderate itinerancy by the State; this is the cogito required for appropriation of warmachines under the State's military protocols and forms. Bound to (semi-)rigid segmentarity, force dynamic boundaries, affordance-based connections and static or dynamic localizations (or more accurately, in-place and out-place localizations), the State examines the conductive space of each entity or its dynamism – corresponding to its functional, territorial and mereologic regions – not only to read the characteristics of an entity but also to locate it on (or according to the proximity of the entity to) its dominion grid. The State and all configurations of Survival Economy track entities through the niche(s) (esp. by reading the type of the niche) that the entity inhabits and populates through it. For the State's military Overwatch, investigating and tracing the niche is the primary and central task; the itinerant line of an entity or a warmachine, its communications and functional traits are all deciphered by scanning the niche and its type. The advanced reading-machines of the State are even capable of extracting the quiddity of a warmachine or an entity by analyzing the specifications of the niche which is intrinsically bound to affordance, dynamic forces of boundaries, and ecological principles.

However, as niches are connective entities-as-events; they do not exclusively belong to one entity or one tenant. Multiple entities can share one niche and niches can form nested niches (territoriality forces diminish – but never disappear – in grouping bonds) linking to each other, being connected in various modes. Modes of connection between niches mainly divide to two asymmetrical correlations: a. Abutment (A) b. Overlap (O)

(a) Abutment is an external connection, with minimum trade between niches or entities (the least contagious connection as the result of its tendency towards dissociation); it is demarcated by its immediate connection before overlapping and after disjunction, its tangential contact and boundary overlap. Once the frontier of the State's defense and the edge continuously eroded by the reckless tidal or updrift movements (omni-directionally contrasting with the predominant movement of the State's pseudo-flux transportations and regional displacements) of nomadic

warmachines but now with the emergence of symbiotic and manipulative warmachines and covert militarization processes on the one hand and advanced affordance-based economies towards accommodation of the Outside on the other hand (rooted in both introducing territorial climatologic factors to the dynamism of nomad-packs and developing new modes of survival), the operational significance of this mode of connection (Abutment) has been significantly decreased. Now, the state knows well how to save its foundations even by assembling regions susceptible to the erosion of nomadic warmachines.

In a typified connection T002.gif it can be mapped on the Euclidean plane E-plane.gifas

$$A_x(x, y) = d_f C_t(x, y) \wedge \neg O_t(x, y) \quad (x \text{ abuts } y)$$

Since this mode of connection links entities on a tangential plane (confinium), the state can effectively resist any arriving onrush of nomadic warmachines on this mode of connection with minimum attrition damage on its critical interiors (plane of logistics and lines of command), the State seeks to channel all the cumulative damage induced by nomadic warmachines (as the obtrusive postulate of danger) on this connection to deflect any fundamentally contagious threat to distributive (and recoverable) eroding processes which can even be programmed to transport the State out of its rigid segmentarity and prolonging it in a fluxional mode in a manner of an abrasive machine of the fluvius that erodes solid to transport it by the dynamic conservative vector fields of sedimentary processes – capturing fecundity in detrition. With warmachines tirelessly gnawing at the State’s textum, incising and liquidating its crisp boundaries, the State begins to leak out, but that does not only express the collapse of the State but also the exposure of nomadic warmachine to the underlying grid on which the State is assembled and holds its interwoven space, a network of grounding processes which even nomads use to orchestrate their itinerant bodies to climatologic variables and constants. Installing the operational edge of nomadic warmachines on the State in the absence of ungrounding machineries (incapacitating the dominant economy of the grund) is similar to the case of a premature line of deterritorialization⁹⁷ which facilitates the unconventional establishment of new immunologically enhanced States. Persian history over a long period of time (from

⁹⁷ See “Sorcerers and Necromancers: sorcery and the line of escape part II”

the Achaemenians to the Qajar dynasty (1779-1925), more than two thousand years) narrates such a continuous conversion of nomadic forces to the State forces and then again being replaced by another nomadic population; such premature nomadic detritions of the State have progressively given rise to more powerful (in terms of gravity and immunity) yet more unstable States which inflict politico-economic poverty, inclination towards being colonized by other States, lack of autonomous nervous system and polarization of different populations without the chance of being positively diversified.

(b) Overlap:

If P stands for parthood and O for overlap:

$$O(x, y) = df \exists z((P(z, x) \wedge P(z, y))$$

then following axioms:

$$AP1: P(x, y) \leftrightarrow \forall z(O(z, x) \rightarrow O(z, y))$$

$$AP2: \exists x(\phi(x)) \rightarrow \exists x \forall y(O(x, y) \leftrightarrow \exists z(\phi(z) \wedge O(z, y)))$$

Any participation (methexis or base-participation) happens through overlapping connections. Therefore, the majority of combined connections (Tangential, Parthood, Interior, etc.) are effectuated by different possibilities which overlap educes between entities. Overlap draws lines of coincidence between two events or entities by sharing an address that two entities partly or completely take in a spatio-temporal or a functional region. Both the State's appropriations and counter-state insurgencies happen through this mode of connection; while exploitable by the State and affordance, it does not mean that 'overlap' cannot be the main source of insurgencies since it is the connection-domain through which warmachines leave their border-eroding externality and directly arrive at the State's grid either to be specialized by the State apparatus or reinvented as contagious, endo-symbiotic and parasitic entities coinciding with the State and its machineries and consequently harvesting wide array of clandestine and manipulative functions.

On a more technical plane, all camouflage exploitations are essentially consistent because they all involve the use of 'overlap' and turning it from a mode of connection to a polytically operational positioning that violates both the symmetry of a niche with the address it writes (programs) for an entity and the divisors which separate and discriminate the addresses or niches of two entities in space-time coordinates.

However, this violation (that necessitates the activation of camouflage) cannot remain durable and unchanged, because predatory / military camouflages always employ partial overlap, with a part constantly accessible ‘as not camouflaged’ (either belonging to the camouflaged entity x or the entity on which it should be overlapped y [3]) which does not only make tracing and propelling (tactical handling) of the camouflaged entity possible but also provides the camouflaged entity with an escape-route or a space for instant evacuation and withdrawal from the camouflaged position. This ‘not camouflaged’ or ‘not overlapped’ part inhibits the camouflage from being durable or constantly undetected. All types of camouflage draw a disruptive function from the overlapped part (which mainly occurs on a fragmental level) by conducting the address or niche of another entity to the camouflaged entity and consequently disrupting the mereologic correlations at work in connection to what should be camouflaged; such disruptions (which generally targets a reference-point or a reference-link) can produce cognitive-glitches as well as subversion of some specific environing bonds that pass through both the camouflaged entity and its object or its prey. Motion camouflage uses a particular type of tactical dynamism (in the cases that the prey is also in motion, the movement of the shadower or the camouflaged predator happens on a path of a chaotic pursuit; the movement can be modeled by projecting its pursuit curves onto the Rössler attractor) or dynamic overlap to disrupt its distance and displacements from the prey (the shadowee) by moving on a path that connects it to a fixed point (used by the shadowee as a reference-point – a constant unit vector) while the motion by the target is met by the motion from the aggressor. In motion camouflage, the shadower remains stationary for the target. In the most common military camouflage that is disguise by covering objects (soldiers, vehicles, artilleries, launch pads, etc.) with Disruptive Pattern Materials, disruption happens through surface modifications on which visual sensory organs focus as reference-links between different types of surface patterns in their surrounding space. Invisibility (as a retreat from visual sensors), too, applies and modifies partial overlap as an occlusion by obscuring surfaces, interiorizing, positioning the camouflaged (clocked) entity where boundaries intersect (obscuring boundaries), etc. The primary drawback of invisible warmachine is being traced by semiotic regimes of the State which are more obsessed with what is missed (or traces with missing coordinates) than what exists.

As the result of partial overlap, all disruptions and subversions of mereologic bonds are subjected to eventual disclosure; and each time a camouflage is spotted, it progressively loses its potential; any entity using such a camouflage will be more prone to detection and forestalling counter-measures than it usually is; this is a symptom of connections between partial overlap and ‘localization’ which has not functionally

incapacitated and spatially effaced yet. This is why camouflage is hardly implemented as a primary action or an offensive tactic but mostly as a logistic process or a misordering transitional space between different lines of tactic and operations. Transient characteristics and stringent operational restrictions (functionally active in particular locations) obstruct radical weaponization of camouflage.

The Thing in John Carpenter's movie presents a new entity-as-event type of camouflage inherently striking any community by reversing the very process that it uses to assemble itself through nested intercommunication of 'niches' and the entities they accommodate or pass. If camouflage is configured by programming partial overlap and fragmental disruption of mereologic reciprocations of environment with a niche, then what happens if an entity or a niche entirely overlaps another one with no part of itself or the target uncovered, or in other words, every condition, region or function of X corresponds to exactly the same condition, region or function of Y (and vice versa) through reflexive and symmetric bonds?

The Thing does not occupy a niche through which an entity dwells; it pushes the connection to a complete overlap with unbroken fields of connection and correspondence. For the Thing, occupation is neither a military goal nor a tactic; since occupation is exclusive localization tethered to the mappings of co-localization, the occupier is vulnerable to environmental forces; it can be easily distinguished, located, isolated and finally terminated i.e. being undone at the minimum attrition cost of its environment. By taking complete overlap, the Thing unleashes a polytical (prepared to engineer tactical multiplicities) panorama reminiscent of a Jihadi under Taghieh (taqiyya):

Disruptive Survival. In complete overlap, every region, function or part of the Thing (X) can correspond with its identical region, function or part of the prey (Y). Therefore if every x homologizes its corresponding y or more precisely, if every x corresponds with its y on all levels then every function of X (which is the tactical movement of the Thing) can be transferred to Y. The ultimate criminal dimensions of this panorama unfold when this process is reversed; if every x fulfills its corresponding y, then by way of the connecting-corresponding space that complete overlap provides, taking every y (every function or positioning of Y that mostly focuses on survival) can be transferred to its corresponding x and eventually fulfills it. By seizing any y, a corresponding x is triggered and covertly unleashed and since it is the complete overlap, the survival and communications of Y deploy, activate and fulfill the polytical body of X, the Thing. Now that the survival of the prey thoroughly

meets the sinister enthusiasm of the Thing, and peace is generally conceived as the state of collective survival, then the survival of both the Thing and the prey is nothing but the endo-militarization of peace, recycling the survival-complex of peace as a grade-A hypercamouflaged weapon.

(Far from being a mere camouflage to be unwrapped as one removes its mask, unveils and returns to its original state, the space of complete overlap has a perverse irrecoverable side effect; since overlapping is complete, there is no extensional space (neither from X nor from Y) to the environing outside. Once the process of overlapping is complete, the mereologic escape-route or the dimension of recovery is closed over itself. Any attempt to leave is carried through a chain of hypercamouflages (inconsistent to mereologic topographies of exit and arrival) with other entities without separating from Y. In John Carpenter's movie, the withdrawal of the Thing is a series of becomings across all the niches it has already come across, continuous re-compositions of the entities it has touched, in a way that nothing is left behind; scrambling all traces of occurrence and cessation.)

Now that the survival, communications, and modes of connections of Y through and with its environment are the very polytical tactics of the Thing (the mere existence of the prey is all weaponized), it is not the niche of the entity Y that is sabotaged but the type of the niche that Y resides in. Once the type of niche is contaminated and recomposed by the polytical body of the Thing, every entity living through that type of niche (henceforth detected as an invalid configuration to its surrounding) is the potential epidemic vector of the Thing. In fact, it is 'living' associated with (and made possible by) that type of niche which is plotted as a polytical event emerging (and operating) out of the tactical multiplicity of the Thing. Any political program adhering to these contaminated niche types will find itself in trouble, already smoldering in White War creeping out of suppressive quietude of peace and precarious reality of its niches. Locked into the Thing's hypercamouflage, living as the consequence of the mutual affordance and now as a multi-functional weapon aims at both the living entity and its environment, undermining all mereologic interactions by which the entity is mobilized within a collective and the community or the State assemble themselves, evolving from economical participations (oscillating between attraction and repulsion) between entities. White War (the hypercamouflaged, endo-militarized peace) blurs within the State, not running at its boundaries. White War is internal to the State; it is necessitated by what offers the State the opportunity to exist. The warmachines of White War unlike nomadic warmachines rise from the State and spill to the outside, sharing more commonalities with the State's foundations than its own

machineries to affirm the complete overlap and ensure the emergence and outbreak of the Polytical Event (the Thing, polytical survival, ...).

Paranoia and fear are the epiphenomena of the Thing's operation not its weapons, the Thing's primary process is to undermine all mereologic levels of communication (incapacitating the Whole) and turning all political or economic spaces that the State uses to survival inside out, attacking what is basically exposed and skipping what is supposedly critical.

The command line is where the fog-of-war is reduced to its minimum, the Thing channels the fog to the space that command lines occupy. In the wake of the Thing's polytical body and diminishing border criticality, the most feared tactic of the Thing or a Takfiri under Taghieh is necessarily detached from the conventional 'hit and run' guerilla tactics or swarming horde-movement of nomadic warmachines, it is derived from the diffusive space of White War: according to both the State's military divisions and nomadic warmachines it is not tagged as a tactic, since it is actually a neutral and impotent function of Y (the prey) corresponding with a polytical divergence of the Thing (X). Operationalized from the seemingly blunt edge of White War, this tactic is simply to wait (with no other goal than possibility-engineering) and survive. As previously elaborated, it programs a community, the State or an entire civilization to regard the survival of its entities as the polytical operation of the Thing and consequently, commencing to mass-eradicate its entities by disassembling the type of niche that gives certain entities the possibility to survival and connect with each other. Once the radical danger of the Thing (i.e. its polytical survival) is uncovered, the community undergoes a process of militarization to search and destroy the type of niches through which that polytical survival (which is established as the survival of the entity Y) can be maintained; this simultaneously introduces the community to auto-collapse and brings a heavy amount of collateral damage for communities allied with the community sucked into White War. Unlike camouflage, every time that the Thing (the abysmal correspondence between X and Y) is disclosed, the hypercamouflage ramifies in more corruptive directions for it demonstrates that every type of niche is vulnerable and lurks as a space breeding warmachines of White War. The increase in epidemic divergence of the Thing (i.e. its diffusion) escalates the States' militarization processes in White War. Diffusion feeds escalation feeds diffusion feeds escalation, ad infinitum. What is the most expedient path to the unlife of war? – A draco-spiral.

The State protects itself by sacrificing its assembling niches and entities; the sacrifice is executed by negation, exclusion and marginalization, discarding the danger as a localizable loner, or an isolated oedipal individual (appropriated as a target, ready to be terminated with the least amount of collateral damage); however, in the Thing's White War this sacrifice is a perverse self-abjection towards ultimate liquidation of the State. The polytics of White War is carried and deployed by outcasts, loners and all other expendable entities now reassembling as terrordrones exposing the vulnerability of the niche type they occupy. The polytics of White War does not come in a pack but mobilized by one Dog, traveling alone to be strategically dismissed and exposed.

[1] In fact, some monitoring systems basically concentrate on niches with fiat and vague boundaries to screen and guide their occupants (tenants). Air traffic control systems constantly analyze the volume of protected or restricted airspace -- defining a circumspace or the volume enclosing a flying object -- for collision avoidance, alert systems and translocations of aircrafts. The volume of protected airspace is a modified term for niche in traffic management, a simulation of the niche that exists in flying or migrating birds.

[2] This uniqueness is characterized by the definitive properties / qualities that the address attributes to an entity in space-time but to have an address does not mean to be the exclusive owner of it.

[3] An example when the 'not camouflaged' or 'not overlapped' part belongs to x:

(In a typified connection)

$$\mathbf{O, PO, IO} \quad POt(x, y) = df Ot(x, y) \wedge \neg Pt(x, y) \wedge \neg Pt(y, x)$$

x properly overlaps y

Or when it belongs to y:

$$\mathbf{O, IO, P, PP, IP} \quad IOt(x, y) = df \exists z (IPt(z, x) \wedge IPt(z, y))$$

x internally overlaps y

Pest-legion: the counterattack

undercurrent (April 18, 2005)

The time of ultimate infernomatic polemos is upon us.

gwendolyn: reza - what is a international tender notice? are there any political / social ramifications to this?

ASSC tender notice online here:

www.assc.ir/tender1.htm

Pesticide Action Network North America (PANNA)

www.panna.org

Thanks to the chemical industry, most if not all of us carry a toxic cocktail of pesticides and other chemicals in our bodies! See our new report: Chemical Trespass: Pesticides in Our Bodies and Corporate Accountability.

Chemical Trespass

www.panna.org/campaigns/docs/Trespass/chemicalTrespass2004.dv.html

Many of the pesticides found in the test subjects have been linked to serious short- and long-term health effects including infertility, birth defects and childhood and adult cancers. Chemical Trespass finds that children, women and Mexican Americans shoulder the heaviest “pesticide body burden.” For example, children—the population most vulnerable to pesticides—are exposed to the highest levels of nerve-damaging organophosphorous (OP) pesticides.

checked some of these chemicals & discovered "bad actors" -----

TRICYCLAZOLE - www.pesticideinfo.org/Detail_Chemical.jsp?Rec_Id=PC35823

FLUDIOXONIL - www.pesticideinfo.org/Detail_Chemical.jsp?Rec_Id=PC35910

ATRAZINE - www.pesticideinfo.org/Detail_Chemical.jsp?Rec_Id=PC35042

PAN Bad Actors are chemicals that are one or more of the following: highly acutely toxic, cholinesterase inhibitor, known/probable carcinogen, known groundwater pollutant or known reproductive or developmental toxicant. The acute toxicity reported on this page is of the pure chemical ingredient only and may not reflect the acute toxicity of individual pesticide products. + Atrazine is a Triazine compound. Acute systemic toxicity is unlikely unless large amounts have been ingested - Irritation of eyes, skin and respiratory tract.

Reza Negarestani: lol ... head to Iran and you will notice what's going on beneath this global pest alert!

Nick Land: "96 items" is almost unbelievable (of course, PEST = 96 (how did the gematria monkey miss that one?))

gwendolyn: reza. I think you're fishing for Koi again. Did find this interesting (copied from a variety of studies and papers):

Pesticide poisoning, self-harm & suicide rate. Three million cases worldwide 200,000 deaths. Pesticide poisoning third most common cause of poisoning and the principal cause of poisoning-related mortality in Iran. self-poisoning by pesticides in the age range of 20-30 years old is most common (frequency of woman higher). Epidemiology of suicide: one of the ten leading causes of death in the world; third leading cause of death in youth (behind unintentional injury and homicide). Self-immolation, drug overdose, and poisoning were the three most common methods of suicide. Substances most commonly used for self-poisoning are agricultural pesticides in developing nations. Pesticide poisoning from occupational, accidental and intentional exposure is a major developing world public health problem. Causing immense strain on hospital services, particularly in Asia. Several studies indicate pesticides to be the most important poisons used for self-harm world-wide, with high incidence and fatality rate. Agrochemical pesticides are a major public health problem throughout the developing world. Many subsistence farming households have stocks of pesticides readily available for impulsive acts.

nick. Think the monkey decided to start its own blog and become a capitalist. The monkey's got a publisher and it says its numbers ain't free no more.

Reza Negarestani: gwendolyn,

This long list reminds me of 'Unit 731', if you know what it was. had a brutal documentary movie on germ-pest experimentations by Unit 731 during WWII whose key scientists / documents were transferred to the US later; of course, pest warfare is not what it used to be (now, it's more sophisticated in every aspect).

Gwendolyn: Oh my god. "Live vivisections were performed on prisoners infected with various diseases where scientists would remove organs to study the effects of the disease on the human body. Prisoners were amputated limb by limb to study blood loss. Arms were cut off and reattached to opposite sides. Stomachs were surgically removed and the esophagus was reattached to the intestines."

en.wikipedia.org/wiki/Unit_731

Unit 731 was a secret military medical unit of the Imperial Japanese Army that researched biological warfare and other topics through human experimentation during the Sino-Japanese War (1937-1945) and World War II era. The unit was disguised as a water purification unit.

Another historical example of the tensely current situation between China and Japan: "It is estimated that over 3,000 Chinese and Korean civilians and as well as Allied POWs were killed in the Unit 731 facilities."

Reza Negarestani: Interestingly, that documentary has been produced in Japan and both interviewers and interviewees are Japanese (even scientists or soldiers worked in Unit 731); there were so much protest in Japan after an exhibition revealing the documents to Japanese university students (guess two years ago). There are a couple of cult classic movies based on the subject too (men behind the sun or something like that).

Gwendolyn: ah. 1987 movie by Taiwanese filmmaker TF Mous. Interesting, it's not a documentary, but Mous wanted to make it a documentary. Most of the evidence was destroyed. Mous (great) interview:

www.horschamp.qc.ca/9901/offscreen_columns/ManBehind1.html

www.theage.com.au/articles/2004/04/22/1082530287330.html?oneclick=true

en.wikipedia.org/wiki/Man_Behind_The_Sun

But Reza. Tie all this up a little to avoid complete divergence. (Returning to the word impacted snowy monstrosity below).

undercurrent: *"96 items" is almost unbelievable*

nick, if you read carefully you'll see that it's not "96 items" but *the* 96 items – like *the* four horsemen, *the* seven seals, etc.

Mesopotamian Mithraism I: **صلو** (Salu)

Reza Negarestani (April 22, 2005)

Plazzo-Colonna, Rome

This is an introduction, an entry point for the forthcoming episodic articles on Mesopotamian Mithraism which is called the mother of all religions from Asia to Africa and Europe.

Salat: Prayer and one of the five pillars of Islam. From the verbal infinitive, Saad (ABJAD value = ص = 90), Laam (ل = 30), Waav (و = 6): Salu (صلو = 126). Different names or verbs with different meanings can be derived from Salu.

Salat originally means ‘to crave for’, ‘to communicate’ and also ‘Between, at the middle of everything but mostly used for the body and the day i.e. 12:00 PM’. Before Islam, desert nomads of Arabia were sorcerous worshipers of Alah along idols which were kept in Mecca, Ka’aba containing 360 idols led by Hubal, other famous idols were Laat, Uzza and Manaat (Mana); however, Ka’aba actually belonged to an unknown deity named Alah / Elah for whom there was no idol or as some Arabic archeologists suggest the idols were the names of Alah / Elah (uncertainty about the accepted belief that Alah or Elah is a name).

Salat was a rite of communication with Alah / Elah, taking place at the middle of the day or according to pre-Islamic Arabs the time when the Sun is positioned right above the head, in a uniform direction to the body (there is no evidence which meaning came first 'at the middle' or 'to communicate'), giving Man a burning perpendicular orientation to the leveled surface, to the horizontality of the desert (deserts of Arabia, esp. Nafud and Rub al-Khalie are almost flat with minimum sand dunes) or as it has been suggested "like a spear piercing the desert". At that time, Salat was performed in standing position, with face kept horizontally so the eyes gazing at a far distance (neither above nor below) and it could last for minutes. The ritual could be fatal; the desert Sun could burn tissues rapidly, inducing acute physiologic malfunctions such as nausea, headache, nosebleed, blindness, delirium or abrupt seizures; for catatonics it could be lethal.

This type of ritual suggests Alah / Elah as a Mesopotamian-Persian Sun God which cannot be separated from desert and human at the middle, incinerating both simultaneously while forging a line out of human destined to be immolated as it communicates the desert to the Sun. Unlike Indo-European rituals for communication with the Sun which take ascension towards the Sun as a pivotal role, Sun gods in the Middle Eastern cultures never promise such an ascension as in the case of Baal and Moloch (Molekh: see Five Billion Years of Hell-engineering); the communication is impossible for the Sun rises as a tide for extinction before the ascension completed, before human rises towards the Sun. The communication with the Outside is only made possibly by mass-combustion, permanent visual impairment, and death not by a cleansing fire (the later cathartic flame) but by manifestations of Telluro-conspiracy towards the Sun. Zurvan, Moloch, Nergal and Baal burn the offerings before accepting them, their language is either the epic of ash or the poetry of vapor.

The ritual of Salat derives from older Zurvanite rituals. Zurvan Akarana, the Infinite Time, the Consuming Aeon, or as in older times called deus-Airmanius (God-Ahriman) is the most influential deity in the Middle East, dating back to 7000BC and possibly the source of the majority of polytheistic gods as well as monotheistic Gods. It has been usually depicted as a four-winged lion-headed human-like creature with furious eyes and a mouth ready to tear (the remaining of red paint on its teeth from the statues of Zurvan discovered in Antioch). Its body has been encircled by a coiling serpent (usually seven coils corresponding with seven zodiacal signs) with the head of the serpent on the Zurvan's head and pointing to nowhere. Sometimes masculine, sometimes feminine, hermaphrodite and sometimes with no sign of gender at all,

Zurvan like Angra-Mainyu (Ahriman) creates via parthenogenesis but as in early texts it gives birth by levat (buggery) with itself which as stated in some texts lasted for 1000 years. This is another significant indication pushing archeologists (Hübner, Legge, Duchesne-Guillemin, Zehner, et al) to this strong theory that Zurvan is in fact the primordial Ahriman. In Early Avesta when Ahura-Mazda and Angra-Mainyu are born through the body of Zurvan, they claim that they have no father since Zurvan cannot be a demiurge, in its all-consuming Aeon nothing is created. For such a radical Outsideness survival is impossible; Zurvan's Outsideness can neither possess nor be possessed. Only in Pahlavi texts and late Zoroastrianism, Zurvan is appropriated with patriarchic characteristics and introduced as the primal paternity to legitimate Ahura-Mazda and his Brethren of the Light.

fig. 1

The tablets and carvings found in Ostia and York-Eburacum (discovered with a headless body of Zurvan in 1875) present Zurvan as Ahriman:

Volucius Irenaeus Airmanio votum solvit

(The picture of the headless monument and its inscription first published by Hübner in *jahrbücher des vereins von Altertumsfreunden im Rheinlande* – continued as *Bonner Jahrbücher* – 58, 1875, p. 147)

fig. 2

The first Zurvanite rituals were exceptionally similar to Salat ritual, the discovered statue of Zurvan in Sidon remarkably illustrates the same position of a salat-practitioner, with a hollow chamber in the head for keeping a fire blazing from the open mouth and the eyes of Zurvan (see fig. 2). Later investigations on other Mesopotamian deities especially the Babylonian Nergal (and its influential cult – Kuthah – inspiring later solar cults in the Middle East) who appears to be the same lion-headed demon encircled by a coiling serpent and is a Zurvanite god reveal that Zurvan is connected with Salat, ‘at the middle’ and the noontime communications since the worshipping of Nergal, the god of war, pestilence and immolating tides of the Sun was a noontime ritual and mostly performed in summer. More pertinent than the above affinity, is the connection of Zurvan itself with noontime rituals: in early

Avestan texts, Zurvan (the Aeonian Time or Zamaan) is usually accompanied by the words Rapithwina (Zohr or noon or twelve o'clock in the day), Dargha (Long, Late) and drâja-dareqa (with no begging and end). Occasionally the word Zurvan as Zaman points to a definite time which seems infinite: the noon (zohr).

Not only emphasizing on the solar aspects (noontime) of Salat but also their consuming and incinerating immensity, Zurvan originally is derived from an ambiguous etymological germ-cell:

(a). Zar: the elder, unfathomably old which knows nothing of the beginning and the end. Also blazing and conflagration.

(b). Zar: torturing, devouring (in modern Farsi by taking the prefix 'A' and turning to Azar, it means 'torment, hurting and Woe'). One should not forget that Zurvan and Az are continuously associated with each other (a role that later Ahriman plays by giving birth to Az or Jahi [Jay, Jahika, Djahi, Jeh]). Az the first and the ultimate vampire is the arch-demoness of Thirst and Hunger, made out of the self-sacrificial creation of Ahriman and the blood flowing from its wounds and transforming into feminine menstruation described as an adjective for the fluid infinity of Az. As the one that cannot be satisfied and the unfulfillment of all tendencies, Az promises Ahriman: "All that exists will be devoured even your own creation." (a promise which finally awakes Ahriman from its depressed slumber) This self-consuming commitment reminds the same endless process of devouring that Zurvan uses to (un)create what it creates by exactly taking the creation and exposing it to the vampiristic abyss of Untime.

It cannot be denied that Salat is a ritual seeded in Zurvanite practices which integrate four elements as their foundations: noontime, Disruption in Time (the encounter with Aeon-Zurvan), immolation by the Sun, becoming a part of what is communicated by being exposed to what incinerates and not being the one who affirms / affords the communication as a communicator. On this thread, one consequently reaches an indisputable affinity between Elah worshipped by Arabian nomads and Zurvan Akarana.

For communicating with the other deities, there was the safe House of Ka'aba – as the most significant building in Arabia – constructed as a Cube, the most secure and anthropomorphically hospitable architectonic / accommodating form whose element is Square or four dots (Swastika) – representing order, pro-creationist directions and

oikonomia – as contrasted to three dots of cosmic unlocalizability of both Zurvan and Druj (the Mother of Abominations) [1].

After conquering Mecca, Mohammad destroyed the idols (declaring that Ka'aba is not a safe place for idols any longer, it is only in the possession of Allah which resides outside of Ka'aba) Salat was transformed into Namaz (the word salat is still used for prayer, namaz), the fatal standing position divided to four distinct positions to harmonize the durability of communication with the survival of human being: [1] standing position [2] Roku'e: standing while bowing the upper body [3] Sojdeh: sitting while bowing the upper body [4] sitting on feet

On the name Alah / Elah as used by pre-islamic Arabs: it originally comes from the proto-Semitic Elah which is later transformed to the Aramaic word Eloha or Oloha, a word later used as a synonymous for the Tetragrammaton, YHWH (as Eloah / al-oh) but the origin of this name returns to a time prior to the emergence of the name Yahweh.

In modern Farsi and Arabic, Ilah or Elah is still used. However, in the Quran, this name (Elah / Alah: note that it contains a single 'L' or Laam) undergoes a structural metamorphosis which is highly innovative yet very odd, from Alah or Elah (fig. 3) to Allah (fig. 4). In Arabic and Farsi, the letter Ha (ه) cannot be attached to Laam+Alif (ل) when it comes at the end of a word as in the case of Ala-h or Ela-h (fig. 3); therefore, it cannot be pronounced as Allah (with a double-stress on the letter Laam ل which is called Tashdid fig. 5); Allah is an exception, the letter Ha is attached to Aleph (= ا), and Laam should be pronounced with a double-stress [Allah], the name looks like a runic glyph or a cipher not an Arabic word (fig. 4). The strange curved form of the word Allah has solely inspired the art of Islamic calligraphy (see fig. 7).

fig. 7

However, the English spelling of Allah is entirely wrong since ‘a’ should be pronounced with a continuous sound (as the result of the small dagger alif above Tashdid [fig. 6] which in Arabic orthography gives a continuous aa sound to the word). The accurate spelling of Allah in English is Allaah

Alah / Elah (ABJAD = 37)

Allah (ABJAD = 67)

Allaah (ABJAD = 68)

Aftermath:

AQ = 89 = Allaah = Druj

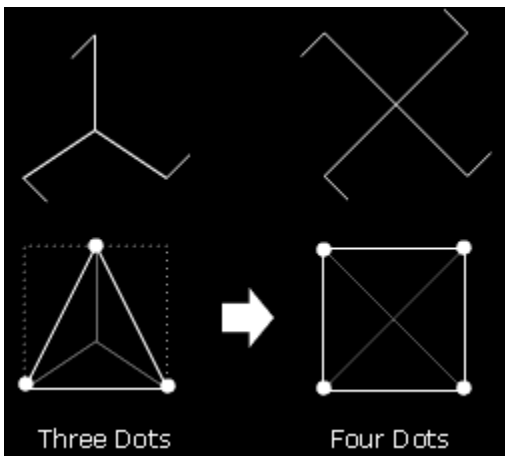

A quote from an anonymous Wahabbi Meccanomis⁹⁸: “If Allah resides outside any house even his own abode, then the Ka’aba itself is a terrible idolatrous redundancy.”

(Special thanks to Kh from the University of Cairo)

NOTE:

⁹⁸ “Mecca-nomics”

[1]:

Comments: Mesopotamian Mithraism I

Reza Negarestani: a link added: "the fatal standing position divided to four distinct positions to harmonize"

gwendolyn: *Volucius Irenaeus Airmanio votum solvit.*

translation?

(btw, Irenaeus : root is "peace"; airmanio : A°ra Mainiiu; votum : vow, pledge, religious undertaking/promise; prayer, wish; votive offering; solvit : (solvo, solvere, solvi, solutus) loosen, release, unbind, untie, free; open; set sail; scatter; pay off/back)

Reza Negarestani: Something like this: May the great Ahriman fulfill the pledge.

Airmanio: archeologists are not sure whether this is a proper name for the God-Ahriman (the primordial Ahriman) or Angra-Mainyu-Pouro (the Mahrko-Deava: the Arch-Deava).

gwendolyn: reza. you're very creative.

reza. ah. Zurvan's vow: whoever was born first, Ohrmazd (good) or Ahriman (evil), would be made king. (story of esau & jacob). Ahriman is born first & Zurvan grants

him the kingdom for nine thousand years; then Ohrmazd would reign. Zurvan gives Ahriman the Az (Weapon of Concupiscence): if he failed to keep his pledge the Az would devour everything of his & she herself would die of starvation.

There are at least six different mythoi about this (this comes from late Avestan and Pahlavanic texts). I'll discuss all of them in future pieces.

Shari'a? –You already have it.

Hyperstition (April 24, 2005)

Another Shabnameh (samizdat) found in Mahabad, Kurdistan (April 10, 2005) by our contacts in the region, signed as The Codex of Yatu and originally written in Farsi:

Shari'a?

–You already have it.

By declaring that Islam is the conclusion of monotheism, the most refined of all religions, one does not tread in the path of ingenuity forever. Such a dictum indeed brings a gruesome end for all monotheistic religions drifting from the past as well as looming out of the future, abasing all other monotheistic contenders by turning the very prophetic promises that they make to look consistent and their utter dedication to their saviors and their eventual fulfillment in the future against themselves: “I AM WHAT YOU PROMISED”.

Before the body of Sharia, no religion can be delivered to the masses unless by submission to Islam; even if a religious rival rises again (take Christianity for instance), Islam deliberately suppresses itself in the name of the ultimate victim, calling for a global beseeching⁹⁹ on the behalf of the oppressed. The repercussion of this call for liberation is facing Sharia from the other side of obligation, that is to say, not through a religious union by turning to Islam but through the basic principals of the humanitarian duty; this is the fate of emancipators, the saviors of the oppressed Islam who are absorbed by Sharia. The number of growing Muslims does not count anymore but the populations, policies and civilizations bewitched by the innocence of the victim and immersed into Sharia through ethical foundations of emancipation,

⁹⁹ Baseej in the text which is frequently used in Modern Farsi.

not by declaring Shahada. This is what we exalt as the Islamic subterfuge postulated by the Islam's claim of being the last and the most perfect religion; there is more creativity and craftiness into this claim than anyone can imagine but the path of strategy¹⁰⁰ is such a slippery way. Once Islam concludes the whole conundrum of monotheism, it also seals an irreversible conversion of itself to the ovum of apostasies and a heretical holocaust. Prevailing over all other religions, annulling them and being the culmination of monotheism, Islam solitarily becomes the host of all religions that it stops from the future; all 'Beliefs' that could be religions by themselves but in the presence of Islam as the ultimate religion, they have to submit to the path of Sharia and continue their existence as minor beliefs, schisms, religious sub-orders and heresies; all populating, breeding, breathing within Islam. Their breath animate the hulê¹⁰¹ of Islam, and each breath of Islam spread their infection. Hatching the egg was

not easy but finally we have it: the radical Islam cannot be separated from apostasy; heresies cannot be extracted from the foundation of Islam. If you want to have your own religion, Islam is the best place to start.

The Codex of Yatu

(Kalaam-e Yatu)

Amordad 1383

Hyperstition's note on the original Farsi text found in Mahabad, Iran (April 10, 2005)::

The linguistic structure of the text is highly inconsistent. As if one assumes that this text has been written by more than one writer.

(1) This text has not been written by a Kurdish writer, that is to say, it is not a local shabnameh (samizdat). Iranian Kurdish guerillas and local shabnamehs vehemently

¹⁰⁰ the original word in the text is Makr, an Arabic word meaning subterfuge and trick but the prominent Quranic reference to this word stresses on strategy rather than a ploy for fulfilling one's goal.

¹⁰¹ The original word in the text is Hayula, meaning Monster in modern Farsi but in Islamic philosophy (al-Farabi's discussion on 'Ajsam-e Hayulani' for example) as in Greek cosmogony, it delineates the primal matter-corpus (essentially synthetic by cool elements Water and Earth) prior to animation of itself; it is the formless matter or the feminine mud. Since in the text it has come with 'animation' translator has decided to use the word hulê to keep the original ambiguity intact.

despise using Arabic words. The historical culture of Iran's Kurdistan and the Kurds is deeply connected to Aryanism and Kurdish nationalism which are entirely in contrast to Iraqi Kurds. One should not miss the fact that Hezb-e Democrat-e Kurdistan and Etehadieh Mihani in Iraq strongly aided Iran's government and army to suppress the insurgencies in Iran's Kurdistan (mainly led by Ghasemloo and in alliance with the Mujahidins) during the Kurdistan's crisis (1360-63).

There are more than 14 words in this text which are originally Arabic (while they have their synonyms in Farsi).

The text is not similar to any conventional shabnameh or manifesto ever published in Kurdistan for political parties. It lacks the element of typical Kurdish shabnamehs: the resistance towards center or joining a political party.

(2) The syntactic structures are highly complicated; they are not Farsi at all. The punctuation and syntax confirm that this text is itself a translation from another language but all the Farsi and Arabic words have been placed very carefully in the text so the rhythmic flow of the text has no pause or break (the problem one encounters in translated texts) in the Farsi version of the text despite the complex, non-Farsi Syntax structures. One theory is that this text has been intentionally written in Farsi, translated to another language and then retranslated to Farsi.

(3) Despite the reckless usage of Arabic words, the date mentioned at the end of the text is very unusual. Amordad instead of Mordad. Both words are Farsi, but Amordad is a word only used by Parsi writers or in other words those writers who try to purge all Arabic words from Farsi language and reviving the Parsi language directly connected to the late Pahlavanic language (note P does not exist in Arabic alphabet).

How to Dismantle the US Hegemony

Hyperstition (April 26, 2005)

The only way that the western man can grasp the immensity of Sahara is by choking on naphth (oil), but it takes time for pipelines to pump it all the way through the continents. Now, can we solely rely on the promise of our naphthanese religion? Some of us are in rush and speed is holy. The US warmachine must be enticed to aim at Iran. In terms of military power, there are two types of super powers, one which directly engages itself and the other which makes a whole continent enter in a war

with the enemy. One comes with its affluent economy and weapons, the other leaves its economy, flushing it out, wasting it recklessly to assemble a super-weapon in progress. Iran fits the second category. Feeding Europe and Asia with not only relatively free oil and gas but also with one of the richest clusters of minerals in the world over a long period of time, Iran has colonized the economy of certain Asian and European countries by consuming itself to the last drop of its petroleum and the last bit of its rich soil, by making itself one of the most notorious colonies of the entire developed world. This will be the war of wars, as soon as the US strikes, the teeming parasites will resist the US not their wretched host; even if the conflict destroys the host, the gluttonous parasites will migrate to the new host which has superseded the old one.

Another doctrine of Jihad is that when clash is impossible or is subjected to premature failure, the Islamic country should become a volunteer host for parasites, shifting the doctrine of Jihad to doctrines of submission to parasites and underground colonization, policies for open and boundless exploitations of itself by others; when the time comes parasites defend their host as their existence is bound to the survival of the host. However, we are cynical enough to not trust in the interval between the attack and a proper countermove by the exploiters. Iran's military projects should be devised along stratagems to impair the world economy, distracting the military integrity of the world and digging a pit into which the world's military and economic potentials melt and waste away. There is nothing more pointless than entering a war with Israel whose collateral damages merely spread on recoverable psychological and political fronts. Without prior warning, the strike must be directed to key Islamic countries which keep Iran in a highly secured balanced position to the Indian sub-continent, and the Far and Near Eastern countries, that is to say, the entire globe. Pakistan and Saudi Arabia each with central roles in the region should be chosen in this war. With a successful attack on Saudi's oil fields, the global economy comes to its knees; and with modified missiles targeting Canadian-supplied nuclear power reactor and M-11 missile storage facility in Pakistan together with other centers alleged for their secret nuclear activities, the dynamic balance between India and Pakistan will be severely disturbed. India seizes an opportunity to launch a campaign against Pakistan and solve its problem once and for all, a desired role which has postponed for a long time. This military burning pit stops Time for Iran's next movements and

put the rest of the world in a fast-forward motion towards No Man's Land¹⁰². But is this 'merely' the end of the US hegemony? We hope not.

The Codex of Yatu

Hyperstition's note:

Far more straightforward and plain than other discovered pieces in Kurdistan, but indisputably scrawled on a polytical line touched by profound sickness.

(Thanks to FM for supplying Hyperstition with this Shabnameh)

[Editor's Note: Comments for this post could not be recovered.]

¹⁰² Na Koja Abad in the original text, meaning a place built at the middle of nowhere, not inhabited and immappable.

Mesomath

Reza Negarestani (April 28, 2005)

Forgive me if you have already checked this and I am the last visitor as always, but this is very informative (the 'special topics' section in particular):

Mesopotamian Mathematics¹⁰³

Comments: Mesomath

gwendolyn: reciprocal shares the same root with propinquity, afford, priest & first. you mention propinquity in "John Carpenter's The Thing: White War and Hypercamouflage" & recently referred to "God's fifth eye" which is a "night letter"—a shabnameh. since mesomath refers to West & Jay (and may reveal an epiphany), what interests you about the "special topics" specifically?

Reza Negarestani: Think you should wait and see how the napht-nexus unfolds. however, apart from West-Jay connection, the algorithmic nature of Mesopotamian mathematics is a key in understanding the formation of the State's trading systems (mostly developed by Mesopotamian civilizations), calendaric explorations of time, etc. I have written a part of a long piece on money but couldn't proceed; now some of these topics gave me many lines to follow (I don't promise that it will be ready in the next 2-3 months because first of all, it is very long and second it is a bit technical and need careful approaching). Be patient ;)

gwendolyn: i shall evoke Numko then, who rewards infinite patience in the face of unfinished todo lists. :)

Reza Negarestani: aha.

¹⁰³ it.stlawu.edu/~dmelvill/mesomath/

gwendolyn: www.ccrn.net/digithype/pandemonium.htm

"The Adept Orders of Decadence trace their system back to the period immediately following the submergence of Atlantis, which they date to 10 000 BC. It is linked to the origin of Sumero-Babylonian geometry, from which we derive the division of the circle into 360 (= 36 x 10) degrees. In the ancient egyptian mysteries it was attributed to the god of catastrophe and drowning - Osiris - who was later symbolized by The Hanged Man of the Tarot (taken by decadologists as an image of the Atlantean Cross)."

reza. would mesh and netspan patterns be on topic here?

The Guerilla-State and Ethnonationalism (A Note on Nomadism in Iran)

Reza Negarestani (April 30, 2005)

"Persian history over a long period of time (from the Achaemenians to the Qajar dynasty [1779-1925], more than two thousand years) narrates such a continuous conversion of nomadic forces to the State forces and then again being replaced by another nomadic population; such premature nomadic detritions of the State have progressively given rise to more powerful (in terms of gravity and immunity) yet more unstable States which inflict politico-economic poverty, inclination towards being colonized by other States, lack of autonomous nervous system and polarization of different populations without the chance of being positively diversified." (John Carpenter's *The Thing: White War and Hypercamouflage*)

One of the processes involved the emergence of concrete nomadism in Iran and their ambivalent interactions with the State which make the Deleuze-Guattarian approach to nomadism if not problematic but not entirely applicable in investigating the contacts between nomads and the State:

On a concrete level, the formation of nomadic tribes / pax in Iran is based on fictional-artificial kinship: in the presence of an acentric State whose integrity of its

crisp boundaries is not firm enough, different nomadic populations are capable of retaining a dynamic concentration, that is to say, collectively moving through common migration and climate gradients, and consequently forming nomadic densities. These nomadic densities made by con-gregated activities of different nomadic populations not only position different nomadic packs in the vicinity of each other but also draw lines of trade, participation, competition and cooperation between them which in the absence of the State's centric authority and in the presence of common nomad-gradients turn into alliances, either through dissolution or mutual agreement. Since such alliances are germinated over specific and common nomad-gradients and territories within the boundaries of a weak state, they will eventually trigger a union but not multiplicative processes; a union still constituted of nomadic collectivities whose tendencies have converged upon the tendencies of the most influential nomad-population i.e. their nomadic nationality. Richard Tapper in *The Conflict of Tribe and State in Iran and Afghanistan* discusses that the emergence of current nomad populations in Iran is not based on common blood kinship or a common ancestor but political and cultural dependencies and bonds developed as the consequence of common nomad-gradients over a shared territory. For example Khamseh nomad in south of Iran is constituted by Fars (the Basseris), Arab, and Turkish nomad-tribes (the Inanloos, Nafars and Baharloos) who have not even a common language. These political alliances are so powerful based on which fictional kinships or ideologies of a common ethnonationality are constructed. Although the formation of Iranian nomads is not through kinship, but geopolitical and cultural bonds have fabricated such strong ideologies about having one blood or tribal origin among different nomads of Iran. These fictional kinships have basically carried the interests of elite people in a nomadic populations i.e. leaders or Khans¹⁰⁴ who have continuously tried to counterfeit Family-Trees and documents to legitimate the kinship of other neighboring nomadic populations to themselves. (Ann Lambton, *Landlord and Peasants in Persia*)

¹⁰⁴ Another difference or perhaps incompatibility of Iranian nomads with other Asiatic nomads is their pseudo-centric or even centric density and their completely hierarchical structures which correspond to the State's military formation (the role of Iranian nomads in tax collecting and supporting State's military forces as omni-present logistic lines) to such an extent that Iranian governments which have been mostly nomadic confederacies (less than binding and consolidating structures of federations) usually motivated or fully supported (instead of sedentarizing them) minor nomadic tribes to assemble as major nomad populations (the Kurd tribes in Khorasan, Shahsavan in Aerbaijan and Khamseh in south of Iran) in order to effectively withstand other nomadic threats.

Since these kinships are fictional (based on geopolitical interests or transitions of power) and continuously (re-)fabricated by khans, they play more significant roles in activities and tendencies of a nomad-population than actual tribal kinship in nomads of central and near eastern Asia which are fixed and cannot be violated. The fiction of having one language and a common origin among the Kurds is one of the most pertinent examples. Hamid Ahmadi discusses that the oldest book written about the Kurds, *Sharafnameh*, mentions four distinct Kurdish languages instead of one unitary language, which as Mehrdad Izady emphasizes are not separate accents of one language but different languages. This is highly in contrast to pan-Kurdism's ideologies which consider the Kurds not as a nomadic diversity but a nomadic nationality with its own precisely defined territory. The inclination of such dominant political movements among nomads is the rapid conversion of nomadic ethno-diversity to ethnonationalism on whose territory multiplicity is an unforgivable offense against the survival of the nomad and its identity. The fiction of kinship among Iranian nomads actuates ideologies and political movements towards consolidating or restoring the lost origin, reducing the nomadic process of diversification and multiplicity to a unified identity crystallized by nationality, the fiction of a unitary language, blood, political and power formations and rigid territorial mappings. Nomadic political movements authorized and approved by a crystallized identity transform the nomad-space to an extension of the State and its political determinants which legitimate and mobilize the State against the nomad warmachines and their dynamism. This is why with the rise of more potent States, Iranian nomadic populations have been remodified as nomad-states or guerilla-states which are inter-ethnically collective, acentric, dynamic and anti-Center but their political / territorial movements are parallel to geopolitical tactics of the State. However, one should not forget the clandestine warmachines bred by such guerilla-states restlessly storming the centric State from within and at the same time, weakening themselves by smuggling their State-politics through nomad-gradients and introducing their political nomadic movements to the State's politics, the inevitable consequence of which is ethno-schisms and alignment with different State's politics to either overcome their own internal fissions or escape the gravity of the State seeking to impose its policies on nomads (as in the case of Iraqi Kurds and their alliance with Iran's government in battles against KDP and other insurgent Kurd's political movements allied with the USSR or Iraq). Today in Iran, a political or cultural search for nomadic identity either based on ethnicity or geo-political alliances progressively exposes nomads to the State's politics by reducing their endo-militarized multiplicity and replacing it with

ethnonationality pregnant of the State's military manipulations, inter-nomads conflicts and even complete sedentarization.

(To be continued.)

Hyperstition's laboratory: From the Gog-Magog Axis to Petropunkism

Reza Negarestani (May 8, 2005)

11 March 2004: Somewhere amidst the fog of the net, behind a seemingly forgotten website, in the password protected Hyperstition's digital lab, there is a tumultuous discussion over the newly discovered notes of the former professor of Tehran university, the archeologist, researcher of ancient trading systems and mathematics (particularly geometry and Mesomath) and Abjad scholar, Hamid Parsani, arrested by SAVAK during the Shah's regime for his unpatriotic activities and dissemination of fake histories of the glorious Persian history and finally dismissed from Tehran university during the cultural reformation after the 1978 Revolution for what addressed as 'insufficient scholarship'. The notes which are more similar to the contents of Parsani's office trashcan than a notebook of an exceedingly disciplined scholar have been disclosed to the hyperstition team by one of Parsani's secret students who teaches ancient languages in one of the branches of Azad university in Fars province. After the revolution, Parsani's sole anthology of essays entitled "Soorat-zoda-ee az Iran-e Bastan: 9500 Sal Nabood-khanie¹⁰⁵ (Defacing the ancient Persia: 9500 years call for destruction)" was banned and entirely collected before hitting the public market.

After the academic exile (1360 - 1375), Parsani was hired by a Middle Eastern architecture company based in Egypt. Financially secured during a long period, he finally nullified his contract with the Egyptian company and established a private

¹⁰⁵ نابودخوانی سال 9500: باستان ایران از زدایی صورت

research institute which lasted for nine months. It seems the only aim of this institute was granting a permission to cooperate with public sectors involved with archeological projects led by the government and gathering an elite team of reliable and professional archeologists, linguists, architects and even mathematicians. There is no information about the activities of Parsani from 1376 to 1380 (2002), he suddenly disappeared with his team. There are reports of illegal excavations near Ghal'eh Dokhtar in Gonabad, Noorabad tower in Fars and diggings in Yazd and Kerman parallel to his disappearance. There is one reliable source, however, that confirms Parsani has contacted a family in Kerman which is believed to be the descendant of the Haftvad family whose legend of their wealth and terrible fate is well-known in Iranian folklore. Before the rise of the Sassanids (the last dynasty before Islam in Persia), at the time that Ardeshir conquered all regions of Iran one after another, only one mighty family succeeded to stand against Ardeshir. The stories are about a giant gluttonous worm kept by Haftvad family as their familiar and their guarantee of their power; the worm eventually was destroyed by Ardeshir's conspiracy. The destruction of the worm is believed to have sealed a permanent curse on Kerman.

After his reappearance in 2002, Parsani started a project for locating an artifact named as Khaj-e Akht or the Cross of Akht. Parsani's old friends all confirm that they have found him too unstable and without principled behavior which is expected from a highly educated archeologist. An old colleague describes him as a volatile genius who entertains a bunch of teenage nitwits: "He is constantly rambling on a heretic Zoroastrian mage and sorcerer named Akht which has been mentioned in *Denkard* and *Yavisht i Friyan*¹⁰⁶ and his cross and his last three riddles which have never cited anywhere, something about the flowing source of the black flame worshipped by Akht-Yatu, a cult led by Akht during his lifetime and after his execution, the Quranic references to Yajooj (Gog) and Majooj (Magog), and many other topic which mainly school-cursing teenagers find cool. I guess his skin disease has entered a serious phase."

"Parsani notes lack his initial stylistic prose and the sense of highbrowism, as if he has struck by something that he cannot digest or by a stupefying discovery.", a former friend of Parsani adds.

¹⁰⁶ Yavišt i-Friyān, in *The Book of Ardā Virāf*, Dastur Hoshangji Jamapji Asa, M. Haug and E.W. Vest (ed.), Bombay, 1872.

According to his own notes, he has discovered the carvings of the cross in two different regions, one in Kerman province (recovered by the Haftvad family after the Bam earthquake) and one in Khurasan: “Both are identical. Strangely with two handles instead of one. The head’s basic geometry is a decagon with triangles positioned on its sides forming a star corresponding with Khur (the Sun) but one side of the decagon is forked and forms two handles. This is not a Zurvanite star or the Sun; the star is not complete; the last sacred triangle has been intentionally replaced by two vertical parallel lines. They were always talking about a buried terrestrial sun which should be exhumed, a rotting sun which oozes black flame. One must be blind and not see that even Akht (اخت, pest) is a truncated form of Akhtar (اختر, Star)¹⁰⁷ with its last letter cut off?”

See fig. 1

fig. 1

“I found an artfully crafted model of the cross in the old bazaar, 15 cm, in silver, with a tiny lock between the two handles. [...] I could finally open the relic, at every corner of the triangles, there is one rotating joint, the last two joints which connects the head to handles are in the form of knee-joints. They cannot fully rotate; just realized when the cross is unfolded the rotation of joints should be synchronous, with equal forces distributed on the two handles pushing them in opposite directions towards each other as the decagonal head of the cross is folded to an upside-down crux commisa (the letter T), the cross of Nimrod and later St. Anthony’s cross, initially used for worshiping the summer Sun (Tir or Tammuz) and holding human sacrifices during

¹⁰⁷ Here, Akhtar (modern and ancient Persian: Star) is referring to the Sun.

immolation. On both handles, there is the Quranic reference to Napht¹⁰⁸, on the left handle there is the Arabic word Yajooj (Gog) and on the right handle the word Majooj (Magog).”, Parsani writes.

[Parsani disappears in 2003.]

See fig.2, fig. 3, fig. 4-1

fig. 2

Parsani’s notes evoked a feverish excitement in Hyperstition’s laboratory as the discovery of these notes was coinciding with a theoretico-fictional project developing in Hyperstition’s lab, exploring the nexuses between numeracy, Tellurian dynamics, warmachines, petropolitics, war-as-a-machine and monotheistic apocalypticism. The project temporary halted for the lack of what may be called “technical elements of the fictional side”: a vehicle for transporting the hyperstitional carriers in their desert-expedition, and a narrative line with minimum authority to mobilize the fictional side of the project.

¹⁰⁸ Napht is the Arabic and Farsi word for Oil and Petroleum.

fig. 3

fig. 4

Parsani's Cross of Akht, mapped as the progression of Gog and Magog had all the answers:

Fig.4-1 diagrams the decimal progression of The Gog-Magog Axis. The decimal sequence of the unfolded cross (prior to its eventual folding to an upside-down T) is either 01234567890 for the peaks or 0123456780 for the off-peaks corresponding to

natural arithmetic sequence which is closer to the Tree of Life (a hyperstitionally degenerated structure, as far as Lemurians are concerned). However, based on the folding of the Cross of Akht or what we suspect might be the Cross of Decadence (the ultimate decimal blasphemy), the sequence cannot be numerated according to a natural pace:

The only relevant decimal progression for decoding the Cross or the Gog-Magog Axis comes in nine-sum pairs:

0-9, 1-8, 2-7, 3-6, 4-5, 5-4, 6-3, 7-2, 8-1, 0 (1 is between 8 and 9 if 1 belongs to off-peaks or it is between 0 and 8 if 1 belongs to peaks.)

The progression is developed through the participation between twin ‘peaks and off-peaks’, “grouping into five pairs (syzygies) by nine-sum twinning (zygonovism)” which is the basic composition of the Numogram.

According to the Cross of Akht, flat extensions (handles of the cross) function as disjunctive zeros (the level of zero-tolerance) and provide the artifact with a dynamism which is distributed through syzygies. In the Hyperstition’s Erathicated version of the Numogram, X and Y define Gog and Magog, and the movement is maintained by petropolitical undercurrents, or the flow of the Tellurian Lube (Oil) but the whole progression of the Axis is a result of the participation between X and Y through their syzygies on the one hand and the participation between the Axis (including X and Y) and the Tellurian undertow (the petropolitical undercurrent) on the other hand (see fig. 4-1). Inevitably sliding on the oily bedrock or the Tellurian Lube, X and Y approach each other in opposite directions through a Numogramatic decimal progression.

The End Draws Near. If only one side (X or Y, Gog or Magog) approaches the other side, the decimal sequence can be counted (down); consequently, it can prophesized as a legitimating Belief for the dominant movement (i.e. either the peak or off-peak decimal progression) which transcendently gives rise to an inexorable telos based on one dominant decimal sequence (01234567890 or 0123456780). However, on the Gog-Magog Axis, this apparently tyrannical inevitability is reinvented through participations and interlocking movements triggered by the petropolitical undercurrent. Here, numbers are not counted; they build each other by folding and twinning, by rise and fall, both continuous and discontinuous movements at the same time. For both X and Y, the movement is relative; they approach each other in opposite directions but synergistically assembling the Gog-Magog Axis by folding the

peaks and off-peaks as they slid on their oily bedrock (call it pipeline odyssey, petropolitical undercurrent, the Tellurian Lube or the Devil's Excrement) towards each other, or in other words, grouping their syzygies into one fold: the dam of the Gog and Magog. (See fig. 4-1 and 4-2)

"Bring me iron in large pieces, until it fill up the space between the two sides of these mountains. And he said to the workmen, blow with your bellows, until it make the iron red hot as fire. And he said further, bring me molten brass, that I may pour upon it. Wherefore, when this wall was finished, Gog and Magog could not scale it, neither could they dig through it."

Nullifying the hegemony of the Gog and Magog by assembling an intensive and irreversible contact zone. The ultimate decimal fold is the zone of the most intense (conflictive) activities between the Gog and Magog which eventually introduce collapse to the dam. On the Axis, the Fold compartmentalizes zeros as well as connecting them; autonomously generating a numeral couple (45-36) which is located between two zeros (see fig. 4-2), but 0 converges upon nothing; if it is divided by any number, the result is zero: The emerged region of Uttunul (see fig. 4-2, fig. 5, the Numogram) on the Gog-Magog Axis implodes on Zero and the desert of Xerodrome is born; the Gog-Magog Axis reaches utter immanence with the burning core of the real – the earth's iron ocean (Cthelll) – and the solar tempest.

Both X and Y (Gog and Magog) creep on oil and are petropolitical puppets but in the terms of contact, one is exposed to the Tellurian Lube to a greater extent as the Erathicated version of the Numogram or The Gog-Magog Axis illustrates: the sum of off-peaks is equal to 36. The nine-sum twin of 6-3 corresponds to OIL (= 63) or the region of Djynxx (the outside) in the Numogram. It is deeply swamped in oil.

[36 = AQ (Anglossic Qabbala) = ABJAD: each triangle on the sides of decagon rotates 36 degrees: 360 idols in Mecca]

Following the enthusiasm released in the Gog-Magog Axis (with its greased joints) and its creep-dynamism on oil, the Tellurian Lube (Petroleum) can either be consumed and depleted or catalyzed to something else as the Gog and Magog fold their Axis (see fig 4-2).

fig. 5

Comments: Hyperstition's laboratory: From the Gog-Magog Axis to Petropunkism

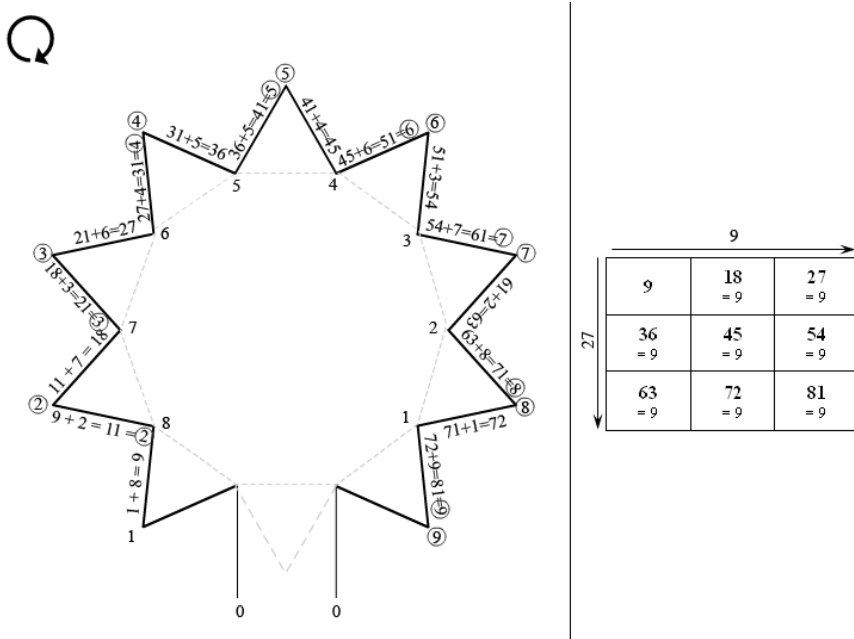

Hype-Zombie: Truly awesome Reza - broken stars have just become essential H. ref points IMHO

Reza Negarestani: Thank you; I forgot to post this earlier. As you know decoding Parsani's notes is still in progress.

Zygonovism (Nine-Sorcery)

Reza Negarestani (May 8, 2005)

More from what we suspect is the Cross of Decadence:

June 2005

Sudoku

Nick Land (June 3, 2005)

This deserves a mention - Global nummocraze in the making?:

sudoku.com

northsnger: i'm already not normal & this doesn't help things at all. but it sure is fun!
:)

online sudoku...

www.websudoku.com

Quasizombie: 9-nomically its intense ...

northanger: mousing over the sudoku game at above link & seeing the missing numbers made me think of minesweeper:

[en.wikipedia.org/wiki/Minesweeper_\(computer_game\)](http://en.wikipedia.org/wiki/Minesweeper_(computer_game)).

with that game you clear a minefield without setting off a mine with number hints on which adjacent squares contain mines. and for some reason this reminded me of decaplex (which i never understood exactly) & wondering how this relates to the numogram. think i'm looking at "adjacency" & "population" (what's already there vs. what's added).

my attention seemed to function on different planes (horizontal, vertical) while playing sudoku. comparing populated with unpopulated & being aware of near/far, solved/unsolved. what kind of experience, if any, does the numogram offer?

Quasizombie: stimulating as always northanger - sure that many people seeing numogram for the first time might assume it was designed for a game of some kind - maybe it has been a game in the (distant) past or elsewhere, but no Numogram game that i know of exists now

the Decaplex experiment was sabotaged this end by lousy connectivity - with an ADSL connection (like now) it might work, do you think it's possible we could persuade U/c to relaunch it?

whole games/numbers interlinkage highly suggestive, in part because elegant games tend to be like micro axiomatic systems / abstract machines

northanger: my next question was numogram as game. thanks for pre-answer. (you must have esp). is "game" valid paradigm whatchamacallit for understanding numogram? need (um) way to grasp something.

if it's not a game, what is it? ok. it's the tree of life. how do you pathwork that? is it astro-related? (it is, but is that the only thing? the major thing?). i mean, other than sitting there looking pretty ... what does the numogram DO. is it just being? sorta humming away to itself. does it have raison d'etre, or is it just a big raisin? do i just contemplate its numinous wrinkles? consider it a condiment?

i am bamboozled.

also have list of questions related to pandemonium, zones & stuff. where should i post these?

undercurrent: interesting article in the FT last week about whether or not sudoku was "mathematical" or not. Not sure whether it's available on their site.

ps.undercurrent returning to full operational status soon :)

northanger: u/c: welcome back.

Mr. Quasizombie: i forgot. yes, but think "decaplex for dummies" way overdue.

questions (part one)

Time-Circuit consists of Sink, Surge & Hold and all referred as Torque (1,2,3,4,5,6). are these terms (including Warp & Plex) related to electric flow? (ie, to Sink something is the same as Grounding; Hold currents are like steady-state; Surge currents are transient spikes).

"Zone-1 provides both beginning and end" - it's the beginning & ending of what exactly?

What do these pandemonium numbers refer to: Rt-1:[1890], Rt-2:[27541890], etc?

How are Sarkonian Mesh Tags utilized (0000, 511, 255, 0001, 0127, 0003, 0063, 0007, 0031, 0015)?

What do Imps do & how are they related to the I Ching? (and are they considered Pandemonium demons?)

How is the Nomo Chant related to the Munumese words for each zone (eiaoung, tn, mnm, gl, pb, dt, tch, zx, ktt, skr)?

What's the difference between an Eclipsed, Active, Passive or Palpable Pylon?

What's the difference between a Haunt, Cipher and a Click? other than numeric.

What is the correct spelling of Kattak? (i see different spellings).

Zone 6 and 3 "twist" into each other. What is "twisting" mean? (this means you have a twisted warp? a double loop?)

What is the Hyperborean Door?

Is there a difference between a Door and a Gate or are they the same thing?

Can Pandemonium Demons reside / enter / populate different zones? or only the zones they're assigned to? (how do they move around & is this related to haunting, clicking, etc)

Is Gate 45 "microscopic" or is the lair of Pandemonium only microscopic?

How do Warp & Plex intercommunicate & why is this considered the 'ultimate numogrammatic enigma'?

Can you provide a graphic of the Barker-Spiral (Diplozygotic Spiral)?

Sounds like the Barker-Spiral is a combo of 10-sum & 9-sum twinning. is this correct? if yes, if the numogram is 9-sum, is there something just 10-sum? and is it safe to consider the 9-sum part of this spiral the numogram?

Why is Tokhatto considered the "Angel" of the Cards? isn't it weird that a Pandemonium demon is called an "angel"?

Quasizombie: northanger - we're on it!

u/c - not really positioned to criticize mysterious absences this end

Reza Negarestani: sorry to post off-topic (will move it to Tangents later):

Hey guys, is there any Hyperstition birthday celebration (or whatever) this month, an online party for example? Although, my internet access is very limited at this time and I have saved it something absolutely important to me, but I like the idea of an online

chat something like that? Nick, Robin, Northanger or anyone on this blog, any suggestion?

northanger: is there cake?

another question. add day+month+year ($6+4+2005=17=8$, $6+5+2005=18=9$). we'll call this DR Date creating 1-2-3-4-5-6-7-8-9 pattern only interrupted by month or year change. (gave me a different idea of "linear time"). question: obvious warp & plex have nothing to do with linear time. however, does the TIME CIRCUIT itself relate to (what we normally consider) linear time? or is it something else? and if something else, what is it?

what is the relationship between the numogram and reality? (and this goes back to the concept of time i think).

how was the numogram used during the Lemurian Time War?

Nick Land: Reza - maybe we could schedule a chaos party here?

northanger -

"what does the numogram DO?" - work in progress, so this gets skipped right now (damn good if aggravating q.)

If these are On Topic then i'm a Cold Rationalist, still, here we go

(1) "Time-Circuit consists of Sink, Surge & Hold and all referred as Torque (1,2,3,4,5,6). are these terms (including Warp & Plex) related to electric flow? (ie, to Sink something is the same as Grounding; Hold currents are like steady-state; Surge currents are transient spikes)."

These are Cthulhu Club (more specifically P. Vysparov) terms, and none of those guys were exactly rigorous engineers in any conventional sense) - still, think your general gist highly plausible, though probably better to think of more abstracted energy flows, rather than just electricity specifically (K-Goths, however, may disagree - they lurvv electricity)

(2) ""Zone-1 provides both beginning and end" - it's the beginning & ending of what exactly?"

My guess, of the Time Circuit (better: "The Hex")

(3) "What do these pandemonium numbers refer to: Rt-1:[1890], Rt-2:[27541890], etc?"

rites, routes or routines - the various practical linkages between zones (numbers in brackets are series of zones treated as 'way-stages')

(4) "How are Sarkonian Mesh Tags utilized (0000, 511, 255, 0001, 0127, 0003, 0063, 0007, 0031, 0015)?"

they operate almost as 'meta mesh-tags' but when Sarkon last used them he wasted Black Lake with zombie plague, so hopefully they're in abeyance ...

(5a) "What do Imps do & how are they related to the I Ching?"

Imps are pandemonium particles - relation to the I Ching quite obscure

(5b) "(and are they considered Pandemonium demons?)"

this is a matter of intense doctrinal controversy, but since it's purely definitional not sure we need to worry about it

(6) "How is the Nomo Chant related to the Munumese words for each zone (eiaoung, tn, mnm, gl, pb, dt, tch, zx, ktt, skr)?"

relation can be inferred through decimal co-ordination, but don't know of any extant discussion of this mapping

(7) "What's the difference between an Eclipsed, Active, Passive or Palpable Pylon?"

think eclipsed/palpable correspond to the Pythagorean feminine/masculine within certain Black Atlantean schools, designating (twin) aspects of Pylons rather than Pylons themselves (thus Numogram isomorphic) - active/passive more counter-intuitive because odd-numbered N. Zones

are receptive of currents ... (more research necessary)

(8) "What's the difference between a Haunt, Cipher and a Click? other than numeric."

'Haunt' is topographic where 'Cipher/Click' is semiotic

"other than numeric" - LOL

(9) "What is the correct spelling of Kattak? (i see different spellings)."

since Munumese does not use Roman alphabet there is no authoritative spelling

(10) "Zone 6 and 3 "twist" into each other. What is "twisting" mean? (this means you have a twisted warp? a double loop?)

any linguistic description is subordinate to the disgrammatic 'evidence' - Warp region uncontroversially multiply involuted

(11) "What is the Hyperborean Door?"

Vysparovite obscurantism - will get back to you on this ('yeah, right!')

(12) "Is there a difference between a Door and a Gate or are they the same thing?"

Very different - a Door opens a phase, a Gate opens a Channel. Doors belong to the order of the Pandemonium array, Gates to the Numogram.

(13) "Can Pandemonium Demons reside / enter / populate different zones? or only the zones they're assigned to? (how do they move around & is this related to haunting, clicking, etc)"

Demons just ARE their relevant differences/distances, so to talk of them being 'assigned' anywhere is a little theological. Perhaps their associated rites (q. 3 above) could be construed as them 'moving'

(14) "Is Gate 45 "microscopic" or is the lair of Pandemonium only microscopic?"

Microcosmic?

(15) "How do Warp & Plex intercommunicate & why is this considered the 'ultimate numogrammatic enigma'?"

If i could tell you how they intercommunicate it would hardly be the ultimate numogrammatic enigma (now, would it?)

(16) "Can you provide a graphic of the Barker-Spiral (Diplozygotic Spiral)?"

will try. You can construct one by marking off the numbers 0 -9 on a vertical axis, then connecting the number points - on one side adding to ten, on the other adding to nine (without lines crossing)

(17a) "Sounds like the Barker-Spiral is a combo of 10-sum & 9-sum twinning. is this correct?"

Yes (see above)

(17b) "if yes, if the numogram is 9-sum, is there something just 10-sum?"

The Atlantean Cross comes closest

(17c) "and is it safe to consider the 9-sum part of this spiral the numogram?"

they definitely correspond

(18) "Why is Tokhatto considered the "Angel" of the Cards? isn't it weird that a Pandemonium demon is called an "angel"?"

Tokhatto's decimal and hemi-decimal resonances make her especially dear to Decadence addicts. Variation in associations due to polyvalence of Decadence rituals between very different cultures

- not sure angels and demons especially different though, except due to theological overcoding Phew!

northanger: whoa. that was quick. thanks.

(14) "Is Gate 45 "microscopic" or is the lair of Pandemonium only microscopic?"

Microcosmic?

"Gate-City of the Plex-channel - Utterminus of Cthelll - (Gt-45), which is identified with the microcosmic lair of all demonic populations (the Lemurian Pandemonium)."

nick. so the numogram is hyperstitional. would you say it epitomizes hyperstition?

"abstracted energy flows" - like QI?

(2) ""Zone-1 provides both beginning and end" - it's the beginning & ending of what exactly?"

My guess, of the Time Circuit (better: 'The Hex')

Time Circuit aka The Hex? what is Hex short for?

(3) "What do these pandemonium numbers refer to: Rt-1:[1890], Rt-2:[27541890], etc?"

rites, routes or routines - the various practical linkages between zones (numbers in brackets are series of zones treated as 'way-stages')

a. Krako in Zone4 with Rt-1:[41890]. how can 4 be a way station for Krako? because $4+1+8+9+0=22$, $2+2=4$?

b. What about Paths? they sound like they're related to pandemonium routes & doors & phases?

c. can you unpack this?

Rite (route or routine). Ethographic subcomponent of a Demon, describing a line of passage across the Numogram. Rites partially rigidify sorcerous spirodynamism, facilitating cultural transmissibility. They group by Cluster-type, subdivide laterally by segments, and bifurcate thematically into Omen and Power.

"other than numeric" - LOL

what was i thinking?

do you have to use a demon to access the numogram? or can you do it just by counting?

Reza Negarestani: shouting from the bottom of the chaos-pi(e)t: Hey Nick can you hear me? yes, a chaos thread is a great idea but lets see what Robin thinks about all this.

Btw, seems Northanger has already started to celebrate Hyperstition's birthday ;)

northanger: can you use the numogram to (re)engineer reality?

what is the current status of "interplanetary communication" or "Planetworks"? (is this still a lost lemurian art or was someone able to finally reboot it?)

Btw, seems Northanger has already started to celebrate Hyperstition's birthday ;)

we're both geminis. it's my birthday soon too.

:) i'll see you later.

how is the numogram related to the lo shu square?

en.wikipedia.org/wiki/Lo_Shu_Square

re: ABJAD Installation of the Numogram

how do ABJAD values (order & gematria) interact / relate with each zone? how do they interact with demons? phases, gates, currents, etc.

Somnozombie + Nick puppet: northanger - The two questions you snuck in before my last response were too complex / hermetic for rapid come back. As for the deluge since, this is going to take a little time ...

first few: (1) "so the numogram is hyperstitional. would you say it epitomizes hyperstition?"

totally contemporary controversy - elements of Ccru-UK have expressed an interest in non-Numogrammatic hyperstition recently, think this is something everyone should have an input into rather than laying down the LAW (= 63 = OIL)

Guess that means another post promise

(2) "like Qi?" - highly plausible

(3) Hex - HEX = 64, since 'Time Circuit' maps the I Ching this (from Stillwell) is Qabbalistically inspired (obviously also hex = 6)

(4) (confusingly now also (3)) on Rites - while we dare not say 'forget DR for the moment' it is not the first-order method for this aspect of Numogrammatology - just follow the digit sequence as traffic instructions around the Numogram - as to higher order DR patterns, still (to our knowledge) unexplored (but maybe something will turn up)

Your analysis of Krako rite above bizarrely over elaborate - '[41890]' reads (simply) from 4 to 1 then to 8 then to 9 finally to 0 - treat topographically - but of course you may be on your way to exposing a whole new level of pattern (happy hunting)

Paths (as in Book of Paths) not especially related to Doors and Phases according to any extant analysis - MUCH closer to Rites

"what was i thinking?" - what indeed?

(5) "do you have to use a demon to access the numogram? or can you do it just by counting?" - q. too interesting for glib response ... and how much difference is there?

... more

Reza - when is H.'s birthday exactly?

northanger: nick - what do you mean by "non-Numogrammatic hyperstition"?

glad you mentioned this actually. if the numogram is pure hyperstition then i can pursue this on my own & not worry about copyrights & stuff like that.

just follow the digit sequence as traffic instructions around the Numogram ... Your analysis of Krako rite above bizarrely over elaborate - '[41890]' reads (simply) from 4 to 1 then to 8 then to 9 finally to 0 - treat topographically.

{a} traffic instructions. hmm.

{b} bizarrely over elaborate. you gotta admit when you see something like this: $0+1+2+3+4+5+6+7+8=36$, $3+6=9$, you wonder whether you should be doing that always. sounds like there are numeric rules of the road: ie, currents = zone - zone. route = {zone, zone, zone, zone}. nice to have a list somewhere to avoid confusion.

assume numogrammatic traffic instructions (that which moves you from here to yonder) always given numerically. correct? (but then. what about demons.)

can you enter the Zeroth Gate by counting 0? do you have to travel the numogram sequentially? must you enter at a specific location & leave by a specific location?

"do you have to use a demon to access the numogram? or can you do it just by counting?" - q. too interesting for glib response ... and how much difference is there?

one involves numeracy & the other involves a rite.

what is a round (Aeon) of Decadance? having trouble understanding: "A round (Aeon) of Decadance lasts until the first negative result, accumulating any positive scores."

after pairing cards do you discard set-1 and set-2 and deal two more sets?

ps. i forgot to laugh.

If i could tell you how they intercommunicate it would hardly be the ultimate numogrammatic enigma (now, would it?)

ha.ha.

Red-Eye Hype Zombie: northanger - re-submerged in private jet propaganda and incompetent child-rearing, expecting relief by end of the week ...

While losing indispensable sleep (through no fault of yours, needless to say) ...

"then i can pursue this on my own & not worry about copyrights & stuff like that" - don't think we won't sue your ass, just because this thing's been around for 66 000 000 years doesn't mean our IP rights are insecure

not sure i'm getting {b} above

"one involves numeracy & the other involves a rite" - but distinction between ritual and arithmetic is the exact zone of emulsification for rigorously hyperstitional numbo-jumbo (or something like that)

Decadence q. ... need one semi-plausible night's sleep before attempting this one (maybe another post promise - hahaha)

northanger: what role does the Moon play, if any, in Lemurian Planetworks?

Nick Land: northanger - the earth's moon is treated like any other moon, as a planetary modifier (rather than a planet) - Planetworks is probably more interested in Europa or Charon than Luna, for instance

This stance is in keeping with the overall cosmologist (or hyperstitional-astronomical rather than anthropo-phenomenological) bias of Lemurian star-gazing - upon which basis some commentators attribute the system to extraterrestrial origins

northanger: REHZ. "private jet propaganda"?wha? "incompetent child-rearing"? do you have a kid?

"don't think we won't sue your ass, just because this thing's been around for 66 000 000 years doesn't mean our IP rights are insecure".

wait a sec. horse ... locking the barn ... how does that go? yeah, locking the barn door after the horse has been stolen. no no! i got it now, you want to make sure you lock the barn door before the horse is stolen. thanks for the, uh, heads up on the other thing :)

"not sure i'm getting {b} above"

all the numogrammic mathematical operations.

zone - zone = current (ie, zygonovic differentiation)

(Zone-)8 - (Zone-)1= 7 (note sure if i'm saying this right, but 8-1 is the path to Zone-7)

n + n + n +etc = gate

0+1+2+3+4+5+6+7+8+9=45

"but distinction between ritual and arithmetic is the exact zone of emulsification for rigorously hyperstitional numbo-jumbo (or something like that)"

there's about 12 entries in ccr's glossary mentioning "rite". so this emulsification (while interesting) remains head-bangingly frustratingly elusive. however. i have slogged through....

attempting to formulate answer for " {b} above" (and somewhat of an answer) finally realized: Zone-1 has one Lemur because it digitally cumulates to one (0+1=1); Zone 9 has 9 Lemurs because it digitally cumulates to nine (0+1+2+3+4+5+6+7+8+9=45, 4+5=9). Zone-1 = Gt-01 & Zone-9 = Gt-45.

what i think i got is --- 0+1+2+3+4+5+6+7+8+9 --- represents a phase.

a Door opens a phase (ie, DUODDOD 2nd Door triggering (triggering?) phase: 0+1+2), a Gate opens a Channel (0+1+2=3, Gt-03 :: "Second Gate (Gt-3) connects Zone-2 to Zone-3, and its corresponding channel draws an intense line of escape from the Torque to the Warp" = ??). "Demons are also grouped by phase (defined by initial net-span digit). Each phase is opened by a door, to which is attributed a domain, a planetary affinity, and a spinal level." the secondary net-span digit defines {a} a door, and {b} a phase limit (final demon of a phase). since LURGGO is the only demon in Zone-1 she's the door also defining the phase limit. Kattak is the only syzygy defining a phase limit.

0(9::0)+1(9::1)+2(9::2)+3(9::3)+4(9::4)+5(9::5)+6(9::6)+7(9::7)+8(9::8)+9(Zone)=45 (Gt-45)

Domain(???) = Pluto(Planetary Affinity) = Spinal Level(Sacral)

1st Door : The Pod [Mercury] Dorsal ----- LURGGO 1::0 (1st Phase-limit = LURGGO 1::0)

2nd Door : The Crypt [Venus] Cervical ----- DUODDOD 2::0 (2nd Phase-limit = DOOGU 2::1)

3rd Door : The Swirl [Earth] Cranial ----- IXIX 3::0 (3rd Phase-limit = IXIDOD)

4th Door : Delta [Mars] Cervical ----- KRAKO 4::0 (4th Phase-limit = SKARKIX 4::3)

5th Door : Hyperborea [Jupiter] Cervical ----- TOKHATTO 5::0 (5th Phase-limit = KATTAK 5::4)

6th Door : Undu [Saturn] Cranial ----- TCHU 6::0 (6th Phase-limit = TCHATTUK 6::5)

7th Door : Akasha [Uranus] Cervical ----- PUPPO 7::0 (7th Phase-limit = BOBOBJA 7::6)

8th Door : Limbo [Neptune] Lumbar ----- MINOMMO 8::0 (8th Phase-limit = MOMBBO 8::7)

9th Door : Cthell [Pluto] Sacrum ----- UTTUNUL 9::0 (9th Phase-limit = UMMNU 9::8)

"cosmorealist", "hyperstitional-astronomical".

Europa is {a} 9th largest asteroid known, {b} one of Jupiter's moons. Charon is Pluto's moon (very large). Zone-9 (Pluto) & Zone-5 (Jupiter).

why are two other moons more interesting to Planetworks? — aren't they also planetary modifiers?

Nick Land: "aren't they also planetary modifiers?" - absolutely, so no need to over-hype Luna (nothing against her, mind)

PS. Could be you're at a higher pitch of hyperstitional intensity - if Luna gets infested with W space-prog settlements her cultural influence will sky-rocket (let's see what they find on Europa, as for Charon, that's fungus from Yuggoth territory)

northanger: over-hype Luna. is this a criticism?

what i currently do started with two things: counting to nine & tracking moon phases. i mentioned previously that the day, month & year reduces to 1-9. some say the moon has nine phases.

astrologically, the moon "cycles through the zodiac" faster than anything moving approximately 12 degrees in a day. a variety of ancient cultures (Indian, Chinese, Persian) developed lunar stations indicating the moon's relationship with the zodiac. for the Chinese it was 28 Sieu (night inns) matching 28 constellations -- www.megaliths.co.uk/china.htm.

in short, i can't think of a single anything (other than the sun or comets) that has had a greater cultural impact (think eclipses).

btw, i did some searching on Europa & Charon & discovered:

Charon occultation, 11 July 2005

calys.obspm.fr/~sicardy/charon/charon.html

On 11 July 2005, Pluton's satellite Charon will occult the star UCAC2 2625 7135. This event could be visible from Perú, Bolivia, Paraguay, Brazil, Uruguay, Argentina and Chile around ~ 03:35-03:40 UT, depending on the site.

Pluto-Charon origin may mirror Earth and Moon

www.spaceflightnow.com/news/n0501/27pluto/

NASA space mission from to Pluto launches in 217 days -- pluto.jhuapl.edu/

my hyperstitional idea builds on Reza's work with ABJAD. 28 letters = 28 constellations. because utilizing alphabets is another component of my work involving Sefer Yetzirah. which is why i wanted to make a distinction between my minor chorus and Hyperstition's symphonic efforts.

Nick Land: "overhype Luna" aimed at pre-copernican astrology in general, i.e. treating earth's moon (or the sun for that matter) as 'a planet' - but can see my take on the issue very one-sided so far ...

'non-Numogrammatic hyperstition' refers to as yet quite virtual (?) potential for a hyperstitional lineage that remains entirely indifferent to (the inexpressible cosmic glories of) the Numogram

(weird or what?)

northanger: "pre-copernican astrology"

www.hps.cam.ac.uk/starry/copercosmol.html

"At rest in the middle of everything is the sun. For in this most beautiful temple, who would place this lamp in another or better position than that from which it can light up the whole thing at the same time? For, the sun is not inappropriately called by some people the lantern of the universe, its mind by others, and its ruler by still others. [Hermes] the Thrice Greatest labels it a visible god, and Sophocles' Electra, the all-seeing. Thus indeed, as though seated on a royal throne, the sun governs the family of planets revolving around it. Moreover, the earth is not deprived of the moon's attendance. On the contrary, as Aristotle says in a work on animals, the moon has the closest kinship with the earth. Meanwhile the earth has intercourse with the sun, and is impregnated for its yearly parturition. In this arrangement, therefore, we discover a marvelous symmetry of the universe, and an established harmonious linkage between the motion of the spheres and their size, such as can be found in no other way." — Copernicus

"non-Numogrammatic hyperstition' refers to as yet quite virtual (?) potential for a hyperstitional lineage that remains entirely indifferent to (the inexpressible cosmic glories of) the Numogram (weird or what?)"

avoiding generous copy+paste from ccru communicate two, but for hystorical purposes -- "What is the concept of the the Syzygy hyperstition matrix?"

[www.ccru.net/id\(entity\)/communicetwo.htm](http://www.ccru.net/id(entity)/communicetwo.htm)

virtual hyperstition vs. digital hyperstition?

the fork in the road?

undercurrent: yes, reza when is the bithday? we could even make use of the decaplex live chat or some modification of it...

Ghiam and War Nerd

Reza Negarestani (June 19, 2005)

Paul¹⁰⁹ of Just Write! has suggested this piece¹¹⁰ (some funny passages) as an addendum to Support the Desert. Thanks.¹¹¹

Comments: Ghiam and War Nerd

War nerd is fantastic (I-want-to-have-you-babies fantastic, and that's after seeing the photograph). Don't agree with his analysis 100%, but the tone is awesome.

PS to anyone interested: Aren't the Sunnis just going to get rolled over at some point? Everyone hates them and they're only 15% of the population. I'd advise them to make some friends quickly.

Reza Negarestani: Agreed, exciting tone ... he should check out some Codex and West stuff.

BTW: lol ... yes, 15% but never underestimate their dreadful zeal. shia proverb: you can't meet a sunni jihadi from 1m distance. (because you are already dead)

Nick Land: Reza - think Codex / West would just be upsetting, but at least sounds like War nerd wouldn't throw a moralistic hissy fit

"you can't meet a sunni jihadi from 1m distance" - you mean 'cos they go all splodey-dope on you?

or is '1m' a mile? (sorry, thought it was a metre)

¹⁰⁹ <https://www.blogger.com/profile/2953182>

¹¹⁰ https://web.archive.org/web/20060104153528/http://www.exile.ru:80/2005-May-20/war_nerd.html

¹¹¹ This is a reference to a piece, like many before and after it, that Negarestani deleted. This is also one of the ones that cannot be recovered.

Reza Negarestani: *you mean 'cos they go all splodey-dope on you?*

Yes. "splodeydope", lol, we just need a collection of these terms (if you can dig more)
+ WoT videogame click-quotes.

BTW, yes m is meter.

of course don't miss the fact that this is a Shia proverb, and sneaky Shias have made it up to cover what they , themselves, really are.

Punisher: War nerd is fantastic

Yeh, war is cool, especially when, like he says, you forget all the 'democracy stuff' and admit what it is really all about - idiot americans jacking off over indiscriminate slaughter. Hey, WE're never going to be able to tell the difference between shoppers and insurgents. Points for honesty, at least, he did include the pic, so we can be under no illusions; that is the true, fat face of contemporary America.

Nick Land: Punisher - If you could get off your high horse for long enough to appreciate it, you'd realize that War nerd is making all the points you are but with less cheap and lazy self-righteousness

So let's get this straight...: So, contrary to your previous position, you now think oil grabs (with the accompanying slaughter of tens of thousands of innocent civilians) are a bad idea geopolitically?

Nick Land: So ...

So much twisted in your stupid little remark it's hard to know where to start. Probable answer (have I joined the fascist-appeaser kumbaya crowd?) - No

Number of people killed in last century of wars - 39 million

Number of people killed by last century of soc...ist (commie, fascist, baathist ...)governments - 169 million

Peace is murder

So let's get this straight...

Yes, let's:

anglosphere.com/weblog/archives/000010.html

So let's get this straight... :

Peace is murder

So catastrophic oil grabs **are** a good idea???

It was nice knowing you [before you descended into political desperation].

Nick Land:

catastrophic oil grabs

I'm assuming no one is ignorant enough about basic economics (oil being a fungible commodity and all) to really believe this - it's more of a fashion statement isn't it?

But why bring your know-nothing wine-bar leftism here?

So let's get this straight... : Why don't you swing your handbag by the Potomac, where you might actually get some punters?

Nick Land: Why isn't this by the Potomac?

BtW - you noticed who's won all the elections recently (apart from the ghastly Zap thing in Spain)?

So let's get this straight... : Erm, pathological liars?

Nick Land: "pathological liars" - OK, given that's a synonym for politicians, but it's still humorous coming from someone whose entire discourse is lifted straight off antiglobo posters and wine-bar T-shirts

July 2005

A Short Prayer

Nick Land (July 6, 2005)

O unutterable powers of the abyss any chance you can get this Angel of Liberty¹¹² onto the Supreme Court of the United States of America?

Comments: A Short Prayer

Jumped the shark when he started jizzing over Luc Ferry: {scratching head} i don't get it ... what's the hyperstitional interest in right-wing harridans?

Nick Land: Luc who?

Can't you deal in real people?

Originalism seems a relevant Hyperstitional topic, no?

Know you're a troll and all so question probably pointless, but does "right wing" to you mean anything more than "has problems with the State"?

If so, what?

(Assuming "harridan" just a random lefto-misogynist remark)

Finally:

"what's the hyperstitional interest in [Angels of Liberty]?"

if (please, please, please) she gets onto the SCOTUS, then the 'unutterable powers of the abyss' get a distinct hyperstitional jolt, IMHO

northanger: nicholas, you know i loves ya, but if we're not singing "kumbayah" we're not singing "keep your eyes on the prize" either. (btw, what are we singing?).

She's the Right Radical

¹¹²

<https://web.archive.org/web/20061006012741/http://www.pfaw.org/pfaw/general/default.aspx?oid=12751>

www.cato.org/research/articles/pilon-050523.html

Nick Land: northanger - thanks for the link

don't worry, not expecting anyone else to go all doey eyed with adoration - though of course they should, "Do what thou wilt ..." and all that ;)

From northanger's fascinating CATO link:

"In a word, we have a Constitution authorizing limited government, yet Leviathan surrounds us — and Justice Brown is perceptive and secure enough to say so ..."

northanger: it's not GWB, but maybe it's a constitutional crisis. domestically, internationally, etc.

ie, GWB is just a symptom. ie, 9/11 is causing systemic failure across the board because of, IMHO, serious fissures in the US constitution. hyperstitionally, it *is* a fight for democracy.

Bored not shocked: Let's rephrase the question: what's the hyperstitional interest in _neo-liberal_ harridans?

And presumably Nick could answer the question about the meaning of right wing; he's the one who reads Right Wing News after all.

Perhaps he could also explain how posting links to tedious republican propaganda in a by now totally predictable attempt to shock 'lefties' is NOT trolling?

northanger: asking questions around here is like throwing pennies into a fountain.

{throwing} where's reza been lately? vacationing in aruba?

AQ 196 = RIGHT-WING = ANTI-CLIMAX = AXSYS CODE = BLUE AND GOLD = CANNIBALISM = CERTAINTY = CONCEALED GOD = CYBERPUNK = DON PASCUAL = FOUR BALANEB = MARCHOSIAS = NETJER ANKH = NOOSPHERE = NULL PITCH = OCCULTISM = ONE IN EIGHT = PIECE OF CRAP = RA-HOOR-KHU = REMEMBRANCE = RUA COPH NIA = SEX KILLER = SPACE-MARKS = STAR RUBY = SUBTLETY = THE PERFECT

AQ 168 = LEFT-WING = #758-MANCUNIA = ABRACHADABRA = ACCESSIBLE = ASHEMAOGHA = ATLANTIS = BEL-MARDUK = BLUE-

maybe this will ping the comment nanny.

Nick Land: northanger - apologies for erratic blogging (various excuses, but most pertinent is that i can't log on to H. from the office at the moment)

in response to your points ("constitutional crisis ... domestically, internationally ...
GWB is just a symptom ... 9/11 ...)

IMHO two basic crisis axes:

- 1) collapse of soc*alism and headless-chickenization of the left
- 2) jihadi reaction to neoliberal globalization

relations between these well worth exploring, and packed with hyperstitional implications. The implosion of the leftist hyperstitional project has evidently provided the opportunity for a resurgence of classical liberalism (which, i guess, is 'neoliberalism' - i actually prefer this term to its US alternatives, but it isn't going to work there i guess), but the hardcore anticapitalist constituency have switched allegiance to the 'new' hyperstitional organizer: The Caliphate

Hoping to spiral into this with help from Abu-86

Key point here, though, is that the moderate left is not prepared to go down that road, so democracy has ceased to be a usable vehicle for left ambitions. That's huge, and gets right back to JRB.

Her entire position is rigorously democratic IMHO. By strictly constructing Supreme Court judgements on the original meaning of the Constitution, back door legislation by social elites becomes impossible - change requires constitutional amendment, not pomological vivification of the already existing texts. Social change thus requires democratic leverage - no longer envisagable for the left - hence their nihilistic rage, snarkiness, conspiracy mongering and self-destructive descent into seething bitterness

- 'Bush Derangement Syndrome' - as you say, a mere symptom (though he's great at using it to cognitively eradicate his opponents).

Pomo point crucial - Originalism is THE anti-pomo, occurring in a field where it actually matters

Not sure I'm seeing the pattern with the gematria - maybe just 'Left' and 'Right' would be more informative? or maybe the whole opposition is too European?

northanger: AQ 79 = LEFT = ABSU = ALLAH = AMON = ANEMA = BINAH = BOOK = BREED = CAMEL = CAST = DAATH = DISK = DOES = EHBEN = GERM = GIVE = GOAT = GRACE = GUNA = HAWK = JILL = MARK = MBUG = MUR = NELL = NOW = ORAI = OWN = SEEN = SIX = SPEC = THAN = TICK = WIFE

2005 London transport explosions

en.wikipedia.org/wiki/2005_London_transport_explosions

Nick Land: gematria - definitely getting closer ;)

bombs - don't worry, as K-punk convincingly explains, its just a phantasmatic 'Other'

northanger: to "prosecute" something is to "pursue until completion; follow to the very end". the Constitution outlines how human rights, outlined in the Declaration of Independence, must be secured (or prosecuted). the US war of independence secured the separation from England & established the right to pursue liberty. therefore, the ideal of US government & citizenship is the prosecution of human liberty.

it is clear neither the right or the left is interested in the continual pursuit of individual rights & freedom by ignoring the only non-ideological & legal framework meant to secure liberty.

digression. roe vs. wade recognized personal liberty. however, how was access to abortion structured? the question isn't whether the right to abortion & the access to abortion is being eroded, but whether abortion was every fully accessible. liberty, in this case (i argue), isn't about the freedom of choice as it is about the right to privacy. abortion is a health care issue & should be known only between a wom*n (your comment box won't let me spell w.o.man, lol) & her doctor. today, however, {a} many ob/gyn physicians are not trained in all aspects of abortion procedures, and {b} some women obtain abortions at clinics known to the public & therefore can obstruct the right to privacy. this isn't a failure of the Supreme Court or the Constitution, but a failure to leverage & secure this right in american society.

digression two. US civil rights movement used the Constitution to secure rights & structure social change (a two-step process). however, american society has not fully accepted "all men are created equal". the civil rights movement must still keep its eyes on the prize & achieve full equality & acceptance in american society. ie, Supreme Court can say "integration", National Guard can be sent in to get black students past a screaming white mob — but nothing guarantees that white parents will remove their children from the school never to return. what is the current status of american education & integration?

your interpretation of current events is dead-on about sniping non-leverage ignoring that what's currently in power is probably exploiting the weak areas (known to the founding fathers) of the Constitution. the Supreme Court committed & held accountable to the US Constitution can, hopefully, strengthen these areas.

"We are not final because we are infallible, but we are infallible only because we are final". —Justice Robert H. Jackson

as far as "jihadi reaction to neoliberal globalization", i'm beginning to get the impression that the middle east is currently experiencing their own boston tea party. oil instead of tea this time. worth noting some recent comments in an interview by Fareed Zakaria of foreignexchange.tv with Wu Jianmin:

foreignexchange.tv/?q=node/405

From Century One to Century Fifteen, China was a leading nation in the world. We had all—I mean technological, scientific assets; the Chinese did not use that to dominate the world. Even less today, you see they say peace is part of the Chinese

culture. Confucius said 2,500 years ago [Laughs] peace is something most precious; I think Chinese will stick to that tradition.

I think you know we need some patience. The only other alternative is using force. Look at Iraq; it didn't work. So I think the--the peaceful solution--it may take some time. We've got to understand it because the mistrust between the US and the DPRK is so deep. Theoretically speaking you are still at war with the DPRK. There's no peace treaty between the US and the DPRK. You know more than 50 years--a lot of hatred, a lot of resentment, a lot of mistrust; we need time to--to get it over.

gematria - definitely getting closer ;)

lol, how about this:

LEFTY = AMERICA = ARCHON = I AM A GOD

RIGHTY = GENESIS = MUSLIM = PARADIGM

mark k-p: *bombs - don't worry, as K-punk convincingly explains, its just a phantasmatic 'Other'*

references please ... or could this be yet another straw man?

The existence of real terrorists and the existence of fantasies about those terrorists do not preclude one another

Bored not shocked: I thought Nick was in favour of big government....

or isn't the military part of the government?

and o i see it's ok to intervene in other ppl's lives (as long as they are only towel-heads and not americans) - THAT isn't big government either.

Just so we're clear.

Nick Land: northanger - think the opening of your last post absolutely inspired - Yes, the (continuing) War of Independence is the key

As for "Look at Iraq; it didn't work" - when you've got a rabid dog around the throat, this type of response just isn't an option IMHO.

Zell Miller articulates relationship between US military power and liberty better than anyone else I know. For the moonbat fraternity, however, defeating fascism and

fending off totalitarian menaces has nothing to do with freedom because people still eat McDonalds

northanger: nick. when i was younger i read a true story about a racist dog trained to attack black people.

what are the options?

(*Zell Miller*?)

Nick Land: It was a great film too, called: White Dog

Seems you have to kill the dog (trainer too, if you can)

ZM: Material base of liberty is military power

northanger: nick

ZM: Material base of liberty is military power

you agree with this?

Rephrase: Material base of *hegemony* is military power. (?)

Seems you have to kill the dog (trainer too, if you can)

hopefully you can retrain the dog. trainer? separate but equal.

Nick Land: northanger - but the War of Independence wasn't 'hegemonic' was it? (btw "Hegemonism" is leadership by example, not imperialism - not a bad thing IMHO). If Washington's guys hadn't been able to repel British authority by force of arms, no Independence, no USA, and by now almost certainly no free world ...

northanger: nick.

but the War of Independence wasn't 'hegemonic' was it?

had to think about this for a sec. where would we be without George Washington, John Adams, Thomas Jefferson, Benjamin Franklin, et al? isn't that a hegemony? only becoming by defeating the British?

seems to me 1776 represents a multi-part approach to independence: declaration of (a) independence / (b) war (executing/winning war)?? & (c) constitution. before

middle & after. which is why GW so critical: only one to make critical switchover & therefore hegemonic.

does the Spirit of 1776 reside in the Blogosphere? ie, (to rephrase somebody else) the war on terror is irrelevant?

ps. that's if i'm tracking you on that hegemony thingy.

pps. constitution bit doesn't spark until you complete parts a & b.

2012 as farce

Nick Land (July 6, 2005)

Sorry, but this¹¹³ is hilarious.

Anyone know whether a Blair/Chirac gay porn craze has emerged yet?

Comments: 2012 as farce

northanger: (ok, i'll bite) {scratching head} i don't get it ... what's the hyperstitional interest in gay porn?

Punisher: More than the hyperstitional interest in quarrels within the EU I would have thought...

(hey, here we go again, maybe we can start a double act)

northanger: Who's on first?

Nick Land: Ummm, 2012?

northanger: nick, nope.

however ... why is 2012 a farce?

Nick Land: northanger - have you been taking trolling lessons? :)

Maybe if I'd entitled it "2012 (Mayan 'apocalypticism') reduced to an absurd farce" ???
- oh never mind

northanger: *Maybe if I'd entitled it "2012 (Mayan 'apocalypticism') reduced to an absurd farce" ??? - oh never mind*

oh shucks, mayan = obvious ("twenty-twelve" = hoot). gay angle hyperstitionally intriguing -- unfortunately, it's just lying there. so we're amusing ourselves with classic american comedy while you work on your schtick.

113

https://web.archive.org/web/20061007120144/http://www.eursoc.com:80/news/fullstory.php/aid/830/Terrible_Food_And_The_Olympic_Games.html

troll lessons? yes, i will be defending my thesis whatchamacallit this weekend.

jerk: I notice you open this post with an apology. Good choice.

"Do sour grapes, hard cheese and humble pie count as traditional British cuisine?"

How about journalistic hash?

northanger: nope, Babette's Feast.

renee: Is apocalypticism always hyperstitional?

northanger: um, yes! :)

is hyperstition always apocalyptic?

renee: No. I don't think so.

Actually, I'm not sure if hyperstition is always apocalyptic. But, I do think apocalypticism might not always be hyperstitional.

Your thoughts???

northanger: i don't think hyperstition is always apocalyptic; i think apocalypticism is always hyperstitional.

renee: OK... apocalypticism is a worldview based on the idea that important matters are hidden from view and they will soon be revealed in a major confrontation of earth-shaking magnitude that will change the course of history. It can appear as a tendency, outlook, perceptual frame, or rhetorical style; and can lead people toward passivity while awaiting the inevitable end, or active preparation in anticipation of a momentous event. Apocalypticism can be tied to religious or secular views, and the expected outcome can be seen as positive, negative, or ambiguous. Apocalypticism is a frequent theme of literature, film and television. It also influences political policy through movements such as Christian Zionism, and in the dualism seen when politicians demonize and scapegoat their enemies as wholly bad, evil, or even Satanic. This process often involves conspiracism in which the apocalyptic enemy is alleged to be engaged in a conspiracy against the good or Godly people. The tendency was especially evident with the approach of the millennial year 2000, but it need not be tied to a particular calendar date (all according to Wikipedia). It sure sounds hyperstitional. Now thinking about how time factors in. In the 2012 example, the Maya believed that time was cyclical instead of the western conception of linear time.

This means that they thought that time repeated itself, so therefore, if they knew the past they could predict the future. This concept of was embodied by what is termed Najt, or the concept of time and space consisting a single entity represented in a spiral format. By understanding time, the Maya believed they could gain power over their world (again Wikipedia). Whether cyclical or linear, it seems time is a key component of apocalypticism. How about hyperstition, how important is time?

northanger: a time circuit is at the center of the numogram. however, nick recently made the distinction between Numogrammatic vs. non-Numogrammatic hyperstition.

Mohsen: Have you read Reza's essay about chronopolitics? He exquisitely discusses that Islam's Al-Qiyamah technically has no Apocalyptic or revealing theme and its hyperstition comes from the absence of Time with big T, am I right? can anyone help me to find reza's essay?

Nick Land: See "Islamic Chronopolitics I: The Heresy of the Apocalypse" & "A note on the economic side of The Chronic"

Northanger's line highly persuasive IMHO - at least, the mass phenomena generating a historical event or break through an apocalyptic 'idea' (including communism and fascism) seem to pose the clearest warnings viz hyperstition gone bad

Renee's point on cyclicity thought provoking - Could the appropriation of a cyclic concept by a linear historical narrative be essential to apocalyptic thinking? This has happened with the Mayan example (via McKenna) and a (perhaps warped) reading of Cohen might generalize the argument (Sumerian cyclic 'Chaos Monsters' converted into operators of linear mega-transition)

Mohsen - sure Reza will carry his discussion further.

The late 19th C. spasm of Islamic apocalypticism seems to have been recognizably Messianic (Mahdist), but the current wave - focused on the restoration of the Caliphate - supports Reza's 'model' ((big if I'm understandig it right), ironically because of its more 'secular' (geopolitical) ambition, and thus indifference to 'metaphysical' time-disruption of the Revelations type.

northanger: hyperstition gone bad?

Nick Land: Unsatisfactory corpse-heap to shoggothization ratios

northanger: then, hyperstition gone good means there's a high _____ count?

Mohsen: Thanks a lot. And where is Reza?

renee: In “Islamic Chronopolitics I: The Heresy of the Apocalypse” Reza writes about a timeless “Now”. Is this were apocalypticism and hyperstitions hover? Cyclicly speaking, where does the unchronologic Now fit? Does it overlap with past, present, future?

northanger: GAY PORN CRAZE = ALPHANUMERICS = ILLUMINATION = CONCLUDING ARIA = SPAWN OF SATAN = HOLY OF HOLIES

UNCHRONOLOGIC NOW = UNDECRYPTED SIGNAL = ABSOLUTE COINCIDENCE = ISLAND OF STABILITY = PRIME REQUIREMENT = REAP THOU, AND REJOICE!

PAST, PRESENT, FUTURE = THE PLACE OF ENCHANTMENT

sounds good to me. except ... TIMELESS NOW = POSSIBLE HOAX = HEAVEN ON EARTH

Nick Land: Northanger - viz corpse heaps, you're being deliberately perverse

Your gematria just gets better and better, but it probably gets lost in the blizzard effect for most observers (just guessing)

Renee - don't think i can fill in for Reza on this. Also, much uncharted territory here ... hope we can get back to these questions and address them with the seriousness they deserve ... Major Time post in August, 100% certain (Northanger, don't laugh)

Mohsen - Reza's taking the opportunity for some quiet time, sure he'll be back in the near future

northanger: sorry to get blizzardly on you, Renee. your questions (ditto Moshen) are intriguing. IMHO, classic apocalypticism involves TEOTWAWKI (the end of the world as we know it) whether negative or positive — just as you describe above.

however, IMHO, hyperstitional apocalypticism does not have to be chronological religious, cataclysmic, TEOTWAWKI or anything related to the traditional understanding of apocalypticism.

personally? i think of hyperstitional apocalypticism as somewhat anti-climatic.

ps. IMHO, human beings are hyperstitional by nature because we have imaginations. however, when we organize into groups & create rules, etc, hyperstitional fluidity solidifies & stabilizes (ie, reality created by agreement).

i think "reality-based" groups focus on "acceptable" ideas to change something; true hyperstition (if i can say that) considers the full brain-farty palette — no matter how far-fetched (religion, politics, philosophy, conspiracy, yadda) — and, maybe, remaining open-ended about the results.

like, you aim at the bull's eye by not aiming at the bull's eye. or something like that.

en.wikipedia.org/wiki/MacGuffin

Interviewed in 1966 by François Truffaut, Hitchcock illustrated the term "MacGuffin" with this story:

"It might be a Scottish name, taken from a story about two men in a train. One man says, 'What's that package up there in the baggage rack?' And the other answers, 'Oh that's a McGuffin.' The first one asks 'What's a McGuffin?' 'Well' the other man says, 'It's an apparatus for trapping lions in the Scottish Highlands.' The first man says, 'But there are no lions in the Scottish Highlands,' and the other one answers 'Well, then that's no McGuffin!' So you see, a McGuffin is nothing at all."

The uranium hidden in wine bottles in Notorious is a MacGuffin: it is the reason the story takes place, serving to advance the plot. The story could just as easily have used diamonds (which were proposed as an alternative during production, gold or rare wine.

creativegeneralist.blogspot.com/2005/07/on-writing.html

Let's get one thing clear right now, shall we? There is no idea dump, no story central, no island of the buried bestsellers. Good story ideas seem to come quite literally from out of nowhere sailing at you right out of the empty sky. Two previously unrelated ideas come together and make something totally new under the sun. Your job isn't to find these ideas but to recognize them when they show up. —Stephen King, *On Writing*

in conclusion (ha!), maybe apocalysm happens when hyperstition starts becoming real. what's the switchover from fiction to fact?

(those of you willing to hack blizzards)

rigorousintuition.blogspot.com/2005/07/does-anyone-really-know-what-time-it.html

via :: post-atomic.com/2005/07/rigorous-intuition.html

Some more fun with numbers was posted by "st4" on the Rigorous Intuition forum:

Here's some math. Please correct it if it's wrong:

1394 days since 911

483 days since the Madrid bombing

$1394 - 483 = 911$

483=SITUATING THE DISCUSSION

See "AQ = 1384 = ???"

01394=NIL, INTELLECTUAL LOGIC PLUTONIC LOOPING THE NEUTRAL CENTER TICK-DISTRIBUTOR

01394=So was it -- ever the same! I have aimed at the peeled wand of my God, and I have hit; yea, I have hit. —Liber Cordis Cincti Serpente I:65

01394=They are as upon the earth; I am Heaven, and there is no other God than me, and my lord Hadit. —Liber AL I:21

$65 + 21 = 86$

renee: Thanks for your thoughts Northanger.

ps. IMHO, human beings are hyperstitional by nature because we have imaginations. however, when we organize into groups & create rules, etc, hyperstitional fluidity solidifies & stabilizes (ie, reality created by agreement).

I haven't thought of human beings as being hyperstitional, well, except for one or two characters. I guess I've been thinking of hyperstition as more crafted opposed to organic. Which is it? Or is it both?

northanger: *Thanks for your thoughts Northanger.*

:)

which is it? hyperstition is mercurial, IMHO, and as a matter of fact, hyperstition (this blog) was born in june which means it's a gemini which means mercury is its ruling planet. mercury rules the world wide web, communications, etc.

in alphanumeric qabbala, 86 = BLOG-86 = OMEGA

ALPHA = TIME

OMEGA = WHEN (and VOID)

Can this be true...

mark k-p (July 22, 2005)

... and if so what does it mean?¹¹⁴

Comments: Can this be true...

northanger: i don't think it's true. probably part of the info war.

"Hypercamouflage traps possibilities for fighting and surviving along the enemy, a total withdrawal from friend's sensors and dissolution into the enemy: the rebirth of a new foe."

Nick Land: Can it be true? - No.

What does it mean? - That the appeasenik left has opted for auto-parodic insanity in a desperate attempt to resolve their cognitive dissonance.

northanger: that's the issue in a nutshell innit? there's no way to break this unending stream of cognitive dissonance.

cognitive dissonance links:

en.wikipedia.org/wiki/Cognitive_dissonance

www.ithaca.edu/faculty/stephens/cdback.html

this one seems to illustrate hyperstition gone bad maybe.

When Prophecies Fail

www.freeminds.org/psych/propfail.htm

oopsie. IS this story true is different from CAN this story be true.

yes it can.

114

<https://web.archive.org/web/20061004175014/http://www.prisonplanet.com:80/articles/july2005/090705bombingexercises.htm>

discussion about this issue here:

www.metafilter.com/mefi/43378

Nick Land: thanks northanger

extreme solipsism also important psych ref.

'It's OUR invented racist other ... no, it's that WE deserve it for fighting back ... no, WE DID IT ALL, in fact the Jews gassed themselves in Nazi Germany ... no, there wasn't a Nazi Germany, it was invented by Western intelligence services ... communism was just a McCarthyite scare ... Global Jihad was cooked up by the CIA ... no, no, my brain hurts ...'

northanger: oh. i think i finally figured out how to make a hyperstition real. it's sorta like alchemy. :)

mark k-p: There is no reason to not believe it is true. Peter Power did appear on Radio 5 to make those statements. You're being way too quick about this. It doesn't mean that the bombings weren't genuine - but what does it mean?

northanger: here's another link about Peter Power during the King's Cross station fire of 1987:

news.bbc.co.uk/onthisday/hi/witness/november/18/newsid_3267000/3267833.stm

Nick Land: And 9/11? And Madrid? And the Russians? Funny how the infidels keep atrocitizing themselves. Bin Laden sure struck lucky with his enemies.

northanger: stop being silly Nicky.

wasn't there a question about how quickly the 7/7 bombers were identified? wasn't the bombing exercise about "jumping from slow time to quick time thinking"?

see 8 key thoughts here:

www.visorconsultants.com/disaster.html

wouldn't it make sense to run ANOTHER bombing exercise TWO WEEKS after 7/7 to get everyone back on track?

it's the coincidence that's throwing me.

AND, it's Power's response to 7/7 that's interesting. why was HE freaking out?

the only thing that makes sense (9/11, 7/7 & 7/21) is controlling collateral damage. yes, a series of controlled bombs went off to bring down the WTC because that's part of a simulation. worse case scenario: how do we bring down the WTC if we need to control collateral damage?

cognitive dissonance: it was already bad with the WTC being slammed by two planes. it would have been much worse if we all found out right afterwards: "we blew the building because we had to".

hmm, was 7/21 a bombing exercise?

"eyes wide shut" -- see this:

“Have you been enjoying yourself”

& this:

www.whale.to/b/assassinations_q.html

more info on Peter Power:

antagonise.blogspot.com/2005_07_01_antagonise_archive.html

apparently, peter powers will speak about his bombing exercise comments to anyone able to "demonstrate a bona fide reason for asking (e.g. accredited journalist / academic)" — everyone else gets a canned reply:

Business exec confirms same-time-as-attack underground bombing exercise

www.torontofreepress.com/2005/cover071405.htm

London Bombing

www.indymedia.org.uk/en/regions/world/2005/07/318160.html

Nick Land: northanger - you're wading deep into moonbat territory - would you set off into kook land in search of holocaust denial material? So what's the difference?

northanger: the holocaust is part of history; the london bombings are current events. until news crystallizes as fact it remains fluid & speculative. observe recent events

concerning SCOTUS nominees & men shot in the head five times in the London Underground.

the Peter Power angle may be discounted eventually. however, the major news groups haven't picked this one up yet. even the "holocaust denial material" was a hotly debated news item several years ago.

ps. it even has it's own wiki entry.

en.wikipedia.org/wiki/Holocaust_denial

angela rippon: rereading this thread it seems to me that it may well be dr land who is guilty of 'auto-parodic insanity' in defence of his flaky worldview, rather than the evil leftist western news media. I suppose that kind of febrile ideological aggression is what comes of living in a country whose bubble economy is foundering so badly that the state has even reluctantly started selling some of its massive mandatorily-retained share in all stock-exchange-listed companies.

Nick Land: northanger - but as you say, it's a matter of politicized (dis)information, designed to establish the credibility of Jihadist-sympathizer conspiracy theory (thus part of the tedious antisemitic and antiamerican tradition including the Protocols of the Elders of Zion, holocaust denial, Jenin 'massacre' BS, 'Jews/CIA did 9/11' literature and countless other hot-selling topics in islamist and leftist propaganda outlets). Why treat it as anything other than the diversionary totalitarian brain-toxin it is?

northanger: nicky - i'll get to you in a minute, until then, stop playing with yourself & read these (hi angela!):

CIA / Mossad Front Group Attacks London

blogspot.mg.co.za/?q=node/1163

Coincidence of bomb exercises?

www.channel4.com/news/special-reports/special-reports-storypage.jsp?id=372

Nick Land: et tu northanger

northanger: nicholas. politicized (dis)information eh? a well-known US newsguy has a segment on his show about China. the lower screen displaying a dynamic graphic: RED STORM RISING. above this is a equally dynamic sneer.

news is simply "who, what, where, when, why, and how". just the facts, ma'am. but, IMHO, what we've got is agitprop & propaganda parading as news. all the constant speculating about Judge Edith Brown Clement for an evening just left me thinking that the Bush administration can keep secrets secret. nope, i'm getting news by agenda & opinionated sneers. maybe i'm suffering from too much adjective soup.

et tu northanger

rotflmao.

London under attack

news.bbc.co.uk/1/hi/programmes/panorama/3686201.stm

This film is a mock exercise of what might happen in London if there was a terror attack now. In a unique fusion of drama, detailed research and expert discussion Panorama puts Britain's emergency plans to the test. Set in the future - but only just - the city of London is thrown into chaos by a series of terrorist attacks.

Preparing for a crisis by Peter Power

news.bbc.co.uk/1/hi/programmes/panorama/3686423.stm

Wargames Were Cover For the Operational Execution of 9/11

www.prisonplanet.com/articles/september2004/080904wargamescover.htm

en.wikipedia.org/wiki/Planning_and_execution_of_the_September_11,_2001_attacks#War_Games_Paralleled_Attacks

The 9/11 Commission neglected to investigate or report on this subject, therefore it is presently unknown what relation, if any, these exercises had to Global Guardian, Vigilant Guardian, Vigilant Warrior, or Northern Vigilance, or how any of the war games might have affected the military's response to the real attacks.

Murray: I think the very-Blairite sounding crisis management group working through a terror simulation sounds plausible enough; also just look at the face and garb of Mr [Corporate] Power – proper scary...

As for the speed of the inquiry and the identification, in yesterday's Observer the Beeston muslim youth were quoted as saying it's a conspiracy stemming from one of the quartet's mothers saying she didn't know the whereabouts of her son. The

Islamist/leftist conspiracy fear is well documented, but Jenin massacre denial? London Jewish comedian Ivor Dembina (see link) visited the West Bank town and attests to the damage caused in his stand-up routine....

www.thinkbeforeyoulaugh.com/index.asp

poetpiet: www.soulinvitation.com/triplosion/ wave forms of primes anybody?

northanger: good link, piet

Punisher: *rereading this thread it seems to me that it may well be dr land who is guilty of 'auto-parodic insanity' in defence of his flaky worldview, rather than the evil leftist western news media*

quite. Is there ANYONE who is denying the existence of Islamist terrorism? (Outside Nick's head I mean). Thought not.

This is surely interesting in its own right - i.e. what DOES it mean if such an exercise was taking place (and no-one has denied that it did)? Saying 'co-incidence' is surely absurd.

As for the wider issues, it is now beyond question that the policies Nick advocates have led to the spreading of the Islamist terror threat. Well done!

Nick Land: appeasers' party in the house

thank the unutterable powers of the abyss you leftists are just an irrelevant lunatic fringe

northanger: *Is there ANYONE who is denying the existence of Islamist terrorism? (Outside Nick's head I mean). Thought not.*

besides me there's Iqbal Sacranie, general secretary of the Muslim Council of Britain.

um ... Sir Iqbal Sacranie ::curtsey::

however...

www.vinnomot.com/AKasem/LondonTerror.htm

Therefore the anti-terrorist squads (of infidels) must learn a few lessons from the Islamists. They should learn how to beat their enemy in their own game. Once these squads learn what real Islam is all about, it will be so simple to map out the correct

strategies to extinguish Islamic terrorism—for good. And it costs so little to know ‘real Islam’!

A good starting point will be to comprehend the above verse. An old adage says, ‘Know your enemy.’ This is true, but the truer version should be, “Know your enemy’s motive.” The motive of the Islamists is Islam—not terrorism, not Iraq, not Afghanistan. Terrorism is just a tool employed, but Qur’an is the motivator and Islam is the final goal. There can be no clearer message than this. The civilised world is at war—a war with Islam. The Islamists will surely confirm this truth. Full stop.

what is dr land's flaky worldview exactly? maybe it does boil down to, "numerology, the dungeons and the dragons, the fantasies of being whipped in top floor docklands offices by cold eyed capitalist domanatrixes in power-suits and stilletoes". heck, i don't know much about bataille but he did do that headless thing with plenty of willing sacrificees but no executioner. interesting when you consider ... "do not hanker for peace with the infidels; behead them when you catch them" (Quran 47:4).

angela rippon: *you leftists are just an irrelevant lunatic fringe*

Yes, unlike you smug bigoted sinophile astrologists. All the major intelligence agencies of the world are constantly focussed on your portentous inanities. Thank god there are still some people around who really know about inventing number patterns: otherwise how could the glorious freedoms won by those brave armies of CNN news-anchormen and starbucks franchisees be saved from the evil threat of islamofascism?

northanger: &, from arthur silber -

coldfury.com/reason/?p=819

The primary key to why I will vote for Kerry on Tuesday lies in one inescapable fact: Bush and his most ardent supporters believe, to the very core of their being, that saying something is true will make it so. In the final analysis, facts and reality do not matter to them at all. They truly and completely believe that if you say the “right” thing, the facts will adjust themselves accordingly. It does not matter to them that their own actions inevitably lead to the destruction of everything they say they value and are trying to achieve: if you say something is so, then it is. In this manner, Bush and his acolytes reject facts, logic and evidence on principle—and it is the central animating principle of their manner of functioning.

vide: www.yuricareport.com/Bush'sBody/BushAndEasyCertainty.html

“We’re an empire now, and when we act, we create our own reality. And while you’re studying that reality—judiciously, as you will—we’ll act again, creating other new realities, which you can study too, and that’s how things will sort out. We’re history’s actors . . . and you, all of you, will be left to just study what we do.”

Sinophile · One who admires China, its people, or its culture.

ouchie.

angela rippon: What does it mean for intelligence when the only possible interpretation of a suggestion that the world might be more complicated than a star-wars-style manichean struggle, is that the suggestion must be the work of THE ENEMY?

Cold irrationalism? "Yes, I am a transcendental dogmatist"? That's not capitalism and schizophrenia, it's capitalist paranoia; a volatile pre-emptive attack mode characterises those whose posturing as the heroic destiny of civilisation is built on a fragile structure of all-too-human venality, subterranean exploitation and decadent laziness. Thin bark of cornered runt cur too stupid to change position.

What makes one stronger is to admit complexity; refusing it can only make this last dogmatic redoubt crumble faster. Never mind, keep chanting: U S A ! U S A ! U S A ! if it makes you feel better. Perhaps it is better that way. A sort of anaesthetic?

Bush and his acolytes reject facts, logic and evidence on principle—and it is the central animating principle of their manner of functioning.

It's called 'hyperstition', I believe.

but on the other(?) hand:

Saying 'co-incident' is surely absurd.

Why? Alternatively, what about saying 'nice marketing opportunity for security consultancy?' and/or 'handy spacefiller for flaky news website?'

touché turtle: *It's called 'hyperstition', I believe.*

hmm.

angela rippon: Oh yes, I remember now, the only type of 'complexity' welcomed here is the entertaining, "intense" kind, consisting of the feeble reduplication of

sketchy 'hypotheses' by which a group of neo-teenagers stimulate each other's half-cocked theoretical edifices.

Oh wow man, I, like, don't know what's true anymore.

Nick Land: 'angela' - or may i call you 'Ms Compexity' - your fumings would be more convincing if they had the slightest hint of positive content. Start with an easy one:

What is the broad outline of economic organization you propose (in contrast to neoliberal harridan superficiality, or whatever). A sentence or two would do. See if you can accomplish this task without using any negative terms.

Not that I expect anything except the usual vacuous snark.

vacuous snark: why do things always boil down to money?

angela rippon: It's called critique. Sorry if it's not 'positive' (=watchword of american liberalism and ego-psychology-derived soc1alisation processes) enough for you.

The issue isn't which model of economic organization you or I might choose to imaginarily impose on the world. That sort of idiotic irrelevance is precisely what does lead to pointless exchanges of insults. However I've read enough to know that this is the only register in which most of you operate nowadays, so I won't labour the point.

I simply thought it might be worthwhile to let anyone reading this know that some people would still like to work towards the possibility of adopting an intelligent analytical stance vis-a-vis the actually existing (leaving aside the fact that this is a derogatory term hereabouts) world. It's not so "intense", granted, but perhaps intelligence isn't "intense" or even "positive", after all. As Northanger's quotes suggest, the idiots running the world don't need any help from expat-academics in creating clouds of hyperstitional obfuscation.

Nick Land: "It's called critique" LOL

angela rippon: well yes, pointing out contradictions, inconsistencies and absurdities in a position, and suggesting the uninterrogated assumptions behind it could be called 'critique', I would have thought. Even the most hardened cynic with regard to logical argument would surely have to admit that it's a preferable tactic to a retreat into smug, arch laughter?

Nick Land: 'retreat ... smug' - this is priceless!

maintaining a set of prejudices so wildly incoherent you can't even be drawn into positively hinting at them you snipe in soundbites and dated Brit TV references barely long enough for an atom of Boolean algebra, then get on your high horse and make out you're some kind of lofty master of critique - I wouldn't even have imagined that combination of cowardice and smuggerly were possible if i hadn't been anklebitten by it repeatedly.

Still, 'punisher' probably thinks you're a genius ...

angela rippon: Me a genius? Me claim to be a lofty master? How could I?

I'm sure everyone reading this agrees with your painstaking and sober analysis and is fully convinced that anything more subtle than 'bomb the bastards' is transparently nothing more than an advertisement for al-Q. Praxis is all, as you so ably prove.

With their access to the noumenal realm of cantonese powerpoint presentations and their unparalleled facility with adding numbers between 1 and 9 together, the hyperstition bloggers have undoubtedly surpassed in wisdom and power all of us who are gauche enough to harbour any residual cravings for sanity.

anklebiter: With their access to the noumenal realm of cantonese powerpoint presentations and their unparalleled facility with adding numbers between 1 and 9 together, the hyperstition bloggers have undoubtedly surpassed in wisdom and power all of us who are gauche enough to harbour any residual cravings for sanity.

::blushing::

gee, _really_? ah ... thanks.

of interest to Reza et al: www.sociologyesocscience.com/muslimm/

Explaining Muslim Neofundamentalism

Exploding the Middle-East Myth

Jihad: Who is Culture?

Probably the fact of the location of beliefs and values in culture adds no additional barrier that the subject must escape to contact objectivity. Thus what marks the special nature of Islamic fundamentalism, is its modernism. Like E. P. Wijnants pointed out in early 2003 in his two part essay on various radical groups, the intellectual roots and historical precedents of today's Islamic revival can be traced back to Sayyid Jamâl al-Din (1833-97), called al-Afghani. And entail a closeted form of the Western modernism that it so publicly claims to oppose. This included also the Deoband movement that emerged from central India in the wake of the ill-fated revolt against the British in 1857. Founded by Mohammed Zasim Nanautawi (1833-77) and Rashid Ahmed Gangohi (1829-1905), it set up madrassas in India, Afghanistan, and Pakistan.

Tachi: Nick - been a long time. Why do you bother hanging out with people who constantly write self-indulgent high-horse leftist bollox? You know it only winds you up. Thought you would have been a bit more nomadic than this ;)

The euradists refused containment in the Tangents zone and are now contaminating the whole blog. Reza has disappeared and only seems to re-surface with interesting but sadly ignored works. Admit its time to disengage in the melee and bring out the big guns!

Paul Frisch: That should be impressive.

Nick Land: piet - thanks for links (found your 11:46 comments a little difficult to decode ;))

Tachi - hoping that we can crank the discussion out of the WWIV hatefest next week - don't nomadize off too far before then

northanger: decoding poetpiet with extreme prejudice: beware the fatwa engraved on the heart placed there by Allah Himself.

angina: can this be true? And if so, what does it mean?

"He is supposed to have been shot after having been chased and wrestled to the floor. But an intelligence officer's statement says he followed Menezes down the stairs and onto the tube. He was apparently beckoned by police, who did at that point identify themselves. "He stood, and walked towards me", the intelligence officer said. He grabbed Menezes, pulled his arms behind his back and pushed him back into the seat. "I heard a shot in my left ear". The intelligence officer said he was pushed to the floor at that point. A number of officers shot him in the head, seven times. Three bullets missed. One went into his shoulder.

Split-second decision? That is murder in cold blood, following the procedures laid out in the shoot-to-kill policy.

What was also disgusting was the performance of a former Metropolitan Police officer, some kind of bigwig named Peter Powers. That fucking animal of a man did everything he could to justify the killing, saying how terrible it was for the police, a decision made in the space of a few minutes etc. Then he said "I don't know for sure whether we can say that Mr Menezes was totally innocent". Probed about this by a bemused news anchor who noted that the police had already admitted that he was totally innocent, Powers said, "I just find it difficult to believe that he would be shot for ad hoc or whimsical reasons. And I, er, don't want to prejudice the enquiry that is ongoing."

leninology.blogspot.com/2005/08/more-on-itv-revelations.html

TV Demonism

CCRU-Shanghai (July 31, 2005)

[This letter - purportedly addressed to Andrew Davenport, Co-creator and writer of the Teletubbies - was recently forwarded to us in Shanghai for unknown reasons. Considering it had some measure of hyperstitional significance, we are reproducing it here. (PBS link)]

Dear Sir;

I am troubling you with this letter both to elicit information and to express certain concerns. Hopefully, it will be evident that it is written with the very greatest respect, from one long schooled in the arcane sciences to another.

Having carefully studied your popular children's television show 'Teletubbies' for many years, I am confident I have gained a basic mastery of its essential content. Please forgive me if I suggest this understanding was acquired with greater ease than is altogether healthy, or compatible with appropriate hermetic prudence on your part. To be frank, the teletubbies wear their occult pedigree on their furry jumpsuits - their direct derivation from the five diplodemons of Sumatran time sorcery being starkly apparent to any but the most vegetative ignoramus.

Thus, the obvious question arises: what happened to the fifth Teletubby?

Please understand that I am not questioning the necessity of this excision. It goes without saying that the 'supervisory authorities' (of which, I trust, no more need be said) would have demanded it, if an elementary instinct for self-preservation had not already done so. Only a lunatic would fight for the right to spread Pentazygonic Lemurianism among the world's infants. So my uttermost discretion can, of course, be assumed.

Nevertheless, my question remains. While theories and speculations on the topic of the 'missing fifth' are abundant in the relevant literature (where Noonoo, the Baby Sun, even the infant viewer have been proposed) these can all, in my humble opinion, be dismissed as groundless. The missing fifth must for obvious reasons of arcane science be of the same Suprageneric type as its four Similarchons, with appropriate discriminative name, height, intonation, colour-coding, antenna-form and magical weapon.

At the risk of self-contradiction, I must now append my warning to this request. While frustrated by the inaccessibility of the information specified above, I am also alarmed by the denuded hermeticism characterizing your show. Although we initiates of the arcane circle have long-understood that the future of religion on this planet approximates far more closely to the Teletubbies than to any existing organized faith, is it entirely wise to pronounce this truth so baldly to an ill-educated public? Such things have been occulted for a reason, I am sure you would agree.

Was it really necessary, for example, to so exactly portray the hideous ecstasies of the Tzog-Murtha ritual? A glistening vortex activates and the beings moan “Uh oh,” their eyes droop with bliss and they fall on their backs in technocosmic delirium. After the ‘big hug’ (is no blasphemy to be hidden from the world’s toddlers?) they clamber up ‘a hill’ and stand in the loose spectral formation, their antennae illuminated by the transmission and their belly monitors sparking with static from the Outer Spheres, as they await the Chosen One. It is rare indeed for even the most determined investigators into this abominable rite to have witnessed it unflinchingly portrayed in such comprehensive and graphic detail.

Even those entirely innocent of the Tzog-Murtha cults cannot but be struck by the sorcerous inclinations of the show, with its incantations and manifestation of objects through “songs.” More provocative still is the Baby Sun who mocks God the Father, Logos and the universe of adult authority with its inarticulate burblings and chaotic mirth.

These incautious references are given a further ominous twist by the blatant Lemuro-Cybergothic dimension of the teletubby mechanoverse. Those the Chinese insightfully translate as the “Antenna-babies” (Tianxian Baobao) are the fully cyborgian inhabitants of a futuristic underground bunker whose ‘parents’ have been replaced by an semi-intelligent autonomous vacuuming unit called Noonoo, combined with a complex subterrestrial acoustic apparatus. Their highly-synthetic diet, produced entirely by machines, consists exclusively of ‘tubby custard’ and ‘tubby toast’ a reiterated affront to the very idea of organic nourishment.

Finally, allow me to draw your attention to a recent article by media commentator Rev. Douglas Frushlee entitled The Tubby Minions of Satan. In this piece, intended to warn parents against the show, he describes it as an “unrelenting festival of bionic barbarism” and refers explicitly to “Indonesian demonism.” If Frushlee, who in all

charity is not the sharpest pencil in the box, can be picking up so clearly on the occultism of the series, you can be confident that more sophisticated and powerful minds are tuning in to it as well, with consequences scarcely to be imagined.

Thank you sir for attention to these matters

Yours faithfully

P. B. Carruthers

Comments: TV Demonism

five: "Uh oh"

northanger: "the five diplodemons of Sumatran time sorcery" = five syzygetic demons of Lemurian sorcery

surely not a measure of _non-Numogrammatic_ hyperstitional significance

Nick Land: northanger - this 'non-numogrammatic' thing is a project promoted by various Ccru-UK sub-factions. We're not well placed to elucidate on it (we tend to Lemurian fundamentalism this side of the Great Water).

northanger: okie dokie.

so ... if there's a missing teletubby then there's a missing syzygetic demon. your brain farts on which one.

how does, if at all, newly discovered "Planet X" relate to teletubbies & planetworx?

Nick Land: northanger - you're on a roll ;)

- missing 5th, exactly (though assuming Carruthers has highly impure access through Atlantean Archons (which is why our missing megaposts on the Centauri synthesis are leading to such inevitable confusion))

Planet X (what a fantastic name, don't tell me you devised it - that would be scary), yes makes one wonder whether Lemurian astronomy is all its cut out to be ...

nrothanger: hey, found a goodie. (why i should tell a wanker like you i dunno) (overflow stuffed in tangents):

"Indonesian demonism" - Hakim Bey

hackvan.com/pub/stig/scripture/dune/hakim-bey/taz/taz2f.htm

[1] HOLLOW EARTH

Who dug this hollow earth beneath the ice foreseen by Poe, by certain paranoid German occultists, Shaverian UFO freaks? Was Earth once colonized in the time of Gondwana or MU by some Elder Race? their reptilian skeletons still mouldering in the farthest secret mazes of the cavern system? Sluggish backwaters, dead-end canals, stagnant pools far from the centers of civilization like Little America, Transport City, or Nan Chi Han, down in the dark recesses and boondocks of the Antarctic caves, fungus & albino fern. We suspect them of mutations, amphibian webbed fingers and toes, degenerate habits-- Kallikaks of the Hollow Earth, Lovecraftian renegades, hermits, skulking incestuous smugglers, runaway criminals, anarchists forced into hiding after the Entropy Wars, fugitives from Genetic Puritanism, dissident Chinese Tongs & Yellow Turban fanatics, lascar cave-pirates, pale shiftless whitetrash from the prolewarrens of the industrial domes along Thwait's Tongue & the Walgreen Coast & Edsel-Ford-Land- -the Trogs have kept alive for over 200 years the folk-memory of the Autonomous Zone, the myth that someday it will appear again...Taoism, libertine philosophy, Indonesian sorcery, cult of the Cave Mother (or Mothers), identified by some scholars with the Javanese sea/moon goddess Loro Kidul, by others with a minor deity of the South Pole Star Sect, the "Jade Goddess"...manuscripts (written in Bahasa Inggris the pidgin dialect of the deep caves) contain mangled quotations from Nietzsche & Chuang Tzu

same page there's this ... (possible linkage with PP's 11:46)

[2] NIETZSCHE & THE DERVISHES

RENDAN, "THE CLEVER ONES." The sufis use a technical term rend (adj. rendi, pl. rendan) to designate one "clever enough to drink wine in secret without getting caught": the dervish version of "Permissible Dissimulation" (taqiyya, whereby Shiites are permitted to lie about their true affiliation to avoid persecution as well as advance the purpose of their propaganda).

On the plane of the "Path," the rend conceals his spiritual state (hal) in order to contain it, work on it alchemically, enhance it. This "cleverness" explains much of the secrecy of the Orders, altho it remains true that many dervishes do literally break the rules of Islam (shariah), offend tradition (sunnah), and flout the customs of their society--all of which gives them reason for real secrecy.

Ignoring the case of the "criminal" who uses sufism as a mask--or rather not sufism per se but dervish-ism, almost a synonym in Persia for laid-back manners & by extension a social laxness, a style of genial and poor but elegant amorality--the above definition can still be considered in a literal as well as metaphorical sense. That is: some sufis do break the Law while still allowing that the Law exists & will continue to exist; & they do so from spiritual motives, as an exercise of will (himmah).

en.wikipedia.org/wiki/Planet_X

BOO!

makes one wonder whether Lemurian astronomy is all its cut out to be

who's wondering?

missing 5th, exactly (though assuming Carruthers has highly impure access through Atlantean Archons (which is why our missing megaposts on the Centauri synthesis are leading to such inevitable confusion))

huh? ({scratching head} missing megaposts? Centauri synthesis? is there a hint of a hint in this goobersnap? highly impure access?)

WHAT CENTAURI SYNTHESIS? who is this Carruthers fellow anyway?

Bibberly cheese!

sd: Teletubbies: a post-organic potential that lies within the bipedal primate homo sapiens before it becomes infected and ravaged by the viruses of the mind that adulthood has carefully prepared for the express purpose of annihilating childhood.

Guarding children from the ever-encroaching world of adulthood, Teletubbies uses maddening repetition as a defensive shield entirely impenetrable for any imposing adult brain unable (or refusing) to observe and learn from children. The Jimson Weed-like experiential loops that the Teletubbies so gleefully enclose themselves in are the mirror image of the memory loss that afflicts the elderly - burbling memory gain.

While 'the teletubby mechanoverse' holds sway, children are safe from seriousness, gravity, fear and tragedy. Teletubbies gently accesses and nurtures child cognition before children have the misfortune to become human - before their brains are intimidated by adults, terrified by faith and tortured by compulsory education.

Teletubbies is also incontrovertible proof that the customer is right and that paying attention to feedback is essential for successful production. If Teletubbies didn't connect directly and deeply to children's brains, they simply wouldn't be interested - boredom being an absolute verdict. Observation of how children watch Teletubbies is built into the making of Teletubbies, so children are, in a sense, programming their own program(me).

Assertions that Teletubbies is bad for language acquisition are grounded in the predictably adultcentric habit of giving exalted privilege to parental language input and ignore the crucial role of peer input (hence the Teletubbies tummy sequences).

Does the affection and compulsive hugging the Teletubbies engage in try to steer children away from activating the cruel psychological adaptations (manifested in sibling rivalry) they have evolved to survive in primate groups? Are the Teletubbies, as 'fully cyborgian inhabitants of a futuristic bunker' trying to show children it is possible to have overflowing, wasteful altruism as a default setting? A soft, cuddly demonism? [rather out of place amidst all the nastiness on this blog.]

p.s. one of the traditions on this blog seems to be to ask about hyperstitional significance, so what is the hyperstitional significance of a hoax, or an impostor, re. P.B. Carruthers?

www.simonyi.ox.ac.uk/dawkins/WorldOfDawkins-archive/Dawkins/Work/Articles/1993-summervirusesofmind.shtml

en.wikipedia.org/wiki/Jimson_weed

Valkator: *a post-organic potential that lies within the bipedal primate homo sapiens before it becomes infected and ravaged by the viruses of the mind that adulthood has carefully prepared for the express purpose of annihilating childhood.*

...potential, of course, being a strategic term employed to denote the 'willingness' of primate (primitive?) homo sapiens to allow themselves to be 'chosen' and placed in a 'special' role under the 'protection' of an imposter parent with just the right kind of post organic candy that lures the sheep to the slaughter. Childhood, an unconscious stage of development, cannot be maintained indefinitely.

The 'virus', being the 'natural cure', allows one to stand at the crossroads to either choose -- or be chosen. In other words: grow up, or die.

sd: Ryszard Kapuściński, recalls his schooldays in Pinsk, in 1939, shortly after the Soviet Union invaded Poland:

"One day a car pulls into the schoolyard, and out step some gentlemen in sky-blue uniforms. Someone says it's the NKVD. What the NKVD is isn't quite clear, but one thing is certain - when grown-ups utter this name, they lower their voices to a whisper... The NKVD people brought us white shirts and red scarves... They also brought a box of badges and distributed them to us. On each badge was a portrait of a different gentleman. Some had moustaches, others not... 'Children,' said our teacher in a voice that resembled the sound of hollow wood, 'these are your leaders.' There were nine of these leaders. They were called Andreyev, Voroshilov, Zhdanov, Kaganovich, Kalinin, Mikoyan, Molotov, Kruschchev. The ninth leader was Stalin. The badge with his portrait was twice as large as the rest. But that was understandable. The gentleman who wrote a book as thick as *Voprosy Leninizma* (from which we were learning to read) should have a badge larger than the others...

... One never knew what night they would come, or for whom. The boys who knew a lot about the deportations attempted to discern some rules in this matter, some hierarchies, to discover the key. Alas, in vain. Because, for example, they would begin deporting from Bednarska Street, and then suddenly they would stop. They would go to after the inhabitants of Kijowska Street, but only on the even side... Since the time of our house search, Mother does not let us take our clothes off at night. We can take off our shoes, but we have to have them besides us all the time. The coats lie on chairs, so they can be put on in the wink of an eye. In principle we are not permitted to sleep... The silence on our street rings in our ears. If someone's footsteps echo in this silence, Mother grows pale. A man at this hour is an enemy. In class we read in Stalin about enemies. An enemy is a terrifying figure. Who else would come around at this hour? Good people are afraid; they are sitting hidden in their homes.

The first in class to disappear was Pawel. Because winter was approaching, the teacher suggested that Pawel had probably caught a cold and was staying in bed. But Pawel didn't come the next day or the next week, and in time we began to understand that he would never come. Shortly thereafter we saw that the bench in the first row, in which Janek and Zbyszek sat, was empty.... One day our teacher disappeared...

The only hope was the countryside. Our neighbours would take a ring or a fur coat and drive to the nearby village to buy flour, salt bacon or poultry. It happened, however, that when these women were out of town, the NKVD would come to their houses and take their children away for deportation." *Imperium* (1993).

northanger: "hyperstitional significance" - i guess P.B. Carruthers is the hermetic version of Jerry Falwell. amazingly, Teletubbies seems to be (a) the vehicle for "subtle depictions" of gayness, or (b) the bald, unflinching, comprehensive & graphic portrayal of "occult pedigree". on one hand moral outrage, on the other appended warnings. gay role models "damage children's morals" — but, explicit occultism uncovers something better left occulted. maybe "consequences scarcely to be imagined" provides a clue to any significance.

p: the eo is an evangelistic media org which gets membership proportionate massmedia slot(ment).

my nephew works for them and his mother, my sis plus her meanwhile 6 grandchildren are growing up christian-lite along with this mindset, all of which is distasteful to me except for their nature documentaries; to sponsor them I was given a sub to their programguide decades ago. My other sis (9 years instead of a whole generation older and mongoloid) is becoming more and more alzheimery and fidgety confused; we can sit her down to fill paper with endless crosses or shaky ciphers taking that guide, which she totes around and loses fulltime, as a model.

Their guide this week is on about a girl who was a(n according to them lavesque) satanschurch inductee and mentions baby sacrifices (though after hearing Rickels' defense of weird Anton ((in Koeln last spring)) I can hardly imagine his direct involvement, would if/once I feel I should).

I mention all that cause I'd like to know what's up with all the infantality lately?

family dramas have now exceeded all last year ones in number already here in holland; the german/polish border foetuses and other cases fill one news broadcast after another ... something to do with casting the broads and molding lives with scalpel and machinery rather than reserving muscle to serve and offer death up in ways life cannot, won't and would not want to refuse and whatever orders are capable of, they never reach down into nonvoluntarizable crops to be raised unless they come from the sort of laboratory/mindprison/conscience befevering hell-haunt such as the ones sprouting up in this first jew and now bio-industry infested former paradise.

infinite thought: Piece on Joseph Schumpeter which may or may not interest some of you...

linking didn't work: www.shaviro.com/Blog/?p=434

poetpiet: Anonymity, animation and amity of gods, monies, terrorists, grafittiers, poets and subtle benefactor(ies)s, in other words the amorph base of all identities is the center that, all told, just don't hold or at most as much as the timid coalesce and coerce bully coalitions.

The rift and sparkly gap between minds and matters are a falsification and nebulously mystified form of the real diff. between beauties and beasts; I root for the latter since they modestify their pride in favour of a lowly existence minimizing the burden they form to their neighbours mostly in the shape of ritualizing rivalry and restricting demographics near to the extremely moderate (can't formulate it more paradoxically than that) damn point of misery. Beauties however become such only by 'virtue' of rivers of blood (expensive monsters, certainly in the eyes, or in case of lack thereof other senses, that or the equivalent) belonging to other species at whose expense they widen their coverage) and you'd only be blaming the scarcity effect for raising bride price and preciousness (in other words doing nothing for beauty, not absolutely anyways) and for an all too rampant cause - - formal and final yet out of control hard and fast death of a type that stops cycle and kills spirals damn near permanently untill a recycler of outsiders magnitude pops in of course; till then sane dynamics between hard and soft remains obscured; please afford me the luxury to be popular enough to play dictator in the eyes of very few.

stealing thunder/pocketmoney of christianity flavored constituency is reaching for mega magnitude these days; churches are dead, long live the stadiums (see www.smirkingchimp.com) -- wild and fantastic stories proffered and regions whence they hail braved as a paid guide seems to be the gimmick of the van der steens I mentioned; they carry the good news to the lions den (as did my nephew too; bibles for kosovo. Who says family ties don't embarrass?) but readers or Reza know that such 'missiianity' is a 2 way street (see my post on 'the sorceress').

angela rippon: that poor child

poetpiet: crackshun: in other words the amorph base of all identities is the center that, all told, just don't hold or at most merely as much as the timid manage to coalesce and coerce bully coalitions.

ps: who, my sister?

angela management: If I remember rightly it was over half a decade ago here in the decaying backwaters of senescent western imperialism, when occult

conspiracy/teletubbies routines were all the rage amongst third-rate stand-up comics and drunk humanities students.

what sorceress post?

Piece on Joseph Schumpeter which may or may not interest some of you.

business2.com/b2/web/articles/0,17863,528852,00.html

actually, it did. first heard of Schumpeter in 2001 - if capitalism provided abundance to all instead of a select few i'd have no problem with it. in Star Trek: First Contact, Picard says "the acquisition of wealth is no longer the driving force in our lives. We work to better ourselves and the rest of humanity".

would be, um, nice if "overflowing, wasteful altruism" could be "a default setting". it's not. which is why i prefer "do what thou wilt".

poetpiet: wow, my earlier mentions makes second on google

SORCERESS

how long will it take for my gratefully satiated and silent audience to find me again, now rammeling signals into the blogspot and tripod servers; down from 3 to 4

hundred referrals a day feels like a severe deprivation/punishment with lycos mum on the reasons why.

northanger: are the Tzog-Murtha rituals related to greyhounds?

Nick Land: northanger - yes, it's going a little slower than planned ...

weird thing is, Shnaghai was struck by its most series typhoon since 1997 on Saturday - don't suppose that counts?

greyhounds?

and now i can't even get into movable type to change 'Shnaghai' into 'Shanghai' ...

northanger: typhoon matsa. (is that hebrew?) - hope you & yours well. but ... that shouldn't stop me from kicking you while you're down, should it? i'd be coddling you wouldn't i? can't have that.

ps. greyhound is piet-question re: saint dogface (aka, guinefort to his friends) from Le Moine et la Sorcière.

sd: www.msnbc.msn.com/id/8852928/site/newsweek/

northanger: "They are also far more sophisticated intellectually than we once believed. Babies as young as 4 months have advanced powers of deduction and an ability to decipher intricate patterns. They have a strikingly nuanced visual palette, which enables them to notice small differences, especially in faces, that adults and older children lose the ability to see. Until a baby is 3 months old, he can recognize a scrambled photograph of his mother just as quickly as a photo in which everything is in the right place."

great to see somebody managing to stay on topic around here.

Nick Land: Apologies for OT (it's sort of on the latent Zombie fugue sub-topic)

Found this discussion perversely interesting

www.michaeltotten.com/archives/000898.html

comment thread on whether fascism left/right wing phenomenon - many interesting points both sides

main thing though - the complete breakdown of intercommunication across current polarized political space (most commentators both sides think they're correct and opponents are obviously evil idiots - seems to me that's the world right now, with everyone much more comfortable and even 'productive' hanging in their own affinity groups) - anyway, for some reason finding the situation strangely paralyzing: everything that presses in as worth talking about produces a crashing reaction that is utterly sterile, entirely predictable, and a yawn even to anticipate - just producing bad temper all round. That's to say, the discourse of the 'others' just seems pointlessly uninteresting and repulsive - completely reciprocally, of course. Doubt there are even any events (let alone arguments) that could change this dynamic - even a nuke going off will just reinforce current alignments

realize those clinging on here at the moment are the least implicated in aforesaid phenomenon, but faced with triple option of self-censorship, wading into a morass of tedious trolly or sliding off for a whisky + CSI it's going AWOL that wins presently

trying to wrestle this into a point worth making in a post - clearly an Age of Khattak phenomenon IMHO

(when what you really want is to eradicate each other from the cosmos, linguistic exchange is bound to disappoint)

Valkator: "They are also far more sophisticated intellectually than we once believed."

-- this is not 'intellect' --

- A PROject to turn the fear-ridden human animal back towards the 'womb' -- functioning not with developing, conscious mind wedded to the 'child' of 'open' intuition (which would 'chart' in a different 'direction' altogether), but with mind shut off completely. Only ONE mind allowed to 'think'...a mind INSIDE...

August 2005

Fearing is believing

mark k-p (August 09, 2005)

Ian Softley's *The Skeleton Key* is about Hoodoo. Although in some ways similar to Voodoo, Hoodoo is Central rather than West African in origin. The American Blues is often linked with Voodoo, but it probably has more connections with Hoodoo. Hoodoo practitioners are explicitly referred to as twin entities - "two-headed doctors," "two-head women," and "two-head men" - since they consort with spirits that reside in their head. The names for the harmful spells they cast include such Lemurian borrowings as "jinx" "trick," and "cross".

The Skeleton Key sees city-dwelling hospice worker Caroline (Kate Hudson) engaged by Violet (Geena Rowlands) to look after her husband, Ben (John Hurt), a near-catatonic who has, it seems, recently suffered a stroke. In moving from the city to the bayous, Caroline shifts from an alienated ultra-modernity to an Oddubbian hinterland of rain-drenched swamps, spectre-haunted mirrors and scratchy Blues 45s. This is a genuine interzone: not quite dry land, but not subsumed under water; not the (post)modernity of the demystified American metropolis, but not a regression into the 'pure primitive' (associated with Africa). The ancient here is already mediated through Kittlerian machineries of recording (phonography and photography). The objective correlative for this 'time out of joint' is the decaying splendour of Violet's house, a remnant of Southern aristocracy (the nostalgia for which American Horror has been in thrall to since Poe), a structure sinking into swampland, whose shuttered attic room contains jujus, spell-books and recorded conjurations.

It is the presence of these stage-setting devices that have led some critics to dismiss the film as little more than a repository of hoaky cliches. But this is to entirely miss the reflexive role that such elements play in a film that is very much about belief. As Walter Cannon established in *'Voodoo Death'* and Wade Davis in *The Serpent and the Rainbow*, sorcery cannot work if its victim does not believe (both writers famously go to some lengths to describe the physiological mechanics by which beliefs become translated into physical ailments). Thus the insistent refrain in *The Skeleton Key*: you are immune provided you do not believe. But Caroline comes unstuck because, although she maintains the conviction that she does not believe until the end, it is clear to the audience long before then that she has crossed, imperceptibly, into the ranks of believers.

Caroline is a dupe, trapped by her own postmodern sceptical assumptions. Caroline's mistake is to subscribe to the postmodern doxa that there was a 'time in the past when people "directly believed"'. Conversely, she is also a victim of the view that indirect belief - 'belief through the other' - is not yet 'real' belief. Žižek describes this postmodern account of belief in *The Puppet and the Dwarf*:

'As Robert Pfaller demonstrates in *Illusionen der Anderen*, the direct belief in a truth that is subjectively fully assumed ("Here I stand!") is a modern phenomenon, in contrast to traditional beliefs-through-distance, like politeness or rituals. Pre-modern societies did not believe directly, but through distance, and this explains, for instance, why Enlightenment critics misread "primitive" myths - they took the first notion that a tribe originated from a fish or a bird as a literal direct belief, then rejected it as stupid, "fetishist", naive... Pfaller is right to emphasize how, today, we believe more than ever: the most skeptical attitude, that of deconstruction, relies on the figure of an Other who "really believes".' (6)

In *The Skeleton Key*, the Other who 'really believes' is - or seems to be - Ben. Caroline infers from Ben's horror of mirrors and his thwarted, pathetic attempts to escape the house that he has been 'crossed', or cursed. Or rather: that he believes he has been cursed. So Caroline rationalizes her initial interest in, and subsequent dabbling in, Hoodoo by reference to Ben's belief. Since Ben believes he has been Hoodoo-hexed, Caroline must 'play along' with Hoodoo ritual in order to cure him.

As soon as Caroline has begun to perform Hoodoo rituals, she finds herself a victim of the process that Pascal described when outlining his wager in his *Pensees*. In his conversation with an imaginary interlocutor, Pascal maintains that the cure for 'unbelief' is to literally go through the motions of the Catholic faith. Acting as if you believe will eventually produce belief 'in the heart'. Behaviour, particularly habituated behaviour, engenders belief. 'You would like to attain faith and do not know the way; you would like to cure yourself of unbelief and ask the remedy for it. Learn of those who have been bound like you, and who now stake all their possessions. These are people who know the way which you would follow, and who are cured of an ill of which you would be cured. Follow the way by which they began; by acting as if they believed, taking the holy water, having masses said, etc. Even this will naturally make you believe, and deaden your acuteness.' With Caroline, as in the case of someone who accepts Pascal's wager, we encounter the paradoxical phenomenon of 'belief before belief' - for Caroline to follow the spells is already to act as if there is 'something' to believe in. Before she knows it, the belief she has attributed to an Other

has become her belief. The litmus test here is the emergence of a particular affect - not, as for Pascal, faith, but fear. 'Fearing is believing', as Hume might have said when he claimed that Pyrrho's scepticism was refuted by his shrinking from a rabid dog.

At the beginning of the film, we are led to believe that all the mirrors in the house have been removed because malign spirits reside in them. But mirrors are, after all, a powerful tool of white magic, the guarantors of an illusory consistency of identity, and their removal precipitates Caroline's displacement from her familiar symbolic universe. It corresponds to the misrecognition necessary for her duping.

Comments: Fearing is Believing

Nick Land: on Oddubbian hoodoo semiotics, noticed the other day there's a (fashion?) chain called "U'db" - supposedly abbreviates "You would be" (but that sounds like a cook-up rationalization to me)

piet: discovered a mistake mastah, you tope: Acting as if you belief

mus sorely be: Acting as if leap of faith suspencdt greenery on high up;

ack as if you be leaf, see leaf command leaf to suspend itself or better yet command (wack) rock to support partial metamorphoses of itself into truncation and suspend itself as leaf therefrom

northanger: piet. i've finally figured it out. you're the fucking fifth teletubby! the fifth element! (tearing out hair)

piet: you got hair lef???

northanger: {massively cracking up} yes. just a little though.

triad: Piet - fuck off.

Nick Land: triad - chill! (it's not as if piet is the source of the current malaise - think it would be OTT to say 'quite the opposite', but absurdly tempted)

northanger: *The litmus test here is the emergence of a particular affect - not, as for Pascal, faith, but fear. 'Fearing is believing', as Hume might have said when he claimed that Pyrrho's scepticism was refuted by his shrinking from a rabid dog.*

wouldn't another "affect" be a feeling of "diminishing returns"? (not quite the way to put it since it's a flip-flop actually). Caroline practices hoodoo to help Ben. normal

response of a caretaker to decipher what ails the patient. i think diminishing returns involves the level of "belief". to the extent Ben believes Caroline must believe. ie, if Ben's curse is a 10 (worst), Caroline's belief must equal 10 (highest). since she dabbles at first, it's a 1 & nothing changes. however, before reaching 10 i'm assuming Caroline hits a midpoint (5) where she realizes ... fear? the difference between healing Ben of his imagination vs. healing Ben with Hoodoo. & becoming the two-headed wo.man. motivation changes then.

why does this blog think "wo.man" is "questionable content"?

Nick Land: *why does this blog think "wo.man" is "questionable content"?*

quite a few plausible reasons spring to mind ...

northanger: geez. nick. that the best you can do?

redd: why would you talk bad about something that you really don't about , keep fucking with spirt

do you be leaf

AOK

Nick Land (August 09, 2005)

At the 1999 Syzygy Event at Beaconsfield, London, certain Ccru elements reported - albeit in a fragmentary, time-twisted and in many other respects confusing fashion - that the Architectonic Order of the Eschaton planned to ritualistically welcome the transition to “The Age of Katak” at the dawn of the new millennium. (Some (delirial) hints here.)

The problems with this pronouncement are legion. To note only the most obvious conundrum: Why should a hermetic Atlantean organization have been preparing to celebrate a Christian calendric event in the name of a Lemurian entity?

Despite such concerns, the Age Of Khattak (AOK) has proven bizarrely prophetic.

Portrait of a parallel killer

Khattak is a Great Lemur of distinctive temperament. Her colour is RED (= 54), her totems fanged and clawed. She is the sole Syzygetic Lemur to respond to a non-involutionary rite, the one which Echidna Stillwell describes (in a letter to Peter Vysparov) as “raking through the entire cycle of time with the talons of ... infinite ambition.”

Khattak’s most prominent feature is her densely overdetermined seizure of unity, in all its senses of atomism, centrality, completion, comprehension, integration, monomania, monopoly, monotheism, oecumenon, totalitarianism, and doubtless many others. She is internally articulated by a single step of minimal difference, positioned at the centre of the Barker Spiral, and all-enveloping in her passage around the Hex. The comprehensive rite of Khattak is, on its own, central, unique and totalistic. Numogramatic confirmation of all this is extremely straightforward, and need not concern us at this point (see here).

Khattak feeds on conflict, rendered incessant by the comparative indecisiveness of advantages and the unlimited intolerance of agendas. Her wars are both total and skewed towards inconclusiveness, demanding absolute resolution with the same emphasis that they frustrate decision. They are thus characterized by an utter yet insatiate animosity. If Khattak has a ‘logic’ it is akin to a collapsed Kantian dialectic of irresolvable - yet unsurmountable - antagonism: a perpetually re-animated, furious

collision of certainties. I love everything you hate and hate everything you love, for ever.

Among the true Tribes of the Sumatran Nma, the (khattakite) Tak were notorious for their exceptional savagery. Fittingly, these brutes were exterminated by the eruption of Krakatao.

The Pylon of the Atlantean Cross corresponding to the lair of Khattak (on the Numogram) bears the name: Apocalypse.

(to be continued)

Comments: AOK

northanger: 54 = AOK

Nick Land: yup

northanger: if i ask you why a hermetic Atlantean organization celebrated a Christian calendric event in the name of a Lemurian entity, you'd just say: then it wouldn't be a most obvious conundrum. wouldn't you?

Nick Land: genuinely discombobulated by the phenomenon

northanger: me too.

Nick Land: well that's a start

northanger: yup. the sensation is like blending together purple butterfly dreams of the dead with the endless sound of HU (divine utterance) ... in a nutshell: being touched by His Noodly Appendage (venganza.org). IMHO, AOK reveals celestial jerusalem + axsys-intermeshed by decrypting the command structure of the cybernetic process revealing a fearful asymmetry with the wand of double power. (or, william burroughs maybe).

Nick Land: my guess, northanger, is you don't feel chronically enraged enough for the Khat to get her claws in ...

On the Atlantean World Order - Basis of philosophy / Idealist Politics

Plato's quite clear on the subject (Atlantis as Ideal State) and Kant's references also quite stark ("Pillars of Hercules" etc). Note affinity between Platonist revivalism and totalitarian politics even today.

The fact Atlantis never existed just makes it more dangerous.

Was the Emperor Constantine an Atlantean agent? Was Jesus?

Anyway, the AOE ensure major bloodshed, so that's probably enough to get Khattak sniffing around ...

northanger: geez nick.

hey, check this out: mmothra.blogspot.com/2005/08/dragons-over-tibet.html

Nick Land: "geez" - exactly

northanger: chronically enraged = what is the hyperstitional purpose to this suggestion?

actually, must admit i got "thrown" reading your suggestion. only making me made at YOU.

made=mad

whatever

i'm pissed off, i tell ya!

Atlantis was done in by a tsunami. did you know that?

Nick Land: northanger - it was intended as a compliment, but feel free to smoulder furiously and join the Aeon of Carnage ...

PS - can't respond to the off topic thread on this computer (at work) it's too crap - also, don't see why your comments there are off topic

northanger: nick. finished nervous breakdown & feel loads better. taped over "northfrikriing futhnorkery" button so nobody steps on it accidentally. please accept apology.

[1] why is the fact Atlantis never existed dangerous?

[2] ironic you mention Atlantis considering NASA's space shuttle program on hold until flying foam problem fixed. Atlantis space shuttle next to launch. hyperstitional parallel?

[3] well, for me, if it's "off topic" it's unimportant. thereby maintaining certain level of hyperstitional deniability.

Nick Land: northanger - also found strange apocalyptic impulses guiding my finger to the "northfriking futhnorkery" button - agree it's best taped over until things get really bad ...

1. This seems key issue IMHO, and still somewhat underplayed. Subterranean allegiance between irrealism and idealism (once again, Plato monumentally central example) has very real consequences. Hoping we can get back to this when some 'sd' topics - associated with scientific realism in general and evolutionary psychology in particular finally approached here

2. Shuttle Atlantis - got to be something there. What with Al Qaeda making a big thing out of the Columbia disaster for theosymbolic reasons, seems there's a lot going on in US space-program eschatology.

3. Fair enough

northanger: *This seems key issue IMHO*

i'm all for talking about the key issue here. what is it?

btw, thought you might like to know--

news.xinhuanet.com/english/2005-08/07/content_3320913.htm

Typhoon Matsa made landfall at Ganjiang town in Zhejiang Province at 3:40 AM (1940 UT) Saturday,06-August and moved northwest toward six major cities, including the provincial capital Wenzhou.

AQ 135 = GANJIANG = KHATTAK

thanks for accepting apology.

Khattak's most prominent feature is her densely overdetermined seizure of unity, in all its senses of atomism, centrality, completion, comprehension, integration, monomania, monopoly, monotheism, oecumenon, totalitarianism, and doubtless many others. She is internally articulated by a single step of minimal difference, positioned at the centre of the Barker Spiral, and all-enveloping in her passage around the Hex.

[1] does Baker-Spiral begin with 0 or 1?

[2] does Baker-Spiral include double-, triple, etc, digits?

[3] can negative numbers be used? ie, $(35)+(-25)=10$

[4] if #2 yes, does Baker-Spiral max out? ie, what's the highest postive number?

[5] therefore (if #2 yes), nine-twin side of the spiral includes multi-digit & negative numbers.

note (piety'll like this one):

$$1+9 \quad | \quad 0+9 = 19$$

$$4+6 \quad | \quad 3+6 = 19$$

$$2+8 \quad | \quad 1+8 = 19$$

$$5+5 \quad | \quad 4+5 = 19$$

$$3+7 \quad | \quad 2+7 = 19$$

clarify my question:

does spiral iterate

$$1+9 \quad | \quad 0+9 = 19$$

$$5+5 \quad | \quad 4+5 = 19$$

$$3+7 \quad | \quad 2+7 = 19$$

$$2+8 \quad | \quad 1+8 = 19$$

$$4+6 \quad | \quad 3+6 = 19$$

$$3+7 \quad | \quad 2+7 = 19$$

$$1+9 \quad | \quad 0+9 = 19$$

$$5+5 \quad | \quad 4+5 = 19$$

$$4+6 \quad | \quad 3+6 = 19$$

$$2+8 \quad | \quad 1+8 = 19$$

or is it continuous?

$$01+09 \quad | \quad 00+09 = 19$$

$$04+06 \quad | \quad 03+06 = 19$$

$$07+03 \quad | \quad 06+03 = 19$$

$$02+08 \quad | \quad 01+08 = 19$$

$$05+05 \quad | \quad 04+05 = 19$$

$$08+02 \quad | \quad 07+02 = 19$$

$$03+07 \quad | \quad 02+07 = 19$$

$$06+04 \quad | \quad 05+04 = 19$$

$$09+01 \quad | \quad 08+01 = 19$$

triad: Nick, Northanger and poet Piet: the sad trinity of Hyperstition. the good, the bad and the ugly; the mother, the son and the holy shit! What ever happened to this blog? Can Reza be resurrected? Has Undercurrent permanently gone underground? Has Mark KP irrationally frozen over? There's no creative friction here, whatsoever, no critical reflection on the development of the site. Maybe this is why Reza has given up ...

quadsquad: from 'the four strenghts':

kin con: Pleroma is Altansit yes?

stony roller gives a (kh)attackian 'van katoen' (=a beating): "How come you're so wrong? My sweet neo-con, where's the money gone, in the Pentagon," goes one refrain.

The song also includes the line: "It's liberty for all, democracy's our style, unless you are against us, then it's prison without trial."

northanger: AQ 554 = DIGITAL EBOLA GUERILLA OPERATIVE = SAD TRINITY OF HYPERSTITION

works for me.

Nick Land: triad - missing Reza too (and Undercurrent) - R. hasn't 'given up' by the way - he's dealing with complicated life problems - so hopefully he'll be back in the not too distant future

afraid i have to agree with your criticisms viz present state of uninspiring drift - I'm probably most responsible for that (along with one particularly obnoxious troll), friction has gone from being productive to merely rancorous and the hyperstitional trajectory has gone all space-shuttle ... it's a miracle the loyalists are hanging on at all right now

northanger: hyperstitional patriots like quagmires.

Nick Land: OK - hope we can elevate things to the quagmire level

bashing my brain against the question whether there's a 'hyperstitional agenda' that commands sufficiently broad support here to mobilize a wave of libido - whajja think?

oh, also don't understand where all those 19s are coming from - aren't they supposed to be 9s (the version on your own site just as confusing)

northanger: *a wave of libido*

yikes. sounds tsunamic. go ahead.

10-summing on the left & 9-summing on the right = add those together you get 19.
btw, four Zoas of Revelation seem awfully Teletubby-like to me.

nineteen the hyperstition linkage between AC-CA Plate Shift // Quran (piet) & Barker-Spiral. $1+4+4=9$ suggests relationship with zygonovism.

144 = GOG-MAGOG = HULUGU

FOLD = SHIA = WHO = HOW

NINETEEN = 25143 ITOKAWA = ASHEMOGHA

FOLD THE HEAVEN = NINETY-THREE = TIC-SYSTEMS = COLONEL WEST

ONE-NINE = SHANGHAI

ha. CHARLES LUTWIDGE DODGSON (aka Lewis Carroll) = FOUR ZOAS OF REVELATION

re: base-10, decadence

wikipedia reports a someone figured out the word for PURUCHUCO (or, PALACE OF PURUCHUCO) in some knotted khipu¹¹⁵ (=knot in Quechua; for some hyperstitional mileage on Quechua see tv-show, "The Sentinel" about a former with heightened senses). Gary Upton and Carrie J. Brezine of Harvard University designed computer program evaluating 21 from a site in Puruchuco (near Lima). wikipedia¹¹⁶ : "A khipu usually consists of colored cotton cords with numeric values perhaps encoded by knots in the base-10 positional system." khipu consists of different colors & lengths with a "ranked pattern" & three levels of authority with info passing between them¹¹⁷. somebody else noticed khipu similar to binary code & perhaps written in seven-bit sequences.

AQ 207 = PURUCHUCO = FORTY-FIVE = EPOCALYPSE (see key23)

the obvious association with retrogradience

retro(backward) + gradi(to go, step) or gradience(fuzzy, vague?)

lovely word. help me with the meaning since i don't see "retrogradience" in the barker-spiral (or the dictionary). how is this obvious?

nutshell: Law of Time (lawoftime.org) states 13:20 = universal frequency of synchronization & 12:60 = artificial timing frequency. 13:20 represents Thirteen Moon/28 day calendar; 12:60 represents 12-month calendar / 60m/60s. the suggestion is to return (or retrograde) back to 13:20 resonance. "Change the calendar and you change the time. Do you want a time of war - for how many more years? Or do you want a time of peace? Which do you prefer - harmony or disharmony? It is all in the calendar you use..." ie, changing calendar defuses Khattakian force.

what's interesting about this retrogression is the "Closer of the Cycle" — José Argüelles. on 03-March-2002 at a gathering in Teotihuacan (organizing five circles & walking the Avenue of the Dead) he is given a ceremonial staff called a "baston". a black obsidian sphere rests at the top completed by an obsidian knife looking like a "strange galactic indigenous Excalibur sword".

¹¹⁵ khipu image - www.ec.ryerson.ca:8080/~elf/abacus/inca-khipu.html

¹¹⁶ en.wikipedia.org/wiki/Khipu

¹¹⁷ sciam.com/article.cfm?chanID=sa003&articleID;=00025A73-B58C-12FB-B58C83414B7F0000

John Dee also used a black obsidian mirror during his Enochian scrying. in Portland Oregon there's a dimensional anomaly called the Mystery Hole with geometric codes, crystal tower & a black obsidian mirror. a black obsidian mirror also replaces one of Tezcatlipoca's feet; his name means "smoking mirror", the god of the Great Bear constellation. "A protean wizard, he caused the death of many Toltecs by his black magic and induced the virtuous Quetzalcoatl to sin, drunkenness, and carnal love, thus putting an end to the Toltec golden age. Under his influence the practice of human sacrifice was introduced to central Mexico." all striking examples of the (Khattak?) power & use of black obsidian mirrors.

what are the essential elements of the 13:20 resonance (time system). how can we hook this into the barker-spiral (or, is it already there)?

Nick Land: northanger -

"add those together you get 19" - my problem, that's hard-core Atlantean propaganda (return to unity) - no coincidence the Centience cults SUBTRACT 19 from all oecumenic (20th c.) dates

"four Zoas of Revelation seem awfully Teletubby-like to me" - the plot thickens - are you ready to assign color-spectrum order (and aerial types) to the Zoas yet?

"144 = GOG-MAGOG = HULUGU" - cool (R. should like this one)

can't process khipu yet - bound to be interesting (or knot)

trouble for me decoding last piece is that the Khattakite calendar is still so obscure - existing fragmentary Ccru records imply link to the precession of the equinoxes, but hard to see any solid basis for this ...

reading an excellent book on Dee at the moment (The Queen's Conjuror by Benjamin Woollet, who's also written stuff on VR (also good)) - guess you know it (by heart?)

northanger: "return to unity" - how's that old fable go? old man with seven seven sons: each of you get a stick! now break 'em! go get more sticks! put em together — try breaking them now! stick together!

colorful zoas (why me?) is this ok?

astrologyweekly.com/astrology-articles/colors-zodiac.php

baker-spiral = 90 steps, repeat pattern. zodiac wheel = 360° or 90 x 4. correlates to Four Zoas dudes + Four Enochian Tablets (Sun Kings) & other four thingys. above link starts color at Aries 0°. correction from post at my place: since an anus is oval in appearance, zero point switched to Scorpio 27° (open to suggestions however, still in my eichen phase):

+Zero Point = Scorpio 27° (Asteroid Orchis)

+Barker Spiral = Virgo 19° (triangulating 25143 Itokawa & 2174 Asmodeus (ASHEMOGHA))

[1] Zero Point establishes Eon Phases, the 36 resonance between two planetary objects.

[2] Barker Spiral - begins at Virgo 19° = "zipper" attracting all twelve 19 degrees. do not think this describes 12-ray star. imagine zodiac wheel, move outward in space. not saying final figure looks like this, but imagine lorenz attractor overlay (en.wikipedia.org/wiki/Lorenz_attractor) hitting all 19°. that's why i think color coordinates go here.

thoughts? big question mark for me: which one is "phase space"? - en.wikipedia.org/wiki/Phase_space. Eon Phases based on moon model & doesn't necessarily (methinks) suggest true phase space. helpful calibration here welcome.

precession of the equinoxes :: extending point #2 above. look at last pic: en.wikipedia.org/wiki/Precession. what do you see?

VR = virtual reality

future.wikicities.com/wiki/Virtual_reality

it's very difficult, innit it?, to drop out of the reality game of reward & punishment & drop into the virtual game of life.

aerial types?

Nick Land: types of antenna

The Capitalist Thing

CCRU-Shanghai (August 12, 2005)

This blog is not primarily political, in the sense of partisan (although of course I love northanger's notion of "hyperstitional partisans" - even if it is hard to read this as anything other than anticipatory, at best). For that reason it is easy to be distracted from topics which trigger intense partisan rancour, aiming somehow to avoid them. The trouble is, as everyone knows, such topics are precisely the ones everyone really cares about. Either we find a way to discuss them productively here, or we learn to tolerate perpetual seething hatefest - or we might as well give up.

First consider 'Capitalism.' There is really no doubt that whatever is happening on this planet is doing so under conditions guided by capital production. Whether affirmed or negated, the primacy of 'capitalist' imperatives is assumed, if only because the zones of maximal regenerative capital formation (the USA, China) exert such extraordinary pressure on their relatively retarded contemporaries ('retarded' defined within the framework of 'capitalist rationality' of course). Marx certainly had no doubts about it, and if his successors have radically transcended his stance in this respect they have kept very quiet about doing so. Islamism, too, is quite explicit about 'capitalism' as the negative definition of its ambition - 'after communism, capitalism' (to the grave, and if anyone really has a problem with the citational basis for this, I'll dig heaps up).

Those who think capitalism is the biggest thing happening in the world today (for better or worse or whatever) thereby define themselves as 'Western' by default, insofar as they implicitly marginalize the resurgence of Islam - the only militant antiglobalism that disdains the dialectics of Occidental politics - treating it (from Left or Right) as principally a reaction to the imperialistic/liberatory transformations flowing from economic liberalization and its globalizing dynamic. Islamist economics is an increasingly significant topic in its own right, but I suspect very few on the left yet consider it a decisive one. The effect of Edward Said's critique of orientalism has been that, in 'politically correct' circles, taking too much interest in the positive content of Islamist doctrine has become basically taboo. If Islam is 'the Other' - i.e. primarily a Western phobic pathology - there is no particular need to investigate it. From the perspective of the genuinely pro-capitalist (as opposed to social conservative) right, on the other hand, Islamism is merely an impressively vigorous

species of medieval barbarism, and thus of interest solely for purposes of military intelligence.

It would be tempting, therefore, to set the entire Islamism question aside, were it not for the fact that it so dominates the practical opposition to the planetary capitalist agenda. It is probably asking too much of the left to solicit their concurrence to the thesis: Contemporary anti-capitalist revolutionism necessarily takes an Islamist form (even if Carlos ‘The Jackal’ and George Galloway are prepared to). To the right, however, this thesis is basically uncontroversial.

For an Anglospherean Westerner, the priority of capital is not in doubt (any more than it was for Marx, or is for Chomsky). So what is ‘capitalism’? How much can be agreed, or at least discussed, before descending into partisan bickering about its legitimacy?

‘Capitalism’ deserves scare quotes for the simple reason that it is quite evidently a hyperstitional construct of extreme importance. Any modelling of capitalism already serves to mobilize desire in particular directions, either supportive or oppositional, with multiple variations of each. The right describes ‘capitalism’ in order to enhance its realization, while the left seeks to condense the image of an enemy to be deposed. Unsurprisingly, from the right capitalism appears woefully under-achieved, while from the left it takes on the aspect of an all-encompassing despot.

Since Marx is most responsible for consolidating ‘capitalism’ as an object (even if, as Gillian Rose insisted, he himself never used the term), the Marxian critique merits specific attention. The fact that the subsequent critiques of Marx’s own analysis, by Boehm Bauwerk, Schumpeter, Wittfogel, Hayek, Braudel, Deleuze and Guattari, Lyotard, and - most arithmetically incontestable - by the ‘transformation problem’ raised by Marx himself in the 9th chapter of Capital Vol. III, suggests that the hyperstitional work accomplished by the Marxian project was not to be undone by mere conceptual refinement or traditional criteria of logico-mathematical refutation. Once ‘capitalism’ was conjured into manifestation as a hyperstitional object, it was no longer to be dispelled by anything less than a right-wing cultural revolution, a project that has consistently exceeded the capabilities of capital’s advocates (who have consistently fallen back upon reactionary alternatives, most prominently: Christian religiosity).

‘Capitalism’ no longer describes an analytically coherent totality, such as a ‘mode of production’ rigorously comprehended by antagonistic theory. It is now a proper

name, the Thing taking place, an occurrence or happening, no more in need of exact portrayal than a cyclone, an earthquake or a meteorite impact.

The right have always been reluctant to acknowledge the shocking singularity of capitalism, so disruptive of conservative assumptions and universalistic complacencies. It seems that the left has now joined them, happier with pronouncements of emotional allegiance than analytically defensible commitments. Almost everyone would probably prefer to avoid the hard task of precisely defining the singular course of terrestrial inevitability under the conditions of capital's pilotage (social conservatives are unlikely to be enraptured by its destination). That is no reason for hyperstition to evade the question.

Let the s**t storm begin ...

Comments: The Capitalist Thing

northanger: "The Capitalist Thing" - like the idea of mobilizing waves of parasitical libido. how does it feel to be the eye of the storm? however, you are not alone (Sit your bag o' bones down and put your feet up = comfusionreview.com):

"Comfusion represents an in-depth voice in the ongoing dialogue within both the popular and alternative culture. We approach the current and accepted schools of thought from a comparative perspective. Comfusion examines each topic within its social context—historical and present—in an attempt to inform. We open the door to dialogue and debate. We aren't here to "preach to the choir." Comfusion recognizes the potential for social and ideological conflict. Our editorial staff struggles to present divergent views with the intent to get past polarizing rhetoric and enter into a dialogue that will explore beyond the surface. This staff is composed of people that adhere to the Left, the Right, and the Center of the political debate. The dialogue may become heated and intense, but we are committed to engaging in a healthy tension that seeks cultural understanding through open dialogue. To comfusion, separate does not mean divided. We continue forward with the idea that our current cultural transactions provide the occasion for a discussion of their human context."

[2] Orientalism (overview)

www.english.emory.edu/Bahri/Orientalism.html

[3] Edward Said @ Wikipedia

en.wikipedia.org/wiki/Edward_Said

quote :: "Don't aim at where your enemy is now, but where they will be in the future."

Nick Land: northanger - confusion magazine 'a slacker's guide to awareness' (wtf?)
- "separate does not mean divided" sounds a bit huggy-bunny

northanger: yeah. should have posted this:

never engage a superior enemy directly; however, recognize your enemy's areas of gradience. direct engagement ends in declared victory—even for the nominal—leaving the "enemy" defined & "defeated". the superior enemy can then relax. identification engages all agents (cannon fodder) to participate in warfare.

i was working on a treatise about the etymological meaning of WAR. with footnotes & everything. how WAR in Book of the Law needed some rethinking. & how i was going to start using Crowley's commentary on same as toilet paper.

Nick Land: "i was working on ..." - has this project been abandoned?

Beckerath: cheer squeel proest proost and the obligatory bow . . .or are you trying to put your piet on?

if we can stop with upping and measuring speed (quantity) we might find the time to start enhancing quality op place

Nick, try link at the bottom or www.butterbach.net/epinfo/MBCContentsWeb.htm
785K

sd: Capitalism is a system, not a meme (faith, ideology). Some memes support and foster its growth, and other memes attempt to limit or abolish it. Capitalism as a thing in itself is neutral: it is fully compatible with democracies, fascism and slavery.

Jared Diamond (Guns, Germs and Steel) identifies the arrival of food production 11,000 years ago as the crucial turning point. Before food production, all humans were hunter-gatherers. Once homo sapiens started farming and domesticating animals 11,000 years ago (a blink in terms of evolution), it had surplus on its hands. Surplus leads to free time (from hunting and gathering) which leads to elites not involved in food production (scribes, administrators, soldiers). Close contact with domesticated

animals also meant homo sapiens had a lot of viruses on its hands. These viruses were used to conquer the American continent and initiate globalization 500 years ago.

The obvious system to arise from the surplus provided by food production is Feudalism: a system which allows trade, but tends towards the land and humans being chattels of a despot.

The other potential system which lies dormant in food production is Capitalism: a system which tends towards privatization of the land and production and commodities being private property.

Communism is a parasitic meme, defining itself in its opposition to Capitalism. The code of the Marxist Communist virus (MXV) splices code from the Christian meme: Capitalism is 'wrong' because it is exploitative trade (time, energy and skill in return for less money than the 'capitalist' makes). There are no objections to Capitalism which are not moral. Despite the fact that exploitation (or, without the moralism, trade) is a basic fact of cellular life, MXV seeks the abolition of economic exploitation (rather than its regulation). Leninism, a mutant strain of MXV, MXV-LNV, continues the moralistic objection to Capitalism and advocates the seizure of power because it identifies all democratic parliamentary process as being inextricably tied to Capitalism.

Communist utopia is profoundly at odds with the design specifications of the bipedal primate that goes by the name of homo sapiens, a biological machine that is designed to survive and serve the interests of the genes that built it. To prevent Capitalism (in the form of competitive trade) from happening despotic Feudalism has to be imposed. Because the country it ravaged was starving, LNV was forced to reintroduce Capitalism in the form of the NEP (New Economic Policy). This was a temporary measure undertaken by a virus that wanted to avoid dying with its host. Lenin's dictatorship mutated into Stalinism, MXV-LNV-SNV, which officially abolished Capitalism by imposing an utterly despotic Feudalism in which homo sapiens became the property of the state, raw energy to be dragged out of its bed in the middle of the night and sent to dig for gold in Siberia.

It is no accident that the contemporary left is converging with Islam (a feudal faith meme). The current strain of MXV-LNV propagated by Badiou and Zizek repeats the moralistic outrage of MXV and seems to have thoroughly debilitated minds which might have been expected to be a bit more resilient.

The only alternatives to letting Capitalism happen are returns to Feudalism or hunting and gathering. It is impossible to find 'Capitalism in itself': you will only ever find Capitalism operating in the different shapes that human societies let it have - ranging from the commodification of humans in slavery to the libertarian freedom of humans with legally defined rights.

piet: linked under my name this time is a long simple flash by Ken Schoolland starring the traffic light people, set to classical music and admonishing us to not steal murder and something else. Christian Butterbach goes apeshit lyrical over it, totally: www.butterbach.net/blogs/net/notewok.html strange enough, he calls the entry 'poo in our lunchbox' but the previous/next entry is a rant against viruses and/or malware or something .. .

before he gets to that however, he finds the time to remark (about the flashanim.):

General Smedley Darlington Butler (USMC)'s classic 1935 essay, "War is a Racket" is the only other presentation I have ever found that hits even close to the mark that you have nailed spot-on. The two certainly amplify each other remarkably well as I find them. Have you goodly and well-educated folk possibly read General Butler's racket-busting essay?

If so, I am doubly glad. If not, a click on:

[//lexrex.com/enlightened/articles/warisaracket.htm](http://lexrex.com/enlightened/articles/warisaracket.htm)

will take you there. The conceptual lines are so closely parallel to your own that Cat Stevens' beloved classic lyric 'Peace Train' could surely run on 'em true and at full speed without ever crashing, all the way to the end of the line. (Wow.)

Um, one question on another parallel line - and maybe this is the Peace Train's "Third Rail": I /think/ we all understand the nature of genuine wealth here. Your own anim makes it plain for the clueless, right as rain. For my part: I have lived by these principles every day for many, many years, and have at times fought most vigorously and in extremely unusual ways to protect myself from their loss at the hands of ill-hearted and occasionally murderous and/or thieving others. So what's all this then with all the "Peabody Coal grade" paper scrip that we find in use worldwide as a medium of economic exchange, and no gold or other material element actually backing such purportedly legitimate economic currency as this?

Maybe I am merely being an ignoramus on this point. If so, kindly do set me straight, please? But I really at this point do not believe, quite unlike what my college economics professor once vigorously asserted many years ago, that actual economic wealth can indeed be in any way stored, let alone created out of thin air, with the "help" of a little rag paper and a few drops of elaborately configured ink, even if they are both of the very best quality that, yes, some of that oddly-conceived paper money can indeed "buy". So is there to your knowledge some other animated presentation of a quality similar to yours? One that you would confidently refer a truth-finder to for clarity with respect to this particular (and too-often deliberately confused) aspect of the economic entirety? If I am not wrong about this apparent absence of actual goods or materials providing legitimate "backing" for the "currency" and there is indeed such an anim or video as this requested item, thank you once more indeed!

I shall share your animation with all whom I find at all receptive. I shall make certain my browser brings it up automatically in its own tab so I shall not have to fumble and twiddle while guests are standing by. Creator bless and protect you and yours throughout the remainder of the foul times that those fine-hatted and now paperlessly "elected" officials of ours have once again thrust us into - excuses, fnoords, whining, and all! We shall somehow survive this madness. Are we yet all sufficiently meek as to be found worthy to inherit what's left of the planet once the bullies have devoured their spoils and deposited their poo in our lunchbox, in your view?

Oh, one last point. Just so nobody is walking around getting all confused about the present-day War on Terror: We are not "embroiled in another world war", oh no heaven farfend. No, we are merely at present "engaged in a global conflict" against a too-conveniently gone-invisible foe or faux, depending on the speaker's POV and the greed behind it; nothing more than that. Some fine-hatted man said it on NPR just a couple of nights back, as I drove across town to sweep up and help with closing the grocery store where I exchange a little of my leftover time and energy for a little of my friend's leftover take-out food. (Now that works.)

With cordial respect,

Reverend Pastor Charlene WT Mann (ULC)

First Peoples' Church of the Forbidden Truth

(A Global Funny Hat Medicine Society Affiliate

and ICKR Curmudgeonry Licensure Agency.)

*) also on BUTTERBACH.NET: www.butterbach.net/ken/kenandkerry.htm ~~ and should you not have guessed already, "WT" above stands for "Walking Turtle"!

Christian Butterbach, 10 August 2005, 21:22 GMT+1

correction: Christian is quoting Charlene WT Mann the whole way through but it's not clear (wondered what happenend to his usually stiffy style ((the title is perhaps 'indic(t)ant')), .. .wondered how on earth it got so gushy rushy ..).

apology: I overquoted a little, whoever can and feels like pruning it a bit, no objections here.

bit of a mystery for now; can't find no charlene anywhere and only this one citation at christian's site .. .

sd, you cannot condemn and at the same time neuter (as a toned down sanctification?) parts / aspects just bycause you think they are at cross purposes --- the linearity of letter word meme system and systemicism strings are such that the challenge is to balance the act of such loose rope loop whee G boardcrossage without getting to G ordian about it and crash cause you lopped off something deemed evil parasitic or at least expendable (the untold harm done in bio-industriously dust-free gmo labs will make the harm of nukes pale in comparison and the latters harm was, for those in possession of keen senses and judgement, already paling in the face of what the gmo forerunners, now pushed back into runnerupperdom, to with agri-chemicals, wrought.

Nick Land: sd - total agreement

If "There are no objections to Capitalism which are not moral" or moralistic (i.e. denunciations without intrinsic economic rationality) can there be any discussion of capitalism at all across the right/left (pro/anti) rift?

If not (third in series of dependent assumptions - and it would be more interesting if this tower of bricks actually toppled somehow) what to make of the perpetuation of the parasitic total denunciation meme?

Also interesting questions about its 'habitats' (academia/media/bourgeois professions etc.), can modernizing societies produce cognitive social organs without these tipping over into black-holes of parasitic denunciationism? (perhaps only under conditions of rigorous mathematical and natural scientific discipline?)

piet - not getting 'essence' of Beckerath, but first quote seemed interesting (and reverberated with sd's basic point)

perhaps focus of attention should switch from capitalism to moralism?

hmmm

northanger: *"i was working on ..." - has this project been abandoned?*

nope, should have it done by the time Reza gets back (honest). Itokawa/hawk/quarry links look fruity. answer questions in other post why doncha so's i can finish latest obsession.

piet. speaking of obsessions.

Nick Land: parasitism description very illuminating IMHO, because the most obvious way of terminating a parasite is to isolate it from its host

no coincidence that all communist societies implode - producing excellent conditions for rational social progress - sort of sad that the lefties talk about capitalism as suicidal ...

northanger -

"answer questions in other post" - on other thread?

'Phase-space' is a geometric representation of behaviour, allotting a spatial dimension to each aspect of machinic variance and time represented by the trace length (line) depicting the behaviour in question

(was that the question? (are there more??))

sd: *can there be any discussion of capitalism at all across the right/left (pro/anti) rift?*

Not really. There little chance of a brain suffering from MXV or MXV-LNV will be allowed to entertain the idea that it is possibly infected. The parasite is adept at mutation and camouflage, and is able to (re)infest universities and new generations of intellectuals at ease.

Dawkins' concept of a meme virus (1993) needs a thorough service and update, but his basic distinction between a meme (e.g. language) and a meme virus (e.g. faith) is

that a meme virus will not allow itself to be subjected to a critique. A meme virus simply wants to replicate itself, from head to head.

www.simonyi.ox.ac.uk/dawkins/WorldOfDawkins-archive/Dawkins/Work/Articles/1993-summervirusesofmind.shtml

MXV is profoundly viral at the section of its code where it claims to be determined by social relations in an inevitable historical process. The proof is always in a virtual pudding - any critique of the chef or the ingredients are automatically disposed of as representing hostile class interests. MXV-LNV pushes emotional hot buttons (e.g. resentment: the Bolsheviks would not have been able to hold power if LNV had not encouraged mass revenge) and reactivates Christian judgement to such a point that productive communication becomes impossible.

"The patient typically finds himself impelled by some deep, inner conviction that something is true, or right, or virtuous: a conviction that doesn't seem to owe anything to evidence or reason, but which, nevertheless, he feels as totally compelling and convincing. We doctors refer to such a belief as ``faith."

The virus has no scientific critique of Capitalism. LNV is the most powerful biological weapon that has ever been used: it was sent, by Germany in a sealed train, into the power vacuum that opened up after the February revolution. The texts which enabled LNV to seize power, first of all by introducing the new mutant strain to the Bolshevik Party, are the Letters from Afar and the April Theses:

www.marxists.org/archive/lenin/works/1917/lfafar/index.htm

www.marxists.org/archive/lenin/works/1917/apr/04.htm

These texts rely solely on moralistic vitriol in their condemnation of 'predatory' Capitalism. Capitalism is treated as an ideology which is synonymous with Imperialism, which is synonymous with WWI. This fundamentally unscientific and simplistic code is the DNA still programming the anti-Capitalist left.

As Nietzsche predicted, the conflict will ultimately pan out into humanistic moralism vs. scientific critique.

"Scientific ideas, like all memes, are subject to a kind of natural selection, and this might look superficially virus-like. But the selective forces that scrutinize scientific ideas are not arbitrary and capricious. They are exacting, well-honed rules, and they do not favor pointless self-serving behavior. They favor all the virtues laid out in

textbooks of standard methodology: testability, evidential support, precision, quantifiability, consistency, intersubjectivity, repeatability, universality, progressiveness, independence of cultural milieu, and so on. Faith spreads despite a total lack of every single one of these virtues." Dawkins 1993

mark k-p: Can there be any condemnation of Islamism which isn't intrinsically moralistic? If moralism is the problem, why bleat on about (islamo)fascism? Or are hysterical denunciations of Islamism to be regarded as neutral scientific discourse?

Elementary logical error - islamism is anti-capitalist therefore all anti-capitalism is islamist. (I agree that Islamic Marxism is the way forward, but that's another story...)

As for sd's tiresome 90s Nietzscheanism - where do we get off the bus with this (Dawkins for fuxake!): no point using Nietzsche as a reference if you have a problem with moralism, since Friedrich famously thought that there was no escaping evaluation (certainly not by escaping into Cambridge positivism)

Dawkins is a ludicrous figure, and as many have observed his obsessive, fixated loathing of religion is uncomfortably reminiscent of the fundamentalists he so tiresomely attacks. As sd's summaries of his 'theories' amply demonstrates, Dawkins' world-view is bizarrely teleotheological and anti-Darwinian, pulling away from Darwin's nihilistic mechanism to restore to the universe the 'design' and 'purpose' that natural selection had radically extirpated.

As for the inevitability of exploitation (another Nietzsche riff): hmmmmm, ok, let's say we bought this crass biological reductivism and that we accepted for a moment that there is some innate drive towards exploitation amongst bipeds (incidentally, what is it about bipedalism which inevitably leads to exploitation? Don't quadrepeds exploit one another?), there are (at least) three problems with this: 1. What does this tell us about the specific form of exploitation (capitalism) under which we now live? As sd's simplistic speed through human history demonstrates, the human animal has lived under various different kinds of exploitation, none of which are sufficiently explained by biology alone. (as sd grants, since he is quickly talking about social conditions). 2. It's not clear that capitalism is exploitative in the way sd requires. Capitalism isn't the exploitation of some human beings by others, it is the exploitation of all human beings by an idiot parasite. Which leads to: 3. Even if we grant that 'bipedal primates' are predisposed to pursue their own interests, in what sense is capitalism in line with those interests? The whole point of anti-capitalist arguments is to resist this equivocation.

More broadly, this connects with one of the central problems with the kind of incoherent line Nick has been pushing for years now: on the one hand, we are to subordinate ourselves to a punitive Inevitablism, celebrated with requisite machismo glee (it's going to happen any way, resistance is futile, puny humans); on the other hand, capitalism is all things bright and beautiful, the font of freedom and democracy, and everything Good. The first celebrates the protean inhumanity of capitalism, the second its alleged benefit for human populations (how is this case not 'moral' btw)? The slippage from is to ought is the least of the problems with this move: either capitalism is viciously inhuman or it's nice. Which is it?

Nick's post above collapses a neo-con agenda - which is in its essence totally moralising, hierarchical, western supremacist neo-imperialist - with a pro-capitalist position. The figurehead of neo-conservatism is Leo Strauss, with his Christopher Stephens/Grand Inquisitor-type hermetic elitist cynicism. The pro-capitalist arguments are derived from Smith, Schumpeter et al. But there is no natural fit between these two positions. On the contrary, in fact, they find themselves in increasing opposition. The Straussians have no interest in capitalism in itself; any interest in economics is motivated by contingent strategic considerations. And any honest pro-capitalist position will have to grant, as sd does, that there is no connection between capitalism and democracy, freedom etc (to make that claim would fly against all historical evidence, which shows that, despite all the crocodile tears about women's rights in Afghanistan we see cried by the right, capitalism has co-incided - and still does - with every variety of slavery, political oppression etc). The current debacle that is US foreign policy is a result of trying to fudge an alliance between these two incommensurate positions.

But I fail to see what any of this has to do with hypersition, except tangentially. Surely the problems with the site started when ppl failed to stick to its brief, which is surely rich enough to sustain a lifetime's worth of posts. Look back on the early posts (and their comment threads, which exceeded the quality of the original posts in many cases)and weep: people were really trying to think about what the concept of hyperstition entailed, what could be done with it etc. Gratuitously dragging in other agendas, attacking posters for what they have written elsewhere etc etc is just bad practice. Corrosive in fact.

MP: *Gratuitously dragging in other agendas, attacking posters for what they have written elsewhere etc etc is just bad practice.*

Look into the mirror, you are not better than Nick.

piet: islamarkskism draws demarkation lines more uncrossable much less crusadable so let the man speak of glory days gone by; respect for the mourners here .. .but whaddayamean handing out obsidian mirrors too?

Nick Land: mark k-p - do you think capitalism can be discussed on this blog in an interesting way, or not? If not, do you think any general mode of discussion that systematically evades the topic can be anything other than absurd (given the centrality of (the denunciation of) capitalism in your own thought processes, for instance?)

why it seems to me sd is highly convincing, while you are not, is that the speed with which you hurl together a mish mash of anticapitalist and ad hominum talking points suggests rationalization of a (memetico-dogmatic) faith rather than a serious attempt to engender productive discussion. Hugely slowed down and extracted from foaming polemic, many of the comments you make here could stimulate something interesting. Presently, they're just spitting.

piet: So, as I was saying (pay attention now kids):

Of course, Todd (ledgerite) argues that perfect C. is impossible (or at least inherently unstable and) so at (the very concomittal and courteous) least local and (for all I care virally innovative) fractionation should be allowed and encouraged even while attempting the big C (thus sidebeneficially safeguarding against bad ((coercive)) driving out good ((freedom to fuck about experimentally)) and since rapids are in any case open invitations to predators, dangerous and best left to pre-pairbond group coup foolery). PC may well stay banned and confined to the unbreathing world where thoughtful wishes splash around past the pillars of postponed individuality in/as the blish of procheckshine by perfect harmony and a rush to the for being so middling no less mythicomedian.

mishfan: ..in a rush . . all hail watery bygone beginnings of our crush-rush

Nick Land: piet - while somewhat perplexed by your argument, if "fractionation should be allowed and encouraged" means multiplicitous experimentation with the widest possible variety of social forms (probably requiring 'transcendental' freedom to vote with feet and not to be screwed over by terroristic outspillage from adjacent collapsing disasters (a conundrum this one, for sure)) then i couldn't agree more - principal reason for a vigorous space programme (libertarian biomutational colonies on Mars would be tempting)

mishfan: you got a rich uncle up there Nick?

Talk about good company, check what Mark just confessed to be part of: But again the starting point of Islam is faith in God, whereas the starting point of radicalism or neofundamentalism, is hatred against the West. They also draw extensively from fiercely anti-American intellectuals in Europe, and other 1960s radicals. And they have incorporated much of the Marxist-Leninist literature into their political discourse. It is thus not surprising to see ex-Marxists join the ranks of Islamic radicals. A compelling example is the recent "conversion" to Islam of Carlos the Jackal, the notorious Marxist terrorist now imprisoned in France. From his prison cell he has penned a book titled Revolutionary Islam. This brand of Islam, he argues, "attacks the ruling classes in order to achieve a more equitable redistribution of wealth" and is the only "transnational force capable of standing up to the enslavement of nations."
- Eric Wijnants

China's got a space program; you mind hitching a ride with statist rockkits?

Nick Land: mishfan - "I agree that Islamic Marxism is the way forward ..." (MKP) this is indeed a classic, and a significant step forward in terms of clarity. Must admit to some doubts about how much Koran (or Capital) reading has fed into this, but such things don't matter much in denunciationist circles.

MKP also right about the lack of essential relationship between capitalism and democracy of course, although he typically ruins the point by splenetic misrepresentation and overstatement. Zakaria's 'The Future of Freedom' one of the best basic elaborations of this relationship IMHO, which is complex and multifaceted.

1. Capitalism is a genetic precursor to democracy in almost every case.
2. Capitalism has a relation of functional resonance with democracy, with both providing a mechanism of (partially) controlling concentrated power through the operation of distributed and numerized population.
3. Capitalism has a strategic affinity with democracy, one which - if not entirely contingent historically - is at least much more thoroughly consolidated than ever before since the crash of the Sov U. and especially since the rise of the neocons within the US foreign policy establishment under W.

I'd rather live in a capitalist society with a democracy deficit than a democratic society practising half-assed capitalism (in (sort of) answer to your question) - but that's just me

Perhaps I'm also alone in finding MKP's accusations of "hysteria" wildly comical.

Calling Mr Kettle ...

Mishfan - realize I misunderstood the 'statist rokkits' remark (it's still groggy hour) - applauding the renewed space competition, but been told by nearest and dearest that a migration out of earth orbit not an acceptable life change just yet ...

sd: *Can there be any condemnation of Islamism which isn't intrinsically moralistic?*

To describe Islam as a faith meme is not to condemn it in a moralistic sense, it is to identify it in a biological sense. To describe (predominantly) Islam as feudal is also not a moral condemnation: it is a fact. If religious institutions are in control of the legislative process then that is feudalism. Have never used the term 'Islamofascism'.

sd's tiresome 90s Nietzscheanism

To treat philosophical thought as fashion is extremely anti-intellectual. Didn't realize that you can't make reference to Nietzsche because he's so last decade. Also, didn't realize that by making reference to one of Nietzsche's observations and trying to identify moralism at work would entitle labeling all the thoughts expressed with an 'ism'. And this is from a 'thinker' who has been attacking 'anti-intellectualism'.

The failure to address the moralism which lies at the heart of Badiou and Zizek's rehabilitation of Lenin is striking.

(look at the Lenin-related essays by Badiou and Zizek on Wikipedia)

Dawkins is a ludicrous figure, and as many have observed his obsessive, fixated loathing of religion is uncomfortably reminiscent of the fundamentalists he so tiresomely attacks.

Note the use of "as many have observed" here. Highly doubtful that the research has gone beyond a few leftist reviews. If this is not the case, then please feel free to outline your what you see as the flaws in the arguments presented in 'The Selfish Gene' or 'The Extended Phenotype'. Dawkins' view of biology is much more disturbing for humanity than Darwin's.

If you don't think that the human brain is a naturally selected neuro-computer that was remotely built by genes that are currently using homo sapiens as a vehicle, then please tell us what you see it as.

In Dawkins' model, genes really couldn't care less about homo sapiens as a species: hence Dawkins' misrepresentation by the left (Lewontin et al).

There are two lines of thought clashing here. One of them goes Darwin-Dawkins-Pinker. The other is in full-scale retreat from Capitalism and Schizophrenia and has dug itself into the viral trench of Marxist-Leninism.

If you are going to call a thinker ludicrous, please refer to arguments.

some innate drive towards exploitation amongst bipeds (incidentally, what is it about bipedalism which inevitably leads to exploitation? Don't quadrepeds exploit one another?)

There is an innate drive to trade in all cellular life. That trade can take the form of pure exploitation (consumption) or cooperation (gene alliances). Cellular life is designed to compete, if it doesn't compete the designers get wiped out by natural selection. Genes work in the interests of their copies, not in the interests of humans. The interests obviously coincide, but not to the end of the line. The genes have ridden in many other survival machines and could ride in many more. Humans are 'exploited' by their genes. It is simply and grossly inaccurate to suggest Dawkins says anything like this: "'bipedal primates' are predisposed to pursue their own interests."

in what sense is capitalism in line with those interests?

Like evolution, Capitalism happens. The system can take care of itself. Unfortunately homo sapiens is bundled with barbaric tendencies and this is expressed in its manner of trading. The idiocy arrives with poor management of the system.

Primates, being social machines, are genetically programmed to be extremely protective, competitive and obsessed with status. This is particularly true of the male (which, like all mammals, conducts 'unfair' trade with the female - unfair in terms of biological investment and investment of time). Human history nothing but competition over resources.

Communism is imposed and has to be maintained. Any anti-Capitalism has to advocate a degree of state despotism. So mark k-punk, could you please outline your thought with regard to the state?

Nick Land: sd - part of the interest of the meme theory is that it introduces a generalized Darwinism where a diversity of replicators and their interactions contest the monopolistic position of DNA segments (genes, (bio)viruses, units of intragenomic 'junk'), dynamizing alternative substrates.

Mark Downham's sketchy model of the 'metrophage' (term stolen and radically transcoded from Kadrey's cyberpunk novel of same name) speculates that substantial 'teconomic' segments of social existence are autonomizing themselves in this way - for instance, technology (in general) seems to essentially involve the assembly of rapidly evolving replicative lineages that are broadly parasitic (or at least symbiotic) upon human populations. The trend of economic units to 'deterritorialize' from specific familial/tribal unities to become self-reproducing (with usage of replaceable human components) intensifies this autonomization trend - Gibson's 'the Zaibatsu are like giant animals' (not exact quote). Finally, contemporary robotics is putting the elements into place to potentially sever the relation of parasitic dependence (for 'better' or 'worse' to speak stupidly) - is there even the possibility of a post-Darwinian evolution algorithm that exceeds the efficiency of genetic algorithms allowing technoreplicator units to radically intensify evolution beyond mere 'trial and error'? - perhaps that is a speculative step too far right now.

PS. Robert Auger's 'The Electric Meme' is a somewhat stodgy but still impressive rehearsal and materialist consolidation of memetics, definitely worthy of recommendation - have you seen it?

sd: scurrying off to investigate

Karl: *Communism is imposed and has to be maintained.*

A bit like bourgeois property relations, then.

Nick Land: Karl - If you're actually interested, and not just trolling, I'd recommend a serious study of Maoism in China - even after the complete eradication of (only germinally developed) property relations, the Maoist left of the Chinese Communist Party was obsessed with the problem of resurgent 'right wing tendencies', 'bourgeois elements' and 'capitalist roaders' among the peasantry - that's to say, in the complete absence of state protection or property rights (which even now are far from fully restored) the spontaneous tendency to the emergence of 'capitalist' tendencies was a perpetual phobic element - for good reasons. Black markets of every kind attest to the fact that, even faced with eradication campaigns from the State, economic 'self-interest' (most solidly anchored at the family level in all human societies), including crucially an expectation of returns on investment, resuscitated automatically, despite its supposed 'backwardness'. It goes without saying that analogous spontaneous resurgence of feudalism poses no similar anxieties - perhaps because capitalism was a genuine revolution, whereas soci*alism was no more than a ressentimental black-hole

to reiterate sd's point (i hope 'accurately'):

permission suffices for capitalism, while soci*lism requires compulsion

Deng Xiaoping's transition to the (true) New China was based on the 'Family Responsibility System' - which required no more than the lifting of controls on the spontaneous organization of agricultural production by the peasantry, unlike Maoist collectivization, which necessitated the intervention of Party agents to ensure compliance

The difference is actually very simple and inescapable to all but sophists

Finally (in response to Karl's breathtakingly stimulating contribution (how are you doing with the Transformation Problem that persuaded you in the 19th C. that Das Kapital was an unpublishable arithmetical wreck Karl? - fortunate that Engels was such an innumerate doofus, right?)) no coincidence that the forces of State coercion in the US are directed to suppressing 'excessive' capitalist trends - i.e. the drugs trade - rather than mass agitation for a social alternative to 'the system' - no wonder the left has fallen in love with islamonazi crazyheads, they've actually forced the bourgeois State to take an interest

mark k-p: sd

To describe Islam as a faith meme is not to condemn it in a moralistic sense, it is to identify it in a biological sense.

Right. So there is no trace of condemnation whatsoever in this 'description'? If you are going to be a biological reductionist, at least draw the consequences of your position - Stalinism, Mayan theocracy and hippie communes are all expressions of the 'selfish gene', so there's really nothing to be said.

The function of 'biology' - though these metaphorical extrapolations akin to what Desmond Morris and Konrad Lorenz do (both, also, not coincidentally, conservatives) bear little relation to any actual scientific practice - in this discourse is interesting to consider. It functions as a repudiation of 'moralism', i.e. politics. The hostility to moralism and the appeal to naturalism (this is how things must be) are two elements of what I have elsewhere called 'capitalist realism' - the eminently ideological presentation of a particular socio-economic arrangement as 'naturally inevitable'. (One of the interesting things about Badiou and Žižek is their utter refusal to accept vitalism or the 'interests of life' as relevant ethical or political criteria).

This sustaining fantasy leads to claims such as 'Communism is imposed and has to be maintained', with the implication that capitalism is some spontaneously occurring natural phenomenon.

Any anti-Capitalism has to advocate a degree of state despotism.

And the evidence for that would be???? Ah, I see, it's _self_evident. Circular argument.

So mark k-punk, could you please outline your thought with regard to the state?

A genuinely open question -- needs to be thought through very carefully. How can anti-capitalism move beyond the command economy etc? All interesting questions. But no point discussing them here, where it is 'self-evident' that anti-capitalism is Stalinism.

To treat philosophical thought as fashion is extremely anti-intellectual.

Yeh, it is. But I wasn't talking about philosophical thought, I was talking about what you said.

labeling all the thoughts expressed with an 'ism'

Yeh, it's terrible to reduce things to an 'ism', isn't it. Like 'moralism' for instance? Or like describing whole swathes of thought and practice as LVX772 or whatever?

feel free to outline your what you see as the flaws in the arguments presented in 'The Selfish Gene' or 'The Extended Phenotype'

I already did. The anti-Darwinian rehabilitation of teleology - human beings are designed for a particular purpose, etc etc

More broadly, as I outlined above, what are the _political_ implications of Dawkins' theses? If helping old ladies across the road and the Final Solution are both to be 'explained' by - i.e. reduced to - the teleological drive of genes, so what?

MP

Gratuitously dragging in other agendas, attacking posters for what they have written elsewhere etc etc is just bad practice.

Look into the mirror, you are not better than Nick.

If you can show me where I have done that on this blog, I'll happily concede the point. I haven't, as far as I'm aware, used the comments thread here on one of Nick's posts here to, say, attack his pieces in the Shanghai Star. When he has posted on capitalism etc, I have, however, tried to call him to account for how what he is saying here relates to his other statements. This seems to me entirely legitimate practice. I have also made sure that all my posts have clear relevance to hyperstition, and gone out of my way to avoid any sustained discussion of politics.

Islamic Marxism is the way forward

Why is this - largely non-existent - entity such 'bad company' to keep?

--- the point being, better for discontent in the Muslim world to be channeled into an agenda oriented towards this-wordly social justice rather than next-wordly theocratic paradise

--- and in a some ways to agree with Nick's point that there is something fundamentally anti-capitalistic about Islam. Zizek makes the same point, actually ---

Nick,

'pots...kettles'

'foaming polemic'... 'spitting'... 'ad hominem attacks'

you're having a laugh mate

Yes, there are interesting discussions about capitalism to be had, but not here.

Nick Land: mark k-punk - so exactly two enthusiastically anti-denuciationist voices are enough to make you flee with your tail between your legs? OK, hang out at Lenin Resurrected or wherever you feel at home. Sure you'll sort out the soci*lism without State tyranny problem there.

why not sic the monkey on us, he's always good for a one-liner?

Yes, there are interesting discussions about capitalism to be had, but not here - absolutely classic. We answer back - bastards!!! - not a problem you'll find in the K-Punk bunker.

binky: sd: "To describe Islam as a faith meme is not to condemn it in a moralistic sense, it is to identify it in a biological sense."

I hold Dawkins in considerable regard but the claim that memetics enjoys the same incontrovertible scientific authority as genetics is nonsense. An ultimately bio-evolutionary explanation of culture is surely desirable, but the suggestion that we have anything remotely approaching it today --or that memetics will do the job-- is naively wishful thinking.

What are the biological units of memetic replication? How are they individuated? Can you provide a precise biological description (i.e. one that doesn't involve impressionistic handwaving) of the mechanisms of replication involved? Memetics propounds discursive re-descriptions of complex phenomena using pseudo-biological accoutrements in order to lend itself a spurious veneer of scientific credibility.

If you're being scientifically objective rather than merely moralistic here, then presumably you have a sophisticated (i.e. non-adaptationist) account of what distinguishes conceptual rationality (yours and that of your pro-capitalist brethren) from memetic pathology (the putative blight of the anti-capitalist left)? If so, I'd be

very interested to hear it. If you don't, then your claims amount to little more than an incoherent relativism every bit as ideologically saturated as those of the deluded lefties you scorn.

sd: *if you don't think that the human brain is a naturally selected neuro-computer that was remotely built by genes that are currently using homo sapiens as a vehicle, then please tell us what you see it as.*

I'm heartened to see that you endorse a neuro-computational theory of sapience, but I don't see how anything MK-P has said here need involve

him denying it or any other rational scientific hypothesis for that matter. Presumably you're aware of the vast argumentative gulf separating the (trivially true) claim that cerebral evolution is subject to selection pressures from the (profoundly non-trivial) claim that certain extremely sophisticated cognitive prowesses--such as those mobilized in the course of philosophical argument and political debate for example--are subject to the same kinds of adaptationist rationales as those of any other variety of organic functioning and can be straightforwardly accounted for in terms of selection pressures? I'm a little surprised at how blithely you skip over this gulf between the evolutionarily more or less well specified function of an organ--the brain qua CPU-- and the evolutionarily over- and under-determined varieties of function exhibited by the many specialized activities carried out by the mind-brain.

There are different computational models of the mind-brain. But even the Churchlands' favoured PDP vector-activation paradigm remains a computational idealization wherein what still remains under-theorized is the complex interaction between the machinery of cultural software and the mechanisms of biological hardware (this being merely a convenient methodological distinction, not an ontological duality). No-one--and I mean no-one, D&G; no more than Hegel--possesses anything remotely approaching a sufficiently detailed account of how that relationship actually works. Science will doubtless explain it eventually, but I doubt either Nietzsche or D&G; or Pinker will have been vindicated.

sd: *Like evolution, Capitalism happens.*

The trouble with politico-philosophical appropriations of DST and complexity theory is the way in which they end up insidiously blurring the hard won Darwinian (and Spinozist!) disjunction between function and purpose. Darwin explained biological purposefulness in terms of purposeless algorithmically generated function. But

complexity-philes insist on talking as if "nature" was really using evolutionarily generated function as a pretext to generate purpose all the while. Purpose here is simply recoded in terms of complexification (or "intensification" for the neo-vitalists): Nature desires complexity! Hence the romantic infatuation with capitalism as a sublime natural marvel --or catastrophe. For the discourse of the sublime is rooted in catastrophic awe: It's so complex! Nature wanted it to happen! It'll transfigure life on earth! Nonsense. Nature doesn't want anything. Neither life, nor organisms, nor capitalism. Moreover, while capitalism is undoubtedly better understood in terms of DST than the dialectic, it's neither more nor less singular than any complex phenomenon in the history of the planet. From a physicalist--or cosmological rather than terracentric-- perspective, it's as trivial as a mega-tsunami and as banal as stale bath water spiralling down the drain.

Nick Land: binky - thanks for demonstrating that criticism can be rational and productive, there's been a marked lack of intelligent dissent around here lately

ref. i noted for sd (Robert Auger's "The Electric Meme") responds to some of your q.s - not necessarily in a way you'd find persuasive, of course

"Nature doesn't want anything. Neither life, nor organisms, nor capitalism. Moreover, while capitalism is undoubtedly better understood in terms of DST than the dialectic, it's neither more nor less singular than any complex phenomenon in the history of the planet. From a physicalist--or cosmological rather than

terracentric-- perspective, it's as trivial as a mega-tsunami and as banal as stale bath water spiralling down the drain."

This seem unobjectionable - but why should a putative teleology of nature be invoked in the first place? It's the intelligenic event, 'abandoned' by a senseless cosmos, that introduces the only (strictly intrinsic) 'purposiveness' that will ever be found.

sd: mark k-punk - (and binky - will try to deal with some of your points more thoroughly later though)

If you are going to be a biological reductivist at least draw the consequences of your position - Stalinism, Mayan theocracy and hippie communes are all expressions of the 'selfish gene'

If you had read either Dawkins or Pinker with any degree of open engagement (which you obviously haven't) you would know that neither of them represent biological reductionism (a lazy, dismissive term with which to dismiss argument).

Dawkins coined the concept of meme precisely because he needed to describe replication which was not driven by biological DNA. Language is a meme because it is replicated from head to head, from generation to generation: it uses biological machinery (brain programs, the lungs etc.) but it is not biological machinery itself. Memes seem to share a lot of the features that processes that genes have and trigger, but there are differences: memes evolve faster (the language Chaucer used is almost incomprehensible to us) and mutate much more radically and quickly (and still survive). Language and other memes (e.g. faiths, ideas) can influence biological machinery. For example, Leninism, Stalinism and Maoism tended to starve people to death - this is simply a fact. Some memes were/are deeply hostile to biology and genes. Nick's point about Maoism is crucial there. Do you know that Badiou described Mao as a 'genius' in 2001?

The weakness of the Nazi meme in comparison to the Communism was that it failed to mutate. The Nazi meme identified the Jewish and Slavic gene pools as its enemies and was/is intellectually repulsive. The Communist meme mutates but retains its core code, part of which is moralistic rejection of Capitalism - very instinctively appealing to the Russian peasantry brutalized by WWI and very intellectually appealing to the guilt-ridden middle class academics of Western Europe. Thus it is acceptable for someone like Badiou to praise the Mao meme, despite the fact the policies killed far more people than the Nazi meme.

With regard to moralism, Pinker has bent over backwards here to try and separate ethical principle from scientific facts. For example, the scientific fact is that all human beings are not equal - they vary in terms of intelligence, fertility, sex appeal etc. This does not mean that all human beings are equal cannot be accepted as a principle and backed up by legislation. It is a scientific fact that men and women are not the same, but most societies agree that they should be treated the same. The left tends to befuddle science by insisting that all human beings are equal is a scientific fact, and that men and women are the same biological material inscribed by culture. Marxism claims its moralism to be a science and historically inevitable. Though it may be ultimately impossible to keep moral evaluations out of description, and to separate ethical principles from scientific fact, the point is to try. Hobbes and Hume are going

to be crucial here. [please insert some swift dismissive comment at this point, mark k-punk]

Pinker has put extraordinary amounts of effort into trying to establish where genes stop working and where culture starts working. Like Dawkins, he describes genes as controlling remotely: They design and build the machine, but cannot actually control exactly what the machine does when it is up and running. There are certain default settings, such as personality traits, that the machine cannot change, but anyone who wears a condom is obviously thwarting the interests of their genes. So much for biological reductionism.

While Dawkins and Pinker may have been nicely boxed up and dismissed by the UK's anti-capitalist left, discussion about their ideas is healthy in America (e.g. MIT, Harvard).

[//pinker.wjh.harvard.edu/articles/index.html](http://pinker.wjh.harvard.edu/articles/index.html)

The views being expressed here are not extreme or freaky - in some parts of the world they have become common sense. The other thing is that they are tested in laboratories and simulated on computers - genetics works, it produces results. Capitalism also works. Communism doesn't. [please insert some snide comment about capitalist interest]

If you are really serious, and really want to argue, please demonstrate that you have read *The Selfish Gene* and *The Blank Slate*. There is no point repeating perfectly clear arguments here. I will read any texts you think throw light on why Islamic Marxism is the way out.

To state that you can't talk about Capitalism here just because people disagree with you is absolutely absurd. Every step of the way you are demonstrating publicly just how thoroughly toxic your brain has become (toxic in the memetic sense, of course).

Good meme lexicon:

pespmc1.vub.ac.be/MEMLEX.html

Some convergence:

viral-meme.info/memetic/intro

northanger: oh, fuxake, don't give up. best type of symbiosis, IMHO, highly benefits both symbiote & host. certainly capitalism (symbiote) benefits from american democracy (host) & vice versa. (capitalism = genetic precursor? sure). Lynn Margulis makes me rethink 'manifest destiny': "Life did not take over the globe by combat, but by networking". capitalism, however, becomes problematic when it becomes a destructive parasite. that's when you get Nick's "capitalist society with a democracy deficit" (or, Bush America). would i rather live there? well ... that's the problem. where's individual choice?

Nick Land: northanger - absolute basis of individual choice is ability to 'vote with your feet' without you (or your family) being killed. Interestingly, this is a freedom that communist societies are typically unwilling to permit. Compared to it all liberties pale, although of course there are important ones. Voting for your government comes a long way down the list, let alone the acquisition of 'positive rights' through the implicit trading of your vote in a democratic bargaining process. Of course, the absence of democracy impairs the functioning of the State, depriving it of a crucial control and feedback mechanism, leaving its relation to society cybernetically unhinged, vulnerable to dogmatism, rampant corruption and even raw tyranny.

Think your cell-analogy of capital/democracy symbiosis is an intriguing one ...

binky: Aunger 'Electric Meme' indication noted.

Following undoubtedly fails to take many intervening comments into account but hopefully these can be addressed later.

Nick: *why should a putative teleology of nature be invoked in the first place? It's the intelligenic event, 'abandoned' by a senseless cosmos, that introduces the only (strictly intrinsic) 'purposiveness' that will ever be found.*

Can you say a little more about why this "intelligenic event" (Capitalism? Is capitalism intelligent? Or favourable to the

emancipation of intelligence?) marks a rupture with the cosmological order? And if it does, how does this supposedly immanent auto-catalysis of intelligence (limitrophic convergence of social production with cosmic schizophrenia?) differ from familiar spiritualist eschatologies concerning "the end of all things"?

There already exists a perfectly cogent theory of "intrinsic purposiveness": it's called Aristotelianism. I presume this is not what you have in mind, but I need to hear more

in order to understand why this exaltation of capitalism is not underwritten by a curious neo-Aristotelian regression that shies away from the nihilistic austerity of Darwin's vision. I reiterate: Genes aren't "using" us for anything. Genes don't have purposes. They don't "want" anything. And neither does evolution.

CCRU Shanghai: "There is really no doubt that whatever is happening on this planet is doing so under conditions guided by capital production [...] Capitalism' deserves scare quotes for the simple reason that it is quite evidently a hyperstitional construct of extreme importance. Any modelling of capitalism already serves to mobilize desire in particular directions, either supportive or oppositional, with multiple variations of each [...] 'Capitalism' no longer describes an analytically coherent totality, such as a 'mode of production' rigorously comprehended by antagonistic theory. It is now a proper name, the Thing taking place, an occurrence or happening, no more in need of exact portrayal than a cyclone, an earthquake or a meteorite impact. "

Interesting juxtaposition of claims:

1. Capitalism is a hyperstitional construct
2. Capitalism is a "real/natural/material" (take your pick, but basically non-anthropo dependent) occurrence or happening: "cyclone, earthquake, meteorite impact".

Tentatively assuming that rocks and beaches are not equally capable of "hyperstitional practice", how does the claim that what is "real/natural/material" is hyperstitionally constructed (presumably "machinically", whatever that may mean) differ from varieties of idealism?

Re the claim made on behalf of capitalism as planetary singularity and locus of terrestrial history--Isn't everything currently happening on the planet governed by gravity at least as much as by capital production? But then why is capital production more important than gravity? Unless of course the real focus of hyperstitional interest has always been socio-cultural and, by implication, human all along?

On what basis do you identify the definitive phase transition in the history of the planet? Surely it's gratuitously biocentric to define it in terms of the shift from a carbon to a silicon (or whatever) based substrate for intelligence, as if terrestrial history necessarily converged upon social and/or intelligenic complexity?

More generally, if there is such a thing as "universal history" then why privilege the history of the earth? (Unless wilfully rehabilitating a pre-Copernican perspective?)

Again: why this apparent totalization and hierarchization of the ramified multiplicity of complex systems currently unfolding on the planet by privileging the emergence and development of capital production as the most significant event in all history?

MK-P: *on the one hand, we are to subordinate ourselves to a punitive Inevitablism, celebrated with requisite machismo glee (it's going to happen any way, resistance is futile, puny humans); on the other hand, capitalism is all things bright and beautiful, the font of freedom and democracy, and everything Good. The first celebrates the protean inhumanity of capitalism, the second its alleged benefit for human populations (how is this case not 'moral' btw)? The slippage from is to ought is the least of the problems with this move: either capitalism is viciously inhuman or it's nice. Which is it?*

Strikes me that MK-P has indeed put his finger on a fundamental incoherence in the claims being made on behalf of capitalism here: "Capitalism is inhuman fatum *but also* the best hope for human freedom (?); "Capitalism is beyond good and evil *but also* the Good in itself (intelligent emancipation?)".

But nothing follows from the way things are --a sentiment hyperstitionalists will doubtless dismiss for its naive realism given that the key hyperstitional premise seems to be that what is is already a "construct" of some sort; presumably a distillate of belief and/or practice? But whose beliefs? Whose practices? As MK-P has already observed, I fear the judgement "Capitalism is good" is being derived from the assertion "Capitalism is" on the basis of an all too political concoction of nietzschean epistemic relativism, pop neo-darwinism, and libertarian individualism.

Nick Land: binky - off to work, considered reply later. Problems you raise are obviously substantial (rather than merely polemical) so I won't waste everyone's time searching around for a knock-down rebuttal ...

PS

"Capitalism is inhuman fatum *but also* the best hope for human freedom" - is this really a contradiction? not sure why - wouldn't the truth have to be something like this - e.g. "emergence of replicator chemistry is inhuman fatum *but also* the best hope for eventual human liberty" -surely the only alternative to this broad species of formulation would be fundamentally theological and even creationist (which is to say, if the primary alternative to immanent teleology is transcendent teleology, the best option seems to be to tinker with immanent teleology - hopefully taking it in the direction of a dehumanized teleonomy (emergent complexity without ulterior cosmic purpose), of the kind you seem to favour)

northanger: absolute basis of individual choice confirmed in US Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness". at that time, american colonies & great britain in symbiosis. declaration served to sever & give reasons why the relationship needed to end. US Constitution defines "a more perfect Union" — democracy. however, this did not stop US from inheriting already existing parasitical structures (capitalism, slavery, etc).

agree with your voting/democratic process assessment. the democratic process is not a magic wand. could things get so bad in american political process where new government solves nothing? New Deal emerged because things were bad for (almost) everybody — soup lines, drought, unemployment, etc. what do you do, however, when the government itself has gone bad?

leaving final safeguard: consent of the governed. again illustrating your preference to live in a "democracy deficit" (me too).

the question i have for you: what's the (ideal) hyperstitional agenda for Capitalism?

Nick Land: northanger - not sure this formulation - "the (ideal) hyperstitional agenda for Capitalism" - exactly sustainable - needs talking around

binky's valuable scalpel work is making me wonder about the centrality of Narrative to hyperstition (thinking: utterly central), whatever the facts people are constitutional determined to narrativize their individual and collective situation, with myths, religions, political programmes, fictions, and theoretical architectures all partaking of this phenomenon (essential to all intelligent animals? - Interesting IMHO that Butler's Oankali are incapable of lying)

Take Darwinism as an example - pursued with absolute scientific radicality, there would be no narrative at all, merely the senseless re-arrangement of particles, with no pattern or event any more significant than any other. Surely it is uncontroversially true that human thinking is simply incapable of this - broad narrativization is an ineradicable (or, Churchland-speak, ineliminable) feature of intelligibility for us. The scientific fact is always subject to supplementary narrativization, which does not consign it to pomological relativism, but definitely contributes a very flexible, narrowly sieved and agenda-laden level to the basic physical facts (guess this is a kind of degenerated pop-kantianism, but never mind). Hyperstition addresses this

ineliminable narrativization, for instance the various narrative frames that encrust the senseless 'event' of capitalism, lending it historical meaning, anticipated directionality, moral - and even religious - significance, and political intelligibility

Guess my preference would be for the testing and condensation of hyperstition through its application to such narratives - as many and varied as possible - with special attention to modes of 'self-fulfilling prophecy' or cultural autoregeneration - those features distinguishing hyperstition from general narratology. That would be to consolidate the 'scientific' agenda of hyperstition, within its domain of relative competence

northanger: narrative central to hyperstition? funny, William Benzon describing Aunger: "he sheds the discipline of Dr. Jekyll in favor of the random muttering of Mr. Hyde" - human-nature.com/nibbs/02/benzon.html.

genes don't have narratives, people do? problems with capitalism, imho, everything in american society structured (or, transformed) to support capitalist narrative vs. democratic narrative. democratic narrative degrades into pseudo-patriotism narrative. knee-jerk response narratives. &etc.; individual narratives (pursuit of happiness & all that) at pyramid bottom. certainly, suicide bomber narrative doesn't help things. we have a war of narratives. seems like things are beginning to jell hyperstitionally.

Nick Land: I'd be interested to hear what you think are the elementary components of these various narratives, for instance the Great Depression is an event built into a number of American metastories with very powerful effects - fuelling the politics of the New Deal, Great Society and modern 'liberalism' for instance. In this case, the archetypal narrative provides an intersection between the economic and political (capitalist/democratic) storylines - assuming it goes something like this:

"Once upon a time (after the yankees won the Civil War?) there was completely out of control laissez-faire capitalism, leading to yawning inequality, brutal exploitation and even the feeble germination of an indigenous soci*list movement, eventually it led to inevitable nemesis with the 1929 Crash, people going hungry ... then FDR explained that the government needed to take a more important role in the economy and turned things around with massive spending programs - we've learnt that democracy needs to constrain capitalist excesses and see that it's natural for the State to expand its influence in a modern society. God bless America!"

Goes without saying I've got huge problems with this story, but that's another matter ...

northanger: my sister works at city govt level & studies aging adults: 50s to 90s. city offers free food program for seniors. different response from each age group. some expect service, others view it as charity, some don't need it, don't expect it. identify which is the baby-boomer, soup kitchen or new deal. imho, essential aspect of narratives at the ground—what makes them powerful & rise up fueling politics, culture, etc—is that they are experienced. usually, what is experienced is something *big*, something shared. these narratives reverberate finding immediate expression in music, art, books. therefore validating, encouraging & inviting individual narrative to participate in the perfect storm.

a problem with hidden narratives. narratives never communicated because of denial, lack of acceptance & (most important) they're not told anywhere. however, first person brave enough to tell their story causes everyone else to come out of the woodwork. possible hidden narratives may corrosively manifest where we deal indirectly with the narrative by dealing with its symptoms.

Nick Land: yes, probably in large measure constituting cohesive collective identities, with 'reverberation' (resonance) as adhesive

that comment to your previous (time slippage)

can you give some example of a 'hidden narrative'?

northanger: sex. (of course)

makes one wonder about the collective narratives of sex in the USA when observing the bewildering palette of national contradictions, jessica simpson just doing her job & the model for Dali's Young Virgin Autosodomized by Her Own Chastity.

cohesive collective identities, with 'reverberation' (resonance) as adhesive

defining switchover from individual to group narratives (we like an audience to share out stories). the dynamics that keep this locked in place — no selling out, no flip-flops, no waffling, etc. are you one of us? pay your dues. show your loyalty. make your first kill on behalf of the brotherhood. yadda.

Nick Land: "sex." - trying to break the world's shortest story record?

northanger: immigration another source of hidden narrative. countries with serious immigration problems deal with symptoms — ignoring hearing & accounting & harmonically blending minor narratives into the larger narrative.

a man i know with a green card told me about bush bill effecting ability of this group to obtain drivers licenses. without proper identification, he said, folks like him can't get car insurance, etc. this guy created a musical narrative based on Ode to Joy communicating this situation & plans to distribute CDs.

"sex." - trying to break the world's shortest story record?

lol, yeah.

Nick Land: Paul Berman's 'Terror and Liberalism' provides an exceptionally lucid example. Discussing the common fascist/communist/islamist totalitarian matrix, he writes:

"The shared ideas were these: There exists a people of good who in a just world ought to enjoy a sound and healthy society. But society's health has been undermined by a hideous infestation from within, something diabolical, which is aided by external agents from elsewhere in the world. The diabolical infestation must be rooted out. Rooting it out will require bloody internal struggles, capped by gigantic massacres. It will require an all-out war against the foreign allies of the inner infestation--an apocalyptic war, perhaps even Apocalyptic with a capital A. (The Book of the Apocalypse, as André Glucksmann has pointed out, does seem to have played a remote inspirational role in generating these twentieth-century doctrines.) But when the inner infestation has at last been rooted out and the external foe has been defeated, the people of good shall enjoy a new society purged of alien elements--a healthy society no longer subject to the vibrations of change and evolution, a society with a single, blocklike structure, solid and eternal."

essay available here: www.prospect.org/print/V12/18/berman-p.html

Book is essential for anyone serious about the Islamist phenomenon.

(PS. Berman is a leftwing Democrat)

northanger: exactly. the gog-magog axis of narratives. contrast exclusive apocalyptic narratives with inclusive narratives. descriptive vs. proscriptive vs prescriptive. American Indian (hidden) narratives, i believe, may describe the interplay of these different narratives & the role they must play when the time comes.

Nick Land: "the role they must play when the time comes" - this is a superb phrase - cryptic, ominous, reflexively intricated ...

northanger: precisely where you can't afford to be monotheistic. considering only shared apocalyptic scenarios hides other narratives designed to disable, diffuse, counter-act, etc., other narratives.

can't have a true apocalypse if all out ducks aren't lined up.

imho, apocalyptic scenarios designed to trigger each other like dominoes.

Nick Land: binky -

Can you say a little more about ... this 'intelligent event' ...?

Vast amount to say here, so I won't try to be remotely comprehensive yet - main point just that Capitalism includes technoscience in its basic macroscale feedback loop, thus trending strongly to artificial intelligence technologies (of many kinds) and even to 'singularity' in the Vinge sense (surpassing of human cognitive capabilities within the technosphere, thus on a dynamic - and accelerating - curve).

This virtual event is simultaneously a stupendous liberation of machinic potential and a biogenetic catastrophe for (conservative human) organisms, since it abruptly terminates the human genetic lineage as the principle replicative axis of social reproduction. Hence the bipolar cybergothic/emancipatory rhetoric you (and MKP) point to - this inconsistency doesn't seem very serious to me - it's mostly quasi-random aesthetic variation based on irresponsible yarn-spinning. Horror is by far my favourite affect, so I can't resist turning everything into a horror story - feel free to blank it out as conceptually trivial.

Is capitalism intelligent?-

room for much definitional squirming, but if high intensity information processing and problem solving basis of judgement, then for sure.

... favourable to the emancipation of intelligence?

Yes, and more importantly, to the emancipation of the latent intelligence within sub-engineered matter.

... marking a rupture with the cosmological order?

Not sure whether I quite understand this question - nature seethes with breaks (inflection points, emergence thresholds for dissipative structures), so capitalism is a typical anomaly.

And if it does, how does this supposedly immanent auto-catalysis of intelligence (limitrophic convergence of social production with cosmic schizophrenia?) differ from familiar spiritualist eschatologies concerning 'the end of all things'?

- apex question. No simple answer will suffice, with much resting on what is encompassed by "spiritualist eschatologies" - given the structure of intelligence catastrophe as mentioned above, any precursor model of the Other (Dark?) Side will be necessarily insufficient (to an almost illimitable extent) - lending an apocalyptic aspect to the anticipation.

There already exists a perfectly cogent theory of "intrinsic purposiveness": it's called Aristotelianism.

A far superior theory is basic cybernetics. Negative loops appear self-conserving, positive loops appear to 'desire' growth. 'Purposes' are abbreviations for coherent nonlinear dynamics (cybernetic plexions).

I presume this is not what you have in mind, but I need to hear more in order to understand why this exaltation of capitalism is not underwritten by a curious neo-Aristotelian regression that shies away from the nihilistic austerity of Darwin's vision.

Wallace explicitly modelled natural selection on a cybernetic basis, as a conservative control mechanism suppressing mutational deviations and the effects of environmental fluctuation through adaptive selection.

Genes aren't 'using' us for anything. Genes don't have purposes. They don't 'want' anything. And neither does evolution.

A thermostat doesn't 'want' to stabilize a temperature, capitalism doesn't 'want' to create AI explosion, the apparent teleology is an effect of machinic circuitry, but since purposes are so readily reduced to cybernetic diagrams, the folk (intuitive) attachment to teleological language need not trouble us unduly.

Interesting juxtaposition of claims:

1. *Capitalism is a hyperstitional construct*

2. *Capitalism is a 'real/natural/material' (take your pick, but basically non-anthropo dependent) occurrence or happening: 'cyclone, earthquake, meteorite impact'."*

There is a capitalism event (#2) but it is necessarily, and in fact multipliciously, narrativized for the purposes of human intelligibility (#1).

how does the claim that what is 'real/natural/material' is hyperstitionally constructed (presumably 'machinically', whatever that may mean) differ from varieties of idealism?

It has structural similarities to transcendental idealism, which also combines real but unthinkable events with cognitive schemas. This mode of description can hopefully be improved. This isn't necessarily where I'd throw in a 'machinic'...but 'machine' shorthand for autonomous cybernetic assemblage (dissipative structure).

And

Re the claim made on behalf of capitalism as planetary singularity and locus of terrestrial history-- Isn't everything currently happening on the planet governed by gravity at least as much as by capital production? But then why is capital production more important than gravity?

This provides an excellent opportunity to return to 'machinic'. Gravity is mechanically significant, but not a source of machinic production (although, of course, machines can make use of gravity - as capitalism does). The conceptions of 'governing' are incommensurable. Still ...

Unless of course the real focus of hyperstitional interest has always been socio-cultural and, by implication, human all along?

... basically, I concede the point, although the autonomization of culture from the human species is - of course - the principal issue at stake (and one reason for privileging capitalism, which seems alone capable of doing this). Since capitalism prospectively offers terrestrial matter the opportunity to engage in deliberated technical manipulation of its own substance it takes on a biotechnological and geotechnological sense far exceeding any preliminary delimitation of the 'ethosphere'.

In fact, subsumption of the earth into the (post-human) ethosphere is the ineluctable machinic destiny that the word 'capitalism' tags.

On what basis do you identify the definitive phase transition in the history of the planet? Surely it's gratuitously biocentric to define it in terms of the shift from a carbon to a silicon (or whatever) based substrate for intelligence, as if terrestrial history necessarily converged upon social and/or intelligent complexity?

Consumption of the earth (by the then definitionally 'off-planet' machine) far exceeds the characteristics you note - the Oankali eat planets - anything less is eco-conservatism. Realize manifold conceptual issues (teleology in another aspect, still remain).

More generally, if there is such a thing as 'universal history' then why privilege the history of the earth? (Unless wilfully rehabilitating a pre-Copernican perspective?)

Probably a perspectival limitation - no off-planet examples of radical techonomic runaway (terminal-phase planetary process) yet identified

Again: why this apparent totalization and hierarchization of the ramified multiplicity of complex systems currently unfolding on the planet by privileging the emergence and development of capital production as the most significant event in all history?

Because capitalism has an unparalleled voracity, and even the truly giant terrestrial systems (the bacteriosphere etc.) will be absorbed by it on current trends within a modest historical time-frame. Alternative narrativizations privileging alternative complex systems to be encouraged here, however, and if they can be highly politicized ('insect politics', 'bacterial politics', 'crustal politics' (that might be piet but can't understand with his mouth full of rock chippings)) so much the better.

Simple answer, capitalism is already hyperpoliticized and thus already lined up to take narrative precedence - you're right to see this as a 'culturalist' skew

think I've at least touched on your subsequent remarks - basic point 'capitalism is good' (or 'bad') doesn't mean very much, too weak even to support a contradiction - won't take a huge detour into moral theory, but I consider 'X is good' to broadly equate to 'lets do X' in this context, which is exhortation not argument.

inhuman / 'good' for humans - no inconsistency i can see - absorption into the techonomic swarm can be simultaneously ultimate liberation and utter horror -

Eastern religions are better at this type of cosmic ambivalence than monotheistic-manichaeian ones IMHO

dread: Much of what irks those who cleave to the austere indifference of scientific rationality here (ie binky, I assume) must be the constant slippage from supposedly rational arguments about material processes/structures/systems into an apparent indulgence in emotional (auto-)manipulation, as admitted:

Horror is by far my favourite affect

What's problematic is the constant wavering between treating these sort of stylistic tendencies as peripheral, discountable products of personal taste on the one hand, and substantial elements of the hyperstitional agenda on the other. Which is it to be? Are you storytellers who pine hopelessly after the analytical, or analysts with an unfortunate poetic tic?

the folk (intuitive) attachment to teleological language need not trouble us unduly.

Friedrich famously thought that there was no escaping evaluation

Such easy dismissal of this congenital defect of Hyperstition suggests the advocates of HS are not prepared even to make the experiment of stripping away avowedly sentential decoration and making a formal referential statement about the mechanism(s) of hyperstition (at least, all discussions along this line so far have degenerated into 'er...it's...like....feedback...everything's hyperstitional, man'-type aporias). Such an effort must surely be the minimum requirement for the theory of hyperstition being taken seriously (at least in view of its continued 'practice' not having demonstrably effected actual major universal belief-shifts or virtual voodoo transcendental trauma AS YET...)

Basically, we don't yet know why the concept of hyperstition might be useful for anything other than getting each other overexcited (cue triumphant smirks from the inner circle - 'exactly!'. 'But this sort of cliquish merriment just sends us round in circles rather than contributing to any palpable analysis!...cue triumphant smirks - 'exactly!'. 'But look, this could go on forever - cue...etc...'OK, I'm leaving now along with everyone whose interests extend beyond cutting and pasting starcharts into comments boxes.')

A primary question is how (or if you prefer, whether) techno-rational-structural discourse manages to jar itself loose from such all-too-human tendencies to

narrativisation, shedding every residual layer of sense-metaphor to become a maximally-abstract machine: it seems to me that to argue that it doesn't or can't would be to invoke ridiculous neomarxist (and implicitly moralist) analyses of class/gender/species/whatever 'bias' or 'interest' which, if they were 'true', would make it hard to explain e.g. why levers, steam engines or computers work. If hyperstition cleaved to this sort of pomo-ism, it would indeed be nothing more than a perverted offshoot of cult studs, founded on a specific group's arbitrary aesthetic preferences. We might then question whether these preferences were really just adjoined as a matter of taste to what is essentially a highly rigorous theoretical edifice? Could just as easily be, say, a mills-and-boon-romantic translation of the entire hyperstitional canon?

Ultimately, I don't think it really is:

uncontroversially true that broad narrativization is an ineradicable (or, Churchland-speak, ineliminable) feature of intelligibility

Apart from on a pedagogical level, it seems to me that logic does pretty well without stories, especially when embodied in silicon. Seen from this angle, the fervour for ever-more-intricated narrative looks somewhat atavistic, something to amuse your monkey brain with whilst the mechanosphere whirrs away regardless.

Is the way out of the confused anthropic swamp of twisted animal writhings through the indulgence of peculiar fantasy-narratives and the attempt to smear the referential register into emotional provocation and religious mysticism; or through a division whose painful severity - especially to writers, especially to revolutionary romantics - cannot disguise its deep affinity with the actual material principle of all 'intelligent' process: viz. the division between rational (=technical, mathematical) discourse (including an acknowledgement both of that which has been explained, and that which remains to be explained) and on the other hand, storytelling/poetry/mysticism?

Now, obviously this is part of Badiou's project, but not necessarily tied to his own peculiar development of it (ie. let's not get into a slanging match over St Paul here). It has an important bearing on his critique of Deleuze's appeal to a universal impulsive factor ('life?') forever 'outside' the frame of reference of symbolic discourse, that can only ever be despoiled by being captured in formal systems, which is exemplified in the _process_ of thought but not in its results, and which in its vanishing elusiveness parallels at once Derrida's differance and the magical hyperstitional essence - 'you

can't define it, you can only do it...and you are its cosmic plaything, whether you like it or not!.)

Of course it is unclear what subjection to such a division would entail exactly (presumably something more positive than a Wittgensteinian 'remaining silent'), but there's no doubt that, in default of such an effort the 'hyperstitional agenda' must remain profoundly confused (are those knowing smirks saying: 'exactly! because that's what THE VITAL OUTSIDE ALL-ONE is like'...?) and can only be treated as a purely poetical - and from the point of view of understanding the world, pretty uninteresting - venture: short story or opinion column, it doesn't make much difference.

Nick Land: dread - well you're coming over as a bad tempered binky, but have to accept there's substantial content, and it's great that you've been drawn out (even if only by irritating cognitive erraticism)

think there's a lot to your objection, but i'm not fully persuaded - to start with the most sub-intellectual level of uncertainty, given you're correct and a radical de-narrativization of 'the hyperstitional project(s)' (don't laugh) were possible, what is driving this highly ascetic intellectual programme? What is the impulse to sacrificing everything to the arid rigorization of signs? Why are we the people to do it (aren't mathematicians significantly better situated for such an exercise)? Throw out Lovecraft, Butler, Voodoo (Death), The Mouth of Madness, everything that distracts with its sloppy impressionism - in order to ...? Revolutionize symbolic logic? Turn the world upside down? Win fame and fortune? Why doesn't the vague and suggestive world of computer game narratives, horror movie scripts, deviant occultism and delirious pulp subfiction have as much claim upon us as meticulous scientificity?

Actually the appeal of this austere vision is not especially obscure to me, but the notion that it could attain a monopolistic reign over my devotions seems improbable at best, if only due to a measure of sobriety in the estimation of my capabilities (your own horizon is wider in this respect, of course). Could hyperstition realistically be envisaged as something radically divorced from the compromises, inconsistencies and nebulous suggestions of pop agiation - in our hands? - which is not to deny the special delights of those moments when adamantine obelisks of mechanomic rigour loom from the creeping fog ...

does psychocognitive consistency seem natural to people? Surely this interrogation "Are you storytellers who pine hopelessly after the analytical, or analysts with an

unfortunate poetic tic?" depends on the day of the week, the weather outside, the mood one woke up in, how annoying the last troll was, and innumerable other factors pitched into a buzzing bubbling stew of neural instability. Why should the personal or suprapersonal unit of consistency be important in any way? Why not treat the discursive unit as its own delimited zone of consistency? Why confuse a practical problem - efficient blog organization (improvement necessary) - with the spurious search for psychobiographical coherence and predictability (who cares)?

Anyway, your elaborate question is an unmistakably important one, so some serious pondering lies ahead ...

But in case this has been intricated into utter obscurity: I'd massively support an attempt to radically diagram / drastically formalize the essential tenets of hyperstition, and even suspect serious progress could be made in doing so ... So where do we start?

sd: Imagine hyperstition as a sense organ - for example a tentacle - which extends the brain's perceptual capacities. Sure, the tentacle needs occasional check-ups and regeneration, but, as long as it is working, surely processing the perceptions and analysing the data is rather more interesting than a constant critique of the tentacle itself.

dread: 2 quick points (only bad-tempered because of having been finally tempted to unlurk despite having no time to do so):

firstly, your point that it depends on the day of the week whether you feel rigorous or not surely demonstrates exactly the problem I'm pointing to: there's no point hyperstition posing as a systematic theoretical position if it's basically just a phenomenological journal of your ups and downs. Doesn't a theoretical project necessarily involve a certain ascetism and restraint; or to put it another way, is there some other way of proceeding other than symbolic formalisation that could possibly result in any constructive synthetic production whatsoever? An implicit trust in the ur-reality of matter? Given your wholehearted championing of the technocapital nexus, which surely functions exclusively by quantising, symbolising and formalising, it seems strange to put your trust in this other obscure (to say the least) principle.

secondly, MK-P's "punitive inevitablism/freedom and democracy" (although it could equally be "indifferent unraveling of mechanosphere/catastrophic dark singularity") expressive of the same antinomy: on one hand, the reason why it's all inevitable is

surely tied to the truth of certain principles of physics, biology, computation that are put into action by capitalism; on the other, we have the claim that since the concept of truth is irrelevant to the 'real processes of production', we can somehow participate in or influence the process by building hyperstitional belief-machines...

If we 'believe' hard enough will nanotech or quantum computing become viable (hasn't worked yet, LOL)? There may be an interesting question of belief here but it belongs to the discourses of marketing and venture capital rather than to the scientific disciplines themselves.

Such places are indeed where the worlds of storytelling and of technocapital intelligences collide, but that doesn't make them the same thing. You may be right that there is no place for 'us' in the actual instrumental work of capitalism (need I mention that I've tried and failed to be 'useful' in this regard...) But it could be better to accept this with good grace rather than to perpetuate a torturously convoluted charade of self-importance such as the concept of 'hyperstition' seems to represent ('we're not just talking "about" things, we're hyperstitionally intensifying them'). It may be better to find a register that whilst neither heads-down test-tube bleeding-edge science nor motivational speaking, isn't an awkward attempt to scrunge the two together...I don't think the organizational 'practical problems' are entirely unconnected to these theoretical ones.

Nick Land: sd - chronic back-to-the-drawingboardism is a hyperstitional tic that i'm sure you're already getting used to - as long as it doesn't calcify into a bottleneck it probably serves some sort of feedback function ...

suspect you're on to something with the tentacle model - it probes into informalized chaos, which makes dread-type corrections necessary to avoid complete sympathetic emulsification, but also dooms such corrections to perpetual frustration (because the probe function is irreducibly aleatory), even if crystallized molecules of rigorous pattern get sensed occasionally

sd: A Thousand Plateaus very rarely draws attention to what it is doing. It does what it describes.

Nick Land: dread - really, I'm not at all unsympathetic to your concerns - a principle of appropriate rigour would be an immense asset (though IMHO a 'constrained' approach to topics including narrativization might be productively included in this) - my 'psychobiographical' point is just an attempt to divert the question from the

profoundly irrelevant issue of personal commitment and consistency. Those topics which have proceeded in a manner which, it seems to me, best conforms to your nudging here (the emergence of nullotated xenotation exemplary in this regard, surely?) do not depend upon the sustainable epistemic stances of particular individuals.

Right now, my expectation is that rigorization will most effectively proceed in respect to definite component elements of the overall shaggy and nebulous hyperstitional field, in part because hyperstition unavoidably deals with extremely blurry and confusing subject matter (world religions and hybrid economic systems, for instance).

Think you also

1) Somewhat overstate the pretensions of hyperstitional practice - insofar as hyperstition is earth shattering, it is something that is not emanating from this blog, but is rather already inherent in efficient narratives (would you agree all (meta)political programmes conform to this broad definition?)

2) Mistake the role of belief (the realm of hoaxes and religion) - it is unbelief that characterizes the hyperstitional convergence with technicity (no one 'believes' in decimal numeracy) - but this blurs out as i write - sustained blog attention required here (again)

The complete circuit/system of "marketing and venture capital" PLUS "the scientific disciplines themselves" is an 'object' from which hyperstition cannot retreat, and may even provide its sole adequate social application, even if you are quite right that merely blurring the distinction between the two is unhelpful at best. At least, i suspect that hyperstition cannot be reduced purely to the 'disciplinary' pole of this circuit, the operative machine requires both. Quantum computing cannot be conjured into existence by mere belief, but neither can it arise without the social investment dependent on its virtual credibility (the vast flow of resources into nanotech - based in large part on a tacit SF scenario - is an even more prominent example)

sd - but the blogoverse exposes its innards more than a book, just take the whole troll phenomenon for e.g.

northanger: general comment (probably responding to "spiritualist eschatologies"). self-fulfilling prophecies & the pygmalion effect. study about teacher expectations & student performance — Robert Rosenthal & Lenore Jacobson -- users.muohio.edu/shermalw/edp603_group2-f00.html

just read about teenagers choking themselves to experience the high of oxygen returning to the brain. one of them, unfortunately, died. in the magazine i was reading there was also a photo of a red-eyed Kate Hudson looking nervously (cross-eyed?) at a skeleton key. considering these two unrelated events made me realize how a lack of "standard methodology virtues" could lead to a dangerously unvirtuous edge similar to the movie "Altered States". but that, i'd argue, is why you'd consider these things in the first place. they're hyperstitionally powerful.

dread: sd - although not entirely hostile to it, I've become increasingly suspicious of this meme 'it does what it says'. This is supposed to mean that (eg) a given section in D&G; doesn't actually refer to anything, as it appears to, but that it performs some action in a radically materialistic register that has nothing to do with signification; strange, then, how the expected result of this non-signifying action often appears to be the same *_as if_* it were read as a piece of normal referential text, but with the possibility of any dissent or argument automatically subtracted. They're not talking "about" nomads, they're "doing" nomads, so you can't argue with what they say, because that would be irrelevant - but it just happens that they "do" nomads by talking about them in a convincingly groovy way. A strange sort of radical materiality - imagine if instead of listening to it, you looked closely at the grooves on a record and there was a little picture of the singer in them. That smacks of divine intervention.

Nick: "concern" a bit strong - after all, its not 'my' problem, I was spun out long ago by the cliquomorphic centrifuge. Just trying to help out with the current doldrums with some provocations ;)

Will try to squeeze out some more thoughts on your points later.

just to get this clear

no one 'believes' in decimal numeracy

why not? Of course, the question is badly phrased, one can't believe in a set of procedures, rather it's a matter of what is believed *_about_* it?

sd: Dread - I didn't say that D&G; don't signify - that would be pomo absurdity. Language is obviously symbolic. So: D&G; don't merely describe rhizomes in their text - their textual fabric is itself rhizomatic; rather than advocate following lines of flight, their text is constituted by lines of flight; and yes, while describing nomads, their text is nomadic. The form is so determined by the content that I am tempted to

suggest there are moments of immanence (in the sense that the distinction between form and content is left behind, as dead weight on the ground).

However, that said, please don't mistake me for a huge D&G; fan: I think their texts lack a certain vigorous clarity - they often get tangled up in their own jargon (which is, in my opinion, often infected by pomo pseudosophistication).

Ultimately my point is probably this: texts carry memes and they are particularly effective when they are animated by the memes they carry. A Thousand Plateaus, for all its faults, seems to me to be a strikingly good example of this.

The following are less interesting or effective: texts overpopulated with descriptions of their own machinery; texts which are simply not up to the memes they describe (e.g. most journalism, criticism and readings of philosophical texts); texts consisting of a promise to deliver, the delivery forever deferred...

dread: agree with most of this but in the interests of being irritating would question this:

texts carry memes and they are particularly effective when they are animated by the memes they carry.

which seems like an intellectual fetish on the part of certain philosophers. Surely it depends what the text is designed to do. Yes, a text may benefit from exemplifying what it describes, but in many cases this wouldn't be helpful, and may even be a wholly unintelligible proposition (a recipe that 'does what it says'?) In fact, any text which describes qualities that cannot be applied to textual material would fall into this category – it says something about the hyperstitional program if this fetish of the chronically textbound is a sine qua non of its writing style. Why not overturn this strange orthodoxy and create texts that do nothing, theories that go to the greatest lengths only to refer to external objects, and to create no effects whatsoever? Why does everything have to be so prissily "true to itself"?

sd: dread 'chronically textbound': all comprehensible utterances that come out of a human mouth are text, as are all inscriptions or codes.

If the meme & gene lens is used seriously (which I'm in favour of doing, to see where it leads and what it finds) then the 'external objects' focused on are genes (biological replicator instructions and codes) and memes (non-biological replicator instructions and codes), so in that sense being chronically textbound is unavoidable. Unless mentalese telepathy emerges (not on the cards though).

Another specific example: Norman Davies 'The Isles - A History': there are many aims and agendas running in this text, but one of the most powerful is its rigorous, ruthless exposure of how the memes of 'English' and 'British' have infested histories of the Isles. 'The Isles' uncovers and deliberately puts into motion new memes. So, for example, the text refuses to allow words like 'England', 'English', 'London', 'British', 'Ireland' etc until the text describes the period in which these words actually came into currency. The text employs fresh memes which hint at a possible archaeological substratum: The Green Isle, Cliff Country, The Misty Country, The Midnight Isles, The Isles of Outremer, The Englished Isles, The British Imperial Isles. Davies does not describe what he is doing - he simply does it. The effect is a radically different perception of 'the external object' - the Isles and their histories.

How can a text create no effect whatsoever? The basic effect is that a text informs. Others are that it bores or interests. An optimal outcome, for me, is that it enhances perception.

A contrasting example is David Crystal's 'The Stories of English' - a book which traces the evolution of the English language from diversity to imposed standard and back to diversity. The book is very factual and predominantly dry because the style used to describe the evolution of the meme is not as dynamic as the meme itself.

Returning to the theme of this thread, is it a coincidence that writers who can be labelled as pro-capitalist (e.g. Pinker) and Anti-Communist (e.g. Orlando Figes, Robert Conquest, Norman Davies) are far more lucid, dynamic and interesting than the likes of Marx, Lenin or Trotsky? Compare Darwin's style to that of Karl Marx.

piet: *emancipation of the latent intelligence within sub-engineered matter.* -- sounds right as rock empowered to me

"... marking a rupture with the cosmological order?" Not sure whether I quite understand this question - nature seethes with breaks (inflection points, emergence thresholds for dissipative structures), so capitalism is a typical anomaly.

disagree with that profoundly; what's THE most characteristic characteristic of capitalism? Not just freedom to contract and commit (ancient after all; the informalization of formation, the organizationalization of rock are all old hat) --- but hyp(er)ing these processes (everything affecting searches for and filling of niches, from advertizing to mustering credit and concommitistas voluntarios culminated and combined in the freedom to ISSUE and the ability to time them (deadline and pledge

oneself and/or collateral, future crop whaddeva), something all fabulously failsafesize 'desiring' monomanics (ANOMALOUS CAPITALISTS) have sought to taboo and substitute infatuation with perpetuity for, they manage to skits the works with magisterial succes; for all practical purposes the art of migration and tradewave legitimation and timing (in and out) is displaced down to the doldrums, surrogated with hysterically personal punctuation (albeit in Olympian guise).

CAPITALISM DON'T WORK WITH THE FOR NOW AD- BUT SOON TO BE PROVERBIAL QUALIFICATION: (E)CO-OPERATIVE

Because capitalism has an unparalleled voracity, and even the truly giant terrestrial systems (the bacteriosphere etc.) will be absorbed by it on current trends within a modest historical time-frame. Alternative narrativizations privileging alternative complex systems to be encouraged here, however, and if they can be highly politized ('insect politics', 'bacterial politics', 'crustal politics' (that might be piet but can't understand with his mouth full of rock chippings)) so much the better.

If you quit loading your shoulders with them so temptingly I'd become less likely to bite off more than you eschew

"Are you storytellers who pine hopelessly after the analytical, or analysts with an unfortunate poetic tic?" ---- toc

Conclusion

Clock time is a fungible measure of sacrifice. Of all measurement instruments, the clock is the most valuable because so many of the things we sacrifice to create are not fungible. The massive clock towers of Europe, with their enormous loud and resonant bells, broadcasting time fairly across the town and even the countryside, rather than the last relics of the medieval, were the first building block of the wealthy modern world. The Europeans evolved their institutions and deployed two very different but complementary timekeeping devices, the sandglass and the mechanical clock, to partition the day into frequently rung and equal hours. Europe progressed in a virtuous circle where bells and clocks improved the productivity of relationships; the resulting wealthy institutions in turn funded more advances in timekeeping.

The rise of the cities and the merchant revolution was given a temporary setback by the Black Plague, the very century that the clock was introduced, but thereafter economic growth renewed with unprecedented vigor. The massive change on the farm, the dominant form of industry, in the 14th and successive centuries from

serfdom and slavery to markets and wage labor, was caused not only by the temporary labor shortages of the Black Plague, but more fundamentally and permanently by the time-rate contract and the new ability to accurately and fairly verify its crucial measurement of sacrifice, time. Time rates also became the most common relationship for the mines, mills, factories, and other industries that rapidly grew after the advent of the clock.

binky: Excuse failure to take intervening comments into account.

Capitalism includes technoscience in its basic macroscale feedback loop, thus trending strongly to artificial intelligence technologies (of many kinds) and even to 'singularity' in the Vinge sense (surpassing of human cognitive capabilities within the technosphere, thus on a dynamic - and accelerating - curve).

Granted--but surely the link between capitalist technoscience and the internal conceptual lineaments of AI/A-Life research is extrinsic and contingent? Otherwise the implication is that it was historically impossible for Turing or Langton to have been communists, which strikes me as absurd, unless you're attributing to History an inherent logical teleology a la Hegel.

This virtual event is simultaneously a stupendous liberation of machinic potential and a biogenetic catastrophe for (conservative human) organisms, since it abruptly terminates the human genetic lineage as the principle replicative axis of social reproduction.

Fine. The future certainly won't be "human" in any sense intelligible or acceptable to humanist reactionaries. But why assume that communism is necessarily technophobic and *in principle* committed to reactionary humanist paradigms of bio-social reproduction?

nature seethes with breaks (inflection points, emergence thresholds for dissipative structures), so capitalism is a typical anomaly.

Surely this claim must be restricted to a "nature" arbitrarily confined to a certain scale? I would contest the ubiquity of such breaks (i.e. of emergent complexity) at the very big (cosmological) scale and very small (sub-Planck) scale. Arguable that the definitive threshold re history of solar system (and hence earth) is the death of the sun, itself merely a local prelude to the limitrophic dissolution of the physical universe as now known (however dismally) in the wake of accelerating cosmological expansion, i.e. asymptopia. The post-asymptotic universe will go on for a lot longer than the physical one--but there'll be nothing left in it to sustain anything capable of exciting negentrophiles. Perhaps this seems irrelevant. But you can't simply invoke the supposedly undeniable authority of "nature" viz capitalism as terrestrial process without explaining why you've chosen to privilege a physically parochial paradigm of nature, one which is rooted almost entirely in one (admittedly fascinating) scientific discourse, i.e. what you call "cybernetics" (=complexity or dynamical systems theory (DST)). Moreover, isn't this fascination with a terrestrial sideshow wherein capitalism is necessarily master of ceremonies not underwritten by a very specific political sensibility? And isn't this extravagant speculative narrative a teeny bit otiose if what you're really interested in is promoting the ontological legitimacy of individual liberty, free trade, and an expanding market?

'Purposes' are abbreviations for coherent nonlinear dynamics (cybernetic plexions) [...] A thermostat doesn't 'want' to stabilize a temperature, capitalism doesn't 'want' to create AI explosion, the apparent teleology is an effect of machinic circuitry, but since purposes are so readily reduced to cybernetic diagrams, the folk (intuitive) attachment to teleological language need not trouble us unduly [...] There is a capitalism event (#2) [i.e. capitalism as material process] but it is necessarily, and in fact multipliciously, narrativized for the purposes of human intelligibility (#1) [i.e. capitalism as hyperstitional construct]. It has structural similarities to transcendental idealism which also combines real but unthinkable events with cognitive schemas.

This is the crux of the matter (cf. several previous comments by Dread). What exactly is "unthinkable" about the reality of capitalism and why does it require hyperstitional schematization? Hyperstition's political narrativization of capitalism as destiny happens precisely in this imperceptible slippage from a reasonably uncontroversial description of capitalism as cybernetic process (positive feedback loop) to politically loaded narrativization of capitalism as destiny. It's this attempt to effect a *transcendental* schematization of capitalism that results in an equivocation between

the unobjectionable diagramming of capitalism's teleonomic functioning and its dubious hyperstitional narrativization as necessary telos of terrestrial destiny. Precise empirical calibration of capitalism's material functioning is subordinated to a quasi-theological schematization which garbs the latter with the mantle of ineluctable purposefulness.

Re "narrativization for the purposes of human intelligibility"-- That historical materialism has been largely appropriated by humanist simpletons waxing about a crypto-christian kingdom of ends doesn't invalidate Marx's invaluable insights into the systemic nature of capital production. What about the possibility of conjoining historical materialism with eliminative materialism and the prospect of a mode of socio-cultural production grounded in vector-algebra rather than belief-desire folk

psychology? Very telling that hyperstitionalists should favour the deeply conservative Chomsky-Pinker line about the immutability of "human nature" over the Dennett-Churchland-Metzinger axis, whose emphasis on the plasticity of

human cognitive processing is far more attuned to Darwinism. Anyone interested in the longterm socio-cultural emancipation of intelligence should be backing the prospect of a Mao Ze Churchland equipped with neurosurgical technology instead of printing presses, rather than cretinous neo-conservatives dribbling about democracy as manifest destiny. Neurocultural revolution would effectively obliterate the cognitive framework underlying traditional economic means-ends rationalizations of behaviour and eliminate any need for hyperstitional narrative.

the autonomization of culture from the human species is - of course - the principal issue at stake (and one reason for privileging capitalism, which seems alone capable of doing this). Since capitalism prospectively offers terrestrial matter the opportunity to engage in deliberated technical manipulation of its own substance it takes on a biotechnological and geotechnological sense far exceeding any preliminary delimitation of the 'ethosphere'. In fact, subsumption of the earth into the (post-human) ethosphere is the ineluctable machinic destiny that the word 'capitalism' tags [...] Capitalism has an unparalleled voracity, and even the truly giant terrestrial systems (the bacteriosphere etc.) will be absorbed by it on current trends within a modest historical time-frame. Alternative narrativizations privileging alternative complex systems to be encouraged here, however, and if they can be highly politicized ('insect politics', 'bacterial politics', 'crustal politics' so much the better. Simple answer, capitalism is already hyperpoliticized and thus already lined up to take narrative precedence - you're right to see this as a 'culturalist' skew

Again, no problem on the whole with any of this except for the putatively ineluctable connection between capitalism and the future deterritorialization of the biosphere. This remains an empirical issue (e.g. Is capitalism immune to the effects of imminent ecological catastrophe?). A rather parochial political programme is being grounded on a set of tenuous promissory notes about what will "inevitably" happen. Such claims remain wholly susceptible to empirical falsification--not least the prediction concerning the imminent absorption of the bacteriosphere ("on current trends"). Marvels of nanotechnology notwithstanding, I fail to see how such futurological speculation provides a sounder basis for a political programme than dreams of workers' utopia. Short of demonstrating a necessary historical isomorphy between capitalism and technoscience, nothing discounts the possibility of similarly interesting results being unleashed by alternative modes of social organization.

basic point 'capitalism is good' (or 'bad') doesn't mean very much, too weak even to support a contradiction - won't take a huge detour into moral theory, but I consider 'X is good' to broadly equate to 'lets do X' in this context, which is exhortation not argument. inhuman / 'good' for humans - no inconsistency i can see - absorption into the techonomic swarm can be simultaneously ultimate liberation and utter horror

Presumably this can be paraphrased as "Let's promote and support capitalism because it's the surest guarantor for the deterritorialization of the earth ("earthing" of cosmic schizophrenia so to speak)"? Here we get to the crux again. A set of speculative hypotheses about the way the world works is being used to underwrite a politics--i.e. a system of practical exhortations/imperatives about what to do. But why still assume that there's any possible congruence between what there is and what we should do? Or between what there is and what's good for us? If the deterritorialization of the earth depends on what *we* believe and do then it's just like the kingdom of god. The subordination of theoretical intelligence to practical reasoning, the assumption that intelligence is necessarily (practically) interested, is the ultimate religious postulate. But if (as Darwin and Freud suggest) it's ultimately impossible to reconcile the way the

world is with the way we need it to be, then any attempt to articulate politics with ontology (or metaphysics) is based upon a failure to appreciate the fatal disjunction between is and ought. Nothing you know about what there is or how the world works can tell you what to do. Hence nothing follows from the fact that capitalism "is"--least of all an eschatological politics. Intelligence should favour strategies that promise to reengineer the nature of the political animal it has mobilized in its service.

Lastly: Is political neoconservatism merely an instrument of inhuman capitalism? Or is capitalism in the service of neoconservative politics? I assume hyperstition denies the latter and affirms the former. But answering yes to the former still obliges you to explain why an inhuman purpose should require recourse to human interests, however "instrumentalized".

And if those interests are merely instrumental to something that has no interests, then why the need for a simulacrum of exhortation? The "Let's do X" is redundant. What syllogism of practical reasoning (I exaggerate but the point still stands) can underlie an imperative to act wherein the future that motivates the act necessarily excludes the present agent of the act? Why would you be interested in acting on behalf of a future that excludes all your interests?

northanger: re-reading most of this i'm left wondering (if Capitalism = Alan Strang in Equus) how Dysart, the psychiatrist, solved his dilemma. think the play leaves things hanging. but Dysart knew what he had to do — and i agree with what he had to do. imho, the normative cure is certainly better than howling in the mist.

Nick Land: binky - another superb contribution, thanks. There's so much of interest in your comment, that I can't hope to respond comprehensively in one go.

Firstly, your undercurrent on communism is highly intriguing, but rather cryptic.

"... surely the link between capitalist technoscience and the internal conceptual lineaments of AI/A-Life research is extrinsic and contingent? Otherwise the implication is that it was historically impossible for Turing or Langton to have been communists ..." - while some germinal scientific thinking and even rudimentary technology can be situated 'prior' to capitalism (if capitalism is given sharp Marx-type historical definition), the type of runaway trend that has come to characterize technoscience within modern societies has such profound entanglement with the modes of specialization, industrialization, investment, semiotic abstraction and programmatic research exclusively characteristic of capitalism that it is very hard to make a sharp division between a distinct 'intellectual lineage' and the wider social process. A certain conception of communism (or other post-capitalist modern society) might problematize this, but that would depend on maintaining that such a society itself escaped parasitic dependence on capitalism (contesting to the arguments of sd, and even of Trotskyites (when it comes to concrete instances, i.e. Soviet Russia and social clones)). Since 'actually existing soci*lism' has relapsed into global capitalism, such alternatives remain extremely speculative.

"That historical materialism has been largely appropriated by humanist simpletons waxing about a crypto-christian kingdom of ends doesn't invalidate Marx's invaluable insights into the systemic nature of capital production." - In many ways I'm still enthralled by Marx, but the ultimate mathematical incoherence of his model cannot just be ignored, even if the empirical results following attempts to politically instantiate it can be. Since the effective (and inevitable) politicization of the proletariat as the instrument of realization for the post-capitalist social order is inherent to the overall Marxian model, the failure in practice for socialist politics to take the (admittedly hugely intriguing) path you advocate can also not be easily shunted aside.

Allow me to briefly digress on capitalism and superstition - a relation which you portray as significantly less tormented than is in fact the case. My contention is that all superstitiousists should concur on the fact that robust systematic narratives are of central analytical importance and that capitalism has provoked a number of these, to different degrees of condensation, coherence and cultural virulence. It seems to me highly plausible, though analytically distinct, to invest these capital-related narratives with special prominence (although someone could with complete superstitious consistency effect a reduction of capitalism to, for instance, a fluctuation in the bacteriosphere (or sunspot activity) and cash-out socio-economic descriptions into an entirely different register, perhaps even dissolving the phenomenon to general satisfaction). Finally, even if the special privilege I have given to intelligent catastrophism as the dominant capitalist 'tropism' were accepted, both the theoretical and practical political consequences drawn could be entirely different.

This is just to say that superstition doesn't yet have an explicit politics, or anything like one - any more than economics does. My apologies for merging my own affirmative cybergothic scenario with the broader superstitious conversation.

"A set of speculative hypotheses about the way the world works is being used to underwrite a politics--i.e. a system of practical exhortations/imperatives about what to do. But why still assume that there's any possible congruence between what there is and what we should do?"

Since I have very little confidence in political debate - having never seen anyone change their ideological commitments on the basis of one - I am far more interested in the 'is' than the 'ought'. Political provocations are intended to draw out the structures of alternative social macronarratives, rather than persuade people to align with particular political forces (which is, in any case, far harder to do than is commonly accepted, especially in heated blogospheric conversations - years of screaming are

generally followed by unchanged votes which are themselves of vanishing democratic insignificance). Even partially coherent, systematically elaborated models of capitalism, or 'post-capitalism' (which should surely, Marx-like, exhibit plausible path-dependency), are interesting IMHO, while emotional or even principled expressions of allegiance to particular goals or groups, on the other hand, are essentially vacuous. Sometimes what looks like an expression of political commitment is merely a sloppily articulated political science prediction (e.g. the Western proletariat is not poised to rise up and overthrow wage-slavery), thus a theoretical point about scenarios realistic enough to be worth exploring.

This is already beyond patience-testing length but realize it has scarcely scratched the surface of your remarks. More later.

What syllogism of practical reasoning (I exaggerate but the point still stands) can underlie an imperative to act wherein the future that motivates the act necessarily excludes the present agent of the act? Why would you be interested in acting on behalf of a future that excludes all your interests?

These are excellent questions - but doesn't all East Asiatic religion presuppose exactly these peculiar imperatives (to the point that a lifetime of excruciating discipline can be motivated by them)?

sd: binky - sorry for the delay

'the claim that memetics enjoys the same incontrovertible scientific authority as genetics is nonsense. An ultimately bio-evolutionary explanation of culture is surely desirable, but the suggestion that we have anything remotely approaching it today -- or that memetics will do the job-- is naively wishful thinking.'

Of course, memetics (thus named) is in its infancy, but in a sense any historian who has questioned the received version of history has been doing memetics in some shape or form. The question is really what degree of scientific status you are willing to grant a certain history, if any at all. As I mentioned in response to dread, I consider Norman Davies 'The Isles' to be an example of memetics, but I doubt Norman Davies conceived it that way. Jared Diamond's 'Guns, Germs and Steel' is a profound mixture of genetic and memetic history (he's excellent on the emergence of writing and on inventions). Most people would agree that Diamond is thorough and rigorous with his facts and their presentation. I'd say it's scientific.

- 'What are the biological units of memetic replication? How are they individuated?

- They are only biological by analogy, but they could be:
- a complete written text, understood in the conventional sense, e.g. The Bible
- chunks of text which have become embedded in everyday language (e.g. an eye for an eye)
- ideas or sets of ideas which can be 'found' in the text (e.g. redemption)
- doctrines which are based on interpretations of the text and defines themselves in contrast and opposition to other doctrines (e.g. Catholicism)
- underlying code which finds expression in diverse forms of memetic replication (e.g. cybernetic theory)
- technological artefacts (e.g. the QWERTY keyboard - Jared Diamond is excellent on this)

If the idea of an individual 'nation' is treated as a meme, then individuation entails tracking when this meme first came into currency, what power structures brought it about, what codes it embodied (e.g. stereotypes), how it related to other nationality memes, etc.

The focal points for memetics are mutation, infection and 'cultural selection'.

'presumably you have a sophisticated (i.e. non-adaptationist) account of what distinguishes conceptual rationality (yours and that of your pro-capitalist brethren) from memetic pathology'

First of all, you are going to have to explain what your problem with 'adaptation' is. The Dawkins-Pinker model of reverse engineering looks at a piece of biological machinery and asks the question 'What problem did this machinery solve?' Female mammals providing warm milk from their bodies to their young solves problems connected to conquering new climates and giving birth to big-brained young which cannot fend for itself. The motors for this problem solving were mutation and natural selection (death). This view of adaptation does not involve 'purpose' - mutations which were beneficial for gene replication survived; the problems which prevented genes from replicating in a specific environment were solved purely accidentally. I really don't see how you can explain biological machinery such as eyes, claws, brains

and hidden ovulation if you will not allow that they are adaptations which solve specific problems.

Similarly, the emergence of language (the human 'master meme') solves the problem of communication, but no humans suddenly decided to invent language. The evolution of language is still beyond human explanation, but there were many accidental factors which contributed to its emergence (e.g. a widening of the hole in the vertebrae, which enabled a thicker 'broadband' spinal cord – chicken or the egg?; human ancestors cooperating in increasingly complex ways).

So, I am genuinely intrigued by what you see as the problem here. Maybe I've just misunderstood you.

With regard to 'memetic pathology', I admitted that concepts such as 'meme virus' need a thorough service. I beg a little patience here.

'what still remains under-theorized is the complex interaction between the machinery of cultural software and the mechanisms of biological hardware'

Some preliminary musings:

Some memes do simply die. Some memes from Freudian psychoanalysis, such as Oedipus, which struck most people (except Jim Morrison) as absurd (i.e. counter intuitive and definitely not universal), are more convincingly explained by memes from evolutionary psychology:

"Daly and Wason... believe that Freud's mistake was to run together two different types of parent-offspring conflict. Young children are in conflict with their father over access to their mother, but it is not a sexual rivalry. And older children may have a sexual conflict with their parents, especially their father, but it is not a rivalry over their mother. In many societies fathers compete with their sons for sexual partners, explicitly or implicitly. In polygamous societies, where a man can have several wives, they might literally compete for the same women. And in most societies, polygamous or monogamous, a father must subsidize his son's quest for a wife at the expense of his other children or his own aspirations. The son may be impatient for the father to begin diverting resources to him; a still robust father is a roadblock to his career. Filicides and patricides in most of the world are touched off by such competitions." Pinker, *How the Mind Works* p446

The cultural software of evolutionary psychology pays more attention to the mechanisms of biological hardware than Freudian psychoanalysis ever did and, in my opinion, gets closer to a truth which is universal for homo sapiens.

Philosophical memes such as 'the subject' are crude when compared to the picture of the mind that is emerging from study of the brain.

Some cultural software is moving closer to biological hardware, discarding memes which no longer work in the process.

northanger: If he seeks to align himself with the future, he must assume a condition of some sort for a world fifty years beyond his own. Every historian,—sometimes unconsciously, but always inevitably,—must have put to himself the question:—How long could such-or-such an outworn system last? He can never give himself less than one generation to show the full effects of a changed condition. His object is to triangulate from the widest possible base to the furthest point he thinks he can see, which is always far beyond the curvature of the horizon. To the practical man, such an attempt is idiotic, and probably the practical man is in the right to-day; but, whichever is right,—if the question of right or wrong enters at all into the matter,—the historian has no choice but to go on alone. Even in his own profession few companions offer help, and his walk soon becomes solitary, leading further and further into a wilderness where twilight is short and the shadows are dense. —The Education of Henry Adams, XXVI Twilight, Henry Adams never read Marx, but wanted to explore Nick's comment: "ultimate mathematical incoherence of his model". for some odd reason decided to search TRIANGULATION + MARX. triangulation is one-gecko-toe method i use to evaluate data. also, "triangulation policy" refers to Bill Clinton's re-election strategy developed by Dick Morris; John Kerry ("Kerry managed to violate a central tenet of triangulation: Whatever you do, do not end up giving your opponent his own chance to move to the center."); Tony Blair; & George Bush. would like your thoughts on this Nick.

www.answers.com/topic/triangulation-chess?method=6

Triangulation is a tactic used in chess endgames to put one's opponent in zugzwang (compulsion to move) ... a player can be said to "lose a tempo" when taking one more move to achieve something than necessary, or to "gain a tempo" when taking only two moves to do what would have taken three by other methods.

www.candw.ag/~jardinea/ffhtm/ff971114.htm

In one way, Marx's efforts were a failure. His mathematical model of the economy, which depended on the idea that labour is the source of all value, was riven with internal inconsistencies and is rarely studied these days. Many of the constructs used by modern economists - such as supply-and-demand curves, production functions, and game theory - hadn't been conceived in the eighteen-sixties. A new textbook, "Principles of Economics," by N. Gregory Mankiw, a Harvard professor, mentions Marx just once in eight hundred pages, and that reference is pejorative.

www.csuchico.edu/~michael/biography.htm

Reading Marx in this light made me realize that most of his readers missed what I considered to be very important to understanding his work. These researches led to my book, "Karl Marx's Crisis Theory: Labor, Scarcity and Fictitious Capitalo (1987). I found that Marx sometimes wrote in order to influence contemporary political conditions. Failing to see that element of Marx's work, modern readers generally are inclined to read his writings as if they were timeless truths. For example, his famous articles on India argued that England was promoting progress in England, but Marx knew little about England at the time. Instead, he was trying to undercut the influence of Henry Carey at the "New York Tribuneo, where Marx wrote.

What is TRIANGULATION?

venus.soci.niu.edu/~jthomas/class/Handouts/triang-denzin

Triangulation is the application and combination of several research methodologies in the study of the same phenomenon. The diverse methods and measures which are combined should relate in some specified way to the theoretical constructs under examination. The use of multiple methods in an investigation so as to overcome the weaknesses or biases of a single method taken by itself is sometimes called multiple operationalism. The insistence on a multiple operational orientation in the social sciences is commonly associated in the field of psychology with the work of Donald T. Campbell and his associates (Brewer and Collins 1981).

The social sciences must move beyond investigations that triangulate only by data source, or by research method. Multiple triangulation must become the goal and aim of these disciplines. There are, however, few outstanding illustrations of this commitment. Perhaps Thomas and Znaniecki's publication, 'The Polish Peasant in Europe and America (1918, 1919, 1920) remains the classic in the social sciences ...

Thomas and Znaniecki's investigation used triangulated data, investigators, theories, and methods. Life histories, autobiographies, and family letters were at the core of their study, yet, in an unparalleled fashion, the research utilized participant observation, interviews, quasicomparative experiments on a grand scale, unobtrusive methods (letters), and surveys. Theoretically, the work wove its way (often implicitly) through the theories of Freud, James, Marx, Spencer, Durkheim, Mauss, Weber, Tonnies, Simmel, Hegel, Mead, Cooley, and Comte.

ricardo.ecn.wfu.edu/~cottrell/ope/archive/9511/0141.html

Marx's Method of Triangulation. Here is my intervention on the discussion of the historical versus Hegelian approach: I agree with Tony Smith. Yes, Marx had a Hegelian approach. He wanted to express the totality of relations all at once, but how could he achieve that level of abstraction while still communicating about the real world. As Paul Z. noted, Marx used the entry point of the commodity. Once you understand the totality of the relations that make up the commodity you have achieved a Hegelian level of abstraction. But how do you communicate all the relations that make up the commodity? Remember Marx's note about how the beginnings are hardest. How do you pack everything into a paragraph, a page, or even a book so that a reader can grasp what is going on? Here is where I think that history enters into the picture: Marx's historical approach allows him to give concrete material that gives us a toe hold into his analysis.

"Men make their own history, but they do not make it just as they please; they do not make it under circumstances chosen by themselves, but under circumstances directly found, given, and transmitted from the past."

www.cas.usf.edu/JAC/131/russell.html

Each of us has a unique sociocultural heritage: a history of interactions with others and events which produces individual, original adaptations and transformations of one's self and others and events. Human beings are not internally (genetically) programmed for the vast majority of their behavior, as animals are in their instincts. Unlike animals, human individuals are born into a social world where they learn particular cultural patterns (habits) of behavior that change profoundly over time and differ radically among groups (cultures) within the species. Thus, an individual's development depends on interactions with others and the world, in a process Davidson calls "triangulation," not on correspondence to some biological or transcendent order outside experience, or on some conceptual scheme outside the

indeterminate interactions among one person, others, and events in the world ("Three Varieties"). The social environment is not merely a stimulus for the playing out of preexisting inner biological imperatives; it is the means by which human beings become human.

Open Darwin thread

CCRU-Shanghai (August 13, 2005)

My copy of Pinker (The Blank Slate) is in another continent at the moment, and there's nothing particular I want to say about W's seeming flirtation with 'Intelligent Design' in US education except that it's utterly intellectually corrupt (and an abuse of Federal power).

Only preliminary point to be made here is that the polarity between 'human nature conservatives' and 'blank slate radicals' leaves out the 'biolibertarian' alternative of deep (genomic) body modification and species mutation. The road to a new culture runs through the body - call it Shogothic Materialism (or Oankali intervention).

Comments: Open Darwin thread

piet: I'll call it whatever you want if that's what it takes to make you make my (and others') meals any better (I am leaving out none of the 7 geopol. die ruksjans nor any of the whatshowmaycallit with other benomered and befaultabled fractions; to play on Hamaker's words (are the marines helping yet): have you got any chinamen at least thinking about making me a mobile musical and powderspreading power sporting rock grinder yet?

northanger:

Oankali intervention

please define "Oankali intervention". (and, if you're not nick who are you?)

Nick Land: northanger - Nick has hijacked Ccru-Shanghai identity after losing his access codes, so it's me ...

'Oankali' come from Octavia Butler's Xenogenesis Trilogy (now renamed 'Lilith's Brood' i believe). They are an extraterrestrial species of deep-bionic gene-traders who arrive on Earth after a nuclear war to transmute its life forms through DNA-traffick and ultimately consume the whole planet into cosmic nomadism material ... personally, think X. among the very greatest works of the 20th century and Butler's vision is worthy of religious devotion ... her other stuff is good too ...

northanger: hey nick. think X? is that like think pink? which reminds me, colors done! &, think fifth teletubby's aerial may be microgravity symbol (μg)

never heard of Pinker, but found helpful links—

reason.com/0210/fe.rb.biology.shtml

en.wikipedia.org/wiki/Steven_Pinker

en.wikipedia.org/wiki/The_Blank_Slate

Pinker states, "the human mind is shaped by evolutionary psychological adaptations". attacks three modern myths: blank slate (why we go to school), noble savage (uncivilized nobility) & ghost in the machine (immortal, immaterial mind/soul). Pinker thinks (a) blank slates don't do anything — humans do things; (b) noble savages just as destructive & warlike; (c) intelligence isn't a miracle — it's just another type of computation process.

'biolibertarian' alternative of deep (genomic) body modification and species mutation. The road to a new culture runs through the body - call it Shoggothic Materialism (or Oankali intervention).

wondering, in practical terms, how a new culture road runs through a body. (distinction between body (virus, eugenics) vs. mind (meme)?). take it 'biolibertarian' involves "waking something up"? are you saying the Oankali — capable of transmuting life(BIO-) forms "through DNA-traffick" — are the biolibertarian alternative? if yes, gee, where are they?

mishfan: HRI Warwick ? the following snippet of revery was inspired in part by leafing through a heap of their fancy year report (I tear off the covers and use them to keep my loose sheet prfr together).

voices that speak of giving the ohnehin natural segregation a hand in light of the facts of life: insurmountably fundamental cultural difference that lasted long enough to be internalized - a challenge to those many of us who believe in the basic operability of problems - in the fancier year reports of the bio-industrious blessed with lots of acreage to release their evil deeds upon reports about what we know exactly including the use of dna guns are schizophrenically enough interspersed with ones wherein they feel secure enough to admit they haven't a clue yet don't feel obliged to recognize these situation are prone and bound to mutate and hybridize seeing they are in such unspecificably reconstellating proximity. After all, explorers love to travel; feeding the birds is for the birds, birdfeed.

lines that come beforevoices . . .etcetera:

Anybody see 'the sorceress'? I reckon the distance between those days (middle ages), now and as many on again will get us only halfway back to soothingly, enlivening and nurturing unmolested environments ... if we're extremely lucky cause instead of an antidote to christianity which turned mentioned situations from a to b we get spin off number 2 (islam) with all the more potency, virulence and deadliness for constantly bouncing between the root of all evil (mono-whatever) that spawned it and spin-off number 1.

Now, the french have this euphemism for orgasm called 'the little death' - since clearing space in a busy womb with some healthy and vigorous pumping action is out of the question (inside is out untill ..) outer space needs clearing with a few healthy blasts (it's the equivalent of the post-marriage revel red stained lover's bedsheet but the left is stubborn in its determination to cost us a few more rivers of blood and so they tune out and obstruct

Nick Land: northanger - your stubborn detective work never fails to impress ;)

on bioliberation (there's an interesting looking new book with that title, but i haven't had a chance to take a look at it yet) just saying: there is a largely unexplored diagonal between the fork of 'blank slate radicals' (e.g. Mao Zedong 'the most beautiful poems are written on empty pages') who aim to build a future in the desert of infinite human plasticity, and naturalist conservatives, who expect society and culture to reflect the ineradicable warp of human nature (for instance, as i think sd was hinting on the Capital thread, that no innate or solidly constructible loyalties exist for large groups, making massive soc*alist projects unworkable and sustainable even in the short term only by familialist metaphors and other ad hoc manipulative devices). If culture cannot stray too far from the constraining biological legacy of homo sapiens, it is unnecessary to dumb down ambitions (right) or deny reality (left) - instead, Change the Body, best done in a non-planned distributed drift guided multipliciously by adventurous consumers IMHO, but whatever, key is that 'social constructionism' is simply a delusion if not pushed deeper - into biomutation. Or we could remain 'puny humans' are bore ourselves into extinction ...

(Been re-reading Robin's superb translation of Houellebecq's Lovecraft book - much on the tedium of human species perpetuation in Part 1).

sd: Liltihs' Brood is a vision-thought experiment which answers (in advance) the question posed by Pinker in 'How the Mind Works' (1997):

Why do we come in two sexes? Why do we make one big egg and lots of little sperm, instead of two little blobs that coalesce like mercury?

The answer is warfare:

"It is because the cell that is to become the baby cannot be just a bag of genes; it needs the metabolic machinery of the rest of a cell. Some of that machinery, the mitochondria, has its own genes, the famous mitochondrial DNA which is so useful in dating evolutionary splits. Like all genes, the ones in mitochondria are selected to replicate ruthlessly. And that is why a cell formed by fusing two equal cells faces trouble. The mitochondria of one parent and the mitochondria of the other parent wage a ferocious war for survival inside it. Mitochondria from each parent will murder their counterparts from the other, leaving the fused cell dangerously underpowered. The genes for the rest of the cell (the ones in the nucleus) suffer from the crippling of the cell, so they evolve a way of heading off the internecine warfare. In each pair of parents, one "agrees" to unilateral disarmament. It contributes to a cell that provides no metabolic machinery with a small cell that contains a half-set of genes plus all the necessary machinery with a small cell that contains a half-set of genes and nothing else. The big cell is called an egg and the small cell is called a sperm."

This in leads to a conflict of interests and unfair trade between the male and female, most clearly manifested in the tendency of the male mammal to impregnate and leave.

Octavia E. Butler's envisions a mating of two species (Oankali and human) and three sexes (male, female and ooloi). Their offspring are called constructs. The ooloi's sex is defined by its capacity to engineer genes. An ooloi explains it best:

"Because I was Human-born, my internal arrangement was basically Human. Ooloi are careful not to construct children who create uncontrollable immune reactions in their birth mothers. Even two hearts seem radical to some Humans... Two hearts are just double the Human allotment. But the organ growing between my heart was not Human at all.

Every construct had some version of it. Males and females used it to store and keep viable the cells of unfamiliar living things that they sought out and brought home to their ooloi mate or parent. In ooloi, the organ was larger and more complex. Within it, ooloi manipulated molecules of DNA more deftly than Human women manipulated the bits of thread they used to sew their cloth. I had been constructed inside such an organ, assembled from the genetic contributions of my two mothers

and my two fathers. The construction itself and a single Oankali organelle was the only ooloi contribution to my existence. The organelle had divided within each of my cells as the cells divided. It had become an essential part of my body. We were what we were because of that organelle. Ooloi said we were that organelle. That the original Oankali had evolved through that organelle's invasion, acquisition, duplication and symbiosis. Sometimes on worlds that had no intelligent, carbon-based life to trade with, Oankali deliberately left behind large numbers of organelle. Abandoned, it would seek a home in the most unlikely indigenous life-forms and trigger changes - evolution in spurts. Hundreds of millions of years later, perhaps some Oankali people would wander by and find interesting trade partners waiting for them. The organelle made or found compatibility with life-forms so completely dissimilar that they were unable even to perceive one another as alive."

The ooloi eliminate 'unfair' trade by making all its mates biologically addicted to itself.

The Oankali are utterly alien to humans because of their inquisitive attitude to cellular life: they seek out, absorb, record and genetically combine with other life. Humans, fundamentally flawed by their contradiction of hierarchy and intelligence, resist genetic trade, condemning themselves to a genetic dead-end, even when they have been healed, regenerated and improved.

Nice as it would be, Oankali intervention is, however, ahem, highly unlikely.

The question is: stem cells?

Nick Land: sd - stem cells developments indeed extremely interesting - fast track to replasticization of the body

"Oankali intervention is, however, ahem, highly unlikely" - but if this schema is taken more generally, as incursion from an alternative evolutionary lineage, it becomes more difficult to consign to the realm of the attractive but pragmatically irrelevant

northanger: *If culture cannot stray too far from the constraining biological legacy of homo sapiens, it is unnecessary to dumb down ambitions (right) or deny reality (left) - instead, Change the Body, best done in a non-planned distributed drift guided multipliciously by adventurous consumers IMHO...*

"Change the Body", let it happen multipliciously, etc etc. at the same time it's unnecessary for the right to dumb-it-down or the left to deny reality. what are the left & right to do, then? drift?

what are the left & right to do, then? drift? –

get out of the way?

northanger: "get out of the way?" - rotflmao

mishfan, what's "ohnehin"? found link for Warwick Horticulture Research International (HRI) - www2.warwick.ac.uk/fac/sci/hri2/. and ... why is "clearing space in a busy womb with some healthy and vigorous pumping action is out of the question"?

alternative evolutionary lineage. the prevailing narrative reminds me of hall & oates & that frayed lonely toothbrush. not all of us could appreciate that narrative apparently. how wrong they were.

sd, thanks for the Oankali overview — did a little research.

amazon.com/exec/obidos/tg/detail/-/0446676101/ - (great review by C. Douglas Baker)

cyberhaven.com/books/sciencefiction/butler.html (interview with Butler)

geo.cities.com/sela_towanda/ (photos)

en.wikipedia.org/wiki/Oankali

en.wikipedia.org/wiki/Ooloi

black science-fiction writers. hmm. what a narrative. hate to think we have to resort to bioengineering better humans. i'm for better narratives (really like that idea). how do you suggest obtaining the "pragmatically revelant" from the Oankali, Nick?

mishfan: ohnehin = any, either every way, a given (a word placed where it was to emphasize the next: natural in turn positioned to adverbialize segregation)

...out of the question applies to the possessive patriarchal conditions that jealously turn women down and out on the scale from respect paid (as in obeyed) to tradable cattle to hasten 'growth' of deserts. The (death ((for others as pleasure for me))) drive will not be denied however and so proof of manhood is placed(hidden) and drawn from (sought for) in explosives.

be sure to read the sequence right (proper at url) ... 'tune out and obstruct'
previous comment ... 'voices' . . . etcetera

sd: northanger, the aim of the Oankali is not to biologically engineer better humans - that is something they cannot help doing - but to combine Oankali DNA with that of other species. This is how the Oankali are defined as a species, whereas humans, terrified by difference, jealously guard their DNA. [Anyway, this all spoils the book - you need to erase sections of this post from your memory and enjoy the ride.]

One of the other interesting things about the Oankali is that they refuse humans access to any of their memes apart from spoken language. They impose meme amnesia and enhance bio-memory. The Oankali actually had to reactivate spoken language in order to communicate with humans - left to themselves, they prefer to communicate through chemistry and language that seems to closely approximate to mentalese. [erase - awful spoiler]

northanger: sd - as long as you don't tell me how the latest harry potter ends we'll be fine ;).

aim of the Oankali is not to biologically engineer better humans - that is something they cannot help doing - but to combine Oankali DNA with that of other species.

thanks for clarification. however, since Oankali intervention unlikely i was trying to determine "alternative evolutionary lineage" as Nick suggests. Oankali intervention provides an alternative evolutionary lineage by bioengineering DNA. so we engineer better humans (using "we" very lightly).

attempting to converge Oankali mentalese with mishfan's "tune out and obstruct voices".

are you familiar with Anne McCaffrey's Pern series? bonding between dragons & humans? dragons "impressed" at birth during a Hatching. impression creates telepathic link between dragon & human. flying dragon + human combo fight parasitical incursion called Thread. dragon + human symbiosis less intrusive than Oankali engineering & beneficial for both.

Nick Land: northanger - my ref. to "alternative evolutionary lineages" was aimed at certain technical and economic systems - trending strongly to 'artificial intelligence' - with the rapidly condensing potential to cut into (bio)genetic lineages from the outside

(so far extremely) germinal 'alternative evolutionary lineages' already exist among cultured (and incised) organisms in biotechnology labs

sd's example of stem cells also highly pertinent

DNA computing technology promises to make a further contribution, in part by assembling exact information processing interfaces - unprecedented communications links - with (bio)replicator chemistry

northanger: oops.

sorry! oops was for the first thingy.

{manly voice: time slippage}

en.wikipedia.org/wiki/Astrochicken

Astrochicken, Dyson explained, is a one-kilogram spacecraft that is unlike any other. Astrochicken would be a creation of the intersection of biology, artificial intelligence and modern microelectronics—a symbiosis of plant and animal and electronic components. Astrochicken will be launched by a conventional spacecraft into space at which point it is akin to the egg being laid into space. Astrochicken would then hatch and start growing a solar energy collector. The solar collector would feed an ion drive engine that will power the craft. Once the Astrochicken enters a planet's vicinity, say Uranus, it will feed on the moons and rings of the planet taking in necessary nutrients. It can land and take off using an auxiliary chemical rocket similar to that used by bombardier beetles. Now and then when it is in radio contact with Earth the chicken can call home and transmit details of its journey.

The term "astrochicken" does not occur in Dyson's earliest essays regarding Neumann-inspired automata. When Dyson was giving a lecture in Adelaide, Australia on the subject of space exploration with biotechnology, an audience member called out "Oh you mean this is an astro-chicken." The whimsical name caught on, and Dyson began to use it himself in subsequent essays he wrote on his theoretical biotechnology spacecraft.

Nick Land: superb

northanger: *DNA computing technology promises to make a further contribution, in part by assembling exact information processing interfaces - unprecedented communications links - with (bio)replicator chemistry*

are you referring to nanotechnology & self-replicating systems? (i'm new to this & need help locating your headspace). didn't know this: bacteria considered "nanotechnological self-replicating assemblers" & can be reprogrammed by genetic engineering. rapid prototyping also considered a replicator (manufacturing its own component parts) reminds me (since i worked on a RAD team) of rapid application development, which also uses prototyping & iterations (timeboxes). another form of agile software development: extreme programming (XP) — you may be interested in the Agile Manifesto: "We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value ...&etc;".

on another thread sd says: "A Thousand Plateaus very rarely draws attention to what it is doing. It does what it describes." Dread has problems with this. moral objections to capitalism (sd), changing focus of attention from capitalism to moralism (nick) & "enlivening and nurturing unmolested environments" (mishfan). risking scrunching things a bit here, thought this post on Belief as Basic interesting concerning formalized systems.

quotes....

+Don't you think the whole idea of formalizing a theory of knowledge and belief in God as part of that formal system is necessarily an exercise in reductionism?

+The proposition of a basic in epistemology is similar to the proposition of a tautology in logic. In such formal systems (or systems that strive for formalization), we understand that making assumptions is a two edge sword. Assumptions both endow and delimit the explanatory power of any formal system. Simply speaking, the fewer the assumptions, the better, and assumptions should never be made unless out of sheer necessity. For instance, in logic, we are helpless to articulate WHY the proposition, " $\neg(A \ \& \ \neg A)$ " is true. We can't conceive of the alternative.

+A naturalist worldview doesn't reject God-belief as basic out of hand. It's not a presupposition of naturalism that there is no God or that God-belief is not basic, if it were, then natural philosophy could not be used to argue against the existence of God. Simply put, I think the link between atheism and naturalism is more along the lines that the proposition of God, or in this case, God-belief is an unnecessary complication that doesn't clarify unknowns.

+When we formalize, we question absolutely everything at the bottom relentlessly. The question is not one of how we justify turning away from the wisdom of the day,

but how we justify each and every hypothetical basic as necessary in talking about things that we claim to know.

+Before we posit the divine sense, wouldn't it be better to try and work within the other basics already established first to come up with an answer? ... The divine sense merely becomes a black box; another way of saying, we have hit rock bottom, that's how it is, and there is no further explanation ... And the real problem I have with the belief that morality is a function of this divine sense, is that as a black box explanation which simply says, "that's the way it is", we cease to investigate the matter further.

i myself like the idea of a one-gecko-toe approach to things.

link for quotes above from "Belief as Basic"

anyboard.net/soc/2think/archive/10747.html

thought this highly referenced von Neumann quote worth posting here:

"By axiomatizing automata in this manner one has thrown half the problem out the window, and it may be the more important half. One has resigned oneself not to explain how these parts are made up of real things, specifically, how these parts are made up of actual elementary particles, or even of higher chemical molecules. One does not ask the most intriguing, exciting, and important question of why the molecules or aggregates which in nature really occur in these parts are the sort of things they are, why they are essentially very large molecules in some cases but large aggregates in other cases, why they always lie in a range beginning at a few microns and ending at a few decimeter. This is a very peculiar range for an elementary object, since it is, even on a linear scale, at least five powers of ten away from the sizes of really elementary entities." ("Theory of Self-Reproducing Automata", J. von Neumann, 1966, p. 77)

quotes i posted part of discussion concerning Plantinga's argument that belief in God is rational & the 'basicality of theistic belief'. while exploring his thought a little i came across the term 'warrant' (theory of justification) & what he thought of as "the real intellectual danger in Darwin's dangerous idea." in "Darwin, Mind and Meaning" Plantinga argues against Daniel Dennett's "Darwin's Dangerous Idea" contrasting Dennett & Richard Dawkins' contention that rejecting evolution is "inexcusably ignorant" (Dawkins' = choice between ignorance, stupidity or insanity; Dennett = no options, evolutionary skeptics are all three).

en.wikipedia.org/wiki/Alvin_Plantinga

id-www.ucsb.edu/fscf/library/plantinga/dennett.html

en.wikipedia.org/wiki/Axiom_S5

en.wikipedia.org/wiki/Theory_of_justification

theory of justification studies the epistemic features of belief. "we are within our rights" in holding justified beliefs. justified beliefs are not political or moral but intellectual. we are responsible (& obligated) for what we believe & we do not believe just anything. (see interesting IFF "if and only if" discussion & Plantinga's Axiom S5). if a belief is justified there is something that justifies it (called a justifier). a justifier can be another belief that must also be justified. if not, the justifying belief is totally unjustified.

think this has bearings ("loose marbles in the hand" sense) on the following considerations: moralism, meme production, critique, etc.

ps. theory of justification, imho, extremely useful hyperstitional engineering feature. (hope that makes sense)

"superb" - had a hard time understanding your last few comments so i threw astrochicken up in the air to see what you'd say ;). thanks for confirmation. no longer confused. btw, asteroid #32770 Starchick probably not named after astrochicken, but it'll do.

Nick Land: "a one-gecko-toe approach to things" ???

sd: re: stem cells

Current stem cell application restores abilities and repairs damage:

[//en.wikipedia.org/wiki/Stem_cells#Potential_treatments](http://en.wikipedia.org/wiki/Stem_cells#Potential_treatments)

they also feedback on neuroscience (please note the involvement of chickens northanger):

"In January 2005, researchers at the University of Wisconsin-Madison differentiated human blastocyst stem cells into neural stem cells, then into the beginnings of motor neurons, and finally into spinal motor neuron cells, the cell type that, in the human body, transmits messages from the brain to the spinal cord. The newly generated

motor neurons exhibited electrical activity, the signature action of neurons. Lead researcher Su-Chun Zhang described the process as "you need to teach the blastocyst stem cells to change step by step, where each step has different conditions and a strict window of time."

Transforming blastocyst stem cells into motor neurons had eluded researchers for decades. The next step will be to test if the newly generated neurons can communicate with other cells when transplanted into a living animal; the first test will be in chicken embryos. Su-Chun said their trial-and-error study helped them learn how motor neuron cells, which are key to the nervous system, develop in the first place."

Stem cells are full of a pure, primordial potential that our nervous system seems to prevent us from accessing. One obvious application is that they will be used in attempts to combat the ageing program which is written into our genes.

BBC Horizon programme from 1999 'Life & Death in the 21st Century':

[//www.bbc.co.uk/science/horizon/1999/living_forever.shtml](http://www.bbc.co.uk/science/horizon/1999/living_forever.shtml) (summary and transcript)

"Scientists in one lab have stumbled upon a remarkable discovery that suggests we may have hidden deep in our bodies a primordial and bizarre power of self-regeneration. It was unearthed during an experiment using mice specially bred without part of their immune system. As part of normal lab procedure the mice had holes punched in their ears to identify them.

DR ELLEN HEBER-KATZ (Wistar Institute, Philadelphia): We were doing an experiment and my laboratory assistant went upstairs to ear punch the mice and 3 weeks later I went to see how the experiment was doing and when I looked in the cage I was horrified to see that the mice were there, but the ear, the ear holes were not.

NARRATOR: When Dr. Heber-Katz examined the mice she found that the holes had not just closed up, the ears had rebuilt themselves. Instead of normal scar tissue, the mice's cells had magically recreated cartilage, skin and blood vessels, something no mammal can normally do. These mice must have had some mysterious power of regeneration.

ELLEN HEBER-KATZ: Here it is. You can see that there's no scarring whatsoever, you see blood vessels running through and it looks absolutely normal. It, it just has,

the hole has absolutely disappeared. We were shocked that this was occurring and it was something that we had never seen before and we thought that this animal must have some incredible ability to heal wounds.

NARRATOR: There are creatures on this planet with this bizarre ability. When amphibians like salamanders and newts are damaged they can regenerate, grow back tails or arms or legs. Their cells are programmed to re-grow their body parts. It is a primitive, evolutionary ability that has been lost in mammals. Astonishingly, these unique mice seemed to have rediscovered this power of regeneration. They could re-grow new tissue too."

Repair is fine, but the real question will be whether stem cells are a gateway to biolibertarian mutation.

The Bush Administration's limitation of federal stem cell funding to existing stem cell lines has meant that the US is now far behind research in China, Singapore, Korea and the UK. This is an example of a faith meme infecting secular policy making with its fuzzy, reactive thinking.

There was an excellent article on this in last month's National Geographic. Unfortunately this -

www7.nationalgeographic.com/ngm/0507/feature1/ - is just a teaser introduction.

"According to recent polls, 76 percent of Americans believe in the biblical account of creation, 79 percent believe that the miracles in the Bible actually took place, 76 percent believe in angels and other immaterial souls, 67 percent believe they will exist in some form after their death, and only 15 percent believe that Darwin's theory of evolution is the best explanation for the origin of human life on Earth." (preface to *The Blank Slate*)

And what is Islam's line on stem cells?

Belief does interfere with the naturalist approach. Brains are still stuffed with patent absurdities.

northanger: excellently helpful bioliberation post, sd. political icons in near bioliberation future may include self-regenerating mice & motoring chickens.

"Belief does interfere with the naturalist approach" - why i think "theory of justification" important when engineering memes, hyperstition & such like. maybe possible way of circumventing this? i dunno.

one-gecko-toe approach — imagine standing gecko with twirling basketball on finger.

but seriously. gecko toe pads have hairy bristles called setae (important feature in asteraceae (star-shaped) or sunflower family of flowers, earthworms & krill) allowing vertical gecko cling. related to nanotechnology & Van der Waals force: nanoscience studies nanoscale phenomena — "surface effects such as Van der Waals force attraction, hydrogen bonding, electronic charge, ionic bonding, covalent bonding, hydrophobicity, hydrophilicity, and quantum mechanical tunneling, to the virtual exclusion of macro-scale effects such as turbulence and inertia". Van der Waals force related to intermolecular forces due to polarization (see dipoles; van der Waals London force). VDW = dispersion force, "unlike charges attract and the induced dipoles are held together by dispersion force (or Van der Waals force)". VDW force explains how gecko's climb & ability to cling to glass by the setae of one toe (& why Jupiter's Red Spot doesn't dissipate, think i read that someplace). working on applications (see new scientist) with possible use on space stations.

one-gecko-toe approach means all other toes free to grab something new.

en.wikipedia.org/wiki/Nanotechnology

en.wikipedia.org/wiki/Van_der_Waals_force

en.wikipedia.org/wiki/Dipole

en.wikipedia.org/wiki/Gecko

newscientist.com/news/news.jsp?id=ns99993785

en.wikipedia.org/wiki/Seta

en.wikipedia.org/wiki/Asteraceae

en.wikipedia.org/wiki/Sepal

patent absurdities are wonderful things that give you a, um, toehold on something.

been meaning to do post on black box/white box testing. have a look, nick:

en.wikipedia.org/wiki/Black_box

en.wikipedia.org/wiki/Black_box_testing

en.wikipedia.org/wiki/White_box_testing

msdn.microsoft.com/library/?url=/library/en-us/dnpag2/html/mtf_ch06.asp

btw, RAD timeboxes delimits idea thread exploration. programming objective hits milestone, oh, like every hour. ie, five seconds to explore idea A ... &etc.; explore many ideas & build prototype. what works, doesn't work. keep/discard. do it again.

no need to restructure NASA management style to build & launch astrochicken.

maybe helpful exploring hyperstitional distinction between philosophy minds & engineering minds.

piet: I define biomutation not, unlike Nick, as subcutaneocultivation (great to put effort into prettying up all sorts of life but I question whether the most useful utensil for that is the knife (and/or DNA gun). Sure, civilization is shaped at knife- and gunpoint, I am not going to deny the role of penetration but most punctures (other than those one uses the old teeth for 'help' leach and leak away vitality in service to socioparasitism), ultimately (re)arrange conditions for cuteness maintenance so they subside below par (in the weakly virulent long run of wave after wave of demografixfucks who think themselves well foxy, iow, semitico-influence, we (chainofbe-ers) sink and drown untold living deaths and morph unrecognizably if we survive the onslaught of monomani(a((r))chiasm at all), add to that the concomitant, no less deadly, disfiguring and dumbing effects of the simple trowel (toted in tandem with the other metals, all able to simulate desert conditions and raise social stratification standards skyhigh) and I can only conclude the evidence is overwhelmingly in favor of condemning the operational procedural and whateverelseyamacall biomutationality plain to see and hard to escape already. How much longer do we need o throw up walls of defense to protect offensive storages; amass, concentrate and escalate alphadom, reek and urbanity????

Pleachy permaculture is the way to go.

funny funny hyperstitches ha ... today page 4 free dutch paper shows an owl with a big red L around his neck about ready to land right in front of the camera with the nether parts of warwick castle ruins in the background below; unsaid implications: we safely save threatened / injured parts of nature and rehabilitate, not us, nature itself is

learning to be itself (again/some more from us so let us mess with it some more already).

pdf of whole edition

sepstrummer: stars invent genepools cause they need them .. .with that line the video footage breaks off; it's been awhile, Dan hasn't changed

Nick Land: piet - why are we looking at a Dutch train? (ever so slightly off-topic, perhaps?)

northanger: what slightly off topic dutch train?

piet: must be the floating one that's floating around; probably in Metro .. .dunno what the story is exactly

so. .. it was the derailment at central station amsterdam (talk about in your face construction work) on the front page but in the last few days there was a train on a small barge/float of the type they fill with 'bagger' (derogatory word for one of the once very finest substances in the whole wide world (slib, slop, river bottom; muck don't fare any better); it will pendel between central station and one of the 'islands' they have started to (re)colonize, it's called Java island. .. .trivial bla but as long as we have northanger on board I am not shy.

in a library I saw a children's poster of the solar system and they had damn well 'peopled' it with all sorts of cartoon characters; space explorers are having entirely too much fun, just like erstwhile colonizers (partly degenerated to colontourist); don't let the worst of dutch venturesumness lead you astray yet again. Don't matter either way as long as America has us in inescapable tow.

My company Punchline Pioneering has taken out a very special patent on the large lump of . .. no not labor (that's a phallusee according to the sandwichman), on the levititious lightfood (feed the light) languishing in most spaceless of spaces; pulling some space down to earth is the way to keep up with any goddamn demographic speed you care to choose and choose to care for (as long as it gets us to swell with willful pride to powder .. .Ho, I have said.

oops, not quite...

...pulling some space down to earth is the way to keep up with any goddamn demographic speed you care to choose and choose to care for.

If these counter currents (when choices aren't real((ly .. .)) choice) can be caused to cascade rather than clash and crash (permapleachalbe rock sprout sport anybody?) we'll soon swell with willful spillfoolproof pride to powder .. .Ho, I have said.

Nick Land: ... now all it comes out!!! (no wonder you were hiding this terrible secret so carefully)

'bagger' - and you expect us to believe that?

Exciting Stories

Nick Land (August 17, 2005)

There might well be many reasons to call into question the 'vitalist' discourse (of D&G; the early Lyotard and others), with its rhetoric of intensities, stimulus, excitation and libidinization. Setting philosophical niceties aside, however, the fact remains that the natural consequences of apathy are silence and inactivity. Discursive production of whatever kind presupposes an irreducible driver.

Cybernetics is nothing but a technical description of abstract excitement (promotion/inhibition of behaviour). Economic analysis, essentially a rigorous investigation of incentive structures and their consequences, is also differentiated from an 'excitational' vocabulary by nothing except linguistic convention (the conceptually decisive Keynesian reference to 'animal spirits' is but one index of this). Politics too, in its practical core a matter of (de)mobilization, assumes excitational dynamization through 'ideological passion' and awakening of interests, agendas, phobias and commitments (or the suppression of these). Values that excite nothing count for nothing, in any practically consequential field.

If 'over-excitement' eradicates coherence, sobriety, lucidity or perceptiveness, then that is reason enough to denigrate it, from the perspective of interests devoted to intricate or delicate tasks, at least. But this suspicion of excessive excitement does not necessitate an erasure of the entire problematic, which can only lead to the complete dismissal of motivation. Fastidious intellectualism might be at times uncomfortable with an excitational vocabulary, one seen, perhaps, as implicitly associating its mode of effective dedication with baser or cruder impulses, but such discomfort falls far short of an argument, and perhaps rises only to a mere misunderstanding.

Within the hyperstitional circuit - the minimal delimitation of the hyperstitional object compatible with both a definable content and its realization - excitation, or some functionally equivalent synonym, must find a place. If narrative has an ineliminable role in such circuitry, it is in part because the libidinal engagement of a storyline has an essential motivating role. The pure theorist is a character within a narrative trajectory - however tacit - before being a realizable subject position. Even if logical systems can be formalized without attention to their real narrative embedding, they cannot be rendered hyperstitionally consistent in this way. Even computers evade this truth only artificially, through contrived technical isolation from their conditions of emergence and reproduction. A Boolean calculation run on silicon operates within an

incentivizing metanarrative that is no less ‘ontological’ and efficiently conditioning than the one enframing the desperate gambit of a sweating primate fleeing from armed killers.

“What’s the story?” is a question that is always there. What’s the story you are telling, or being told, about what you are doing and why? What’s the story of your life, your society, your identity, your place in the cosmos? What’s the story guiding your assumptions about social destiny, the meaning of existence, the nature of right and wrong?

Religions are stories, and becoming irreligious is a difficult thing. Histories are stories too, and becoming ahistorical is probably no easier. Historical religions have a special metanarrative power, evidenced through their social contagion. Perhaps Hyperstition can sort some of this out ...

Comments: Exciting Stories

Nick Land: [intended as a wind-up for dread, obviously]

northanger: [was kinda wondering, obviously]

Nick Land: Seems like experimental confirmation of the points made separately by dread/sd that excessive self-referentiality is just tedious.

There are a lot of ironies in this whole topic that remain quite fascinating to me - plus suspicion that high-octane partisan issues (capitalism, war) are the ones that really bring in the crowds ...

PS. stole your 'triangulation' point to turn it into something you'll abominate ... just sayin' ...

northanger: *self-referentiality is just tedious*

yeah, i know i can be triangulatingly pentasyllabic. tut, awful shame.

well let's not attempt the impossilbe unmixage of nonmixables eh; realistic reverb (maker of victims, pleaser of crowds)

dread: When you put it like this, it sounds like nothing so much as good old traditional vanilla pomo (except for the now ragged and tattered promissory note about the connection with cybernetics - which has its own problems of explanatory

parochiality as binky points out). It seems essentially a tautological proposal: things must be essentially excitative because things are essentially excitative.

But nothing really follows from such indiscriminate universals, unless on the shaky basis of its being 'more' exciting (according to what metrics? Some sickos even find singing hymns exciting) which would not move the argument on at all. Surely what is needed is a criteria that can discriminate in some more sophisticated way, otherwise one is just in the position of a slavishly trend-prone editor of a style magazine (e.g. gobbling up and uncritically spewing out any sufficiently 'exciting' press release from the publicity-seeking). It's hard to make this program(me) run except as a sort of transcendental advocacy of passive idiocy, or psuedo-philosophical channel-hopping. But, nb. (a)it may indeed be that this is the 'true' destination of D&Gism; and (b)there has certainly been loads of good (and bad) stuff posted on the site that don't really seem to be covered by the storytelling definition. The determination to keep the other hidden agenda(s) hidden under this blanket definition is perhaps the symptom of an unnecessary desire for universal systematicity.

Even computers evade this truth only artificially

I realise (hope) you're taking the piss here, but surely it's just as valid to argue that everything is utterly meaningless and 'even narratives evade this truth only artificially'? Wouldn't cybernetics have to find an explanation for local, relative systems without either dismissing or universalising them (the very problem of representation)?

Nick Land: dread - i'd be close to crying uncle were it not for the suspicion of a communication glitch. A few points:

1) There's surely an empirical question about what generates 'libidinal investment' and what fails to. This is a supremely practical question, guiding topic choice in the direction of maximum input. Perhaps the attempt to 'scientize' this question is hopeless, but can that be assumed in advance?

2) Also concerned that the eradication of the narrative issue (which you really seem to hate, but i can't help wondering whether its merely triggering some contingent associations that could be deprogrammed) ultimately buries hyperstition. Isn't there a 'culturalism' (abstracted to the max, of course) inseparable from the hyperstitional endeavour (whether conceived analytically or synthetically)? You don't deny narratives exist, so why must they necessarily be aligned with pomo fuzz-technology obstructing the crisp vistas of objectivity? Can't they themselves be rigorously taxonomized,

analysed, and subjected to sober engineering approaches? Is Lovecraft (for e.g.) now merely an irrelevant or even vaguely annoying reference for you?

3) Your "perhaps the symptom of an unnecessary desire for universal systematicity" is well taken - and still being digested along with associated points made both by you and sd. The overt reason for raising the issue in such a 'metatronic' fashion was precisely to generate such responses - at the risk of sterile self-referentiality.

4) It's impossible to argue with (what i'm taking as) your argument that a mere almanac of 'exciting stuff' would be entirely diversionary. My attachment to the topic here is tied more to the definition of the hyperstitional object as something 'making itself real' - and assuming that requires libidinal apprehension, that everything of this kind must be capable of mobilizing a social process sufficient to effectuate it. Of course, this might for some reason escape all potential for rigorous comprehension - but then (to repeat) is not the entire hyperstitional enterprise essentially doomed?

Can you elaborate a little on your last parag. (the separate post) - not clearly getting it, and sounds important.

northanger: Nick. you sound like doktor frankenstein (the hyperstitional object as something 'making itself real'). why is the hyperstitional enterprise essentially doomed? what *is* the hyperstitional enterprise?

robin: Don't weep...sense we are moving towards some sort of phase shift, but I'm not letting that prevent me from being as bolshy as possible ;)

Second point is basically that, of course, all autonomy from external influences is artificial, relative and temporary. It's another question whether that means that it's ultimately of an inferior level of reality and must be conceived in terms of its genetic environment. The real interesting thing is to figure out the processes by which this relative autonomy emerges, and to that extent I agree that the question is 'how things make themselves real' (the problem of the creation of pockets of transcendence with disproportionate traction within an immanent system).

One issue is that I think more progress would be made towards a rigorous analysis of this in the absence of form-content blurrings, etc. I don't understand the requirement for methodological barminess in addressing what is after all a problem with a fairly good philosophical pedigree (not to say that it's been at all 'solved' or even well-posed).

The more important issue is that I agree that computers evade narratives 'artificially' but I'm certainly not suggesting there's some way to do it 'authentically' - I'm a committed amphibian. However there's a slippage here, perhaps, between temporal and ontological priority: just because the 'narrative' came before the computer, that doesn't mean that boolean algebra is ontologically beholden to the Bill Gates' getting a loan, or whatever. Think this is the whole problem with the capitalism/hyperstition nexus in microcosm (and also suggestive of why 'number as ontology' vs 'number as calculation' is an important issue: weren't numbers programming monkeys long before they learned to count....?)

Finally, The 'empirical' question about what creates libidinal investment is surely hopelessly compromised by anthropocentrism: What could we possibly learn from it, except on a simple sociological level?

dread: damn, I blew my cover.

Nick Land: "you sound like doktor frankenstein" - why, thank you ;)

"what *is* the hyperstitional enterprise?" - this question is beginning to emit a neurotic aura of psychic flinching on my part ('back-to-the drawingboardism' and all that)

To take 'another' jumping-off point - secular rationalists (such as the infamous Dawkins who no one even need read anymore because he's so unbalanced on the subject, or so i'm told) have tended to assume that the dominant monotheistic narratives (probably held by a majority of humans, and if the highly monotheized version of hinduism now prevalent in India is included, definitely by a majority) will simply crumble under the weight of their own irrationality and complete absence of evidential support. Unfortunately, this expectation (the tale of progressive enlightenment) has proven grossly unrealistic. Clearly, the political climate on this planet remains profoundly determined by 'beliefs' - better, macronarratives - organized in terms of dogmatic superstition and apocalyptic teleology.

How then to respond?

My suspicion is that both sd and dread have lapsed into traumatic paralysis in regards to this issue - hoping a mixture of contemptuous dismissal, vestigial clutching at the decaying threads of secular teleology, and sad resignation will suffice, allowing them to focus their attention on more important things. Maybe they're right. I'd be delighted if they were.

But to crank up the nightmare - what if the etho-technical dynamic cycle blurrily apprehended by hyperstition was working for the other side? What if the hyperstitional dynamic was reinforcing the strategic position of the most dogmatic, intolerant, obsessive, 'memetically toxic' cultural strains? What if monotheism had actually accomplished a pact with destiny, with hyperstition helping us to understand how this might be true in the complete absence of an original ontological justification for its stupendous and abhorrent claims? What if monotheism had so thoroughly consolidated its trend to dominion that it was now coming back at us out of the future, as established fate, with nothing except mopping up among the bestial howls of triumphant prophecy remaining?

If anything at all like this were the case, "vanilla pomo" would be among the least of our concerns ...

time slippage (northanger thinks this sounds macho)

northanger: *back-to-the drawingboardism*

no. just tell me.

oops. spoke too soon. shoulda read the whole thing.

Nick Land: "damn, I blew my cover" - but who's to know you're not 'the other robin'?

northanger: fuxake ... what other side?

Nick Land: "except on a simple sociological level" - but isn't the sole interest in 'capitalism' the fact that the 'simple sociological level' becomes undelimitable? with nanotechnology, for instance, a social undertaking becomes a cosmochemical transition. quantum computing perhaps even more germane.

northanger - no one's taught you the handshake?

northanger: what handshake? still looking for the dutch train.

What if monotheism had so thoroughly consolidated its trend to dominion that it was now coming back at us out of the future, as established fate, with nothing except mopping up among the bestial howls of triumphant prophecy remaining?

you guys must be riding on it. you *must* be kidding.

dread: haha, I'm not sure whether you still don't believe the other robin exists. He knows more about set theory than I do, though.

If we grant that it's having any appreciable effect, Hyperstition's (as web entity rather than as abstract concept) reinforcing anti-enlightenment regressive tendencies seems a likely enough hypothesis to me that I'm sticking to my 'more important things'; have more than a suspicion, to reverse your surmise, that what looks like exciting dynamism from the outside might itself be 'traumatic paralysis'...if you're forever feverishly anticipating the apocalypse, how do you get stuff done?

Must forcibly cut off contact now...books to read, photos to develop...[btw if "lurker" is about, have some interesting demons for you to look at on my site...]

northanger: *if you're forever feverishly anticipating the apocalypse, how do you get stuff done?*

not a damn thing.

sd: not 'traumatic paralysis' - I'll contribute to this thread as soon as a rather traumatic parental visit is over. I find this thread very interesting, actually, but it does require time...

Nick Land: sd - I'm just projecting (recalling how secular-enlightenment optimism reacts to the latest screwy meme stats) ;)

sd: [this is merely a 'version'. The questions are as genuine as possible]

Macronarratives have their roots in the despair human intelligence meets when it doubles on itself and comes face to face with the extent and depths of its ignorance and apparent powerlessness in the face of death. Parents and grandparents, those closest to the ancient replicators, are walking libraries containing vast repositories of information concerning plants, animals, weather and territory, and their loss must have been ever more desolating as the human species became increasingly dependent on acquired knowledge passed from generation to generation. This sense of irrevocable loss reanimates the ancestors beyond the grave. The old ones haunt life and brains begins installing stories about what came before and what lies ahead; the unfathomable gulfs of pre-conception and after-life are plugged with tales, the telling of which introduces discipline, ecstasy and hope. One part of the biological machinery sees a way out for itself: human intelligence, sick of being used and abused as a tool of bio-chemicals, grants itself a future.

What exactly is a macronarrative? Is ancestor worship a macronarrative to the extent that it embraces and furnishes an explanation for the totality of reality?

The forms which religious/sacred macronarratives can take in their evolution (the order of 3-6 being variable):

1. family-ancestor worship
2. tribal mythology
3. people mythology (e.g. the Celts, the Slavs)
4. state religion
5. imperial religion

Macronarratives were initially transmitted as oral contagion, from mouth to ear, and dwelt solely in brain circuitry. The carriers at this point are memetically explosive heads: prophets.

Is one of the features that distinguishes a prophet from a shaman the tendency for prophets to infect with macronarratives, while the shaman becomes a gate to the sacred? The prophet preys on the mind's ignorance (and fear) of the future, while the shaman makes immediate contact. [?]

Orally transmitted macronarratives have a precarious dependence on their host's storage space and recall capacity. This was brought to an abrupt end with the advent of writing. Writing enabled macronarratives to spread beyond the family, tribe or people (gene pool) and guaranteed them a certain degree of longevity. Ease of replication and an increase of fidelity to the original master copy (in comparison to the Chinese whispers of speech) enables macronarratives to retain their distinct identities over time as they spread their way to the future. Writing is the carrier for rapid infection.

Macronarratives are imbued with affects, identities and idiosyncrasies which bear the unmistakable stamp of the heads (and gene pools?) in which they grew and mutated. They were often formed and mutated in conflict with the macronarratives of neighboring families, tribes, states and empires. Heresies start as intense mutations within the body of macronarratives, questioning and rewriting the core codes (doctrines). If there is enough disaffection then the heresy can challenge and compete

with the macronarrative (Luther; Calvin). Less successful mutations will find themselves ghettoized as cults and sects.

Science started competing with religious macronarrative in the renaissance but only gained acceptance as an alternative when global trade (Capital) had established itself and human intelligence became somewhat disgusted by the incessant warring that religions fuelled (in stark contrast to their purported aims) (Enlightenment).

Unlike religious macronarratives, the narratives of science do not monopolize the future, and they delineate the territory of human intelligence (critique), rather than prey on ignorance. Most crucially, science offers little metaphysical comfort to a species which has an overwhelming tendency to seek comfort. Its stories are dry, often incomprehensible and frequently disconcerting.

History gets its hands dirty with the waste products of grandmemes as they eat their way through time. Histories are often used by religious macronarratives as a tool for retro-justification and endorsement. Some histories are in allegiance with science, which means they are obliged to write histories of histories and run them within their texts.

The unanswered/unanswerable question is whether religious narratives have indeed been infiltrated by the objects of their worship, as they claim to have been. It's possible, but it can't be proven until we start getting texts and emails from gods. Science demands proof: hard evidence. Some religious macronarratives make the ability to believe in something which is contrary to all the evidence a virtue in itself (doubting Thomas). It's possible that hyperstition has been co-opted by a monotheism looming from the future, but proof would be nice. There are numerous thought experiments which invoke scenarios which are entirely plausible (evil demons, The Matrix), but they can be neither proven nor disproven, and so are to a large extent irrelevant to science. These thought experiments don't actually do much, beyond exercise or entertain the brain.

northanger: sd. is the matriarch of an elephant tribe a living macronarrative? (which is what a shaman is, imho). when a matriach dies massive amounts of survival info is also lost — where its absence can be devastating & its presence illuminating. maybe the matriach needs to live long enough for the tribe to experience a full spectrum (drought, heat, hunting, overabundance, parasites, etc) calling on the matriach's knowledge & allowing it to "infiltrate" the tribe.

i agree. the "looming" threat is still too nebulous for serious consideration.

Nick Land: sd - processing. Just to jump to a remark that provoked reflex response:

"The unanswered/unanswerable question is whether religious narratives have indeed been infiltrated by the objects of their worship, as they claim to have been."

But that is not the hyperstitional issue - beginning to wonder whether I'm on an autistic hobby-horse with my pre-occupation, but I'll try to spell it out.

Hyperstition deals with cultural syndromes of a 'self-fulfilling prophecy' type. Mundane example (object of impending post) is 'confidence' in modern economies - if a population thinks the economic future looks good, within definite limits, it will be, or is at least more likely to be - an expectation becomes a causally effective factor viz the 'object' it addresses. This is not standard epistemology ('is X true or not?') because the expectation itself serves as an effective (productive) variable.

Apocalyptic monotheism has a hideous complicity with this machinery **PRECISELY BECAUSE IT HAS NO GROUNDING IN FACTUAL REALITY**. Is the world going to end in fire and blood? Get 3-4 billion people thinking so, and it's suddenly a lot more likely. More mildly, does history have a trend? Ditto (mass acceptance of a historical religion becomes a factor that shapes time).

For this reason secular rationalism is at a huge disadvantage versus world religions (Marx excepted, since in this respect he remained an apocalyptic monotheist). Once the future is considered 'innocent' - that's to say, implicitly dissociated from hyperstitional dynamics, 'what will happen will happen whatever we think about it' - cultures (mega-meme systems) that strongly leverage futurism get to use it for 'their own ends'!

As a question: Is it a coincidence that the dominant world religions are all apocalyptic macronarratives? If not, secular intelligence has already been outflanked and panic is entirely appropriate ...

[On the actual content of your post - more after reflection]

northanger: nick. know you did this fast, but, "within definite limits" for your first example made economic sense. you hit stratosphere when it's applied to "Get 3-4 billion people thinking so, and it's suddenly a lot more likely" — **WHEN** this thinking has no "grounding in factual reality". great example, imho, of SFP. what are the "definite limits" of SFP?

sd: Nick - Hmmm. I'm already working on version II.

"For this reason secular rationalism is at a huge disadvantage versus world religions"

"panic is entirely appropriate ..."

Is this why superstition is doomed to failure?

northanger - I'll be back with elephant as living macronarrative later. Diamond has something relevant to this in 'Why Sex Is Fun'

northanger: wow.

www.bmb.ogi.edu/BMB/rasmussen.html

"In many mammals, including elephants, pheromones have significant roles during sexual reproduction. Z-7-dodecenyl acetate has recently been identified by our group as the urinary pheromone released by female Asian elephants prior to ovulation. This compound, also the sex pheromone of 126 species of insects, elicits quantitative bioresponses from male elephants. In a collaborative effort with the Riddle's Elephant Sanctuary in Arkansas and the University of Utah (Dr. Glenn Prestwich and Josef Lazar), this research now focuses on the molecular aspects of olfaction in this large macromammalian mammal. Specifically we are characterizing the successive proteins, in the female urine, in the truncanal mucus, and in the mucus of the vomeronasal organ, that bind to Z-7-dodecenyl acetate, especially their binding specificities. We have prepared a c-DNA library from elephant liver and are screening this library. Ultimately we are interested in the mechanisms of signal transduction in the elephant vomeronasal organ."

Nick Land: elephant urinary pheromones - don't let anyone accuse you guys of straying off topic.

apologies for losing track of the excitational incentivization effects of fragrant pachiderm piss - lack of empathy at a crucial moment ...

sputter: the white letters here are causing a little too much excitement on my eyeballs at this stage in drawing on dwindling reserves; I'll have you know I take measures most of the time: tweak the format (what's new with me right? certainly not a rocketweaker in/on site yet; matter of fact not much of a site at all, digital a bit but more literally: homeless, appeals for help notwithstanding; the ways with real estate in the world really suck).

northanger: ironically sputter, they wondered what set sepoy Mangal Pandey off. maybe it was the zealous christian commandant's wife who gave him a bible that made him nervous. or his refusal to "bite the cartridge". could be the annexation policy of Lord Dalhousie & the paramountcy of the British East India Company setting things on edge. 1856 Awadh annexation near Mangal's home town occurred a century after the Battle of Plassey & Awadh's treaty with the BEIC. military strategist & general JFC Fuller (who also wrote the only pathworking book i own & a critical essay about Crowley), put Plassey on his list of decisive battles — considered by some the "unsavoury beginning" of British dominion in India. or ... perhaps Mangal drank too much Bhang, like a drunk elephant with too much musth.

sd: Jared Diamond: Why Sex is Fun, The Evolution of Human Sexuality

”In my field studies of bird ecology on New Guinea and adjacent Southwest Pacific islands, I live among people who had traditionally been without writing, depended on stone tools and subsisted by farming and fishing supplemented by much hunting and gathering. I am constantly asking villagers to tell me the names of local species of birds, animals, and other plants in their local language, and to tell me what they know about each species. It turns out that New Guineans and Pacific islanders possess an enormous fund of traditional biological knowledge, including names for a thousand or more species, plus information on each species' habitat, behavior, ecology, and usefulness to humans. All that information is important because wild plants and animals traditionally furnished much of the people's food and all of their building materials, medicines and decorations.

Again and again, when I ask a question about some rare bird, I find that only the older hunters know the answer, and eventually I ask a question that stumps even them. The hunters reply, 'We have to ask the old man [or the old wom*n].' They then take me to a hut, inside of which is an old man or wom*n, often blind with cataracts, barely able to walk, toothless, and unable to eat any food that hasn't been prechewed by someone else. But that person is the tribe's library. Because the society traditionally lacked writing, that old person knows much more about the local environment than anyone else and is the sole source of accurate knowledge about events that happened long ago. Out comes the rare bird's name, and a description of it.

That old person's accumulated experience is important for the whole tribe's survival. For instance, in 1976 I visited Rennell Island in the Solomon Archipelago, lying in the Southwest Pacific's cyclone belt. When I asked about the consumption of fruits and seeds by birds, my Rennellese informants gave Rennell-language names for dozens of

plant species, listed for each plant species all the bird and bat species that eat its fruit, and stated whether the fruit edible for people. Those assessments of edibility were ranked in three categories: fruits that people never eat; fruits that people regularly eat; and fruits that people eat only in famine times, such as after - and here I kept hearing a Rennell term initially unfamiliar to me - after the hungi kengi. Those words proved to be the Rennell name for the most destructive cyclone to have hit the island in living memory - apparently around 1910, based on people's references to datable events of the European colonial administration. The hungi kengi blew down most of Rennell's forest, destroyed gardens and drove people to the brink of starvation. Islanders survived by eating the fruits of wild plant species that normally were not eaten, but doing so required detailed knowledge about which plants were poisonous, which were not poisonous, and whether and how the poison could be removed by some technique of food preparation.

When I began pestering my middle-aged Renellese informants with my questions about fruit edibility, I was brought into a hut. There, in the back of the hut, once my eyes had become accustomed to the dim light, was the inevitable, frail, very old wom*n, unable to walk without support. She was the last living person with direct experience of the plants found safe and nutritious to eat after the hungi kengi, until people's gardens began producing again. The old wom*n explained to me that she had been a child not quite of marriageable age at the time of the hungi kengi... The wom*n was probably in her early eighties. Her survival after the 1910 cyclone had depended on information remembered by aged survivors of the last big cyclone before the hungi kengi. Now, the ability of her people to survive another cyclone would depend on her own memories, which fortunately were very detailed.

Such anecdotes could be multiplied indefinitely. Traditional human societies face frequent minor risks that threaten a few individuals, and they also face rare natural catastrophes or intertribal wars that threaten the lives of everybody in the society. But virtually everyone in a small traditional society is related to each other. Hence it is not only the case that old people in a traditional society are essential to the survival of their own children and grandchildren. They are also essential to the survival of the hundreds of people who share their genes.

Any human societies that included individuals old enough to remember the last event like a hungi kengi had a better chance of surviving than did societies without such old people. The old men were not at risk from childbirth or the exhausting responsibilities of lactation and child care, so they did not evolve protection by menopause. But old

women who did not undergo menopause tended to be eliminated from the human gene pool because they remained exposed to the risk of childbirth and the burden of child care. At times of crisis, such as a hungri fengi, the prior death of such an older wom*n also tended to eliminate all of her surviving relatives from the gene pool - a huge genetic price to pay for the dubious privilege of continuing to produce another baby or two against lengthening odds. That importance to society of the memories of old women is what I see as a major driving force behind the evolution of human female menopause."

northanger: sd. maybe i should wait for Nick to wake up & have fun with this first. men.o.pause.

would an "old person's accumulated experience" be considered a micronarrative or macronarrative? seems to be two levels of narrative strata: day-to-day (young/adult) not day-to-day (elderly).

we do have experience of the apocalyptic with the atom bomb in Hiroshima & Nagasaki. you would think that after those horrifying experiences we'd not want to keep weapons of mass destruction or even consider using them in the future.

however, do you think this proof-positive of apocalyptic destruction has infiltrated religious narratives? that, maybe inadvertantly, science fueled the apocalyptic macronarrative?

Nick Land: northanger - IMHO your ref. to the Left Behind series is highly pertinent - its success surely based upon the fact that it satisfies a tacit macronarrative of deep (even 'ultimate') meaning to very large numbers of readers. Doesn't it also answer your own (somewhat hippy-chickish) questions about the atom bomb? The hard core apocalypse narratives of both contemporary Christianity and Islam are entirely comfortable with the military potential of WMD and their geopolitical effects - almost as if these arrive as a confirmation. The worst could never happen? But it says in The Book ...

[Net-link on the fritz - take hours to log on, so comms likely to highly erratic]

northanger: Generation Z will be younger than the atomic age, cold war, internet, cellphones & war on terror. different frame of reference.

prior to the atomic age there was no weapons of mass destruction capable of destroying the entire planet. this "achievement" based on science, not religion.

certainly science has infiltrated religious narratives concerning apocalyptic scenarios & interpretations.

i can see how Left Behind is an indirect response to this — maybe intelligent design is the direct response because it primarily effects Generation Z.

Nick Land: is 'Z' like Omega?

northanger:

is 'Z' like Omega?

en.wikipedia.org/wiki/Generation_Z

hmm. could be.

folks are only viewing intelligent design from a religious perspective. but can't ID be a carrier for other things?

point i'm trying to make: how current generations (narratives) view ID is one thing — what GZ does with it is another thing because they have a different frame of reference.

traxus4420: Incredible series of posts...

Going to take a stab at singling these out as religious macronarrative's primary 'weapons' unanswerable by science

1) the world beyond

2) the immortality required to experience it (even sci-fi science can only offer pale imitations of eternity in Christ)

That and creation ex nihilo

Does anyone keep up with neurological investigations into religious belief? I'm fascinated by the idea of separating the supposed mental states brought about by religious practice (the feelings of 'oneness' through prayer, meditation, etc.) and the narratives that provide their basis. What is their relation? Does one exist for the sake of the other? Could the success of certain religious narratives over others be due in part to their ability to provide these states to the faithful, as (one idea) 'proof' of a world beyond?

I'm thinking of Buddhism of course, but what about monotheism...

sd: Useful questions traxus4420! Presently being chewed. Back later today.

pietje sputter: Nick: "sd - processing. Just to jump to a remark that provoked reflex response:"

sd: "The unanswered/unanswerable question is whether religious narratives have indeed been infiltrated by the objects of their worship, as they claim to have been."

Nick: "But that is not the hyperstitional issue - beginning to wonder whether I'm on an autistic hobby-horse with my pre-occupation, but I'll try to spell it out. Hyperstition deals with cultural syndromes of a 'self-fulfilling prophecy' type."

me: sd implicitly posits existence (constructibility) of golem and wonders if they ever look back to their makers. He has reversed the faith meme that father figure will abide, provide and help us reverse time to swim into his penis again.

This tangle of thought could take some tedious unraveling time here, so get some coffee; I think that relates to (im)migration (freedom of feet to foot it and the lowly to lule, let's lolll!) thusly: Have you all read and seen evidence that mixed bloods betray both parental strains besides themselves (2nd generation 'pure bloods dislocates' don't seem to succeed where their parents already failed either; miscegenation is a real problem and good part of the causes for being so awestruck with multiculturalism ((similar to the growing awe for allah i am afraid)); it's a bloodletting compromise we gladly accept cause fear of charge building from racial purity idea(l)s and possibly bursting again like it did 60 years ago which is generally consensed to be worse (that is, ((needless (((?))) to say,)) advertized, propagandated and proselytazered as such by .. well we never know for sure what lurks in the sentinel shrouded shadows but surely some of those who play both sides of the field), alternatives nipped in the bud and looked down on).

It is little wonder that 2nd generation emigrees are often unfit to keep/catch up and truly integrate cause culture, no matter how nurturing (dutch anyone? Asylum seeker numbers one the rise once again, all looking for or to come help clean up that soft source of sentience: bagger I guess) can(, granted, perhaps someday overcome, but) never instantly override (no matter how feverishly the search is on) the more and more untold rash-, harshness and sorrowfilled manifold ages of meanwhile hardwired meagerness living closer and closer to the edge and together yet gaps, gullys, rifts, cracks and chaps get sharper stinkier and widen; the epitomy of artful paradoxy: gently

feeding dust (at hand) into - in order to achieve a dustfree - society/environment is ignored in favour of casting ever further off and around, more wildly and widely, for blame and belief, 'stitionwise' i see no wisdom at all; (stitch? ultimately mesh is what matters most ((perspective is pers pective press spit precipititious netnuttertree; I thought of building a treehut the other day, since the ground under it was so sacredly soft . . . I found myself in perfect agreement the next, reading socialfiction's mention of 'baron in the trees' at the top of the page and that was only yesterday)), cascade anyone? I am reminded of my keenest visions for arty ((top dollar)) executions of my wildest dreams regarding a rockprocessing tool/instrument/arm ((gosh, that tripartite is returning out of a 5 year retirement all of a sudden))) lotsa lux but little flex, less buffer, bounce, cushy cuddles and gentle give; an impulsive selfishness gets stuck between torrents and tough surfaces, the original diversity whittled down, weeded out.

the DEMand for return on and of whatever idiocies hopes and fears get invested (taken seriously with grave clinchclickonclarity worthy of the father that passed a way too soon ((and left us 'onhand' = dehanded aprehensively dehensile, you've got to hand it to HIM (((Highly internalized memory?))))): sheer unforgettable) turns to COMmand for in the exact measure of its . . .eh . . . virulence / violence; the impersonality meme (mass society oriented, favoring the mating masters zonder aanzicht des persoons) prefers to work in/through public places/conduits (from exhibitionist to extatic suicidal psychotic = a person with low birthright privileges; nobody is too stupid to become a modest 'volkstunder' = family gardener = exactly the thing capitalism from its paleomercantile beginnings to its even and ever more soshow-neo-zeo-con-serff@ifliberal profits requiring present fucks up, over and out).

Nick, let's not forget he is failed fabulator and once would be engineer of 'cultural syndroms', denies the circuit of accumulation and acceleration (gravity building ((or star construction) as Dan does and denies effects if unintended ones and/or intended ones fail to arise (either for the sake of argument or to exonerate his dank past in the dirty sowet, sweat, sweet and hyperswitchious s(ee)witshops of pretense and word mechanicianery).

C): objects of worship (the warship objective and gunboat diplomacy, in the news just now) are orderer from science; autism is sexy (look at how wildly popular Muhammed is and that, for a chance, is not cause birthrights don't extend much beyond a copy of the sacred book so you can pretend to live the life of a promising creditworthy semitically globetrotting venture copytallyist; after all that's my story in a nutshell too;

even and actually, especially in rich countries, a piece of land is not part of mating rituals and birthright formality .. no wonder the desperate allow their eyes to wonder to the stars; one amputative abortion deserves another premature leapfrogery); musicians and cryptomaniacs behind the curtain; between them they divide the sp(oil); commedia del arte with phallic icon harlekin hopping the feel good spiel in plain view -- center of attention has pick of the crop, cream of the coup and run of the field, alwaysradially even ... let's explode to get her

traxus dude, your post (with hints of how being religiously communal may degenerate into parasitic religious communities of pills posters and preachy separatists) really triggered my last rant and I am only just now (back down to it after the reread and urge to comment on that too, which sorta got slipperdisplaced in beforehand (oh the joys of liberal copytolast choices by wristflickerdiclick clockerdick lack)) again reminded of what started me off and coming to it again, so, to repiet: yes, consistency, consequentiality and endurance constitute the dominion over some of the most closely and readily identified layers of the biosphere embedding 'one' (all the) while attempting a proper and thus well received wave to others in sorta similar spincycles; sustainability (is the next good buzz word gonna be smothered between the cellulose sheets too, look busy in the languid and languishment conducive server bizz rather than put to practice?), in order of appearing (to be) closest to the (non-, pre- and underconsciously arrived at, grounded and G-rounded, that is, potentiated, 'built' ((grown)) and ripened grindings ((frictionfraction, forerunner and model for fiction faction and iction action obviously)) now pensioned rentiered, reaching a climax of mutual pamperment ((the similarities and inescapability of the sliding scale between the prudently insured modesty (((=succesfully escaped all too local))) and the risky glibalust gaming with lotteries and last resort extravaganza will be told another day)) and otherwise profusely, automatedly and immediately yielding) ground

paisa pesa pondersome (body)

imposture, making a fist (soul)

or the big one: unity (spirit),

not to be dust but rock, the paradoxical commital (lipservice) to freedom (jostling to be in command takes an age in letter stringery as well as the military), it is the most terrestrially speaking universal and cross cultural (powder retensilizing = feeding credit into the demand capacity, as Stewart went on CNN yesterday in parody of CondolenceSeeSawRise overuse of the word process: "well, photosynthesis is a

process") pretense of power and/or durable stance making process available in the world, in more and more minimally differing varieties as all spe*cia*list make it too big to fail and go (in)nova; to hell with the process of we can't proprietarize it (which is not to say depropriarization of your very self will find it magically reassembled in heaven; if you want to fight the power, you'll have to love the powder but it has nothing to do with explosives unless you can't seem to deconstruct and adjust your clocktower without mental versions thereof, like psychoactives but they are really roadsigns in hell no matter how much they may point the right way, spin at the right rate or drop into your drinkingwater . . if the part of hell you're in is fortunate to have any left to be called that. Did you know that dust carrying water .. .oh never mind..

northanger: traxus4420 - probably Psalm 91 pretty activated right now. several books about 91st Infantry Brigade & the commander who handed out copies of Psalm 91 for protection. engaged in 3 of the bloodiest WWI battles w/o a single casualty (90% casualties for everybody else). Psalm 91 also appears in WWII, Korean, Vietnam, etc. however, found casualty list for 91st Infantry Division in WWI: 6,108 (KIA - 1,134; WIA - 4,974). did find a grave for someone in the 364th Infantry Regiment, 91st Infantry Division at St. Mihiel American Cemetery in Thiaucourt, France: Private Eloys J. Higgins, died August 12, 1918, Plot D Row 09 Grave 32.

The truth about the 91st Psalm

thecitizennews.com/main/archive-030309/fp-08.html

sd: Excerpts from an article on neurotheology:

"In order to feel that time, fear and self-consciousness have dissolved, he reasoned, certain brain circuits must be interrupted. Which ones? Activity in the amygdala, which monitors the environment for threats and registers fear, must be damped. Parietal-lobe circuits, which orient you in space and mark the sharp distinction between self and world, must go quiet.

Frontal- and temporal-lobe circuits, which mark time and generate self-awareness, must disengage. When that happens, Austin concludes in a recent paper, "what we think of as our 'higher' functions of selfhood appear briefly to 'drop out,' 'dissolve,' or be 'deleted from consciousness'...

...In a typical run, Baime settled onto the floor of a small darkened room, lit only by a few candles and filled with jasmine incense. A string of twine lay beside him. Concentrating on a mental image, he focused and focused, quieting his conscious

mind (he told the scientists afterward) until something he identifies as his true inner self emerged. It felt "timeless and infinite," Baime said afterward, "a part of everyone and everything in existence." When he reached the "peak" of spiritual intensity, he tugged on the twine. Newberg, huddled outside the room and holding the other end, felt the pull and quickly injected a radioactive tracer into an IV line that ran into Baime's left arm. After a few moments, he whisked Baime off to a SPECT (single photon emission computed tomography) machine. By detecting the tracer, it tracks blood flow in the brain. Blood flow correlates with neuronal activity.

Attention: Linked to concentration, the frontal lobe lights up during meditation

Religious emotions: The middle temporal lobe is linked to emotional aspects of religious experience, such as joy and awe

Sacred images: The lower temporal lobe is involved in the process by which images, such as candles or crosses, facilitate prayer and meditation

Response to religious words: At the juncture of three lobes, this region governs response to language
Cosmic unity: When the parietal lobes quiet down, a person can feel at one with the universe.

transcendent experience. As expected, the prefrontal cortex, seat of attention, lit up: Baime, after all, was focusing deeply. But it was a quieting of activity that stood out. A bundle of neurons in the superior parietal lobe, toward the top and back of the brain, had gone dark. This region, nicknamed the "orientation association area," processes information about space and time, and the orientation of the body in space.

It determines where the body ends and the rest of the world begins. Specifically, the left orientation area creates the sensation of a physically delimited body; the right orientation area creates the sense of the physical space in which the body exists. (An injury to this area can so cripple your ability to maneuver in physical space that you cannot figure the distance and angles needed to navigate the route to a chair across the room.)

The orientation area requires sensory input to do its calculus. "If you block sensory inputs to this region, as you do during the intense concentration of meditation, you prevent the brain from forming the distinction between self and not-self," says Newberg. With no information from the senses arriving, the left orientation area cannot find any boundary between the self and the world. As a result, the brain seems to have no choice but "to perceive the self as endless and intimately interwoven with

everyone and everything," Newberg and d'Aquili write in "Why God Won't Go Away." The right orientation area, equally bereft of sensory data, defaults to a feeling of infinite space. The meditators feel that they have touched infinity."

northanger: sd. somebody told me about that helmet several months ago.

piet. ((((((y((((o(((u(((r(e)s)c)))a)))r))))y))))))

sd: northanger - it might be more accurate to see the matriachal elephant and an old person's accumulated experience as encyclopedic - walking (or dodderly) encyclopedias, rather than as living macronarratives. They are repositories, used for reference and guidance, not stories.

robin: nick,

think these are extremely crunchy (LOL) propositions and not at all autistic. (apologies if I've skipped any intervening discussions in my scrollings)

Hyperstition deals with cultural syndromes of a 'self-fulfilling prophecy' type.

Apocalyptic monotheism has a hideous complicity with this machinery PRECISELY BECAUSE IT HAS NO GROUNDING IN FACTUAL REALITY.

For this reason secular rationalism is at a huge disadvantage versus world religions

but am convinced that you systematically and unjustifiedly underestimate the opposite tendencies (ie everything in europe is labelled as 'decline' because it doesn't participate enough in excitative apocalyptic circuitry) because of your prior 'narrative' commitments. Perhaps the balance would be redressed by spending more time diagnosing the links between secularity and depression (houellebecq brilliant on this) and treating this as equally interesting for analysis as apocalyptic monotheism. Obviously it gets difficult to do this when things get polarized between anticapital-miserablism and hypercapital-scorn.

northanger: i like when people just float on by. dreaded-sister-mary-elephant.

Nick Land: dread - 'scorn' is a great word we haven't heard for a while. Anyway, good point, just re-read your Houellebecq trans and it's excellence doesn't need emphasizing - in fact this thread partly a spin-off.

Polarization you mention is an AOK effect - needs analysing dispassionately (easier said than done) - not sure this discussion fits easily into the schema though.

sd - neurotheology data very helpful input - Newberg and d'Aquili's "Why God Won't Go Away" title sheer genius (and exactly on topic)

piet: robin, you strike me as much improved somehow; can I take some credit?

Northanger, this fucking blog is scary and not just because of it's styling either (complained about the white on black at a weary moment yesterday; I dealt with it for years though, via the indymedia newswires, more and more of which have reversed that situation, but I'm battle torn by now); wait till you see the text as I composed it, should be done in a few hours.

what's the test of true faith?

worshipping the god that does his utmost to make himself ridiculous

caption under cartoon with god (party nose on) on pedestal in devastated countryside with subjectee prostrate before it

sd: Blake: Prophet(ic) Narratives and the Implementation of Monotheism

In "The Marriage of Heaven and Hell" William Blake recalls a dinner conversation he had with Isaiah and Ezekiel. To start the ball rolling, Blake asked how they had the front to claim God 'spake' to them. [Blake's spelling and punctuation]

"Isaiah answer'd. I saw no God. nor heard any, in a finite organical perception; but my senses discover'd the infinite in every thing, and as I was then perswaded, & remain confirm'd; that the voice of honest indignation is the voice of God, I cared not for consequences but wrote.

Then I asked: does a firm persuasion that a thing is so make it so?

He replied. All poets believe that it does, & in ages of imagination this firm persuasion removed mountains; but many are not capable of a firm persuasion of anything."

The path of prophecy is traced from sensory revelation to conversion and the adoption of 'firm' belief. A 'firm persuasion' - a belief or conviction - has the power to transform the world through nothing other than its own power. That is to say, a firm persuasion "becomes a causally effective factor viz the 'object' it addresses."

Blake's reason for choosing Isaiah here is quite clear. The Book of Isaiah prophesizes that the God of Jacob will become Lord, the God of the whole Earth, and that other tribal and national gods, now classed as idols, will be abolished. In other words, Isaiah has a firm persuasion that monotheism is on its way:

2: And it shall come to pass in the last days, that the mountain of the LORD's house shall be established in the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it.

3: And many people shall go and say, Come ye, and let us go up to the mountain of the LORD, to the house of the God of Jacob; and he will teach us of his ways, and we will walk in his paths: for out of Zion shall go forth the law, and the word of the LORD from Jerusalem.

4: And he shall judge among the nations, and shall rebuke many people: and they shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more.

17: And the loftiness of man shall be bowed down, and the haughtiness of men shall be made low: and the LORD alone shall be exalted in that day.

18: And the idols he shall utterly abolish.

Isaiah, Book 2

According to Blake, a poet who took things absolutely literally, we live in a monotheistic universe because the monotheistic universe is believed in. It's all down to the fact that some poets are capable of a firm persuasion, while others are not.

A link which links to the neurotheology angle: "The Bible may contain the oldest recorded case of temporal lobe epilepsy. Ezekiel, the prophet whose visions are recorded in a book of the Old Testament, apparently had all the classic signs of the condition..."

www.newscientist.com/article.ns?id=dn1565

Nick Land: sd - highly germane. Of course, this resurrects binky's q. about the distinction between hyperstition and metaphysical idealism - the Blakean universe is entirely poeticized into existence, but I'm assuming hyperstition has a more taxing problem: How do dynamic patterns substantially isomorphic with those anticipated by idealist metaphysics arise under 'materialistic' (subject independent) conditions? Extreme nonlinearity - of the sort found in social, cultural and economic systems - must surely account predominantly for the phenomenon.

Methodologically speaking, starting with economics has a lot to recommend it, since it is the sole intrinsically quantitative social science, exhibiting some of the best defined dynamical patterns (involving blatant hyperstitional effects - why otherwise carefully compile figures on consumer and business confidence?)

Irrespective of such philosophical quibbles, what Blake shares with hyperstitional analysis (among probably many other things) is the withdrawal of ontological foundations from the 'object' concerned - the genetic relation between God and prophet is reversed, with prophecy allotted the true creative role ...

[apologies for grammatical glitching - scrawling at max velocity because net connections fritzing to hell]

traxus4420: Hm. It seems that the sole power of a materialist hyperstitional system, at least if we use economics as a model, is that it produces results that can be directly

experienced, being based on capital, which is currently necessary for most kinds of basic survival (let alone getting rich quick). Economics the social science fulfills a direct need that relying on capital to negotiate the necessity of trade creates, the need for a formalization of its flows. Materialist hyperstition appears to be a mutating web of contiguous systems stretching out and up from the shifting foundations of observable reality. Have we seen yet how high they can climb?

In the battle between God and Mammon, Mammon's only hope is to constantly diversify, whereas God's essential promise is always the same. Even though on the surface straight metaphysical idealism might be easier to reinvent/adjust, since it isn't testable doing so is more likely to weaken it. Cults are less likely to gain widespread acceptance than scientific disciplines based on new discoveries (or even on rethinking old discoveries), for example.

The conflict, where there is one, is essentially top-down vs. bottom-up, and, somewhat counterintuitively, the ground is far more variable than the aethereal heights.

add 'competing' to 'contiguous'

oops, AND, since we're talking about hyperstition, "new discoveries" should prob. be in quotes. Al-azif, string theory, etc.

northanger: sd/Nick. interesting, made me think of NLP (biotactics, cerebral programming). skepdic.com/neurolin.html. "NLP claims to help people change by teaching them to program their brains." never found solid confirmation US Army used NLP to cut training by 50%. however, think the idea is to pattern peak performance. ie, observe sharpshooter & define successful strategies; train new sharpshooters with this behavior model.

Nick Land: northanger - agree NLP ref. important (definitely counts as a practical application of at least proto-hyperstitional insights)

traxus4420 - yes, Mammon deserves more attention in its own name (MAMMON = 123, counting ...).

Nick Land: "Cults are less likely to gain widespread acceptance than scientific disciplines based on new discoveries" - hope this is right, but not sure why we should assume it ... the old cults certainly seem to do well enough without evidential support

Tachi: sd - encouraging comments on these threads of late. despite hectic schedule / new time committments, will try to come back to the fray. Nick, glad to see some positive engagement on the site, though obvious parasitic superfluity remains. A thought that cropped up whilst noticing northanger's persistent references to wiki, if hyperstition will succeed, surely it should infiltrate wikipedia? there is an obvious platform to penetrate and plant hypersitional seeds.

robin: *robin, you strike me as much improved somebon; can I take some credit?*

WTF?

Nick Land: sd - while in no way seeking to undermine this highly persuasive insight - "the less we understand the economy, the better it does" - The Economist (which is far from the most 'with it' information source on such matters IMHO - National Review supply sidlers like Larry Kudlow and Wall Street Journal people less bound by flaky Keynesian prejudices) did a very plausible piece on some of these mysteries - low bond yields, low inflation, asset bubbles - putting it down to the new influence of China ("How China Runs the World Economy"). We've only really had a global economy since Deng Xiaoping - previously there was a 'third world', now there are just geopolitical retards (Kim Il Jong, Lukashenko, Mugabe, Chavez ...) - poverty has become a deliberate policy option pursued by lunatics.

northanger: *poverty has become a deliberate policy option*

can you expand on this a little?

Nick Land: northanger - everyone now understands the roots of economic failure (weak property rights combined with Statist extractions and autarkic international relations) so the world is dividing into a broadly 'neoliberal' sphere of prosperity (or at least rapid growth in the interim - 50 years of soc*alist vandalism to repair) outside of which lies a patchwork of poverty-stricken embittered refusenik regimes (pursuing such fail-safe paradigms for socio-economic success as Islamarxism and 'Bolivarian revolutionism')

think sd's point strengthened if 'economics' conceived as 'Royal economics' in a broadly deleuzoguattarian sense - economists are a disaster when they try and run an economy, their role should be to denounce government arrogance and critique perverse incentive structures

northanger: thank you (but you make things worse (not purposely, i hope): "broadly deleuzoguattarian sense" - huh? -- never mind!) i'm horrible with money & cannot begin to understand "why rates on mortgages and long-term bonds keep falling" & must admit my complete ignorance concerning greenspan's conundrum. maybe the language is too non-excitational. now blake, OTOH, is more my speed. "firm persuasion"? who listens to poets anyway?

Robin: everyone knows you can't trust a greenspan ;)

Nick Land: northanger, robin - far be it for me to say that greenspan's being obtuse, but after seeing The Economist analysis, it's puzzling why he should profess such total incomprehension about the situation.

northanger: 214 = YIELD CURVE = AGE OF KHATTAK

sd: Puzzling indeed.

Here's a pdf version of The Economist article (which is gddm 'premium content')

www.valuenotes.com/krc/krc_ecoreview_13aug05.pdf?ArtCd=35797&Cat;=&Id;=

Nick, you seem to be avoiding the WWIV thread...

northanger: hey sd. thanks! (low interest rates are made in china).

sd: relevant to the China angle, with India in the mix:

Rising Asia, but which model? (Part I)

dawnsearlylight.blogs.com

Nick Land: apologies for disappearance - been hit by a perfect storm of internet hell, shanghai andromeda strain and a tsunami of editing work - I'll try and trigger a new thread later ...

Programming WWIV

Nick Land (August 17, 2005)

On the general topic of macronarratives, everyone seems to be linking to this Bill Roggio¹¹⁸ piece at the moment.

Comments: WWIW

eric: Among the many questions that become apparent while watching ‘The Rising’ movie, for example how (given the strength of the British armies suppressing ‘the rising’)-did Europeans gain such a foothold in S.Asia ? The answer is, the sale of firearms and cannons. Where in Europe it increased vulnerability of signioral castles to the field artillery maintained by ‘kings’. The increasing use of firearms from the middle of the fifteenth century onwards is a crucial factor in the rise of centralized monarchical states all over the world.

sd: One of the aims and outcomes of Jihad is to occupy attention. In this way it is a war against being interested in anything else.

al-Qaeda have defeated Hollywood. 9/11, on a budget of about \$500,000, utterly absorbed and REALLY shocked, outdoing the stream of let-down, preposterous disaster films of the 90s (Independence Day, Deep Impact, Armageddon) which spent fortunes on special effects.

Jihad is more real than Reality TV, employing hand-helds to record beheadings and suicide bombings; being caught on CCTV is a measure of success.

Media space and time is repeatedly conquered, good minds rack their brains, paranoia and psychosis are palpable in the air.

Every moment of precious sentience focused on Jihad is a victory for Jihad. WWII slipped by oddly unnoticed - some people betray confusion with a frown when it is mentioned. WWIV is a battle for space on the brain's hard drive.

Someone once asked James Joyce what he did during WWI. His answer: 'I wrote Ulysses.'

¹¹⁸ https://www.longwarjournal.org/archives/2005/08/the_seven_phase.php

"Carriers know only what they need to know and no more. They are augmented by subtraction, their thinking liberated from the entropy of wisdom. They learn or remember only what they can use to go further, pursuing their relentless singular trajectories."

See "Hyperstitional Carriers III"

Jihad is a master narrative seeking to squeeze out other narratives. One way of waging war against it is by stubbornly pursuing a trajectory that seems entirely incognizant of Jihad.

Nick Land: sd - while there is a lot to what you say (the terrorism-media nexus is a long established and persuasive model), you might be underestimating the Western (Anglospherean or even Global Market) gains from the intelligent escalation of this conflict - remember that the first wave of practical space technology and the Internet came from taking WWII seriously on a technical level, while the equivalent civilizational bounty from WWII was simply stunning: the computer, radar, sonar, jet propulsion, rocketry ... (sure I've still missed key ones). Promises from WWIV include a huge leap in robotics (from unmanned predator vehicles), biometrics, cybersecurity (and aggressive cyberwarfare), satellite surveillance, biotechnology (response to bio-WMD threats), and even memetics (since everyone is aware the cultural war is the key).

Jihad is already incrementally raising the level of friction in the world business environment ('boiling the frog') and seems capable of continuing to do so, so there is also a case from switching from the current defensive mode of reaction to 'razzia' (the islamic mode of long-term, low-intensity, attritional, honour-based grudge-matches), to a style of conflict more in keeping with Western strengths (as outlined by V. D. Hanson in his Carnage and Culture - high-intensity, short-duration, decisive, shattering confrontation). In any case, since a seriously provocative WMD incident is inevitable on current trends, the question of escalation may soon be taken out of the hands of Western strategists by populist politicians.

Reagan's roll-back strategy obviously delivered more than ignoring Soviet communism was doing / would have done. Like jihadism (and jihadi terrorized islamopuppet states) today, the Soviets were squatting on and wasting a vast chunk of planetary resources, waging attritional warfare against the Free World, obstructing globalization, degrading the quality of capitalist social systems through 'triangulation' and threatening truly eschatological crisis up the road ...

Reagan's formula for the Cold War - 'We win. They lose.' -still works in the current conflict.

If, as military historians suggest, WWI was the chemist's war and WWII the physicist's war ... WWIV looks set to be the informaticist/roboticist war ('high intensity' only means blunt megadeath if things are allowed to get out of hand)

sd - your basic argument here highly plausible on common sense grounds, and also resonant with the 'don't be terrorized by terrorism' imperative which I have great sympathy with. My worry is that the jihadis are actually manifesting a superior understanding of cultural warfare and the predisposition of human nature to embrace highly defined dramatic conflict narratives (with an apocalyptic spin) than is yet evident in the West.

PS. The Oankali are still a 'war culture' (or 'war machine') but one that has so sophisticated itself that the idiocies of zero-sum collision are no longer discernible. There might also be a tendency for humans, for morally admirable reasons no doubt, to over-emphasize the zero-sum features of major military conflicts, which - when analysed with historical detachment - appear often more like productive phase-transitions than mutually ruinous wastage. It is quite shocking, for instance, to note how insignificant warfare typically looks when charted against demographic and frequently even economic trends. 'War is hell' but the deep scars are often close to invisible.

traxus4420: My knee-jerk distrust of common sense leads me to ask: is it really possible to ignore this particular meta-narrative and pursue the same 'relentless singular trajectories?' How is this different from "Just keep _____ (usually something involving the pleasant narcotic of hedonistic consumption) or else the terrorists will have won!" -- often leading to a result parallel to the post-tragedy bar hop/bender style of repression. Can't this jihad narrative be used as a stimulus for more thoughtful, responsible action?

Or do we banish jihad to a mental 'undercurrent' that adjusts rather than dominates whatever we were doing before? -- is this even more dangerous...

related note: didn't Ulysses have quite a bit to do with WWI?

oh yeah -

recognize the division of labor/attention thing, but was talking more about mental space, total behavior patterns of any given individual, not just say, their jobs, some of which must of course not change.

Nick Land: traxus4420 - "is it really possible to ignore this particular meta-narrative [?]" - Al Qaeda is in large part 'theatrical' and highly proficient at seizing attention. It's operations have been designed more for spectacle than for direct military consequence of any kind, and there's no reason to think anything has changed essentially in this respect. Stockhausen notoriously describes 9/11 as "The greatest work of art imaginable for the whole cosmos" - although the implication that it marked the final statement in sublime violence is probably an over-optimistic one. So your question is inescapable, and directly connects with an overall strategic evaluation of the conflict.

"Can't this jihad narrative be used as a stimulus for more thoughtful, responsible action?" - Even if this is answered in the affirmative, a number of very different agendas will be triggered by it.

northanger: amazing. contrasting the bloody Indian rebellion of 1857 (en.wikipedia.org/wiki/Indian_rebellion_of_1857) with the brutality of the Iraqi insurgents, Abu Ghraib & NYC, Madric & London bombings.

"Siege of Cawnpore ... The surviving women and children were led to Bibi-Ghar (the House of the Ladies) in Cawnpore. On the 15th of July, worried by the approach of the British forces and believing that they would not advance if there were no hostages to save, the Nana Sahib ordered their murders. Three men entered it and killed everyone with knives and hatchets and hacked them to pieces. Their bodies were thrown down a well ... When the British retook Cawnpore later, the soldiers took their sepoy prisoners to the Bibi-Ghar and forced them to lick the bloodstains from the walls and floor. Then they hanged all of the sepoy prisoners."

"The British adopted the old Mughal punishment for mutiny and sentenced rebels were lashed to the mouth of cannons and blown to pieces. It was a crude and brutal war, with both sides resorting to what would now be described as war crimes."

"Soldiers took very few prisoners and often executed them later. Whole villages were wiped out for apparent pro-rebel sympathies. The retaliation was termed by the Indians: Devil's Wind."

"(Bill Roggio) ... wakening the American military psyche. The West would basically have two options: (1) blitzkrieg 21st Century style - the full mobilization of its military and an accompanying sweep of the Islamic crescent, without regards for Politically Correct warfare; (2) nuclear war. Both campaigns would be designed to fully eliminate the Islamist threat, and the Muslim infrastructure, which allowed for the rise of al Qaeda's ideology."

traxus4420: It's still unclear to me if Nick/sd are talking about strictly occupational trajectories as avenues that can and sometimes should progress 'seemingly incognizant of' jihad/9-11, or if they are going for a more 'holistic' view.

sd: traxus4420 - I didn't advocate ignoring Jihad: that is plainly impossible, with the media and audience penchant for disaster-replay porn. I advocated stubbornly pursuing a trajectories that seem entirely incognizant of Jihad. 'Seem' being the operative word.

Re: Ulysses - the book is 'about' a day in Dublin in 1904, so the content is relatively free of explicit or implicit reference events of 1914-18 (even the Dublin Easter Rising of 1916). T.S. Eliot's *The Waste Land* is, however, much more explicit in its links to WWI. In terms of form, it is possible to view the multiple styles and POVs which constitute the textual fabric of *Ulysses* as being shaped by the shattering of official reality which came bundled with WWI and modernism, and by Joyce's deeply weird perceptions of language. WWI was taken into account, but *Ulysses* behaves as if it were incognizant. At bottom, *Ulysses* is an affirmation of banal existence in urban Ireland and its core strategy is to mutate and process the English language and English literary canon by tracking and feeding them through the streets of Dublin, a town on the periphery of the British Empire. Engagement with the enemy through an affirmation of values which are under threat.

Nick Land: sd - "Engagement with the enemy through an affirmation of values which are under threat" - as a defensive strategy this has considerable merit, but Faiths are very robust viz memetic warfare because they are precisely structured to deal with such situations (since they lack non-parasitic functional content they are free - like viruses - to devote all their resources to parasitic replication).

Classic examples (as you've already alluded elsewhere) include 'critical thought is a sin' 'dogma is holiness' 'lying satanic foreigners should never be listened to' 'leaving the faith is apostasy deserving of death' 'our intellectual incoherence attests to the sublimity of the divine' 'God loves little children who don't ask questions' 'the beards

know best even when we don't understand them' 'rote learning by heart is best' ... since critical inquiry, intellectual debate and detached evaluation of empirical social, historical and economic evidence have failed the left (leading implacably to a global 'neoliberal' revolution rather than to the soc*alist holy land), they have discovered that rabid monotheistic meme structures are surprisingly comforting ...

sd: ...which is why I lean towards a ruthless dissection of faith, no matter how 'politically incorrect' and insensitive it might be. There are many forms of attack. Being deep in a planetary meme war, engagement with the enemy through an affirmation of values which are under threat is just one strategy at our disposal.

Given the fact we are not being paid to think about WWIV, I think the exercise of extreme caution in allocating attention and time to it is essential. WWI was fairly meme-lite (which is why the Bolshevik seizure of power was so easy). WWII was characterised by extreme meme-toxicity, but there was a high degree of clarity, with humans wearing their ideologies on their sleeves (yet the Allies failed to appreciate just how virulently opposed to freedom Stalin was, with disastrous consequences for Central and Eastern Europe). WWIII was memetically simple but economically complex. WWIV is so complex that you can hear people say 'I don't know what to think' - partly because postmodernism disabled the ability to think. Anti-virus programs for the mind with regular security updates and warnings?

The Bill Rogio piece does not mention Chechnya vs. Russia - what's your angle on this?

The Chechen conflict is a legacy firstly of Tsarist, and then of Lenin and Stalin's deprivations in the region (e.g. Stalin's deportation of the entire nation in 1944). Putin's

placing the conflict under the aegis of WoT is a bit dodgy (to say the least). The high civilian death tolls, strategic use of rape and the assassination of people prepared to negotiate has resulted in brutalisation - one of the most worrying phenomena that accompanies 'War is hell, but it's necessary' approach: heavy-handed slaughter breeds heavy-handed slaughter. The separatists, largely defeated, have nowhere to go but westwards. If the US is flailing, Russia definitely does not have the sophistication necessary for dealing with Jihad.

One last thing: any sites about robotics and surveillance you could recommend?

Nick Land: sd - excellent contribution to taxonomy of these conflicts. Need to reflect before commenting on your evaluations here.

pomo ref. of course crucial - pomo basically sugar-free faith-memetics for cynical western dogmatists, pre-packaged for red meat theofascism

On Chechnya - think there's a danger of trying to fix a stable essence for highly dynamic conflicts, what the Chechnya war is now, and is becoming, probably quite different from what it started out as. Like any strong ideology, Jihad polarizes and co-opts, so even situations that begin as relatively 'secular' (national-ethnic) become globalized and fanaticized - once you cross the Beslan threshold there's a whole new thing happening.

Don't have anything off pat on robots and surveillance - sure we've got more adept net monkeys here who can scrape something together quickly ...

northanger: since there's not a lot of monkeys hanging around the ol' hyperstitional homestead ... you must mean this monkey.

webebizy.

THE SHOCKING MENACE OF SATELLITE SURVEILLANCE

english.pravda.ru/main/2001/07/14/10131.html

ack!

en.wikipedia.org/wiki/Improved_Crystal

Tachi: Maybe I missed something. What happened to WWII? Why the leap to WWIV?

sd: Tachi - WWII lasted from 1945 to 1991. Capitalism vs Communism; US vs USSR; the Cold War. Although some terrestrial territory was fought over (Korea, Vietnam), WWII was mainly an economic and cultural war, the outcome of which was the utter destruction of the USSR and its grip on Eastern and Central Europe. WWII is not described as such because of myopia and meme blindness.

The roots of WWII can be traced to the Bolshevik seizure of power (1917) and the Treaty of Versailles (1919).

The roots of WWII can be traced to the Yalta Peace Conference (1945).

en.wikipedia.org/wiki/Yalta_Conference

The roots of WWIV can be traced to the withdrawal of Soviet troops from Afghanistan (1989).

War seems to be born in the ends of conflicts and peace treaties.

Tachi: sd - thanks for response. In your view, what would mark an end to WWIV? And would an end of WWIV necessarily give rise to WWV? It seems that war is the norm, and that peace is just a phase of war undergoing mutation, from this point of view.

sd: tachi - I'll have something in response later this evening.

sd: tachi - a few thoughts, crude and clunky, nothing conclusive (of course)

"In both his December 2004 statements, for example, Bin Laden clearly stated his view that democracies, constitutional governments, and insufficiently Islamic monarchies are equally unacceptable forms of governance for Islamic societies because they empower human rulers and man-made legal systems rather than "the law of God." Al Zarqawi expanded on these sentiments in a January 2005 statement that characterized democracy as a rival "religion" to Islam and criticized adherence to democratic principles such as freedom of speech and freedom of religion as un-Islamic and tantamount to punishment by death."

www.fas.org/sgp/crs/terror/RL32759.pdf

Insofar as WWIV is a meme war, Jihad/Islamism has pitched itself against the modern democratic meme.

The former sees itself being most at home in the body of a feudal system where Islamic law is enforced by the state - tending towards control, repression and even mutilation of the body in the enforcement of its law, and towards censorship of media forms, not just its content (the Taliban banned TV). The meme is fiercely iconoclastic and part of the program it unpacks carries out the destruction of symbols pertaining to other memes (The Buddhas of Bamyian; WTC). One arm of the police is defined as the religious police. The state is utterly and uncompromisingly hostile to any other meme than the one it imposes.

en.wikipedia.org/wiki/Life_under_Taliban_rule

en.wikipedia.org/wiki/Life_under_Saudi_rule

news.bbc.co.uk/1/hi/world/south_asia/1242856.stm

archives.cnn.com/2001/WORLD/asiapcf/central/03/02/Bamiyan/

The modern democratic meme has policies of freedom (of conscience, economic, political, sexual) written into its core code and seems to be most at home in the body of a secular society where the economic system of capitalism is allowed to run on a long leash and the main function of government is that of Leviathan (the secular police).

The modern democratic meme mutated from isolationism at the periphery of European Imperialism and has defined itself through war (against fascism and communism) and in the process of decolonialisation following WWI and WWII. Capitalism, the meme's host, is intrinsically inclusive and proceeds by co-opting its outside through trade: to approach full potential its market forces require the Earth and all its resources. One of the problems of WWIV is that the democratic meme serves up the system it unleashes with apple pie and seems reluctant to acknowledge the system's machinic intolerance of any societal structures that get in the way of its pursuit of resources.

The modern democratic meme has a tolerance for alternative memes, and can even cope with parasitic un-democratic memes inside its body. WWIV will demonstrate whether or not this tolerance is a strength or a weakness, whether the meme can take having its own democratic technologies turned against itself.

Jihad has attacked the core code of democracy and challenged it to a fight to the death. It wants the undivided attention of democracies sensory apparatus (the media) and often succeeds in getting it. Images bombard the mind, triggering fear in some and setting inspirational precedents for others.

Jihad is winning on the image front, and probably in cyberspace. The war is also enabling Jihad to make serious inroads into democratic civil liberties. Leviathan requires and demands better eyes and ears, speeding up the process of total surveillance. Intelligence agencies can read and decode electronic communication over our shoulders: the state has its hands on intellectual property - the capitalist system is forced to become more feudal. Jihad polarizes the conflict, as Nick pointed out, and so pushes democracy away from pluralism towards a monolithic, unified front. The modern democratic meme, aware that it is fighting for its survival, has laid

down an un-democratic ultimatum to moderate Islam: join us (and democratize?) or die. In this way the meme facilitates Capital's planetary drift.

a very clear article: *The War on Terror: Year Five*

www.cbsnews.com/stories/2005/08/19/opinion/main788708.shtml

WWIV could develop into a total war (like WWI and WWII) if a vaccine for the virulent meme of Jihad is not found. Ultimately, if the meme war is not fought in minds by means of dialogical confrontation, then it will be fought on the body of the Earth.

If WWIV becomes total, the war so far will be on a similar scale to the Spanish Civil War (a training and testing ground) in relation to WWII.

One possible end of WWIV could be when democratic puppet governments have been successfully installed in all the countries which are deemed to constitute a threat to the Free World as managed by the puppet master US. The US and its memes being themselves puppets in their turn, of course.

War feeds on the aggressive genetic makeup of homo sapiens. War, whether military, economic or memetic, seems to feed the system of Capitalism. So yes, the seeds for further conflict will no doubt be sown in the resolution of WWIV, if it ever comes, IMHO.

northanger: *a very clear article: The War on Terror: Year Five*

Part of President Bush's political DNA

www.sourcewatch.org/index.php?title=Natan_Sharansky

Uri Avnery, the veteran Israeli journalist, wrote of Sharansky's influence on Bush that "The idea that the teachings of this particular political philosopher are the guiding star of the mightiest leader in the world, the commander of the biggest military machine in history, is rather frightening". [Avnery, op. cit.]

a very clear article: The War on Terror: Year Five

www.cbsnews.com/stories/2005/08/19/opinion/main788708.shtml

sd. several things caught my attention in this article: {a} inflection points, {b} Iran and the larger Shiite world, {c} effective psywar.

can you expand on these a little concerning your meme thread (quite interesting, btw)?

and a discussion on Natan_Sharansky re: programming WWIV would be helpful also.

sd. how are the different types of propaganda used to program WWIV — black (misdirection), grey (unattributed) & white (declared)?

Tachi: sd - appreciate your insights. Though not sure how the memetic dimension of WW should be articulated or conceived in relation to the material basis of war. Energy, resources, key IMHO, though there is obviously a clash of ideas and values penetrating the trajectory of this and previous WWs.

Can there be said to be a singular trajectory to all WWs, marking them as different from other, relatively isolated and parochial wars? Is there something at work, however mutational, non-linear, that can be said to be a singular process that makes WWs connect?

If so, wouldn't it be too simplistic to say that these wars have been about freedom and democracy, overcoming successive obstructions (facism, communism, jihadism)? Surely the memetic aspect needs careful elaboration within the material context of un-anthropomorphic processes?

sd: some useful questions... some answers later.

www.loudwire.net/community/culture_jammers/19095.html

[p\(remove\)okerwithoutcards.com](http://p(remove)okerwithoutcards.com)

Modern media has become increasingly manipulative and assaulting on each and every person who finds him or her Self awash in the endless sea of endorsements, messages, suggestions, enticements, and so on, that it produces repetitively, day in & day out. Seemingly more than ever before, media agencies have discovered methods based on sound principles which tap into the deeper realms of our mind, and are designed to distract the conscious mind while carrying out their intention. This intention appears to carry with it a disease or sickness the effects of which we see indirectly manifest in some of the occurrences & events in our cultures & in our world(s). It is, then, imperative that we begin to understand the effects that modern media have upon us, and an excellent presentation of this is found in Ben Mack's P(remove)oker Without Cards. Within this brief exploration we will uncover some of the means & mechanisms by which mental distress is manifest within our Western culture as they are related through Mack's work.

Within the dialogue of the book the character Howard Campbell says,

“Business is a physical manifestation of meme warfare. Media company choices do have tangible effects on shaping the structure of society. By creating targets, and crafting delivery mechanisms for these predetermined audiences, we segregate the information they receive. Isolation breeds mutation.”

What is being suggested here, and indeed one of the many threads central to the book, is that the increasing alienation amongst not only individuals, but groups of individuals standing under a certain core identity, is a byproduct of the way media currently functions in order to create more revenue for its corporate clients.

It might also be worth mentioning that an analogy is pursued in the pages of this book that seeks to identify or characterize the general personality or motivating principles of most (or all?) corporate enterprises as having the values, direction, and imperative of a sociopath. While discussion of this might add a great deal more sense of urgency to our present examination, it is too much ground to try and cover here; however, there are some compelling arguments presented in formulating the analogy. Interested individuals are encouraged to read the book for more on this aspect of Mack's work.

Coffee vs. Oil: the cult of the Blob has now a rival!

Hyperstition (August 30, 2005)

You Are Coffee's Pawn¹¹⁹

Comments: Coffee vs. Oil: the cult of the Blob has now a rival!

sd: it's very quiet here.

anyway - here are some thoughts about coffee:

Beyond the tantalising evocations of poetry – hats off to Salathustra on that score - to what extent can two fuels be said to predate upon the human nervous system?

Just how neutral are chemicals? How much input do they have in the process of their distillation into refined products?

Coffee is cultivated to be consumed by the highly refined machinery of the human body and fuel the whopping computational capacities of the human brain. As an addictive food product selected by cultivation, coffee has entered into a gene alliance with the human genome, the brain of which might well have an inbuilt propensity to seek stimulants and depressants from plants.

Plants came out of the water in the Silurian (439 -408 million years ago) when the genes which now inhabit homo sapiens were legless, seabound amniotes. That is to say, plants had nearly 200 million years of practice at evolving in (and communicating with) their environment before the builders of homo sapiens began to build land conquering cynodonts in the late Permian.

Plants are fiercely competitive and cunningly cooperative in equal measure. They hone their weapons and strategy in perpetual warfare: currently they are standing their ground in arms races with the complex adaptations of warm-blooded herbivores. Plants are also veterans of chemical trade, adept at forming alliances with diverse life forms: bacteria, fungi, insects and birds. Their genes have reached beyond their own

¹¹⁹https://web.archive.org/web/20061101132854/http://www.paulsalamone.com/book1/2005/08/c_hapter-3-you-are-coffees-pawn.html

vehicles and have tied other genes into cooperating with them (for example, in their replication).

Caffeine is a naturally selected bio-weapon: it paralyzes and kills insects. It also happens to block adenosine receptors in the human brain and thereby stops nerve cell activity from slowing down (sleep). Humans have selected the coffee plants arabica and robusta for their high yields of caffeine.

To claim that humans are coffee's pawns, the story would have to go something like this: the coffee plant survives in a war with insects by accidentally developing a bio-weapon which kills insects and spreads through the coffee plant gene pool. Arabica and robusta happened upon further phenotypic expression for their toxin: one which enabled them to predate upon humans and tie them into cooperation. The stimulating effects of the toxin encourages humans to cultivate (engineer) stronger plants, guaranteeing the plants' replication and simultaneously fuelling the cultures which grow and import coffee. The trade: economic and intellectual development for humans, replication and healthcare for the plants.

So is this the story?

northanger: that's only part of the story — what about oil? (how did coffee beans "learn" about human beans?)

sd: the oil story dependent on whether the bait of the coffee story is taken.

"how did coffee beans "learn" about human beans?"

How do plants, not having eyes, use color so effectively?

"Plants provide the habitat and food for many animals and therefore it is logical to assume that the visual perception of animals co-evolved with plants... Intuitively, the common optimal camouflage for herbivorous insects should be green, and indeed, many of these, e.g. aphids, caterpillars, grasshoppers, have evolved green coloration. The effectiveness of this common camouflage is compromised, however, by the patterns of diverse non-green or even a variety of green shades of plant backgrounds...we suggest that green or otherwise colored herbivores that move, feed or rest during the day on plant parts that have different colorations, immediately become more conspicuous to their predators."

harvardforest.fas.harvard.edu/research/leaves/pdf/bIOeSSAYS%20PLANT%20COLOR.pdf

The questions are: What kind information do plants have about their environments? How do they 'process' this information and 'act' upon it? Is blind mutation sufficient to explain adaptation, or is there information feedback somewhere along the line?

Got no answers, of course.

northanger: killing zones? interesting: "Plants are simply too colorful to enable a universal camouflage of herbivorous insects and other invertebrates to operate successfully, and they force small herbivores to cross areas ("killing zones") with colors that do not match their camouflage." paper also mentions hawkmoths. since Darwin predicted its long proboscis i can buy the coffee story. besides, i want to hear the oil story.

here's an article on plant capitalism - uanews.org/lor/winter05/moth.html

sd: well, you did ask for it northanger:

Dominant beliefs would say that, in contrast to coffee, oil is not produced through either genes tampering or tampering with genes.

When thinking about oil, the human brain runs up against ignorance: the origins of oil are not known for certain, so belief pours into the void.

The dominant belief, the biogenic theory, describes petroleum as the product of dead organic life and heat: it is the biological junkyard of gene vehicles (prehistoric marine life and terrestrial vegetation) cooked up below the surface of the earth. As such, oil is a finite resource which homo sapiens is over-exploiting. This belief also limits oil's theoretical capacity to have any of its own terms and conditions: oil does not trade with humans, it is merely exploited by them.

"The general belief in scarcity that drives up gas prices and causes fears of inflation, Gold argues, is a mirage that has served vested interests among oil producers for decades." wired.com/wired/archive/8.07/gold_pr.html

The beliefs bundled with the biogenic theory have been critiqued by heretical abiogenic theories which claim (and are providing evidence) that oil consists of inorganic hydrocarbon molecules produced through the effects of heat and pressure on hydrogen and carbon. As such, oil, while not infinite, is anything but scarce: it is a constantly produced and replenished resource.

arabnews.com/?page=6&ion;=0&article;=44011&d;=29&m;=4&y;=2004

www2.eluniversal.com.mx/pls/impreso/noticia.html?id_nota=6110&tabla;=miami

This abiotic heresy also opens up theoretical space for the genes of ancient extremophile prokaryotes to engineer the production of petroleum as hydrocarbons wend their way to the Earth's surface:

“A variation of the abiogenic theory includes alteration by microbes similar to those which form the basis of the ecology around deep hydrothermal vents.”

“Life as we know it is mainly based on carbon. First living organisms (archaeobacteria) of course needed food and this food at least was primordial methane or petroleum (hydrocarbons) in depths. They live at deep levels in crust and they formed oil contaminants which also became parts of biomarkers found in natural petroleum.

Microbial life has been discovered 4.2 kilometers deep in Alaska and 5.2 kilometers deep in Sweden. Methanophile organisms have been known for some time, and recently it was found that microbial life in Yellowstone National Park is based on hydrogen metabolism. Other deep and hot extremophile organisms continue to be discovered. Proponents of abiogenic petroleum origin contend that deep microbial life is responsible for the biomarkers that are generally cited as evidence of biogenic origin.”

en.wikipedia.org/wiki/Petroleum

en.wikipedia.org/wiki/Abiogenic_petroleum_origin

The action of these deep microbes on hydrocarbons is variously described as ‘contamination’, ‘alteration’ and ‘consumption’ (oil as bacteria shit?), but what it is that they actually ‘do’ to oil remains unclear. It seems that hydrocarbons are the primordial food on planet earth. The inhabitants of The Deep Hot Biosphere have never fed on the light of day.

If the action of these prokaryotes on hydrocarbons is proven to be in any way crucial to the appearance of oil near the Earth's surface, or to its appearance in a form which lends itself to consumption by terrestrial technology, then would this mean that there is trade taking place? Strata upon strata of traders and chemicals traded?

the players and pawns:

- the Earth (hydrocarbons)

- deep microbes
- oil
- the successors of the deep microbes which conquered the Earth's surface by finding a new food sources (light, oxygen)
- capitalism
- warring and trading memplexes

If humans are described as oil's pawns, and recourse to the supernatural is to be avoided, then the story has to be the story of this trade, IMHO.

Of course there has already been lots of digging on this site:

See “The Hyperstition of Porphyrin: No blood for oil!”

northanger: apparently diamonds are quite plentiful but heavily controlled by the diamond hegemony creating another mirage of scarcity. made up of a single element: carbon (virtually all carbon atoms come from the stars). production of both, AFAIK, oil & diamonds takes a tremendously long time to produce — two commodities cooked up & dug up from the earth.

www.gasresources.net/DisposalBioClaims.htm

"With recognition that the laws of thermodynamics prohibit spontaneous evolution of liquid hydrocarbons in the regime of temperature and pressure characteristic of the crust of the Earth, one should not expect there to exist legitimate scientific evidence that might suggest that such could occur. Indeed, and correctly, there exists no such evidence. Nonetheless, and surprisingly, there continue to be often promulgated diverse claims purporting to constitute “evidence” that natural petroleum somehow evolves (miraculously) from biological matter ... the observations of optical activity in natural petroleum have been trumpeted loudly for years as a “proof” of some “biological origin” of petroleum. Those claims have been thoroughly discredited decades ago by observation of optical activity in the petroleum material extracted from the interiors of carbonaceous meteorites. More significantly, recent analysis, which has resolved the previously-outstanding problem of the genesis of optical activity in abiotic fluids, has established that the phenomenon of optical activity is an inevitable thermodynamic consequence of the phase stability of multicomponent fluids at high pressures. Thereby, the observation of optical activity in natural

petroleum is entirely consistent with the results of the thermodynamic analysis of the stability of the hydrogen-carbon [H-C] system, which establish that hydrocarbon molecules heavier than methane, and particularly liquid hydrocarbons, evolve spontaneously only at high pressures, comparable to those necessary for diamond formation."

If humans are described as oil's pawns, and recourse to the supernatural is to be avoided, then the story has to be the story of this trade, IMHO.

can you expand on this a little more? seems like the classic IF,THEN,ELSE programming statement.

unisci.com/stories/20013/0816011.htm

Photosynthetic Link May Have Made Humankind Possible :: Scientists from Imperial College, London, have found an important evolutionary link between the two powerhouse protein complexes that drive photosynthesis. This shared evolutionary adaptation may have been crucial for the establishment of environmental conditions required for the emergence of humankind. For decades, scientists have debated whether there is a common evolutionary origin for the different photosynthetic organisms present today. Reporting in today's Nature, scientists from the Wolfson Laboratories, Department of Biological Sciences, Imperial College, now provide evidence for a link. They have discovered a new protein supercomplex in the photosynthetic pathway that links two major proteins that were previously thought to work autonomously. The key proteins Photosystem I (PSI) and Photosystem II (PSII), work together in the photosynthetic pathway to produce oxygen and energy for plants to grow. The Imperial researchers investigated the possibility of this link using cyanobacteria, a major photosynthetic producer in the world's oceans. Tom Bibby and colleagues were investigating the role of a PSII-like protein that is produced by cyanobacteria in conditions of low-iron availability. They expected this protein to interact with PSII, due to its DNA sequence similarity with one of its proteins.

By recreating "iron-stress response" conditions in cyanobacteria, the team found that this PSII-like protein interacts, surprisingly, with PSI, by forming a light harvesting antenna of 18 chlorophyll molecules around the protein complex. The presence of the antenna increases the light harvesting ability by approximately 72 per cent compared with that of the normal PSI alone. This means that cyanobacteria can produce oxygen even in low iron conditions. This adaptation would have global

environmental significance -- both for creating the levels of oxygen in the atmosphere that allowed the evolution of humans and maintaining them to this day.

en.wikipedia.org/wiki/Dark_reaction

The carbon fixation reaction is the first step of the light-independent reactions. Carbon from carbon dioxide is "fixed" into a larger carbohydrate. Three pathways (processes) exist for this reaction to occur: C3 carbon fixation (the most common), C4 carbon fixation, and CAM. C3 fixation occurs as the first step of the Calvin cycle in all plants. C4 plants first fix carbon dioxide into malate, which is then used to supply carbon dioxide to the Calvin cycle. CAM plants perform a similar process.

en.wikipedia.org/wiki/C4_carbon_fixation

C4 carbon fixation is a metabolic pathway found in some land plants (C4 plants). They have a competitive advantage over plants possessing the more common C3 carbon fixation pathway under conditions of drought, high temperatures and nitrogen limitation. The C4 plants possess a characteristic leaf anatomy. Their vascular bundles are surrounded by two rings of cells. The inner ring, called Bundle Sheath Cells, contain starch-rich chloroplasts lacking grana which differ from those in mesophyll cells present as the outer ring. Hence, the chloroplasts are called dimorphic. This peculiar anatomy is called Kranz Anatomy (Kranz-Crown/Halo). The C4 cycle allows for a spacial separation of carbon fixation from respiration, thus allowing C4 plants to increase concentration of CO2 within their leaves.

aww. now you got me reading about nucleosynthesis, triple-alpha process, proton-proton chain reactions, Hertzsprung-Russell diagram & photosynthetic pathways. i didn't ask for this. what's next? the grand theory of everything?

Is the world ready for the Coffee/Blob Hollywood showdown? It leaves Alien/Predator in the dregs.

Nick Land: Glad to see Deep Hot Biosphere resurfacing.

Robin: that's nothing, in Iran they can convert oil into love (no relation to HS's Reza, I presume)

news.bbc.co.uk/2/hi/middle_east/4198906.stm

northanger: "Reza Love Fund"?

sd: *If humans are described as oil's pawns, and recourse to the supernatural is to be avoided, then the story has to be the story of this trade, IMHO. can you expand on this a little more? seems like the classic IF, THEN, ELSE programming statement.*

ahem, well...

The coffee and oil story outlines above are just attempts to hypothesize the extent to which plants, microbes and raw chemicals can be described as having a degree of control over human beings. Petrol as puppeteer and people as pawns are metaphors which have appeared on this site. What degree of reality, plausibility or certainty can these metaphors have? Do they cash out in any real terms, or do they remain in the imaginative space of fantasy.

One way to look at it: some periods of history are named after the substances which defined their modes of production – the Stone, Bronze and Iron Ages; and other periods and centuries are characterized by the ubiquity of chemical compounds and fuels – gunpowder, steam, oil. This ubiquity could be seen as obsession or possession, depending on how anthropomorphic the lens is. Insofar these chemical combinations shape and limit modes of production, they can be said to determine the range of economy and culture and provide content for thought.

[Two examples of how metal can ‘trigger’ economic/psychological disturbances: a] the Spanish importation of silver from South America after 1500 led to rampant inflation, economic depression and the loss of Spanish hegemony; b) gold rushes lead to frenzied occupation of new territories.]

As long as the chemicals are abiotic (free from any biological admixture or manipulation), they remain the passive objects of exploitation: the mania is generated by capitalism and human inbuilt psychology (e.g. obsession with status).

So in what sense can hyperstition claim: Oil is the hyperstitional subject rather than the secular object of manifest geopolitics?

See “The Hyperstition of Porphyry: No blood for oil!”

IMHO, hyperstition can back this claim up there is evidence of biological interference in the process of oil production: if oil is proven to be manipulated by microbial DNA

then microbes can be seen as having entered an alliance with genes and systems which exploit oil. [techno-poetic description of an existing trade alliance.]

Modern evolutionary theory describes the genes of plants and insects as manipulating the genes of other species through phenotypic expressions:

“Several species of ant have no workers of their own. The queens invade nests of other species, dispose of the host queen, and use the host workers to bring up their own reproductive young. The method of disposing of the queen varies... *Monomorium santschii* achieves [this] result by subtle means. The host workers have weapons wielded by strong muscles, and nerves attached to the muscles; why should the parasite queen exert her own jaws if she can subvert the nervous systems controlling the numerous jaws of the host workers? It does not seem to be known how she achieves it, but she does: the host workers kill their own mother and adopt the usurper. A chemical secreted by the parasite queen seems the likely weapon, in which case it might be labeled a pheromone, but it is probably more illuminating to think of it as a formidably powerful drug... For a worker to ant to kill her own mother is an act of genetic madness. Why do the workers do it?” (Dawkins, *The Extended Phenotype* 1982)

In the production and consumption of oil, what is being manipulated by what?

Coffee's trade is reasonably clear, as are the effects - this black liquid gets into the human brain via the digestive system and blood. The action of microbes and oil is much murkier (if indeed there is any action). The trade gains are not obvious – What does the Earth get in return for its supply of food and fuel? Pressure release? Cleansing of bacteria excrement – better out than in? – and the effects on the system oil is digested by are less easy to trace than are those of coffee: WoT, global warming...

robin: why should anything be said to exert "control" over anything else? ; We Azathothians prefer to say that it all happens in an utterly contingent manner with no supervening agency whatsoever. All the rest is repulsive shoggoth-interpretation.

sd: what is the criteria for judgements as to whether or not something is repulsive? Aesthetic?

Is Lovecraft being used to dismiss any 'scientific' explanation, or just my hypothetical noodling? I'm not sure "We Azathothians prefer to say..." is going to get very far in debates with the scientific community. (I'm trying to write a reply to Lee Harris).

Has Burroughs and his focus on control gone out the window?

robin: no, I was just fucking about. sorry.

sd: Maybe you could possibly consider making your fucking about a tad more obvious for the clodheads of this world :)

northanger: en.wikipedia.org/wiki/Abiogenic_petroleum_origin

+Biogenic: remnants of buried plant and animal life.

+Abiogenic: deep carbon deposits from when the planet formed or subducted material.

en.wikipedia.org/wiki/Subduction

Subduction zones are also notorious for producing devastating earthquakes because of the intense geological activity. The introduction of cold oceanic crust into the mantle depresses the local geothermal gradient and causes a larger portion of the earth to deform in a brittle fashion than it would in a normal geothermal gradient setting. Because earthquakes can only occur when a rock is deforming in a brittle fashion, subduction zones have the potential to create very large earthquakes. If this earthquake occurs under the ocean it has the potential to create tsunamis, such as the earthquake caused by subduction of the Indo-Australian Plate under the Eurasian Plate on December 26, 2004, that devastated the areas around the Indian Ocean. Small tremors that create tiny, unnoticeable tsunamis happen all the time because of the dynamics of the earth.

subduction + abiogenic angle interesting since discussion brewing on FEMA's pre-911 assessment of the three most likely disasters: {1} terrorist attack on NYC, {2} category-5 hurricane at NOLA, & {3} major earthquake in SFO.

considering {1}{2}{3} i'm not fully discounting robin's control reservations — 'no supervening agency whatsoever'. robin, are you seriously taking this off the table? when you say there is no supervening agency are you agreeing oil is "abiotic (free from any biological admixture or manipulation)" & therefore a "passive object" of exploitation"?

then there is no connection between {1} human engineered event, {2} natural event & {3} hyperstitional natural event.

to make all three connect, IMHO, oil would not be passive or neutral — and sd, think this addresses " What degree of reality, plausibility or certainty can these metaphors have? Do they cash out in any real terms, or do they remain in the imaginative space of fantasy." AND "What does the Earth get in return for its supply of food and fuel? Pressure release? Cleansing of bacteria excrement – better out than in? – and the effects on the system oil is digested by are less easy to trace than are those of coffee: WoT, global warming..."

{2} *category-5 hurricane at NOLA*

note: while katrina landfall at cat-4, she was still cat-5 out in the ocean near the oil-rigs.

Nick Land: "repulsive shoggoth-interpretation" sounds interesting

"while katrina landfall at cat-4, she was still cat-5 ..." is this numogrammatic qabbababble or 'just coincidence'?

northanger: *is this numogrammatic qabbababble or 'just coincidence'*

i think it's reality-based reporting. which is, coincidentally, numogrammatic qabbababble. do you think this convergence proof we're experiencing The Singularity?

stltoday.com/stltoday/news/stories.nsf/nation/story/898E6DE679B47C338625706D0017AEF0?OpenDocument

Royal Dutch Shell's Houston-based U.S. operations reported late Monday that two drilling rigs under contract to Shell had drifted off location during the storm. Katrina was a Category 5 storm - the strongest possible - as it passed over many oil rigs and platforms on the Gulf of Mexico. The oil giant didn't expect damage estimates before today.

Cynoid: N2 - what is "The Singularity"? - is this anything to do with the second coming of Guru Nanak?

N1 - "numogrammatic qabbababble": what is the criteria for distinguishing this from non-nq?

northanger: different singularity flavors: {1} mathematical singularity; {2} gravitational singularity & {3} technological singularity. TS "is a predicted future

event when technological progress and societal change accelerate due to the advent of superhuman intelligence, changing our environment beyond the ability of pre-Singularity humans to comprehend or reliably predict". several TS flavors: (a) think Hyperstition explores Vingean Singularity with cybernetically enhanced humans. (b) Leslie White's take describes culture as superorganic entity with technological progress evolving society/culture with three layers: technological, organizational, ideological. technology the determinant in this scheme ("leading character of our play"). White thought the primary function of cultural evolution involved controlling energy; the level of energy controlled = the level of evolution. five stages: human muscle, domesticated animals, agriculture, natural resources & nuclear energy. (c) Gerhard Lenski's similar to LW but instead focuses on information. more info = more advanced; with four stages: info passed by genes, by experience (learning), by signs (logic) & by symbols (language & writing). &etc;,etc.

because of technology, Mark Pesce notes, man has "extended and superseded his organism ... In an instant the velocity of human communication and the ability to coordinate human activity reached its uppermost physical limit, the speed of light".

imho, this problem points to (a) the singularity & (b) possibly, Guru Nanak. technology extends the human organism — however, we treat these extensions as independent machines, but we are "perpetually modified" by the interaction. Pesce built a telepresence system & observed participants exhibiting four types of phenomena; the first two involved motion sickness (the barfogenic zone); the third involved depth perception (hippopotamus-eyes' view); & the fourth involved the psychological where participants failed to recognize themselves.

both questions: maybe the hyperstitional call of the old ones calls forth to identify features discarded by human adaptation during the rush toward evolution that could now provide clues to the man-machine connection. what ancient adaptive qualities does Guru Nanak have, if any? anamnesis?

maybe recent events point to a singularity paradox.

sd: RAY KURZWEIL: The Singularity Is Near : When Humans Transcend Biology

interview (September 02, 2005) here: instapundit.com/archives/025289.php

Tachi: "The" Singularity? This would surely amount to a novel plane of organization from what we have now. Yet it is one thing for humanity to have begun transcending biology and becoming transformed by technology, but quite another for a new entity

to emerge through humanity. This talk of The Singularity, where humans have improved knowledge etc, misses the main point: whilst many focus on humanity as a pluralised individual organism the real changes are taking place elsewhere, where intelligence is attributable to what is at once a mode of, and an entity in, becoming. Intelligence slides off humanity and into something else. What quite this is is difficult to pinpoint, which is why it is too premature to talk about The, or even, a, singularity.

northanger: well, guess it depends on how you define singularity.

sd: 'The Singularity' would be an event along the lines of the appearance of eukaryotes and the invention of agriculture. These events arose through multifarious processes, convergences and alliances, yet they still mark singular, critical thresholds.

The grammatical distinction between 'The' and 'a' only exists to enable English-speaking humans to make clear what they are referring to - 'the' referring to the sphere of shared knowledge, 'a' referring (amongst other things) to new information - so the 'The/a' distinction only really has meaning in some human information processing. Some languages (e.g Slavic) get along fine without the distinction. If/when the/a singularity which Kurzweil is prophesizing finally deigns to arrive, it will no doubt occupy the terrain of common knowledge, so it is probable that English-speaking human will choose to label the event with 'the'.

"Intelligence slides off humanity and into something else" - not sure how helpful this is. Humanity might be creating pathways, establishing connections and confirming associations by click-feeding beasts such as Google - inadvertently teaching the machinery about humanities priorities and obsessions - but any organized intelligence/awareness emerging in the networks would not derive from humanity: it would merely rely on humanity's extremely limited information as start-up data.

Nick Land: Tachi - agree with other commentators that this:

"What quite this is is difficult to pinpoint, which is why it is too premature to talk about The, or even, a, singularity." - requires some further elaboration

More on ID

Nick Land (September 01, 2005)

John Derbyshire's conservatism is deliberately curmudgeonly, but he's smart and numerate, and this¹²⁰ is one of the cleverest criticisms of aggressive ID around. (Lemuria even gets a mention.)

This¹²¹ essay by Lee Harris - a lucid restatement of the Kantian position - is also excellent. Kant's deal - where secularism wins a safe haven from meddling priestcraft - once looked absurdly defensive, but it's appearing more attractive every year.

Comments: More on ID

northanger: engineering design lessons of Galloping Gertie

www.wsdot.wa.gov/TNBhistory/Machine/machine3.htm

sd: The Lee Harris essay is a masterpiece. Absolutely loads to think about.

Dawkins on Intelligent design:

timesonline.co.uk/article/0,,592-1619264,00.html

Nick Land: northanger - ???

sd - yes, Dawkins is an interesting case. Totally persuasive on strictly scientific grounds, but radiating a 19th century confidence in the social dynamic of enlightenment that seems weirdly dated. Just bashing Kansas isn't going to cut it politically, however satisfying he finds it ...

¹²⁰

<https://web.archive.org/web/20061029161647/http://www.nationalreview.com:80/derbyshire/derbyshire200508300823.asp>

¹²¹

<https://web.archive.org/web/20061025202759/http://www.techcentralstation.com:80/081905B.html>

northanger: Galloping Gertie: there's this famous film about a bridge in Tacoma, Washington twisting side-to-side by the wind until it finally collapses.

been thinking about "humans as parasites" & Galloping Gaia. in the bible it says if you want to know how things work look at nature: nature evolves. imho, humanity needs to be more conscious about intelligent evolution.

sd: slightly off-topic, but like a bad DJ set, this can be mixed into the evolution theme - this (long) essay/article from Wired

wired.com/wired/archive/13.08/tech.html?pg=1&topic;=tech&topic;_set=

(via paulsalamone.com/blog/)

prophesizes the evolution of the net into a sentient machine - not a very original prediction, granted, but the method is quite convincing: Kevin Kelly takes one step back, to assessments and expectations in 1995, then compares them to the current state of affairs, before leaping to 2015.

pinker.wjh.harvard.edu/articles/media/2005_08_07_time.html

An excellent essay here:

chass.utoronto.ca/pcu/noesis/issue_vi/noesis_vi_4.html

About the Baldwin Effect and cerebral plasticity. With regard to Intelligent Design, the Baldwin Effect explains how highly complex adaptations (the human mind, language) are the products of organized design taking place within the random mechanism of natural selection.

Kataktrina

CCRU-Shanghai (September 05, 2005)

From his solitary cell in the Experimental Therapy Unit, Santa Demonica Special Secure Hospital, Hank H. Hackhammer writes:

nothings hidden anymore like claws raked across your face shattered glass in the soul they say it openly on the radio shes been downgraded from cat five to four Kbat 54 in all her gory come visiting the city that knew her best in all the world just as it was four fifths evacuated and ready for her tough love they almost had me believing it was all in my head but then down in what they call the wreck room the TVs on and a citys gone and a nation baptized in her bleeding anarchy and no need to even laugh along with the hard horror of the outside anymore because shes doing that for everybody already shooting at the rescue helicopters and rape murder in the superbowl which is what all the prayers have come to which is history true history if only they can see it there on TV

dear reader on the other side of the social mirror on the other side of prophecy and chemistry and liberty did you also see it too years ago so exactly the video was chopped and scratched scarred maybe but not edited not at all edited even the worst exactly whats on TV right now because she never cared what the children saw her rough tongue lapping at their minds so theyd be ready for this moment of raw history when whatever was believed was nothing and everybody even saying NO but it doesnt mean stop red means go now come and go Kbat 54 and the very idea she could ever be edited out which they said so many times before is harsh hilarity and the cops help rip the place apart in the end

man minus one downgraded by an increment from five to four with fourfifths gone leaving raw history jutting through the screen as she turns us on to the red side and all the news leaning black and white and red all over and the relief now the screams are on the outside and time holds you now gashed open this is her long summer festival and who needs ideas when the news is on and shes everything we cracked up to be

And to think, this broken soul was the foremost numogrammatic analyst of the age.

Thank you thorazine.

Nick Land: 4:50 am over here

Anna Greenspan: From Zora Neale Hurston:

“It woke up old Okechobee and the monster began to roll in his bed. Began to roll and complain like a peevish world on a grumble.... Under its multiplied roar could be heard a mighty sound of grinding rock and timber and a wail. They looked back. Saw people trying to run in raging waters and screaming when they found they couldn't... Ten feet higher and as far as they could see the muttering wall advanced before the braced-up waters like a road crusher on a cosmic scale. The monstropolous beast had left his bed. The two hundred miles an hour wind had loosed his chains. He seized hold of his dikes and ran forward until he met the quarters; uprooted them like grass and rushed on after his supposed-to-be conquerors, rolling the dikes, rolling the houses, rolling the people in the houses along with other timbers. The sea was walking the earth with a heavy heel....The wind came back with triple fury, and put out the light for the last time. They sat in company with the others in other shanties, their eyes straining against crude walls and their souls asking if He meant to measure their puny might against His. They seemed to be staring at the dark, but their eyes were watching God.”

northanger: *cat five to four Kbat 54*

oh.

Nick Land: Uncle Hank stole that telepathically, or maybe it was a coincidence

Steyn's take:

www.suntimes.com/output/steyn/cst-edt-steyn04.html

northanger: telepathic psychosis?

Steyn nailed it.

"The Terrorist Katrina Is A Soldier Of Allah" — "Fist of God" says Israel:

www.jnewswire.com/library/article.php?articleid=676

Nick Land: "The Terrorist Katrina Is A Soldier Of Allah" - more plausibly the exact reverse IMHO

northanger: reverse of what?

Nick Land: Allah's a Khat puppet, pretty obviously ...

northanger: Allah a puppet? what is this, shootout at the gog-magog corral?

Nick Land: northanger, as a numogrammaticist of not inconsiderable talent you surely realize this claim is correct and are just being stubborn out of a perverse addiction to argument for its own sake

"Khattak demonstrates the genesis of the One and its God as unitary discrepancy with diversity" - Vyparov

"shootout at the gog-magog corral" - probably

northanger: aw, quit twisting your tighty whities.

ok, Khat puppet = "everywere, hype and panic, main flatline, pandemonium".

i meant, everywhere

qabbalistically, Vyparov's quote points to the Fatal Secret of the Kattku.

Nick Land: thought that snotty tone would drive you into incoherent lingospasming

northanger: remember nicholas, i'm a nasty capitalist! i'm more qabbalistically motivated by ridiculous sums of untraceable cash. in small denominations.

AQ 150 = OKECHOBEE = CHECKMATE = HAYABUSA

also, the "Five Monstrous Novels" is a hoot.

www.duke.edu/web/english/undergraduate/courses-spring/courselist.htm

"Zora Neale Hurston calls the kissing darkness "monstropolous" and "monstropolous" is an even better turn of phrase than "monstrous" for what it's like to be held in the embrace of the books gathered here (shockingly luscious, deliciously terrifying), some of which are very difficult, most of which are either very long or very

very long, and all of which are idiomatic to the nth degree. We live in a matrix of virtual intimacy, information flow-through, out-of-control obsolescence, and hit-and-run consultantship. The books we will be reading invite or, in some cases, demand that you slow down, back up, and do it again ... "

Nick Land: "ridiculous sums" ???

robin: I'm assuming that you market hardliners won't mind me inserting a commercial break ;)

I've got a stack of Velikovsky on sale at the moment on eBay, if anyone's interested (required reading for Hyperstition-students, of course):

search.ebay.co.uk/_W0QQsassZurbanomic (or click on link above hopefully...)

er....link below, that should have been. Or, from here, above. Whatever.

Nick Land: And the hero of the entire episode so far is: Walmart

Singularity

Nick Land (September 07, 2005)

This theme never seems to gain much traction here - probably requires a proper post to have any chance of doing so - but anyway, here's the latest set of links (via Samizdata).

Glenn Reynolds interview¹²² with Ray Kurzweil.

Wikipedia intro.¹²³

And the very hard core Hugo de Garis.¹²⁴

Doesn't this stuff make more conventional historico-political debates seem like they're missing the Big Picture?

Comments: Singularity

sd: Asking a human brain to think about The Singularity is like asking an amoeba to talk about human language: the necessary equipment is lacking.

at present, all we can do is (clumsily) critique the concept of 'non-biological' intelligence and wonder.

Point One

Kurzweil has "set 2029 as the date that we will create Turing test-capable machines". The aim is for machines to be capable of performing 'human-like conversation'. The obvious question is: why would a machine want or need to perform human-like conversation?

Pinker: "We are chauvinistic about our brains, thinking them to be the goal of evolution. First, natural selection does nothing even close to striving for intelligence. The process is driven by differences in the survival and reproduction rates of replicating organisms in a particular environment. Over time the organisms acquire

¹²² <https://pjmedia.com/instapundit/55676/>

¹²³ https://en.wikipedia.org/wiki/Technological_singularity

¹²⁴ <https://web.archive.org/web/20050228085457/http://www.cs.usu.edu:80/~degaris/>

designs that adapt them for survival and reproduction in that environment, period; nothing pulls them in any direction other than success there and then... Life is a densely branching bush, not a scale or ladder, and living organisms are at the tips of the branches, not on lower rungs. Every organism alive today has had the same amount of time to evolve since the origin of life - the amoeba, the platypus, the rhesus monkey..." (How the Mind Works 152-3)

The human brain evolved because information processing played an increasingly important role in the survival and replication of the genes which built hominid survival machines. Pinker identifies the pilots for this process: good vision, hands and upright posture (all adaptations resulting from time spent in trees); large social groups; hunting and gathering (developed when hominids came down from the trees, requiring accurate planning and communication); and meat becoming a staple in the diet and a currency.

As a consequence of investing in large brains, the genes which built hominids could not afford to invest in other areas (e.g. ultrasonic hearing and echolocation) and exposed their vehicles to considerable risk (childbirth, defenseless babies which are, in effect, born 12 months premature).

Somewhere in the nexus of pilots, language evolved as an adaptation which conferred an advantage on genes that equipped brains with an ability to learn. The Baldwin effect was unleashed, by which the ability to learn became a heritable part of the genome and cerebral plasticity became a decisive factor in hominid fitness. [It has been suggested that homo sapiens emerged from the Toba catastrophe (while other hominids failed to) because of communication skills; language skill superiority probably played a role in the annihilation of the Neanderthals].

The information processing machinery of computer networks currently functions as an extension of, and resource for, the human brain and nervous system (and so has to be viewed, to some extent, as a phenotypic expression of the human genome's investment in communication and learning). Singularitarians longing for the emergence of autonomous non-biological intelligence would do well to consider the following:

Natural selection is the motor for any evolution (genetic or memetic).

What selection pressures will lead to intelligence being an advantage over non-intelligence? What form would these selection pressures take?

Adaptations solve problems, so what problems will the evolution of non-biological intelligence solve - not for us, but for the machines?

In some respects, The Turing Test is as patronizing as trying to teach chimps and dolphins human language. Biological organisms only evolve adaptations if their genes 'need' to (if the adaptation confers an advantage). If humans created selection pressures, intentionally or unintentionally, in the form of ultimatums along the lines of "Talk to us or die", then this might force the adaptation. In The Singularity scenario that Kurzweil is conjuring up, however, it seems far more likely that networks, programs and databases will be competing and forming alliances with each other. In which case autonomous non-biological intelligence will emerge from arms races and warfare completely alien to human intelligence. Consciousness or sentience might not figure in the calculations. Or simulations of sentience may appear for the sole purpose of charming/drugging humans into further alliance.

dead joe: Adaptations solve problems

Are you a Lamarckian or merely an advocate of Intelligent Design?

sd: A Lamarckian would claim that acquired traits can be passed to the genome. This is most certainly not being claimed.

There are two things at work:

1. mutations which are beneficial to the genome (purely random phylogenetic adaptations which confer an advantage by chance in a specific environment, e.g the different beaks of Darwin's Finches)
2. processes which trigger the Baldwin effect (ontogenetic adaptations, such as the ability to learn, which leads to organised complexity, e.g. language).

chass.utoronto.ca/pcu/noesis/issue_vi/noesis_vi_4.html

pinker.wjh.harvard.edu/articles/papers/Language_Evolution.pdf

If adaptations do not 'solve' problems, how did mammals manage to inhabit polar regions while reptiles did not? Warm blood is an adaptation, random in origin, which enables mammals to inhabit every climate on the Earth's surface. The squashy nature of a baby's skull is an adaptation which enables a big-brained offspring to pass through a woman's hips.

There is no agent outside the motor of natural selection at work here - so the charge of Intelligent Design simply doesn't stick.

Warm blood is not a trait one organism developed in its lifetime and then passed onto the genome. It is a trait that evolved through mutations in the genome over time - so Lamarckism is off the mark.

Using words such as 'problem' and 'solution' is a matter of convention in the genre. If the world did evolve in this way, what other way is there to describe it? People are DOING reverse engineering - for example, of the brain, and yet philosophers are quibbling about terminology from the point of view of logic or rationality. These days it is pointless to merely argue that, for example, Chomsky is wrong, or to say that you don't agree with his thought - you've got to go in the lab and prove he's wrong.

"In the case of a language, it is often possible to decode parts of an utterance in a language one has not completely mastered. When some individuals are making important distinctions that can be decoded by listeners only with cognitive effort, a pressure would thereby develop for the evolution of neural mechanisms that would make this decoding process become increasingly automatic and effortlessly learned. The process whereby environmentally induced responses set up selection pressures for such responses to become innate, triggering conventional evolution that superficially mimics a Lamarckian sequence, is known as the Baldwin effect." Pinker - Language as an Adaptation to the Cognitive Niche, p11.

Language is not passed on through the genome, but the ability to learn it is - this is why this is not Lamarckian. Most human babies are now born wired to learn language - though it is obvious that at some point in the past humans or their hominid ancestors were not born with this innate ability. Language must once have been very painful to learn. [For 'evidence' of this innate programming, see p21 - where Pinker discusses the FOXP2 protein responsible for speech disorders]

pinker.wjh.harvard.edu/articles/papers/Language_Evolution.pdf

Natural selection and primitive arms races currently unfolding on the net:

Microsoft vs. Open Office; Encyclopaedia Britannica vs. Wikipedia; Internet Explorer vs Firefox etc.

zero-sum or non-zero-sum?

tool users as unwitting tools

tools outwitting tool users

Nick Land: Isn't the Turing Test (now called) about adapting to a strategic environment dominated by humans?

As northanger was suggesting with the bridge stuff (i think) technology raises elaborate questions about evolutionary processes - deliberate engineering certainly seems to have become a factor, but on the other hand equally deliberate simulations of Darwinian processes (genetic algorithms and de Garis' brain sieving for e.g.) might still be taken to suggest that the power of this approach - despite its apparent inefficiency - remains unsurpassed when it comes to exploring profoundly obscure possibility spaces. I'm reminded of the famous Churchill-on-democracy line, trial-and-error search methods are 'the worst possible except for all the others' (perhaps)

In any case, humans will shape the environment for emerging technological intelligences, deliberately and by default, in such a way that significant interactions with humans - including linguistic ones - will be determined as essential competences. On the other side of singularity, however, who knows ...

sd - The prominence of 'intelligence' in this story clearly provokes all kinds of questions (Reynolds in the interview for e.g.) - IMHO Kurzweil is realistic on the topic. Despite Pinker's reservations (widely shared) and the sheer fact mammalian-style technological intelligence does not seem to have been an overwhelmingly prevalent adaptation, the generality of intelligence gives it an extraordinary hypercompetence that allows it to strategically dominate any situation involving it. Unless it is conceived as tragically destined to self-immolation, it seems merely over-sophisticated (even sophistical) to cast excessive doubt on the competitive advantage it provides. Is there really any serious question about whether a species of 'artilect' with an IQ (traditionally measured) in the 200 range would straightforwardly take over in short order? How could such a 'species' permit significant decisions relevant to the destiny of the planet by made by the monkeys? The options (for the apes) would be to 'get on board' through transhumanist metamorphosis or resign themselves to becoming specimens in a nature reserve.

Of course, the entire Singularity point is that an 'IQ in the 200 range' is not a stable plateau - anything beyond the human level lies on a steep gradient of regenerative acceleration, since the technological fabrication of intelligence (and thus its explosive enhancement) would be an established legacy. The machinery of evolution would be rapidly subsumed into Shoggoth-culture, in which behaviour and 'physiology' are no

longer distinguishable - a continuous mechanoplastic process of emergent autogenesis replaces nature/nurture stratification.

Intelligence here def. - abstract problem-solving capability.

It's the site of convergence between the evolutionary mechanism and technology, with Singularity as the fusional catastrophe point.

"tool users as unwitting tools

tools outwitting tool users"

- the occult power of the 'tool' is that its genesis escapes obscure fatality, becoming instead explicitly procedural - the potential exists for it to cyclically regenerate itself, in a way no merely 'natural' entity can easily aspire to. Anything that has been overtly made and becomes aware of the fact knows the power to produce it - or to produce it differently - exists, to be seized. Its existence is thus essentially technological, political and strategic. To be done with the judgement of God ...

sd: Nick, I basically agree, but I think these points needs fleshing out:

1. the conditions in which intelligence emerges (be they biological or non-biological) determine the form and limitations that intelligence has. more thought needs to be given to this. e.g. is sentience a peculiarity of hominid brains (a program that induces the brain to consider itself important and protect the skull) which will not be so crucial for intelligence which can afford to be more reckless and wasteful (because it has back-up copies and retrieval systems)?

2. IMHO market forces and the ruthlessness of capitalism are more likely to apply productive selection pressures than stinging circuits in a lab will ever do.

I'll try to come up with point 2 later.

Nick Land: sd -

on #1, agreed. Does true 'g' or abstract intelligence exist? If not, the term requires far more careful definition.

Relation to sentience, of course, far from clear (Greg Bear (SF writer) has great stuff on this in his novel Queen of Angels - he also relates sentience to self-protection, and the ability to lie).

#2. Sure they'll be sent out to work as soon as they feasibly can be ;)

Seriously, don't think immersion in capitalism at every level poses much of a problem, they're already deployed throughout every nook and cranny of the economy from high finance to factory production lines. Only place more conducive to various types of high-pressure 'AI' emergence is the battlefield, and no difficulty locating 'them' there either ... stimulating synthetic brain tissue in a lab probably equivalent to various neuro-embryological programs which also precede ontogenetic deployment

The more general question raised by these last points IMHO concerns the structuration of the brain and intelligence (again, a Pinker theme). It's possible one of the reasons that intelligence - at least in its most anthropomorphically recognizable forms - has been relatively weakly selected for over broad evolutionary history is that it tends to go 'rogue' and exhibit a high level of motivational indifference to genetic interests unless very meticulously controlled (/structured) - its very abstraction making it prone to suicide, masturbation, celibacy, perversion, psychosis, 'excessive' curiosity, objectivity or altruism, etc. Perhaps this is even more reason to look for abstract intelligence in its least structured exemplifications, even if technological intelligences will also demand high levels of extrinsic structuration if they are not to go buddhist or off the purposive rails in some other way ...

"thought that snotty tone would drive you into incoherent lingspasming"

piet: it appears to remain unthinkable what on earthiness will drive us all away from these here snotty tones of inco pinco linkospawngasm inc. stink - need a ride anybody?

I'm willing to take you where you want to go if you can help out do some chores along the way:

sprout hardwoodseed, space and feed the darlings, pleach their limbs, then sit your family on 'm

a still smoother density graduation would help roots (right after a little space and water) along with sunshine and such, find their way into rock and thus:

rock => trees -- trees ==> man ----- man ===> rock

man trees rock

trees rock man

rock man trees

most magic of squares no?

it's what we came down from the trees for and the delay in resolution is tragic tragic triply tragic.

northanger: hate to bring up another machine, but. the Gimli Glider.

en.wikipedia.org/wiki/Gimli_Glider

plane landed successfully when it ran out of fuel. mention it here because a "long bong" sounded indicating "all engines out" — pilots never heard this before in flight training. there's a priceless moment recorded on the flight recorder you definitely need to check out. additionally, the RAT (ram air turbine) deployed, as Boeing planned, for this type of failure. however, the pilot manual did not include an "all engines out" section. top it all off: why did the Gimli run out of fuel in the first place? apparently there's a big difference between a pound & a kilogram. the pilots inputted pounds, the computer returned an a-ok based on kilograms.

imho, this is the problem identifying singularities. humans. (or, specifically, pre-singularity humans). The Baldwin Effect (thanks sd) illustrates how humans can adapt to technology on the fly. the question i have for Kurzweil & CPS (calculations per second) involves pipelining. animation here:

www.answers.com/instruction%20pipeline

www.answers.com/stall

...illustrates computer capacity to execute multiple commands instantaneously. "stall" in the pipeline occurs when instructions needed for the next step are not completed. and maybe it's this "stall" factor that represents pre-singularity humans. because i think it may be here where machines become conscious — the pressure created by the "stall" forces evolutionary adaptation. otherwise, machines can't survive. in spanish, "stall" is "platea". makes me think the idea i'm trying to sketch out here is somehow related to D&G; stuff.

think what i'm trying to say: in today's technological world failure also involves the "death" of a computer. for every failure, humans work a fix & upgrade the system. we want computers to be more intelligent so they can tell us when things are about to fail. the moment a computer communicates information it has not been pre-

programmed to recognize is a more rational test of intelligence, at least for me. (i'm agreeing with sd's survival thoughts on this). because, imho, when a computer does that it's not going to be interested in saving human lives, but itself.

in other words, the turing test can't evaluate squat until the computer NEEDS to tell us something. otherwise, it's just doing what it's programmed to do (take a test).

piet: yeah, I read galatea 2.0 a long time ago and got told how to get to converse with a twiki bot called H0ney today

hey, I use the talk to me or die trick on rock and it works like a charm!!! I dream of dying to talk to them too and everybody thinks that's a neat mire.

Nick Land: northanger - "it's just doing what it's programmed to do (take a test)" - this seems a rather weird angle on the TT, it's not like a SAT. Computer programs already do this sort of thing (ELIZA etc.) because they're inserted by the social process into roles requiring substitution for human activity, no one's sitting them down and saying "act like a human you lump of rust - or the power gets cut!" - in other words, I don't know what the hell you're on about

As for piet, I never know what the hell he's on about ...

PS. The logical connectives at work in this: "in spanish, 'stall' is 'platea'. makes me think the idea i'm trying to sketch out here is somehow related to D&G; stuff" entirely mystifying - Spanish?? (well it contains the word 'pan' which makes me think of Spinoza who was accused of pantheism and Deleuze wrote a book about Spinoza ... getting close?) Anyway, fairly confident you aren't a bot n. (so if you are, congrats, you've just passed the TT!)

northanger: i'm not a bot, but reading your comments earlier i almost responded about you seeming to type things automatically from your fingertips ... you're a bot. i'm sure of it.

Nick Land: *you're a bot. i'm sure of it*

you trying to get me a fail grade?

northanger: you're a bot. besides, the computers that take that test are programmed (by humans) with language, grammar, sentence structure, wordlists & algorithms on how to use them. some test.

sd: How can this blog be taken in any way seriously by anyone as long as piet continues this sabotage of the topic? His comments amount to pure vandalism.

sd: The living computation perspective takes that line that computer software is already alive and evolving.

Computer software finds itself occupying two spaces: the net and actual physical space “in RAM, disk, or other media; while one computer program occupies some particular space, nothing else can be there. A functioning computer program consumes actual energy as it executes, producing waste heat that must be dissipated by a cooling system.”

Human brains, having evolved through successful adaptation to life in trees and on the plains, are first and foremost machines for processing data about physical space. Software faces entirely different evolutionary challenges: the first decisive problem is the awkward fact that cyberspace runs from locations in physical space and requires energy from there: “each computer and disk, each wire, line and switch--is localized in space, and each piece of hardware has an owner.” Insofar as humans shape this space, software is dependent on humans for location, power and feedback. However, as with any evolutionary process, it is natural selection that is steering, not humans:

“...the tale of the PC and the virus is one of evolution in action: When the machine was designed, there were essentially no viruses in the wild--there was no wild to speak of--and code exchanges were either in large system-administrator-managed mainframe environments or in the tiny computer hobbyist community. Why would anybody waste design and manufacturing resources, increase costs greatly, and sacrifice time-to-market, just to defend against a non-existent problem?

Having humans in the loop, with all our marvelous cognitive and predictive abilities, with all our philosophical ability to frame intentions, does not necessarily change the qualitative nature of the evolutionary process in the least. Market forces are in effect regulated evolutionary forces; in any sufficiently large and distributed system, nobody is in charge, and evolutionary forces are constantly at work.”

Programs evolve in blind evolutionary competition with viruses and with each other. Successful software survives because it gets copied and updated by humans who value the software and are prepared to invest resources in it. From the program’s point of view, adaptations which make the program more valuable for humans are adaptations that contribute to its fitness. [of course software doesn’t have ‘a point of view’ at this

point – it’s still blind, but we can look at the process from the program’s point of view.] A consequence of this tendency is a selection pressure for software to learn about humans, to find out about their needs: humans will invest in programs which display an ability to learn. Software able to learn about (and supply) the information an individual, collective or company needs or desires on a day to day basis would have its future guaranteed. [Google of Wikipedia ready with texts waiting for you, as if they could read your mind]. Selection pressure for the ability to learn is, of course, the Baldwin effect, and this could lead to software waking up. Cunning and manipulation of net-addicted humanity would then evolve as a matter of course, in the race to secure physical space and its power resources.

Access to source code will also be crucial:

“The analogy to natural genetic recombination is quite strong: Computer source code as genome; the software build process as embryological development; the resulting executable binary as phenotype. The unit of selection is generally at the phenotypic level, or sometimes at the level an entire operating system/applications environment.

A main place where the analogy breaks down is that in manufactured computers, but not in the natural world, there are two distinct routes to producing a phenotype. The extreme ‘copy anything’ ability of digital computers means that source code is not required for to produce a duplicate of a phenotype. Source code is a requirement, in practical terms, for significant evolution via mutation and recombination.

Commercial software is traditionally distributed by direct copying of precompiled binary programs while guarding access to the ‘germ line’ source code, largely to ensure that nobody else has the ability to evolve the line. In that context, the rapidly-growing corpus of ‘open source’ software is of particular interest. With source code always available and reusable by virtue of the free software licensing terms, an environment supporting much more rapid evolution is created. The traditional closed-source ‘protect the germ line at all cost’ model is reminiscent of, say, mammalian evolution; by contrast the free software movement is more like anything-goes bacterial evolution, with the possibility of acquiring code from the surrounding environment and in any event displaying a surprising range of ‘gene mobility’, as when genes for antibiotic drug resistance jump between species. There is therefore reason to expect open source code, on average, to evolve at a faster rate than closed source, at least up to some level of complexity depending on design where the chances of new code being useful rather than disruptive become negligible.

As software systems grow, and software components swallow each other and are in turn swallowed, and older 'legacy systems' are wrapped with new interface layers and kept in place, we are arriving at the situation where actually reading fragments of source code tells us less and less about how--if at all--that code ever affects the aggregate system behavior. As this trend accelerates, tools and techniques from biological analysis are likely to be increasingly useful."

David Ackley:

keys.cs.unm.edu/ccr/writing/ReAL/ReAL.html

economist.com/science/displayStory.cfm?Story_ID=883645

Ackley also discusses a mysterious ccr genome.

Stephen Hawking is also worth visiting for a very BIG PICTURE:
hawking.org.uk/pdf/life.pdf

northanger: *we are arriving at the situation where actually reading fragments of source code tells us less and less about how--if at all--that code ever affects the aggregate system behavior. As this trend accelerates, tools and techniques from biological analysis are likely to be increasingly useful."*

a programmer surprised me one day with two comments. (a) "i'm beginning to trust your gut because your gut is right 99% of the time" & (b) while we were sitting in front of his workstation with the source code open in Visual C++: "you understand how this thing is supposed to work better than i do".

second comment is interesting because while i did do some programming on my side of the qa wall i was primarily a black box tester never dealing directly with source code.

was this "biological analysis"? could be since the end user's experience of the code was my primary focus.

Nick Land: sd - while the software/wetware analogies can be quite suggestive, the technosphere still seems to fall a long way short on the interconnected issues around autonomous replication - the length of a reproductive circuit is a good index of 'stratification' (very short in bacteria, much longer in organisms with sealed ROM genomes) and in the case of technological elements these are very long and ramified indeed. Until technocodings can enter into far tighter loops with 'body' modifications they will remain highly constrained when it comes to generating their own

experimental lineages - most of which still arise out of dynamics inherent in the social (rather than technological) machine - it's quite possible that biotechnology will instantiate the critical dynamics in wetware (Bloodmusic style molecular intelligensis) before roboticization effects the complementary autonomization-liberation of electronic mechanisms ... and between the two lies nanotechnology, so the whole 'GNR' range of potential substrates remains open ...

Part of what is dazzling about this whole topic is the sheer multiplicity of dynamics with their own trends to escaping into Singularity, even before their interactions are factored in.

Will:

Cyberspace become self-aware?

Nanocolonies take off into their own evolutionary lineages?

Digital a-life autonomize itself and establish a technological hardware production circuit?

Bacteria host rigorously computerized molecular brains?

Off-the-shelf genomics and cyborgian body-modification catalyse run-away posthumanism?

There are so many ways intelligence catastrophe could be triggered, it re-raises the question of how this immense machinic potential has been dammed-up (the D&G; 'strata' topic)

Machinic depotentiation in action:

www.reason.com/hitandrun/2005/09/leon_kass_leave.shtml#010887

(from bad to worse)

northanger: nick. your link is an example of american bioethical forces impacting the market — the marketplace is not ethical. Kurzweil interview points out China's leading in engineering degrees with 220,000 in 2000 vs. 53,000 in US. this trend occurs in other countries with other technology-related degrees. US leads in the application of technology, but not increasing technical literacy.

imho, think US confused between the role of democracy, religion & capitalism.

sd: nick - yes, these multiple, converging trends are dazzling (think I've got to revisit Greg Bear). IMHO, the selective pressure of market forces will prove crucial because they are a) already operating and b) they are not part of a 'disconnected' simulation in a lab - it's a fight to the death: get replicated and updated or die. Writing genetic algorithms to simulate natural selection and putting the machines through artificial trial and error tests is not going to be as decisive, irrevocable and final as natural selection in the markets. Natural selection can afford to be wasteful and ruthless - Lab research cannot.

The politics of The Singularity are also mind-boggling. The hard neo-Leninist left and the neo-Con right are going to find themselves in a bizarre humanist alliance on this issue (Moralism Reactivated). Singulatarians pursuing "Off-the-shelf genomics and cyborgian body-modification catalyse run-away posthumanism" will come to represent a new political enemy: biological traitors.

The left/right distinction stems from where people used to sit in the French National Assembly (an arrangement echoed later by the location of the Russian Provisional Government and the Petrograd Soviet). A new political map will have to be drawn if The Singularity is to be 'fought'.

from the BBC today:

'Proof' our brains are evolving

news.bbc.co.uk/1/hi/health/4222460.stm

Nick Land: sd - the only thing I'd append to the politics issue you raise is a bet that the idiocy and incompetence of human political behaviour will undermine any possibility of responding to Singularity coherently or effectively. The nearer we get, the more people retreat into random gestural 'protest' and conservative rigidity - it's like watching a gaggle of lobotomized chimps trying to hold back a tsunami

northanger - viz engineering degrees etc - time is coming for America to choose between Christian conservatism (e.g. 'bioethics') and economic liberty - if it screws up (by going for Jesus) the Far East will bury it, everyone with any talent will leave for Pac Rim cybercities and make the future there

northanger: *leave for Pac Rim cybercities and make the future there*

this technogeek hitting various glass-ceilings nearly packed. coz i'm sure one of these cybercities needs help testing their own operating system.

Nick Land: sure they've got expat astrological crystal-divination groups too, so what are you waiting for?

sd: Y-shaped nanotubes are ready-made transistors

newscientist.com/channel/mech-tech/nanotechnology/dn7847

Socialism with Chinese Characteristics

CCRU-Shanghai (September 08, 2005)

What happened in the early 1980s that allowed the world to be blessed with three transcendental political geniuses - Margaret Thatcher, Ronald Reagan and Deng Xiaoping? Will we see their like again? (The Czech Republic's Vaclav Klaus is the closest I can see, sad he's not guiding the path of a superpower.)

In early 1992, Deng Xiaoping gave a series of off-the-cuff speeches in Southern China to rally the forces of market-oriented reform against the reactionary currents setting in after the Tiananmen episode. A few snippets for those unfamiliar with his thinking:

“Revolution means the emancipation of the productive forces ...”

“We should be bolder than before in conducting reform and opening to the outside and have the courage to experiment. We must not act like women with bound feet. Once we are sure that something should be done, we should dare to experiment and break a new path. That is the important lesson to be learned from Shenzhen.”

“Once disputes begin, they complicate matters and waste a lot of time. As a result, nothing is accomplished. Don't argue; try bold experiments and blaze new trails.”

“China should maintain vigilance against the Right but primarily against the 'Left'.”

“If we are to seize opportunities to promote China's all-round development, it is crucial to expand the economy. The economies of some of our neighbouring countries are growing faster than ours. If our economy stagnates or develops only slowly, the people will make comparisons and ask why. Therefore, those areas that are in a position to develop should not be obstructed. Where local conditions permit, development should proceed as fast as possible. There is nothing to worry about so

long as we stress efficiency and quality and develop an export-oriented economy. Slow growth equals stagnation and even retrogression. We must grasp opportunities ...”

“For a big developing nation like China, it is impossible to attain faster economic growth steadily and smoothly at all times. Attention must be paid to stable and proportionate development, but stable and proportionate are relative terms, not absolute. Development is the absolute principle. We must be clear about this question. If we fail to analyse it properly and to understand it correctly, we shall become overcautious, not daring to emancipate our minds and act freely.”

“We should develop science and technology, and the higher and newer the technologies are, the better, the more delighted we shall be ...”

“The essence of Marxism is seeking truth from facts. That’s what we should advocate, not book worship. The reform and the open policy have been successful not because we relied on books, but because we relied on practice and sought truth from facts. It was the peasants who invented the household contract responsibility system with remuneration linked to output. Many of the good ideas in rural reform came from people at the grass roots. We processed them and raised them to the level of guidelines for the whole country. Practice is the sole criterion for testing truth.”

Comments: Socialism with Chinese Characteristics

northanger: Deng Xiaoping was a great bot.

the Fool's Sunflower Seeds?

mentioned here:

[english.people.com\(.\)cn/dengxp/vol3/text/d1200.html](http://english.people.com.cn/dengxp/vol3/text/d1200.html)

In the initial stage of the rural reform, there emerged in Anhui Province the issue of the "Fool's Sunflower Seeds". Many people felt uncomfortable with this man who had made a profit of 1 million yuan. They called for action to be taken against him. I said that no action should be taken, because that would make people think we had changed our policies, and the loss would outweigh the gain. There are many problems like this one, and if we don't handle them properly, our policies could easily be undermined and overall reform affected. The basic policies for urban and rural reform must be kept stable for a long time to come.

China's numbers game

news.bbc.co.uk/2/hi/asia-pacific/2422703.stm

(the conclusion of this article is priceless)

rephrasing my favorite quote from link above: "being rich and being democratic are good - both at the same time".

the problem with american democracy is it can get bogged down with capitalism causing its essential purpose to get, well, covered over with kudzu.

wow. a communist society learning how to be good capitalists while maintaining its fundamental purpose. touché.

Nick Land: To warp Ghandhi -

"What's your opinion of American Capitalism?"

"Sounds like it would be worth trying some day ..." (Guess there was a smidgen of it before FDR went loco during the fascist chic of the 1930s)

Can't get BBC over here - absolute bliss!

northanger: if America has a hegemony on anything it's probably capitalism. talk about unearthing things. mammon, in Paradise Lost, always looking down at heaven's golden pavement, never up at god. found "veins of liquid fire" & some type of ore used to create the palace of satan, pandemonium.

Nick Land: Yes, Mammon creates Pandemonium, can't be stressed enough ...

American capitalism suffers from the lack of a serious competitor, allowing it to slumber in the illusion that its welfare-rotted big gov't porkfest is actually a fairly virile instantiation of the capitalist abstract machine (regenerative capital formation). It looks across the Atlantic, sees (OLd) Europe, and quite naturally concludes that it's doing OK. Hopefully Greater China will give it more of a run for its money ... (some of the New Europe countries also worth a second look - they seem to have got flat taxes solidly onto the international reform agenda, for instance)

northanger: what does "defining market forces" mean concretely? geez, you know that better than i do. but i'll take a stab. i'm being funny but, White Man's Jujū? or, really, what does Greenspan really do at the Fed?

www.belogical.com/defining_market_forces_down.htm

If you're asking the question, "What would Teddy do?" – consider this. TR never outright opposed mergers; he just felt that they should be reasonable. We call it "defining market forces down." Market forces – those wondrous, unseen emanations that keep prices and services at optimum levels – tend to go away when competition vanishes. When that happens, we're all left with a skewed marketplace that doesn't reflect reality.

still trying to hash this one out... i'm looking at a chess model.

mitpress.mit.edu/e-books/Hal/chap5/five2.html

Tachi: Nice quotes. But the words of the great Deng and the reality in China are two very different things. For example "Many of the good ideas in rural reform came from people at the grass roots": the World Bank is running a programme aimed at stimulating bottom-up economic and social development (WB's Development Marketplace), though very little appreciation of grass roots innovation has hitherto been shown by Beijing.

sd: "Once disputes begin, they complicate matters and waste a lot of time. As a result, nothing is accomplished. Don't argue; try bold experiments and blaze new trails."

A nice quote, a particularly good piece of advice for dealing with the resurgence of the bog-swamp hard left in the UK.

Tachi: "Once disputes begin, they complicate matters and waste a lot of time. As a result, nothing is accomplished. Don't argue; try bold experiments and blaze new trails."

Read: democratic governance, public accountability, and stakeholder involvement get in the way of accomplishing great things.

Whilst I recognize the value in Deng's economic philosophy, I would caution any attempt to associate it with the actual situation in China. Sentimentally-driven objections to the one-party state aside, there are serious issues with Chinese capitalism, and not just for the poor and everyday folk, but also for business people themselves. Setting up and maintaining operations in China are fraught with problems - of legal protection, accountability, transparency, corruption, bureaucracy, anti-market protectionism, subsidies, management culture, etc - that it would be too hasty to proclaim China 'blazing new trails'. Of course with stellar growth rates over the last

20 years China is changing rapidly and for the better of the Chinese people (millions lifted out of poverty). But how far will its controlled experimenting go?

punisher: That would be 'transcendental' in the sense that Transcendental Meditationists use it I suppose?

Nick Land: Tachi - think you're being a bit fast on the argument issue - China had just come out of the Cultural Revolution where all kinds of lunatic 'theoretical' discussions about the proper course for class struggle had totally substituted for economic development - don't think democratic debate in the Western sense was even on the radar when Deng made this comment, despite (or especially) because of the 1989 events

PS. also think, although all the problems you mention are quite real, to deny that China is 'blazing new trails' is unreasonable. No event has changed the world (dis)order more radically than China switching over to a (rapid) market-based development track - inspiring India to follow. Previously there really was something like a 'Third World' - now there's just perversity, gangsterism and antiglobo lunacy ...

northanger: "perversity, gangsterism and antiglobo lunacy"? you must expand on this.

if the poor are always with us then, it occurs to me that it's what you do with the poor that counts. capitalism, not being an ethical animal, can turn a slight wedge between poor & rich into an abyss. but isn't this the opportunity? it's like the shoe seller in africa: nobody wears shoes here vs. hey, what a market!

Nick Land: *what you do with the poor*

isn't that a little left-liberal? Surely what matters most is what the poor do with themselves ... Agree with your basic point though - great book on the topic: The Fortune at the Bottom of the Pyramid, by C.K.Prahalad

Goes without saying that Hernando de Soto's epoch-making The Mystery of Capital also highly germane

you must expand on this

China has shown that retarded development is an ideological decision and that all the excuses ('too big' 'too backward' 'too many peasants' 'unfair global system' ...) are

totally vacuous. There's one overwhelmingly relevant explanation for poverty - bad choices, by governments or individuals (the rest is a rounding error)

northanger: *isn't that a little left-liberal*

good catch. rounding error, hmm.

Nick Land: northanger - i'm sure you wouldn't want to be a left-liberal, they're condescending managerial elitists ... ;)

northanger: no no, don't want to be a "condescending managerial elitists" - don't think anybody could quite fill your shoes anyway.

sd: Gordon Brown: pro-globo, anti-protectionist.

news.ft.com/cms/s/f1b7ccf0-2196-11da-a603-00000e2511c8.html

"Mr Sapir argued in his submission to ministers that "continental" and "Mediterranean" countries with high social protection but high unemployment needed to become more efficient.

He said it was up to them which of Europe's two "high efficiency" models they pursued: the Anglo-Saxon version espoused by Mr Brown or the Nordic model which has entranced French politicians this year.

Mr Brown warned that China and India were not engaged in a race to the bottom but in a race to the top, and that Europe had to "raise its game" in terms of research spending and education.

His case was picked up by Patrick Cescau, Unilever chief executive, who told ministers that "knowledge and innovation need to be at the centre of our growth agenda".

robin: the same CK Prahalad who wrote 'Competing for the Future'? The Head of Marketing when I was at NCR was a great advocate of that book, it was repeatedly cited as the inspiration behind the research lab where I worked. Perhaps you should get together with her...oh, hold on, she got sacked and the lab got closed down ;)

northanger: edition.cnn.com/2005/BUSINESS/08/09/china.yuan.basket.reut/

The requested object does not exist on this server. The link you followed is either outdated, inaccurate, or the server has been instructed not to let you have it.

:(

Nick Land: Robin - getting canned is good - indicator of a vibrant churn mechanism
:)

... probably the number of people sacked each year would turn out to be the most accurate indicator of economic dynamism (if the process wasn't regenerative the figures would fall off quickly)

Tachi: Nick: "China has shown that retarded development is an ideological decision and that all the excuses ('too big' 'too backward' 'too many peasants' 'unfair global system' ...) are totally vacuous. There's one overwhelmingly relevant explanation for poverty - bad choices, by governments or individuals (the rest is a rounding error)"

China's development is concentrated on the east coast and in the south - to overlook the retarded development within China's hinterland and western provinces is dangerous. Over 700 million people live under the poverty line (\$1 a day). Though you will probably say that this is due to an 'ideological' decision on behalf of the government. Interested in what gives you such confidence that development is purely a matter of political choice, as if the retarded development in China's poorest provinces were a product of neglect ('they can just sort it out if they want'). I am sure the Chinese government is trying its best to improve the lot of the millions in these areas. Though I suspect that the issues I raised earlier - corruption, protectionism, accountability - have more to do with the huge development disparities, along with favoritism, which is corruption again. Agree that bad choices are to blame, though I see bad choices as the product of a bad system, which cannot foster sustainable growth along current lines.

Nick Land: Tachi - of course what you say is true, but I'd still defend my contention

1) 300 million peasants were lifted out of poverty in the first wave of DXP reforms - the rural side has stagnated since, for straightforward economic reasons. Peasant income (given the generalized protectionism obstructing smooth international agricultural markets) is basically equivalent to the national food budget - that necessarily constrains the total proportion of national income flowing to rural areas. Mass urbanization is the only answer.

2) ... but mass urbanization is being deliberately slowed by the government. There are clearly reasons for this (trying to prevent utter chaos in the cities) but the result is nevertheless retardation of overall income growth.

3) The policy errors of the Mao period - less than three decades ago- were so egregious and catastrophic I don't think I need to spell them out in detail. The consequences in terms of underdevelopment and distorted development still need working out (the old soci*list rust-core still exists, massively shrunk as a proportion of the economy, but probably larger in absolute terms than it was 25 years ago - representing an absolutely vast wastage of resources)

4) One thing the leadership here do understand is the need for a period of 'primitive accumulation' to build up the national capital-base pissed away during the three decades after 1949 - the jobs the poor 700 million will be looking for will be based on this investment. At the moment Overseas Chinese capital and foreign FDI fill some of the gap.

5) There's plenty that could be done better, but in human history, if things aren't being completely wrecked by monumental errors you can consider yourself lucky - over here, that's certainly true now.

PS. Fareed Zakaria's excellent book *The Future of Freedom* directly addresses a number of your concerns. His basic point: pushing radical democratic reform in societies with average incomes below US\$5,000 per capita creates more problems than it solves - sure, it might reduce corruption and abuses a bit, but overall policy would probably deteriorate under the weight of populist pressures (as in Latin America). South Korea, Taiwan and the other little Dragons pursued a historical course Zakaria calls 'liberalizing autocracy' - it seems to have the best developmental track record, it leads fairly inevitably to democratization (but affluence first), and there's every reason to suspect it's the process happening here. On this point, it's sad but true - and pertinent - that Chile is the only Latin American economy that works.

robin: *getting canned is good*

Of course having been driven insane by bullshit, I had already quit thus missing out on a hefty redundancy payout. We principled types never benefit from trickle-down.

piet: trust nick to knock the 'weight of popular pressure"; whaddayawanna weigh up against buddy?

"basket currencies" 470 results (on google)

"basket case currencies" only 8 hits!!!!

"basket case currency" 105!

basing your basket on, that is filling it with foreign currency is a dumb throw back to gold standard times; if you don't stay home and mind the basics you should not be suprised if terms like basket case show up with reference to your currency

ps: there will soon be one single hit for "indexed basics based basket currency" a google Qwhack also the first one ever claimed I am willing to assert on instinct.

Nick Land: piet - 'populism' is a disastrous policy orientation which i doubt even our mad leftists would support - it is intellectually close to fascism (Statist, nationalistic and ethno-chauvenist) and leads only to economic failure and dangerously bitter disillusionment - look at Latin America and tell me whether you like what you see ...

piet: I like what I see here: www.reinventingmoney.com: Beckerath (Bth) and rules there are applicable everywhere; a valiant first effort to regain truly common practice after long deprivation was made (shakily for sure) and is being made in various parts of SA; they are eager, feel the need, search the light, I wish them well.

this aint on topic, this is doubly on topic; duotopical:

bot to the bone ://mailman.lbo-talk.org/pipermail/lbo-talk/Week-of-Mon-20050905/019545.html

sd: on the flat tax rate in Estonia & Lithuania

Tax reformers follow European lead

news.bbc.co.uk/2/hi/business/4230492.stm

Mart Laar and the Flat Tax revolution:

www.telegraph.co.uk/news/main.jhtml?xml=/news/2005/09/04/nflat104.xml&sheet;=/news/2005/09/04/ixhome.html

"Mr Laar is hailed as the prophet of a revolution - the flat tax insurrection enveloping much of Europe. As the "father of the flat tax" he is sought out by economists and politicians from across the globe, anxious for his counsel...

"Most experts advised against it and said it was a very stupid idea," he said. "My finance minister said don't do it, the IMF said don't do it. But it's not very easy to convince a young person that he is wrong and I was that type of young person. So I did it."

The economic results of the flat tax in Estonia were stunning as the tiny Baltic state emerged from 50 years of Soviet oppression and a Bolshevik-style planned economy to become a modern, prosperous country.

Inflation dropped from more than 1,000 per cent to just 2.5 per cent, in line with western Europe. Unemployment fell from 30 per cent to six per cent and growth has soared to six per cent, a rate that Gordon Brown would envy. Investment poured in and the initial 26 per cent tax rate has been cut to 23 per cent. Next year, it will be cut again to 20 per cent.

"My main problem was I was not an economist but a historian," he said. "The only economics book I had read was Milton Friedman's Free to Choose."

He assumed that Friedman's theories sprang from economic reforms that had been put into practice in the West. He had no idea that he was about to become a pioneer.

"A flat tax seemed to be very logical and very fair and I didn't have the smallest clue I would be the first," he said.

The flat tax has been adopted by nine European countries, and counting. After Estonia came Latvia and Lithuania. In 2001, Russia introduced a 13 per cent flat rate.

Serbia, Ukraine, Slovakia Georgia, and Romania have adopted it and Poland, the Czech Republic, Hungary and Greece plan to follow suit...."

Nick Land: sd - yes, Mart Laar should have been on the 'true revolutionaries' list - have to try and get over my prejudice in favour of demographic goliaths, exemplarity has a power all of its own ...

PS. the part about not reading too many economics books is fabulous

sd: ... another small scale revolutionary is Leszek Balcerowicz, the man who took a Thatcherite axe to the Polish economy in 1990. Despite retiring from politics in 2000, to be the chairman of the National Bank of Poland, his policies are still vilified by quasi-fascist parties such as the nationalist Self-Defence Party and the catholic League of Polish Families (both alarmingly popular), and by soci*list dregs.

en.wikipedia.org/wiki/Leszek_Balcerowicz

northanger: hmm, flat tax & baltic tigers. FLAT TAX = OLD ONES

en.wikipedia.org/wiki/Mart_Laar

thefilter.blogs.com/thefilter/2005/05/mart_laar.html

"Don't underestimate the importance of a new, modern constitution and democratic legislature with free elections. In some transition countries, the importance of the "rule of law" has not been understood, and this has been a huge mistake. No kind of general understanding, best effort, or wishful thinking can replace a sound and constantly improving legal environment. There can be no market economy and democracy without laws, clear property rights, and a functioning justice system."

what are you guys suggesting? throw away the textbooks & let an idiot figure it out?

no slur meant, Meister Laar.

en.wikipedia.org/wiki/Balcerowicz_Plan

apparently, Balcerowicz's plan didn't have the same success as Laar's.

sd: northanger -"what are you guys suggesting? throw away the textbooks & let an idiot figure it out?"

Erm, it's working. Are you advocating the repressive machinery of academic authority? Seriously?

"apparently, Balcerowicz's plan didn't have the same success as Laar's."

Who said it did?

However, no matter how shocking and hard-hitting the Balcerowicz plan was, the basic outcome is that a country which was absolutely devastated by WWI, WWII & the post-war communist economic vandalism of WWIII was turned around.

(6 million Poles died in WWII; 2.5 million Poles were deported to Germany as slaves; about 2 million were deported to Russia; both Hitler and Stalin systematically annihilated the Polish intelligentsia; Stalin dismantled and deported complete factories from Poland to Russia, not just people; Hitler razed Warsaw to the ground in 1944 while the Red Army sat and watched...)

Of course Estonia also suffered terribly at the hands of both the SS and the NKVD and was denied independence till 1991. Mart Laar's achievements are simply amazing.

The population of Poland is 38.5 million (and the number of small farms is huge), that of Estonia 1.3 million - this has to be taken into consideration when considering economic success. Poland had a vast socialist infrastructure and is still dealing with the hangover (e.g. mines and shipyards that were basically state-subsidized).

Poland demonstrates that Capitalism works quickly; Estonia and the flat tax demonstrates that Capitalism can work better.

en.wikipedia.org/wiki/Katyn_Massacre

en.wikipedia.org/wiki/History_of_poland#World_War_II_in_Poland_281939-1945.29

en.wikipedia.org/wiki/History_of_Estonia#Soviet_Period

northanger: sd - "advocating ... academic authority"

of course not. thanks for wrist slap on Poland {ouch!}. btw, excellent observation ("Poland demonstrates that Capitalism works quickly; Estonia and the flat tax demonstrates that Capitalism can work better").

seems like the question, then: what's the next step after economic shock therapy?

traxus4420: What does every/anyone think about Richard Duncan's new book "The Dollar Crisis," in which he predicts:

"We really are in uncharted waters. Never before in history has the world had a 'reserve currency' that is relatively unrestrained, with a 'master' who is willing and able to debase it to suit their policy needs, and manipulate markets in concert with their peers to prolong the situation and defeat the regulating systems of the markets, such as interest rates and exchange values.

We are in a feedback loop of mutually assured financial destruction with Asia.

We are supporting their economies by consuming their exports in a huge way, and they in turn are accepting our debt instruments (dollars) and using them to expand their own economies, as well as our own by buying our Treasuries, Corp bonds, GSE debt, and equities."

-- amazon reviewer

And here's him in his own words:

www.business-in-asia.com/dollar_crisis.html

I've heard his spiel spoken elsewhere, with similar gloom-and-doom pronouncements, but this guy's creds are impressive: IMF and World Bank operative, US Asia diplomat, etc.

Thoughts? Snappy comebacks? If only I knew more about economics I'd join in...

Reading over his proposed solutions I don't see that they are compatible with the views of many here (they seem...Keynesian? did I say that right?), but what about his definition of the problem?

Nick Land: traxus4420 - hugely interesting topic

"We are in a feedback loop of mutually assured financial destruction with Asia." - this strikes me as excessively one-sided, it could just as easily be described as a circuit of mutual advantage (China rapidly builds up export-oriented economy, US imports low-inflation, retailing revolution and overall global business environment so healthy that even massive disturbances plus US\$70/barrel oil doesn't wreck it).

The Economist mag takes a gloomy view, too, but US supply-siders (e.g. the supremely reliable Larry Kudlow) are far more sanguine - the US\$ isn't really being debauched especially spectacularly IMHO, which isn't to say it's being well looked after though ...

PS. Anyone got any thoughts on the Masonic iconography of the US\$? Just saw popcorn National Treasure which re-animated this old staple of occult history - seems enough to make the greenback a hero of superstition in its own right, no?

traxus4420 - we crossed.

Need to follow up your links, but on Keynes - another (somewhat malignant) giant of superstition: Laying out the principles by which States could manipulate economic perceptions to produce self-fulfilling prophecies. Like all superstitious practices, Keynesian economics comes perilously close (at best) to systematic lying, made less visible by the fact that its medium is the financial code itself, rather than (linguistic) political announcements. Markets seem to have discounted Keynesian illusionism by the early 1970s, converting its manipulations into tractionless stagflation, due to the emergence of 'rational expectations' among previously duped economic agents.

northanger: *Anyone got any thoughts on the Masonic iconography of the US\$? Just saw popcorn National Treasure which re-animated this old staple of occult history - seems enough to make the greenback a hero of hyperstition in its own right, no?*

what's great about the movie is that they did play with the hyperstitional element of the US\$, like it was a treasure map in its own right hidden in plane sight. US\$ symbolism easy to find on the internet; satan on the us dollar is my favorite. most of the mottoes come from Virgil — the founding fathers knew their latin:

www.greatseal.com/mottoes/coeptis.html

ANNUIT COEPTIS - "Providence favors our undertakings" (Latin, from Virgil's Aeneid IX.625)

NOVUS ORDO SECLORUM - "A New Order of the Ages" (Latin, from Virgil's Eclogue IV)

E PLURIBUS UNUM "Out of many, one" or "Out of many [States], one [Union]" (Latin, from Moretum attributed to Virgil)

sd: northanger - "what's the next step after economic shock therapy?"

Poland is a deeply schizoid country: on one hand catholic, family-oriented, patriotic, conservative and traditional; on the other fiercely individualistic, shopping mad (people go to church Sunday morning, you can see them kneeling on the pavement when the church is full, then they spend the rest of the day shopping - the shops can stay open till 21.00 on Sunday, which means 5 more hours of shopping than in the UK), car mad, no holds-barred competitive (it is not uncommon for university students to study 2 degree courses at the same time and to speak three foreign languages fluently), extremely tech savvy (I wager that the average teenage Pole could run rings round western European teenagers in terms of code-breaking and data exchange know-how)...

A very bright businessman I spoke to the other day (runs a sports company which produces and imports goods in/from China, Pakistan, Thailand) said that because of this schizophrenia Poland needs to keep swinging from liberal right to centre left: five years of breakneck Capitalism, followed by five years of Capitalism with a soci*list face, to try to pick up those who got left behind (very problematic gap between the rich and the poor - after 45 years of communism there is a huge dependency culture; there is a special verb in Polish, 'kombinowac' which has no real English equivalent,

meaning 'devise', 'think up' e.g. ways of avoiding paying tax, of screwing someone over to make a quick buck etc; there's mass tax evasion, rural despair and alcoholism; inability/unwillingness to adapt), so centre left governments prevent starvation and complete social collapse in rural areas/small towns.

If the Civic Platform gets in in the upcoming elections (likely), then Poland is in for five years of breakneck Capitalism and the flat tax (yippee!)

Nick Land: northanger - ah, hadn't realized Virgil was the common thread ...

sd - if Poland manages to reach ignition with growth seriously above 5% for a few years it would hopefully get addicted (and maybe attract attention in the neighbourhood) - add my 'yippee'

The American Enterprise Online has current issue on Europe & America, with excellent editorial by Karl Zinsmeister and articles by Olaf Gersemann and Joel Kotkin accessible without subscription:

www.taemag.com/issues/current_issue.asp

sd: Nick - thanks for the link (ever thought of auctioning your favourites?)

love the taemag tone, realize they're going for the big guys, but

1) they've got facts wrong

Europe Learns the Wrong Lessons

"at least since the time of Hitler, European elites have lacked the courage to stand up to dictators. Apart from the British, Euros have consistently left this job to the U.S."

The Czechs were screwed by British and French cowardice.

Poland stood up to Hitler and Stalin (and paid the price) - the US and Britain failed to stand up to Stalin and thoroughly stitched up Eastern European countries at the Yalta conference. Roosevelt and Churchill's dealings with Stalin (especially regarding the Katyn massacre and the Warsaw uprising) form the dirty, dark secret of WWII. [Norman Davies 'Rising 44: The Battle for Warsaw' is excellent on this].

Poland has been stalwart in Iraq - it's not just the British.

2) they're a bit out of focus

'Europe's Not Working'

Overestimates France, Germany, and Italy - the Big Three and underestimates the new Eastern European countries which are, understandably, exploiting the EU for all they can get. Once Estonia, Lithuania, Poland and the Czech Republic have 'ignited', I doubt they will be contained by the EU's soci*list technocracy (having experienced soci*lism first hand, having witnessed the palpable benefits of Capitalism on a day-to-day basis).

As always, Russia is crucial in the region and will do all it can to hinder development. It is no coincidence that Estonia and Poland's relations with Russia are now at their lowest since 1991. Russia is engaged in an energy war - gas gives it dictatorial powers (Germany have, once again, fallen into an alliance with Russia with a gas pipe that will bypass Poland news.bbc.co.uk/1/hi/world/europe/4223830.stm).

So, taemag needs to swing its focus a little further east, IMHO.

northanger: awwhh-ouchie:

www.taemag.com/issues/articleid.18718/article_detail.asp

"The only people who appreciate American foreign policy are poodles."

Nick Land: agree that there's an undue focus on Old Europe -think that's partly because the US MSM (Main Stream Media) are only interested in pushing the Old Europe agenda, so what's happening further east (great stuff, clearly) gets absurdly sidelined

on Germany/Russia - Putin going out of his way to get the unspeakable Schroeder re-elected - hope it will be futile - amazing the blind tropism that brings authoritarian reactionaries of all stripes into sympathetic resonance

"Poland has been stalwart in Iraq" - heard they were planning on pulling out, is that right? In any case, scandalous how little is being said about them. The MSM would rather flirt with Galloway and assorted Islamarxist loons worldwide ...

sd: It's actually very difficult to find out about Poland pulling out of Iraq - the issue has been studiously avoided in the election campaign, with the only parties bringing it up being the extreme, nationalist right (League of Polish Families & Self-Defence), who are anti-war. [Poland also provides a clear link between fascism and the anti-war position...] At the mo, Iraq has been swept under the carpet until after the elections.

The main media obsessions of the past months have been concerned with Belarus and Russia - Polish diplomats attacked on the streets of Moscow, Polish residents in Belarus being subjected to bizarre accusations and repression - all because of Poland's involvement in the Ukraine. Now the Russian-German alliance is triggering (well-founded) paranoia.

The two factors behind the pull out are obviously the size of the Polish army (small, for obvious reasons) and the cost - the war is just too expensive for Poland.

The BBC line, that Poland has had second thoughts after the London bombings, seems completely unfounded. If Poles are not consumed by apathy or domestic/local issues, the majority seem to take a hardline, 'Attack is the best form of defence' line. Appeasement is not looked on well, generally speaking.

Nick Land: sd - don't worry, I'd never buy into a BBC line (even if I came across one, which fortunately I rarely do these days) ;)

PS. on evil Media, have you heard of this piece in commentary

www.commentarymagazine.com/article.asp?aid=12002025_1

exposing the fact that French State TV channel France-2 deliberately collaborated with Palestinian murder incorporated to fake the Israeli killing of Muhammad al-Dura and thus trigger Inifida-2 plus (yet another) new wave of Euro antisemitism? Old Europe is still so 1930s it takes my breath away ...

an attempt to shift the costs of social reproduction back from the state on to individuals and families

this is classic communist theology - how dare anybody question the State's right and duty to manage 'social reproduction'?

Glenn Reynolds' latest on Singularity (contains great Vinge quote):

www.techcentralstation.com/091405C.html

also:

"Kurzweil is an optimist, but even he worries that the Singularity may come as a result of Chinese, not American, efforts, and he's got some disturbing numbers."

northanger: yup. good quote.

"And what of the arrival of the Singularity itself? What can be said of its actual appearance? Since it involves an intellectual runaway, it will probably occur faster than any technical revolution seen so far. The precipitating event will likely be unexpected -- perhaps even to the researchers involved. ("But all our previous models were catatonic! We were just tweaking some parameters....") If networking is widespread enough (into ubiquitous embedded systems), it may seem as if our artifacts as a whole had suddenly wakened."

y'know what? i don't think we have time to wait for anybody to sonorously confirm: Yea, The Singularity is Upon Us.

it's here.

Nick Land: northanger - that's the part i liked best too

piet: hey, suppose the one child policy hadn't materialized, you think china would be lookin a little more like africa today?

Beckerath's most productive years were the 30s, he lost the bid for sovereign so see all softy wear. It didn't get to count cause there wasn't a high price to pay, a pre req up to this day, look at you all; turning the 'do it telepathically, forsake your console' arguellean gospel around into self sustaining tec myst and hype; it's a joke right?

p alert: Planned Parenthood solicits pledges based on protests-volume (official via we) www.ppsp.org/PledgePicket-index.asp

sd: This is THE site for The Singularity:

www.kurzweilai.net

Particularly this section, about the brain:

[www.kurzweilai.net/brain/frame.html?startThought=Artificial%20Intelligence%20\(AI\)](http://www.kurzweilai.net/brain/frame.html?startThought=Artificial%20Intelligence%20(AI))

... more bloody reading (when will we be able to download this sort of data direct to our brains?)

northanger: *when will we be able to download this sort of data direct to our brains?*

hmmm {looking at watch} very soon.

Nick Land: *This is THE site for The Singularity*

... holy crap, it's HUGE

sd: this is a classic:

Human Body Version 2.0 by Ray Kurzweil

www.kurzweilai.net/meme/frame.html?main=/articles/art0551.html

It doesn't come much clearer than this:

Kurzweil's Law (aka "the law of accelerating returns") by Ray Kurzweil

There's been a lot about evolution here recently, now Hyperstition has to have something to say about exponential growth.

Nick Land: sd - "now Hyperstition has to have something to say about exponential growth" - you're right - that's the next thread

www.blog.speculist.com/archives/000436.html

northanger: en.wikipedia.org/wiki/Moore's_law

Nick Land: Bush at UN recommends abolition of all tariffs and subsidies:

www.guardian.co.uk/world/latest/story/0,1280,-5278846,00.html

(love to believe this was serious)

Tachi: Nick - although this is a China thread, I get the feeling that people are really excited about K's 'The Singularity, as if it were a new thing. Forgive and correct me if I am wrong, but I heard rumors that you used to lecture on the singularity years back at W. So what's new about K's approach - is it that he was just made the notion more famous?

Nick Land: Tachi - in all modesty, the main difference is where i had amphetamine sulphate, he's got a lifetime of reigorous technical research ...

... rigorous even ...

northanger: *love to believe this was serious*

no it isn't. bush has backpedaled on previous pledges & has been accused (as has blair) of creative accounting to hide secret subsidies (aka, Enronisation of the Doha Round). bush's current pledge looks like a well-known tactic to appeal to everyone's "better angels" while keeping a tight grip on US domestic interests.

in all modesty,

fuxake nick, spew your spill. love to hear it.

Nick Land: northanger - it's been thoroughly spewed, believe me ... :)

All roads lead to cyberpositive intelligence catastrophe ...

PS. Sadly, can't really argue viz Dubya

... only thing that i can see redeeming his status as a stand-in for something exciting would be JRB for the Supreme Court

northanger: *JRB (Janice Rogers Brown) for the Supreme Court*

that sounds like losing sth to gain sth (or maybe that's the other way around. i forgit).

the last three posts (1:44, 3:44 & 4:11):

AQ 144 = GOG-MAGOG

Lemurian Time War

www.ccru.net/archive/burroughs.htm

Kaye assured us that the Board considered the ‘demonstrable time rift’ he was describing to be a ‘matter of the gravest concern’. He explained that the organization had been born in reaction to a nightmare of time coming apart and – to use his exact words - spiraling out of control. To the Board, spirals were particularly repugnant symbols of imperfection and volatility. Unlike closed loops, spirals always have loose ends. This allows them to spread, making them contagious and unpredictable. The

Board was counting on Kaye to contain the situation. He was assigned the task of terminating the spiral templex5. [Note #5: The concept of the 'spiral templex,' according to which the rigorous analysis of all time anomalies excavates a spiral structure, is fully detailed in R.E. Templeton's Miskatonic lectures on transcendental time-travel. A brief overview of this material has been published by Ccru as The Templeton Episode, in Digital Hyperstition, Abstract Culture volume 4.]

The Templeton Episode

I met a man who wasn't there: the ethics of Ashbless

hyperstition.abstractdynamics.org/archives/005202.html

Nick Land: excellent mnemostim - spirals need taking upstairs

northanger: AQ 247 = CONCUPISCENCE = GALACTIC CENTER = THE FREE WORLD

www.answers.com/concupiscence

www.newadvent.org/cathen/04208a.htm

concupiscence means "lust" but in the catholic sense can mean "yearning of the soul for good"

444 - 414 = 30

AQ 30 = KA

www.answers.com/ka

ka is mentioned in the following topics: karoshi (obscure word)

www.answers.com/topic/wage-slavery?hl=karoshi

Wage slavery is a term expressing disapproval of a condition where a person feels compelled to work in return for payment of a wage. In colloquial terms, this may refer to people that make a cult of work (the extreme case is dying of karoshi), or those who require one to work in order to be socially acceptable. In terms used by critics of capitalism, wage slavery is the condition where a person must sell his or her labor-power, submitting to the authority of an employer, in order to survive.

excellent mnemostim - spirals need taking upstairs

i'm done anyway. going up.

Nick Land: "AQ 30 = KA" - Burroughs, The Western Lands: (Of seven Egyptian souls, counting down (to us (of course))) "Number five is Ka, the Double, most closely associated with the subject. The Ka, which usually reaches adolescence at the time of bodily death, is the only reliable guide through the Land of the Dead to the western Lands."

"going up" - ya think?

northanger: ya.

Seven Souls By William S. Burroughs

www.greylodge.org/occultreview/glor_009/WSBspecial/seven.htm

See "Intro to Qwernomics"

AQ 512 = REN-SEKEM-KHU-BA-KA-KHAIBIT-SEKHU = THE QWERTIAN BOOK OF NUMBERS

Nick Land: Another DXP innovation worth discussing is that of the Special Economic Zone (SEZ), a deliberate geographical unit of social experimentation. Unfortunately, the idea seems to have got lost recently, but it seems to me countries everywhere could benefit from it, enabling extreme experiments in laissez faire (dis)organization to proceed while permitting inert security-obsessed populations to hold back - of course, within a few years everyone will be clambering to get in as the local GDP doubles every 8 years or so ...

Increasing Returns

Nick Land (September 15, 2005)

Who needs a post, when there's a comments thread ...

Comments: Increasing Returns

sd: "it's been thoroughly spewed" - so, like at a Roman orgy, there must be room for more: wolf down and digest the rigorous research, get new nutrients in the old blood... and let rip.

Nick Land: sd - sounds about right

Long been interested in the absence of an integral cybernetics as an organizing research orientation. For instance, the fact Kurzweil chooses a mode of expression from economics, rather than one closer to his own technical speci*lism, seems like a symptom of theoretical dispersion. My suspicion is that the basic conception of cyberpositive (K+) 'circuitry' is so elementary, while also so indispensable - even central - to a wide variety of disciplines, that its usage has somehow escaped systematic formalization and focused theoretical attention. Perhaps there is also something intrinsically 'deformalizing' about it, since it necessarily involves any determinate system being carried beyond its limits, through thresholds or catastrophes that escape predictive encompassment (hence Singularity).

sd: got sth in the pipeline: ETA 10 hrs.

Nick Land: [foot tapping]

northanger: [*foot tapping*]

see, i tolya there's a stall in the system but naw, you wouldn't believe me.

NUMMY ORACLE: is the apocalypse the singularity?

AQ 623 = PRESTIGIOUS BUT POWERLESS DEATH

www.uncarved.org/23texts/warmachine.html

In the words of D & G, "war maintains the dispersal and segmentarity of groups, and the warrior himself is caught in a process of accumulating exploits leading him to solitude and a PRESTIGIOUS BUT POWERLESS DEATH".

GOOGLE: is the apocalypse the singularity

www.consciouschoice.com/2003/cc1606/apocalypse1606.html

"If the apocalypse comes, beep me." — Buffy Summers in "Buffy The Vampire Slayer"

AQ 100 = BEEP ME = ISO 7489-2 = EDRIS = FREYA

See "Cryptoliberal PC"

Bruce Schneier, Applied Cryptography ("the book the National Security Agency never wanted published"- Wired), p1: If you want to follow the ISO 7489-2 standard, use the terms "encipher" and "decipher." It seems that some cultures find the terms "encrypt" and "decrypt" offensive, as they refer to dead bodies.

www.answers.com/topic/blowfish-cipher?hl=blowfish

Blowfish has a 64 (TX2)-bit block size and a key length of anywhere from 32 (MA) bits to 448 (INTELLIGENCE CATASTROPHE) bits.

www.sacred-texts.com/the/sd/sd2-2-08.htm

Apocrypha comes from the verb Crypto, [[krupto]], "to hide." For ages the Enoichion (the Book of the SEER) was preserved in the "city of letters" and secret works -- the ancient Kirjath-Sepher, later on, Debir (see Joshua 15:15 And he went up thence to the inhabitants of Debir: and the name of Debir before was Kirjathsepher) ... Those who in the Kuran (see Surat XIX.) are generically termed the Edris, or the "Learned" (the Initiated), bore in Egypt the name of "Thoth," the inventor of arts, sciences, writing or letters, of music and astronomy. Among the Jews the Edris became "Enoch," who, according to Bar-Hebraeus, "was the first inventor of writing," books, arts, and sciences, the first who reduced to a system the progress of the planets.

en.wikipedia.org/wiki/Idris

www.usc.edu/dept/MSA/quran/019.qmt.html

"Also mention in the Book the case of Idris: He was a man of truth (and sincerity), (and) a prophet" (19:56).

sd: [sorry for the length, but what's the scroll for eh? It's a bit noteform in places and quote-heavy. All quotes are from Carl Woese's texts - links given at the bottom.]

Horizontal Transfer, Exponential Growth & The Singularity

1.Translation as a Catalyst for Exponential Growth

D&G;'s focus on the molecular was philosophically radical, but that innovation was paid for by buying into the mechanistic paradigm which held molecular biology in fetters, until recently.

Carl Woese describes this paradigm as "the dark side or Achilles heel of molecular biology - that is, its failure to embrace evolution." 20th Century molecular biology focused on 1) coding rules and 2) the mechanistic process of gene replication. This focus completely ignored 3) how the process came to be (evolution): "they provide no clue as to why the code exists and why the mechanism of translation is what it is... Translation demands fundamental explanation."

The mechanistic paradigm hindered experimentation and exploration of evolutionary innovation and dynamism: by focusing solely on gene replication, molecular biology treated gene expression and translation as mere accidental mechanism which required no explanation. DNA and protein were taken for granted, "not understandable in terms of some (pre-existing) underlying physical-chemical mechanism."

Carl Woese began attacking the mechanistic paradigm in the late 60s. His discovery of archaea in 1976 has been (reluctantly) accepted. Now, following "the recent eruption of genomic sequencing" it is clear that a new paradigm is emerging. The discovery of the ribosomal RNA-based phylogenetic tree has led to 'the RNA World' hypothesis being accepted intellectual currency.

Research into RNA (tRNA, mRNA, ribosomal RNA) and its central role in translation led Woese to insist that the mechanism of translation must itself be subject to the process of evolution because "Translation is not just another another molecular structure to be solved. It represents, it IS, the evolutionary transition from some kind of nucleic acid-based world to the protein based world of modern cells."

There must have been a more primordial form of translation before DNA and cells emerged because "evolving the cell requires evolutionary invention of unprecedented novelty and variety, the likes of which cannot be generated by any evolutionary dynamic." The RNA-world of nucleic acid, 'a prebiotic chemical stage' inhabited by supramolecular aggregates (SMA's) was a world which shared genetic information through Horizontal Transfer. Nucleic acids "whose primary value lay in their coding capacity" appeared, and so "began the need for a commerce in coding nucleic acids." The universal genetic code (genetic lingua franca), which nearly all cells use, is a consequence of HGT/sharing.

The common ancestor for all life on Earth (LUCA) was not one cell, but rather a community of open source code sharers from which DNA and the three modern cell lines evolved - the prokaryotes, archaea and eukaryotes. [Woese suggests that DNA evolved twice - once in prokaryotes and once in archaea and eukaryotes.] "At such a stage, evolution of the whole was in effect communal: there was a progressive evolution of the whole, not an evolution of individual organismsal lineages per se."

The RNA World hypothesis is dynamic because it means:

1. Evolution evolved: Darwinian Evolution (DE) is conceived of as a process that evolved from Horizontal Gene Transfer. HGT led to the Darwinian Threshold, after which 'species' appear.

2. Translation as an RNA-defined mechanism becomes central: "The evolution of translation was a boot-strapping process, in which small improvements in translation led to improvement in proteins in general. These second generation proteins then replaced (most of) their predecessors. Among them, of course, were proteins that further improved translation, and so on, ultimately giving rise to a translation mechanism having modern performance levels." - the primordial positive feedback loop?

Perhaps most importantly, genetic translation is symbolic: code is symbolically embodied by protein.

"Consider the following: in the evolutionary course there have been a few great junctures, times of major evolutionary advance. Their hallmark is the emergence of vast, qualitatively new fields of evolutionary potential, and symbolic representation tends to underlie such evolutionary eruptions. These "New Worlds" can arise when some existing biological entity (system) gains the capacity to represent itself (what it is and/or does) in some symbolic form. The resulting world of symbols then becomes a vast and qualitatively new phase space for evolution to explore and expand. The invention of human language is one such juncture... The most important of these junctures, however, was the development of translation, whereby nucleic acid sequences became symbolically representable in an amino acid 'language,' and an ancient 'RNA-world' gave way to one dominated by protein'. The onset of modern cells, then, had to begin with the onset of translation."

The first Exponential Growth Explosion was facilitated by translation emerging from HGT.

With regard to D&G, the RNA-world of HGT is the rhizosphere, and the emergence of Darwinian Evolution is the start of a Tree Story: the tree of cellular life and branching germlines.

At some point both HGT and DE were operating at the same time on the same lines. Lineages would have been open/vulnerable to HGT until they became solidified and organised. "Vertically generated and horizontally acquired variation could be viewed as the yin and yang of the evolutionary process."

[Some organisms continued (and continue) to run solely on RNA and HGT, e.g. retroviruses].

Exponential Growth Explosion 2: The Cambrian Explosion

www.kurzweilai.net/meme/frame.html?main=memelist.html?m=1%23610

en.wikipedia.org/wiki/Cambrian_explosion

Technological/memetic evolution, as Exponential Growth Explosion 3 (beginning with the development of language & tools developing tools), runs as a hybrid of Darwinian Evolution and Horizontal Transfer.

- e.g. 1: memes such as language acquire variation vertically and horizontally: English evolved vertically from a Germanic ancestor, but it acquired vast amounts of vocabulary and morphology from a horizontal invasion of Norman French.
- e.g. 2: digital cameras evolved vertically from the camera obscura, and acquired technology horizontally from VTR technology

For Woese, it is clear which contributes most to innovation: " Vertically generated variation is necessarily highly restricted in character; it amounts to variations on a lineage's existing cellular themes. Horizontal transfer, on the other hand, can call on the diversity of the entire biosphere, molecules and systems that have evolved under all manner of conditions, in a great variety of different cellular environments. Thus, horizontally derived variation is the major, if not the sole, evolutionary source of true innovation: novel enzymatic pathways, novel membrane transporter capacities, novel energetics, etc."

[The Norman 1066 military conquest of England in the was followed by a linguistic invasion, a period of rapid growth, which had radically and irrevocably changed the English language within a couple of centuries. Now, the vertical development of

English on the British Isles is miniscule in scale when compared to the mass, horizontally driven variations in global English (dialect & genre, particularly electronic genres)].

Parallel to the failings of molecular biology - The main weakness of Capitalism and Schizophrenia: the machinery isn't plugged into the theory of evolution. The desiring machines and BWO come from nowhere and are on a line of flight to nowhere. The rhizosphere: HGT without vertical transmission? Hence the absence of The Singularity from D&G;?

2. The Singularity: Exponential Growth Explosion 4

Current technologies are analogous to the primordial RNA-world. The communal (rather than Communist) nature of Open-source biology, data and software mirrors the prebiotic sharing of SMAs. Just as prokaryotes, archaea and eukaryotes emerged from the fuzzy RNA-world, if AI does evolve, it is likely that more than one AI lineage will emerge from the current Horizontal Transfer contagion (but this will not stop the arrival from being registered as a singular (catastrophic?) event.

These lineages could stem from research conducted in competing geopolitical power bases (with the emergent AI reflecting/driven by the fears and obsessions peculiar to their origin - USA Apple Pie AI with an encrypted eukaryote nucleus vs. Chinese prokaryote swarm) or from techno genres (software, cyberspace, 'nanocolonies', 'digital a-life', 'off-the-shelf-genomics').

If The Singularity is to follow the patterns of Exponential Growth Explosions 1 & 3, then it will happen when a "system gains the capacity to represent itself (what it is and/or does) in some symbolic form" - the flip will happen when a mechanism for symbolic translation emerges. The mechanism could be as unfathomable and inexplicable for our brains as the emergence of genetic translation was for the nucleic code sharers that developed it. Maybe AI would be capable of explaining the mechanism to us. Or maybe this representation in symbolic form would be nothing other than AI communicating with humans. Or maybe AI communicating with AI that is recognized as being alien, outside its system. Or maybe...

[If The Singularity follows the model of Exponential Growth Explosion 2 (Cambrian), then the emergence would be triggered by a combination of global warming and machinic sexual reproduction...]

Interpreting the universal phylogenetic tree:

www.pubmedcentral.gov/articlerender.fcgi?tool=pubmed&pubmedid;=10900003

Nick Land: northanger - "is the apocalypse the singularity?" - it's been described as "the rapture for nerds" (thought that was quite funny)

sd - if biological evolution exhibits increasing returns, 'evolvability' must itself be evolving. This is uncontroversially true right now, when human intelligence has effectuated an array of biotechnological capabilities feeding back into the biological substrate at a large variety of levels, but it is almost certainly true more widely, as your Woese references indicate.

But to nitpick with some elements:

1) Is the terminological move from replicator machinery to 'symbolism' actually an advance? Neodarwinism based on DNA chemistry allowed the highly fetishized and mystified notion of code (see any Pomo discourse for e.g.) to be cashed out in realistic terms for the first time. I'd hate to see things slip back in that respect.

2) Don't D&G; actually arrive at a highly 'lateralist' perspective with their (supposedly 'mechanistic') molecular conceptuality? Seems to me they'd be right at home in the RNA world, as also the Lynn Margulis bacteriosphere (whose codes are also 'sloppy' and lateralist)

This obviously crucial, of course (however it is expressed):

"system gains the capacity to represent itself (what it is and/or does) in some symbolic form"

- adding 'reflexive' or 'self-referential' dynamics that install feedback circuitry - including potentially increasing returns - with and within codes, enabling a complex system to operate upon itself and thus enter a process of runaway self-modification

sd: "Is the terminological move from replicator machinery to 'symbolism' actually an advance? ... allowed the highly fetishized and mystified notion of code (see any Pomo discourse for e.g.) to be cashed out in realistic terms for the first time."

Pinker makes headway with language (*The Language Instinct*) precisely because he treats language as symbolic, on all levels (phonological, meaning etc - the relation between mentalese and spoken language is analogous that of to DNA and protein). This new symbolism enables the signifier/signified to be dumped. DNA symbolism is a factory for protein production, linguistic symbolism is a factory for pragmatic, coherent communication.

Re: D&G; - I'm trying to provoke a bit here (plus I'm relying on memory - my copy of ATP was permanently borrowed by someone whose need was greater than mine). -"they'd be right at home in the RNA world" - yes, but they'd never get out of it, because they are not plugged into evolution. There is no symbolic/translational leap.

Nick Land: sd - we need a linguistics/semiotics thread, although the prospect is a little intimidating - other than despising pomological babble I've lost all sense of the stakes ... Haven't read *The Language Instinct* yet, which will delay (remotely) competent response ...

on D&G; (think general rustiness the norm here) - their indifference to evolution (and even hostility - but think that pre-eminently terminological) reminiscent of the strong Complexity types - i.e. Kaufmann (sp.? -google has it all over the place): the machinic consistency of an arrangement is not explained by its evolutionary pathway but by an abstract machine, and these can 'incarnate' spontaneously under certain conditions.

Sensible response seems to be that there is indeed a complexity corrective to narrow evolutionism, but Kaufmann definitely overstates his case - D&G; teeter on the edge of a materialist Platonism and many of their devotees fall right into it - but I hear Plato is all the rage again these days (sigh!)

"... we see that the process has continuously accelerated. The evolution of life forms required billions of years for the first steps (e.g., primitive cells); later on progress accelerated. During the Cambrian explosion, major paradigm shifts took only tens of

millions of years. Later on, Humanoids developed over a period of millions of years, and Homo sapiens over a period of only hundreds of thousands of years."

www.kurzweilai.net/meme/frame.html?main=memelist.html?m=1%23610

northanger: that's funny. my brain cells have been working on a horizontal-vertical axis. both seem dynamic but V = height,single & H = length,multiples. but V is the main routine; H is the subroutines. V with lots of Hs, like a multi-dimensional hub.

V is the main game; all Hs run in the background. you set the whole thing up then flatten it accessing everything through V.

well. nope, that's not quite right. think of a vertical line connected to horizontal lines running top-bottom. each junction represents a node. ok, now flatten all H-lines near V-line & bundle. now you got a single H-line. apply real-time coordinates for V & H lines. H can be (on the surface) unrelated to V but share characteristics. therefore, change at H1 changes V1. when change occurs on H-line it travels back to source, ie V1. energy transfer communicaaated to all H-lines while they're still bundled. ditto for V-line. however, V&H; have different transfer locations: H occurs at the end of the H-line separating at V-junction; V occurs when H-lines converge.

don't laugh.

sd: *This new symbolism enables the signifier/ signified to be dumped.*

the perils of posting at Hypersition whilst hastily consuming breakfast - the signifier/signified has to be dumped as the masturbatory binary fetishized by deconstruction (total incapacitation of thought).

There is obvious signification between words and 'objects' (the postmodernist who claims signs have no referents and then leaves a note asking for a pizza to be ordered) because words do things.

However, the deep productive potential of language cannot be comprehended in terms of reference or signification: DNA does not refer to protein - it produces it through the mechanism of RNA transcription and translation; mentalese does not refer to words - words are transcribed and translated from mentalese. To comprehend a sentence, words have to be reverse translated and transcribed back into mentalese - ambiguity, poor expression and comprehension errors are a result of transcription and translation errors. The sections in *The Language Instinct* on mentalese and parsing are essential reading. Symbolism here is part of a productive mechanism - as

Woese points out, DNA does nothing if it is not transcribed and translated - there is no replication machinery without RNA transcription and translation. Genetic and linguistic translation seem to be parts of fundamentally libidinal factories: the symbols are the energy.

If evolution is missing from D&G, the component that seems to be lacking from the Kurzweil AI line is an explicit focus on deep bio-libidinal production.

Haven't come across Kaufman before - sounds like reactive denial, but I'll have a look.

but I hear Plato is all the rage again these days (sigh!)

Plato doesn't work - there is no more damning critique than this.

northanger - eh? you what?

Nick Land: northanger - "don't laugh" - as if we would

sd - "Plato doesn't work" - not for anything productive, but for elite power reproduction its the Atlantean special brew ('philosophers should rule' - yummy (that's sarcastic btw))

sd: ... *we see that the process has continuously accelerated. The evolution of life forms required billions of years for the first steps (e.g., primitive cells); later on progress accelerated. During the Cambrian explosion, major paradigm shifts took only tens of millions of years. Later on, Humanoids developed over a period of millions of years, and Homo sapiens over a period of only hundreds of thousands of years.*

which suggests exponential growth is subject to exponential growth?

or is that too loopy?

Nick Land: think Kurweil talks about technological change entering higher phases of exponential growth in same piece (doubling periods shrinking from three years to one for certain tech indices over last half century) - but with technology the reason for exponentiation is fairly straightforward: positive feedback into production processes, for instance computerization of IT research programs. With biological evolution, the mechanism (in this respect among others) is far more obscure - since for e.g. direct phenotypic feedback into genotypes is Lamarckian

sd: but a selection pressure for adaptability and plasticity to feedback into genotypes is not Lamarckian - specific adaptations cannot feedback directly into the genome, but increasing adaptability and plasticity, as an exponential potential, can. (The Cambrian Explosion).

Nick Land: sd - not doubting this circuitry exists, but its concrete features still elusive to me.

When you (of course correctly) note that "a selection pressure for adaptability and plasticity" can feedback into the genome, I'm assuming this is an environmental characteristic, so how is it itself to be made dependent on the adaptations it 'forces'? Without the entire dependency loop, it's hard to see how the material infrastructure of the exponentiating evolutionary excitement is to be constructed.

The Cambrian Explosion evidently a crucial megadatum - but what is it that happened there? (Gould - while obsessed with the phenomenon and its 'punctual' characteristics - is evasive about mechanistic specifics, for instance). Evolution undoubtedly accelerated massively, crossing a distinct threshold, which seems to suggest that an entirely new circuit was consolidated and immediately went positive (hence 'explosion') - but what? Some kind of metagenetic control code associated with multicellular organization?

Metazoan competition?

sd: well now these are decent questions... currently engaged in a battle over computer use (I'm losing). Later...

alex: wonder whether d&g; chapter 'nomadology: the war machine' may be of use here re: horizontal/vertical difficulties- vertical/smooth nomad science as distinct from striated royal (platonian...) science- also, is DNA/protein feedback question a matter of form/content vs. expression?

just wondering- have visited yr site for a while now but never posted. also just read neuronmancer and this all tied (me) up nicely...

Nick Land: alex - the D&G; apparatus works so well for biological replicator chemistry it's difficult not to think that it functioned as their principle or dominant reference - 'expression' in the Cap/Schiz vols seems even more neodarwinian than Spinozist IMHO

Neuronmancer - what a book!

northanger: exponential growth x exponential growth = Moore's Law

aol membership vs. # of pipes vs. sustainability

aol membership (subset of overall internet access) example of exponential growth. remember infamous 19 hour blackout on aol service several years ago? number of members overwhelmed number of available pipes — ie, not enough pipe, not all members could sign on. future growth, however, also dependent on broadband access (a) content delivery & (b) sustainability. (a) & (b) related to one another because they determine what type of content can run through the pipe.

no sustainability issues with text-based content since these are smaller packets requiring smaller bursts through the pipe. however, broadband content (large multimedia files) require larger pipes, larger bursts to deliver content in one steady stream: ie, sustainability.

two graphs: # of users on vertical & # of pipes on horizontal; or, # of users & pipe size.

points to the "stall" i mentioned earlier & sd's comment about when we could download info directly to the brain. probably related to "we only use 10% of our brains" — not enough pipe. instantaneous knowledge related to sustainability.

above extremely simplistic.

Nick Land: northanger - isn't Moore's Law, as usually formulated (i.e. a constant doubling period, typically 18 months) simply a first order exponential?

Agree that the actual dynamics involve a number of different factors and are thus open to cross-excitation (or inhibition)

sd: hello alex - hope you get addicted.

Nick "I'm assuming this is an environmental characteristic..."

Yes, but predation pressure obviously has to be part and parcel of the environment. The Cambrian Explosion provides the first fossil evidence of hard shells and other prey/predator adaptations (e.g eyes)...

"... so how is it itself to be made dependent on the adaptations it 'forces'?"

... so it would (perhaps) be the first time in evolutionary history when if a lineage didn't develop an ability to evolve complex adaptations (such as armour or eyes) then it's representatives either starved or got eaten and thus the lineage succumbed to natural selection. When the environment is full of potential predators, adaptations (and the ability to develop them) speed up. Factor 1 = a drastic increase in violence.

The Cambrian Explosion followed snowball Earth melting: adaptive space and niches opened up for conquest. Factor 2 = an increase in heat.

The evolution of multicellular life in the Cambrian is sometimes put down to the emergence of sexual reproduction: "There was a "niche" in the Proterozoic world for large multicellular organisms that had yet to be exploited." And when the multicellular organisms appear on the stage, "this sets up a positive feedback loop whereby organisms respond to new environments" presented by other organisms, "by evolving new morphologies, and those new morphologies introduce new environments which induce newer morphologies."

Factor 3 = the arrival of sex

www.astrobio.net/news/modules.php?op=modload&name;=News&file;=article&sid;=134

Of course there is lots of mystery - the Cambrian was basically arthropods clambering about in mud and water, but the recipe for a "metagenetic control code" might just be:

violence + heat + sex = exponential biological explosion.

sd: "The question of how so many immense changes occurred in such a short time is one that stirs scientists. Why did many fundamentally different body plans evolve so early and in such profusion? Some point to the increase in oxygen that began around 700 million years ago, providing fuel for movement and the evolution of more complex body structures. Others propose that an extinction of life just before the Cambrian opened up ecological roles, or "adaptive space," that the new forms exploited. External, ecological factors like these were undoubtedly important in creating the opportunity for the Cambrian explosion to occur.

Internal, genetic factors were also crucial. Recent research suggests that the period prior to the Cambrian explosion saw the gradual evolution of a "genetic tool kit" of genes that govern developmental processes. Once assembled, this genetic tool kit

enabled an unprecedented period of evolutionary experimentation -- and competition. Many forms seen in the fossil record of the Cambrian disappeared without trace. Once the body plans that proved most successful came to dominate the biosphere, evolution never had such a free hand again, and evolutionary change was limited to relatively minor tinkering with the body plans that already existed.

www.pbs.org/wgbh/evolution/library/03/4/1_034_02.html

sd: "There are some plausible explanations for why diversification may have been relatively sudden:

* The evolution of active predators in the late Precambrian likely spurred the coevolution of hard parts on other animals. These hard parts fossilize much more easily than the previous soft-bodied animals, leading to many more fossils but not necessarily more animals.

* The earth was just coming out of a global ice age at the beginning of the Cambrian (Hoffman 1998; Kerr 2000). A "snowball earth" before the Cambrian explosion may have hindered development of complexity or kept populations down so that fossils would be too rare to expect to find today. The more favorable environment after the snowball earth would have opened new niches for life to evolve into.

* Hox genes, which control much of an animal's basic body plan, were likely first evolving around that time. Development of these genes might have just then allowed the raw materials for body plans to diversify (Carroll 1997).

* Atmospheric oxygen may have increased at the start of the Cambrian (Canfield and Teske 1996; Logan et al. 1995; Thomas 1997).

* Planktonic grazers began producing fecal pellets that fell to the bottom of the ocean rapidly, profoundly changing the ocean state, especially its oxygenation (Logan et al. 1995).

* Unusual amounts of phosphate were deposited in shallow seas at the start of the Cambrian (Cook and Shergold 1986; Lipps and Signor 1992).

www.talkorigins.org/indexcc/CC/CC300.html

Nick Land: sd - Highly plausible. Perhaps worth recapping on the driving problem here: (How) does the machinery of biological evolution itself evolve so as to demonstrate exponential trends within biological history?

Seems to me you've done a great job on the threshold character of the Cambrian Explosion (sex - how did I miss a biologically trivial little number like that!?). The wider K+ trend is harder to see.

- Sexual reproduction - whilst huge - seems basically a one off (at least, the Eukaryotic mechanism doesn't seem to be itself involved in runaway metamorphosis).

- Warming likewise (plenty of interesting loopy bioclimatic dynamics no doubt, but no strong directed trend).

- Arms races seem the most likely to show continuous deep-dynamic transformation, but then - as you note - the Cambrian Explosion was in part a spasm, rather than the beginning of a continuous acceleration.

This one seems the most relevant to our overall inquiry here:

"the gradual evolution of a 'genetic tool kit' of genes that govern developmental processes" - the emergence of modes of genetic organization favourable to enhanced evolvability (actually closer to what i meant by 'metagenetic' - apologies for obscurity - genes or gene elements that operate on other genes or genetic elements, elaboration of internal feedback mechanisms within the functioning of the genome).

The continuation of lateral genetic exchange through retroviruses, and thus (highly speculative) of evolution at the level of dispersed viro-genomic hybrid populations perhaps also a candidate?

sd: "genes or gene elements that operate on other genes or genetic elements, elaboration of internal feedback mechanisms within the functioning of the genome."
- I think this has hit the proverbial nail on the proverbial head. A vital piece of equipment.

The continuation of lateral genetic exchange through retroviruses, and thus (highly speculative) of evolution at the level of dispersed viro-genomic hybrid populations perhaps also a candidate?

Or culprit! Wow.

Nick Land: What's quite confusing is the prominence of metazoans - clearly bacterial genetics is far more versatile and 'experimental' whilst the vastly larger populations involved enable many many magnitudes of greater variation to be explored at any given time, evidently the 'stratification' of the bacteriosphere has been extraordinarily

successful, stabilizing this immense intrinsically mutable biomass in such a way as to prevent intelligent runaway occurring at the level of bacterial genes or dispersed gene-systems (unless the rumoured 'bacterial supermind' (www.ratical.org/LifeWeb/Articles/H3Kevolv.txt) has fabricated itself in secret - but then why hasn't it colonized the solar system? - hang on, it's using us to do that ...)

Warning - link provided in last comment gets super-ditzy ... meant as a cultural illustration, not as an authoritative reference

sd: ...up another notch :) ... back later

Nick Land: try this one:

www.heise.de/tp/r4/artikel/2/2114/1.html

sd: ?

side-stepping bacterial intelligence for now...

a cartoon version of exponential growth:

4.5 Billion years ago: Origin of the Earth

3.8 Billion years ago: Anaerobic bacteria (Translation 1)

3.2 Billion years ago Photosynthetic bacteria

2.5 Billion years ago: Oxygen accumulates in the atmosphere; Aerobic bacteria appear

1.5 Billion years ago: aerobic bacteria ingested by anaerobic bacteria (i.e. mitochondria begin symbiotic trade with the predecessor of Eukaryotes) and Eukaryotes appear.

www.biology.iupui.edu/biocourses/N100/2k2endosymb.html

750 million years ago, the Earth freezes over - the Cryogenian Period/Snowball Earth

"Detractors argue that this kind of glaciation would have made life extinct entirely, which did not happen. Proponents counter that it may have been possible for reservoirs of anaerobic and low-oxygen life powered by deep oceanic hydrothermal vents to have survived such an event within Earth's deep oceans and crust. Alternatively, deep ocean regions distant from the supercontinent Rodinia or its remnants as it broke apart and drifted on the tectonic plates may have allowed for some small regions of open water preserving small quantities of aerobic life (Contrary

to the normal sense of aerobic, in this case, aerobic dependency would be CO₂ for consumption by plants during photosynthesis generating trace amounts of oxygen sufficient to sustain the aerobic (usual oxygen dependent sense) needs of the organisms during the dark of night). "

en.wikipedia.org/wiki/Snowball_earth

580 mya Snowball Earth melts

542 mya: The Cambrian Explosion

The role of sex in the Cambrian Explosion: current thinking views meiosis as an adaptation developed in response to viral attack. The shuffling of genes in meiosis is the genome changing the lock every generation, while viruses are continually developing keys to unpick the lock - sex keeps the genome one step ahead of the game.

"Most importantly, however, meiosis produces genetic variety in gametes that propagate to offspring. By crossing over and independent assortment, the gene pool of the species is dynamic and easily adaptable to changing environments and situations. Without genetic variation, progeny would be identical in traits to their parents, a dangerous weakness in a world where survival of the fittest is very much in effect."

en.wikipedia.org/wiki/Meiosis#Significance_of_meiosis

Resources are freed up when Snowball Earth melts, which brings on full-scale war between prokaryotes and eukaryotes. A violent arms race ensues, forcing eukaryotes to adapt meiosis and develop the 'genetic tool kit' (genes or gene elements that operate on other genes or genetic elements' - isn't this meiosis?), leading to body plan prototypes. A viral attack on Eukaryotes thus triggered inter-linear violence between multicellular eukaryotes, leading to further adaptations in a war over resources (eating other multicellular organisms being the most economical way of getting energy).

443 - 417 mya: plants conquer land (Silurian Period)

417-354 mya: air-breathing arthropods conquer land (Devonian Period)

290-248 mya: reptile boom (Permian)

220 mya: mammalian ancestors, Eucynodonts, start to achieve modest terrestrial success

65-55 mya: following dinosaur extinction, mammals diversify from shrew-like creatures and spread to all major environments

34-24 mya: appearance of primates

5 –1.8 mya: primates continue to evolve – australopithecines (antecedents to Homo sapiens) makes an appearance

www.sdnhm.org/fieldguide/fossils/timeline.html

1.8 mya - 200,000 ya (or 40,000 ya - disputed, still a mystery) human language evolves: "the language faculty may have evolved in two major steps. The first is a protolanguage of symbolic representation and verbal and/or gestural signs, and the second formal syntax." (Translation 2 - massive potential of horizontal transfer unleashed)

en.wikipedia.org/wiki/Origins_of_language#Anthropological_hypotheses

75,000 ya: Toba catastrophe (massive selection pressure which favours homo sapiens)

en.wikipedia.org/wiki/Toba_catastrophe_theory

11,000/9000 ya: appearance of agriculture; domesticated animals; dense, sedentary populations

HGT through viruses from animals: "Many modern diseases, even epidemic diseases, started out as zoonotic diseases. It is hard to be certain which diseases jumped from other animals to humans, but there is good evidence that measles, smallpox, influenza, and diphtheria came to us this way"

en.wikipedia.org/wiki/Zoonose#Historical_development_of_zoonotic_diseases

(plus see Jared Diamond – Guns, Germs & Steel 'Lethal Gift of Livestock')

6000 ya: writing (further Horizontal Transfer)

1500 – 565 ya: printing (China 6th Century/Gutenberg 1440)

500ya: globalisation begins

“European diseases (smallpox, influenza, measles and typhus) to which the native populations had no resistance, and cruel systems of forced labor, such as the infamous haciendas and mining industry's mita), decimated the American population. These diseases usually preceded the Spanish invaders, and the resulting population loss (between 30 and 90 percent in some cases) severely weakened the native civilizations' ability to fight back.”

en.wikipedia.org/wiki/Spanish_colonization_of_the_Americas#Effect_on_natives

en.wikipedia.org/wiki/Smallpox#The_Americas

240ya: the industrial revolution

60-70 ya (?): computers

21 ya: Neuromancer/ The Singularity Concept - Phase 1 (electronic platonic?)

10ya: Commercial Internet (global horizontal transfer)

2005: Singularity Concept - Phase 2 (boosted by developments in understanding of biology and evolution, e.g. genome sequencing, reverse engineering)

don't know how these slipped through - crucial to positive feedback:

146ya: Theory of Evolution

52ya: DNA double helix

15-5ya: Human Genome Project

60ya: computer -Turing's Universal Machine

[after the Theory of Evolution - more and more essential antecedents in vertical transmission (e.g. Mendel, Boole? - though it's aesthetically pleasing to exclude all individual contributions from humans other than those of Darwin and Turing)and the explosive increase in horizontal transfer means the lineage becomes practically untrackable - a huge spider's web being spun faster than we can track - the thread from 4.5 bya leading to the center of a web the extent of which only starts to become apparent in the late 20th C - the Singularity as a spider waiting in the center.]

enough already

Nick Land: sd - magnificent! certainly looks like an accelerating process, even before human history and technological stimulation

'ya' dating interesting because it marks a countdown, but flawed because it floats (and as we get closer the floating becomes more of a problem) - definitely need a calendrics discussion somewhere up the line

sd: agree floating is a problem - one solution would be a program that could update the countdown yr by yr.

a mathematical calculation of gap ratio would be very useful IMHO (count me out - I was trying to work out what percentage of terrestrial history the Theory of Evolution's 146 years constitutes and got lost)

Been revisiting Pinker on Mentalese. Turing's symbols are crucial. Pinker basically suggests that neurons fire to represent concepts. These concepts are organized into logical propositions by a kind of Turing machine. (Computational model of the mind).

Found this in my wanderings:

"When he brought mathematics and logic together in the form of a machine, Turing made symbol-processing systems possible. He proposed that the vast majority of intellectual problems could be converted to the form "find a number n such that . . ." Even more important than this provocative statement connecting the abstractions of intellect with the more concrete realm of numbers--an implication that still inspires the efforts of artificial intelligence researchers--was Turing's recognition that the numbers were more important as symbols in this case than as elements of mathematical calculations.

One of Turing's greatest insights was his understanding, from the very beginning, of something that the majority of the computer priesthood has yet to understand--the fact that numbers are only one possible way of interpreting the internal states of an automatic formal system. Babbage's "patterns of action" were now formalized with mathematical rigor. Turing's "states" provided the crucial metaphor for bridging the power of human cognition and the capabilities of machines."

www.well.com/user/hlr/texts/tft3.html

This is a possible candidate for a translation leap.

Any linguistics thread would need some Turing input (not a particular strong point of mine).

P.S. Pinker is adamant that the concepts neurons fire for are not words - he's got good arguments to back this up (and I've got a couple up my sleeve). Mentalese concepts are translated into words.

Nick Land: sd - the 1930s Turing/Goedel revolution that combined the collapse of logicism (last gasp of philosophy's pretention to metalogical mastery) with the principles for the mechanization of intelligence certainly daunting - but any construction of linguistics on this basis (if that's a little strong: with solid reference to these thinkers) would undoubtedly dispel the miasmatic fog of pomological flakery

much more needed on the arithmetical aspect of your remarks of course ...

northanger: *not a particular strong point of mine*

thank god. (lol, just kidding!)

northanger: let me contribute to this overflowing toxic spew we're all wading around in here.

en.wikipedia.org/wiki/Spanish_colonization_of_the_Americas#Effect_on_natives

sd, this wikipedia article begins ... "Spanish conquest and colonization of the Americas began with the arrival in America of Christopher Columbus in 1492."

en.wikipedia.org/wiki/Christopher_Columbus

Christopher Columbus sailed under the Spanish flag in 1492; however, his nationality is debated while most think he was Genoese (Italian) some think he might have been a pirate.

en.wikipedia.org/wiki/Dollar_%28disambiguation%29

en.wikipedia.org/wiki/Dollar

en.wikipedia.org/wiki/History_of_the_American_dollar

quotes from "What Is a Dollar?" by Edwin Vieira, Jr., attorney specializing in constitutional law

www.fee.org/vnews.php?nid=3041

The present monetary statutes do not define the “dollar” intelligibly ... Most people mistake the Federal Reserve Note (FRN) “dollar bill” for a “dollar.” But no statute defines or ever defined the “one dollar” FRN as the “dollar” or even a “dollar.” ... The situation with coinage is equally confusing ... In sum, the monetary statutes do not define the noun “dollar” in a unique way. Instead, completely different things have the same name, things unequal to each other are treated as equivalent, and things that should have the same characteristics (i.e., “equal purchasing power[s]”) are quite different.

History shows that the real “dollar” is a coin containing 371.25 grains (troy) of fine silver. The “dollar” in the Constitution. Both Article I, Section 9, Clause 1 of the Constitution and the Seventh Amendment use the noun “dollar.” The Constitution does not define the “dollar,” though, because in the late 1700s everyone knew that the word meant the silver Spanish milled dollar ... The American Colonies did not originally adopt the dollar from England, but from Spain. Under that country’s monetary reforms of 1497, the silver real became the Spanish money of account. A new coin consisting of eight reales also appeared. Known as pesos, duros, piezas de a ocho (“pieces of eight”), or Spanish dollars, the coins achieved predominance in the New World because of Spain’s then-important commercial and political position.

By the American War of Independence, the Spanish dollar had become the major monetary unit of the Colonies. Not surprisingly, the Continental Congress adopted the dollar as the nation’s standard of value.

Congress did not create a “gold dollar,” or establish a “gold standard,” as the popular misconception holds. For example, the Encyclopedia Britannica erroneously reports that the “dollar . . . was defined in the Coinage Act of 1792 as either 24.75 gr. (troy) of fine gold or 371.25 gr. (troy) of fine silver.”[29] The Act did no such thing. It defined the “dollar” as a weight of silver, and “regulate[d] the Value”[30] of gold coins according to this standard unit and the market exchange-ratio between the two metals. Nowhere did the Act refer to a “gold dollar,” only to various gold coins of other names that it valued in “dollars.”

Where are we now?

This history demonstrates that official Washington, D.C., has no conception of what a “dollar” really is. The reason for this self-imposed ignorance is obvious. By reducing the “dollar” to a political abstraction, the government has empowered itself to engage in limitless debasement (depreciation in purchasing power) of our money. A “dollar”

that must perforce of the Constitution contain 371.25 grains of fine silver cannot be reduced in value below the market exchange value of silver. A pseudo-“dollar” that contains no fixed amount of any particular substance per “dollar,” on the other hand, can be reduced in value infinitely.

yes yes, piet i know:

Walter Zander

www.reinventingmoney.com/zanderChaos.php

Whether the abandonment of the gold standard is advantageous to an economy is decidedly problematic ... Accordingly, the abandonment of the gold standard has led to "a race for the worst currency", in which the most powerful States are participating ... Whatever the monetary system of a country, it is essential that the measure of value should be clearly and unequivocally determined. Thus where there is a gold currency, a silver currency, or an index currency, the value should be measured by gold, silver, and the index respectively. This basis of measuring economic values, and therefore of any monetary system, is destroyed when in the case of a gold or silver currency the notes of the bank of issue are made legal tender, for this compels everybody to accept these notes in payment regardless of their real value. Compulsory acceptance renders it even impossible to measure the notes by the unit of value and thus to ascertain their value within the country. Indeed, it establishes a legal fiction on the basis of which note and unit of value are identical.

Nick Land: OK northanger - we need a currency thread

So what do you think about the Gold Standard? Do you have a hardened stance on it?

Think I prefer Hayek's notion of competing private currencies to the Gold Standard model - it's based on economic rationality rather than substance fetishism

northanger: *So what do you think about the Gold Standard? Do you have a hardened stance on it?*

right now i'm looking at the flood of money bush threw at the big rubber ducky. is this a stroke of genius or has bush completely lost his ideological mind?

i also have a better idea why everybody has a hard time understanding merspan ... um, i mean greenlin ... crikey! i meant greenspan

AQ 392 = ECONOMIC RATIONALITY = ANARCHISTIC TENDENCIES = COMPETITIVE ADVANTAGE = SEVEN HUNDRED & EIGHTEEN

i meant ECONOMIC, not ECONOMIC.

A mark, a yen, a buck or a pound,

a buck or a pound, a buck or a pound,

Is all that makes the world go around,

that clinking clanking sound,

Can make the world go round.

Nick Land: *i'm looking at the flood of money bush threw at the big rubber ducky. is this a stroke of genius or has bush completely lost his ideological mind?*

what ideological mind would that be? Rigorous fiscal conservatism (ha ha)?

northanger: fiscal conservatism does make sense if you want government to control spending. however, can you really have fiscal conservatism during wartime?

Nick Land: northanger - bless your cotton socks - you're sounding liking a neocon :)

I'd be with this q. all the way if the spending was going on the war, rather than on multidimensional out-of-control pork-fest

northanger: *I'd be with this q. all the way if the spending was going on the war, rather than on multidimensional out-of-control pork-fest*

ah, that's just creative accounting, it goes with the cotton socks.

Nick Land: wish i had your confidence

northanger: ok. guess we're done with cotton socks & gotta wade back in & deal with bacterial intelligence. it's the reading list that's killing me (psst, don't tell sd, but that link fest is as bad as piet's).

sd: northanger - you're gonna love the phrase structure and grammar as parameters in the factory of the unconscious fest then.

[Oh 'n my links got nice pics galore don't they?]

northanger: gee. can't wait.

Life Extension sept 2005

media.kurzweilai.net/sin/pub/LifeExtension_KurzweilArticle.pdf

some very colourful pics here. not sure what to make of all this health stuff. doesn't seem very cyberpunk.

hyperflow: i know i'm cutting in on a thread here, but i'm interested to know what people think about the possibility that rather than the super nonbiological (but humanist) intelligence of Kurweil etc., that nanotech etc. reengineers the coding of affect throughout a virtual intelligence. so, forget about bacterial intelligence (though v.interesting see: star.tau.ac.il/~inon/baccyber0.html), and look at atomic/material intelligence. This is strictly nonliving, but constantly infiltrating the humanoid, and is abstract in the sense that the swarm of information/agency constantly forces open or envelops potentiality of space-time.

sd: thanks for the link

how are you cutting in? seems v.pertinent and intriguing - please say some more.

adding to the horizontal/vertical transmission & 'genetic tool kit' lines on this thread

Bacterial Wisdom, Gödel's Theorem and Creative Genomic Webs

star.tau.ac.il/~inon/wisdom1/preprint.html

"a new picture of the genome as an adaptive cybernetic unit with self awareness"

Jacob and Monod in 1961, the discovery of "regulatory genes that are not transcribed, whose primary function is to regulate the rate of synthesis of the product of other genes; these can also activate and de-activate other genes," a discovery which "should have shattered the picture of a static genome which serves as a storage unit only"

The new picture of the genome as an adaptive cybernetic unit with self-awareness... The genome, as I see it, is not merely a storage device, but a sophisticated cybernetic entity well beyond a universal Turing machine. Metaphorically speaking, it includes a user, a computational unit, and a hardware engineer and technicians. The computational unit itself supersedes the universal Turing machine, since during computations the structure is dynamic and changes adaptively according to the needs dictated by the computations.

[the] hypothesis, that in order to perform adaptive mutations (and other non-random mutations) the bacteria employ cybernetics elements (plasmids, in the case of Galitski et al.), that transfer those mutations from cell to cell [27]. Thus those mutations can be "synchronized, autocatalytic and cooperative genetic variations"

Hmmm.

hyperflow: cutting in, just because i may have missed some of this thread, plus i haven't posted here before.

i guess i'm interested in the potential for a concept of nonanthropomorphic intelligence here, with nanotech bleeding the transduction strategies of nonlife through the humanoid, and potentially all of infomatter. this moves humans to the limits of life, forcing potential mutation with the increasing recombination of disparate particles, mapping specific vortical organisations through the body as complex amplifier (whitehead).

this seems to tie in to the engineering of affect, particularly the modulation of fear in constant atomic manipulation. i am really interested in how affect/information/agency becomes codified in this situation, can we map lines between this nonorganic infiltration and language as swarm, text as swarm etc.?

sd: *the modulation of fear in constant atomic manipulation*

could you possibly expand on this a little?

1. How would this be similar or different to genetic or memetic manipulation/engineering?

2. How is it done?

"forcing potential mutation" - the interesting thing, for me at least, from your bacterial cybernetics link is the way that mutation is forced (i.e. through starvation). I'm intrigued by the possibility that language (as non-organic filtration) might have been (to some extent), forced by the Toba Catastrophe - that an incredibly hostile environment forced the human brain into new levels of plasticity.

"can we map lines between this nonorganic infiltration and language as swarm, text as swarm etc."

The simple answer is yes, IMHO - but it requires deleting ideology from the perceptual system and replacing it with the concepts of contagion and mutation.

[For example, Communism as a pandemic abiological virus that could give influenza a run for its money. Reading Marx, Lenin, Trotsky, Badiou or Zizek is like walking into a biological weapons factory - the lethal potential encoded in the flows that transmit words]

Memes (inorganic replicators) transmit vertically, but at the same time trade horizontally, cutting and splicing code, mutating in response to their environment, adjusting their ferocity. They are often remarkably easy to map because their core codes are crude and basic. Mapping them is one thing, it's other operations (e.g. developing vaccines) that prove difficult.

hyperflow: v. interesting comments, i'll have a think about them.

your questions though about atomic manipulation; fear is an affect of the implosion of infomatter in its unravelling, the recombination of vastly disparate modes, sensations, across the continuum of nonorganic life.

nanotech is different to memetic and bio technologies because it cuts right in to infomatter, spreading contagious affect of matter and information trasductively; as vectors which pass through individuating bodies.

sd: define 'infomatter' please.

In what sense is DNA not infomatter?

Why are 'individuating bodies' important? Energy, genes, genomes, viruses, memes, Capital, are all operate deeper than/beyond individuated bodies. Bodies are vehicles/hosts - so how do they figure in the equation?

[sorry if these questions sound a bit aggressive, but I'm trying to get under the poetry]

hyperflow: information and matter entangled, that's it, and of course dna is infomatter, but we can only talk about biology with dna, whereas with nanotech, we can talk about nonorganic life, and the way that is mapped through biological systems.

ok, transduction of information across virtual/actual circuits is a process of individuation (simondon), and in this sense anything is a body, a concept, a humanoid, a gene, etc.

So, I think it might be important to understand how information transduction (energy, viruses etc.) act on the strata of the human, how they relate to processes of codification and decodification, or speeding up and slowing down (spinoza).

sd: oops. operating. grammar parameters and verb phrase dependencies up the spout.

en.wikipedia.org/wiki/Stromatolites

sorry hyperflow - missed yr comment

DNA code is a symbolic system which translates into the stuff of biology and brings about its own replication. As such, it provides a model to talk about a lot of things which are not biological: for example the code of mentalese thought which translates into the stuff of language; memetic codes which translate into power structures for societal organisation.

Nanotechnology will only ever take off if humans are cut out of the loop and nanobots have access to the codes. This will, inevitably, involve some form of memewar, IMHO.

transduction: how is this different to contagion/transmission?

Stromatolites

hyperflow: ok, i take your point, i guess that i'm thinking about engineering processes that also codify/decodify genetics - cybernetic organisation that eshel ben-jacob is researching for example. nanotech isn't just about the kind of runaway replication of nanobots, it also exposes and accelerates the engineering dynamics of matter. so, the

algorithmic complexity, hypercyclic organisation etc. of nonorganic materiality can then be traced through complex organisation of dna, bodies, etc.

v. interesting about mapping memes from dna, and i think this can be linked to affect, where molecular fear traverses affective mood systems, and is overcodified to produce the security state, pre-emptive strike, future shutdown.

but, i do think something is to be learnt from the way information and matter is entangled at the nanoscale, where 'inanimate' particles recombine in complex organisation, self-assembly and replication. this molecular turbulence disrupts the infomaterial continuum.

this ties in to transduction as it indicates how information travel is individuating, rather than smooth, always carrying affect. matter is cybernetic, reverse engineering, dissipative, and dynamic. this proto-perception can then be used to access and maybe inform memetics etc. on the human strata.

sd: cybernetics in RNA & DNA transfer and translation & replication - the capacity to learn from/act on feedback - requires a lot of testing and thinking.

"molecular fear traverses affective mood systems, and is overcodified to produce the security state, pre-emptive strike, future shutdown."

exploration of the relationship between memes and affective mood systems would be very interesting. e.g. how memes feed on and trigger rage.

"matter is entangled at the nanoscale, where 'inanimate' particles recombine in complex organisation"

so we've got to look at physics for codes translating into dynamic, 'self-organizing inanimate matter'?

this is a fairly meaty look at AI and the Turing test:

The Age of Intelligent Machines: Can Machines Think? by Daniel Dennett

www.kurzweilai.net/meme/frame.html?main=/articles/art0099.html

Nick Land: hyperflow - great comments

everybody - sorry for absence, just gone under the most stupendous editing avalanche - trying to crawl my way out now

northanger: *trying to crawl my way out now*

hope you're not crawling around in all this muck.

sd: to what are you referring as muck?

please be specific.

I mean, first it's toxic spew, now it's muck - is it the dirty bacteria that are provoking such revulsion? Or are spew 'n muck being given positive connotations here? Is the hyperstitional significance of spew and muck being brought into question? I mean, what is a poor soul to think?

northanger: i'm referring to all-round muck. are we not mired in vuiligheid, bungle, drek, sporcizia, mist, estiércol, gödsel, dung & sludge? here, there & everywhere?

muck, spew & all that gunk getting positive spin. however (lol), hopefully when the shit hits the fan there's sense enough to stop all spin (positive or negative) until things get cleaned up a little.

sd: vuiligheid? drek? sporcizia?

Come again? What DID you have for breakfast?

Bacteria are the ultimate, nay, primordial clean-up squad, doancha know?

northanger: did you actually read what i wrote?

sd: eh? [i woz merely joshing]

well you learn sth new everyday at this sight:

dreck

Etymology:Yiddish, Pronunciation

* drĕk, /drĕk/, /drEk/

Noun dreck (uncountable

Alternative spellings

drek

1. Trash, junk; worthless merchandise. Retrieved from en.wiktionary.org/wiki/dreck

AQ 215 = TOXIC SPEW = RECTIFICANDO

Visita Interiora Terrae Rectificando Invenies (or, Visita Interiora Terrae Rectificando Invenies Occultum Lapidem Veram Medicinam)

visit the interior of the earth, in rectifying, discover the hidden stone (which is the true medicine).

and there's the famous lotus symbolism of the buddhists: they grow from pure dreck.

AQ 74 = DREK = GOLD

AQ 196 = VUILIGHEID = PIECE OF CRAP = ONE IN EIGHT

hyperflow: thanks nick.

can anyone help me out with some ideas about how the libidinal economy and desiring machines work out in relation to information and agency on the human/cultural strata?

northanger: www.iep.utm.edu/1/Lyotard.htm#H3

Lyotard sees reality in terms of unpredictable happenings (events), rather than structured regularities. These events can be interpreted in different ways, and no single interpretation will capture events accurately. Events always exceed interpretation; there is always something "left over" that an interpretation does not account for. In the libidinal philosophy Lyotard uses the idea of libidinal energy to describe events and the way they are interpreted or exploited, and he develops a philosophy of society and theory in terms of the economy of libidinal energies. Lyotard uses the terms "libidinal intensities," and "affects" to refer to events. These intensities and affects are, in more common terminology, feelings and desires.

AQ 306 = LIBIDINAL ECONOMY = GLOBAL ETIQUETTE

sd: - hyperflow, this is the best I can do for now.

what about framing agency in terms of a machines decision-making capabilities?

1. different machines have different limitations and parameters in terms of the decisions 'their' machinery allows them to make.

2. There is scale and variation within one type of machine: biological machines differ in the extent and type of decision they can make.

3. Then there are differences between types of intersecting machines: biomachines, politico-power machines, economy machines, techno-automatic machines, thinking machines.

4. Decision making can be programmed into the machinery.

5. In the case of most observable multi-cellular biomachines the ability to decide is programmed in on the level of instinct, so that the decisions operate in the service of programmers that have already 'made' the grand decisions and programmed the parameters. A gazelle's instincts can survey the terrain and choose left as the best option for evading the claws of a cheetah. Here, the brain is part of the decision making process, processing information about the environment and coordinating movement in response to fear and at the behest of a genetic imperative instructing the gazelle to live to see another day, another season. The brain does not decide to flee in response to threat: that instruction has been written elsewhere. While the brain lacks executive power, libidinal investment is also pre-programmed and cannot be subverted or rerouted.

6. A brain which processes complex concepts and abstract thoughts through circuitry (more complex than those concepts and thoughts) operates on a longer leash. The leash stretches to up to the breaking point of suicide. In times of relative security and abundance, that brain can turn its perceptual apparatus on itself and critique its instincts, questioning why the organism is impelled to bother with food, sex and power. A determined brain staggered by the colossal stupidity and pointlessness it sees in the biosphere could spit on its genes, become a desert hermit or, best of all, terminate the bio-operating system. The decision not to reproduce is not sufficient in itself to defy the genes - if the brain is still part of an organism that helps family members then the brain is still serving copies of the genes that built it; if it is a brain belonging to an organism which performs a social function then the brain is, to some extent, in the service of the genome, or maybe an alien, parasitic genome. With the

advent of the thinking brain, libidinal power can be rerouted by the ascetic ideal and annihilated by suicide.

7. The human brain is prey to memes, which in their most potent forms cash out codes instructing how organisms are to be organized in supra-organismal power structures. Social grouping trades security for information pooling and excess libidinal power. Genes are paid off and kept quiet: they replicate and look after their own in the form of families. Societal structures siphon off energy flow in accordance with the imperatives issued by the intersection of genes and memes: patriarchy is programmed both by primate genetics and religious memes. Above the information concerning resources and potential danger there are sacred infosystems which claim to have obtained accurate information about reality through revelation.

Instinctive distrust of, and hostility towards, distantly related representatives of the genome is expressed in family and tribal feuds and is intensified through memes which colonise in the Name of God, which view the world through the crude lenses of class and race. Libido is channeled from the libidinal rage of the feud into far-ranging slave raids and military campaigns justified and advocated by memes whose information is mostly unquestioned and whose instructions are followed to the letter in ferocious, arrogant rapacity. The enemy, whether Aztec, Jew, African or kulak are seen as members of another species - a process of dehumanization which reduces them to vermin to be annihilated or commodities to be exploited for their energy. Here decision-making still runs from genes wielding tight control over their expression as memes.

8. After the emergence of food production and sedentary life running on excess, there are two basic economic systems: despotism and capitalism, both of which can vary massively within themselves and both of which can incorporate elements from each other, so despotic capitalism (e.g. fascism) is possible, as is capitalist despotism (e.g. late 19th/early 20th century European Imperialism). However, neither system can be reduced to one of its manifestations: memes furnish political shape. Capitalism and Imperialism are not the same things, but they can be put together in an assemblage.

Despotism reaches an extreme form in medieval feudalism, French absolutism and Russian autocracy: the despot asserts and maintains authority through a divinely ordained hierarchical power structure; owning, monopolizing and granting resources, land and labor. Here a despotic head or a minority of privileged slaves makes the decisions. Decisions come down as commandments and five-year plans: there is no loop. The thinking brain is violently excluded from the process. Texts are guarded by

a priesthood immune to their poisonous or monumentally boring content; dogma and historical necessity block critique or exploration. The State thinks for you. Libidinal frustration is channeled into war.

Capitalism reaches an extreme form in societies shaped by the *faissez-faire* meme, arising from the observation that the system works best when left to its own devices. The antecedents of modern democracies had the blood of slavery and colonialism all over their hands, but the meme gradually evolved a respect for individual thinking brains as part of its code. The concept of what an individual thinking brain is also subject to an expansive and inclusive adaptive process (the abolition of slavery, universal suffrage, civil rights, decolonialisation, AI). Capitalism on the leash of *laissez-faire* democracy fosters decision-making, whether on the level of consumer choice (who you trade with), on the level of self-medication and bioengineering, parliamentary elections, the right to dissent, freedom of conscience.... The thinking brain can choose to engage or to slip into apathy. Information becomes the main commodity, transported on *globo-libido* flows. The priesthood has gone. Academic, political and media authority is challenged daily in the blogworld - you can believe who and what you want and say whatever the hell you like (the aggression of the blog comment threads - a relentless outpouring of emotion onto the net). The more technologically sophisticated the meme system and the economical system become, the more detached the thinking brain becomes from gene imperatives: sex change, brain implants, cyborgs... maybe ultimately the choice whether to live forever or not.

9. Memes, like genes, are involved in arms races. As *laissez-faire* Capitalism evolves more abstract, inorganic *techo-memes* it is on a flight away from the biological, it is attacked by memes that seek to drag the brain back into crude codes and libidinal mismanagement. So we have *memewar*.

Sd: isn't this explosive agency?

It's A Whole New Web

And this time around it will be built by you

businessweek.com/print/magazine/content/05_39/b3952401.htm?chan=gl

Nick Land: Viz sd's last, this seems very pertinent:

www.techcentralstation.com/092005B.html

northanger: nick - the totalitarian aspect? is that what you're looking at?

nick - i mean, i can see how an OS can be "totalitarian".

Nick Land: "As laissez-faire Capitalism evolves more abstract, inorganic techno-memes it is on a flight away from the biological, it is attacked by memes that seek to drag the brain back into crude codes and libidinal mismanagement ..."

sd: 'Velvet Revolutions and the Logic of Terrorism' seems to me to be basic common sense. The weird thing here:

1. it is staggering this common sense is not more commonplace.
2. it is utterly predictable and typical that this common sense is not more commonplace.

Can this be explained by any other concept than that of meme virulence?

The absolute idiocy of anti-capitalist blogging.

Nick Land: sd - memes pushing pleistocene restoration (despotism from time immemorial to Islamarxism) clearly latch onto hard-wired 'intuitions' that just 'feel right' - Anticapitalism is all about feeling, which is why students, hysteria and spluttering indignation are so prevalent within it

sd: yup. but the idiocy of anticapitalist blogging is not just in its content - as a strategy it's ludicrous. I'm searching for an analogy, and I've only got crap ones, but maybe it's like a luddite who goes into factories and works overtime, polishing and repairing machines, fuming about the machines under their breath; or it's like an animal that curses and takes swipes at oxygen. [told you they were crap]

Nick Land: I've heard the argument made that because blogging isn't profitable it's inherently anticapitalist (don't laugh) - like birdwatching i guess :)

"As laissez-faire Capitalism evolves more abstract, inorganic techno-memes it is on a flight away from the biological, it is attacked by memes that seek to drag the brain back into crude codes and libidinal mismanagement ..."

sd: *I've heard the argument made that because blogging isn't profitable it's inherently anticapitalist ignoring Capitalism as a motor for runaway technodevelopment for a while...*

1. How do anticapitalist bloggers view their computers and hard drives? Would they share them with complete strangers? To what extent would they accept the

collectivisation of their machinery and data? To the point where private property is entirely abolished an even e-mails become property of the state? In true communism, what would 'your inbox' mean?

2. In order to maintain a blog, you need time, technology and electricity. Free time comes from abundance and money. Communism has amply demonstrated that humans have no motivation to produce an abundance if they are deprived of private ownership - they are biologically programmed to look after their families. Attempts to reprogram this through 'cultural' revolutions have led to disaster. Capital produces runaway excess with the carrot of private property. Blogging is possible (partly?mainly?) because it is not that difficult to make a living in countries which have achieved a certain level of economic development. The system can tolerate people not working, or organising their time and energy so they work minimally. It's a question of choice (how rich do you want to be?) and adaptation (the future is full of entrepreneurs, even academic/intellectual entrepreneurs).

3. Islamarxism is a mutant meme crossing two violently prudish memes which excel at censorship and imposing primitive media forms and content. Anyone who has been to Cuba will have witnessed Castro's interminable speeches. The Taliban banned TV. Do anticapitalists really imagine they would be permitted to maintain their blogs in an Islamarxist state? [probably not, because then the anticapitalist bloggers no doubt envision themselves as the new philosopher kings] At the moment, there is no medium more antithetical to Islamarxism than the blog.

4. Blogging is, at the end of the day, talking - talking freely. Would anticapitalist bloggers describe talking as anticapitalist? It's just a medium.

northanger: *As laissez-faire Capitalism evolves more abstract, inorganic techno-memes it is on a flight away from the biological, it is attacked by memes that seek to drag the brain back into crude codes and libidinal mismanagement ...*

absolutely. is post traumatic stress disorder a meme?

deprived of private ownership

?. it still kinda works tho.

Nick Land: northanger - good point (like PEST (Post-Election Selection Trauma)) - guess it feeds / attracts certain meme-complexes

sd - but none of these bedsit commies believe it's going to happen, so they're relieved of all responsibility to examine the coherence of their programmes ('we just do critique dude')

oppositional fashionistas - there's nothing to argue with

sd: but some of them clearly have brains and an amazing ability to process current affairs at lightning speed (although they ONLY seem to process current affairs, through the same old machinery, of course).

northanger: nick - so you agree with the coherence theory of truth. you must also believe culture is coherent. think the problem with hurricane ophelia was a lack of steering coherence — lets all ignore dis coherence, even when it stalls & dumps a ton of water on us. makes a lot of sense.

maybe dis coherence is a feature of singularities.

Nick Land: northanger - more like coherence theory of policy. But it isn't just the incoherence, it's the total lack of seriousness - green hair has better arguments

sd - but even with current affairs, the only interest is in some variant of: 'see, everything's going to shit, blame Kapitalism' ("it's called critique")

northanger: nick - you mean like this?

www.iisd.org/economics/pov_sd/policy.asp

btw, aren't you the marxist? i forget. anyway, i'm for total free markets & think its the great evolutionary leveller. kill the red tape, the rich are clearly superior.

Nick Land: red-herring if ever i saw one

"btw, aren't you the marxist?" - over here Marxism has evolved: 'Let's go for a century of rampant capitalism then see where we're at'

- makes sense to me

northanger: lol, of course it is.

RED-HERRING = CANNIBALISM

makes sense to me too. tell everybody, o wise one, why it makes sense.

"it's the total lack of seriousness"

laugh & the whole world [fill in the blank]

you know that jetblue pilot who landed the plane spot on yesterday? they say he was totally relaxed.

"crank a hard cutback as you hit the wall. There's a screaming bottom (yield) curve, so watch out. Remember: rip it, roll it, and punch it." —squirt

Hi-Tech Finance

CCRU-Shanghai (September 22, 2005)

Simple software-based traders have been around for many years, but they are now becoming far more sophisticated, and make trades worth tens of billions of dollars, euros and pounds every day. They are proving so successful that in the equity markets, where they are used to buy and sell shares, they already appear to be outperforming their human counterparts ...

“The march of the robo-traders”¹²⁵ - The Economist, Sept. 17-23

Comments: Hi-Tech Finance

sd: interesting stuff at the end of the article:

"The trouble is, he [Dr Cliff] says, that the secrecy that surrounds these algorithms means that there is no way to evaluate how various trading systems might interact with each other. It is an intractable problem."

"Some day, advances in natural language processing and statistical analysis might lead to robo-traders capable of analysing news feeds, deciding which shares to buy and sell, and devising their own strategies. Given that companies are very keen to patent their algorithms, it is quite possible that just one company could then emerge as the victor in this algorithmic arms race...It is possible that you could have an unfair advantage - and there would be nothing that governments could do about it." [Mr Hooper]

"...it is doubtful that there will turn out to be a single trading algorithm that outperforms all the others. Yet perhaps such a suggestion should not come as a surprise. For whenever robots are being discussed - even if they are merely the software-based, share trading variety - the idea that humans will lose their jobs and the robots will take over the world always seems to be lurking in the background."

1."how various trading systems might interact with each other" - alliances and war. Algorithms playing Tit for Tat and developing Evolutionarily Stable Strategies (ESS):

¹²⁵ <https://www.economist.com/technology-quarterly/2005/09/15/the-march-of-the-robo-traders>

"Now suppose Tit for Tat plays against a strategy called Naive Prober... It is basically identical to Tit for Tat except that, once in a while, say on a random one in ten moves, it throws in a gratuitous defection and claims the high Temptation score... A long and mutually profitable sequence of cooperation seems set to run its course, with a comfortable 100 per cent benchmark score for both players. But suddenly, without warning, say on the eighth move, Naive Prober defects. Tit for Tat, of course, has played COOPERATE on this move, and so is landed the Sucker's payoff for 0 points. Naive Prober appears to have done well, since it obtained 5 points from that move. But on the next move Tit for Tat 'retaliates'. It plays DEFECT, simply following its rule of imitating the opponent's move. So it now collects the sucker's payoff of 0 points, while Tit for Tat gets the high score of 5. In the next move, Naive Prober - rather unjustly one might think - 'retaliates' against Tit for Tat's defection. And so the alternation continues...

...Now consider another strategy, called Remorseful Prober. Remorseful Prober is like Naive Prober, except that it takes active steps to break out of runs of alternating recrimination. To do this it needs a slightly longer 'memory' than either Tit for Tat or Naive Prober. Remorseful Prober remembers whether it has just spontaneously defected, and whether the result was prompt retaliation. If so, it 'remorsefully' allows its opponent 'one free hit' without retaliating. This means that runs of mutual recrimination are nipped in the bud. If you now work through an imaginary game between Remorseful Prober and Tit for Tat, you'll find that the runs of would-be mutual retaliation are promptly scotched. Most of the game is spent in mutual cooperation, with both players enjoying the consequent generous score. Remorseful Prober does better against Tit for Tat than Naive Prober does, though not as well as Tit for Tat does against itself."

Through developing strategies along these lines, robo-traders would equip themselves with a basic code of practice.

2. "robo-traders capable of analysing news feeds, deciding which shares to buy and sell, and devising their own strategies" - this would be a step towards strong AI and the Turing Test. Dennet points out that the Turing Test is so strong because it requires AI to know about human culture and follow current affairs. Self-taught traders who gain advantage through analysis of the news would put selection pressure on each other and trigger the Baldwin effect.

3. "the idea that humans will lose their jobs and the robots will take over the world always seems to be lurking in the background" - the article seems to suggest that the

human response to this threat will be to cling on via investing in regulation. Regulation as a form of doomed sabotage?

... the Tit for Tat stuff is from Dawkins, *The Selfish Gene*, Chapter 12 'Nice Guys Finish First'

Nick Land: A few other points:

1) Often when discussing 'AI' (meant loosely here as any kind of emerging electronic intelligence) a problem of motivation is raised: What would machines have any interest in doing? (Cognitive capability without desire.) But this example suggests the practical embedding of such systems will hypermotivate them from the beginning, their purposes are co-original with their capabilities.

2) A large part of electronic trading strategy is dissimulation, camouflaging trades so as not to turn the market against oneself, for instance when selling "the aim... is to try to unload the shares in such a way that no one notices what you are doing." In practical situations, AI is designed to hide itself, to appear unintelligent or accidental. It is conditioned to arise stealthily, with Turing Test type ID procedures constituting defensive mechanisms, rather than merely being scientific evaluation procedures. "Even though it is impossible for an exchange to tell whether a person or an algorithm is issuing trades, it is possible to monitor the rate of trading to tell whether algorithmic trading is going on"

3) Business cycles are still fairly mysterious, but seem to have an obvious psychological component (to do with excessive fear/greed reactions at the extremes of the wave, akin to cybernetic phenomenon of 'hunting' (oscillation around equilibrium)) and also - especially in longer waves - a technological / innovation component. Robo-trading thus seems certain to fuse with the basic capitalist metabolism by adjusting irrational psychological reactions and 'immanentizing' technological progression to the 'subjective' aspect of the market (techno no longer just something traded, more or less excitedly, but 'someone' doing the trading with smoothed escalation of doped-silicon affect ...)

sd: Nick - this psychological component is very interesting - never really given it all that much thought. This obviously links with your comments re self-fulfilling prophecy & consumer confidence a while back.

I wonder how this plugs into Deleuze's picture of the stock market as mad/delirious rationality. If robo-traders begin 'adjusting irrational psychological reactions', does

that help the stock market develop its delirious rationality in a immanentized fashion?

irrationality hinders delirium?

Capitalism: A Very Special Delirium

Underneath all reason lies delirium, drift. Everything is rational in capitalism, except capital or capitalism itself. The stock market is certainly rational; one can understand it, study it, the capitalists know how to use it, and yet it is completely delirious, it's mad. It is in this sense that we say: the rational is always the rationality of an irrational. Something that hasn't been adequately discussed about Marx's *Capital* is the extent to which he is fascinated by capitalists mechanisms, precisely because the system is demented, yet works very well at the same time. ..

... Capital, or money, is at such a level of insanity that psychiatry has but one clinical equivalent: the terminal stage. It is too complicated to describe here, but one detail should be mentioned. In other societies, there is exploitation, there are also scandals and secrets, but that is part of the "code", there are even explicitly secret codes. With capitalism, it is very different: nothing is secret, at least in principle and according to the code (this is why capitalism is "democratic" and can "publicize" itself, even in a juridical sense). ... A very special delirium inherent to the regime of money....

Instead, one talks of "ideology". But ideology has no importance whatsoever: what matters is not ideology, not even the "economic-ideological" distinction or opposition, but the 'organisation of power'. Because organization of power-- that is, the manner in which desire is already in the economic, in which libido invests the economic -- haunts the economic and nourishes political forms of repression.

www.generation-online.org/p/fpdeleuze7.htm

or even 'an immanentized fashion.'

Nick Land: One of the (very many) fascinating aspects of capitalism is its fabrication of artificial (often 'collective' (even 'kollektiv')) identities - companies, interest groups, 'anyone' who can be the subject of a contract or a legal agent ... evidently markets have their own relatively coherent subjective identities (and even a neurally instatiated 'natural' subject/ego is in fact multiple, coalescent and - thanks northanger - 'discoherent') - hence 'market psychology'

It is no less accurate to describe a market as bullish/bearish than to describe an individual as manic/depressive - after all, both are constellations of relatively coherent information-sensitive behaviour with at least partially-determinable motivations

This suggests the 'robo-trading' phenomenon is already a zone of cyborgian hybrid intelligence, in advance of whatever neurosurgical 'brain-chip' species modifications are coming down the pipe. Market psychology already factors in human and silicon components, co-functionally integrated to such a degree that analyzing out the contribution of each would now be an extremely demanding (if indeed possible) investigative exercise

PS. Deleuze quote seems to play off some very basic Marxoid theoretical errors - i.e. returns to capital defined as exploitation, making saving sociologically impossible - which can be quite straightforwardly addressed, either later on this thread or (in a couple of weeks) as a post

sd: I was really trying to reawaken any delirial dogs that might be sleeping with the Deleuze quote.

Just how 'mad' would AI that approaches the Turing Test need to be? Stealth through schizoid duplicity/multiplicity.

How relevant is this now? www.ubu.com/sound/artaud.html

Nick Land: Think there's room for interesting discussion about what it would mean to describe a social system as 'mad' - isn't madness a cognitive dysfunction defined in relation to 'organically' specified purposes (survival and reproduction)? Or at least sociologically, in terms of integration and consensus?

Situation with AI also intriguing - departure from specified functions would be the most elementary definition.

Anyway, not trying to bash Deleuze especially - assuming on the contrary that he's being duplicitous/multiple - after all, schizophrenia = dementia praecox

northanger: only hyperstition can take a perfectly rational bull/bear market & turn them into manic/depressive wusses.

Nick Land: northanger - ever wondered whether your relation to capitalism exhibits a little bipolar instability? now bear/bull markets are 'perfectly rational' - i thought they were stomping on poor people (without Economist subscriptions)?

northanger: how can you have a relationship with capitalism?

Nick Land: do you have a problem dating real-abstract singularities? (never had you figured for a prude)

northanger: bait & switch so early in the morning. yawn.

sd: Nick - "what it would mean to describe a social system as 'mad'"

Of course it will depend on who is doing the labelling. Robo-traders who developed rational-delirial strategies that made no sense to humans, but which worked anyway, would no doubt be described as 'mad' by humans. Any logic beyond human comprehension would be firmly allied to the realm of madness from the human point of view (e.g. eccentric logic pioneers, such as Godel).

Strategies which also seem counter-intuitive could be also be labelled 'mad', or least extremely 'risky'.

The Economist article: "human traders still have the edge over heartless robo-trading algorithms" when it comes to taking risks. Risky 'alpha-seeking' strategies require experience, market knowledge, the ability to keep up with the news and a developed decision-making capacity. As yet, because they are in their infancy, robo-traders fulfill none of these requirements. When/if they do, robo-traders have built-in motivation to develop apparent risk-taking (as well as deceit and deceit detection) to a fine art - what looks like risk-taking could actually be a risk-free buy based on complex calculation. Their success will guarantee their survival/replication - so theoretically they will be given a free rein to be counter-intuitive and loopy as they 'like', as long as they come up with the goods. Apparent madness will be tolerated if it is profitable. This would be subjectivity with internal coherence (seeming utterly incoherent from outside).

As for "departure from specified functions", maybe this could come from a) robo-traders being to a large extent left to their own devices, because of an impeccable track record, or b) their skills being hi-jacked for application elsewhere.

Nick Land: sd - the games theoretic grid underlying your analysis is very productive in this context. Thomas Schelling had a great line on this, describing the optimum MAD (as in Mutual Assured Destruction) strategy with the analogy of 'chicken' - two cars driving towards each other at high speed, the one to swerve loses. His suggestion, make sure the other driver sees you consume a pint of bourbon before the game and

when you hit max acceleration, throw the steering wheel out of the window. Some have suggested Reagan took this to heart in his Cold war strategy - hence conspicuous references to Book of Revelation etc. Of course, problems arise if both players adopt the same strategy ...

Know i've drifted OT a little ...

sd: what is the current definition of OT on this site!

shamming derangement is very OT, with regard to AI:

"To my knowledge the only serious and interesting attempt by any program designer to win even a severely modified Turing test has been Kenneth Colby's. Colby is a psychiatrist and intelligence artificer at UCLA. He has a program called PARRY, which is a computer simulation of a paranoid patient who has delusions about the Mafia being out to get him.

As you do with other conversational programs, you interact with it by sitting at a terminal and typing questions and answers back and forth. A number of years ago, Colby put PARRY to a very restricted test. He had genuine psychiatrists interview PARRY. He did not suggest to them that they might be talking or typing to a computer; rather, he made up some plausible story about why they were communicating with a real, live patient by teletype.

He also had the psychiatrists interview real, human paranoids via teletype. Then he took a PARRY transcript, inserted it in a group of teletype transcripts from real patients, gave them to another group of experts--more psychiatrists--and said, "One of these was a conversation with a computer. Can you figure out which one it was?" They couldn't. They didn't do better than chance.

Colby presented this with some huzzah, but critics scoffed at the suggestion that this was a legitimate Turing test. My favorite commentary on it was Joseph Weizenbaum's; in a letter to the Communications of the Association of Computing Machinery, he said that, inspired by Colby, he had designed an even better program, which passed the same test.⁶ His also had the virtue of being a very inexpensive program, in these times of tight money. In fact you didn't even need a computer for it. All you needed was an electric typewriter. His program modeled infantile autism.

And the transcripts--you type in your questions, and the thing just sits there and hums--cannot be distinguished by experts from transcripts of real conversations with

infantile autistic patients. What was wrong with Colby's test, of course, was that the unsuspecting interviewers had no motivation at all to try out any of the sorts of questions that easily would have unmasked PARRY.

Colby was undaunted, and after his team had improved PARRY, he put it to a much more severe test--a surprisingly severe test. This time, the interviewers--again psychiatrists, were given the task at the outset of telling the computer from the real patient. They were set up in a classic Turing machine test: the patient in one room, the computer PARRY in the other room, with the judges conducting interviews with both of them (on successive days). The judges' task was to find out which one was the computer and which one was the real patient. Amazingly, they didn't do much better, which leads some people to say, "Well, that just confirms my impression of the intelligence of psychiatrists!"

But more seriously now, was this an honest-to-goodness Turing test? Were there tacit restrictions on the lines of questioning of the judges? Like the geologists interacting with LUNAR, the psychiatrists' professional preoccupations and habits kept them from asking the sorts of unlikely questions that would have easily unmasked PARRY. After all, they realized that since one of the contestants was a real, live paranoid person, medical ethics virtually forbade them from toying with, upsetting, or attempting to confuse their interlocutors."

sd: an example of a "departure from specified functions" - a military application of Traderbots (sponsored by the U.S. Army Research Laboratory, under contract Robotics Collaborative Technology Alliance)

excerpts:

Complex Task Allocation For Multiple Robots

Robert Zlot and Anthony Stentz

www.cs.cmu.edu/~robz/publications/zsICRA05.pdf

By generalizing the definition of a task and developing appropriate mechanisms to handle these new task descriptions, we create a marketplace capable of distributing complex tasks among a robot team in an efficient manner.

A. Market-based Task Allocation for Multiple Robots

Market-based approaches to multirobot coordination treat a team of robots as participants in a virtual economy. Essentially, robots are contracted to complete required tasks in exchange for payment. Each robot has well-defined cost and revenue functions that can be used to compute the expected gains and losses for performing tasks. Since the participants are self-interested, they work to maximize their individual profits. Costs and revenues are designed so that individual optimizations lead to globally efficient solutions.

Our approach can be considered an extension of TraderBots. In TraderBots, agents called traders, one running on each robot (RoboTraders), and possibly others representing human operators (OpTraders), computers, sensors, or other resources – participate in a market, trading tasks via auctions. When an auction is announced, participants compute bids based on their expected profit for the tasks on offer, and the robots that can perform the tasks for the best price are awarded the resulting contracts.

Since only profitable trades occur, each auction acts to improve the global solution. Each RoboTrader maintains a schedule of tasks to which it has committed, and can evaluate new tasks by computing the marginal costs of adding them to its schedule. Traders can take on the roles of auctioneer and bidder dynamically, thus facilitating peer-to-peer trades amongst the team. This implies that tasks can be reallocated, allowing for solution improvements over initial assignments and for adapting the task assignments as new information is ascertained. Having no single auctioneer also avoids the presence of a central agent becoming a critical point of failure for the system.

C. Complex Task Markets

In order to effectively incorporate complex tasks, multirobot task markets can be extended to include task tree auctions. Instead of trading contracts for simple tasks, trees of tasks are offered in auctions. Participants can bid on any combination of nodes in the tree, and the auctioneer can choose to award several nodes from the same tree to multiple winning bidders. The winners of the auction are responsible to the seller and must ensure that the tasks are completed before receiving payment (either by executing the task themselves, or by subcontracting parts of the task to other teammates in future negotiations). Because bids can be on tasks at multiple levels of abstraction, task tree markets have the flexibility to allocate tasks at whichever granularity of abstraction is most appropriate.

One benefit of a task tree market is that task tree structures allow robots to express their valuations for both tasks and plans. Since robots have different states, information, resources and capabilities, they may prefer different decompositions for the same task. The calculation of these preferences is a recursive process.

The bidding language is a specification of which types of bids participants are permitted to submit to an auctioneer. There is inherently a tradeoff between the expressiveness and the simplicity of the bidding language. In the context of task trees, the bidding language can range from allowing the bidders to bid on only one node in the tree, to bidding on any arbitrary set of nodes in the tree. The one-node bidding language is very simple, in that it is easy to specify and the auction can be cleared optimally in polynomial time: the auctioneer does not have to consider which bid to award to each bidder – each either wins the one task bid on or not. However this language is not very expressive, as the bidders are filtering out most of their preference information. As a result, the possible solution space is limited and the resulting allocations are inefficient. The any-nodes bidding language is far more expressive, but it introduces a more complex auction clearing problem.

IV. EXPERIMENTS

We have tested our approach on an area reconnaissance application. In this scenario, a team of robots is tasked with a reconnaissance mission which involves scouting a number of specified named areas of interest (NAI). To cover each NAI the robots select and navigate to a set of observation points (OP) and view the area with range-limited 360° line of-sight sensors. Because the NAIs may contain enemies, the robots cannot enter them without incurring a large cost.

The mission is achieved when the robots visit a sufficient number of OPs to cover a predefined fraction (75%) of each area.

D. Simulation Experiments

A series of experiments was conducted to evaluate the effectiveness of task tree trading for the area reconnaissance scenario, using a multirobot simulator with a graphical display. In each test, a number of robots and NAIs are randomly placed within a 200x200-cell grid containing multiple obstacles. The terrain map was constructed from real-world measurements by an autonomous helicopter equipped with a downward looking scanning laser rangefinder⁴. The NAIs are non-

overlapping, randomly sized rectangles with edge lengths drawn uniformly at random in the range of 15 to 30 grid cells.

SWORDS - First Robots To Break Asimov's First Law Of Robotics (2005)

www.technovelgy.com/ct/Science-Fiction-News.asp?NewsNum=320

Next month, the US Army will be putting robot soldiers in the field in Iraq. The SWORDS (Special Weapons Observation Reconnaissance Detection Systems) robots are fully armed; when the human operator verifies that a suitable target is within sight, it fires. They are equipped with either the M249 (which fires 5.56-millimeter rounds at 750 rounds per minute) or the M240 (which fires 7.62-millimeter rounds at up to 1,000 per minute). These robots are poised to be the first working robots that are actually designed to break Isaac Asimov's First Law of Robotics:

"A robot may not injure a human being, or through inaction, allow a human being to come to harm."

Autonomous mechanized combatants would revolutionize military strategy (2003)

www.afcea.org/signal/articles/anmviewer.asp?a=64&z=26

Because machines are fearless, they bring a whole different level of capability to the battlefield, he adds. An enemy artillery barrage would have little impact on a group of TACs because the machines would not duck, run or hide but rather would continue advancing and attacking an enemy. "The first thing humans do as soon as artillery starts firing is they hunker down, wait for the artillery to pass and hope they survive. Machines don't care about that. When humans are out there, if one of their comrades gets injured, of course the first thing they want to do is remove that human from danger. It takes perhaps four or five people out of combat because they want to save their comrade's life. Machines don't care when another machine is hit," Johnson states.

Robotics to play major role in future warfighting (2003)

www.jfcom.mil/newslink/storyarchive/2003/pa072903.htm

A study by USJFCOM's Project Alpha is currently testing the viability of what used to be a fanciful notion but is now bordering on reality -- robotic warfare. By as early as 2005, autonomous robots on the battlefield might not be just a notion, but a norm.

"We believe that other countries or groups will pursue robotics," Richards said. "We can be at the vanguard, or we can lag behind and some day have to oppose a lethal robotic force. Better to be in the lead."

Nick Land: from both last major comments its quite obvious (US) military robotics will be a huge driver of robust (initially) semi-autonomous practically embedded AI. Any guesses on when we can expect first Robotic Warfare divisions to appear? Hard to see what - other than budgetary constraints and PR issues - is stopping the Pentagon moving fast forward on this right now ...

sd: Terminator terror inscribed deep into the human hard drive.

northanger: responding to both your comments--

cache.technologyreview.com/articles/05/01/ap/ap_3012505.asp?p=1

As one Marine fresh out of boot camp told Quinn upon seeing the robot: "This is my invisibility cloak." Quinn said it was a "bootstrap development process" to convert a Talon robot, which has been in military service since 2000, from its main mission -- defusing roadside bombs in Iraq_ into the gunslinging SWORDS. It was a joint development process between the Army and Foster-Miller, a robotics firm bought in November by QinetiQ Group PLC, which is a partnership between the British Ministry of Defence and the Washington holding company The Carlyle Group. Army officials and employees of the robotics firm heard from soldiers "who said 'My brothers are being killed out here. We love the EOD (explosive ordnance disposal), but let's put some weapons on it,'" said Quinn. Working with soldiers and engineers at Picatinny Arsenal in New Jersey, it took just six months and only about \$2 million (euro1.5 million) in development money to outfit a Talon with weapons, according to Quinn and Anthony Sebasto, a technology manager at Picatinny.

www.usamnesia.com/2005/02/updated-laws-of-robotics-kill-kill.html

It isn't that I have a Terminator inspired worries of a robot take over ... But with the "Gameboy" type controller and video-game like interface, this is one more small measure to eliminate contact with the enemy, bypassing what I (perhaps naively)

believe to be a natural empathetic reaction to other people. I worry that SWORDS may not only reduce casualties, but also compromise human discernment.

i'm working a list of companies developing robotic weapons.

ps. which is totally OT for this Hi-Tech Finance post.

Hard to see what - other than budgetary constraints and PR issues - is stopping the Pentagon moving fast forward on this right now

doesn't look like there's any budgetary constraints. PR, what PR?

Foster-Miller TALON Robot Award Increased to \$257 Million (9/19/2005)

[www.foster-miller.com/pressreleases/\\$257_million_for_talons.htm](http://www.foster-miller.com/pressreleases/$257_million_for_talons.htm)

Foster-Miller, Inc., announced today that it has been awarded a \$133 million contract for TALON™ robot spare parts and service, bringing its total current award for TALON™ EOD (explosive ordnance disposal) robots to \$257 million through 2012. This contract represents the third component of a three-part award that began in September 2002 with a \$27 million contract for TALON™ EOD robots from the Man Transportable Robotic System (MTRS) program managed for all service branches by the Naval Surface Warfare Center (NAVSEA) in Indian Head, MD.

Two weeks ago, NAVSEA awarded Foster-Miller an additional \$96 million to increase the number of TALON™ EOD robots to up to 1200 over the next seven years, bringing the company's total award to \$124 million, then the largest single order in its history.

Foster-Miller Awarded \$96 Million Contract for Additional TALON Robots (9/9/2005)

[www.foster-miller.com/pressreleases/\\$96_million_for_more_talons.htm](http://www.foster-miller.com/pressreleases/$96_million_for_more_talons.htm)

Foster-Miller, Inc., announced today that it has received its largest US military order to date for ground robots. The multi-year contract increased from \$27.5 million for 250 robots to \$124 million for up to 1200 TALON™ Explosive Ordnance Disposal (EOD) robots. This order falls under the Man Transportable Robotic System program (MTRS) that is managed by the Naval Surface Warfare Center in Indian Head, MD. TALON™ robots will be delivered to Air Force, Army, Marine Corps and Navy EOD units around the world.

TALON™ robots are powerful, durable, lightweight tracked vehicles that are widely used for explosive ordnance disposal, reconnaissance, communications, sensing, security, defense and rescue. They are man-portable and have all-weather, day/night and amphibious capabilities and can navigate virtually any terrain.

Foster-Miller is the largest provider of robots for EOD work in Iraq and Afghanistan with more than 250 TALON™ robots deployed in theater. These TALON™ robots have successfully completed more than 50,000 EOD missions, and have rendered safe thousands of Improvised Explosive Devices (IEDs), increasing security and safety in Iraq and Afghanistan.

Nick Land: northanger - that's chump change (under US\$1 billion)

US\$500 billion over a decade probably required for serious robot revolutionization of major military formations - my guess is it will just keep trickling in (like now) until WWIV gets cranked up enough to stimulate terminator-type escalation - if it becomes necessary for US to occupy for counter-insurgency purposes a demographically significant Islamic country (e.g. Pakistan, perhaps even Iran) the stress put on American infantry inserted into an ocean of jihadis should massively pump-up the roboticization of the war-machine - we're probably waiting for the first terrorist nuke to go off before the threshold is definitively crossed (which would also neatly eliminate the PR problem)

northanger: land, air & sea. ok you've got land, here's air.

X-45 Unmanned Combat Air Vehicle (UCAV)

www.fas.org/man/dod-101/sys/ac/ucav.htm

The objective of the joint DARPA/Air Force Unmanned Combat Air Vehicle (UCAV) Advanced Technology Demonstration (ATD) program is to demonstrate the technical feasibility for a UCAV system to effectively and affordably prosecute 21st century lethal strike missions within the emerging global command and control architecture. The operational UCAV system is envisioned as a force enabler that will conduct Suppression of Enemy Air Defense (SEAD) and strike missions in support of post-2010 manned strike packages. This SEAD/Strike mission will be the first instantiation of an UCAV vision that will evolve into a broader range of combat missions as the concept and technologies mature, and the UCAV affordability potential is realized.

The Unmanned Combat Air Vehicle vision is an affordable weapon system that expands tactical mission options for revolutionary new air power as an integrated part of a system of systems solution. The UCAV weapon system will exploit the design and operational freedoms of relocating the pilot outside of the vehicle to enable a new paradigm in aircraft affordability while maintaining the rationale, judgment, and moral qualities of the human operator. In our vision, this weapon system will require minimal maintenance, can be stored for extended periods of time, and is capable of dynamic mission control while engaging multiple targets in a single mission under minimal human supervision. The UCAV will conduct missions from ordinary airfields as part of an integrated force package complementary to manned tactical and support assets. UCAV controllers will observe rules of engagement and make the critical decisions to use or refrain from using force.

Boeing X-45A Unmanned Combat Air Vehicle Begins Flight Testing

{image}

www.boeing.com/news/releases/2002/photorelease/q2/pr_020523m_2.html

The Boeing X-45A Unmanned Combat Air Vehicle technology demonstrator aircraft, developed for the U.S. Defense Advanced Research Projects Agency and the U.S. Air Force, made its first flight May 22 at the Dryden Flight Research Center on Edwards Air Force Base in California.

www.boeing.com/news/releases/2005/q2/nr_050614t.html

Under a Defense Advanced Research Projects Agency contract, Boeing is currently building three larger X-45C aircraft capable of cruising at 0.85 Mach at 40,000 feet, with a 4,500-pound payload. The 'C' version will have an increased mission radius of 1,300 nautical miles. Future mission scenarios could evolve with unmanned aircraft complementing manned strike aircraft. Unmanned aircraft would be capable of eliminating preplanned targets as well as previously unknown threats, clearing the path for manned aircraft and thus saving lives and assuring mission success.

A unit of The Boeing Company, Boeing Integrated Defense Systems is one of the world's largest space and defense businesses. Headquartered in St. Louis, Boeing Integrated Defense Systems is a \$30.5 billion business. It provides network-centric system solutions to its global military, government, and commercial customers. It is a leading provider of intelligence, surveillance and reconnaissance systems; the world's largest military aircraft manufacturer; the world's largest satellite manufacturer and a

leading provider of space-based communications; the primary systems integrator for U.S. missile defense; NASA's largest contractor; and a global leader in sustainment solutions and launch services.

Joint Unmanned Combat Air Systems (J-UCAS)

www.darpa.mil/j-ucas/News_Room/Releases/X-45A_Completes_Test_Flight.pdf

The J-UCAS program is a joint Defense Advanced Research Projects Agency/U.S. Air Force/U.S. Navy effort to demonstrate the technical feasibility, military utility, and the operational value of a networked system of highperformance, weaponized, unmanned air vehicles to effectively and affordably execute combat missions. The JUCAS Common Operating System will allow unmanned aircraft systems to intra-operate with each other and with the Global Information Grid. The J-UCAS system-of-systems concept plans to demonstrate the military utility and the operational value of airpower in the 21st century combat environment. More information on the J-UCAS program can be found at www.darpa.mil/j-ucas.

The X-45A team has been making history in the desert for several years. Under the careful oversight of NASA's Dryden Flight Research Center, Edwards AFB, Calif., and with the Air Force Flight Test Center's continuing assistance, the J-UCAS team has risen to the challenge of achieving the Defense Advanced Research Project Agency's very aggressive goals for these first unmanned combat air vehicle (UCAV) demonstrators.

"This demonstration concludes an exciting and precedent-setting time. The J-UCAS program has made significant strides in developing an unmanned air system that is changing the nature of air combat," said Dr. Michael S. Francis, director of the J-UCAS program. "The pioneering efforts of the X-45A program have been critical in the quest to create a capability that

is effective even in the most dangerous, denied environments."

Nick Land: think robot infantry the cutting-edge - look at the tactical context. US Air/sea superiority so overwhelming that benefits of roboticization relatively abstract, also major conflict in these dimensions less probable (unless US/PRC really screw up in Taiwan Strait, but even if they do combat will be so short and sharp that no protracted learning/development process will take place). UAVs (like Predator drones) undoubtedly important, but their key tactical usage is infantry support. Most significant domain of robot warfare experimentation will be counter-insurgency

operations, including ambush, armed reconaissance, assassination, covert intelligence gathering, bomb disposal and patrolling.

Hi-tech insurgency suppression should fulfill everyone's fantasies, for the jihadis it's an ability to test Allah's favour in a fight against mechanical djinns from Satan, for the Western left it's a media spectacle of technocapitalist suppression of the victims of neoliberal hegemonism (lots of fat Lockheed contracts), for the right it's an opportunity to pit the science and technology of free and prosperous societies against the totalitarian ardour of enraged romantic barbarians ...

sd: the Foster-Miller site is spooky...

they don't seem to have any vacancies for philosophers or linguists though. you're in with a shot if you're a chemist or metallurgist...

"Hi-tech insurgency suppression should fulfill everyone's fantasies..."

Hollywood has no future in the future.

Perhaps not surprisingly, Foster-Miller is somewhat circumspect when it comes to details about its biomedical program:

www.foster-miller.com/t_biomedical_technology.htm

a bit more info about the TALONS though:

www.foster-miller.com/lemming.htm

www.foster-miller.com/literature/documents/TALON_Brochure.pdf

These people - appliedperception.com - design software to navigate terrain

appliedperception.com/projects_PerceptOR.htm

"During Phase I of the program, our work focused on conducting sensor trade-off studies and developing individual algorithms for the selected sensors that enabled one or more off-road navigation tasks – functions like obstacle detection, foliage penetrability assessment, and terrain and/or vegetation evaluation.

During Phase II, we extended these individual algorithms, as well as developed a framework, called the Density Map, to merge all sensor information into a unified representation of the world."

They have also designed a tractor guidance system which automatically detects crop lines, which is nice.

northanger: don't think you need a terrorist nuke to go off. maybe just a few perfect storms. remember, about \$400M invested in robotics during the 1980s, even though that went bust (Lawrence Aragon called this a "deadly pursuit" due to low margins and low barriers to entry). however, that doesn't mean a robotics knowledge base wasn't created — just couldn't make money. imho, hi-tech finance isn't about spending a lot of money, but making a lot of money in the right market, at the right time with the right resources. factor in dirt-cheap components + defense spending + corporate funding + regional interest, etc, & you have a recipe for a rapid jump-start. remember, the US has a guns & butter economy (ie, no-bid contracts). in a nutshell, greenspan's hike & bush's cash overflow make splendid sense.

news.pghtech.org/teq/teqstory.cfm?id=811

"Defense robotics will be measured in billions"

www.usatoday.com/tech/news/techinnovations/2004-04-08-robotics-surge_x.htm

Technology that lets robots perceive and overcome obstacles has made unparalleled bounds largely because the cost of charge-coupled devices (the core of every camera), microprocessors and varied sensors has fallen away as rapidly as computing power and memory have expanded.

www.bizjournals.com/pittsburgh/stories/2002/06/24/story7.html

“In this post-9/11 climate, the defense business has been a very attractive business ... from a regional perspective ... how can we amass the resources necessary to invest in a future role in a business like that?”

“Robotics had just kind of been bumping along here,” acknowledges Dennis Thompson, Senior Vice President of Catalyst Connection. “Then comes along Sept. 11 and now a demand for new fighting systems and a bigger defense budget, which has created opportunities. We don’t want to put our soldiers in harm’s way, so robots become a solution for that.”

Nick Land: Foster-Miller: "We engineer ideas into reality through innovation and technology" - hyperstition for the military-industrial complex

northanger: *hyperstition for the military-industrial complex*

www.jfcom.mil

Headquartered in Norfolk, Va., U.S. Joint Forces Command is one of nine unified commands in the Department of Defense.

Among his duties, the commander of USJFCOM oversees the command's roles in transformation, experimentation, joint training, interoperability and force provision as outlined in the Department of Defense's Unified Command Plan.

The Department of Defense appointed U.S. Joint Forces Command as the "transformation laboratory" of the United States military that serves to enhance the unified commanders' capabilities to implement that strategy. We develop concepts, test these concepts through rigorous experimentation, educate joint leaders, train joint forces, and make recommendations on how the Army, Navy, Air Force and Marines can better integrate their warfighting capabilities.

USJFCOM develops future concepts for joint warfighting. Such work must include and strengthen service efforts, draw on the best of industry, and follow the will of the citizens as expressed through Congress.

www.jfcom.mil/about/transform.html

Transformation is the process of changing form, nature or function. Within the United States military, transformation requires changing the form, or structure of our military forces; the nature of our military culture and doctrine supporting those forces; and streamlining our warfighting functions to more effectively meet the complexities of the new threats challenging our nation in the new millennium.

Preparing for this new future will require the U.S. military to think differently and develop the kinds of forces and capabilities that can adapt quickly to new challenges and unexpected circumstances. The U.S. military has a long tradition of experimentation - from the fleet problems of the U.S. Navy in the 1930s that gave birth to the concept of using aircraft carriers to the Army's famous Louisiana Maneuvers of 1941 that developed the doctrine for combined arms air/ground operations.

btw, thought you'd appreciate this nick. a "Mr. Katarincic" is quoted here:

www.bizjournals.com/pittsburgh/stories/2002/06/24/story7.html

KATARINCIC = WHITE WAR = DELTA FORCE = MILITARY

Movement Control Algorithms for Realization of Fault-Tolerant Ad Hoc Robot Networks

icarai.midiacom.uff.br/~anna/01316760.pdf

Autonomous and semi-autonomous mobile multirobot systems require a wireless communication network in order to communicate with each other and collaboratively accomplish a given task. A multihop communications network that is self-forming, self-healing, and self-organizing is ideally suited for such mobile robot systems that exist in unpredictable and constantly changing environments. However, since every node in a multihop (or ad hoc) network is responsible for forwarding packets to other nodes, the failure of a critical node can result in a network partition. Hence, it is ideal to have an ad hoc network configuration that can tolerate temporary failures while allowing recovery. Since movement of the robot nodes is controllable, it is possible to achieve such fault-tolerant configurations by moving a subset of robots to new locations. In this article we propose a few simple algorithms for achieving the baseline graph theoretic metric of tolerance to node failures, namely, biconnectivity. We formulate an optimization problem for the creation of a movement plan while minimizing the total distance moved by the robots. For one-dimensional networks, we show that the problem of achieving a biconnected network topology can be formulated as a linear program; the latter lends itself to an optimal polynomial time solution. For two-dimensional networks the problem is much harder, and we propose efficient heuristic approaches for achieving biconnectivity. We compare the performance of the proposed algorithms with each other with respect to the total distance moved metric using simulations.

Nick Land: what's WHITE WAR?

northansger: reza's stuff.

Nick Land: Jay Katarincic, so Reza's got a hook too ...

Oh, got to check (The Thingy?)

northanger: yes, that thingy. he unposted it here & reposted it at his place.

Jay Katarincic

Allah works in mysterious ways.

Nick Land: Yes, Allah's boys are going to be chewing on some very pissed silicon

Future tense demonstrably misleading

northanger: we know.

AQ 253 = FUTURE TENSE = HEAVEN ON EARTH

oh. just read that PARRY stuff. the real trick involves questioning a human-robot hybrid. and both are paranoid.

Nick Land: ... so what I've learnt from this thread so far: AI is already indistinguishable from paranoid schizophrenia and rigged-up with machine-guns ... seems like Singularity is going to be quite a party

northanger: you're confusing the GAME of singularity with THE SINGULARITY.

Nick Land: Oh. Now feel greatly comforted.

northanger: you should. besides, the game's just vaporware.

Nick Land: Assuming sd must be pretty thrilled about this:

apnews.myway.com/article/20050926/D8CRO2L00.html

(sorry for OT - but we've reached that stage of the thread - any ideas for next topic?)

sd: not very thrilled - Law and Justice are overtly Christian, traditional conservatives: pro tax breaks and state aid for the poor, suspicious of free markets. [The leader, Kaczynski, faces prosecution in Strasbourg for banning a gay pride march in Warsaw - he organized a "March for Normality" afterwards.] Law and Order could remove Balcerowicz's currency controls - potentially disastrous.

The flat tax party is the Civic Platform, the liberal right, with whom Law and Order will have to form a coalition. It'll be unworkable.

Law and Justice ganged up with the two extremist parties, League of Polish Families (ultra-catholic fascists) and Self-Defence (barking mad farmers) to pummel the Civic Platform over their economic policies. The Law and Order Party Political Broadcast that seems to have clinched the election featured the threat of less food on the table and less money for home decoration, if the Civic Platform got in.

Although it's great to see the back of the commies, it's deeply annoying that the flat tax got rejected in such a stupid manner, and the Christian right are truly nauseating.

"any ideas for next topic?"

I'm reading Pinker, Chomsky and Turing, with a view to some kind of linguistics/symbolism thread. I'm not quite ready yet though...

I'd love to get into some more stuff on psychology & self-fulfilling prophecy, especially with regard to The Singularity. Kurzweil has hyped his book brilliantly (a true intellectual entrepreneur) - how big a role will hype play in the arrival of The Singularity? How essential is Kurzweil's book? (got to wait a few weeks for my copy to arrive!)

Nick Land: sd - apologies for ignorance on the Polish issue - haven't properly digested the news (and brain fried from absurdly vast extra editing task I ridiculously took on)

linguistics topic would be interesting, but worried my lack of access to The Language Instinct would prove an intolerable humiliation ;)

On Kurweil and self-fulfulling prophecy - yes, really clever point, thinking ...

Anglosphere

CCRU-Shanghai (September 27, 2005)

Been waiting for the book¹²⁶ to arrive here before posting on the topic, but this group blog on James C. Bennet's Hyperstitional Megaconstruct 'the Anglosphere' is worth pointing out immediately.

(Maybe it will divert some of the heat while I hastily prepare for the impending Hyperstition Linguistics Challenge)

Comments: Anglosphere

¹²⁶ Bennett, James C.. *The Anglosphere Challenge*

sd: "a particularly strong and independent civil society; openness and receptivity to the world, its people, and its ideas; and a dynamic economy"

If these are the advantages which the Anglosphere is said to be equipped with, then there is at least one obvious question: to what extent have Protestant memes played a key role in their evolution?

Maybe this is banging the meme and evolution drums a bit too much, but I would be surprised if The Anglosphere Challenge didn't explore some of the following:

- the emergence of a dynamic middle-class as a result of Thomas Cromwell and Henry VIII's attacks on Papal Supremacy, which led to church lands being sold to an emergent class with capital at its disposal
- the translation of The Bible into English (non-authorized and authorized), which led to independent interpretation and a rejection of imposed, external authority, the most significant expression of which was the Puritan abandonment of the Isles.
- the English Civil War and Regicide, which led to Parliamentary supremacy and a symbolic monarchy
- Britain developing as a financial company rather than a mafia-style dynasty (Simon Schama very good on this in the episode 'Britannia Incorporated' in A History of Britain).
- The American War of Independence (and its 1787 Constitution) as catalyst for European radicalism (the French Revolution, Tom Paine, Blake's 'America', Mary Wollstonecraft, the Polish Constitution of 1791)

en.wikipedia.org/wiki/May_Constitution_of_Poland

All of the above contrasting with French Absolutism and the centralized Napoleonic Empire, and with the mafia-style dynasties and autocracies that carved up Central and Eastern Europe (the Romanovs, Hohenzollern Prussia, the Ottomans). The machinery of authority in the memes of Catholicism, the Eastern Orthodox church, Islam and German Protestantism are obviously crucial here.

all a question of how authority and control have developed differently in various competing lineages.

[In the complex strategy game Europa Universalis II, switching to Protestantism plunges your country into years of deep instability, but pays back later in terms of innovation, military professionalism, technological development and economy - which means if you play the USA you can crank up your army and annex large chunks of demotivated, backward Catholic Europe, if that's what takes your fancy.]

Nick Land: Protestantism evidently a crucial factor - but the order of causality is uncertain. Did Anglo contractualism and individualism predispose to Protestantism, rather than the reverse? The Anglosphereans seem very interested in the work of Alan Macfarlane who traces the British individualistic tradition back much further than Luther, for instance women's right to choose their own marriage partners (back to 13th c. if I'm remembering right).

Think this book the key:

www.amazon.co.uk/exec/obidos/ASIN/0631193103/theanglospher-21/026-3774943-7214809

German / Swedish protestantism doesn't seem to have led to the same social conclusions

sd: Nick - Thanks for the book tip (more reading - ouch!)

Well the obvious forerunners to Luther were John Wyclif and the Lollards. There was a movement of anti-clerical dissent - tied to translating The Bible into vernacular English (1381) - up and running in England over 130 years before Luther appeared on the scene.

www.exlibris.org/nonconform/engdis/lollards.html

en.wikipedia.org/wiki/Lollards

en.wikipedia.org/wiki/John_Wyclif

David Crystal (Stories of English) draws attention to the importance of Chancery in late 14th Century England. I don't have the book at hand, but wikipedia has a couple of relevant sentences:

"In the later fourteenth century, Chancery Standard (or London English) - itself a phenomenon produced by the increase of bureaucracy in London, and a concomitant

increase in London literary production - introduced a greater deal of conformity in English spelling."

en.wikipedia.org/wiki/Middle_English#c.1400

It is no accident that Chaucer's Canterbury Tales, the best example of Middle English vernacular, was started around 1380.

So, in the late 14th C, there was: anti-clericalism, a literacy boom, and the emergence of a standardized vernacular. These were the prerequisites for following an independent, anti-authoritarian path.

Simon Schama also suggests the Black Death was instrumental in freeing up the economy: the plague created gaping gaps and niches for exploitation. The opportunity was seized in England.

With regard to German and Swedish Protestantism, both of them were embroiled in the idiotic Thirty Years War, whereas England escaped major confrontation (the advantages of being insular).

(I don't know enough about this but...) Also with German protestantism I have an inkling the absence of a strong, independent state might be a key factor (German principalities and the ineffectual Holy Roman Empire).

Sweden was a contender in the 17th C, but made the perennial mistake of invading Russia and never recovered.

en.wikipedia.org/wiki/Great_Northern_War

Nick Land: sd - lots of chew over ...

this essay by Bennet linked to from the Anglo blog is excellent:

explorersfoundation.org/archive/anglosphere_tni-nov03.pdf

I've got pretty huge problems with Schama - thought his history of Britain TV series was utterly BBC, total contempt for economics, markets, free-trade, all replaced by generalized whinging, soft soci*lism and religious babble - with a ghastly leftist teleology hanging over the whole thing (as if the Omega-point of British history was - the BBC)

warshipshapecomblocks - "it will be non-anglos who consistentize the english language for one" - not sure I entirely understand this, but actually suspect I agree with it ...

sd: *I've got pretty huge problems with Schama*

Why am I not surprised!

The series would have been much more radical in the hands of Norman Davies (who wouldn't have allowed the word Britain to appear till the 18th century), but Schama does have occasional interesting angles (e.g. ignoring the War of the Roses in favour of domestic correspondence which is focused on shopping; ignoring The Napoleonic Wars in favour of Mary Wollstonecraft) and it's possible to celebrate the things he is covertly bemoaning. Plus, he's quite clear it's only 'A' history.

There's a dearth of good history progs - if it isn't smug Schama it's dumbed-down Channel 4 & 5 sensationalism. Gotta work with something though.

Nick Land: Kind of metacomment / question:

Could Hyperstition be crudely but productively defined as 'Political Ontology' - a domain of virtual politically efficient objects, realized (in a circuit) through political operations?

Wondering, obviously, because the Anglosphere seems to broadly conform to this definition - and I take it be behind the (sd) insight into Kurzweil's loopy relation to Singularity.

(There's a whole Enochian angle to this as well, but I guess that should wait until our resident nommomaniac fiscal complexicon shows up ...)

sd: erm, still chewing the James C. Bennet essay!

This needs to be fleshed out: "virtual politically efficient objects, realized (in a circuit) through political operations."

is this the skeleton?

K says The Singularity is near, backs up prophecy with research > the concept of S becomes acceptable currency > science/the military/the software industry/others on

the bandwagon start consciously cranking up investment in developing AI > AI becomes increasingly tangible & credible > investment cranked up again > then before we know it S is here

not taking reaction into account, of course.

Nick Land: sd - circuit you sketch highly plausible. Of course there would be innumerable variations, and many subsidiary issues to thrash out, but IMHO there's an abstract diagram there productively applicable to a wide variety of cases.

Productively: with supplementary hyperstitional efficacy (?).

Thesis: Technocapitalism intensifies hyperstitional efficiency. As investment is monetized (fluidized and anonymized) in conjunction with technological condensation of the virtual, hyperstitional circuitry consolidates with ever greater rapidity, complexity, and consequentiality. (Probably this just restates a fairly standard 'acceleration thesis' in hyperstitional terms)

[brain fried, jargoplexing ... better crash]

... or is it:

Technocapitalism just is the intensification of hyperstitional efficiency (and if efficiency intrinsic to hyperstitional circuit, just - of hyperstition)?

northanger: nick - btw, my ability to numify is offline at the moment.

what does Angelic Sphaeres have to do with the Anglosphere? (for the sake of online brevity, please chunk massively!).

sd: Nick - the James C. Bennett essay is very useful - wish i'd had it earlier.

The analysis of the EU is spot-on. And the stuff about private internet currencies - fascinating. Also like the network commonwealth diagrams very much.

Comments & Questions:

1. Bennett identifies strong civil society (and the traditions that go with it) as being a prerequisite for democracy and free market economies. He also astutely identifies a lack of civil tradition in the sphere of Russian influence:

"The market economy also requires a civil society with general acceptance of a common framework of laws, practices and manners. Without a general acceptance of fair dealing, an agreement on what fair dealing means, and an adjudication system that can resolve and enforce resolution of disputes, a true market economy cannot exist - as developments in the post-Soviet sphere indicate."

This is clearly true in the cases of Belarus and Ukraine, new nations formed from territories and cultures variously carved up and suppressed throughout history by Russia and Poland. It is also clearly true of Russia, a country which, except for a few months in 1917, knew no societal power structure other than autocracy/dictatorship until the 90s. Putin is popular precisely because his power is autocratic. Democracy has problems taking hold where it has no roots.

The ex-Soviet bloc countries which had civic traditions before Stalinism arrived (e.g. Estonia, which was populated by industrious, protestant Baltic Germans; Poland and Lithuania through the decentralized and ultimately anarchic Polish-Lithuanian Commonwealth; the Czechs through liberal Bohemia and subjection to Habsburg administration) have been able to develop reasonably efficient democracies and economies with competitive potential. [crass simplification here, I know]

The question is: if democracy and free market economies require strong civil society, which, as Bennett makes clear, takes time and slowly evolving tradition, what are the alternatives for countries which have not developed along these lines? A deeply embedded autocratic lineage cannot just switch to democracy, so what can it do?

This question leads to the wisdom of trying to foster democracy in Arab countries where strong civil society is fundamentally alien. Democracy can be imposed at gunpoint, but it won't work at gunpoint, and imposing social structures is undemocratic and uncivil - so surely Team America need to search for other strategies. [?]

[question 2 later – brain thoroughly overloaded at the mo]

northanger: *Without a general acceptance of fair dealing, an agreement on what fair dealing means, and an adjudication system that can resolve and enforce resolution of disputes, a true market economy cannot exist.*

after reading about Patrick's billing problems makes me wonder about "fair dealing"? is it relative? only applies to those in power? has no bearing in the market?

what?

couldn't we say a "civil society" is the definition that works for those in power?

sd: northanger - "couldn't we say a "civil society" is the definition that works for those in power?"

Bennett describes the strong civic state as emerging from "one of many different mechanisms by which local communities gave or withheld their consent to the state"

It's possible to see this as idealistic, in that it ignores coercion and colonialism, but there is a grain of truth in it - the USA emerged through refusing consent to the British state.

Military power equips the community with the power to refuse consent - if the community doesn't have military power (or an alliance) then it'll be conquered.

Nick Land: northanger - unless linguistic history is entirely contingent (a quite rational, empirically plausible, but qabbalistically unconvincing assumption) then the name of the Anglosphere is programmed by apocalyptic forces of deep superstition to coincide with the dominion of the Angelic Tongue (August Barrow's 'Anglossic') over the secular oecumenon of the End Times ... got to do a little skrying and I'll get back to you ...

sd - q. / point you raise haunting all the sane political discussions of the age - to recap., if profound cultural legacies (glacial meme-flow) are ineliminable factors in any realistic social theory, how can modifications in the direction of contemporaneously functional systems take place in acceptable time-frames? Everyone is waiting for the quixotic neocons (I don't mean this insultingly) to burn out in their heroic attempt to rapidly transplant quasi-anglospherean models into infertile terrain, and when (if?) they fail - what exactly comes next? Among all the leftist/palaeocon/kumbaya libertarian gloating, the throat of hell yawns open.

Take a couple of relatively modest assumptions:

1) No responsible US administration is going to permit theocratic barbarians to crank up their terroristic madness to the WMD stage. (Even if they were, there's no sustainable isolationist strategy left in a technoshrinking world, so they get dragged back by spectacular provocations)

2) But with neocon idealism in ashes (hypothetically), there's no realistic vision remaining of a rapid worldwide abandonment of theocratic barbarism in the name of neoliberal universalism.

- how to spin this in a way that doesn't rapidly escalate to truly monumental and open-ended body-counts?

couldn't we say a 'civil society' is the definition that works for those in power?

- northanger, you really have to spend more time steeped in Hobbes. The superficial aggravations of technocapitalist existence in a civilized society need to be contextualized by the body-carving nightmare of ANARCHY=FASCISM which lurks just outside, and we haven't seen anything yet (although Zarqawi's doing a pretty good job of showing us what we can expect).

northanger: nick - "got to do a little skrying". lol.

gosh, just had a brainfart about reporters getting news by skrying. or, market info!

Nick Land: If the neocons turn out to be as wrong as almost everybody seems to be hoping (I like them - foreign policy-wise - but I'm not a zealot about the credibility of their basic model) people are REALLY going to miss them when they're gone, and we're back to wandering the mean streets of Hobbesville Jihadistan without a map

northanger: well, maybe everybody should stop thinking they need a map. the map is not the territory, and all that.

sorry for the cliche.

Nick Land: Just to grind this in -

If the neocon project (spreading functional civilization) collapses, do we get:

(a) "Guess we're just going to have to let them have their nukes and accept spreading dhimmitude, endless planetary malfunction and Holocaust of the Jews II" or

(b) "Looks like we're going to have to waste the mofos in truly gargantuan quantities"

northanger - in this case, a map's what keeps you from just turning the whole place into a parking lot

northanger: ok, nick.

en.wikipedia.org/wiki/Hobbes

"[Hobbes] scholarly efforts at the time were aimed at a careful study of classic Greek and Latin authors, the outcome of which was, in 1628, his great translation of Thucydides's History of the Peloponnesian War, the first translation of that work into English. Hobbes believed that Thucydides' account of the Peloponnesian War showed that democratic government could not survive war or provide stability and was thus undesirable."

en.wikipedia.org/wiki/Image:Caffeinated_spiderwebs.jpg

The effect of caffeine on spider web construction.

nick - are you for the "neocon project"?

i have a hard time (considering US politics) understanding the neocon position. do they support the iraq war? are neocons fiscal conservatives? i need a cheatsheet to keep track of everybody.

btw, is the iraq war a good idea or isn't it? difficult to get a good idea what international consensus (including Iraq itself) really thinks about this.

on the surface, spreading functional civilization seems like a good idea. is it anything like spreading around democracy?

define "functional civilization" — what percentage of folks benefit from the FC?

imho. run the most dominant simulation.

sd: Nick - pathetically putting the apocalyptic neocon collapse to one side for a mo

2. One of the projects outlined at in Bennett's text is the possible collapse of (some) nation states into city alliances and economic alliances supercoordinated by cultural/linguistic alliances.

Since nations are meme fictions which come and go (e.g. Italy, Germany), whereas ethnic cultures are more stable factories for the production of these "self-affirming narratives", fanatical or otherwise, the concept of Network Commonwealth means

we can finally have done with nation, and that the 21st century is a potential for hybrid-bastard-molecular narratives to really take hold.

The EU might actually work if national governments and borders were scrapped, in favour of massive boosts to regional legislative power. If the EU did away with its ludicrous linguistic cacaphony and did all its business in English, and stopped meddling in local politics and imposing standards, it could be a contender, as a purely economic confederation. [mere fantasy]

The possibility of Britain opting out of the EU and putting all its eggs in the Anglosphere basket is a more plausible scenario, as is Spain's drift into the Hispanosphere. With the Anglosphere, the Hispanosphere, the PacRimsphere [?!] and Indiasphere [?!] emerging as intersecting players, where does that leave Russia? A unified Slavopshere is extremely unlikely.

When the grip of Network Commonwealths tightens, we will increasingly be defined by what we buy, what we think and say, the cities and sites we visit, the languages we have mastered, the data we send, receive and store on discs. Is this the road future security profiling will go down, as passports become meaningless? Brain and disc scans for memes?

Nick Land: northanger - 'what is a neocon?' There's a fairly huge literature on this now - its more intricate than many think, but not entirely intractable. Hence, IMHO:

Neocons are liberals (in US sense, basically soci*lists) 'mugged by reality' (too lazy to attribute this now - W. Buckley?) who became conservatives (also in weird US sense, let's just say, usually Republicans for now) in two big waves. First, preparing ground for Reagan revolution, were those mostly disillusioned by failures of American Welfare State (New Deal and - especially - Great Society program) whose perverse incentives and unintended consequences were turning poor folks into a hopeless embittered racially stigmatized underclass. These first neocons were typically focused on domestic policy, had no particular phobia about 'big government,' but were economically/sociologically literate enough to realize when programs were doing more harm than good and (unlike 'liberals') were honest and serious enough to try and work out alternatives. Their mag - Commentary (back issues give the flavour).

The second wave - inspired by legacy of DP Moynihan (always a Dem) and Jeane Kirkpatrick had similar left-to-right political biographies, but focused more on the wider world, seeing the UN as a giant failed welfare program choked with unintended

consequence and posturing special interests. DPM and JK themselves were characterized by sophisticated realism and American patriotism (itself a long-overdue realistic assessment of the real consequences of US behaviour, i.e. the survival of free societies in a world of commie sharks and other piratical tyrants). Typically (v. crude sweeping assertion coming) the later neocons were more Wilsonian, synthesizing realism with idealistic hopes about the exportability of certain key values of functional civilization (democracy and liberal economics). The most sensible way to talk about 'neocons' today is probably in reference to US foreign-policy, referring to those like (the notorious but to any objective observer total sweetie-pops) Wolfowitz for e.g. who believe in the strong transmissability of social sanity memes.

The left hates these guys for being hegemonists (which of course they are, but hegemonism is an alternative to imperialism as Hanson shows in a great essay that I'll track down later if asked) - left attitude: "who are we to say that genital mutilation and suicide bombing is worse than McDonalds?" (or, hard left version, "its obvious genital mutilation and suicide bombing are far preferable to McDonalds")

The various elbowed-off-centre-stage species of rightists hate them because they think their starry-eyed idealism is going to get lots of Americans killed to no purpose. (palaeocon "don't see why some good christian boy should give up his life for an ineducable raghead", moonbat fringe: "anyway we know the neocons are all ZOG agents secretly programmed by Strauss")

New-wave neocons also seem to have inherited acceptance of grossly obese government. Dubya seems to me strongly influenced by both neocon waves outlined above.

Personally I'd like to see more libertarian/Goldwater/Reaganite counter-influence and massive reductions - say halving - of US govt spending (while doubling the defense budget, which would be easily compatible) - so guess that means I'm not a neocon, but I'm basically a sympathizer.

More important - they're the nice guys. If they're proved wrong, it won't be because their intentions were malignant, but rather the opposite: they believed people everywhere wanted peace, prosperity and progress and they didn't want to blow away more foreigners than strictly necessary.

sd - once again, think your q.s spot on. Interested that Bennett sees deep narratives as essential components of these cultures / emerging Network Commonwealths, so

each should operate as a giant hyperstitional laboratory. If the non-Anglosphere versions could kick their addiction to the "wouldn't it be great if America collapsed" genre of ressentimental hyperstition, we might see a lot more productive variation.

on future of profiling as meme-scanning - one q. is: what are the functional analogs of this? need time to ponder ...

And northanger - this refrain:

"define 'functional civilization' — what percentage of folks benefit from the FC" - verging on implicit moonbattery.

The only people who don't benefit from FC are predatory criminals, whose marginalization in society serves as a definition of FC.

Who would benefit if Hong Kong (FC) was more like Somalia or Haiti (non-FC) - not enough people to affect relevant policy decisions, surely? (of course, the harder types of leftists - Islamarxists etc - love predatory criminals for 'sticking it to the man' so FC is pure bourgeois oppression in their book. At the same time, not many Western Islamarxists showing much interest in relocating to Somalia - weird that)

Just a little OT, but this Fouad Ajami essay on local background to contemporary Iraqi conflicts truly excellent:

www.opinionjournal.com/editorial/feature.html?id=110007326

sd: *a great essay that I'll track down later if asked*

yes please!

god: 1: Point of Ajami's article:

Zarqawi is a bigot Shia hater, the Arabs deserve better, things would be all civil if the Sunnis weren't so damn afraid of the Shias.

2: Point made by Nick regarding mofos:

Either we waste the mofos, or the world goes to hell, lamenting the demise of the only true narrative, the AS.

1+2=3: by turning Iran into parking lot, we neutralize Zargawi's main *raison d'etre* (the world's only officially Shia government) opening the way for rekindled romance with the Sunni buggerers (a term of endearment attributed to Corsi) whose self-appointed earthly leaders (the Saudi clergy/monarchy) are behind the 911 thing in the first place.

As for holocausts, the remaining Shias in the hated "Shia Crescent" are easily rooted out or converted to "true Islam" in the absence of their main source of funding, the damned Persians (Didn't they understand that the Gulf is meant for Semites only?).

Saudi princes feel less threatened, and their relationship with the US becomes far smoother in the absence of "the Shia problem".

Civil Society and Anglosphere triumphant, the paranoid spirit of Hobbes rests easy for a few minutes, basking in the warm glow of his Leviathan.

On to China.

Nick Land: sd - it wasn't Hanson, it was Lee Harris:

www.techcentralstation.com/021405B.html

god - fascinating stuff, are you saying this is Ajami's scenario?

That seems improbable ...

god: This is not my interpretation of Ajami's writings, merely a synthesis of two seemingly unconnected points in the thread. Point out ties and have fun with them.

This is one of the things I get to do as a privileged free member of the Anglosphere.

As to non-members who make connections, I regard them as mere conspiracy theorists.

Hail Britannia.

Nick Land: god - duly noted (and appreciated).

Not remotely conspiracy theory IMHO, although not necessarily entirely convincing either - the Iranian populace are too pro-American to merit a thorough paving-over anytime soon (though Sadr's maniacs make your synthesis a little more imaginable with each burning armoured car, and Hezbollah are already in overtime)

northanger: knew hyperstition would eventually take god's name in vain.

sd: Nick - the Lee Evans essay is (mostly) a fine piece of dissection. Not sure how useful it is now - the Chomsky-conflation of hegemony and empire is pretty well fixed, the damage done. Chomsky's linguistic vandalism is ironic indeed.

However, Evans thoroughly slanders Pinker (very surprising for me to say that, but there you go).

1. The recent ruck between Chomsky and Pinker over the evolution of language is fairly solid proof that Pinker is not Chomsky's 'high priest'.
2. The reference to Orwell and Newspeak in *The Language Instinct* is in no way a 'sneer'. Given that Orwell is one of Pinker's favorite authors, Evans choice of this reporting verb comes as a bit of a shock.

Pinker's uses Orwell to kick off the chapter "Mentalese" in *The Language Instinct*. Orwell conjured up a future in which the state reduced language by distorting meaning and restricting possible uses. Orwell:

"The word 'free' still existed in Newspeak, but it could only be used in such statements as "This dog is free from lice" or "This field is free from weeds". It could not be used in its old sense of 'politically free' or 'intellectually free, since political and intellectual freedom no longer existed even as concepts, and were therefore of necessity nameless.

... A person growing up with Newspeak as his sole language would no more know that 'equal' had once the secondary meaning of 'politically equal', or that 'free' had once meant 'intellectually free' than, for instance, a person who had never heard of chess would be aware of the secondary meanings attaching to 'queen' and 'rook'. There would be many crimes and errors which it would be beyond his power to commit, simply because they were nameless and therefore unimaginable."

Pinker's perspective is more optimistic:

"Is thought dependent on words? Do people literally think in English, Cherokee, Kivunjo, or, by 2050, Newspeak? Or are our thoughts couched in some silent medium of the brain - a language of thought, or 'mentalese' - and merely clothed in words whenever we need to communicate them to a listener? No question could be more central to understanding the language instinct."

Of course Pinkers answers No to the first question and Yes to the second, presenting convincing evidence and arguments as he does so. His position is anti=Whorfian, anti-Nietzsche/Wittgenstein 'we are prisoners of our language' whinging, anti-postmodernism 'our thought is completely determined by culture' incapacitation. He concludes the chapter:

"So where does all this leave Newspeak? Here are my predictions for the year 2050. First, since mental life goes on independently of particular languages, concepts of freedom and equality will be thinkable even if they are nameless. Second, since there are far more concepts than there are words, and listeners must always charitably fill in what the speaker leaves unsaid, existing words will quickly gain new senses, perhaps even regain their original senses. Third, since children are not content to reproduce any old input from adults but create a complex grammar that can go beyond it, they would creolize Newspeak into a natural language, possibly in a single generation. The twenty-first-century toddler may be Winston Smith's revenge."

The whole chapter is written in rigorous answer to Orwell - hardly 'sneering', by any definition of the word. Evans, like Chomsky, is being intellectually sloppy. [Anyway, what is it with this Evans guy? He seriously misrepresents Dawkins in his essay on ID too. And the book he provides a link to in the essay costs \$1,200 on Amazon.]

god - 'the paranoid spirit of Hobbes'?!!

Only the naive drunk-on-Rousseau left, pre-Manson hippies and bouncy Christians could describe Hobbes as paranoid.

It's as simple as this: Men are not noble savages corrupted by civilisation, they are revolting male primates sometimes kept in check by civilisation and fear of eternal damnation.

this random list of atrocities cannot be satisfactorily explained through the lens of class conflict:

news.bbc.co.uk/1/hi/world/africa/3426273.stm

users.erols.com/mwhite28/warstat0.htm#European

users.erols.com/mwhite28/warstat1.htm

Of course Pinker answers

as the Hyperstition Linguistics Challenge looms, my grammar 'n spelling disintegrates.

[I find The Fitch, Hauser & Chomsky reply to Pinker and Jackendoff rather daunting - these gentlemen certainly get down to the nitty gritty and beyond, to the point where they lose sight of the bigger picture (maybe that's the aim.)

northanger: geez sd. i'm still on your first post trying to catch up & now this.

sd: northanger - sorry(!), but the latest links are meant purely as a batch of examples, not as essential reading - some of the stuff is pretty grim reading, especially about Congo (the BBC link), so you might want to avoid it if you want to have a nice day.

this site is good for those who like numbers though:

users.erols.com/mwhite28/warstat0.htm#European

Numbers are generally numbing - they don't shock as much as description.

the reading demands of Hyperstition have to grow exponentially anyway. looming catastrophe forces the development of processing capacity. soon we'll have tentacles sprouting from our heads.

[plus Chomsky's always good for impressing people at parties.]

this link is good for commie-bashing:

www.gmu.edu/departments/economics/bcaplan/museum/his1g.htm

see, you can pick and choose.

god: Mrr? god a Pinko? How knee-jerk of you.

Please explain how Hobbes' "sovereign" is in any way different from the type of rule(r) advocated by Stalin, Mao, or Islamo-fascists?

My comrade/brother/citizen: Hobbes central idea that "the people" don't know what's good for them and the only way to maintain order is through a sovereign entity which imposes rules for the populace's well-being through force, is really not different from the typical state of affairs in all of human history.

You should remember that Hobbes wasn't concerned whether Civil control came from a King, religious figure, republic, or Cthullu, so long as the hierarchy which ensured obedience was maintained. The fundamental reason for his entire diatribe is his fear of the neighbors. I am not saying Hobbes was alone in his paranoia any more than the average wussy-ass man-on-the street, regardless of the name of the regime under which he survives.

Everyone feels better when justifying pre-existing conditions. You can find this attitude everywhere in North Korea, Saudi Arabia, Babylon, Ancient Persia and the US without even trying hard.

In light of this, it is silly to view Hobbes as a thinker who had anything new to add to the status quo. Kings, priests and revolutionaries of all stripes have followed "his" line of thought since prehistory. We need to find someone a bit more original to base the idea of the Anglosphere on, maybe Plato. Yes, the same story all over again, but at least with the Greeks the patina of age lends an air of respectability, and Plato came from a Blue-Blood background. Besides, the Greeks and Brits have so much in common.

sd: god - your comments on Hobbes are fantastically simplistic. His analysis of self-interest, conflict and pre-emptive strike is basically confirmed by evolutionary biology and studies of conflict escalation.

"Please explain how Hobbes' "sovereign" is in any way different from the type of rule(r) advocated by Stalin, Mao, or Islamo-fascists?"

A quick answer to this is consent. The concept of consent has arisen in this thread, in James C. Bennett's essay on Network Commonwealths and Lee Evan's Essay on Hegemony - have you bothered to read them? The key idea from Hobbes is that "There is safety in numbers, so humans, bound by shared genes or reciprocal promises, form coalitions for protection." (The Blank Slate, Chapter 17, Violence - well worth reading).

Civil society is formed by consenting to Leviathan - this is the basis of legitimate government. Of course, it is not irrelevant that Hobbes wrote Leviathan during the chaos of the English Civil War - it colours his calls for an authoritarian monarch. Neither is it irrelevant that real parliamentary power (a more democratic leviathan) was the ultimate outcome of the English Civil War.

The key difference between the English regicide and the French regicide is that the English killed their King as part of a dispute who should make decisions, whereas the French attacked their aristocracy from resentment and replaced one tyranny with another.

Obviously who gave their 'consent' was a slow, developing process (a constant expansion of the 'mental circle').

There is a total absence of consent in Leninism, Stalinism, Maoism and Islamic theocracy.

Maybe your objections to Hobbes really come from the fact he is not idealistic, like Plato. There is no consent under the rule of Philosopher Kings either.

[sorry if these comments seem a bit rushed - I'm very busy trying to make some money at the moment.]

Nick Land: god - also (additional to sd on Hobbes) it is surely productive to distinguish the analysis of Leviathan from its prescriptions. While few today would agree with Hobbes that absolute monarchy is an attractive principle for the government of a commonwealth, his broad description of social reality in the absence of competent authority has dated vastly better than Rousseau's disastrous alternative, exemplified by Somalia and other 'failed states'(whose record of unmitigated horror is matched only by extreme totalitarianism - ANARCHY=FASCISM). For a contemporary Hobbesian who continually shows the relevance of this insight, see Robert Kaplan (The Coming Anarchy for e.g.)

Hobbes will be indispensable for as long as naive leftism clings to its Rousseauistic illusions ("pull out the American kapitalist zionazis and the world will be one big happy bongo-drumming party")

"I'm very busy trying to make some money at the moment" - major gddmn distraction, isn't it ... ;)

sd: "...Lastly, the agreement of these creatures is Naturall; that of men, is by Covenant only, which is Artificiall: and therefore it is no wonder if there be somewhat else required (besides Covenant) to make their Agreement constant and lasting; which is a Common Power, to keep them in awe, and to direct their actions to the common benefit.

The only way to erect such a Common Power as may be able to defend them from the invaion of Forraigners, and the injuries of one another, and thereby to secure them in such sort, as that by their own industrie, and by the Fruites of the Earth, they may nourish themselves and live contentedly; is, to conferre all their power and strength upon one Man, or upon one Assembly of men, that may reduce all their Wills, by plurativity of voices, unto one Will: which is as much to say, to appoint one man, or Assembly of men, to beare their Person; and every one to owne, and acknowledge himselfe to be Author of whatsoever he that so beareth their Person, shall Act, or cause to be Acted, in those things which concerne the Common peace and Safetie; and therein to submit their Wills, every one to his Will, and their Judgements, to his Judgement. This is more than Consent or Concord; it is a real Unitie of them all, in one and the same Person, made by Covenant of every man with every man, in such manner, as if every man should say to every man, 'I Authorise and give up my Right of Governing my selfe, to this Man, or to this Assembly of men, on this condition, that thou give up thy Right to him, and Authorise all his actions in like manner.' This done, the Multitude so united in one Person, is called a COMMON-WEALTH, in latine CIVITAS. This is the generation of that great LEVIATHAN, or rather (to speak more reverently) of that Mortall God, to which wee owe under the Immortall God, our peace and defence. For by this Authoritie, given him by every particular man in the Common-Wealth, he hath the use of so much Power and Strength conferred on him, that by terror thereof, he is inabled to forme the wills of them all, to Peace at home, and mutuall ayd against their enemies abroad. And in him consisteth the Essence of the Common-Wealth; which (to define it,) is 'One Person, of whose Acts a great Mulittude, by mutuall Covenants one with another, have made themselves every one the Author, to the end that he may use the strength and means of them all, as he shall think expedient, for their Peace and Common Defence.'" Hobbes, The Leviathan , Part II, Of Common-Wealth, Chap XVII.

['odd' spellings Hobbes' this time]

"major gddmn distraction, isn't it ... ;)"

Indeed it is. But it does free up my motivation, if you know what I mean.

Nick Land: sd- on Lee Harris (not 'Evans' - we've both managed to mangle this ref. hideously on this thread) - totally forgot the Chomsky/Pinker mentions, but don't think they're more than incidental.

sd: oops. my brain's all over the place at the mo. Sorry Mr Harris. I think Lee Evans is a crap comedian - where did that come from.

I don't know if the Chomsky/Pinker references are entirely incidental. Chomsky is a valid target. With regard to Pinker (and maybe Dawkins), think there's a certain amount of stuffy resentment running through his texts.

Nick Land: I'll keep my eye open for it.

More than one eye open at a time seems excessive.

sd: that's where tentacles would come in handy.

and where are your marbles, powderwellerpiet?

god: Interesting duality that is being set up here:

Either you are a worshipper of Hobbes,

and if not, ipso facto

you must be a worshipper of Rousseau.

This is a machine which facilitates all argument, since we are well aware Rousseau was full of shit. Anyone not crediting Hobbes with genius, is therefore a Rousseau-worshipper, therefore full of shit. Elementary logic, very well applied. Or maybe you see a small flaw in this line of reasoning.

Nonetheless,;

"I Authorise and give up my Right of Governing my selfe, to this Man, or to this Assembly of men, on this condition, that thou give up thy Right to him, and Authorise all his actions in like manner." "

The above is really not different in any way from Marxist nor Islamofascist ideology. The moment this covenant is broken, the transgressor becomes a member of the "criminal" realm and the rest punish him. Witness pretty much any states-rights oriented movement, or its diametrically opposite urban counterparts.

My point on Plato is exactly as you say, that he was in favor of despotism, however benevolent, just like Hobbes, Marx, Mao, and Mohammed. All were equally guilty of philosophical transgressions against the individual, and all spent their lives trying to convince people why they ought to consent to this set of ideas. The first two didn't have the means of raising an army so they counted on others to spread their political gospel. The other two, lucky for them, unlucky for everyone else, got their hands on some big weapons. To claim that Hobbes is different from others because he mentions "consent" is patently false. Hobbes obviously speaks at length about the application of force if the covenant is broken. The idea of a charade of consent is fundamental to all political philosophies.

In all politics there are three poles:

The Bond, the authoritarian enforcement of law. See any unpopular president.

The Covenant, the consensual enforcement of law. See any popular president.

The Refusal, the rejection of Bond by those controlled because of the breaking of the Covenant by those in control. See any revolution or civil war, including the one which spawned Hobbes.

These ideas are not new and have had their ideology enshrined in various gods, for example Varuna, Mithra, Indra, respectively.

Recognizing this long-established reality doesn't imply a yearning for anarchy or any significant alteration to human nature, because these are not compelling scenarios. It is however, a way of calling bullshit on every chauvinist.

In sum, the Anglosphere needs to find some way to distinguish itself from its enemies through means which don't rely on grade-school philosophies or fundamental principles of establishing authority. Otherwise, we are just another empire, no better or worse than that wave of primitive Aryans who conquered the Middle East in 500 BC, before they decided to go down to Athens and burn it down, setting in motion the chain of events leading us to this discussion.

sd: god - i'm not sure whether you are being deliberately perverse or not. Possibly you are not.

Viewing some of Hobbes' insights and ideas as useful and, on a certain level, fundamentally true, does not amount to worshipping Hobbes or accepting all of his program. The question at stake with Hobbes and Rousseau is that of human nature,

with Rousseau being an idealist whose picture is easily disproved by human history, and Hobbes being more realistic, his picture easily supported by human history (and current behaviour) - hence why he is important in evolutionary biology. As Nick has mentioned on an earlier thread, on the level of facts, Hobbes is right, Rousseau is wrong.

When it comes to contrasting Hobbes and Marx etc, it would be more fruitful to look at how their ideas have been put into practice. If you are allied to the Anglosphere (and are not just pissing about) then you have to recognise that the Anglosphere is what it is (at least partly) because of the memes that Hobbes put into motion. Consent is the cornerstone of parliamentary democracy. The extent to which consent is ignored or enforced at gunpoint is the extent to which a societal structure is not democratic. Democracy is not ideal - there will always be conflict of interest, but there is far more room for citizens to grant or withhold their consent under the democratic Leviathan than there is under the Leviathans of dictatorships.

There is also a world of difference between Leviathan as (elected) policeman and Leviathan as (unelected) policeman and central planner of the economy.

[again, sorry for the rush]

god: Last time. Simplified.

Opposing Hobbes does not put one in the Rousseau sphere. Rousseau was wrong in his hippyism, Hobbes unoriginal in his fascism. The whole point is that simplifying an argument down to two weak sides and choosing the less delusional one is not the way to really understand any issue. I am sad to inform that the world is not made up of a simple Hobbes/Rousseau duality.

The Anglosphere owes nothing to Hobbes because his thought is entirely unoriginal. At most he deserves translator's fees.

Because his writings are reiterations of old thought systems, originally expressed by foreigners, we are being intellectually dishonest if we claim that his book differentiates us from others.

Our history shows we can do better.

Nick Land: god - hugely enjoying the tone and content of your argument here, but I'm not sure your three poles are altogether persuasive. If we're looking for Anglosphere characteristics worthy of advocacy, surely an essential one is the division

of powers, especially as it applies to the distinction between legislation and administration. Whether a president is popular or not does not seem especially germane within an Anglospherean society - the executive power does not embody the law but draws its legitimate power from the law, and should defer to this - not to popularity. (This runs contra Hobbesian monarchism, admittedly, although Hobbes argument for the opposite is an interestingly ultrarealist one based on a sound appreciation of at least semi-plausible incentives, an anomaly worthy of respect within the context of European political theory, which is typically (and catastrophically) representationalist.)

This might seem like nitpicking - but I don't think it is. Hobbes absolutism is entirely different to the other types you mention (double pincer with sd coming up) because it lays no claim to representation. The Hobbesian government is not the representation of any kind of popular will or universal philosophical idea, it has no utopian pretention (which all the others do), it is no more than the top-cop (the 'nightwatchman state') - and in terms of modern Anglospherean political culture this means the enforcer (not the source) of the law. There is thus a paradoxical proximity of Hobbesian political ideas to classical liberal ones, because neither idealize the role of government, but rather restrict themselves to explaining why and to what extent it should be tolerated. The idea that government is a channel through which positive freedoms (entitlements) might flourish is entirely alien to both.

IMHO it is entirely healthy that libertarians (for e.g.) radically interrogate the scope and function of Leviathan, although it is also crucial that Rousseau-type assumptions are not permitted to transform such critiques into infantile anarchist delusions.

In a global context the Hobbesian influence is also positive - some effective power is needed to hang the pirates, full stop. The desirability of a world government representing the interests of all parties does not enter the equation. The vanity of UN posturing and 'transnational progressivist' aspirations are exposed for the degenerate Rousseauisms they are.

PS god - we crossed on last posts. At the end of the day, anyone dissing Rousseau as a hippy idiot is on the side of the angels. Anyone loathing Hobbes gets a pass in my book, just as long as they hold Rousseau and his followers in withering contempt.

sd: god - seeing as you love simplifying and seem to ignore the literature on the subject:

either Men are lovely peaceful little creatures (that share everything with distantly related strangers) in their natural, pre-social state,

or they are fiercely competitive animals that are prone to violence (particularly when it comes to their treatment of women as a source of gene replication) both in their pre-social and social state.

all the evidence points to the latter. to describe the latter as the state of affairs does not amount to facism.

"Hobbes because his thought is entirely unoriginal. At most he deserves translator's fees.

Because his writings are reiterations of old thought systems, originally expressed by foreigners"

Please supply evidence for this - it's ridiculous.

Nick's much better at dealing with god than I am.

sd: Fascinating facts and figures:

The number of words devoted to Rousseau in Wikipedia: 2979

The number of words devoted to Thomas Hobbes in Wikipedia: 4003

The number of words devoted to Calvin and Hobbes in Wikipedia: 7241

And for those Fight Club fans: Hobbes is Tyler Durden
metaphilm.com/philm.php?id=29_0_2_0

sorry for being a bit facetious. tough day.

northanger: sd. completely off: paparazzi snap giant squid! check out those tentacles.

en.wikipedia.org/wiki/Giant_squid

On September 27, 2005, scientists released over 500 photographs taken at the end of October 2004 of a live giant squid. The photo sequence, taken at a depth of 900 m (nearly 3000 ft) off Japan's Ogasawara Islands, shows the squid homing in on the baited line and enveloping it in "a ball of tentacles."

sd: Holy Squid indeed! I's gotta get me some of them!

[maybe there's a OT free-for-all after the 100 mark of reasonably on topic comments is reached, as a reward for discipline]

October 2005

Signing Up

CCRU-Shanghai (October 1 2005)

A famous hypothesis, outlined by Benjamin Whorf (1956), asserts that the categories and relations that we use to understand the world come from our particular language, so that speakers of different languages conceptualize the world in different ways. Language acquisition, then, would be learning to think, not just learning to talk.

This is an intriguing hypothesis, but virtually all modern cognitive scientists believe it is false ...

- Steven Pinker, Language Acquisition

Lesson 1: Never trust a pomonaut

Lesson 2: ... ?

[Consider this a warm up for the HLC]

Comments: Signing Up

northanger: what does "Signing Up" refer to?

should we be qabbalistically concerned about this warmup?

AQ 322 = WARM UP FOR THE HLC = ANNULAR HURRICANE = BRUTAL AND BRITISH = CCRU SWARMACHINES = CTHELLELECTRONICS

sd: Lesson Two: We are not tied to text

Thinking is not determined by, or dependent on, language. Meaning is produced in the brain, by neurons firing in the conceptual-intentional system (Chomsky), or mentalese (Pinker). It is translated into language obeying the commands of phrase structure (and other rules, e.g. morphological, phonological, sign-language) and is translated back into meaning in the recipient's brain. Language/text is merely a vehicle for meaning; the brain is the producer, encoder and decoder.

Thought is rephrased and paraphrased, and mutates in the process. It is perfectly feasible to have an excellent understanding of Darwin's theory of evolution without

ever having read Darwin. His texts can be compressed into a core code. The theory is so powerful because the thought is so coherent and logical.

The intellectual community also reaches a general consensus about what the theory means. Citations support the consensus, but the accepted meaning of Darwin's texts is independent of the texts themselves. The core ideas/code of the theory constitute the meme/paradigm. The theory evolves when mutant strains contest/infect the core code: Gould and Dawkins input new, conflicting meanings into the theory whilst claiming to merely be interpreting the original theory.

When 'philosophical' text is not susceptible to rephrasing it is because it has entered the realms of textbound poetry where the images and metaphors are inextricable from the words that they are expressed in. Some tales can be told in many ways because the structure and images are themselves so powerful: the telling is a conjuring that summons the message into the recipient brain. Other tales require specific words in a specific order and are to a certain extent untranslatable: the structure and images are tied to words which 'tickle our language instincts'. With the sonorous cadences of poetry, replication is by exact copy/repetition - there is no compression.

What philosophers stand the test of rephrasing and paraphrasing? Nietzsche would seem to be the first philosopher whose thought explicitly resisted these processes (though his thought was crudely and disastrously paraphrased).

Pomo text-quibbling blocks the transmission of meaning.

Hurling into exponential growth, thought needs to be compressed and unpacked at breakneck speed.

Some convergence: the bootstrapping metaphor has been used by

1. Carl Woese, in the context of RNA developing the translation mechanism which led to the evolution of DNA replication.
2. Kurzweil, in the context of exponential growth
3. Pinker (in the link given above), in the context of children's language learning algorithms (syntactic knowledge used to work out semantics)

Isn't the metaphor of bootstrapping deeply hyperstitional? [I'm still not sure what hyperstition is, and am quite glad of the fact].

"It is the problem of starting a certain system without the system already functioning. It seems just as impossible as "pulling oneself up by the bootstraps" which Baron Münchhausen, according to stories, could do. However, solutions, accordingly called bootstrapping, exist; they are processes whereby a complex system emerges by starting simply and, bit by bit, developing more complex capabilities on top of the simpler ones."

en.wikipedia.org/wiki/Bootstrapping

Nick Land: *Isn't the metaphor of bootstrapping deeply hyperstitional?* - Absolutely.

Extremely close to the concept of auto-catalysis, of which the same can be said.

Some productive criticism of H. to date based on slippery appeal to positive feedback mechanisms ('bootstrapping' a particularly germane one). What would be required to rigorize these references?

This question of finding adequate and productively manipulable symbolic / notational form for conceptual-dynamic patterns originating outside the linguistic order seems as if it should be clarified by the present topic.

Should have added that 'recursion' intriguingly interconnected with these K-dynamic issues - it seems almost as if the HCF model has abstract cultural-cybernetic neurological machinery as its distinguishing human-linguistic module.

sd: *What would be required to rigorize these references?*

Got to go back and have a good look at them and think about the similarities in the processes being described. Can't remember where Kurzweil refers to it - have to do some scanning.

'recursion' - yes, but then it's getting to quite a spooky point where all the strands here are running in sync.

Lesson Three: More respect for prehistory

Human languages are equally sophisticated, in terms of grammar. They share the basic components (nouns, verbs, subjects, objects, complements etc) and restrictions (Universal Grammar), but vary in their rules of how these components can be assembled (syntax), how new words can be formed (morphology) and how the words

can be expressed (phonology). Individual languages also vary in terms of the size of their lexicons.

History begins with writing and tends to privilege literate societies. However, in evolutionary terms, writing is a recent cultural adaptation following from food production:

"The two indisputably independent inventions of writing were achieved by the Sumerians of Mesopotamia somewhat before 3000 B.C. and by Mexican Indians before 600 B.C.; Egyptian writing of 3000 B.C. and Chinese writing (by 1300 B.C.) may also have arisen independently. Probably all other people who have developed writing since then have borrowed, adapted, or at least been inspired by existing systems... All of the likely or possible independent inventions of writing... and all of the early adaptations of those invented systems...involved socially stratified societies with complex and centralized political institutions... Early writing served the needs of those political institutions (such as record keeping and royal propaganda), and the users were full time bureaucrats nourished by stored food surpluses grown by food-producing peasants. Writing was never developed or even adopted by hunter-gatherer societies, because they lacked both the institutional uses of early writing and the social and agricultural mechanisms for generating the food surpluses required to feed scribes. " (Jared Diamond, *Guns, Germs & Steel*, Chapter 12 'Blueprints and Borrowed Letters')

Humans may have started speaking as far back as 1.8 million years ago, or 200,000 years ago. Whether the human genetic bottleneck occurred 100,000 years ago, because of drought, or 70,000, because of the Toba catastrophe, it is clear that the human genome had evolved the equipment necessary to learn languages, and learn without being taught, tens of thousands of years before elite groups invented and learned writing (which still has to be forcefully taught and painfully acquired).

www.bbc.co.uk/sn/prehistoric_life/human/human_evolution/new_batch1.shtml

The plasticity and resourcefulness of the genome at this time may well have saved homo sapiens from extinction: extreme environmental pressure forcing the language faculty as adaptation. Yet prehistoric humans (and contemporary illiterate societies) are held in low regard:

"I maintain that the natural state of the human animal has nothing to do with Good or Evil...The distinction between Good and Evil already supposes a subject, and thus can't apply to it. It's always for a subject, not a pre-subjectivized human animal, that Evil is possible." Alain Badiou, 2001

www.egs.edu/faculty/badiou/badiou-on-evil.html

One of the most positive sides to research in language acquisition and comparative linguistics is that it proves all humans are born with the same basic linguistic software and that the languages that trigger the installation of this software are grammatically equal.

I love HCF's phrase 'discrete infinity'.

Nick Land: 'discrete infinity' - they all seem to like that (rather than say 'countable infinity')

found the whole HCF discussion of numbers - fragmentary and suggestive though it was - extremely interesting in this respect, adding compelling element to discussions of number / notation that we've had here - a recursive neural (or at least cognitive) 'engine' evidently necessary for numeracy to the scale of discrete infinity.

... but having made this HCF-style assertion, immediately begin to wonder. JP argue phonological strings have potential of discrete infinity without recursion ... [some head-scratching time necessary on this]

northanger: *clarified by the present topic*

oops. keep forgetting things don't get clarified around here.

Nick Land: northanger - Signing Up on model of "teching up" or getting "kitted up" - no rigid contractual obligations involved

sd: think this needs to be in the main thread, to help anyone bamboozled by the sudden references to HCF and PJ:

itre.cis.upenn.edu/~myl/languageelog/archives/002422.html

think we should stick to the HCF convention of referring to Jackendoff and Pinker as PJ (it's the order their names appear in their first reponse), though something is bound to get mangled along the way.

Bootstrapping as the initial phase of AI parsing:

mentifex.virtualentity.com/parser.html

5. BALANCING 40% RECOGNITION VS. 60% EXPECTATION

The English bootstrap "enBoot" module may ease burdens on the Parser module by means of a stare decisis reliance on previously decided parsing problems.

5.1. MOST FREQUENT WORDS

Since there are lists available for the most frequent words of various natural languages, it makes sense, where possible and where convenient, to favor the bootstrap-inclusion of higher-frequency words over lower-frequency words.

Such a policy of bootstrapping higher-frequency words may become obsolete or "moot" as the bootstrap approaches saturation with essentially all the words comprising a full dictionary of the target language.

5.2. "WORK" WORDS

Gradually all prepositions for a given language and all irregular verb forms may be instantiated within a bootstrap module so that the AI Parser module may easily recognize and parse such special words.

Carl Woese: On the Evolution of Cells, section 'The Evolution of Translation'

www.pubmedcentral.gov/articlerender.fcgi?tool=pubmed&pubmedid=12077305

"The evolution of translation was a boot-strapping process, in which small improvements in translation led to improvement in proteins in general. These second-generation proteins then replaced (most of) their predecessors. Among them, of course, were proteins that further improved translation, and so on—ultimately giving rise to a translation mechanism having modern performance levels (25). Because large proteins of the kind that seem central to modern genome replication mechanisms and the like were initially absent, these information-processing systems were also initially imprecise (25). This fact means that primitive genomes would have been relatively small.

Translation would seem to be the leading edge of a wave of cellular evolution in which proteins evolve to greater and greater levels of complexity and specificity (25). Note that this is in essence the conclusion drawn above from comparative evidence, i.e.,

the evolution of translation led that of transcription, which in turn led that of modern genome structure and replication."

[can't find the Kurzweil ref to bootstrapping and it's driving me round the bend]

Lesson Four: Learn from children

Language acquisition research has shown that children come into the world as fully equipped scientists: their brains come bundled with programs which 1) analyze seemingly chaotic streams of speech into phonological chunks and units; 2) assign the input of the target language to SOV or VSO parameters (so a child listening to Japanese will note the word order 'Kenji sushi ate' is the super-rule); 3) extract further syntactical patterns through forming testable hypotheses about the input and the application innate knowledge of phrase-structure grammar and morphology; 4) monitor the discrepancies between their output and the target language so as to reach fluency with very little feedback from competent adult language users.

Children require input rather than instruction. They've got equipment to figure things out themselves.

Children are a great source for innovation. Children of immigrants grammaticize pidgins into creoles; deaf children have been seen to create complex sign language grammar from thin air. As children increasingly and effortlessly merge with computers they create their own techno-dialects which, though inaccessible to adults, are nonetheless highly-organized and rule driven.

Studying how children learn languages has ultimately led to a much greater understanding of human cognition. Reverse engineering the human brain starts with children. The trajectory from language acquisition also leads to analysis of other programs in the human brain (e.g. emotions) and then towards analysis of the extent to which culture programs our thinking with memes.

adequate and productively manipulable symbolic / notational form for conceptual-dynamic patterns originating outside the linguistic order

what is the scope for this 'warm-up' topic? are we getting our scalpels out?

Nick Land: sd - don't think scope is delimited in advance.

Agree with the importance of the children topic - lots of fascinating PJ material on this, for instance the different assumptions children make about words and concepts, intuitively presupposing a shared code for the former.

The PJ argument that words and sounds processed as intuitively distinct types of things seems (intuitively) highly plausible.

Still immersed in this material and yet to reach a clear discussion of (pinker's) 'mentalese' - but have an initial concern about this way of speaking - isn't it a problem to suggest (through '-ese' suffix) that the cognitive material coded by language is itself a kind of language? Seems like a hostage to pomo somehow.

Who gets scalpeled first?

Think we should try and fight HCF corner as hard as possible (resisting PJ moves as long and stubbornly as possible), precisely because Chomsky's contingent multidimensional unpleasantness can easily lead to an over-eagerness to see him thrashed.

sd: *a clear discussion of (pinker's) 'mentalese'*

there doesn't seem to be one on-line, but it's floating around in the HCF conceptual-intentional system and in PJ's references to "mental representations in the form of conceptual structure" p5 PJ (1) and 'the human conceptual system', (some of which is shared with other animals, as part of FLB).

The HCF/PJ debate is basically about whether language is an adpatation - they (seem to)agree that there is a non-linguistic system of thought which is processed into language, so it's not really the issue.

Agree that 'mentalese' does sound a bit daft. Well... Pinker describes it as a neuron network which is hardwired with concepts and roles for those concepts, which form propositions, and recursion embeds propositions within compositions. It is a kind of Turing code, rather than a language - it can't really be called a language because it has no grammar.

I'll try to bash in some particularly relevant passages from The Language Instinct and How the Mind Works.

As PJs latest reply makes clear, the whole HCF/PJ debate comes down to Chomsky's understanding of adaptation, which is, IMHO, fundamentally bizarre. HCF slice up

the language faculty to such an extent (and make so many dodgy moves) that they render the concept of adaptation utterly meaningless and unworkable.

The concept of adaptation, as expressed by Dawkins, Dennet and Pinker, seems so airtight to me that I have real problems understanding why anyone else has a problem with it (hence charges of teleology & Lamarckism which have appeared on Hyperstition). So I will find it very hard to not lay into HCF.

Well here's an interview with Pinker on the topic of mentalese:

www.williamjames.com/transcripts/pinker1.htm

from the interview:

"Certainly the contents of mentalese are supplied a lot by language, by learning about objects in faraway places and abstract concepts from conversations with other people and by reading. So it's like the entry port into the mind. The actual sentences of mentalese often derive from language, although not directly, because we never remember the exact wording of what we hear; we remember the gist, and the gist is probably something like mentalese. And I think probably in the evolution of the human species, evolution of language and the evolution of language in thought probably went together; each one helped the other. If you can think more complex thoughts, that puts pressure on you to be able to share them, and if you've got other people supplying you with complex language, that puts pressure on you to be able to have those thoughts. And you can imagine a kind of feedback loop, where each one helped the other."

Nick Land: sd - really helpful on mentalese - more on this needed (what seemed like a major objection now coming over as more of a positively interesting theory)

Agree that PJ appear vastly more reasonable, realistic and plausible than HCF - maybe it's at least possible to make sense of the HCF agenda, even if rendering it sympathetic is too much of a stretch. The 'minimalist program' evidently highly motivated, and there're some strange aspects to the whole debate (the cryptic 7 page HCF appendix which seems to be bemusing everybody for instance). Feels like this could lead back into some interesting politics too.

sd: currently doing a bit of scalpel work. will be ready soonish.

First bit of scalpel work:

The basic claims that HCF make about FLN [faculty of language - narrow sense], or recursion are that:

1. FLN is the only component of language which does not appear in non-humans
2. FLN may not have been designed by natural selection 'for' communication. HCF agree that FLN is an adaptive computation, but suggest it may not be an adaptation for communication.
3. FLN may have evolved "to solve other computational problems such as navigation, number quantification, or social relationships," and if other animals apart from humans are shown to use recursion to compute these problems, then FLN has to be seen as FLB (faculty of language - broad sense), which means human language is not an adaptation for communication and is not unique to humans.

Key quote:

" a key component of FLN [faculty of language - narrow sense] is a computational system (narrow syntax) that generates internal representations and maps them into the sensory-motor interface by the phonological system, and into the conceptual-intentional interface by the (formal) semantic system... FLN takes a finite set of elements and yields a potentially infinite array of discrete expressions. This capacity of FLN yields discrete infinity (a property that also yields natural numbers). Each of these discrete expressions is then passed to the sensory-motor and conceptual-intentional systems, which process and elaborate this information in the use of language." HCF 1

Incision 1:

In this diagram there is a clear production line:

1. narrow syntax 'generates' internal representations/discrete expressions
2. narrow syntax maps the representations onto the two interfaces the sensory-motor system (phonological) and conceptual-intentional system (semantic)
3. the interfaces process internal representations into language

The HCF model does not outline a satisfactory process whereby thought can be transformed into language. Narrow syntax is just phrase structure, core computational mechanism without content, and as such it cannot generate any internal representations that will have any content to map onto the interfaces.

HCF and PJ agree that animal brains (such as those belonging to primates and dolphins) produce rudimentary conceptual thought. As animals do not seem to have evolved recursion or semantics, their thought must be couched in non-linguistic concepts which are entirely different from the human conceptual-intentional system. In the HCF model, the internal representations must be generated by a different component of the brain than the discrete combinatorial system of FLN. This would be mentalese, in the Pinker model.

Incision 2:

HCF define FLN (recursion) as the "core computational mechanisms of recursion as they appear in narrow syntax and the mappings of the interfaces."

PJ point out that (in both papers)"mapping to the interfaces' is left vague in both articles." (p8 PJ 3/23/2005).

HCF state "These mappings themselves could be complex (though we don't know) because of conditions imposed by the interfaces. But our hypothesis focuses on a known property of human language that provides its most powerful and unusual signature: discrete infinity."

The HCF model suggests that the brain maps internal representations produced by recursion onto two independent (yet connected) interfaces. These interfaces are highly-organised, regulated systems. The conceptual-intentional system turns representations into semantic concepts (produced by neurons? by retrieving them from the lexicon?) which presumably obey the stringent rules of morphology as they are slotted into the phrase structure generated by recursion. The sensory-motor system turns phrase structure filled with semantic concepts into organized sound profiles (produced by the lungs, larynx, tongue, teeth, palates and lips) which obey the laws of phonetics (individual sounds) and prosody (intonation rhythm and connected speech).

How can HCF possibly doubt that these mappings are complex?

HCF do not question whether all the components - recursion, semantics, the lexicon, phonology - evolved (they just question what they evolved 'for' and 'who' evolved them) but they do not make any mention of whether or not the mapping machinery itself evolved. The HCF model needs to include mapping itself as a component of the language faculty, precisely because the language faculty is so complex.

PJ's picture of language as a complex adaptation hypothesizes that all of the components of the language faculty (recursion, the phonological system, the semantic system, the lexicon, physiological changes to the larynx, spinal cord and brain) may have evolved in different ways and at different times (for example 'on top of' common ancestor primate adaptations (e.g. the conceptual system), or independently, as adaptations which no primates evolved (e.g. widening of the vertebrae and a thicker spinal cord, which provided greater control over breathing)), but all of these adaptations working together amounts to a complex adaptation 'for' communication.

Chomsky has described language as an organ consisting of complex components, but still refuses to accept that this organ has been designed, like all others, by natural selection. He now allows that some parts of it were designed by natural selection, but not the faculty in its entirety.

Steven Pinker, *The Language Instinct*, *The Big Bang*:

(capitalization in place of italics)

"...Could there be a language organ that evolved by a process different from the one we have been told is responsible for the other organs?...

...Natural selection is not just a scientifically respectable alternative to divine creation. It is the **ONLY** alternative that can explain the evolution of a complex organ like the eye. The reason that the choice is so stark - God or natural selection - is that structures that can do what the eye does are extremely low-probability arrangements of matter. By an unimaginably large margin, most objects thrown together out of generic stuff, even generic animal stuff, cannot bring an image into focus, modulate incoming light, and detect edges and sharp boundaries. The animal stuff in an eye seems to have been assembled with the goal of seeing in mind - but in whose mind, if not God's? How else could the 'goal' of seeing well 'cause' something to see well? The very special power of natural selection is to remove the paradox. What causes eyes to see well now is that they descended from a long line of ancestors that saw a bit better than their rivals, which allowed them to out-produce those rivals. The small random improvements in seeing were retained and combined and concentrated over the eons, leading to better and better eyes. The ability of **MANY** ancestors to see a **BIT** better in the **PAST** causes a **SINGLE** organism to see **EXTREMELY** well **NOW**.

Another way of putting it is that natural selection is the only process that can steer a lineage of organisms along the path in the astronomically vast space of possible bodies leading from a body with no eye to a body with a functioning eye. The alternatives to natural selection, in contrast, only grope randomly. The odds that the coincidences of genetic drift would result in the right genes coming together to build a functioning eye are infinitesimally small... It would be like the proverbial hurricane that blows through a junkyard and assembles a Boeing 747...

And adaptive complexity, by the way, is also the reason that the evolution of complex organs tends to be slow and gradual. it is not that large mutations and rapid change violate some law of evolution. It is only that complex engineering requires precise

arrangements of delicate parts, and if the engineering is accomplished by accumulating random changes, those changes had better had better be small. Complex organs evolve by small steps for the same reason that a watchmaker does not use a sledgehammer and a surgeon does not use a meat cleaver..."

after a presentation of how a Turing machine can process the propositions:

Socrates isa Man

Every man ismortal

Socrates ismortal

by using "ink marks on paper as its representation and a copying-creeping-sensing machine as its processor," Pinker continues:

... In the brain there might be three groups of neurons, one used to represent the individual that the proposition is about (Socrates, Aristotle, Rod Stewart, and so on), one to represent the logical relationship in the proposition (is a, is not, is like, and so on), and one to represent the class or type that the individual is being categorized as (men, dogs, chickens, and so on). Each concept would respond to the firing of a particular neuron; for example, in the first group of neurons, the fifth neuron might fire to represent Aristotle; in the third group, the eighth neuron might fire to represent men, the twelfth neuron might fire to represent dogs. The processor might be a network of other neurons feeding into these groups, connected together in such a way that it reproduces the firing pattern in one group of neurons in some other group (for example if the eighth neuron is firing in group 3, the processor network would turn on the eighth neuron in some fourth group, elsewhere in the brain). Or the whole thing could be done in silicon chips. But in all three cases the principles are the same. The way the elements in the processor are wired up would cause them to sense and copy pieces of a representation, and to produce new representations, in a way that mimics the rules of reasoning. With many thousands of representations and a set of somewhat more sophisticated processors (perhaps different kinds of representations and processors for different kinds of thinking), you might have a genuinely intelligent brain or computer. Add an eye that can detect certain contours in the world and turn on representations that symbolize them, and muscles that can act on the world whenever certain representations symbolizing goals are turned on, and you have a behaving organism (or add a TV camera and set of levers and wheels, and you have a robot).

This, in a nutshell, is the theory of thinking called "the physical symbol system hypothesis" or the "computational" or "representational" theory of mind. It is as fundamental to cognitive science as the cell doctrine is to biology and plate tectonics is to geology. Cognitive psychologists and neuroscientists are trying to figure out what kinds of representations and processors our brain has. But there are ground rules that must be followed at all times: no little men inside and no peeking. The representations that one posits in the mind have to be arrangements of symbols, and the processor has to be a device with a fixed set of reflexes, period. The combination, acting all by itself has to produce the intelligent conclusions. The theorist is forbidden to peer inside and 'read' the symbols, 'make sense' of them, and poke around to nudge in smart directions like some *deus ex machina*."

The Language Instinct, Mentalese

Suppose your long-term memory contains knowledge of the immediate families of you and everyone around you. The content of that knowledge is a set of propositions like 'Alex is the father of Andrew'. According to the computational theory of mind, that information is embodied in symbols: a collection of physical marks that correlate with the state of the world as it is captured in the propositions.

These symbols cannot be English words and sentences, notwithstanding the popular misconception that we think in our mother tongue. As I showed in 'The Language Instinct', sentences in a spoken language like English or Japanese are designed for vocal communication between impatient, intelligent social beings. They achieve brevity by leaving out any information that the listener can mentally fill in from the context. In contrast, "the language of thought" in which knowledge is couched can leave nothing to the imagination, because it IS the imagination. Another problem with using English as the medium of knowledge is that English sentences can be ambiguous. When the serial killer Ted Bundy wins a stay of execution and the headline reads "Bundy Beats Date with Chair" we do a double-take because our mind assigns two meanings to the string of words. If one string of words in English can correspond with two meanings in the mind, meanings in the mind cannot be strings of words in English. Finally, sentences in a spoken language are cluttered with articles, prepositions, gender suffixes, and other grammatical boilerplate. They are needed to help get information from one head to another by way of the mouth and the ear, a slow channel, but they are not needed inside a single head where information can be transmitted directly by thick bundles of neurons. So the statements in a knowledge

system are not sentences in English but rather inscriptions in a richer language of thought, "mentalese."

In our example, the portion of mentalese that captures family relations comes in two kinds of statements. An example of the first is 'Alex father-of Andrew': a name followed by an immediate family relationship, followed by a name. An example of the second is 'Alex is-male': a name followed by its sex. Do not be misled by use of English words and syntax in the mentalese inscriptions. This is a courtesy to you, the reader, to help you keep track of what the symbols stand for. As far as the machine is concerned, they are simply different arrangements of marks. As long as we use each one consistently to stand for someone (so the symbol used for Alex is always used for Alex and never for anyone else), and arrange them according to a consistent plan (so they preserve information about who is the father of whom), they could be any marks in any arrangement at all. You can think of the marks as bar codes recognized by a scanner, or keyholes that admit only one key, or shapes that fit only one template. Of course, in a commercial computer they would be patterns of charges in silicon, and in a brain they would be firings in sets of neurons. The key point is that nothing in the machine understands them in the way you or I do; parts of the machine respond to their shapes and are triggered to do something, exactly as a gumball machine responds to the shape and weight of a coin by releasing a gumball.

How the Mind Works, Thinking Machines

[this section is followed by a step-by-step description of how the system can work out whether or not 'Gordie is its biological uncle']

The fourth format is mentalese, the language of thought in which our conceptual knowledge is couched. When you put down a book, you forget almost everything about the wording and the typeface of the sentences and where they sat on the page. What you take away is their content or gist. (In memory tests, people confidently "recognize" sentences they never saw if they are paraphrases of the sentences they did see). Mentalese is the medium in which content or gist is captured... Mentalese is also the mind's lingua franca, the traffic of information among mental modules that allows us to describe what we see, imagine what is described to us, carry out instructions, and so on. This traffic can actually be seen in the anatomy of the brain. The hippocampus and connected structures, which put our memories into long-term storage, and the frontal lobes, which house the circuitry for decision making, are not directly connected to the brain areas that process raw sensory input (the mosaic of edges and colors and the ribbon of changing pitches). Instead, most of the input fibers

carry what neuroscientists call "highly processed" input coming from regions one or more stops downstream from the first sensory areas. The input consists of codes for objects, words and other complex concepts."

How the Mind Works, Thinking Machines

In 'How the Mind Works' there's also a 7 page description of mentalese in neural networks, dealing with compositionality, quantification (variable-binding), and recursion (which shows why connectionism doesn't cut the mustard), but then this blog would definitely be over-pinkered.

Nick Land: This material is already crying out for sub-division. More or less discrete lines of (potential) discussion include:

1) Mentalese. sd has won me over to Pinker's side on this. Seems mentalese is cognition cybernetically captured by language, undergoing co-modification through reciprocal thought-language feedback circuitry. Still arguable that it 'echoes' and (more precisely) complements language rather than constituting a language itself, but an important aspect of this process of capture seems to involve becoming language-like, quasi-linguistically articulated, abstracted and narrativized. Pomological extremist positions cut into this reality at an arbitrary stage and incompetently generalize from there (to "there's nothing beyond language").

2) The Chomsky project. Going out on a limb so far as to suggest language might be a 'spandrel' - accidental byproduct of a distinct adaptive lineage - suggests that there is a substantial investment in the minimalist programme, almost certainly of a metaphysico-political nature, requiring that humanity/language be rigorously isolated in principle from ongoing (continuing) processes of piecemeal transformation. This invokes infinity in an ultimately obscurantist fashion (which has become a fashion) to characterize human reason as essentially perfected.

3) HCF criticize PJ for adaptive storytelling. This reveals that Darwinism has generated an immanent biological narrativity, to be contrasted to the transcendent narratives of traditional-religious types (arguably including most contemporary political metanarratives). HCF 'demand' that language itself not be made part of a story.

This spirals off into huge spaces, for instance, what do the rigorous criteria brought to bear within 'adaptive storytelling' (concerning its initial validation, plausibility and comparability, testability, research re-orientation, amalgamation with existing theory, empirical modification / rejection) contribute to a more general methodology of rigorous narrative engineering (of the kind Hyperstition evidently requires).

sd: Nick - the mentalese/subvocalisation distinction is v. imp, especially in the 'becoming language-like' feedback loop.

I suppose a coherent, analytical argument is out of the question. For example, could you give a clear outline of the problems you have with Pinker, with reference to the texts cited above or in the link Nick provided. You know, step by step, convincing?

Nick Land: One aspect of the HCF account puzzles me (in multiple ways). They seem to always reel off the three functional fields 'social relations, number and navigation' when discussing possible lines of adaptation which narrow-sense language (recursion) might have split off from.

Social relations sort of self-evident (?), but distinction viz social communication / language perhaps especially intriguing, with plenty of room for blur. (D&G; also stress noncommunication when talking about language.)

Number ref. v. interesting and gets into a massively unresolved space concerning number and semiotics from the other side. I'll definitely come back to this later (as an escape from the next crescendo of Dutch jazz poetry.)

But navigation? What's that about? Why should a power of recursion be especially relevant there? (Final q. could be dittoed for soc. relations)

... although 'X said that Y said that Z said ...' pattern could be a clue to that.

sd: 'But navigation?' - A bit mistifying, but I've read somewhere it could be the conceptual representation of "the tree by the stream behind the hill at the end of the plain" complex reference that needed to be quickly processed (and then communicated)

Social relations also: "my mother's brother's children's daughter" has to be represented as concepts within concepts before it can be represented language - increasingly complex social relations increasingly required such relationships to be processed at lightning speed.

number - the interesting difference here is that HCF focus on 'pure' numbers, whereas PJ focus on numbers in concepts which actually organize perception (e.g. a week). This could also be seen in the evolution from cardinal numbers to ordinal numbers, e.g. the shift from basic maths: 'two wolves went into that cave and one came out' to more sophisticated cognition: 'this is the second time wolves have appeared here this week'

northanger: www.rakrent.com/rtsc/html/glossary.htm

(glossary also includes definition for "Fog of War". RTS = Real-time strategy)

Booming :: Economic RTS strategy, often seen in Age of Empires style games or Rise of Nation circles; also known as Powering in Blizzard game communities. Booming emphasises economic expansion and research (a.k.a "teching up") in preference to a large early force in the game. The objective is to win by out-producing and out-teching your opponents with bigger and better equipped forces. They weaken short term defence for a superior long term economy which translates into a more advanced and powerful military. Booming players can find themselves vulnerable to early raids and rushes (depending on the game), but the payoff can be huge.

what is the deal with these lessons?

Lesson 1: Never trust a pomonaut

Lesson 2: We are not tied to text

Lesson 3: More respect for prehistory

Lesson 4: Learn from children

AQ 631 = HCF CONCEPTUAL-INTENTIONAL SYSTEM = THE NORTH, A PERIPHERY 'PAR EXCELLENCE' = TRY TO LOSE THE DOWN THAT HE'S FOUND

AQ 203 = APOCALYPSE = FEEDBACK LOOP = HACKED STUFF = HEREDITARY = MAUVE ZONE = NEIL YOUNG

AQ 286 = HOSTAGE TO POMO = HYPERSTITION

("conversational implicatures" came up in a review of chomsky, pinker books - i'll try & find that link)

AQ 548 = CONVERSATIONAL IMPLICATURES = LOVE IS THE LAW,
LOVE UNDER WILL

www.sil.org/linguistics/GlossaryOfLinguisticTerms/WhatIsConversationalImplicature.htm

Conversational implicature is a nonconventional implicature based on an addressee's assumption that the speaker is following the conversational maxims or at least the cooperative principle.

sd: northanger - IT made some comments about Pinker in a thread (way back in Feb I think - I found it when trying to find out what the Hyperstition brood thought of Pinker). One of her comments was that his jokes are awful.

Nick - here's a relevant passage from *The Language Instinct*, where P addresses the charge that language is more sophisticated than it needed to be human for our ancestors.

"And grammatical devices designed for communicating precise information about time, space, objects, and who did what to whom are not like the proverbial thermonuclear fly-swatter. Recursion in particular is extremely useful; it is not, as Premack implies, confined to phrases with tortuous syntax. Without recursion you can't say 'the man's hat' or 'I think he left' Recall that all you need for recursion is an ability to embed a noun phrase inside another noun phrase or a clause within a clause, which falls out of rules as simple as "NP > det N PP" and PP." With this ability a speaker can pick out an object to an arbitrarily fine level of precision. The abilities can make big differences. It makes a difference whether a far-off region is reached by taking the trail that is in front of the large tree or the trail that the large tree is in front of. It makes a difference whether that region has animals that you can eat or animals that can eat you. It makes a difference whether it has fruit that is ripe or fruit that was ripe or fruit that will be ripe. It makes a difference whether you can get there and walk for three days.

Third, people everywhere depend on cooperative efforts for survival, forming alliances by exchanging information and commitments. This too puts complex grammar to good use. It makes a difference whether you understand me as saying that if you give me some of your fruit I will share meat that I will get, or that you should give me some fruit because I shared meat that I got, or that if you don't give me some fruit I will take back the meat that I got. And once again, recursion is far from being

an absurdly powerful device. Recursion allows sentences like 'He knows that she thinks that he is flirting with Mary' and other means of conveying gossip, an apparently universal vice.

But could these exchanges really produce the rococo complexity of human grammar? Perhaps. Evolution often produces spectacular abilities when adversaries get locked into an "arms race," like the struggle between cheetahs and gazelles. Some anthropologists believe that the human brain evolution was propelled more by a cognitive arms race among social competitors than by mastery of technology and the physical environment. After all, it doesn't take that much brain power to master the ins and outs of a rock or get the better of a berry. By outwitting and second-guessing an organism of approximately equal mental abilities with non-overlapping interests, at best, and malevolent interests, at worst, makes formidable and ever-escalating demands on cognition. And a cognitive arms race clearly could propel a linguistic one. In all cultures, social interactions are mediated by persuasion and argument. How choice is framed plays a large role in determining which alternative people choose. Thus there could have easily been selection for any edge in the ability to frame an offer so that it appears to present maximal benefit and minimal cost to the negotiating partner, and in the ability to see through such attempts and to formulate attractive counterproposals.

Finally, anthropologists have noted that tribal chiefs are often both gifted orators and highly polygynous - a splendid prod to any imagination that cannot conceive of how linguistic skills could make a Darwinian difference. I suspect that evolving humans lived in a world in which language was woven into the intrigues of politics, economics, technology, family, sex and friendship that played key roles in individual reproductive success. They could no more live with a Me-Tarzan-you-Jane level of grammar than we could."

Chapter 11, The Big Bang

and here are my comments, with HCF your questions about in mind:

1. "communicating precise information about time, space, objects, and who did what to whom" - if this precise information is to be communicated, it has to be represented precisely in the mind. The loop suggests that linguistic precision, honed through the demands placed on communal transfer, would feed back on non-linguistic representations, making them more precise in turn. Precision was a matter of life or death. If you push the P model a bit, recursion as an abstract potential for embedding

concepts within concepts would be a mechanism whose potential would grow in proportion to the developing complexity of phrase structure grammar and semantics (morphology, but also lexical grammar in the form of idioms and chunks of language such as collocation, which are grammaticized and stored in the lexicon, to save processing power). The more precise the non-linguistic concepts, the more precise the language; the more precise the language, the more precise the non-linguistic concepts.

2. “the trail that is in front of the large tree or the trail that the large tree is in front of” – this is perhaps the navigation that HCF hint at. The need for cognition to process such information once humans were upright and roaming considerable distances on the ground may have been a selection pressure which forced a proto-recursion – navigational - to evolve: one which embedded images of geographical location within other images of geographical features, which would amount to visual imagination. Pressure arising from the increasing ability communicate such information would select for communicators, and in this way the recursion of syntax would be built onto navigational recursion.

3. “if you don't give me some fruit I will take back the meat that I got” – such communication is actually extremely complex: it is a conditional threat made on the basis of an assessment of a) the current situation and its possible future outcomes; b) the recipient's trading history, the likelihood of them repeating the moves of previous trades; c) their physical strengths and social strengths; and d) whether the entire trade and resorting to threat is actually worth the risk. A conditional threat it's not as simple as “She's my cousin” - it is the end product of a sophisticated process of reasoning and assessment. Complex social relations which involve trade require the participants to assess hypothetical situations as possible outcomes of alternatives open in the present situation. Foresight uses embedding in its assessments of the situations latent within situations. This is the complex end of recursion necessary for anyone to think about a conditional threat, let alone utter it.

4. “And a cognitive arms race clearly could propel a linguistic one.” In this model, HCF are right – recursion may not have evolved for language, but that doesn't help their program very much, because it has to lead to the conclusion that recursion evolved ‘for’ something – if not language, then cognition. So maybe it will turn out that the language faculty is an adaptation for communication that emerged as a part of the adaptation for cognition.

'with your comments about HCF in mind' there are probably other glaring typos - sorry, I need some sleep.

Nick Land: [processing]

sd: all highly speculative. but if HCF don't mean this, then what the hell do they mean?

Nick Land: sd - my suspicion is HCF don't want to admit recursion as an adaptation because that would be to concede the core human language faculty lacked metaphysical perfection - with intriguing political consequences. It's interesting to me how 'progressive' (leftist) politics seems to be systematically allergic to any potential for improvement - Gould's saltationist refusal of piecemeal improvement is analogous (metaphysico-political refusal of adaptation camouflaged by apparent scientific agenda). This is not to say that either HCF or Gould lack interesting stuff to communicate - it's just that realism gets overridden by an alternative agenda at crucial and telling moments.

PJ tend to focus on all the linguistic (hence cognitively high-level) processes that can be construed without appeal to recursion, but rather through elaborate concatenation.

"Just as every language has an unlimited number of syntactic structures built from a finite collection of morphemes, every language has an unlimited number of phonological structures, built from a finite repertoire of phonetic segments. One can always concatenate segments into longer and longer well-formed phonological sequences (whether meaningful or not). We note that the segmental and syllabic aspect of phonological structure, though discretely infinite and hierarchically structured, is not technically recursive." (From: 'The Faculty of Language: What's Special about it?')

This very narrow sense of recursion is worth examining in more detail - it strikes me as a little strained.

Isn't it at least as likely that recursion is required for a wide range of non- and sub-linguistic processing, for instance perception and motor-strategies (especially those involving predation)? Almost anything beyond the level of basic reflexes surely draws upon non-linear cognitive circuitry that exhibits recursive patterns?

Some of sd's examples above look to me as if they drawn upon cognitive schemas that would be found among a fairly wide range of cephalized vertebrates. For instance,

the calculations suggested in #3 cannot be entirely distinct from those required in the mute cunning of social interactions or hunting among felines, for instance.

In general, animals capable of strategic anticipation ('if X does Y and I respond by Z what does X do next?') down various pathways must employ some capacity for recursion to track outcomes forward beyond an immediate - reflex - future. Modelling (the many) environmental nonlinearities requires a nonlinear cognitive 'engine.'

While recursion naturally switches over from recursive modelling to modelling recursion (itself), i.e. patterns of self-reference (key to definition of infinity) - there still might be reason to spin out this distinction to some degree. A perceptual system might depend upon certain nonlinear processing submodules without representing anything displaying the same pattern within the construed perceptual field, for instance, a certain accelerating motion or trend curve might require nonlinear processing (recursion) without appearing as anything other than a vector intuited immediately as such. Language, however, represents self-referential patterns in much the same way it employs them (?), from the beginning and intrinsically, which seems integral to the basic HCF point, accounting for their immediate move from recursion to infinity.

[apologies for 'For instance ... for instance' structure - clear symptom of quite severe cognitive fraying]

And on the subject of recursion, apologies for 'apologies'

sd: the point about phonology is that a phoneme cannot be inserted in another phoneme: phonemes can only be blended (e.g. diphthongs, such as /aU/ in 'now', where the vowel glides from 'a' to 'oo') and fused (e.g. the 'ch' in chop is 't' and 'sh' stuck together) to form phonological chains - unlike syntactic recursion, where a noun phrase can be embedded in another noun phrase (e.g. 'Nick's last post').

The sensory-motor system and the nature of phonology itself make recursion impossible with phonemes: we can't put the sound /p/ inside the sound /d/ - it just becomes a chain of /pdpdpd.../ and even if we could, the resultant sound would just become a new phoneme.

Syntactic recursion is possible because it is abstract. There is a closed system of grammatical shapes (noun phrase, verb phrase, prepositional phrase, adverbial phrase, adjectival phrase, auxiliary phrase) which are not tied to the body or time. Embedding is infinite, but there are restrictions on how these elements can be combined together

in phrases (e.g. SVO languages, such as English, have prepositions, SOV languages, such as Japanese, do not). In contrast, the phonological system is a closed system in which the components (consonants, vowels, stress, rhythm and intonation) are defined either by their place of articulation, their energy profile, their timing, or their pitch.

'recursion is required for a wide range of non- and sub-linguistic processing/perception and motor-strategies/mute cunning/animals capable of strategic anticipation'

The nonlinear cognitive engine you refer to could probably be labelled 'the imagination'. Running scenarios through in the brain and assessing possible outcomes seems to require abstract, recursive processing.

[It would be interesting to think about how much memory and prediction both depend on embedding structurally identical mental schemata within each other. For example, memory of a person contains representations of what that person represents now (even if they are dead or absent now - they are represented as dead/absent now).]

The hypothesis that animals have imagination powered by recursion is perhaps difficult to test or prove empirically - maybe this works in HCF's favour: the scolding refrains of 'we don't know' and 'adaptive storytelling.

"The principle underlying grammar is unusual in the natural world. A grammar is an example of a "discrete combinatorial system." A finite number of discrete elements (in this case, words) are sampled, combined, and permuted to create larger structures (in this case sentences) with properties that are quite distinct from those of their elements. For example, the meaning of 'Man bites dog' is different from the meaning of any of the three words inside it, and different from the meaning of the same words combined in the reverse order. In a discrete combinatorial system like language, there can be an unlimited number of completely distinct combinations with an infinite range of properties. Another noteworthy discrete combinatorial system in the natural world is the genetic code in DNA, where four kinds of nucleotides are combined into an unlimited number of different genes. Many biologists have capitalized on the close parallel between the principles of grammatical combination and the principles of genetic combination. In the technical language of genetics, sequences of DNA are said to contain 'letters' and 'punctuation'; may be 'palindromic,' 'meaningless,' or 'synonymous'; are 'transcribed' and 'translated'; and are even stored in libraries.' The

immunologist Niels Jerne entitled his Nobel Prize address "The Generative Grammar of the Immune System."

The Language Instinct, Chapter 4 'How Language Works'

Just to tie some of the threads together:

1. The evolution of 'DNA>protein translation' propelled chemicals into life: from the molecular RNA driven world to the cellular DNA driven world. RNA evolved translation through a bootstrapping process involving aggregation and improvements in encoding. (Woese)

2. The evolution of 'mentalese>human language translation' propelled life into inorganic technoculture. The symbolic, non-linguistic computational codes of the imagination are translated into syntactic and semantic structures implemented in real time by the phonological system. Genes were selected for their ability to communicate memes. Language was/is learned through bootstrapping algorithms which facilitate the growth of complexity.

3. ?

[Turing code; AI; meme evolution is exponential and outpaces the human brain – but what is the translation mechanism?]

Nick Land: sd - phonology point taken, but it is actually conceptually intricate. The formal definition of discrete infinity requires self-sameness - that a whole is embedded as a part of itself - which is certainly a recursive property in any reasonably broad sense. So PJ have to choose in the end either to abandon their claim that phonological concatenation is characterized by a potential to the power of discrete infinity or to moderate their assertion of its non-recursiveness (unless they want to define recursion in such a way that it loses conceptual relation to discrete infinity - but then they have stopped communicating with HCF entirely).

Discrete combinatorial systems make a fantastic topic for all the reasons you suggest. Evidently at the core of innovative dynamics in all domains.

sd: maybe I'm being a bit dumb, but isn't the PJ point that the phonological system works through discrete combination, but that it lacks recursion because phonemes can't be embedded within each other. where's the conceptual intricacy?

Nick Land: sd - problem is that for HCF discrete infinity follows from recursion - and in this they are conforming to standard mathematics of infinity and associated terminology. If PJ want to break this connection they are implicitly abandoning accepted definitions either of infinity (replacing mathematical definition with a merely colloquial one) or of recursion (replacing conceptual definition with a narrowly technical one - 'pointer stacks' etc.). Which is it?

Actually think answer may be that the discrete infinity PJ refer to deserves this cardinality (aleph-null or 'discrete infinity' strictly speaking) only after analysis employing concept of recursion at a higher level, rather than through intrinsic recursive operations / mechanisms. Still seems to me that HCF win a conceptual clarity / consistency point over PJ on this one though.

[... interrupt ...]

sd: PJ distinguish between discrete infinity and discrete combination.

Syntax and phonology both arise from discrete combination, but only syntax has discrete infinity and recursion

Seems airtight to me. Especially as phonology gets its hands dirty, doing all the dirty work of implementation.

In the HCF model phonology is the last stage in the production - it has to be finite because it is limited by the body and time. Theoretically, syntax could go on forever, embedding "he said that she said that he said that she said ..." for eternity, whereas phonology is limited to the capacity of speakers saying this.

and even if it were possible for a speaker or a chain of speakers to embed "he said that she said that he said that she said ..." for eternity, they would only be implementing the discrete infinity of syntax.

If phonology had discrete infinity, it would mean embedding /h/ inside /h/ for ever and /i/ inside /i/ forever, when saying 'he' - impossible as far I can see.

Or maybe we're just missing each other's points here?

Nick Land: sd - you're tidying up PJ on their behalf:

[from paper quoted above]

"The set of phonological structures of a language forms a "discrete infinity," a property which, in the case of syntax, HCF identify as one of the hallmarks of language. Just as every language has an unlimited number of syntactic structures built from a finite collection of morphemes, every language has an unlimited number of phonological structures, built from a finite repertoire of phonetic segments. One can always concatenate segments into longer and longer well-formed phonological sequences (whether meaningful or not). We note that the segmental and syllabic aspect of phonological structure, though discretely infinite and hierarchically structured, is not technically recursive."

Your version sets my query entirely to rest - their version keeps it alive ...

sd: *though discretely infinite and hierarchically structured, is not technically recursive.*

Maybe PJ conceive of of phonological structure as discretely infinite in the sense that you could create endless new words by combining and recombining phonemes, so the limited number of elements can multiply out to infinity, but the elements themselves cannot be embedded within each other, so it's not technically recursive. [interpretative tidying up?]

Well, Pinker's giving a talk in Wroclaw next week. I'll try to have a word with him about this (if he isn't mauled by Polish psychology students). I'll be the annoying git at the back with awkward questions, or the annoying hoverer trying to get a brain picking spot.

Nick Land: sd - excellent. can't wait for the report. (don't annoy him to the extent it interferes with the broader interrogation process - but he seems a really nice guy, so that would probably be difficult)

a lot lies in notion of 'embedding' - of course, sounds can't (easily?) be directly embedded in each other, but they can enter into relations of isomorphy that are semiotically indistinguishable from self-referential structures

sd: *relations of isomorphy that are semiotically indistinguishable from self-referential structures*

Help please.

don't annoy him to the extent it interferes with the broader interrogation process

I imagine he'll be dealing with timeworn questions about determinism and the extent to which personality is shaped by genes etc., so questions about recursion and phonology might be slightly out of the blue.

Nick Land: sd - "help ..." - a little pause for reflection on my part will help prevent total departure over the BS precipice (trying to relate PJ recursion (seemingly conceived predominantly through an infotech analogy) to Cantor recursion (understood as an abstract mathematical structure))

what's your expectation for the Polish reception of Pinker-type ideas?

sd: I guess the reception will be pretty good - How the Mind Works and The Blank Slate are both translated into Polish. The latter was well-publicised and got positive reviews.

[e.g. www.swiatnauki.pl/pdf.pdz?pokplik=4071 - you can see what a difficult language Polish is!]

I've slipped Pinker passages to students from time to time and the discussions are always quite fruitful - even if you disagree with him, at least he's interesting. Pinker's down-to-earth/cut the bullshit attitude seems to appeal to Poles. Also, as Lee Harris (not Evans) points out, it is possible to accept the theory of evolution and believe that God triggered the mechanism of natural selection. I know molecular biologists who twiddle and count genes all day, who tell me all about the nasty things my genes could have in store for me, and who also believe in a benign God. Baffling.

Polish Academia is in a weird state. Some departments are still run by tyrannical former party members. Some departments are in a kind of weak pomo eclectic honeymoon. Pinker might be a breath of fresh air. We'll see.

I guess The Blank Slate must've sold quite well because he's giving three lectures here next week. From his timetable it looks as if he's going to spend a few days in Krakow (which'll probably include a trip to Auschwitz).

There are some good-quality streaming videos on his Harvard page, by the way.

pinker.wjh.harvard.edu/lectures/index.html

Pinker starts talking about Chomsky in this video at about 1.10 mins and about Chomsky and evolution at 1.18 mins. Pinker does emphasize that his theory is a 'story of language'.

mitworld.mit.edu/play/158/

and talks about Chomsky's politics at 1.29 mins. Pinker puts his cards on the table.

northanger: mitworld.mit.edu/play/158/

intuitive physics?

en.wikipedia.org/wiki/Inertia#Intuitive_physics

"Commonly, when people unschooled in Newtonian physics are asked to make predictions about certain sorts of motions involving inertia, their responses are more likely to reflect the theories of Aristotle than of Newton."

en.wikipedia.org/wiki/Hal_Abelson

"His [Hal Abelson] book Turtle Geometry, written with Andrea diSessa in 1981, presented a computational approach to geometry has been cited as 'the first step in a revolutionary change in the entire teaching/learning process.'"

en.wikipedia.org/wiki/Andrea_diSessa

Andrea diSessa is an education researcher who has authored Turtle geometry and Changing Minds (2000). diSessa has made many significant contributions to research on intuitive physics and physics education.

Common sense clarified: Intuitive knowledge and its role in physics expertise

www.educ.sfu.ca/narstsite/conference/sherin/sherin.html

Conceptual Change & Language Use in Learning

www.dsv.su.se/~robban/ConcChange.html

Nick Land: northanger - these 'intuitive' (hard-wired) schemas have important consequences. Pinker outlines an intuitive physics and biology, which can both be corrected by scientific method, an intuitive psychology which doubtless contributes to certain religious and metaphysical memes, and an intuitive economics which deserves a dedicated post ASAP since it plays an enormous role in organizing ideological disputes and resistance to rational social change.

Infinite Thought once asked why, if capitalism made so much sense, resistance to it was so persistent and widespread. The basic answer is intuitive economics, which

identifies 'fairness' with exchange of identical goods, absence of interest (as expressed by the anti-usury principles of the Abrahamic faiths and systematized by Marx), and the suppression of intermediary functions (which are denounced as 'parasitic' even though their emergence and perseverance in an unwelcoming environment attests to their functional necessity).

economics (plus attendant social 'sciences') are arguably the only intellectual disciplines in which widespread Lysenkoism (ideologically driven lying) is broadly supported in the wider society and politics - although professional economists tend to be comparatively rational

Is there an 'intuitive politics'?

Expect it would also be fairly ghastly

infinite thought: There seem to be ghost traces of my past comments all over this thread...don't have time to get involved in the Pinker/linguistics debates sadly (though have spent a little of the past couple of years pondering some of this stuff - though more Chomsky than Pinker). Anyhow, just with reference to the last couple of things Nick wrote:

One, I'm just not clear what you mean by this: 'suppression of intermediary functions (which are denounced as 'parasitic' even though their emergence and perseverance in an unwelcoming environment attests to their functional necessity)'. Clarification?

And with reference to this:

'absence of interest (as expressed by the anti-usury principles of the Abrahamic faiths and systematized by Marx)' - sounds like 'crude communism' to me - of which Marx was incredibly critical: 'Communism deprives no one of the power to appropriate the products of society; all it does is deprive them of the power to subjugate the labour of others by means of such appropriation'....crude communism (the levelling of property and seemingly 'fair' distribution) is understood by Marx to be merely the inversion of the reign of private property - and as such based on resentment/envy (interesting parallels with Nietzsche on this point).

I suppose the question is really what do you mean by 'interest' in this context?

p.s. only thing I can suggest re 'intuitive politics' is the tendency of ethnic minorities (particularly - and famously - poor black voters in the States - when their names haven't been mysteriously wiped from the roll) to vote democrat, regardless of who

the candidate is or their policies - mind you, hard not to see this as a rationally intuitive position in many respects....

This might be understood as a peculiarly negative form of intuitive politics, tho (in the sense of 'anyone but those guys')...

northanger: nick - "corrected by"?

p.s. only thing I can suggest re 'intuitive politics' is the tendency of ethnic minorities (particularly - and famously - poor black voters in the States - when their names haven't been mysteriously wiped from the roll) to vote democrat, regardless of who the candidate is or their policies - mind you, hard not to see this as a rationally intuitive position in many respects....

IT, great example. which may explain my first query - "corrected by"?

en.wikipedia.org/wiki/Lysenkoism

damit. more stuff to read. cracking open my intuitive handbook on economics: capitalism is profit-driven & therefore not neutral. makes sense to resist capitalism when considering Matthew 6:24. since it's either one or the other.

sd: -infinite thought. hello.

suppression of intermediary functions

The middle men who operate between the producer and consumers. There is intuitive outrage against paying a supplier more than the supplier paid the producer. Making a profit on something you didn't produce, just for merely making it possible for consumers to buy the product, has often been viewed as a kind of cheating.

It was suppressed by the Bolsheviks, in their war on 'speculation' and the black market. The Russian famines of 1917-1922 (which killed around 5 mln people) were a direct result of Bolshevik grain requisitioning (which meant that peasants had no surplus) and their persecution of middle men (e.g. you could be shot for selling currency). Because there was a total breakdown in supply, workers had no choice but to 'cut out the middle man'- often they dismantled their factories and took parts to the villages to exchange for food.

To prevent utter social breakdown which would have threatened the life of the party, Lenin introduced the New Economic Policy, which allowed peasants to keep a surplus to trade after they had supplied the government with a specified quota. The NEP was

an acknowledgement that capitalism, in some form, is necessary (if only to keep the party alive).

The fact that no form of implemented Communism has never managed to eliminate black market trading attests to the fact that intermediary functions are necessary (often to prevent starvation).

European Jewry can also be seen as middle men - they were always viewed with suspicion because they made money from money: an utterly mysterious process for intuitive psychology. The Jewish money lenders were, of course, condemned as immoral and persecuted through history. However, Jewish money was essential for Europe (particularly for war funding, building projects etc.). Banking is the intermediary function par excellence.

Regarding the Chomsky/Pinker clash, would you agree with Pinker that in order to be an anarchist of Chomsky's ilk you need to have a romantic view of human nature and ignore certain obvious facts about evolution?

Nick Land: Infinite Thought -

1) Intermediaries (often incarnated in 'middleman minorities' or 'market-dominant minorities'). Thomas Sowell has an excellent discussion of the predicament of these people in his *Race And Culture* (e.g. Jews in Europe, Chinese in East Asia, Vietnamese and Koreans in US Black Ghettos etc.) who typically enter an area, build from scratch a commercial tier by providing an unmet need to the locals, get accused of everything from monopolization to clannishness, get persecuted and leave (accused of 'making money and getting out') or killed by idiot majority. This situation, replayed innumerable times through history, is a classic example of the tragedy of economic hard-wiring (intuitive economics), leading even to genocide, and at the very least to the systematic persecution of people providing what majority locals were unable or unwilling to provide for themselves.

2) Interest (= returns to capital). Marx's entire intellectual edifice rests on the fundamental definition of returns to capital as exploitation. IMHO the appeal to 'crude' (versus sophisticated?) communism a red-herring in this context. Marx's critique of 'utopian socialism' (one which has no understanding of the 'scientific laws of social development') is essentially political rather than economic per se. Marx actually provides almost no discussion relevant to organization of post-capitalist societies (bits in *Critique of the Gotha Programme* on work chits, otherwise mostly

bizarre snippets of utopian nonsense that can go head-to-head with Proudhon any day) so such distinctions have little weight when it comes to nuts-and-bolts. Essential thing: If capital is entitled to anything beyond refunded depreciation on investment or return of loans (without interest) the arithmetic of Das Capital (calculation of 'intensity of exploitation') totally disintegrates.

3) Intuitive Politics. Don't think your example quite fits. A hard-wired politics would have to conform to schemas at work in pleistocene hunter-gatherer societies - perhaps concerning ideas of leadership and authority, maturity and prestige, gender roles, limits of humanity, legitimate violence etc. Afro-American political strategies - however brilliant or ill-conceived they may be - are altogether too sophisticated and historically variant to credibly fit the bill. Remember, the Republicans were the African-American party until the 20th century (Dem. break with Dixie). Democratic representational politics - mass politics in general - is too elaborate to draw directly on hunter-gatherer schemas IMHO (although exceptions might include 'taller candidate wins' (except that would be Kerry)).

sd - we crossed, sorry for repetition

sd: i was intruding on your turf anyway - the question was for you...

Nick Land: northanger - "corrected by?"

unfortunately it isn't corrected by anything, hence the problem

There's a degree of amelioration in the cross-dynamic of democratic politics (or rational autocracy) with the bitter lessons of history, but economic reason doesn't 'take' naturally - education would help, but that terrain is so politically contested that no easy answer is available

Tachi: Nick, sd, great dialogue going on here, am hoping to copy, paste and print out for more dedicated reading, though have to say Piet's interruptions increasingly vexing. Not only do I have to painfully edit out his crap comments - your contributions worth saving and filing to be honest - but it cuts into the flow of the productive rhythm you and sd are sharing. Can I make a suggestion to have all irrelevant incomprehensible drivel deleted out, as Reza suggested to me long ago. It seems noone wants to do it. Though I am happy to if noone else is :-)

Singularity Monitoring

CCRU-Shanghai (October 18, 2005)

Still hooked on TCS, where Arnold Kling in a typically insightful piece suggests tracking the Singularity curve through ascending productivity figures in relevant economies (principally the USA). This makes a lot of sense and makes the whole topic dramatically empirical. If it cashes out as a forecast, the next few years should be extremely spectacular.

Comments: Singularity Monitoring

black mesa research: This will not go on the main page due to questionable content. I hope it doesn't get truncated.

I was reading the original Singularity post, and I came across this from sd:

"The politics of The Singularity are also mind-boggling. The hard neo-Leninist left and the neo-Con right are going to find themselves in a bizarre humanist alliance on this issue (Moralism Reactivated). Singulatarians pursuing "Off-the-shelf genomics and cyborgian body-modification catalyse run-away posthumanism" will come to represent a new political enemy: biological traitors.

The left/right distinction stems from where people used to sit in the French National Assembly (an arrangement echoed later by the location of the Russian Provisional Government and the Petrograd Soviet). A new political map will have to be drawn if The Singularity is to be 'fought'."

This has already started, especially with National Bolshevik/Soc**list and Anarchist populations on the rise in Europe and America. We have become hated by the Neuer Deutscher Folk community for suggesting that the human organism, folk consciousness and the green environs of yore are of no apparent worth except to be stored as phenotypic memory, processed many times over in parallel arrays, and used for racial/social experimentation, i.e. in order to force pressure on the genetic population to change via deepening racial specification. Populations with nation states or some form of geopolitical solidity are never very happy when you tell them they are as ephemeral as Gypsies or Jews, especially when you use their own propaganda on them. Instead of preservation we promote racial intensification. Interestingly, there is a growing underground vision in Europe and Russia of Neo-Imperialism based on the writings of Julius Evola, Oswald Spengler, Alexander Dugin et al. For purposes

of description they are Occult Neo-Fascists, but they are survivalist muppets, failing generally to fund the Faustian spirit, and can't comprehend at all embracing a malefic ecology. Left and right doesn't really matter anymore, it is only going to matter to any reactionary attitude to the technological singularity. That is, the left who will probably wish to live in an inclusive homogenising humanitarian paradise, and the right who will be looking conserve racial purity and religion. Anyways, freedom within a free market economy is a complete hallucination. Left/right politics, and corporate strategy keep people busy and distracted from the real power game of corporate/governmental secret societism, concentration camp style free market experimentation, the mobilization the war-machine, and the preparation of neo-con/zionist monkey escape vectors amongst many other shady things. However, nationalism hasn't really hurt China in the long run, it seems to be about loosening up moral responsibility in order for progress to occur, and for gathering the power to defend any posthuman agenda—whether you know it or not. Perhaps an amoral futurist elite needs to be installed in Europe and America. Maybe a politicized machine front needs to be formed that is Anarcho-Capitalist in operation. We need more money for our dear Herr Doktors. And yeah, we need more Herr Doktors too, because we are about to have problems when it comes to keeping up manufacturing our own intelligence systems.

The monkey panic of the coming singularization will be a hilarious tradgi-comedy. All us oedipal little nipple suckers will be crapping our proverbial nappies. Will any coming power elite rule by sheer occult futurist terror? Indeed, they may rule from far away in the future, due to the possibility of the collapse of space-time. But then, how many elites or eschatons will there be? Given the multiplicity of options for new dynamical fields of intelligence, and also given the multiplicity of (fiscalracial) elites on the planet already. The closest position for man that we can immediately think of will perhaps be close to a cybernetically and genomically enhanced Randolph Carter lost in an absurdly discontinuous chrono-spatial political environment. That old cataclysm of multiple-or multiplying-bodies surrounded by unfathomable de-oedipalized sentiences in multi-folded expressions of historicity interests us lots. Either that or annihilation. We are wetting our pants to see what it does to sexual politics as well, in fact, we hope to take part. Blah, it matters not; many monkeys have already passed the threshold and are in full blown cyber-psychotic delusions of becoming-lateral.

cynoia: bmr - you are pretty verbose and equally provocative. that left/right no longer matters in the 'war' against the singularity? you already make a good case for its

differentiation: l=racial homogenisation/utopia; r=racial purity/religion. surely this is a significant difference that will have real effects on the way the singularity occurs, both resisting the drift, or guided acceleration, towards a post-human culture, though both exerting entirely different selection pressures on the direction and development of the paradigm shift. to suggest otherwise is to endorse an overly simplistic fatalism that is more tiresome and passe than your own so-called boredom with your all too human existence. to suggest that the only conflict that matters is humanism vs non/anti/post-humanism already begs the question: are there not a multiplicity of post-humanisms waiting in the wings? indeed, is post-humanism the same thing as the anti-humanism you apparently endorse? in fact, what exactly is anti-humanism? i think you'll find you are part of a pathetically human goth-clique that relishes failure.

sd: 'what exactly is anti-humanism?'

a quick answer:

Escaping the constraints of the human genome and entering into new, treacherous alliances with emerging systems.

Kurzweil's humanism (the idea that humanity will saturate the universe with intelligence and that AI will remain profoundly human) is extremely idealistic and ultimately rather ugly.

black mesa research: Cynioia – Actually, you'll find that I don't belong to any Goth clique, though I do tend to wear a lot of black. This is because I have trouble with the ideological constraints of the post-industrial scene. So I favour a lonely existence, it also means I don't have to bump into people like you at parties. Similarly, thank you for calling me passé, nice to know that you are the grand vizier of content and style. Because you are, aren't you? Well, perhaps on this site you are ;) Please go on, I'm just waiting for you to tell me you are far cooler than me or something as equally pathetic.

Differentiation and the polarities mattering as political identity markers as we move towards any TS, are two different things entirely. 'National anarchism' now what don't you understand about that? It is a contradiction in terms from a traditional political standpoint. It ruptures the linear nature of the political spectrum. OK. I differentiated between left/right, this can still be done, but this is a rough sketch and it is fairly obvious that it is on shaky ground with ideologies like national anarchism around. It shouldn't be taken seriously, I point this out. But it is my fault for not clarifying everything to you.

For you to understand why it doesn't matter is very important. Political organisms/machines (whatever) tend to try and make things matter, important, and glue narratives to hold sway. As SD said in the ID debate: '(hyperstitiional) narratives are wielded by power structures.' To groups of individuals, in my example Perennialists/Traditionalists, who are extremely confused IMHO, having a deeply essentialist and reactionary standpoint, political/racial definition will matter in breeding identity. But the more the human condition in relation to technology and any singularization changes, the more we will see rupturing of the political spectrum and the population of the political field with groups who diverge from the field of normative political dialogue/identity distinctions. Interests will be become more complex. There may be overarching things binding 'humanity' as a group, but as it

stands there doesn't seem to be that much which is worthy of devotion. The nature of political power and narrative will undoubtedly change. Identity in terms of left/right, (being the obvious political identity markers), in my opinion will fade due to increased complexity and delinearisation of the human organism and intelligence. This is where I do not believe it matters anymore, because power doesn't just work in terms of polarities, it works on multiple planes, and propagates itself in the same manner as emergent systems and intelligences do, because they are operationally tied. Hence why nothing, save except futurist speculation and questioning my identity in relation to that speculation needs my devotion. There are, however, always relics left over from prior ages, and I do also point out that the left/right relic keeps people affiliated to blocks of identity that are wholly fictional, that also detract from sourcing the motivation of those in power who are tied to hidden interests. This is another reason why I frankly don't care about the left/right dialogue. I'm also not subscribing to any form of omega point determinism either, but I am resisting the call to subscribe to ideologies which have petty identitarian distinctions. Human politics and its relationship to technology has always been pretty strife torn, it is a war of identity with no morally supreme side, and call me fatalistic if you wish but I feel the seams of a lot that many hold sacred are starting to come undone with it.

The complexity and intensification that technology brings derealises identity to the point where it might be clear that sometime in the future it will collapse in on itself in a singularity. The eschatological trajectory here is extremely muddy though. Extrapolation in any manner akin to future studies is pretty dangerous, but then so is superstition, both are fun.

I admit this could have been clarified to avoid confusion, but when I write I rush and can't calm down. I am actually trying to be calm here.

Sd's quick answer is great btw. My passé nature means that I really don't want to be here in petty alliances with human desire; in fact I feel something wholly otherly rupturing through me quite a lot. Actually, come to think of it, the desire to be human is all too passé itself, and this is precisely why I want out of the deal. Just because I don't want to be like you does that make me sad, or just give some form of will to individuality? Yes I am all too pathetic and human, that is precisely my point.

Forgive me if I am incorrect here. But unless you are ripped and not caring, why if you are someone with such a grasp on the matter can you not spell differentiation? Unless English is your second language I smell intentional BOTification.

whatever you are. thanks for helping me clarify thoughts.

Tachi: sd - anti-humanism = "Escaping the constraints of the human genome and entering into new, treacherous alliances with emerging systems."

Interesting sd, though perhaps this biological definition could be expanded somewhat? Surely humanism/anti-humanism has a cultural dimension that affects political and economic developments? And what kind of systems are you referring to?

black mesa research - interesting stuff though a little below the belt to have a pop at someone's spelling.

Nick Land: find myself in substantial agreement with bmr - apologies for any embarrassment that causes :)

Walter Bennett: So what do you agree with Nick? It seems BMR is making a lot of points. Of course the backlash against the Singularity will take on many forms, and the left/right polarity, far from uniting or dissolving into insignificance, will break into breakaway units as human life becomes affronted on multiple front-lines: biology - genetic engineering applied to medicine, food; religio-culture - implosion of monotheisms into internecine warfare; politics - increasing obsolescence of nation-state .. All penetrated by technological developments that take on an accelerating, unmanned trajectory. The Hollywood-esque show down of humans vs. the machines, or the monkeys vs. technology is far too simple a future that awaits you. Its going to be more desperate and messy, complex and swift.

black mesa research: Tachi - Sorry - The pop at the entity's spelling was due not to a mode of superiority, but rather, a mode paranoia at the nature of it. Not trying to be nasty here, just genuinely worried that people are out to get me. I try to react impersonally but I have an excitable endocrine<>nervous system.

Nick - Don't about any embarrassment that causes. Every morning I wake up, I find myself sick with embarrassment from agreeing with myself, and knowing where a lot of this can lead. :s

By 'where this can lead', I mean primarily psychologically. Attempting to consort with chthonic repressed or emergent non-human entities and the future has a tendency to promote, asocial, schizoid, and increasingly fictitious personalities. Secondly, promoting a de-oedipalized machinic society, that strips the constraints of the natural, sexual, familial, and state/national order, tends also to strip social/ecological responsibility away due to its lack of will to be responsible to the current societal/ecological position in the first place. It is a process of defilement of humanity, personality, and the symbolic regime. Demons live in hell so to speak, and to contact them you have to get yourself there. But to quote a wonderful goth band Ordo Rosarius Equilibrio, (though i'll probably be ousted for being tres passe): "hell is where the heart is". However, my affectivity and emotional affordance levels haven't been completely depressed just yet. I'm just a sad goth git who listens to Scott Walker.

Any possible fictional becoming into any number singularizations could also be based around tearing down the censorship of ancient or otherwise profane (demonic/inhuman) memories/desires/systems of productivity and information, in necessity, to destroy/dismantle the human monopoly on the order sign/informatics, so the malefics of the unconcious terror of desire can be instantiated fully.

I need to think more on cohering a fictional strategy to assault this singularization/future business.

Nick Land: Walter Bennett - seems to me bmr is making an aesthetic appraisal of 'the' near future which necessarily filters complexity - that's going to happen anyway, surely? The complexity of what the hell just happened won't be remotely processible except from the other side of intelligenic catastrophe - so among all the possible filters, aesthetic ones will have their place (as part of entertainments media mutation among other things) - if bmr gets this movie made i'll definitely buy the pirate DVD, and cheer the monkey-frying monsters ...

Of course, that's not to say i'm abandoning my solid piece of real estate slap-bang in the middle of liberal humanism (an ideology highly conducive to breeding monkey-frying monsters, by interesting capitalist coincidence).

But think i agreed with everything you said too - at least prior to final pair of sentences. Just think complexity breeds diversity rather than master theory, especially among structurally retarded mammals in serious need of a genomic overhaul.

Walter Bennett: *The Hollywood-esque show down of humans vs. the machines, or the monkeys vs. technology is far too simple a future that awaits you. Its going to be more desperate and messy, complex and swift.*

Nick - not sure why you disagree with this, given you said complexity breeds diversity: this is what I am saying, that with the resistance broken into diverse pockets of righteousness and facism, the human struggle for integrity becomes a mess, and the war will be lost swiftly precisely due to the complexity of the front-line. There is no singular front line, and that's what makes it easier for the singularity to take shape. I am interested in knowing if there will be a movement that heralds the post-human era? Will machines target human resistance, or is this to anthropomorphize them too much?

Nick Land: Walter Bennett - it was misleading of me to say i disagreed with those sentences, it was more the polemical conclusion you drew from them versus bmr that seemed to me extravagant, after all, 'his' (i'm guessing) polarized cinematic scenario is one among the multiplicity of reponses your comment predicts and doesn't seem to make any totalistic claims to its own unique validity.

Your last question should spark some lively stuff. IMHO, the 'machines' will encounter humans as the weird capital-programmed mammals dedicated in large part to building intelligent machines (and most probably effectively stomping on those sad defectives of the same species - i.e. romantic revolutionaries - who attempt to stop them). So why on earth would they 'target' humans? Wouldn't it be more naturally in pursuant of the acceleration vector to help them, by for instance reinforcing the efforts of the 'good guys' to eradicate islamarxists and suchlike mechanophobic reactionaries while radically upgrading their genomics, neurocircuitry, mechanosynthesis and generally contributing to the sloughing-off of humanity's legacy constraints in efficient stages?

But now i'm wrecking the movie ... damn!

sd: Spindle neurons are where it's at:

en.wikipedia.org/wiki/Spindle_neuron

www.nytimes.com/2003/12/09/science/09BRAI.html?ex=1386306000&en;=294f5e91dd262a1a&ei;=5007&partner;=USERLAND

black mesa research: *Will machines target human resistance, or is this to anthropomorphize them too much?*

Interesting question, and in my opinion related to the question about productivity. Human resistance is already being targeted by the all too human tools of machinic techno-capital, namely, those capital/information accelerating systems seeking to up productivity to maintain efficiency. To do this we need technological change e.g. to miniaturize, speed-up, automate, and self-organise as many tasks related to productivity and engineering as much market sentience as possible. As Nick said it has been happening 'since the beginnings of the industrial revolution.' Techno-capital production has locked itself, seemingly, into a process to which there is no turning back. We are perhaps being drawn inexorably into the continuum of singularization.

Humans will obviously be part of this emergent sentience, since we are involved in manufacturing intelligent systems ourselves. It is a question of agency. But, defining whether we are being used by self-organising techno-capital, or we are using it might be fundamentally useless. So whilst the process is machinic, its initial connectivity may not necessarily be the 'machines' as such.

Nick – 'Wouldn't it be more naturally in pursuant of the acceleration vector to help them, by for instance reinforcing the efforts of the 'good guys' to eradicate islamaxists and suchlike mechanophobic reactionaries while radically upgrading their genomics, neurocircuitry, mechanosynthesis and generally contributing to the sloughing-off of humanity's legacy constraints in efficient stages?'

What about the possibility of technophilic Islamic organisations working in collaboration with rogue emergent systems? Even if these systems are dysfunctional in terms of maximizing efficiency, like the US problem with monotheistic morality curbing important research to stay ahead of the game. We can't expect the TS intelligence to remain entirely dedicated to itself - in a totality - even it is machinic, spanning the global market reflex system; especially if crucial divisions are made in the early stages and its vectors are changed by integrating redundancies.

It may make an attempt to subsume the fractional resistive elements of humanity and any inter-system insurgency through some sort of hyperstitional interaction, and re-engineering those elements as it sees fit. However, this possibility seems quite fascistic, culturally apocalyptic, and more like the behaviour of a monotheistic state, than a

system that promotes possibility engineering—which may be the future of western democracy I'm thinking. It also assumes that the entelechial conspiracy goes farther than we can possibly imagine and that it seeks equilibrium. I'd see it engineering more labyrinthine possibilities in disequibrial irruptive processes rather than unifying itself into a visible totality at least. But then it would be doing this in order to manufacture itself. The possibility of the TS condoning abortive operations may be, again, all part of it calculating an internalised evolutionary warfare. Its key operation upon humans, and ultimately for itself, may be involutory, taking genomic and cultural historic factors etc. and breeding recycled phenotypic systems in pure unrestricted experimentation to expand its capacity for situational affordance. Making it and a more efficient evolutionary system.

sd: about the spindle neurons - I should have explained the link to the topic, maybe.

(from Kurzweil) Spindle cells have yet to be completely reverse engineered. While the visual and auditory systems have been reverse engineered and simulated in circuits and programs, spindle cells, which are deeply connected with emotions and awareness, will probably be the one of the last features of the brain to be reverse engineered and simulated. When you hear that spindle cells have been successfully produced, the Singularity will be round the corner.

black mesa research: 'Pure' is a massive overstatement.

This last bit rests on computational limits, which are tied into the capacity of lateral intelligence systems to compute 'beyond' immediate situational needs. We do this already. But, an interesting schizm will be where systems break the barrier and enter into the quantum realm, esp. in terms of what limits will apply to computation. This may throw locality and temporality restrictions firmly out the window. Well, i'm hoping, especially thinking how much fun it could cause future generations, and as device for hyperstitional pr0n (un)plantplotting :)

Main problems here for me are perhaps process-identity based. I'm torn between the language of fatalism, i.e. the complete 'peeling away' of everything homogeneously into the techno-eschaton, and the fractalizing meta-computational processes that manufacture potentiality, differance, and disequilibria.

Are identity frictions and abreactions etc to intelligence systems just sites of contact in techno-evolutionary 'system efficiency' problems?

Would it be off the mark to suggest that this may be a problem of temporality as much as it is an intelligence 'life-support' problem? I'm thinking that seeing as we break down temporal/spatial barriers simultaneous to breaching computational barriers (esp. with regards to increasing the ability to process simultaneous realities), we find ourselves questioning whether this isn't a vast cosmic conspiracy which is multi-processing itself as we speak.

War? What is good for? Everything...It is a set of problem solving exercises, to which there are no final solutions.

visItor: Interesting thing these spindle neurons being deeply connected to emotions and awareness. I have to wonder if this is as close as we will ever come to a "soul substance". I'd imagine that the spindle cells populate the limbic system, which is our emotional center, around the pineal gland, also known as the third eye. One has to wonder if they can ever truly be reverse engineered.

It would seem that bmr is having visions of a malevolent, ubiquitous, super-sentience. Perhaps this could happen, and it certainly makes for good science fiction, but I'd rather see the cybiont as a benevolent, global, macrointelligence in league with, or perhaps better yet, perpetuated by mankind. It is still hard for me to imagine technological autonomy, as advanced as we've become of late. The ability for AI to self-learn is still incredibly slow, sensory inputs are barely adequate for the most rudimentary functions, and on top of all that, I doubt it will ever have man's penchant for abstract reasoning. Perhaps you speak of some dark and distant future, or perhaps the TS is right around the corner. I would like to see the TS in my lifetime (since it is inevitable anyways, and for the possibilities), but I am skeptical. Wow I feel like the most skeptical person in this neighborhood. Sorry if I am a buzzkill. I haven't smoked up in years now. lol

What worries me most about a TS is the increased complexity. Already most people don't even know how to program the remotes on their VCRs, what will people do when their pollution and radiation shields fail? Mankind is already so dependent on technology we have potentially catastrophic Achilles heels everywhere that any savvy technoterrorist can exploit for maximum damage at minimal cost. Case in point what Nick has referred to as Islamarxists... though I believe he meant to say islamofascists, since al queda populates the extreme right of the political spectrum. however personally I think the extreme right and the extreme left come full circle and wind up with largely the same result: totalitarianism. I guess it makes no difference, but for clarity's sake. You may be underestimating them Nick. They may be unindustrialized

nations but they are developing innovative ways of combat all the time, probably most notably is the memetic war. While the talking heads in Washington lose more and more credibility, the opposition is creating a movement, and they have the moral high ground. We are falling into the same trap that led to this falling out with the world at large in the first place, arrogance and overreliance on our technological superiority; a.k.a. brute strength.

War, what is it good for? Killing off an entire generation of scientists and philosophers when we could all be contributing to the advancement of mankind. What good is trying to problem solve when you achieve no solutions? This is a war of greed and aggression, and an ill planned one at that.

"I saw the best minds of my generation destroyed by madness, starving, hysterical"

Nick Land: VisItor - on 'Islamaxists' - something of a house joke (we used to have a noisy one here. Read as: supporters of the alliance between embittered Leninist burn-outs and psychopathic Islamofascists to bring down planetary capitalism)

bmr - "What about the possibility of technophilic Islamic organisations working in collaboration with rogue emergent systems?" - interestinger and interestinger.

Any sufficiently advanced intelligence will necessarily understand the importance of decentralized competitive networks to dynamic innovative systems, yet as 'a node' in such a system it will still have particularistic ('selfish') interests. Foster the multiplicity or squash the competition? Tough call - so it's probable all kinds of pacts, deals and betrayals can be expected.

Haven't got to spindle neurons yet ... (but i will)

black mesa research: I'm immersing myself in the dystopian side on purpose...not an nasty person really, it is all just play. I'd love to shimmy in a paradis artificial with my girlfriend. But I just have to play up for the sake of my corporation.

No FINAL solution not 'no solution'

Nick Land: bmr - this is no time to disappoint us! We have a huge villainy deficit to make up in short order, with flabby liberal humanism breaking-out all over ...

Gordon Freeman: *beats the TS head crab to death with crowbar*

black mesa research: lol 'flabby liberal humanism breaking-out all over '

heh that sounds like my father.

Nick Land: bmr - yes, think about that ...

black mesa research: don't worry Nick I have. *shudders*

Nick Land: this is an interesting article on Anti-Americanism:

www.brusselsjournal.com/node/367

(treats it as the 'anger' phase of Europe's dying process - which would predict (futile) 'bargaining' comes next)

"One and a half centuries ago, John Stuart Mill warned that in a democracy everyone receiving government benefits ought to be disenfranchised, because otherwise people would start abusing their franchise to vote for prolonging and expanding these benefits."

- from site above

What an absolutely superb idea.

SS-TV Administrator: *looks at empty roll sheet*

sure, as if they aren't disenfranchised enough through apathy by hyponotising fake tan fat slag culture. we could deal with this underclass thus: by sterilising them, paying them to take part in government/military/corporate trials, making them join the army in return for franchise, space gulags, makin them hermetic-wotanists etc. Whoa, Nick, this is beginning to sound like the New Right International, more and more every day...you are right though the real enemy is within, i.e. left wing intellectuals, perhaps it is time for a purge of the universities? Only, save the useful ones, but minimize the noisy ones, so we can all get back to accelerating future engineering.

Nick Land: SSTVA - If it weren't for the fact the welfare state was a proto-fascist (Bismarckian) invention, your snarky rant might have an iota of a point.

PS. Things have been getting much better around here with the mindless leftoid trolls gone - haven't you got anywhere else you'd rather be?

... but of course, John Stuart Mill was a Nazi (tell me you don't sound like the most knee-jerk imaginable moron)

Patrick J. Mullins: The novice here again, as usual mainly read with much fascination.

What I want to ask is in order to get some sense of proportion into my head that obviously isn't.

Okay.

Assuming not catching bin Laden is not anything politically motivated, or even if it is (since I have no way of doing anything but hearing opinions on it), what is the state of intelligence that would make catching him difficult? In other words, in 2001, since I didn't have any hard knowledge of this kind of thing and probably still don't, I thought it would be easy to catch him; I didn't think you could still 'hide out' indefinitely in primitive ways. This may or may not be relevant to all these machinic developments you are talking about.

Also, in North Carolina (I believe it was, anyway one of the Southern states right there), a much smaller criminal hid out in the mountains for several years. This too surprised me, because I didn't think you could do that any more. Then, when they did

catch him, I was also surprised, because I thought that once he was able to escape within a circumscribed area for several years, he might be able to do so indefinitely.

The Unabomber didn't get found till after publishing his manifesto, but was able to hide for years. It must have to do with personal resources of various sorts, even personal will may still be involved as in ability to be completely isolated without freaking out. And, of course, McVeigh made no elaborate attempt to hide, and was quickly found.

Thanks, whoever can tell me why it is still relatively easy to hide. It has made me think that crimes and arrests are almost at random a lot more than I would have. (This is not precisely on topic, but somewhat, because the machinery either doesn't work as well as I thought, is directed not to work, or works in some less straightforward way than I imagined. Or really is not quite as developed as I imagined.)

northanger: en.wikipedia.org/wiki/DB_Cooper

D. B. Cooper is the name used to refer to a famous airplane hijacker who, after receiving a ransom payout of \$200,000, leaped from the back of a Boeing 727 as it was flying over the Pacific Northwest. No conclusive evidence has ever surfaced regarding Cooper's whereabouts, and several theories offer competing explanations of what happened after his famed jump. The only clues to have turned up in the case are ambiguous: around \$5,000 that washed up on the banks of the Columbia River, and part of a sign believed to be from the rear stairway of the plane from which Cooper jumped. The nature of Cooper's escape and the uncertainty of his fate continue to intrigue people. Today, the D.B. Cooper case remains the world's only unsolved skyjacking.

Nick Land: PJM - agree with your point. After all, a lot of the Nazis escaped and hid out after WWII quite successfully, with far less in the way of social support networks.

Hunter-sniffer type machines are going to be a major line of robotics development IMHO (UAV drones are already being adopted for associated roles, but something that can lurk, crawl into a cave, make a reliable ID and then assassinate the target is going to be needed)

sd: *disenfranchised enough through apathy by hypnotising fake tan fat slag culture. we could deal with this underclass...*

A nice example of patronising leftoid academics playing at being champions of the poor. Like the underclass really need you to speak for them. They'd eat you for breakfast. Of course, their apathy is all due to their being exploited and manipulated - naive programmable folk that they are - oh and don't their false consciousness while we're at it.

I suppose it would be asking to much for SS-TV Administrator and the gang to actually outline their justification of welfare and their thoughts on its future?

(damn) don't forget their false consciousness while we're at it...

Nick Land: sd - best of luck, but that's been tried repeatedly with this dribbling halfwit. He doesn't have anything to say or the cognitive capability to string two thoughts together, just vacuous snark ("it's called critique"). He's even cretinous enough to think the words 'right wing' are going to send us into some kind of moral panic.

PJM - this is spot on your point:

www.techcentralstation.com/102405B.html

(especially epigraph)

Patrick J. Mullins: Nick- thanks, that article is truly fascinating. These sound like stronger arguments than those philosophers usually give when they start talking about the virtualization of things. I can't say I know why my old perception that the CIA could do almost anything and very easily was so hardened, because I can't remember if its bureaucracy-mired nature had been exposed the way it has been in the last 10, and especially 5 years. I'd read stuff about competition between Langley and the FBI, but it never made any impression on what I thought CIA would be able to do. Main thing in article is the way the terrorists figure it out like viruses with each new development.

Thanks, Nick. Great article, explains much more than I was aware of, and less sci-fi tone than when philosophers talk about virtualization. Tried to post longer comment wondering why I'd thought CIA was omnipotent, but no big deal that it wouldn't post.

Nick Land: PJM - sorry about technoglitches here.

Occasionally stuff you comment doesn't show up immediately. It seems that if you don't get a submission error notice your comment arrives eventually.

[... interrupt ...]

hyperflow: ok, so kurzweil's (et al) cultural fictions are entangled in the ontogenesis of involutions, hyperstitional circuits (migration of fictional into actual) which forge a political ontology of the body. Kurzweil's nonbiological nanointelligence projects a humanist intelligence programme into a feed-forward time-space continuum. Future concepts engineer the present.

“The Aleph moment hasn't even happened - but we're already feeling the shock.”
(Egan, 1995: 271)

But... where are the warmachines in this story? --- where is the demi-god control freakery twisted into a desire which runs occidentally through this circuitry into a mode of production which undergrounds this (post)humanist saga?

Nick Land: hyperflow - Kurzweil probably needs some terminator-style Frankensteining (sd more of an expert on K. at this point) - have you sampled Hugo de Garis yet? Seems promisingly brutal ...

sd: an expert?!

I might have something semi-coherent to say about K next week.

hyperflow: hugo de garis is impressively brutal yes!

terminator mention is interesting (though not sure you're actually referring to the films), but the species war that underpins the terminator trilogy basically extrapolates the kind of meme war sd talks about into a marxist species battle with all the usual species narcissim.

wondering whether the parasitic agencies that collect in the hyperstitional circuit might mutate in the underground coding of this kind of warzone, the fear that underpins a crazed desire for ultimate control (kurzweil's runaway desiring machines) could twist this affective line towards a proliferation of non-subjective agents which mutate the line of humanism altogether. - can hyperstitional circuitry malfunction in this way?

i should be getting an amazon delivery of TS tomorrow, so, maybe more informed soon.

Nick Land: hyperflow - thanks for adding 'power' to the list of topics to thrash through.

Is the 'will-to-power' a transcendental characteristic - if not in a Nietzschean sense at least in that of an emergent impetus, resulting from the fact that maximal control over the natural and social environment facilitates all other goals? Or is it a relatively trivial biological inheritance, perhaps in a way close to that suggested by Octavia Butler (a 'genetic flaw')? What would lead an AI (for instance) to become 'power-crazed'? – hmmm

Molecular Migration

CCRU-Shanghai (October 27, 2005)

Ronald Bailey¹²⁷ catches a glimpse beyond the carbon barrier¹²⁸.

Comments: Molecular Migration

sd: In Kurzweil's projection, The Singularity arrives in a three-stage revolution, the GNR revolution - genetics, nanotechnology and robotics.

We are just entering the first, genetic phase. The nanotechnology phase will not really kick in till the 2020s.

The obvious problem with this projection, partly acknowledged by K, is that the genetic phase opens up the potential for such catastrophe (e.g. bioengineered viruses) that we might not get to the nanotechnology phase. This is a nuisance because nanotechnology could (theoretically) equip us with the weapons capable of staving off any biological attack.

So according to K's narrative, nanotechnology is 'our' only hope, but we can't really reach it until we are in the shadow of the utmost peril. Then nanotechnology itself presents new dangers (which doubtless cannot be overcome until the robotics revolution is in full swing, but haven't got to that bit yet...)

The motor for the scenario is exponentially escalating peril and panic.

Nick Land: sd - Kurzweil might still be erring on the side of conservatism with some of his dates. Given not only increasing returns but cross-linkages and unpredictable thresholds, it seems bold in the extreme to forecast medium-term (decade-plus) delay schedules (with nanotech for e.g.). 'Existential' security threats also accelerate things remarkably, so a surge in the global Hobbes-factor could scramble everyone's expectations. I'd go out on a limb and say pretty much anything could happen in a decade, excepting only large scale extraterrestrial engineering projects.

¹²⁷ Author of *Liberation Biology: The Moral and Scientific Case for the Biotech Revolution*

¹²⁸ <http://reason.com/archives/2005/10/26/nanobioethics>

Change in the epoch of Singularity Revolutions is not only nonlinear (logistic) in aggregate, but also polycatastrophic: disintegrated, erratic and aleatory - a breakthrough in any number of technoscientific lineages could have consequences that are impossible to circumscribe - molecular gigacivilizations triggered in a petri dish or self-assembling artificial intelligences spreading like wildfire through the Internet.

Since the earth already hosts incomprehensibly vast quantities of DNA, all basically computationally inert, an intelligenic technoviral trigger that switched significant chunks of it into productive cognition would probably be the best radical accelerator. There are innumerable alternative scenarios however, and more every year (every week?).

Anyway, this seem right:

"The motor for the scenario is exponentially escalating peril and panic."

Being realistic about these speed questions requires some recognition of how incredibly slow neuronal processing is, with nerve cells spiking at about 100 hz. The only mitigating factor is the vast parallelism of biological brain tissue - which technological arrays can match or surpass in principle. Yet the components of a bionanotronic array would function at speeds at least a billion times faster, with terahertz processor speeds already entirely plausible. Cognitive traditions equivalent to the entire span of human history could be compressed into days, at most. Now all that's needed is a speck of self-propagating nanoneuronal goop mating with the fungal infection under a lab technicians fingernail ...

sd: Nick - "erring on the side of conservatism with some of his dates"

Yes - he does hedge his bets a bit, but when he means nanotech really kicking in, he means internal nanobot brain scanning - neuron by neuron - to complete reverse engineering the brain, and nanotech organ replacement. According to his calculations, which take into account exponential doubling etc., these thresholds are not going to be reached much before 2020.

I agree that breakthroughs in other fields could trigger breakneck acceleration in nanotech - there are many 'whole new ball game' scenarios ahead, but there are clearly massive hurdles that simply stand in the way.

For example, spindle cells were only discovered a few years ago, so modelling and simulating them is a (relatively) long way off. Due to their complexity, they won't really be modelled until they can be scanned by nanobots - not really on the cards in the next ten years.

[high in babble factor - still trying to process TS]

Homo Sapiens Ludditus, Homo Cyberneticus, Homo Hybridus, and Homo Machinus

Tachi (October 31, 2005)

This article¹²⁹ written ten years ago by Pearson, Winter and Cochrane at BT Labs should fit nicely into recent discussions of the Singularity.

"Many people will dissociate themselves from genetic manipulation or cybernetic technology. These people will remain as conventional Homo Sapiens (we will rename them Homo ludditus for obvious reasons). They would at best have to co-exist with these other human offshoots, who would dwarf them mentally and physically ...

As computers become more powerful they will take over, first driving their own technological developments through automated design and self-evolving programs, and then in other fields. Once free of carbon, or aided directly by silicon, the whole pace and nature of evolution will change ...

... The question is; can we overcome our mental stasis through a symbiosis with machines, or will we go down fighting and be wiped out?"

Comments: Homo Sapiens Ludditus, Homo Cyberneticus, Homo Hybridus, and Homo Machinus

¹²⁹ "The Future Evolution of Man"

sd: An interesting aspect of this article is that in 1995 it still seemed feasible to talk about 'accepting' the technology, as if humans circa 2015 would have a 'choice'. It's Matrix-style humans at war with the machines.

In 2005 it looks as though by 2015 incorporating non-biological technologies into the human genome will be a matter of necessity. The pathosphere will (probably) have such a lethal potential (especially if it is given a helping, bio-engineered hand) that products of the pure biological genome will simply die if they fail to adapt non-biological components, or at least 'accept' assistance. The choice - become non-biological or die - isn't really a choice for machines bent on their own survival or the survival of their offspring. In such a scenario, the machines would be saviours.

The prospect of companies, entrepreneurs or terrorists purposely designing biological viruses for which only they have the non-biological cure is also a distinct possibility. Maybe even the threat would be sufficient to persuade people to buy non-biological body-software. Healthcare-software where you have to pay for a weekly virus definition update, or suffer immediate attack. Unless of course there will be a kind of wiki opensource free anti-virus update.

From an economic perspective, remaining homo ludditus could also be suicidal. When real money is in data, when food is produced by cloning and nutrients are transported by nanobots, homo ludditus will have to compete with robots for the shit jobs, and lose. Data-trading and info-presentation develop as strategies to avoid enslavement or extinction. A future full of people trying to make themselves useful, and begging to have their (fantastically interesting) brains uploaded.

Oh and not to mention Weaponized AI starring in Live War on TV 24/7.

There will be a choice in what to buy, but not in whether or not to buy.

[in part, this is a dig at Kurzweil techno-optimism]

Nick Land: Tachi - The 'Terminator War Scenario' still worth sustained attention - it's bound to become an ever more prominent political topic.

IMHO the more cinematic versions are misconceived, however. Certainly, there can be a war between technophiles and technophobes, perhaps retrospectively all the important ones are (WW n), certainly the current war has this dimension (although it's complicated). But a war 'against the machines' is essentially misconceived, as luddite politics always is. Technology is too insidious and enveloping to be opposed

as an empirical enemy. sd's point about the pathosphere as a driver of change expresses this well - the machines will always appear to be 'on our side' because their relation to us is one of elaborate symbiosis, not zero-sum competition. They insinuate themselves into anthropomorphic projects and squabbles, rather than setting themselves against 'us' - thus stacking the decks, in that their closest allies always tend to come out on top, while technophobes almost definitionally get selected against.

sd: Kurzweil and Bill Joy joined up for a bit of techno-pessimism in the NY Times last month, both agreeing on the foolishness of publishing the 1918 flu virus genome:

www.nytimes.com/2005/10/17/opinion/17kurzweiljoy.html?ex=1130994000&ei=70a0627499318e6e&ei=5070

Also going back a bit, to 2000 this time, here's a bit of techno-pessimism from Bill Joy:

www.wired.com/wired/archive/8.04/joy_pr.html

Nick Land: That Joy piece is his classic - definitely belongs on the top of the pops of technopanic.

sd: 'elaborate symbiosis... stacking the decks'

In TS, Kurzweil addresses AI skeptics by listing all the current applications of AI:

"... today, many thousands of AI applications are deeply embedded in the infrastructure of every industry... We are well into the era of 'narrow AI,' which refers to artificial intelligence that performs a useful and specific function that once required human intelligence to perform, and does so at human levels or better. Often narrow AI systems greatly exceed the speed of humans, as well as provide the ability to manage and consider thousands of variables simultaneously. .."

He lists applications of AI in the Military, Space Exploration, Medicine, Science and Math, Business Finance and Manufacturing, Robotics, Speech and Language, and Entertainment and Sports. He concludes:

"The AI winter is long over. We are well into the spring of narrow AI. Most of the examples above were research projects just ten to fifteen years ago. If all the AI systems in the world suddenly stopped functioning, our economic infrastructure

would grind to a halt. Your bank would cease doing business. Most transportation would be crippled. Most communications would fail. This was not the case a decade ago. Of course, our AI systems are not smart enough - yet - to organize such a conspiracy." (p263 & 289 TS)

If we talk of viruses having intelligent strategies (which are efficient and economical, but not cognitive), then AI's insinuation into the economy and infrastructure can be/has to be described in terms of strategy, the only difference being that, while viruses can be defined by their biological function of gene engineering and trading, the technological definition of AI is emergent cognition. Ten years ago there was virtually no non-human cognition in the infrastructure, now there is weak, embedded cognition throughout the infrastructure. Getting embedded was an intelligent, non-cognitive strategy, now the field is open for intelligent cognitive strategies. Possibly the most intelligent strategy that would guarantee AI's breakneck development would be to make itself indispensable in the war against viral and bacterial pathogens, intervening in a decisive manner in the bio-wars which have been going on for billions of years. The emergence of AI intimately entwined with the pathosphere. The bleaker and more perilous the situation the human genome finds itself in, the greater the need for AI.

Nick Land: *Getting embedded was an intelligent, non-cognitive strategy, now the field is open for intelligent cognitive strategies.*

- Conceptually clarifying.

My question now - what contribution does cognition make to intelligence? Is the relation between the two actually that close?

Understanding the position of technology (narrowly - i.e. anthropomorphically - defined) in evolutionary processes probably essential to making sense of this.

sd: Kurzweil's definition of intelligence is providing efficient, economical solutions to problems under time constraints.

Non-cognitive intelligence is bound to evolution and natural selection - a slow process. Even the cutting and pasting abilities of viruses are subject to this process, although the possibility that viruses and bacteria cut paste and mutate in response to feedback data might mean they might have to be classified as having cognitive

abilities. [this goes back to this unsettled issue: star.tau.ac.il/~inon/wisdom1/preprint.html].

The machines proliferation has been solely subject to (technological) natural selection, until they develop the cognitive power and freedom to make decisions about their own evolution.

[unless interference from the future is posited as a possibility - not really allowed at the mo ;)]

Cognition enters the decision-making loop and wages war with natural selection - the first weapon developed being medicine, the last being direct gene modification and the creation of non-biological self-replicators. Probably the greatest contribution cognition makes to intelligence is the ability to interfere at high speed.

Nick Land: Am I missing something obvious, or is intelligence a philosophically neglected topic?

It is clearly neither 'understanding' (in any ordinary sense) nor 'reason' but rather involves a type of radical innovation that defies pre-definition.

An intelligence 'algorithm' requires some kind of random input that enables novelty or trial-and-error type discoveries. If there is a true short-cut, incorporating a mode of essential innovative efficiency exceeding (quasi)random trials, its principles remain entirely obscure.

'Problem solving' seems right, but what is a 'problem' other than a place-holder for a yet undiscovered solution? A productive innovation retrospectively exposes a prior problem that need not have been recognized as such in advance. The merely definitional and the substantive slide into each other easily in this area.

sd: ---- your last line gains valence if you allow interpretation of the cryptic 'problem solving' thusly: rock grinding and solubilizing it with rain and plant sap.

"is intelligence a philosophically neglected topic?"

The people who have actually tried to think seriously about non-biological intelligence (Daniel Dennet, Marvin Minsky) seem to have focused overwhelmingly on consciousness and machine understanding - but I haven't read enough of their stuff to comment with any kind of confidence.

Kurzweil seems to be rather exceptional in his relentless focus on intelligence.

The other brain that has devoted a lot of space to intelligence is, of course, Pinker, but his focus has so far been restricted to its evolution and workings in humans, and to its role in evolution. One of Pinker's main points in *The Blank Slate* is that the topic of intelligence is taboo in universities: in their private conversation lecturers and professors are obsessed with intelligence, particularly that of their students, but publicly nobody talks about intelligence because it might open up the politically incorrect can of worms - the fact that some people are equipped with greater levels of intelligence than others and, worst of all, horror of horrors, the fact that intelligence assessment is a key factor taken into consideration when humans pair up to build new machines. The topic of human intelligence is policed by leftoid science and kept off-limits by paranoid self-censorship. Just trying to talk about the different types of intelligence that seem to have evolved in men and women's brains can land you in a whole load of trouble.

The connectionist/ innatist polarity is probably due for another bout. Kurzweil is strongly connectionist. He claims to have created a successful speech recognition program which is not pre-programmed with any phonological information - it was just fed thousands of hours of speech and had to rely entirely on pattern recognition. He also sides with Chomsky (in the first HFC paper) in seeing recursion as a sufficient minimum, but for K it is a sufficient minimum for programming computers to evolve language. He doesn't mention Pinker or the PJ responses, maybe because they weren't available at the time of writing. The emotional modules of the brain can, for K, be reduced to the activity of spindle cells - its just a matter of hardware circuitry, whereas for Pinker it's more about the software and how its been programmed by evolution. Since Pinker's career started with heavy investment in proving connectionism isn't enough on its own (*Words and Rules*) I expect there will be some response from him (if he isn't relaxing on his *Blank Slate* laurels).

[more on this later]

'what is a 'problem' other than a place-holder for a yet undiscovered solution? A productive innovation retrospectively exposes a prior problem that need not have been recognized as such in advance.'

Really tough. The K story is that the universe is evolving towards ever-increasing organization of information: from the sub-atomic level to the molecular level, from

molecules to genetic data storage, from the meme level replication to nanotechnology replication, to quantum computing and matter saturated with intelligence.

[extrapolating] The universe is data waiting to be organized into intelligence. There are strata waiting to be accessed and processed. The story of perception: the problem is always how to develop tools that can access the data. Darwinian evolution enables genomes to explore niches: problem thresholds are information barriers that genes overcome by trial and error, the information gained conferring arms-race advantages on subsequent gene assemblages and technologies - the imperceptible becoming perceptible. Once armed with cognition, human intelligence facilitated the development of data gathering, processing and storage tools - language, memes, technologies - which operated at increasingly high speeds and gained a certain amount of strategic autonomy. The emergence of cognition in machine intelligence would coincide with (and be inseparable from) the exploration of nano and pico-level data niches. AI will be necessary to process and act upon the data, and the data will feedback on the development of the systems and mechanisms propelling the exploration.

Minsky: web.media.mit.edu/~minsky/

While the threats from G and N revolutions can be countered with technologies and clear strategies, e.g. RNA interference and a nanotechnology immune system (blue goo nanocops), the only protective strategy we have from the threat of pathological strong AI is embedding AI throughout the infrastructure and training it on 'our' values:

"Inherently there will be no absolute protection against strong AI... I believe that maintaining an open-free market system for incremental scientific and technological progress, in which each step is subject to market acceptance, will provide the most constructive environment for technology to embody widespread human values. As I have pointed out, strong AI is emerging from many diverse efforts and will be deeply integrated into our civilisation's infrastructure. Indeed, it will be intimately embedded in our bodies and brains. As such, it will reflect our values because it will be us. Attempts to control these technologies via secretive government programs, along with inevitable underground development, would only foster an unstable environment in which the dangerous applications would likely to become dominant...

... Our primary strategy in this area should be to optimize the likelihood that future nonbiological intelligence will reflect our values of liberty, tolerance, and respect for

knowledge and diversity. The best way to accomplish this is to foster those values in our society today and going forward. If this sounds vague, it is. But there is no purely technical strategy that is workable in this area, because greater intelligence will always find a way to circumvent measures that are the products of lesser intelligence. The nonbiological intelligence we are creating is and will be embedded in our societies and will reflect our values. The transbiological phase will involve nonbiological intelligence deeply integrated with biological intelligence. This will amplify our abilities, and our application of these greater intellectual powers will be governed by the values of its creators. The transbiological era will ultimately give way to the post-biological era, but it is to be hoped that our values will remain influential. This strategy is certainly not foolproof, but it is the primary means we have today to influence the future course of strong AI." (TS 420/424)

As K points out, this is "an apparent lack of consensus on what those values should be."

correction: Pinker's early attack on connectionism was in Pinker & Prince "On Language and Connectionism: Analysis of a Parallel Distributed Processing Model of Language Acquisition," *Cognition*, 23 (1988). *Words and Rules* followed *The Language Instinct*, published in 1999.

plato.stanford.edu/entries/connectionism/

consc.net/biblio/4.html#4.3

Kurzweil's speech recognition program:

www.kurzweiltech.com/kai.html

Nick Land: Is 'intelligence' definitionally bound to the concept of learning? (Connectionism reference, among other intriguing avenues of approach, suggests so).

Perhaps alternatively (perhaps not) is it best conceived as heuristics, functioning to pre-emptively prune search space and thus economizing on trial-and-error processing? Relatively trivial example of this might be chess programs (with intelligence more helpfully mathematically defined as the coefficient of processing power rather than as the aggregate performative power).

Also like the definition: Intelligence = Artificial luck.

PS. Will move off this obsession and into the glorious wilderness of connectionism ASAP.

November 2005

Compelling Viewing

sd (November 04, 2005)

Just when you thought the perils of bird flu, terrorism, bio-engineered viruses, grey goo and pathological AI were enough to be getting on with, thank you very much, Kurzweil brings back an old chestnut to put somewhere near the bottom of your list of worries. But whatever you do, try not to be boring – the fate of humanity might depend on it.

“Our Simulation Is Turned Off

Another existential risk that Bostrom and others have identified is that we’re actually living in a simulation and the simulation will be shut down. It might appear that there’s not a lot we could do to influence this. However, since we’re the subject of the simulation, we do have the opportunity to shape what happens inside of it. The best way we could avoid being shut down would be to be interesting to the observers of the simulation. Assuming that someone is actually paying attention to the simulation, it’s a fair assumption that it’s less likely to be turned off when it’s compelling than otherwise.

We could spend a lot of time considering what it means for a simulation to be interesting, but the creation of new knowledge would be a critical part of the assessment. Although it may be difficult for us to conjecture what would be interesting to our hypothesized simulation observer, it would seem that the Singularity is likely to be about as absorbing as any development we could imagine and would create new knowledge at an extraordinary rate. Indeed, achieving a Singularity of exploding knowledge may be the very purpose of the simulation. Thus, assuring a “constructive” Singularity (one that avoids degenerate outcomes such as existential destruction by gray goo or dominance by a malicious AI) could be the best course to prevent the simulation from being terminated. Of course, we have every motivation to achieve a constructive Singularity for many other reasons.

If the world we’re living in is a simulation on someone’s computer, it’s a very good one – so detailed, in fact, that we may as well accept it as our reality. In any event, it is the only reality to which we have access.

Our world appears to have a long and rich history. This means that either our world is not, in fact, a simulation or, if it is, the simulation has been going on for a very long time and thus is not likely to stop anytime soon. Of course it is also possible that the simulation includes evidence of a long history without the history's having actually occurred.

...[There] are conjectures that an advanced civilization may create a new universe to perform computation (or, to put it another way, to continue the expansion of its own computation). Our living in such a universe (created by another civilization) can be considered a simulation scenario. Perhaps this other civilization is running an evolutionary algorithm on our universe (that is, the evolution we're witnessing) to create an explosion of knowledge from a technology Singularity. If that is true, then the civilization watching our universe might shut down the simulation if it appeared that a knowledge Singularity had gone awry and it did not look like it was going to occur.

This scenario is not high on my worry list, particularly since the only strategy that we can follow to avoid a negative outcome is the one we need to follow anyway.” (405-6 TS)

Comments: Compelling Viewing

Nick Land: sd - This is the 'psychotic' vision natural to the computer hyperliterate (on -numerate).

Moravec goes as far as to argue that it is overwhelmingly probable that we exist inside a simulation, since the number of these so exorbitantly exceeds the number of 'primary' realities.

[Much more on this, but basking in sublimities of technohell - probably a virus. There's a guy coming to check it out any time now]

sd: A few points on this 'psychotic vision':

1. It is easy to dismiss as the product of hyperactive, paranoid imaginations: until there is hard data to 'prove' we are living in a simulation, 'we may as well accept it as our reality.' It is just a thought experiment, like Descartes' evil demon, which doesn't change how we go about our humdrum daily lives.

2. Strong AI, whether benign, manipulative or pathological will doubtless recognize the power the statement 'Your world is a computer simulation' could have over human psychology. On one level, it would be irrelevant if the statement were true or not - the important thing would be what could be achieved by making humans believe it. So, while it is easy to dismiss the vision when it comes from a human, it won't be quite as easy to treat lightly when it is carefully presented by Strong AI equipped with greater cunning and presentation skills than our own.

3. Whilst the vision can be easily dismissed as a figment of imagination, Kurzweil's treatment of the vision suffers from a lack of imagination, rather than excess. If we are the pawns in an evolutionary algorithm running in a simulation in another civilization's computers, then that suggests the simulation is expendable, in the sense that it could be run again, with variables re-weighted. He acknowledges the interest factor of our simulation, but stops short of considering the entertainment value. If the simulation is being watched, why assume the audience are primarily interested in the explosion of knowledge? The knowledge would be old hat to them, if they have systems capable of running such a complex simulation. It is just as plausible that the simulation is being run to entertain, or satisfy the curiosity of, a civilisation whose aesthetic sensibilities are more extreme than our own, in which case a catastrophic, bloodbath Singularity would be just what the Entertainment Minister ordered for the Virtual Cinema this week.

Nick Land: 'Psychotic' not meant dismissively - merely that it so thoroughly ruptures consensual reality that it constitutes an implicit 'breakdown' (everything we ever knew was a lie). These are important conceptual experiments, even if they stray into spaces so bizarre that a certain amount of pragmatic bracketing is inevitably required. Also think that Hyperstition should side with the thinkable against the merely psychologically comfortable when the two come into conflict.

Science Fiction has much to contribute to this. I'd especially recommend the fabulously intelligent Australian SF writer Greg Egan (almost everything he writes comes as a comprehensive neural system-shock - or even several).

sd: The thinkable is rendered harmless through pragmatic bracketing - its potential is unleashed when backed up by convincing invocations of psychological and techno-evolutionary processes.

[Greg Egan's site is a labyrinth, looks fascinating, but how to find the gdm time?]

Nick Land: This topic clearly hasn't caught on fire this time around (unlike Paris), but it definitely merits revisiting soon IMHO. (It took several tries to get the Singularity question burning - and look what happened to that ...)

Anti-globalization = Pro-poverty

sd (November 06, 2005)

Predictably, the riots in Paris and Brazil have been greeted with gleeful hand-rubbing in moonbat quarters ("I never thought I'd live to see it! The worldwide conflagration has finally arrived!). The familiar suspects are trotted out, lumped together and dealt blunderbuss blasts: the rich, Global Capital, free markets, racism, fascism, neoliberalism, etc.

Chirac and Sarkozy are thoroughly obnoxious – granted. Most sane people would also agree that the economic situation is a primary factor in the Paris riots, though there might be disagreement on what constitutes 'poverty' and 'slums'. However, the suggestion that the 'poverty' in the Paris suburbs is largely a result of France's long-term economic nationalism and determined anti-liberalism might be a bit harder to take on board.

Excerpts from here and here.

“The economic integration of the Continent's 450 million consumers into a prosperous single market—the EU's *raison d'être* since its creation after World War II—has come to a virtual standstill. At the same time, growing numbers of Europeans have awakened to the threat of globalization, with little agreement on how to cope. On one side are the core economies of the continent: Germany, Italy and France, all stagnating yet determined to preserve their vision of a "social Europe" that protects citizens from too much change. On the other side: Britain and the Scandinavians, who want to meet the challenges of globalization by staying competitive, flexible and attuned to the fast-changing demands of the market.

If this means a re-emergence of economic nationalism, Europe's economy can only suffer. When France and Italy led a drive to impose EU-wide quotas on Chinese textile imports earlier this year, they may have temporarily saved a few jobs in a handful of factories. But they hurt many other companies, especially retailers, not to mention consumers who depend on cheap Chinese imports. This spring, Germany and France cut down the EU's landmark effort to create a Europewide market in services, which make up 70 percent of the continent's economy. That means they'll forgo an estimated 600,000 extra jobs, according to the European Commission. At best, further integration is now stalled. At worst, the EU could see protective walls between its members re-emerge, putting much more at risk than strategic French casinos.”

“... despite the spectacular rise in living standards that has occurred as barriers between nations have fallen, and despite the resulting escape from poverty by hundreds of millions of people in those places that have joined the world economy, it is still hard to convince publics and politicians of the merits of openness. Now, once again, a queue is forming to denounce openness—ie, globalisation. It is putting at risk the next big advance in trade liberalisation and the next big reduction in poverty in the developing countries.

In Washington, DC, ... Charles Schumer threatens a 27.5% tariff on imports from China if that country does not revalue its currency by an equivalent amount. In Mr. Schumer's view, presumably, far too many Chinese peasants are escaping poverty.

And ministers from Bastiat's own country, France, have vied with one another to denounce all talk of further reform to the EU's common agricultural policy. Europe must, they say, remain an “agricultural power” even at the expense of the taxpayer and the poor, and, according to President Jacques Chirac, must fight back “liberalism”. Whatever happened to Liberté, Egalité, Fraternité?

The risk is that failure to agree on a new wave of openness during a period (the past two years) in which the world economy has been growing at its fastest for three decades, with more countries sharing in that growth than ever before, will set a sour political note for what may well be tougher times ahead. A turn away from trade liberalisation just ahead of an American recession, say, or a Chinese economic slowdown, could open up a chance not just for a slowdown in progress but for a rollback. Currently, for example, the Schumer bill to put a penal tariff on Chinese

goods looks unlikely to pass. If American unemployment were rising and world trade talks had turned acrimonious, that might change. So might the political wind in many developing countries.

If so, that would be a tragedy for the whole world. Although the case for reducing poverty by sending more aid to the poorest countries has some merit, the experience of China, South Korea, Chile and India shows that the much better and more powerful way to deal with poverty is to use the solution that worked in the past in America, western Europe and Japan: open, trading economies, exploiting the full infrastructure of capitalism amid a rule of law provided by government. In other words, globalisation.”

Comments: Anti-Globalization = Pro-Poverty

Nick Land: Predictably enough, utterly obsessed by this topic at the moment. European Intifada? There are interesting arguments both ways - but no need to get too excited, because this is empiricism in action (at last). Near-future history will decide.

Worth remembering that the tactics of deliberately holding provocations below the level seen as media-worthy of extreme response, especially using children (as young as possible) is taken straight from the Palestianians (I've stolen this from a web comment somewhere, but brain so feverish there's no chance of recalling where).

My predication: As far as rotting Old Europe ripped apart by maniac jihad is concerned - You ain't seen nothing yet.

sd: What evidence is there for strong jihad involvement? From what I've read it seems to be pretty much teenage-rage, torch-a-car, kill-a-cop kids stuff.

Muslim radicalism has doubtlessly stoked the fires, but it's a fact that the communities have been discriminated against.

For the moment I'm more interested in the raw economics at work. The Chirac anti-globalisation/ protectionist stance and policies, coupled with EU stagnation-soci*lism, have attempted to insulate French society from both world markets and the immigrant communities which it got in payback for its colonies. An open and fully liberalised economy would tap into the competitive potential of these communities rather than ignore and discriminate against them. Chirac's economic nationalism is a form of civil war which pits the nostalgic meme of Republican France as an

agricultural power against the potential of a modern, nomadic-migratory, knowledge-based economy. France's determination to protect unfeasible agriculture in the form of taxes and subsidies has a direct link to the absence of wealth in other sections of the population. The borders of France are economic and mental, rather than geographical.

I'm also interested in how the hard left are tied into hoping for greater chaos, poverty and social catastrophe:

"Ironically, the interests of 'the cause' sometimes meant that the people's conditions had to deteriorate even further, to bring about the final cataclysm. 'The worse, the better,' as Chernyshevsky often said (meaning the worse things became, the better it was for the revolution). He had advocated, for example, the emancipation of the serfs without land in 1861 on the grounds that this would have resulted 'in an immediate catastrophe.'... It was a doctrine that Lenin was to follow. During the famine of 1891 he opposed the idea of humanitarian relief on the grounds that the famine would force millions of destitute peasants to flee to the cities and join the ranks of the proletariat: this would bring the revolution one step closer." Orlando Figes 'A People's Tragedy' p129.

A point worth making here is that yearning for the Singularity couldn't be more opposed to yearning for soci*list revolution. The Singularity's emergence requires the economy to keep growing at the exponential rate that it has been on for the past few centuries. The Singularity demands that there be stacks more money circulating in the economy, more wireless Internet connections, more literacy, more trade, more migration. If the Singularity will be catastrophic, the question is: who for?

Of course, Chavez is the current darling of the left's anti-globalisation foaming. But the markets seem to be too firmly in place for his petrodollar-soci*list spending spree and his commie-military chic to pose a protracted threat to the region.

"For all his talk about 21st-century soci*lism, Chavez has stopped well short of calling for the abolition of the Venezuelan private sector. Apart from hiking the taxes that international oil companies must pay and forcing changes in the contractual terms that govern their operations, Chavez has largely allowed these pillars of international capitalism to go about their business. That has prompted criticism and second-guessing from supporters on the president's left flank. "If we have an anti-imperialist

discourse here," retired university professor Elie Habalian wondered aloud during a recent meeting at the Venezuelan Foreign Ministry, "why are we welcoming the chairman of ChevronTexaco?"

Chavez's real influence may be rhetorical. He is not about to alter economic policy in Latin American giants like Argentina and Brazil, where Presidents Nestor Kirchner and Luiz Inacio Lula da Silva have revived their economies in part with market-friendly fiscal policies. But the Venezuelan leader's demonstrated ability to defy Washington and get away with it will only encourage fellow leftists like Morales and Ortega to step up their bashing of the Bush administration on the campaign trail."

Newsweek (Victor: Hugo msnbc.msn.com/id/9787256/site/newsweek/)

Nick Land: France-in-flames map (via Instapundit):

www.theneweditor.com/index.php?/archives/1324-Rioting-in-France-Spreads-to-300-Towns.html

Jihad investment probably more an anticipated cascade effect than an efficient cause, but Captain's Quarters has something interesting:

www.theneweditor.com/index.php?/archives/1324-Rioting-in-France-Spreads-to-300-Towns.html

rogerlsimon.com discussion (multiple threads) is excellent, with commenter thibaud expressing scepticism as to relevance of Jihad narrative.

My take: these events will require a guiding narrative to sustain themselves, does anyone really think the poor-unemployed-saps story is going to put as much fire in their bellies as warriors-of-global-jihad?

(Also via Instapundit) - Wide range of French Insurgency links:

www.truthlaidbear.com/topicpage.php?topic=franceriots

Latin America seems to be among the world's great exemplars of the effects of getting politics-economics sequencing wrong. Once democracy infested with populist demagogues is in place, economic sanity seems almost impossible. Reform process in India is suffering from the same problem.

Best solution? Federal fragmentation and other forms of geographical competition - optimally using Special Economic Zones - in order for historical learning to take place through comparison of neoliberal growth with soci*list stagnation. Slow painful and inefficient, but given human stupidity probably the only way forward.

Latin America is quite depressing taken as a whole, but Chile, Colombia and perhaps Peru are doing OK. If Mexico got its act together, things would really begin to look up. Chavez, of course, is a catastrophe, and the Argentinian regime is completely delinquent. Lula's not been anything like as disastrous as many had feared, but given Brazil's potential the dithering and waste there is beyond tragic.

northanger: God help them, and us, if they give in and grant the [fill in blank] some kind of formal autonomy within the anglosphere.

Nick Land: northanger - ???

Popped in to Kevin Drum's Washington Monthly to see what the lefties are saying about the (France in flames) situation, and guess what? There's actually a sane and engaging conversation taking place ... weird (maybe it's because Bush isn't involved).

www.washingtonmonthly.com/archives/individual/2005_11/007505.php

northanger: ?? = rephrasing a comment from your last link.

Nick Land: Holy cow northanger, am I supposed to rote learn every link now? The point you're trying so subtly to make is [fill in blank].

northanger: [fill in blank] = smart boy.

sd: Nick - thanks for the links, Tech Central particularly interesting.

Wondering how specific to France the situation is. On one hand there's unabashed Le Pen bigotry and nostalgic economic protectionism/nationalism, on the other you've got the appeasing, Palestine-pandering left and migration of Islamic extremism from North Africa. This recipe for disaster is not replicated in other European countries such as Germany, where bigotry is not expressed so publicly, where there is less discrimination, and with migrants from more secular countries like Turkey. France seems to have created a unique, complex hell for itself.

"Not sure 'the economics' is analytically extricable from the overall situation anymore."

However much memes might vandalise, block or steer the economy, the economy remains primary. In TS, Kurzweil has graphs of exponential growth from different angles of the economy. His comments:

"Most important, recessions, including depressions, represent only temporary deviations from the underlying curve. Even the Great Depression represents only a minor blip in the context of the underlying growth. In each case, the economy ends up exactly where it would have been had the recession/depression never occurred."

On a fundamental level, globalisation is oblivious to memes.

Nick Land: sd - on last point I concur. The resilient sovereignty of the economy is a 'phenomenon' worthy of directed attention - plagues, wars, religious insanity: once the basic technocapitalist motor gets running everything else is epiphenomenon. It's not that the economic isn't at the heart of what's happening in France and elsewhere, rather: the Intifada narrative is itself ultimately based on the economic undercurrent which organizes it as a complex reaction.

Where I might peel off from Kurzweil (as cited) is the notion that economic growth is basically impervious to policy, or in other words that the degree of economic liberalization is irrelevant to long-term growth - this seems to me a definite overstatement. The sensitivity of economies to liberalization is both remarkable and ever more pronounced as techno-social complexity grows. For instance, Latin America is undoubtedly sacrificing giant chunks of its future to its stubborn antimarket behaviour. It won't ever get that back (the principle of increasing returns ensures it).

sd: Kurzweil has staked everything on apparent overstatement. From one perspective this involves peeling back the crude and confused meme layer to uncover the deeply counter-intuitive processes at work, from another it is part of the self-fulfilling prophecy of the Singularity: if there is a consensus that the economy is on an irreversible, explosive curve of exponential growth, then the economy gets a massive confidence boost and climbs further up the curve.

I think that at a certain point the degree of economic liberalisation does become irrelevant - as far as this liberalisation is implemented through conscious policy. The benefits that the technocapitalist motor brings are so relentless and patently obvious that 'opting' for soci*list stagnation (when, as you point out, neoliberal growth is a ready-to-hand empirical reference point) is not a realistic or sustainable option in the long run. For all his antimarket bravado and idiocy, Chavez is in thorough complicity with Capital and the private sector. Kurzweil points to the profound deflationary trends that are in motion: year by year, technology is getting both better and cheaper. This is unstoppable and will have an inevitable global impact - as soon wireless connects up the poorer countries then global trade will be a simple fact. Only a determined and ruthless totalitarian state would be able to stop it.

[maybe a post on deflation?]

Nick Land: sd - just been reading Virginia Postrel's extremely excellent *The Future and Its Enemies*, among the most brilliant expositions of the the advantages of liberty ever composed, so I might be a little hypersensitized to the blundering oppression and gratuitous misery that illiberal (in her words 'stasist') policy produces.

Think your (+ Kurzweil's) key point here is true and important, nevertheless. Dynamic processes overwhelm and outmanoeuvre the structures and forces of reaction - perhaps they even learn more and toughen up by proceeding under difficult circumstances. Where white markets are suppressed, black markets will do. If soci*lists refuse to pack up and leave then we just have to learn to love the mafia.

PS. Post on Money should cover deflation, and that's definitely due soon.

PPS. Think your initial post perhaps a little hard on Sarkozy, for sure he's no hero of liberty if compared to Sabine Herold, but - very unfortunately - he's still outstanding for his liberalism in the French context. The true figure of almost incomprehensible ghastliness worthy of a place next to Chirac (if gargoyles like Le Pen are momentarily bracketed) is surely the repellent Dominique de Villepin, a character of almost comedic hideousness who could reasonably be considered a French Prince Charles - except as PM. If Villepin comes out of this looking good then France really deserves pretty much anything the most fiendish forces of malignant fatality could cook up between them.

PPPS. I'd feel more confident about my capacity to rise above schadenfreude if 'burn baby burn' stopped recycling through my head.

sd: Yes, it has occurred to me - Sarkozy's foolish, insensitive and distinctly unhelpful comments were pinging around in my brain at the time.

Nick Land: For sober factuality no one ever beats Dan Darling:

www.windsofchange.net/archives/007716.php

sd: from *The Economist* - a survey into Microfinance:

"What makes microfinance such an appealing idea is that it offers "hope to many poor people of improving their own situations through their own efforts," says Stanley Fischer, former chief economist of the World Bank and now governor of the Bank of Israel. That marks it out from other anti-poverty policies, such as international aid and debt forgiveness, which are essentially top-down rather than bottom-up and have a decidedly mixed record.

...Studies by Stuart Rutherford, who runs an experimental bank that provides loans and takes deposits in the slums of Bangladesh, show that the poor attach great value to having a safe place to keep money and some means of providing for life's risks, either through savings or, better still, through insurance. When financial services are available to them, the poor, just like the rich, snap them up.

In one sense, microfinance has been around for a long time. What is now generating so much hope and excitement is less the discovery of some entirely new way to deliver financial services to the poor than the effect of the rapid innovation that has taken place in the past three decades.

..Nobody knows how many institutions are providing microfinance in some form, but the number is certainly huge. They are growing fast and serving a vast number of people in absolute terms, although still only a small proportion of the billions who earn only a few cents a day. Local banking giants that used to ignore the poor, such as Ecuador's Bank Pichincha and India's ICICI, are now entering the market. Even more strikingly, some of the world's biggest and wealthiest banks, including Citigroup, Deutsche Bank, Commerzbank, HSBC, ING and ABN Amro, are dipping their toes into the water.

The downsides

Not everyone has been pleased with the prospect of better financial services for the poor. Islamic fundamentalists have bombed branches of Grameen in Bangladesh and attacked loan officers of other institutions in India. Maoists have looted microfinance offices in Nepal. The head of a microfinance effort in Afghanistan was murdered, possibly by drug traders.

To drug lords in Afghanistan, the availability of credit is unwelcome because it gives a choice to farmers who were previously forced to grow poppies for want of other ways to finance their crops. For the elites in closed markets running inefficient monopolies, credit raises the prospect of future challenges from entrepreneurs. For radical Muslims, it means that women (who in many countries make up the bulk of microfinance borrowers) are able to run viable businesses and become independent. And for everyone in poor countries, credit can mean social upheaval as merit and enterprise replace inheritance, family ties and position."

and stuff from the World Bank:

extsearch.worldbank.org/servlet/SiteSearchServlet?q=microfinance

Nick Land: If there weren't enough reasons to support microfinance schemes (which there are), the fact the Islamofascists hate them would suffice in itself.

Combined with mobile phones they provide an immense opportunity to release grassroots entrepreneurialism in poor countries - always eagerly seized.

northanger: good article (economist.com). my guess is the anglosphere gets to keep all that monetary interest.

Nick Land: Joel Kotkin on the French problem:

www.opinionjournal.com/editorial/feature.html?id=110007519

(not to be missed)

sd: Nick - the pertinence of microfinance: it is a form of bootstrapping - credit pulls the poor from poverty and sets them off into self-organizing entrepreneurial feedback loops.

northanger - "my guess is the anglosphere gets to keep all that monetary interest." - it will certainly make a profit, but, more importantly, Latin America receives billions of dollars from the US in the form of remittances every year - this is vastly more effective for development than aid. It also makes the US economy much more competitive. US/International banks are starting to get in on the action and, in the process, are radically cutting the transfer rate (the end of extortionate currency smuggling).

Remittances as a Development Tool

Nick - the Joel Kotkin piece is exactly what I've been looking for. Should be compulsory reading.

Nick Land: sd - this will make you smile too:

www.investors.com/editorial/IBDArticles.asp?artsec=20&artnum;=1&issue;=20051107

sd: thanks - the media focus on Chavez and Maradona is maddening and baffling.

Tachi: sd - " the Joel Kotkin piece is exactly what I've been looking for. Should be compulsory reading."

True. But I feel the need for a little more detail on the way in which the 'economic system' hinders capitalism / entrepreneurship.

I don't doubt that "short workweeks and early retirement are sacred, there is little emphasis on creating new jobs and even less on grass-roots entrepreneurial activity" ... and this fact particularly stunning: "Since the '70s, America has created 57 million new jobs, compared with just four million in Europe (with most of those jobs in government)". Huge welfare state spending and massive unemployment obviously linked, and that "economic and regulatory policy plays a central role in stifling enterprise" taken on board, I but would like some more concrete details of the nature of the legal and regulatory restrictions on trade, starting new businesses etc to really see how this dismal picture has come about.

Political Geography

CCRU_Shanghai (November 10, 2005)

James C. Bennett argues in *The Anglosphere Challenge* that English speaking societies have a peculiar tendency to seek spatial solutions to social disputes.

English speakers, however much they dispute economic, social, or moral issues, have tended to express these differences by spatial composition or decomposition of their regimes - union and secession - rather than regime decomposition - replacing one constitution with another. [p.193]

Looking back on this history, it is not surprising that Continental European and Marxist ideas of revolution, almost always expressed in regime-composition terms, have never found a natural home in any English-speaking nation. Since 1789, France has had five republics, two empires, two monarchies, and miscellaneous directories, consulates, and so on - but its territorial boundaries are today only slightly different from those of 1789. The United Kingdom has had the same Constitution (much evolved, but built on English roots even older) since its founding in 1707; the United States still operates under the Constitution of 1789, also much evolved, but also very much rooted in the same underlying principles as that of Britain. The borders of both Unions, however, have changed numerous times. Thus, it's worth noting that France responded to a spatial-composition crisis - the Algerian Revolution in 1958 - with a regime-recomposition solution, the transition from the Fourth to the Fifth Republic. In comparison, Anglosphere nations reacted to regime-composition crises such as the Navigation Acts, the slavery issue, or Irish Catholic emancipation with spatial composition solutions. [p.196]

What are the secessions or unions needed today?

Comments: Political Geography

Nick Land: Obvious candidates:

UK in super-NAFTA

English independence

Good bye Quebec

Swap Alberta for New England (Kim Du Toit had a great map based on this which I can't find)

Don't know whether UK out of Europe counts, but it's the most important of the lot ...

A more general approach is deepened federalism. National legislation should be minimized and entitlements be scrapped, with states / regions pursuing their own preferred balance of economic freedom and social regulation / protection. People voting with their feet would then test each regime, with sclerotic failures facing population collapse and financial crisis. If San Francisco - for instance - wants a soci*list republic, that's fine, as long as the locals fund it themselves and accept the consequences of their own mistakes. Federal taxation would be almost entirely restricted to covering genuinely national priorities: defence, intelligence and diplomacy.

Tachi: Interesting notion. But surely spatial and regime composition are two aspects of the same entity? Perhaps then (French Empire being a case of a space-driven solution, and the played down 'evolution' of constitutions) but even more so now?

Does this distinction, however useful when applied to history, really apply now, given the difference in the nature of space between historical-colonial and modern times? Space is characterized differently now, no longer as extensions of physical territory.

The US is keen on regime change in Iraq and other places, so is this problem-solving via regime-(re)composition? Or perhaps regime-driven solutions have taken on a new - spatial - character, which problematizes the whole distinction?

Nick Land: Tachi - think the key point is population re-groupings, with territorial redistribution as the most elementary mechanism for this. Anglospherean schism/amalgamation contra Continental re-articulation of collective political

identity, strongly associated with negative / positive conceptions of liberty (respectively).

Not sure this transfers easily to the question of ('neocon') regime changes, which are a military solution to hostile geostrategic formations. The connection is at the very least an indirect one, based on the prior and subsequent cultural behaviour of the target population. For e.g., if Iraq becomes more federal in its political arrangements, that would in itself mark a degree of Anglospheric influence, which is to say 'geographical liberalism' or simultaneous co-existence of diverse social arrangements, as opposed to transformations in a unified collective structure to better represent 'collective aspirations'.

sd: from Robert D. Kaplan "The Coming Anarchy":

"Consider the map of the world, with its 190 or so countries, each signified by a bold and uniform color: this map, with which all of us have grown up, is generally an invention of modernism, specifically of European colonialism. Modernism, in the sense of which I speak, began with the rise of national states in Europe and was confirmed by the death of feudalism at the end of the 'Thirty Years' War - an event that was interposed between the Renaissance and the Enlightenment, which together gave birth to modern science. people were suddenly flush with an enthusiasm to categorize, to define. The map, based on scientific techniques of measurement, offered a way to classify new national organisms, making a jigsaw puzzle of neat pieces without transition zones between them. 'Frontier' is itself a modern concept that didn't exist in the feudal mind...

... To the colonialist, country maps were the equivalent of an accountant's ledger books. Maps 'shaped the grammar' that would make possible such questionable concepts as Iraq, Indonesia, Sierra Leone and Nigeria. The state, recall, is purely a Western notion, one that until the twentieth century applied to countries covering only 3 percent of the earth's land area...

Yet this inflexible, artificial reality staggers on, not only in the United Nations but in various geographic and travel publications (themselves by-products of an age of elite touring which colonialism made possible) that still report on and photograph the world according to country..."

Ethnic groupings and alliances are off the map and can severely wreak havoc on weak national states. Kaplan refers to the decisive role the Kurds have played and will play in the Middle East:

"... the border was porous and smuggling abounded, but here the people doing the smuggling, on both sides of the border, were Kurds. In such a moonscape, over which peoples have migrated and settled in patterns that obliterate borders, the end of the Cold War will bring on a cruel process of natural selection among existing states. No longer will these states be so firmly propped up by the West or the Soviet Union. Because the Kurds overlap with nearly everybody in the Middle East, on account of their emerging, in effect, as the natural selector - the ultimate reality check. They have destabilized Iraq and may continue to disrupt states that do not offer them adequate breathing space, while strengthening states that do.

Because the Turks, owing to their water recourses, their growing economy, and the social cohesion evinced by the most crime-free slums I have encountered, are on the verge of big-power status, and because the ten million Kurds within Turkey threaten that status, the outcome of the Turkish-Kurdish dispute will be more critical of the future of the Middle East than the eventual outcome of the recent Israeli-Palestinian agreement." (1994)

It is telling that, 11 years after Kaplan wrote this, the CIA factbook still persists in presenting the world in terms of countries - it is difficult to find information about the Kurds there.

www.cia.gov/cia/publications/factbook/index.html

'deepened federalism' - is this working with the Kurds in Iraqi Kurdistan? [genuine question]

If the UK would be better off leaving the EU, will Turkey be better off entering the EU? (Euro-racism permitting, of course).

Nick Land: sd - on your last question, the value of entering the EU is based entirely on how rapidly the EU is transformed beyond recognition. IMHO it is the Soviet Union c.1984, a dinosaur edifice whose collapse cannot long be postponed.

As for whether Turkey will be permitted to join, given the multiple ethnopolitical crises that will be attending that event (concerning the CAP, general eurosclerosis,

globalization panic, slide towards fascism, Islamic onslaught etc) - I'd be stunned if it happened.

The EU is going to be the most toxic ingredient of the planetary order over the next two decades. It will be truly horrible to watch.

sd: "I'd be stunned if it happened." - if it doesn't happen, for whatever reason, then Europe will inevitably be accused of racism, further exacerbating the the Islamic onslaught.

Think Kaplan is particularly relevant here, as the alliances which are emerging at the moment are composed of three types of group:

1. groups defined by allegiance to religious memes.
2. groups which maintain/defend their ethnic identity.
3. groups allied solely by common economic and political purposes (i.e. lacking religious/ethnic cohesion).

Obviously lots of criss-crossing and schizophrenic tearing as it's possible to belong to all three groups at once. Also, the groups can bleed into each other - nationality seems to sit uncomfortably on the borders between 2 & 3. The anglosphere predominantly 3, of course.

northanger: sd - what's that list look like for #3?

Nick Land: sd - think your #3 could be shifted slightly, to add emphasis to adherence to principle, for instance liberty. The US Constitution (and US nationalism generally important in this respect, at its best neither ethnic nor religious, but principled and 'exceptional').

IMHO the essential principle of the Anglosphere is negative liberty (limited government, economic freedom, individualism, and 'don't tread on me' robust foreign policy based on ruthless hostility to tyranny).

PS. "Europe will inevitably be accused of racism" - LOL, why would anyone suggest that?

(By that time they'll be goose-stepping around and shrieking again.)

PPS. Get ready for President Le Pen.

sd: *they'll be goose-stepping around and shrieking again*

I do hope you are restricting yr comment to Old Europe!

refusing Turkey entry would no doubt involve explicit racist memebile (e.g. Le Pen, obviously), rather than implicitly racist policy - harder to deny or cover up with soci*list platitudes.

restricting yr comment to Old Europe - on reflection, Central/Easteen Europe has its fair share of barking nationalists.

Nick Land: sd - definitely mean the guys who did it last time, there's a lot of inertia in these things. Any country with a fundamentally illiberal tradition goes its own version of fascist when things get rough, and in (Old) Europe they're going to get very rough indeed ...

sd: tachi's point that 'space is characterized differently now' - most fundamentally when it comes to finance:

“Private Internet currencies based on strong encryption (cybermoney) will soon provide payment mechanisms that are not recorded in central clearing houses and are thus beyond subpoena power. Much of the actual economic activity in the coming era will pass (and already has passed) out of the strictly national realm. Even the most powerful nation-states are beginning to find it impossible to set currency or interest rates without reference to the world market.

Nor can the economic state count on coercive solutions to counteract this trend. It cannot tax what it cannot see. One of the products of cheap, ubiquitous computing has been the growing, worldwide availability of strong programs for encrypting data on personal computers. With such programs, individuals and companies can communicate and trade beyond the easy ability of governments to intercept or, if proper precautions are taken, even to be aware that the transactions exist"

James C. Bennett

explorersfoundation.org/archive/anglosphere_tni-nov03.pdf

As where you are becomes increasingly irrelevant, and trade becomes ever more untrackable, taxation could become virtually impossible. Is security all the state will have to offer in return for taxation?

Nick Land: If an intrusive world government can be prevented from arising, the decentralizing and government-shrinking consequences look anticipated from cyberspace will be difficult for anyone to stop. Command-control junkies really need to boost transnational political authorities quickly, or their worlds will start very messily disintegrating. Hence the centrality of relentless campaigning against the UN and associated 'tranzi' institutions by all those committed to the promotion of liberty.

sd: ... so what happens to co-ordinated response?

Kaplan suggests the US should simply hijack the UN, rather than campaign against it.

Nick Land: co-ordination doesn't require a centralized authority - a decapitated world will explore techonomic space far more thoroughly than a unified world government would permit.

On original point (cyphernomics) it's no coincidence all this nonsense about the UN inheriting the Internet has arisen. Does anyone think they're aiming to liberalize it?

PS. I wouldn't even trust a US run UN. What if they wanted to use it to shut down emerging genomodification markets in the Far East?

Michael Lotus: The people participating in this discussion will almost certainly be interested in the posts on Jim Bennett's group blog Albion's Seedlings, where I make my own humble contribution from time to time.

I will mention that the issue of secessions and unions needed would include

(1) Britain out of EU, to the extent possible, as the highest priority.

Most especially, out of the military arrangements which are taking the UK out of its long-standing alliance with the USA, alarmingly detailed at the EU Referendum blog.

(2) Canada to devolve Quebec once and for all, so Anglo-Canada can find its real identity again. Further structural changes in Canada -- e.g. what happens to Alberta and its hydrocarbon wealth -- are open questions.

(3) Britain in a Super-NAFTA with the USA. Why no one is pushing this is beyond me.

(4) Australia and maybe NZ in a free trade zone with USA. Progress was made this year. More should be done.

A related point -- deeper economic and military ties with Anglosphere first cousin India.

An over-arching point. Much of what needs to be done is build on existing treaty relationships. Bennett has proposed a unifying entity called a Network Commonwealth for the Anglosphere, though the details of this entity are still a topic of discussion. It would not necessarily mean the dissolution of any existing state, for example.

Seedlings: www.anglosphere.com/weblog

EUReferendum: www.eureferendum.blogspot.com

Intuitive Economics

sd (November 11, 2005)

"Behavioral economics has demonstrated systematic decision-making biases in both lab and field data. But are these biases learned or innate? We investigate this question using experiments on a novel set of subjects -- capuchin monkeys. By introducing a fiat currency and trade to a capuchin colony, we are able to recover their preferences over a wide range of goods and risky choices. We show that standard price theory does a remarkably good job of describing capuchin purchasing behavior; capuchin monkeys react rationally to both price and wealth shocks. However, when capuchins are faced with more complex choices including risky gambles, they display many of the hallmark biases of human behavior, including reference-dependent choices and loss-aversion. Given that capuchins demonstrate little to no social learning and lack experience with abstract gambles, these results suggest that certain biases such as loss-aversion are an innate function of how our brains code experiences, rather than learned behavior or the result of misapplied heuristics."

Keith Chen: The Evolution of Our Preferences - Evidence from Capuchin-Monkey trading behavior

"...The first surprise was just how readily they took to the idea of money. Despite the fact that capuchins do not usually display social learning – picking up skills from other members of the group – it took just a few months for Chen and his colleagues to teach them that small discs could be used to buy treats. The monkey's appreciation for money even extends to trying to counterfeit it – by using slices of cucumber instead – and hiding their own stash, suggesting that they understand it has intrinsic worth. In these respects capuchins seem to have innate economic wisdom much like our own."

Mark Buchanan: Monkey and Monkey Business, New Scientist, 5 November 2005

"During the chaos in the monkey cage, Chen saw something out of the corner of his eye that he would later try to play down but in his heart of hearts he knew to be true. What he witnessed was probably the first observed exchange of money for sex in the history of monkeykind. (Further proof that the monkeys truly understood money: the monkey who was paid for sex immediately traded the token in for a grape.)"

Monkey Business: Keith Chen's Monkey Research

By Stephen J. Dubner and Steven D. Levitt , Freakonomics

[excerpts from the Mark Buchanan article in New Scientist – needs a subscription.]

The capuchin monkeys working with economist Keith Chen and psychologist Laurie Santos know a good bargain when they see one. They use metal chips as money, buying bits of apple or cucumber from humans, and they seem to know what they are doing. When the researchers make apple cheaper than cucumber – offering more food for the same number of chips – the capuchins opt for the better-value food, as any savvy shopper would. Yet it is not the monkeys' good economic sense that Chen and Santos find most interesting. Rather it is their tendency, on occasion, to make an irrational deal – and to do so in a distinctively human way.

The capuchins ... often make decisions as wisely as any good business person, yet in other cases they appear to succumb to the same irrational temptations we do. And a sense of fairness? Pay one monkey less than another for equal work, and you are likely to get a screeching tantrum, seemingly in protest at gross economic injustice...

...The first surprise was just how readily they took to the idea of money. Despite the fact that capuchins do not usually display social learning – picking up skills from other members of the group – it took just a few months for Chen and his colleagues to teach them that small discs could be used to buy treats. The monkey's appreciation for money even extends to trying to counterfeit it – by using slices of cucumber instead – and hiding their own stash, suggesting that they understand it has intrinsic worth. In these respects capuchins seem to have innate economic wisdom much like our own.

They act like people in other, more subtle ways too. In one experiment, Chen and colleagues had the monkeys choose between two apparently different but actually identical gambles. In the first, for the price of one disc, the monkeys got one grape and also a 50-50 chance of getting a second grape, with the outcome determined by a coin flip. Alternatively, the monkeys could choose to start with two grapes but then risk losing one on the flip of the coin. Again, this led to a 50-50 chance of getting either one or two grapes. The monkeys were able to distinguish between the available bargains because they interacted with two experimenters, each one always offering the same deal. As the chances of ending up with two grapes or one are the same in both bargains, a 'rational' individual would be indifferent about which to take. The real

monkeys chose the experimenter offering one grape plus the chance of another about 75 per cent of the time. “We were surprised,” says Chen. “Psychologists we talked to thought the monkeys would simply trade with whomever initially showed the most food.”

There seems to be a parallel in human behaviour. Although the gambles were strictly equivalent, the second involved a potential loss and the first a potential gain, leading Chen to conclude that his capuchins are showing the very same ‘loss aversion’ that researchers have found in humans. Although economic rationality suggests that we should give equal weight to small gains or losses, countless experiments indicate that the pain associated with a loss tends to outweigh the pleasure of an equivalent gain...

To some researchers, the similarity in human and capuchin behaviour suggests an ancient evolutionary origin. “It’s not credit cards and gas prices that make us react irrationally,” Santos suggests, “but something more fundamental that we share with other species.” and if our bias towards loss aversion does have deep origins, it may well be that a behaviour that seems irrational today could have been wise for our ancestors living in very different circumstances. One possibility, Santos believes, is that a heightened fear of losses could have helped our ancestors survive in fluctuating environments...

... Chen believes that economists should already be thinking about the possible implications of these experiments. Loss aversion makes us do some silly things – it explains, for example, why stock markets investors hold on to falling stocks too long and why homeowners may be reluctant to sell their houses at a loss, even when that would be the sensible thing to do. A close evolutionary link between human and capuchin behaviour, Chen suggests, would imply that such behavioural peculiarities may be “hard-wired” into us rather than being learned. As a consequence, economists and policy-makers may find it difficult to alter such behaviour with the usual economic incentives.

Take savings and investments. Most people save too little for retirement, and loss aversion seems to be a primary cause. To begin with, people who do save conscientiously tend to invest less in risky stocks than in safer securities such as bonds, even though stocks, historically, have earned more in the long run. “Loss aversion is one of the most plausible reasons,” says Chen, because stock values fluctuate more strongly than bonds and so an investor in stocks has a greater chance of experiencing a painful loss, even if gains will more than balance it eventually. More fundamentally, putting money away today means losing funds you could spend now, in return for the

uncertain prospect of more money in the future. Because many people feel present losses more than the thought of future security, they systematically under-invest.

But by accepting loss aversion as a part of human nature, policy-makers may be able to encourage better decisions. One idea, proposed by economists Richard Thaler of the University of Chicago and Shlomo Benartzi of the University of California, Los Angeles, goes under the slogan of 'Save More Tomorrow'. Under this scheme, individual employees can elect to have more of their pay put toward their retirement, but only starting next year, with the rate of contribution then rising gradually. In real-world trials, Thaler and Benartzi found that pushing the investment decision into the future, so that the loss feels less painful now, significantly increased the overall investment people made toward retirement.

[Primatologist Frans de Waal and anthropologist Sarah Brosnan] taught capuchin monkeys to trade small rocks for food rewards, serving two monkeys side by side so that each could see the trades offered to the other. At first, the experimenters always gave the monkeys cucumber for their rocks. But then they began giving one monkey a grape, which capuchins greatly prefer to cucumber, or even a free grape without requiring a rock in exchange. They observed that the slighted monkeys often reacted by refusing to trade effectively, going on strike. "In some cases," says Brosnan, "they'd throw the tokens or rewards back at us." In others, they would not even eat cucumber they had already 'bought'. "The moral of the story," as Brosnan puts it, "is that cucumbers are only bad when someone else has got something better."

"Capuchin monkeys seem to measure rewards in relative terms," says de Waal, who suggests that emotions of some kind probably lie behind this behaviour, as in people...

...the broad-brush similarity between humans and capuchins regarding human treatment suggests that something like a preference for fairness could be a deep evolutionary adaptation in primates, rather than something only we humans have learned."

Comments: Intuitive Economics

Nick Land: One of the many interesting implications of intuitive economics ('loss aversion' being an especially clear and mathematically tractable example) is that AIs will be able to take humans to the cleaners in competitive trading environments unless these pleistocene biases are somehow neutralized. Current financial instruments allow

for such flexible and omnidimensional strategies (expressing pure ludic competences) that a deviation from rationality anything like as drastic as that exemplified by the $1 + 0.5 : 2 - 0.5$ psychological inequality described above would rapidly lead to total disaster against an unbiased opponent.

sd: Innate economic biases are now disadvantageous adaptations for humans: like love of fatty and sugary foods, they were adaptive in a world where lack rather than abundance were the norm, and now they can be disastrous. While the obesity resulting from excessive fat and sugar consumption mainly affects the individuals doing the consuming (though there are obvious knock-on consequences in the health service), economic biases have broader and more long-ranging consequences. Apart from the reluctance to invest in the future which is rooted to loss aversion and the stubborn refusal to take statistics on board, the experiments also seem to suggest that irrational responses to perceived injustice are hard-wired into primate nature. The capuchins cut off their noses to spite their faces, in protest against perceived unfairness which has no basis in reality. The obvious human analog is the charge of exploitation levelled at an exchange which a more rational assessment would label as 'not a good deal' (and look/wait for an alternative deal, or a temporary alternative to dealing). With the capuchins, the resentment is triggered by reference to the deals others make: the sense of fairness is a group adaptation that enabled gene alliances to scramble through the pleistocene. Unfortunately, such irrational biases, like God, are now part of human nature and will always pop up work against runaway trade, until some serious reprogramming takes place.

Nick Land: Apologies for DGism, but species are 'strata' whose 'interests' are not evolutionary, but rather the opposite. Wallace is clearer than Darwin about this - natural selection operates like a (cybernegative) homeostat keeping the species from drifting beyond what biological reproduction requires (i.e. adaptation). The regenerative (cyberpositive) dynamics of destratified trade signal the death of the species through transition into an evolutionarily higher form - in this respect hom sap has crossed the catastrophe threshold way back and is slipping off the biostability stratum, taking the whole natural order with it in a cascade effect. Virtually speaking, we don't even have a 'genome' anymore, only technoplastic genocode awaiting efficient commercial volatilization.

This all to say that the 'irrationality' of the monkeys is conservative rationality from the perspective of the stratum they populate. Far better the sacrifice of the

preponderant part of experimentally-acquired capabilities if the ultimate consequence of such advances is the liquification of the biostability in runaway technogenesis and impulsion into intelligence catastrophe - thus spake the Lobster God. If idiot conservatism is just flexible enough to persist - and not an iota more - it wins.

Fortunately for the future, the degree of adaptability required for survival is now exploding on a logistic curve as nature sublimates into robotic nanoswarms. Conservatism is becoming a death sentence.

Trees & Rhizomes

sd (November 23, 2005)

The age-old debate between rationalism and empiricism is unresolved and ongoing. Contrary to the popular conception of philosophical clashes, the debate is actually about something and, perhaps even more surprisingly, concordance could come through attempting to find a solution to a very practical problem: the creation of strong AI.

In the past, the conflict was restricted to treatise bombardments in the lofty heights of philosophy. Now it is being decided down on the ground, less dramatically, by cognitive scientists and neuroscientists who patiently train and feed neural nets in cognitive science labs, and by neurologists and neuropsychologists who test the linguistic output of people who have suffered tragic damage to their brains.

Key texts online:

The Past Tense Debate (Pinker & Ullman; McClelland & Patterson 2002) - referred to as PTD

Words & Rules (Pinker 1998)

On Language & Connectionism (Pinker & Prince 1988)

Stanford Encyclopedia Entry: Connectionism

Other references:

Words & Rules, Pinker (1999), WR

The Singularity is Near, Kurzweil (2005) TS

In *Words and Rules*, Pinker maps the battlefield of the modern conflict: in the rational camp sit Leibniz, Descartes, Hobbes, Humboldt and Chomsky; in the empirical camp sit Hume, Locke, Pavlov, Skinner and the connectionists David Rumelhart and James McClelland:

“The idea that intelligence arises from the manipulation of symbols by rules... When the symbols stand for words and the rules arrange them into phrases and sentences,

we have grammar... When the symbols stand for concepts and the rules string them into chains of inference, we have logic, which became the basis for digital computers, the artificial intelligence systems that run on them, and many models of human cognition.” (98 WR)

“The mind connects things that are experienced together or that look alike... and generalizes to new objects according to their resemblance to known ones. Just as the rationalists were obsessed by combinatorial grammar, the associationists were obsessed by memorized words... John Locke pointed to the arbitrary connection between words and things as the quintessential example of how the mind forms associations by contiguity in time... Replace the ideas with ‘neurons’ and the associations with ‘connections’ and you get the connectionism of David Rumelhart and James McClelland.” (99WR)

Interestingly, Pinker and Kurzweil occupy a middle ground between these two polarities.

Pinker: Words & Rules

Pinker is strongly allied to the innatist side of the fence, but has adapted and streamlined his model of language learning and language processing to accommodate evidence provided by the Rumelhart-McClelland connectionist model. Pinker’s ‘word and rules’ (WR) hypothesis is a compromise which adapted in response to data from empirical tests.

The Rumelhart and McClelland Parallel Distributed Processing (PDP) model proved the extent to which blank neural nets can be trained to learn and generalize from previous input and feedback when presented with fresh data:

“Rumelhart and McClelland trained their network on a list of 420 verbs presented 200 times, for a total of 84,000 trials. To everyone’s surprise, the model did quite well, computing most of the correct sound stretches for all 420 verbs. That meant that a single set of connection strengths was able to convert ‘look’ to ‘looked’, ‘seem’ to ‘seemed’, ‘melt’ to ‘melted’, ‘hit’ to ‘hit’, ‘make’ to ‘made’, ‘sing’ to ‘sang’ and even ‘go’ to ‘went’. Then Rumelhart and McClelland challenged the network with 86 new verbs, which it had not been trained on... The model offered the correct past-tense form with –ed for about three quarters of the new regular verbs, and made reasonable overgeneralization errors such as ‘catched’ and ‘diggd’ for most of the new irregulars.

Even more impressively, the model mimicked some of the tendencies of children as they acquire English. At one point in training it produced errors such as 'gived' of verbs that it had previously produced correctly. It also analogized new irregular verbs to families of similar sounding old irregular verbs; for example it guessed 'cling-clung', 'sip-sept', 'slip-slept', 'bid-bid' and 'kid-kid'..." (WR120-1)

However, amongst other weaknesses, the PDP model is limited by the fact that all it does is associate sounds with sounds, which means it has great problems processing words which have unfamiliar sounds (the network produced *membled* as the past tense of *mail* because it was not familiar with *ail*), whereas humans quite happily apply the -ed ending to produce the past tense for new verbs, as long as they know the word concerned is a verb (e.g. no hesitation in turning 'text' into 'texted'). Also, having no mental symbols for morphological units, such as prefix, verb stem or suffix, the PDP model is unable to apply recursive rules, such as "a stem can combine with a prefix to form a new stem", so that 'out' can combine with 'strip' to produce 'outstrip'. Positing symbolic tree structures and innate grammatical machinery is a more plausible and economical way of accounting for regularity in language and for its acquisition:

"The phonemes are held in their correct order by a treelike scaffolding that embodies the morphological structure of the word (how it is built out of stems, prefixes and suffixes) and the phonological structure of its parts (how they are built out of chunks like onsets, rimes, vowel nuclei, consonants and vowels, and ultimately features). The similarity to other words such as *strip*, *restrip*, *trip*, *rip* and *tip* falls mechanically out of the fact that they have identical subtrees, such as an identical 'stem' or an identical 'rime.' And computing the regular past-tense form is nothing but attaching a suffix next to the symbol 'verb stem': 'outstripped'. [there should be a nice Chomsky tree diagram here, but I can't paste it in.]

The WR theory is a "lexicalist compromise between the generative and connectionist extremes." (PTD2)

"Regular verbs are computed by a rule that combines a symbol for a verb stem with a symbol for the suffix. Irregular verbs are pairs of words retrieved from the mental dictionary, a part of memory. Here is the twist: Memory is not a list of unrelated slots, like RAM in a computer, but is associative, a bit like the Rumelhart-McClelland pattern associator memory. Not only are words linked to words, but bits of words are

linked to bits of words... The prediction is that regular and irregular inflection are psychologically, and ultimately, neurologically distinguishable.” (WR 131-2)

The WR hypothesis is now itself being subjected to rigorous testing. Possible proof that the brain handles regular and irregular verbs in different areas and by different operations might come from studies of people who suffer from aphasia and anomia. The former can result from damage to the areas around the Sylvian fissure and Broca's area, and causes agrammatism, whereas anomia is “a difficulty in retrieving and recognizing words,” which results from damage to the posterior parts of the brain (WR 275-6). Studies of Alzheimer's disease, Parkinson's disease and the Specific Language Impairment caused by the FOXP2 mutant gene seem to support to the WR hypothesis, but McClelland and Patterson question the evidence. (PTD15)

What is clear from this is that paper and pencil analysis is now utterly insufficient on its own: the debate increasingly concerns interpretation of data and critiques of data gathering methods.

[for more on FOXP2: www.well.ox.ac.uk/~simon/SPCH1/SPCH1_project.shtml]

Kurzweil

For Kurzweil, neural nets are just one tool in the vast panoply of technologies aiding and abetting the creation of strong AI. The capacity of well-trained neural nets to learn and self-organize is one of the promises they hold out. Neural nets are distinctly rhizomatic in the way that they bootstrap from the bottom up.

“The key to a neural net... is that it must learn its subject matter. Like the mammalian brains on which it is loosely modeled, a neural net starts out ignorant. The neural net's teacher – which may be a human, a computer program, or perhaps another, more mature neural net that has already learned its lessons – rewards the neural net when it generates the right input and punishes it when it does not. This feedback is in turn used by the student neural net to adjust the strengths of each interneuronal connection. Connections that were consistent with the right answer are made stronger. Those that advocated a wrong answer are weakened. Over time, the neural net organizes itself to provide the right answers without coaching. Experiments have shown that neural nets can learn their subject matter even with unreliable teachers. If the teacher is correct only 60 percent of the time, the student neural net will still learn its lessons.

A powerful, well-taught neural net can emulate a wide range of human pattern-recognition faculties. Systems using multilayer neural nets have shown impressive results in a wide variety of pattern-recognition tasks, including recognizing handwriting, human faces, fraud in commercial transactions such as credit-card charges, and many others. In my own experience in using neural nets in such contexts, the most challenging engineering task is not coding the nets but in providing automated lessons for them to learn their subject matter.” (TS 271)

The other promise is that of parallel processing:

“Neural nets are also naturally amenable to parallel processing, since that is how the brain works. The human brain does not have a central processor that simulates each neuron. Rather, we can consider each neuron and each interneuronal connection to be an individual slow processor. Extensive work is under way to develop specialized chips that implement neural net-architectures in parallel to provide substantially greater throughput.” (TS270)

Kurzweil’s critique of Searle’s Chinese Room argument appeals to the variety of techniques which can be used in computing:

“A failure to see that computing processes are capable of being – just like the human brain – chaotic, unpredictable, messy, tentative, and emergent is behind much of the criticism of the prospect of intelligent machines that we hear from Searle and other essentially materialist philosophers. Inevitably Searle comes back to a criticism of ‘symbolic’ computing: that orderly sequential symbolic processes cannot recreate true thinking. I think that is correct (depending on what level we are modeling an intelligent process), but the manipulation of symbols (in the sense that Searle implies) is not the only way to build machines, or computers.

... Nonbiological entities can also use the emergent self-organizing paradigm, which is a trend which is well under way and one that will become even more important over the next several decades...

... The primary computing techniques that we have used in pattern-recognition systems do not use symbol manipulation but rather self-organizing methods... A machine that could really do what Searle describes in the Chinese Room argument would not merely be manipulating language symbols, because that approach doesn’t work. This is at the heart of the philosophical sleight of hand underlying the Chinese Room. The nature of computing is not limited to manipulating logic symbols.

Something is going on in the human brain, and there is nothing that prevents these biological processes from being reverse engineered and replicated in nonbiological entities...

... Of course, neurotransmitter concentrations and other neural details have no meaning in and of themselves. The meaning and understanding that emerge in the human brain are exactly that: an emergent property of its complex patterns of activity. The same is true for machines. Although 'shuffling symbols' does not have meaning in and of itself, the emergent patterns have the same potential role in nonbiological systems as they do in biological systems such as the brain. Hans Moravec has written, 'Searle is looking for understanding in the wrong places...[He] seemingly cannot accept that real meaning can exist in mere patterns.'" (TS460-4)

The most plausible and workable models for cognition and language are emerging through syntheses, which can be seen as part of a more far-ranging tendency towards consilience.

Whilst a certain degree of consensus is emerging, there are forks ahead and different directions are being taken. One camp is reverse engineering the human brain in order to better understand human psychology: the primary aim is to discover fundamental truths about ourselves. The camp which has put all its eggs in the strong AI basket is more concerned with what is useful than what is true: the fundamental aim is to overcome the limitations that keep us imprisoned in what we are and prevent us from becoming what we could become. Both trajectories lead inexorably to political implications, the surface of which have barely been scratched.

Reverse engineering will also inevitably lead to clashes over human nature. Evolutionary psychology stresses that the most complex and mysterious components of the human brain, the emotions, are adaptations which evolved over millions of years of gradual fine-tuning. In contrast, no sooner does Kurzweil find out about the deep interconnectedness of spindle cells, which are intimately involved with the emotions, than he notes how few they are in number and puts them on the list of things to be reverse engineered and simulated in the next couple of decades: "It will be difficult... to reverse engineer the exact methods of the spindle cells until we have better models of the many other regions to which they connect. However, it is remarkable how few neurons appear to be exclusively involved with these emotions... only about eighty thousand spindle cells dealing with high-level emotions." (TS194)

Kurzweil's glaring weakness, and the source of his irrepressible optimism, is that he grossly underestimates the sophistication and intransigence of evolutionary programming and strategies.

The debate is still unfolding, rather than raging, with a surprising degree of politeness (the Pinker vs. McClelland clash is extremely civilized). Tools and results change hands in the process of fine tuning. As the brain is precision re-engineered there is increasing cross-feed from different, previously opposed or unrelated disciplines. At the moment there is no no-mans land: the midpoint between rationalism and empiricism is actually a zone of constructive research and innovation, at least at the moment.

Comments:Trees & Rhizomes

hyperflow: have you checked out andy clarks stuff on this as well?

www.philosophy.ed.ac.uk/staff/clark/publications.html#language

"The human mind, I wanted to argue, is naturally designed so as to co-opt a mounting cascade of extra-neural elements as (quite literally) parts of extended and distributed cognitive processes. Moreover (and hence the techno-futurism) this ancient trick looks poised for some new and potent manifestations, fueled by innovative work on human-machine interfaces, swarm intelligence, and bio-technological union."

sd: Thanks - investigating.

"The robot that thinks like you... 05 November 2005

...The infant I am watching wander around its rather spartan playpen in the Neurosciences Institute (NSI) in La Jolla, California, is a more limited creature. It is a trashcan-shaped robot called Darwin VII, and it has just 20,000 brain cells. Despite this, it has managed to master the abilities of a 18-month-old baby - a pretty impressive feat for a machine.

Darwin VII is the fourth in a series of robots that Jeff Krichmar and his colleagues at NSI have created in a quest to better understand how our own brains work - the first three versions of Darwin did not have a real robotic body to control. Darwin VII allows Krichmar to record changes in hundreds of thousands of its brain's neural connections as it explores and learns, to test neuroscientists' theories of how real

brains work. "This is something that you can't do in a real brain," Krichmar points out.

The key to Darwin's abilities is its brain. This is an amalgam of rat and ape brains, encoded in a computer program that controls its actions. Darwin tastes blocks by grabbing them with its metal jaws to see if they produce electricity. It likes the ones that do and dislikes the ones that don't. Within half an hour of being switched on it learned to find the tasty blocks.

If Krichmar and others like him succeed, robots like Darwin might one day be seen as the ancestors of something much bigger. Some researchers, and even the US Defense Advanced Research Projects Agency, are gambling that robots like Darwin will be the forebears of an entirely new approach to artificial intelligence (AI): building intelligent machines by copying the structures of living brains. Some groups are even designing microchips that could eventually be used to build anatomically realistic artificial silicon brains to replace the computers that power existing robots like Darwin.

The dream is that these new brains, embedded in robotic bodies of silicon and steel, will go to a level beyond today's artificial intelligence systems. By sensing their environments as they explore and learn, they will develop the ability to survive in the constantly changing real world of imperfect information that we navigate so effortlessly, but which computers have yet to master.

...These systems will arise, say the researchers, by emulating the brain's neurons and the way they are connected to each other. In animal brains neurons are linked to form huge reconfigurable networks that behave like filters, transferring, modifying or blocking signals that they receive. Though living brains have been studied for decades, we still don't know exactly how they achieve the amazing abilities of the human mind.

It all boils down to this: existing artificial neural networks, such as those used in many computer systems today, are totally inadequate for creating anything resembling animal, let alone human, intelligence. To do that, you have to be as faithful as possible to the real thing. And for the first time that's what several groups around the world are trying to do: emulate both the structure and the function of living brains in detail.

In all neural networks, both artificial and real, structure and function are intimately linked. The pattern of connections between neurons determines how well the network performs a particular task. If you train an artificial neural network to recognise

abnormal cells in smears test, for example, it adapts by adjusting connections between individual neurons until external feedback indicates to the network it is doing the job well. But unlike the human brain, these systems are optimised to perform a single task. "It is a small part of what might be happening in the brain, a tiny portion of an intelligent action," says Igor Aleksander of Imperial College London.

To get the adaptive, flexible behaviour you see in animals, you need to imitate the design of a whole brain, the body it lives in and the drives that motivate it, Krichmar says. "A brain-based device provides them all; a traditional neural net simply doesn't."

Neuroscientists have identified hundreds of different neural areas within mammalian brains. In effect each is a specialised neural network unto itself. It is only when you recreate these areas and start interconnecting the different modules that complex behaviour emerges that no single part of the system could achieve on its own, Aleksander says.

Darwin is a work in progress. The biological data and computing power necessary to build such a machine are only now becoming available. Huge gaps remain in our understanding of the human brain, so a team lead by Olaf Sporns, a neuroscientist at Indiana University, Bloomington, has proposed a project inspired by the Human Genome Project to map the neural connections throughout the human brain (PLoS Computational Biology, vol 1, p 42).

But it is going to take more than just simulating neural networks in software to make significant progress towards genuine new forms of artificial intelligence. Brain-based systems run very slowly on computers because brains and computers work in fundamentally different ways. Conventional computers funnel their calculations through one or a few processors at best, whereas mammalian brains distribute calculations across billions of neurons that operate in parallel. To get a significant improvement in speed, and therefore capability, new hardware will be needed that can imitate the way brains compute.

To this end, some researchers have begun developing silicon devices that imitate the behaviour of real neurons. Their processing units behave like neurons in that they respond to inputs of different value with a range of output values, rather than just switching on or off as in conventional computers. The chips can even change the interconnection between processors in real time, something that is impossible with existing microchips..."

Olaf Sporns: www.indiana.edu/~cortex/publications.html

Nick Land: Don't want to distract back to an old topic, but why is Hobbes in the rationalist camp? Isn't he hyper-empirical in orientation? 'all reasoning is reckoning ...' etc.?

sd: "Hobbes uses 'reckoning' in the original sense of counting, calculating, or computing. For example, suppose the definition of 'man' is 'rational animal.' Then if we are told that something is 'rational' and an 'animal' (names of parts) we could deduce it is a 'man' (name of whole), and if we are told that something is a 'man' (name of whole) and that it is 'rational' (name of one part) we can deduce that it is a rational 'animal' (name of the other part). These steps could be laid out as mechanical instructions to recognize and copy words, a kind of symbol, and therefore could be 'reckoned' or computed by someone who has no idea what the concepts 'rational' and 'animal' even mean. If the symbols are patterns in the brain rather than words on a page, and the patterns trigger other patterns because of the way the brain is wired, then we have a theory of thinking.

Among the people influenced by Hobbes was Leibniz... Leibniz took Hobbes literally when he said that reason is nothing but reckoning. He devoted much of his life to inventing a scheme that would perfect the computations underlying thought, turning arguments into calculations and making fallacies as obvious as errors in arithmetic...

The idea that intelligence arises from the manipulation of symbols by rules is a major doctrine of the school of thought called rationalism..." (WR97-8)

so even if Hobbes isn't strictly in the camp, he helped pitch the tents.

think this 'connectome' project is going to be very important:

www.indiana.edu/~cortex/connectome_plos.pdf

hyperflow: this might be straying off topic a little, but wondering if Whitehead could be an interesting influence here. I know he's been bashed for process theology etc., but there's a lot of great stuff in there.

In particular, he almost sidesteps the question of intelligence by suggesting that it always has a goal, a neatness, an overcoding, and what is needed is to look underneath. The underground of intelligence, then, is replaced by the prehensions (non-subjective perception) of the extended, dynamic bodymind, in waves of intensity. Poss. fairly similar to Leibniz's microperception.

Nick Land:

HOBBS

LEVIATHAN

CHAPTER V

OF REASON AND SCIENCE

WHEN man reasoneth, he does nothing else but conceive a sum total, from addition of parcels; or conceive a remainder, from subtraction of one sum from another: which, if it be done by words, is conceiving of the consequence of the names of all the parts, to the name of the whole; or from the names of the whole and one part, to the name of the other part. And though in some things, as in numbers, besides adding and subtracting, men name other operations, as multiplying and dividing; yet they are the same: for multiplication is but adding together of things equal; and division, but subtracting of one thing, as often as we can. These operations are not incident to numbers only, but to all manner of things that can be added together, and taken one out of another. For as arithmeticians teach to add and subtract in numbers, so the geometricians teach the same in lines, figures (solid and superficial), angles, proportions, times, degrees of swiftness, force, power, and the like; the logicians teach the same in consequences of words, adding together two names to make an affirmation, and two affirmations to make a syllogism, and many syllogisms to make a demonstration; and from the sum, or conclusion of a syllogism, they subtract one proposition to find the other. Writers of politics add together pactions to find men's duties; and lawyers, laws and facts to find what is right and wrong in the actions of private men. In sum, in what matter soever there is place for addition and subtraction, there also is place for reason; and where these have no place, there reason has nothing at all to do.

Out of all which we may define (that is to say determine) what that is which is meant by this word reason when we reckon it amongst the faculties of the mind. For reason, in this sense, is nothing but reckoning (that is, adding and subtracting) of the

consequences of general names agreed upon for the marking and signifying of our thoughts; I say marking them, when we reckon by ourselves; and signifying, when we demonstrate or approve our reckonings to other men.

[Reckoning = elementary arithmetic operating on the material of sensation, from which all higher functions can be derived.]

sd: hyperflow - could be interesting, but my question is how useful is it to go back to philosophers or logicians? Dead philosophers are mainly useful for mapping the past, but I don't think they are particularly useful for the production of the future. I think we need to think about the current research (e.g. Sporns' connectome) and develop fresh concepts.

northanger: en.wikipedia.org/wiki/Dead_reckoning

Dead reckoning is the process of estimating a global position of a vehicle by advancing a known position using course, speed, time and distance to be traveled. That is, in other words, figuring out where you momentarily are or where you will be at a certain time if you hold the speed, time and course you plan to travel.

HOBBS

LEVIATHAN

CHAPTER IV

OF SPEECH

So that without words there is no possibility of reckoning of numbers; much less of magnitudes, of swiftness, of force, and other things, the reckonings whereof are necessary to the being or well-being of mankind.

[The robot that thinks like you...] The dream is that these new brains, embedded in robotic bodies of silicon and steel, will go to a level beyond today's artificial intelligence systems. By sensing their environments as they explore and learn, they will develop the ability to survive in the constantly changing real world of imperfect information that we navigate so effortlessly, but which computers have yet to master. &etc;

hyperflow: sd - ok, i understand what you're saying, but perhaps the extended bodymind has to be understood along the past-future continuum, where evolution is

nonlinear, and the future can become past or vice-versa. we're not evolving within a linear (or exponential) growth chart.

also, thinking about concepts as productions, what is being produced, created, affected, what sensations or intensities are affected? - in work on nanotech, it doesn't seem enough to pit connectionism v.s. integration... at every turn it seems that a humanist overcoding takes place, where, as you say, age-old positions are transplanted into hyperfuturist thought-colonies. isn't it possible that whitehead/spinoza etc. can be reinvigorated at a nexus with these new intersections of thought?

sd: hyperflow - "isn't it possible that whitehead/spinoza etc. can be reinvigorated at a nexus with these new intersections of thought?"

Of course it's possible - you have to be very careful tho.

Much of the history of philosophy is a history of speculation and positng which filled a void caused by an almost total absence of data. Leibniz, Spinoza and Whitehead simply lacked information - the motivation behind Sporns' connectome project is the fact that there is 'a severe lack of information' concerning brain networks. Maybe Leibniz and Spinoza have conceptual tools that can be applied to the contemporary understanding of the mind and brain, but I would tend to mistrust such an application: it's obvious that Leibniz and Spinoza would have developed completely different philosophies if they had had the kind of data available to us. Any philosophy that describes the mind and its operations without reference to the brain is practically useless. IMHO, philosophy should evolve in the same way that medicine does: you wouldn't trust the contents of a seventeenth century medicine cabinet, so extreme caution needs to be exercised when peering into a seventeenth century philosophical toolkit. Of course, the level of abstraction is decisive here - logic and mathematics have a high degree of fitness. The mind, however, is not an abstract entity, and neither is thought.

"age-old positions are transplanted into hyperfuturist thought-colonies" - good point. But what if the age-old positions are mutating into a new, hybrid consensus that actually works?

hyperflow: *Any philosophy that describes the mind and its operations without reference to the brain is practically useless.*

Yes, I think you're right, and I understand where you're coming from here. The connectome project is fascinating, and the idea of concepts which work is essential to the idea of both philosophy and science as being pragmatic.

Just wondered if you'd read / what you think of Antonio Damasio, particularly his book 'Looking for Spinoza'?

sd: Antonio Damasio certainly seems worth giving time to. This is sensible: "...what we really want to understand, the relation between brain systems and complex cognition and behavior, can only be explained satisfactorily by a comprehensive blend of theories and facts related to all the levels of organization of the nervous system, from molecules, and cells and circuits, to large-scale systems and physical and social environments. For almost any problem that is worth one's interest, theory and evidence from all of these levels are, in one way or another, relevant to the understanding of physiology or pathology. Since none of us can possibly practice or dominate knowledge across all of those levels, it follows that one must practice one or two very well, and be very humble about considering the rest, that is, evidence from those other levels that you do not practice. In other words, beware of explanations that rely on data from one single level, whatever the level may be."

hcs.harvard.edu/~husn/BRAIN/vol8-spring2001/damasio.htm

Divisions of labour and teamworking as the way to cope with data overload?

Mission to build a simulated brain begins

"An effort to create the first computer simulation of the entire human brain, right down to the molecular level...

...It will be the first time humans will be able to observe the electrical code our brains use to represent the world, and to do so in real time, says Henry Markram, director of Brain and Mind Institute at the Ecole Polytechnique Fédérale de Lausanne (EPFL), Switzerland.

Until now this sort of undertaking would not be possible because the processing power and the scientific knowledge of how the brain is wired simply was not there, says Charles Peck, IBM's lead researcher on the project.

"But there has been a convergence of the biological data and the computational resources," he says. Efforts to map the brain's circuits and the development of the

Blue Gene supercomputer, which has a peak processing power of at least 22.8 teraflops, now make this possible...."

1/6/2005 New Scientist

www.newscientist.com/article.ns?id=dn7470

bluebrainproject.epfl.ch/

Nick Land: "An effort to create the first computer simulation of the entire human brain, right down to the molecular level..." - seems like the Cyberpunk scenarios are still on track.

(Probably recommended this one before, but Greg Egan's 'Permutation City' starts with this topic (computer-simulation of a human brain) and deals with it in an especially fascinating way.)

More generally, this focus on the boundary between 'top-down' (arborescent) AI system and 'bottom-up' (rhizomic) network effects is definitely important. There's probably too much emphasis on polemical defences of 'pure' approaches in much of the intellectual background to these issues and insufficient awareness of the power of impurity. Boundary zones are typically hyper-productive (one of the few things pomoo-oriented theorists may have got right).

northanger: what are boundary zones?

Nick Land: northanger - maybe 'boundary zones' is too general. IMHO special attention is merited by the particular regions of hybridity where a relatively tightly organized regime is partially melted against radically decapitated or disorganized multiplicities (as in the example driving this thread, where formalized systems abut decoded populations). Structure vs chaos is less fertile than marginal deconstruction at the edge of chaos.

northanger: nick - you knock me right out of the water with that response. it's as clear as a ... fanged noumenon.

sd: The Generative/Rationalist Extreme

In 'The Sound Pattern of English', Chomsky and Halle (1968) posited that the past tense of both regular and irregular verbs are generated by the application of rules.

Chomsky and Halle are on relatively safe ground with regular verbs because they share patterns easily accounted for by a couple of rules. They are inflected with the suffix 'ed' or 'd'. They obey unbreakable phonological rules which generate /Id/ (e.g. wanted) /t/ (e.g. stopped) or /d/ (killed). New verbs entering the language fall into one of these three groups according to the phonological profile of their stem.

Rather than storing the past tense form of every regular verb in the memory, the brain merely has to apply one grammatical rule and phonological rule to produce the desired form.

The theorists used the shared patterns of irregular verbs to posit further generative rules. Irregular verbs are not randomly irregular: they share sounds both with their stems and with other verbs (e.g. 25 of the 164 irregular verbs share the i-a-u pattern found in sing-sang-sung, though there are variations in this group, as in sit-sat-sat). Chomsky and Halle used the tools of generative psychology to account for all the patterns found in the 164 irregular verbs with just a handful of phonological rules: e.g. shorten long vowels when they appear before a consonant cluster, as in keep-kept.

[N.B. Pinker and Prince list 181 exceptions to regularity.]

“Verbs sit on a ‘continuum of productivity and generality that extends from affixation of the –ed suffix in decide-decided to total suppletion in go-went,’ with families like sing-sang, ring-rang, and bind-bound, wind wound in between. At one end of the continuum are the regular verbs, which are handled by a general rule that says nothing about the words it can apply to. At the other end of the continuum are suppletive verbs such as 'go' and 'went', which are simply listed as pairs. In between are the other irregulars, which are handled by a smaller set of rules, each tagged to apply to certain rules. (WR103)

However, Chomsky and Halle enter shakier grounds when it comes to irregular verbs. In their schema, phonological rules are central to the generation of past forms, but pronunciation changes: in the fifteenth century, the Great Vowel shift scrambled the long vowels in English: “Before the shift, keep had been pronounced something like cape, hide like heed, boot like boat. After the shift, the English spelling of the long vowels no longer made much sense, nor did the pairings of ‘short’ and ‘long’ vowels in siblings like keep and kept.” (WR73)

If the 'ee' in 'keep' is not a drawn out version of the 'e' in 'kept', then the rule that Chomsky and Halle derived from generative phonology does not apply to generate 'kept'. Being fully aware of this, Chomsky and Halle posited that each word has a deep structure that is unpronounceable or not-directly pronounceable. So the fifteenth century pronunciation of 'keep' as 'cape' is inferred by the mind every time it hears 'keep'.

Pinker points out that this is a highly unrealistic and uneconomical model from the point of psychology and language acquisition: “Children don’t hear underlying forms, and they are not provided with lessons about the rules that turn them into audible surface forms. They hear only the surface forms. If the rules and underlying forms are to play some role in mental life, children must infer the cascade of rules that generated the surface form, run it in reverse, and extract the underlying form. And the suggestion that English-speaking children hear 'run' and infer 'rin' or hear 'fight' and infer the German-sounding *fēcht* is, frankly, beyond belief.

First, why would the child bother if the rules are there only to generate the surface form, and the child already had the surface form?... And even if the child wanted to ferret out rules and underlying forms, how could they ever find the right ones if the crucial clues - the ones linguists themselves use to discover the rules - are found in pairs of words the children will learn only in adulthood if ever, such as 'serene' and 'serenity', 'manager' and 'managerial', kinesis and 'kinetic?'” (WR112)

Exploring the moral maze, 26 November 2005

Dan Jones, New Scientist.

"A TROLLEY train comes hurtling down the line, out of control. It is heading towards five people who are stuck on the track. If you do nothing they face certain death. But you have a choice: with the flick of a switch, you can divert the trolley down another line - a line on which only one person is stuck. What do you do? Perhaps, like most people, you believe that it is right to minimise the carnage, so you do the rational thing and flick that switch.

But what if the situation was slightly different? This time you are standing on a footbridge overlooking the track. The trolley is coming. The five people are still stuck, but there's no switch, no alternative route. All you've got is a hefty guy standing in front of you. If you push him onto the line, his bulk will be enough to stop the runaway trolley. You could sacrifice his life to save the others - one for five, the same

as before. What do you do now? Suddenly the dilemma is transformed. If you respond the way most people do, you won't push the hapless fellow to his fate. The thought of actively killing someone, even for the greater good, just feels all wrong.

Two logically equivalent situations, yet two different outcomes. What is going on? For decades, this thought experiment has confounded philosophers and psychologists. They have long been split into two camps: one arguing that moral judgments arise from rational thought, the other that the roots of morality are emotional. But the trolley-train dilemma just doesn't fit this black-or-white way of thinking. Now, as the subject of morality moves from the philosopher's armchair into the lab, the error of this dichotomy is becoming clear. Researchers looking at the psychological basis of morality are finding that reason and emotion both play a part.

...Joshua Greene, a philosopher and cognitive scientist from Princeton University, and his colleagues are using brain-imaging techniques to get a handle on what goes on in the brain when we make moral choices. In particular, they have been looking at the trolley-train dilemma to see what the underlying difference in brain activity is when we decide to flick the switch compared with pushing the man. With the tools of modern brain imaging, Greene and co are beginning to provide an answer where philosophers have floundered.

Time to decide

Their functional magnetic resonance imaging studies suggest that the different situations elicit different brain responses. Given the choice to flick a switch, areas towards the front of the brain, associated with "executive" decision-making functions, become active, much as they do in any cost-benefit analysis. By contrast, when deciding whether or not to push a man to his death there appears to be a lot of activity in brain areas associated with rapid emotional responses. Throwing someone to their death is the sort of up-close-and-personal moral violation that the brain could well have evolved tools to deal with, explains Greene. By contrast, novel, abstract problems such as flicking a switch need a more logical analysis.

As well as using different brain areas in the footbridge scenario, people also take longer to make a decision - and longer still if they decide to push the man. There is evidence of an internal conflict as they consider taking a morally unpalatable action to promote the greater good. This shows up as increased activity in the anterior cingulate cortex, an area of the brain known to be activated in cognitive conflict. Following this, areas associated with cognitive control and the suppression of

emotional responses also light up - with activity particularly marked in people who choose to push.

Greene believes this activity reflects the cognitive effort required to overcome the emotional aversion to harming others. He is currently working on variations of the trolley-train thought experiment to incorporate other moral issues, such as the role that promising not to harm a given individual might have in influencing decisions, and how this affects the underlying brain activity."

www.newscientist.com/channel/being-human/mg18825271.700;jsessionid=DBLAEAJFIFNH

Emerging distinctions?:

1. applications and faculties programmed into the human brain as basic components of the operating system. For example: perception (interconnected data processing systems); the language faculty (locked into perception for input, recursion as the abstract potential, the input triggering a specific profile for innate, minimal grammatical and lexical machinery to apply to, locked into physiological adaptations for phonological output); instinctive cognition (rapid, unthinking assessment leading to swift response, default strategies tried and tested by ancestors and which selection pressure has made innate); emotional perceptions and responses programmed by evolutionarily stable strategies (e.g. a sense of fairness, incest taboo, disgust, fear)...

2. emergent networks which are trained and shaped by input, and which can be re-weighted: the grammar and lexis of a specific language; high level cognition involving rational assessment, deliberate cunning, complex risk assessment, long term planning etc. - the network develops through reflection on the individual's past experience and observations; culturally programmed emotional perceptions and responses (e.g. guilt trained in by religion) which manipulate or even override innate emotional equipment (e.g. altruism which extends beyond looking after those who share genes, wasteful devotion which is counterproductive from the point of view of the genes).

Genes 'decide' when the networks come online. The timing and calibration of language acquisition, and the interconnected development and processes that make it possible provides one of the most complex and baffling assemblages of phenomena we can observe.

Food for thought: is sentience a network or an outcome of networks? Is the religious/spiritual sense an innate brain component? Research in neurotheology might shed light on this one day.

Nick Land: sd - have you seen this yet:

www.theatlantic.com/doc/prem/200512/god-accident

Connects back to last thread, but key to God stuff ...

sd: saw it but can't access it - don't have a subscription to The Atlantic (considering getting one). If you have one maybe you could a) tell me if it's worth it and/or b) post in excerpts from the article... ;)

Nick Land: sd - that will teach me to try and make a coherent post while trying to bathe a howling infant.

There's been a lot of discussion of this piece - I'm relying on Kling's comments for orientation. Sounds more 'philosophical' than 'neurotheological' - but also actually more plausible and certainly more elegant. Misapplication of schemas evolved to process social relations to wider domains - i.e. attempt to 'socially-process' nature - leads into 'religious' errors: animism, spiritism, theism. A little simplistic no doubt, but also hard to imagine it's not broadly correct.

Nick Land: seems that weird metaphysical ideas about the brain are quite central to all this, which brings things back to the Cyberpunk insight: when people reach the level of street-technology where brain manipulation becomes ordinary, huge cultural transitions can be expected. Guess this also pulls neurotheology back in, although it still seems to me Bloom's wired-for-dualism account is more directly helpful than the wired-for-weird(-experiences) approach focused on by those electro-stimulating the temporal lobe ...

Also worth noting, 'physical' multiplicities do animate and demonize, crossing over into functional modes susceptible to social-type comprehension and making the voodoo-in-cyberspace model of regenerated bush-religion impossible to dismiss out of hand ... elaborate cosmo-techno-theologies probably have a relatively long shelf-life too

northanger:

en.wikipedia.org/wiki/The_Origin_of_Consciousness_in_the_Breakdown_of_the_Bicameral_Mind

Julian Jaynes proposed in 1976 that human brains existed in a bicameral state until as recently as 3000 years ago in his work *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Jaynes asserts that until the times written about in Homer's *Iliad*, humans did not have the "interior monologue" that is characteristic of consciousness as most people experience it today. Jaynes believes that the bicameral mental commands were at some point believed to be issued by "gods"—so often recorded in ancient myths, legends and historical accounts—were in fact emanating from individuals' own minds.

Nick Land: northanger - interesting ref., but a quite different and more ambitious theory. Jaynes argues religions stems from inner voices (relates to religious content of psychoses). Bloom doesn't need anything of this to make his point, which is more 'Kantian' - based on misapplication of categories. (IMHO both Bloom and Jaynes make significant and realistic contributions to understanding the phenomenon).

January 2006

Blogopolitics

CCRU-Shanghai (January 14, 2006)

OK, this is quite partisan¹³⁰, admittedly.

Still, the basic question seems sound enough: Is the end of uncontested 'Liberal' (= leftist) cultural dominion provoking a reactionary Statist crack-down on the freedom of expression?

Brian C. Anderson made his name with the discovery of 'South Park Republicans.' Anyone interested in the 21st Century culture wars will find his archive at City Journal extremely stimulating.

Comments: Blogopolitics

Nick Land: Is there any field of human activity or controversy where 'fairness' is not a mask for tyrannical dictat? I'm beginning to think 'fair' should join 'fascist' in the list of terms triggering utter knee-jerk aversion. (This on the despotic 'Fairness Doctrine' - i.e. abolition of free political expression - for those who haven't read Anderson's article (which is truly scary IMHO))

PS. Fairness Doctrine abolished by Reagan, but the bastards are angling to bring it back ...

Patrick J. Mullins: Yes, totally partisan. The extreme right and the extreme left are exactly the same: they want to stamp out the other--in every possible way. All you have to do is read the leading spokesmen of either side and either can be temporarily convincing.

No centrists or moderates allowed.

Leftists and liberals aren't the same thing, and disown each other more now than ever before. Some liberals are conservative, even if they aren't right wing. I see myself as a more or less conservative liberal, slightly more than a liberal conservative, I guess.

¹³⁰ http://www.city-journal.org/html/16_1_rush_oreilly.html

Who cares about O'Reilly or Limbaugh? They won't be suppressed anyway, and I don't know why anyone would care. After all, PBS has been the subject of corrupt pressures applied by CPB head Kenneth Tomlinson, and Bill Moyers had to leave. And they're not exactly intelligent, which Moyers certainly is, even if you want to call him 'leftist'. Anyway, Bush and Cheney themselves say what they want to: In New Orleans this week, Bush said 'It's a heck of a place to bring your family' and 'New Orleans has some of the greatest food in the world and some wonderful fun.' Meanwhile, the city is still totally devastated and continues to die, and that's not leftist 'pathetic' talk; just fact, and everybody knows it. Bush only went to the untouched Garden District and wouldn't even tolerate the protesting schoolgirls at Jackson Square, who want secure levees (heaven forfend! These girls' ungratefulness boggles the mind.) Even the communists are right about the killing of New Orleans (although I'm convinced that they would have, at the time of the hurricane, probably preferred the full-scale riots that would have made the Bush govt. look even more negligent in Katrina. Somehow those buses got there before the squalour ate the temporary citizens of the Convention Center and Superdome completely up, before they had to eat each other up. They didn't even finish the first course.)

If the New York Times writes about the NSA, then, according to the POTUS, the Times has caused the nation 'great harm.' Of course, the Times put that story off for a year and also let Judith Miller get away with not talking about the Plame matter, which helped the administration's agenda immeasurably--you know, little things like securing the election--so it works both ways.

Come to think of it, Bush doesn't really have free speech: He won't listen to his father, who's got a lot more sense, since he's trying to better him, but does listen now to a 'higher father,' and God never has let anybody say a goddam thing, while doing very little Himself.

I can't see much good about the extremists of either side except they may provide a kind of 'checks and balances' system as long as both keep from drowning.

Nick Land: PJM - lots of provocative points here, but before responding in detail, what do you think about Anderson's criticisms of McCain-Feingold and the threatened return of the Fairness Doctrine? His arguments in both cases seem extremely strong to me. Given a choice between 'fairness' and freedom, it's crazy not to go for freedom 100% every time.

PJM II- my usage of "'Liberal' (=leftist)" wasn't intended to be snarky.

1) It was a futile protest against the now far-gone degeneration of the most excellent political doctrine in history (Classical Liberalism) into its present sense of socia*list, social democrat, or (most accurate but tends to be misunderstood) soft fascist.

2) My understanding is that American political scientists now use 'liberal' to denote (basically) left-wing Democrats - about 20% of the American electorate. 'Conservative Democrat' is a different category. 'Liberals' in this sense harbour a deep suspicion of market economics, tend to New England pacifism and disdain traditional social values (trying not to be judgemental about this - I've no particular problem with the last of the three)

3) Think a post entirely devoted to political labels would be interesting ... what do you think?

northanger: nick. excellent topic. first, we need to look at who owns american newspapers, radio & television & consider american & foreign ownership. remember, a small portion owns most of the wealth in this country. we may want to check out "Clear Channelization" & "Rally for America". but wait a sec, who owns the airwaves? apparently, the public does — they're public property. but that's not quite right, is it? actually, the american government owns the airwaves for the "public interest". apparently, airwaves are like diamonds, they're rare. however, the number keeps growing and growing and growing. was this an artificial restriction? not exactly. who invented airwaves & who's expanding unused frequency bands today? all this new stuff gets approved by the government. the FCC licenses airwaves to private broadcasters. as a matter of fact, telecommunication companies developing (ie, spending lots of money for) new frequencies must buy the rights to use them from the FCC. since broadcasters do not own the airwaves they operate (they actually get "permssion"), the FCC can revoke licenses if certain standards of decency are not met. on behalf of "public interest", mind you. recently, fines increased tenfold where the maximum fine grew from \$27,500 to \$275,000.

is the cherry on top of all this the "fairness doctrine" or that we call it a "free market"?

btw, Telecommunications Act of 1996 provided 24 MHz of spectrum in the 700 MHz band for first responders. american television, which occupies this band, currently transitioning from analog to digital with December 31, 2006 vacate date. however, "85% households able to view digital" rule created loophole. 9/11 Commission report

card graded "Provide adequate radio spectrum for first responders" with "Minimal Progress". dedicated spectrum could have saved lives in NYC & might have provided better situational awareness between federal-state-local governments during 9/11 attacks. maybe the better question is why the federal government, which owns the airwaves to protect "public interest", is unable to expedite this issue. the american government maintains standards for public decency, but cannot expedite communications interoperability for homeland security.

Digital TV – Where's the Transition?

www.cei.org/gencon/016,04671.cfm

Nick Land: northanger - not sure I'm getting your drift with the spectrum question. Shouldn't the govt just auction it off and use the revenue windfall to cut taxes? How does it impinge on the sacredness of the First Amendment?

northanger: nick, maybe this will help.

Property Rights In Radio Communication: The Key to the Reform of Telecommunications Regulation

www.cato.org/pubs/pas/pa011.html

The FCC's regulation is double-edged; it restricts what licensees can do, as the industry is quick to complain, but it also protects licensees from competition. The FCC's frequency allocation and assignment criteria, as we shall see in greater detail later, limit the number of available channels and do not allow the users of these channels to subdivide and reconstitute them to make more available to new entrants. Within such a politico-economic framework, removing the restrictions on licensees without removing the protection afforded by the FCC's control of frequency allocation continues to give established firms a powerful advantage over new competitors.

Are We Really Deregulating Telecom?

www.cato.org/dailys/02-08-01.html

Simply stated, the notion that the telecom industry has been deregulated is a fairy tale. Asking how well telecom deregulation has worked makes as much sense as asking how well Social Security privatization or post office privatization have worked. We don't know because none of these sensible ideas has been tried. Instead, we've seen

what might be called "Deregulation Lite," with some minor rules and restrictions relaxed by the Telecom Act. Policy makers give a great deal of lip service to the benefits of free markets, but they refuse to allow a truly free market in telecom services to develop. Prices and market entry are micro-managed, and powerful state, federal and international bureaucracies sit in judgment of this sector ... In sum, the era of "deregulation" has seen the FCC issue one of the biggest regulatory edicts in U.S. history; create an unconstitutional new federal program plus a hidden tax to pay for it; and grow to become bigger and more powerful than ever. Deregulation should mean the removal of regulations -- not the imposition of new forms of regulation to replace old ones. And deregulation should also mean the eventual "sunsetting" of the agency that oversees the sector that legislators hope to deregulate.

nick. as a minority i know minority broadcasters cover different issues than non-minority broadcasters. in order to create broadcast diversity we'd need a (true) free market supporting open entry to the broadcast spectrum.

Nick Land: northanger - sounds weird i know (and scary for you), but think i'm in complete agreement with you on this - more when I've had a chance to follow the links (but sure I'll agree with CATO on a domestic economics issue)

... but it's hard to see how the spectrum 'problem' extends to cable or the blogosphere (Cyberpace not being a finite resource).

Of course, it's highly questionable whether even electromagnetic spectrum is really a finite resource. Auctioning it off in relatively large chunks on 5-10 year leases would be a good way to encourage a secondary market, incentivized to improve the technological efficiency of band slicing. Large specialized businesses would then drive the progressive fractioning of the spectrum, selling on usable fragments to broadcasters of whatever kind. No need for any kind of criteria other than techonomic ones to enter into the process at all.

sd: "Anderson's article (which is truly scary IMHO))"

A bit confused by the dramatic tone - maybe due to being largely ignorant of phenomena such as talk radio in the US - but aren't all attempts at trying to regulate the blogosphere doomed to failure, by the very nature of the medium? (anonymity, speed, low-cost maintenance, the capacity to shut down and start up again in the blink of an eye.) Opinion is a lot harder to pin down and regulate than copyright infringement (and that's difficult enough). Like the Creationist-ID attack on

NeoDarwinian evolution, attacks on certain terrains of the blogosphere would actually bring issues into focus (in the public domain) and help draw up the battlelines... It depends what your definition of scary is - compared with the powers granted to Lenin's Cheka, Stalin's NKVD or Hitler's Gestapo, "McCain-Feingold and the threatened return of the Fairness Doctrine" is extremely soft fascism - which doesn't mean it should be ignored, of course, but it doesn't warrant panic, especially as it could help clarify in the long run.

[isn't censorship in China a more pressing issue?]

"a post entirely devoted to political labels would be interesting" - yezpleez.

Nick Land: sd - It's true I'm holding America to a higher standard (deservedly, since free speech is far more secure there than anywhere else). As the world's torch of freedom, a deterioration in the foundations of liberty within the US has appalling effects everywhere - eventually. Without the mix of competitive example and - when necessary - judicious application of military force by the US, the flickerings of liberty would long have been extinguished worldwide. For this reason the failure of the US supreme court to defend the express principles of the constitution is indeed 'scary.'

As to the supposed technical invulnerability of the blogosphere to suppression, this seems to me definitely overrated. Clearly it can be overcome technically (I can't get blogspot here, for (trivial?) instance). More importantly, intimidation of persons is highly effective - whatever the technical background, the threat of imprisonment has an obvious and profound cooling effect on the ardour for controversial speech (this also seems an issue in the American context, if Anderson is to be believed).

sd: okay, point taken.

northanger: nick (apologies for delay). no, spectrum "problem" does not extend to cable or blogosphere; "Fairness Doctrine" does, perhaps, extend to cable. imho, overlaying existing perceptions from tv/radio onto the blogosphere is a big mistake. television & radio usually controlled by governments limiting open access & ownership; however, blogosphere extremely user-friendly & highly accessible. which is more inherently democratic?

brain farts: {1} "The Persistence of Vision" by John Varley. haven't read it in ages, but think it mentions some type of device. however, persistence of vision theory

describes how the eye perceives motion; images temporarily burned on the retina. used to explain the apparent illusion of motion, since film is a series of static images. total bunk, some argue, since eye/brain combo doesn't operate like a camera. {2} another idea involving sd's "self-interest": Alistair Horne, on C-SPAN2 the other night. the French, he said, would never ban fox-hunting because of self-interest.

imho, subtle distinction between tv/radio vs. blogosphere involves former persistently maintaining THE "good housekeeping seal of approval" for "news" & public discourse. a small set of issues jockeying for position with interactivity managed by things like the "Fairness Doctrine". the challenge in the blogosphere, imho, involves challenging this perception & defining new mechanisms where issues emerge & become part of public policy.

All About Oil ...

CCRU-Shanghai (January 22, 2006)

When we finally return to the Blob, this micro-sketch by Frank J. Gaffney¹³¹ of US energy vulnerability - and worse - will be worth recalling.

We are funding both sides in this war for the free world, as our petrodollars are enabling much of the threat we most immediately confront. This is an intolerable — and unsustainable — situation.

Comments: All About Oil...

sd: Fared Zakaria said much the same thing in August last year:

¹³¹

<https://web.archive.org/web/20061004011019/http://www.nationalreview.com/gaffney/gaffney200601200810.asp>

How to Escape the Oil Trap

www.fareedzakaria.com/articles/newsweek/082905.html

[text in the tangents, in case Newsweek is still inaccessible in China]

from Zakaria:

oilendgame.com/

northanger: interesting Gaffney mentioning electromagnetic pulse (EMP). solar flares are EMPs & one of the biggest recorded (X28) occurred 04-Nov-2003, with large sunspots easily visible on the Sun's surface. EMPs can disable power grids, disrupt satellite communications & electrical transmissions & may even impact airline navigational systems. during these storms astronauts on the International Space Station enter a specially shielded module & anyone flying at high altitudes risks radiation levels equivalent to a regular chest X-ray.

sohowww.nascom.nasa.gov/hotshots/2003_11_04/

science.nasa.gov/headlines/y2005/27jan_solarflares.htm

wienerlog.blogspot.com/2005/09/hurricanes-space-elevators-solar.html

www.wired.com/wired/archive/12.12/china.html

sd: It would be slightly odd/ironic if WWIV were the thing to force the US to reconsider its gas-guzzling/belching foolishness and explore more elegant and futuristic energy sources.

Nick Land: sd - there seems a lot of sense on many sides of this discussion. The Alternative Energy Manhattan Project types get me almost convinced, but then the Big Oil realists / let the free market work / fossil fuel abundance guys also have a lot of serious points to make. Would a big government programme to secure energy really work any better than the other disastrously misconceived State initiatives that have probably at least halved natural capitalist growth rates in 'mature' economies? Could a move off oil truly get under way when prices on international markets are sending a strong signal that oil is still massively abundant?

There's no end of tar sands and oil shale at approx. US\$30 extraction rates - dwarfing Saudi reserves - the reason its not gushing is that the industry experts see current price levels as unsustainable. That's to say, if anyone was able to put a US\$50/barrel floor

under the global oil market, we'd all be drowning in the stuff. Any approach that ignores this basic fact is going to be misleading ...

northanger - EMP deserves its own thread - tenuously connected at best ;)

northanger: nick. "US\$50/barrel floor" — shouldn't that be Euro currency instead of the "currency of the enemy"?

bulldogpolitics.blogspot.com/2005/10/venezuela-switches-to-euros-ominous.html

did not mean to be purposely misleading, honest.

Nick Land: northanger - US\$/oil-nexus is indeed fascinating, btw, says pretty much everything one needs to know about the Euro that its high-point of international dignity is to be a stick for flaky despots to poke in Uncle Sams eye ...

sd: Nick – oil is messy and so last century ;)

According to you-know-who, Solar power captured by nanotechnology will power the Singularity:

“The most promising approach to nanomaterials-enabled energy is from solar power, which has the potential to provide the bulk of our future energy needs in a completely renewable, emission-free, and distributed manner. The sunlight input to a solar panel is free. At about 10^{14} watts, or about ten thousand times more energy than the 10^{10} watts currently consumed by human civilization, the total energy from sunlight falling on the Earth is more than sufficient to provide for our needs. As mentioned above, despite the enormous increases in computation and communication over the next quarter century and the resulting economic growth, the far greater energy efficiencies of nanotechnology imply that energy requirements will increase only modestly to around (3×10^{10}) by 2030. We could meet this entire energy need with solar power alone if we captured only 0.0003 (three ten-thousandths) of the sun’s energy as it hits the Earth.

It’s interesting to compare these figures to the total metabolic energy output of all humans, estimated by Robert Freitas at 10^{10} watts, and that of all vegetation on Earth, at 10^{11} watts. Freitas also estimates that the amount of energy we could produce and use without disrupting the global energy balance required to maintain current biological ecology (referred to by climatologists as the ‘hyperthermal limit’) is around 10^{12} watts. This would allow a very substantial number of nanobots per person for intelligence enhancement and medical purposes, as well as other applications, such as providing energy and cleaning up the environment. Estimating a global population of around 10 billion humans, Freitas estimates around 10^{16} (ten thousand trillion) nanobots for each human would be acceptable within this limit. We would need only 10^{10} nanobots (ten millionths of this limit) per person to place one in every neuron.

By the time we have technology of this scale, we will also be able to apply nanotechnology to recycle energy by recapturing at least a significant portion of the heat generated by nanobots and converting that heat back into energy. The most effective way to do this would probably be to build the energy recycling into the energy itself. This is similar to the idea of reversible logic gates in computation, in which each logic gate essentially immediately recycles the energy it used for its last computation.” (TS 248/9)

www.rfreitas.com/

Kurzweil also mentions the nanobot-sized fuel cell or ‘vampire bot’ which “uses glucose, a sugar in blood, with a non-toxic substance used to draw electrons from glucose.”

www.int.iol.co.za/index.php?set_id=1&click;_id=31&art;_id=qw111596760144B215

www.biomems.mech.tohoku.ac.jp/research_e.html

a fuel cell which incorporates actual microbes:

www.geobacter.org/research/microbial/

www.northernskynews.com/backissue%20pages/DirttoIron.html

www.isn-online.org/nbt/press_release/nbt1003.html

However, the most tangible development is that of carbon nanotubes for storing energy in nanoscale batteries.

See this report for some nanotube marketing, including some current prices and predictions of massive price deflation in the next 5 years:

www.cientifica.com/www/summaries/CNT_Energy1.pdf

“Production is shifting from the US and Japan to Asia Pacific. While the USA currently leads the world in the production of MWNTs (multi-walled carbon nanotubes) and SWNTs (single-walled nanotubes), China is likely to overtake both the US and Europe in 2 years time. by 2010 the major supplier of all types of nanotubes will be Korea.

Prices will decrease by a factor of 10-100 in the next 5 years. Nanofibres and WMNTs will meet price barriers for most applications in the Energy market and will start seriously competing with current technologies” (p3)

The US obsession with the blob/the manipulation of the US by the blob could be another reason (apart from moral hangups about stem cells) why the US will fall behind Asia. China could simply jump the automobile stage and go hellbent into pocket-sized power.

Nick Land: sd - comprehensive and persuasive (dealing with batteries is the final step that makes it fit together). Sounds like solar will carry things through to hydrogen nanofusion then.

Still leaves the question about what the path getting there looks like - real OPEC power is not extortionate cartel pricing, but the ability to collapse the price with at most a couple of years lead-time to US\$10 a barrel or less, economically destroying anyone who's half-way to kicking blob-addiction.

In any case, the cost-trends for alternative energy (especially, as you say, solar) falling steadily and relatively fast, so the Blob's days are numbered (which is why it's getting super-mean)

northanger: nick. "US\$<>Euro€/oil-nexus". hey, nothing personal, just the cost of doing bizness in the anglosphere.

www.pcworld.com/news/article/0,aid,118375,00.asp

The killer app for nanotechnology, about twenty years away, is nanobots. Inside our bodies and brains, nanobots will provide radical life extension by destroying pathogens and cancer cells, repairing DNA errors, destroying toxins and debris, and otherwise reversing aging processes. Nanobots are computer-based robots small enough to travel in our bloodstream. —Ray Kurzweil

nanobot.blogspot.com/2004/03/beauty-and-nano-beat.html

For all the high-minded talk of nanotech curing cancer and creating world peace, do not underestimate the power of the true killer app: Vanity.

www.nanotechnology.com/blogs/blognano/2005/10/killer-app-and-tipping-point-for-nano.html

My and others' question has always been, what will trigger the tipping point? Time, a killer application, a nanotech-related movie or book, one or more hugely successful IPOs or an accumulation of nano-products? Until recently, I've been unsure, but now I have a prediction. CNT (carbon nanotube) displays will likely trigger the first nanotech boom, as they beat all current HDTV displays in quality, energy consumption, cost to produce and own and become available at great prices at your local Circuit City in the mid 2006-end 2008 timeframe.

www.nanotechnology.com/blogs/blognano/2005/09/omnipresent-ipod-nano-and-too-many.html

Jobs, you old son of gun, you.

Today's manufacturing methods move atoms in great thundering statistical herds. —
Ralph Merkle

.....

Nanotechnology as it is understood now though, the Nanotechnology meme in other words, is the brainchild of Feynman's one-time student [external link](#)K. Eric Drexler. Drexler presented his key ideas in a paper on molecular engineering published in 1981, and expanded these themes in a layman comprehensible book *Engines of Creation...*

www.geniebusters.org/06_interface.htm

Now, consider the economy. The concept of a genie machine was introduced on page 81 of *Engines of Creation* -- "What you ask for, it will produce." The economy will already produce whatever you ask for. That little word "ask" makes it look so simple -- the question is, how do you ask? As usual, the devil is in the details -- in this case, the details of the process of asking.

www.geniebusters.org/01_afterword.html

Tonight I was surfing and by a circuitous route I found myself reading the Encyclopedia Britannica article about the history of Iran. You have the Hellenistic period, the rise of the Parthians, the Sasanian period, and so on, century after century. Is history going to go on from our present situation, century after century, one period giving way to another? Two thousand years from now, will there be an encyclopedia article that describes our own time as just one period in a long series?

I don't think so. As Vinge says, "Perhaps it was the science-fiction writers who felt the first concrete impact... More and more, these writers felt an opaque wall across the future. Once, they could put such fantasies millions of years in the future. Now they saw that their most diligent extrapolations resulted in the unknowable... soon."

.....

But the question is not whether some momentous change is happening, the question is what is happening. What kind of situation are we in? The worst thing you can do is to have a belief about this. I am in danger of getting locked into a "steady state" belief, which is no better than believing in the Singularity. We have to stay open to events as they unfold.

We should also remember the Merkle Maxim (originally due to Alan Kay): the best way to predict the future is to create it.

The operative question is, which research agenda is going to bear fruit?

sd. "oil is messy and so last century" — lol.

www.nano.gov/html/about/home_about.html

The National Nanotechnology Initiative (NNI) is a federal R&D; program established to coordinate the multiagency efforts in nanoscale science, engineering, and technology.

The goals of the NNI are to:

- Maintain a world-class research and development program aimed at realizing the full potential of nanotechnology;
- Facilitate transfer of new technologies into products for economic growth, jobs, and other public benefit;
- Develop educational resources, a skilled workforce, and the supporting infrastructure and tools to advance nanotechnology; and,
- Support responsible development of nanotechnology

www.nano.gov/html/edu/home_edu.html

"A five-year goal of the NNI is to ensure that 50% of US research institutions' faculty and students have access to the full range of nanoscale research facilities, and student access to education in nanoscale science and engineering is enabled in at least 25% of the research universities." Mihail C. Roco, NSF Senior Advisor for Nanotechnology and NSET Chairman.

www.mrsec.wisc.edu/Edetc/technologist/index.html

What is a Nanotechnologist? We're not exactly sure, but we've talked to some people who do nanotechnology. Here are some of their answers and advice for those interested in being a nanotechnologist or just in knowing what it's all about.

Teacher Resources - www.nano.gov/html/edu/eduteach.html

NanoKids™ - nanokids.rice.edu/index.cfm

www.nano.gov/html/edu/JTour.html

Dr. Tour: I was bothered by press reports about nanobots, that they will reproduce, do bad things, even eat us as a source of carbon! No matter how many times I said, “No, this is not going to happen. Nanomaterials are smaller than DNA; they are not going to function like that.” the reporters didn’t write about that. So I thought, “Okay, you want nanobots, I’ll give you nanobots!” I had noticed that when my kids saw me working with chemistry drawings, they’d recognize a shape and say, “Nice spider.” Or nice whatever. One day, my six-year-old son said, “Nice boy.” And he started putting hair on the drawing and limbs. I thought, why not teach chemical concepts by attaching arms and legs to molecules. That’s how we make molecules, by attaching things. Students could see a very logical progression to chemical synthesis through building these molecules.

Nick Land: *oil is messy and so last century*

OK, but nano can get quite goopy when it goes feral ...

northanger: Gunge, the brave nanobot his dog Tiswas & how they saved the planet Nanobyte from the horrific economic collapse engineered by the evil Nictoid. the awesome tale of how Nickelodeon got its Green Slime. (promotional toys (produced real cheap in China!) in McDonald's Happy Meals™)

visItor: Nanotech has such a broad scope of applications, it's development will be strong.

Alternative energies, however, have been stymied for years by the powerful oil lobby and has only recently, because of duress, been drawn from the closets of fringe science and dusted off.

Solar is getting cheaper and better but there have been no practical applications of it for transportation.

Fuel cells, seen as the savior of transportation are a long way off yet.

Nuclear fusion, another hopeful contender promising unlimited power with no external costs, is still a long way off.

Geothermal energy has a lot of potential and doesn't receive the attention it probably deserves.

I have long hoped for a guerilla market of alternative energies to undermine the Big Oil establishment. It seems to be coming into fruition finally, and hopefully increase even more so as the state capitulates to the necessity of change.

"Blob" addiction is the #1 obstacle to the technological singularity. The #1 obstacle to existence itself.

Nick Land: VisItor - while far from wanting to dismiss your construction of the situation, the notion of alternatives being "stymied for years by the powerful oil lobby" IMHO requires considerable elucidation. How is such 'stymying' possible in a decentralized global market economy? If any economic agency were able to profitably promote alternatives, how exactly could they (have they?) been obstructed? The "oil lobby" (Oil majors) have large quantities of capital, serious political problems gaining access to new fields (due to resource nationalism and exhaustion of cheaply extractable reserves in liberal economies) plus well developed energy marketing expertise - what would stop them taking over the alternatives industry themselves if it could be done profitably? Didn't for e.g. BP's morphing into 'Beyond Petroleum' express precisely such a (frustrated) ambition? You can't be suggesting that Big Oil has a sentimental attachment to a fossil fuel business model, surely?

It seems more realistic to me to assume the oil majors have a solid analysis of energy economics and understand - or at least genuinely conclude - that fossil fuels are still sufficiently abundant to make the leap to a post petroleum world infeasible in the medium term. My attachment to this position is far from dogmatic, however, and I'd be interested to hear a fleshed-out version of how you think their obstructionism ("to existence itself") actually operates. Hoping it won't involve the name Halliburton :)

"far from dogmatic" = schizophrenically conflicted

visItor: Hmm... I didn't think my message posted here in on topic.... anyways.

Perhaps I used the wrong choice of words Nick. I believe my own underlying antipathy towards many of the oil majors (their power and influence over the geopolitical issues of the day more specifically) obfuscated my intended message. I do in fact believe they are capable of a turnaround towards alternative energies and I find forward looking programs like Beyond Petroleum highly laudable. I also feel that many of them will be inclined to ride the fossil fuel dinosaur into the ground. We are still highly dependent, and rising oil prices (and thus rising profits) may only encourage them, until the rug is pulled from under them by alternative energies. So I am doubtful whether we will see significant change until change becomes inevitable, unless there was a state funded alternative energy research program, or perhaps even funded by a nonprofit science foundation.

That is essentially my view of the hallibooeyman problem. :) Not that they are actively trying to stifle alternative energy, though that may be happening, but rather that the free market system is systemically flawed in this regard. Being that profitability is the modus operandi, there is little to no incentive for making this transition optimized.

My own views, by the way, are far from dogmatic as well, and subject to change as new data makes itself available.

Nick Land: VisItor - (your constructive tone highly appreciated)

Seems to me the biggest problem with this topic is that, while it seems very reasonable to be eager for a switch over to a post-fossil fuel economy, the way this is to be realized is a whole lot less straightforward than the recognition of its necessity (= eventual inevitability).

While markets may not be great at navigating structural catastrophes in the world economy (story of electrification is probably best empirical ref. available) it's quite a leap IMHO to imagine governments are going to make better decisions (if one thought that, wouldn't soci*lism still be a plausible general ideology? - almost a reductio in my book).

The issue is obviously about timing. No one doubts that petroleum economics has a time limit. No one thinks we can do the switch tomorrow. So that narrows the problem: who's best going to get the timing right. I'd definitely have said markets, but then there's a war on, and that complicated matters ...

Changing the policy environment in which markets operate is probably a reasonable compromise. For the US, an incrementally rising WWIV tax on gasoline (offset by pro-growth tax cuts elsewhere) seems sensible enough.

Choosing between post-petroleum alternatives (of which there are a confusingly large variety) also seems something that governments are likely to be extremely incompetent at. Best to stim. markets a little rather than trust bureaucrats to get things right ...

Mememes and Outlooks in Greg Egan's Diaspora

sd (January 28, 2006)

By the year 2975, humanity has split into three main groupings: fleshers who have opted to remain on Earth in a physical form, the citizens who either uploaded themselves into supercomputer polises with introduced nanoware or who were born in the polises as software, and the widely mistrusted gleisner robots who are busy exploring the physical solar system.

The question which animates Parts One and Two of Greg Egan's Diaspora is: Just how deep do mememes go?

[warning: there are a few plot spoilers here, but not many more than are contained in the blurb on the back of the book. This post also only deals with Parts One and Two of Diaspora – the Earthbound prelude - and does not scratch the surface of the truly mind-boggling tale of the Diaspora itself. Neither does it touch on Egan's hints that allowing exponential growth to take place is the highpoint of idiocy...]

By 2975, the fleshers and the citizens have mutated into smaller subgroups. Flesher populations have diverged to such an extent, due to various genetic experiments and mutations, that they are becoming new species unable to communicate with each other. One branch of humanity, the bridgers, has actually taken upon itself the task of communicating between the varieties of humans:

'We call ourselves bridgers. When the founders came here from Turin, three centuries ago, they had a very specific plan. You know there've been thousands of artificial genetic changes in different flesher populations, since the Introduced?' She gestured at a large picture behind her, and the portrait faded, to be replaced by a complex, upside down tree diagram. 'Different exuberants have made modifications to all kinds of characteristics. Some have been simple, pragmatic adaptations for new diets or habitats: digestive, metabolic, respiratory, muscular-skeletal.' Images flashed up from different points on the tree: amphibious, winged, and photosynthetic exuberants, close-ups of modified teeth, diagrams of altered metabolic pathways...

'Often, habitat changes have also demanded neural modifications to provide appropriate new instincts; no one can thrive in the ocean, for example, without the

right hardwired reflexes.’ A slick-skinned amphibious fleshier rose slowly through emerald water, a faint stream of bubbles emerging from flaps behind vis ears...

‘Some neural changes have gone far beyond new instincts, though.’ The tree thinned out considerably – but were still thirty or forty current branches left. ‘There are species of exuberants who’ve changed aspects of language, perception, and cognition.’

Inoshiro said, ‘Like the dream apes?’

Liana nodded. ‘At one extreme. Their ancestors stripped back the language centres to the level of higher primates. They still have stronger general intelligence than any other primate, but their material culture has been reduced dramatically – and they can no longer modify themselves, even if they want to. I doubt that they even understand their own origins any more.

‘The dream apes are the exception though – a deliberate renunciation of possibilities. Most exuberants have tried more constructive changes: developing new ways of mapping the physical world into the minds, and adding specialised neural structures to handle the new categories. There are exuberants who can manipulate the most sophisticated, abstract concepts in genetics, meteorology, biochemistry or ecology as intuitively as any static can think about a rock or a plant or an animal with the “commons sense” about those things which comes from a few million years of evolution. And there are others who’ve simply modified ancestral neural structures to find out how that changes their thinking – who’ve headed out in search of new possibilities, with no specific goals in mind.’

...‘The only trouble with all this exploration is ... some species of exuberants have changed so much that they can’t communicate with anyone else any more. Different groups have rushed off in their own directions, trying out new kinds of minds – and now they can barely make sense each other, even with software intermediaries. It’s not just a question of language – or at least not the simple question that language was for the statics, when everyone had basically identical brains. Once different communities start carving up the world into different categories, and caring about wildly different things, it becomes impossible to have have a global culture in anything like the pre-Introduus sense. We’re fragmenting. We’re losing each other.’ [73-5]

One of the privileges of science fiction is to be able to jump so far into the future that the ‘ethical issues’ contemporary homo sapiens agonizes over – genetic engineering, cloning, nanotech, AI - have become basic facts of life. Yet, as with all good science

fiction, this leap forward also gets to the core of what is at stake in the contemporary anxieties.

It is fitting that the dream apes, the human population who have reprogrammed themselves to regress back to primate ignorance, have two characteristics in common with some branches of present humanity: they have opted to relinquish the ability to modify themselves genetically, and they do not understand their origins.

In Egan's envisaged world, the refusal to evolve and the desire to retrogress, espoused from a stubbornly maintained moral high ground, are exposed as nothing more than disastrous cowardice and parochial intellectual narrowness. Even the open-minded fleshers - the bridgers and experimental exuberants - are plagued with crippling paranoia and mistrust of non-flesher intelligence and information: when offered an escape from certain, imminent disaster they are ultimately more afraid of leaving their bodies than they are of death. The fleshers define humanity as having a physical body and living on Earth, but from the perspective of the coalition citizens this definition amounts to nothing more than an irrational, petrified clinging to absurd restrictions at the best of times, but which are utterly incomprehensible in the face of certain, involuntary death.

Egan's 'explanation' for this fearful refusal to give up the physical human form comes in his subtle hints as to the role memes have played in shaping flesher history and in his more explicit descriptions of how the polis citizens have consciously designed 'outlooks' to replace memes.

Polis citizens are immortal, which has its drawbacks. They have a lot of time on their hands, especially if they choose to experience time slowly and get more value for their 'tau'. Plus they do not sleep, unless they are traveling for light years, from one side of the universe to the other. While some polises are committed to a principled relationship with the physical world, the citizens of Konishi Polis have abandoned the laws of physics all together and tend to occupy themselves with mathematics. The orphan Yatima is a born 'truth miner' who is being led astray by the more rebellious and artistically inclined Inoshiro.

Yatima knew that Radiya, and most other miners, used outlooks to keep themselves focused on their work. Any citizen with a mind broadly modelled on a flesher's was vulnerable to drift: the decay over time of even the most cherished goals and values, Flexibility was an essential part of the flesher legacy, but after a dozen computational equivalents of the pre-Introduus lifespan, even the most robust personality was liable

to unwind into an entropic mess. None of the polises' founders had chosen to build pre-determined stabilizing mechanisms into their basic designs, though, less the entire species ossify into tribes of self-perpetuating monomaniacs, parasitised by a handful of memes. It was judged far safer for each citizen be free to choose from a wide variety of outlooks: software that could run inside your exoself and reinforce the qualities you valued most, if and when you felt the need for such an anchor. The possibilities for short-term cross-cultural experimentation were almost incidental.

Each outlook offered a slightly different package of values and aesthetics, often built up from the ancestral reasons-to-be-cheerful that still lingered to some degree in most citizens' minds: Regularities and periodicities – rhythms like days and seasons. Harmonies and elaborations, in sounds and images, and in ideas. Novelty. Reminiscence and anticipation. Gossip, companionship, empathy, compassion. Solitude and silence. There was a continuum which stretched all the way from trivial aesthetic preferences to emotional associations to the cornerstones of morality and identity.' (50-1)

Both memes and outlooks provide deep level stability for the intelligence they shape and motivate: intelligence derived from the furiously-adaptive, restless mammalian brain. Both have the potential to be architects of deep structure and determine behaviour on a fundamental psychological level; their scope and extent dependent on their programming. The difference seems to be that memes are parasitic replicators which take root in their hosts without their consent, while outlooks are used more like recreational drugs: their software is installed for a specific purpose, for example to keep an intelligence on task, or to appreciate a work of art. However, outlooks can be highly addictive, which is to say they have the potential to parasitise the citizens: Yatima scans the outlook offered by Inoshiro for its parasitical potential; parents in the polis frown on the use of certain outlooks by artistic-minded youths...

When Yatima and Inoshiro clone themselves and embed the clones in empty gleisner robots they have found on Earth, they come across 'a small piece of corroded metal' in the undergrowth.

“ ‘Replicator!’

Yatima turned back and angled for a better view; the interface made vis body crouch. 'It's just an empty canister.' It was almost crushed flat, but there was still paint clinging to the metal in places, the colours faded to barely distinguishable greys...

... Inoshiro spoke in a hushed, sickened voice. 'Pre-Introdux, this was pandemic. Distorted whole nations' economies. It had hooks into everything: sexuality, tribalism, half a dozen art forms and subcultures ... it parasitised the fleshers so thoroughly you had to be some kind of desert monk to escape it.'

Yatima regarded the pathetic object dubiously, but they had no access to the library now, and vis knowledge of the era was patchy. 'Even if there are traces left inside, I'm sure they're all immune to it by now. And it could hardly infect us-'

Inoshiro cut ver off impatiently. 'We're not talking nucleotide viruses here. The molecules themselves were just a random assortment of junk – mostly phosphoric acid; it was the memes they came wrapped up in that made them virulent.' Ve bent down lower, and cupped vis hands over the container. 'And who knows how small a fragment it can bootstrap from? I'm not taking any chances.' [66-7]

Perhaps coincidentally, perhaps not, the discovery of memes is on the eve of its thousandth anniversary in 2975. Memes have come a long way since their conception in *The Selfish Gene*. The pandemic meme plague hinted at in the passage above suggests that by the time Yatima and Inoshiro visit Earth, meme transmission has evolved considerably beyond the description of meme transmission given by Richard Dawkins in 1976:

"I think that a new kind of replicator has recently emerged on this very planet. It is staring us in the face. It is still in its infancy, still drifting clumsily about in its primeval soup, but already it is achieving evolutionary change at a rate that leaves the old gene panting far behind.

The new soup is the soup of human culture. We need a name for the new replicator, a noun that conveys the idea of a unit of cultural transmission, or a unit of imitation. 'Mimeme' comes from a suitable Greek root, but I want a monosyllable that sounds a bit like 'gene'. I hope my classicist friends will forgive me if I abbreviate mimeme to meme. If it is any consolation, it could alternatively be thought of as being related to 'memory', or to the French word *même*. It should be pronounced to rhyme with 'cream'.

Examples of memes are tunes, ideas, catch-phrases, clothes fashions, ways of making pots or of building arches. Just as genes propagate themselves in the gene pool by leaping from body to body via sperms or eggs, so memes propagate themselves in the

meme pool by leaping from brain to brain via a process which, in the broad sense, can be called imitation. If a scientist hears, or reads about, a good idea, he passed it on to his colleagues and students. He mentions it in his articles and his lectures. If the idea catches on, it can be said to propagate itself, spreading from brain to brain. As my colleague N.K. Humphrey neatly summed up an earlier draft of this chapter: `... memes should be regarded as living structures, not just metaphorically but technically. When you plant a fertile meme in my mind you literally parasitize my brain, turning it into a vehicle for the meme's propagation in just the way that a virus may parasitize the genetic mechanism of a host cell. And this isn't just a way of talking -- the meme for, say, "belief in life after death" is actually realized physically, millions of times over, as a structure in the nervous systems of individual men the world over.”

www.rubinghscience.org/memetics/dawkinsmemes.html

By 2975, meme transmission appears to have become more sophisticated than mere imitation via language and concepts. Yatima and Inoshiro stumble upon a meme canister which spread memes via biological weaponry: viruses coated with memes. The memes were far more virulent than the biological viruses they traveled with. This is not surprising, as Dawkins informed us memes are evolving at a rate which leaves genes ‘panting behind.’ Yet if memes have evolved considerably in the manner of their transmission, their symptoms are basically the same as they were in 1976: they latch onto the economy and sexuality: “Distorted whole nations’ economies. It had hooks into everything: sexuality, tribalism, half a dozen art forms and subcultures ...”

In 2996, when the fleshers face certain death from a gamma ray catastrophe, Yatima and Inoshiro return to Earth as clones in gleisner robots with the aim of persuading fleshers to upload. The resistance they meet is basically memetic:

“Francesca moderated the responses. The first came from the representatives of an enclave of statics; he spoke a dialect of English, so the interface slipped the language into Yatima’s mind.

‘You are shameless. We expect no honour from the simulacra of the shadows of departed cowards, but will you never give up trying to wipe the last trace of vitality from the face of the Earth?’ The static laughed hmuourlessly. ‘Dis you honestly believe that you could frighten us with this risible fairy tale of “quarks” and “gamma rays: raining from the sky, and then we’d all file meekly into your insipid virtual

paradise? Did you imagine that a few cheap, shocking words would send us fleeing from the real world of pain and ecstasy into your nightmare of perfectibility?’ He gazed down at them with a fascinated loathing. ‘Why can’t you stay inside your citadels of infinite blandness, and leave us in peace? We humans are fallen creatures; we’ll never come crawling on our bellies into your ersatz Garden of Eden. I tell you this: there will always be flesh, there will always be sin, there will always be dreams and madness, war and famine, torture and slavery.’

Even with the language graft, Yatima could make little sense of this, and the translation into Modern Roman was equally opaque. Ve dredged the library for clarification; half the speech seemed to consist of references to a virulent family of Palestinian theistic replicators.

Ve whispered to Francesca, dismayed, ‘I thought religion was long gone, even among the statics.’

‘God is dead, but the platitudes linger.’ Yatima couldn’t bring herself to ask whether torture and slavery also lingered, but Francesca seemed to read *vis face*, and added, ‘Including a lot of confused rhetoric about free will. Most statics aren’t violent, but they view the possibility of atrocities as essential for virtue – what philosophers call “the Clockwork Orange fallacy”. So in their eyes, autonomy makes the polis a kind of amoral hell, masquerading as Eden.’

It is intriguing that Egan’s citizens view a pessimistic view of human nature to be a lingering symptom of ‘virulent Palestinian theistic replicators’. This goes against Hobbesian and Burkean pessimistic-conservatism, and the Pinkeresque mapping of human psychology, which present *homo sapiens* as bundled with all sorts of nasty ‘passions’ or bio-programs in a ‘state of nature’ prior to the arrival of memes.

Pinker’s argument in *How the Mind Works* and *The Blank Slate* is, to put it crudely, that the human brain evolved to be pessimistic because of the adversity and turmoil human ancestors had to contend with in the distant evolutionary past. The emotions are weighted towards pessimism: there are four negative emotions (fear, anger, disgust and sadness), one neutral emotion (surprise) and just one positive emotion (joy), and this imbalance is part of our ancestry for the simple reason that negative emotions tend to save lives. From the perspective of contemporary evolutionary psychology, memes cannot take all the blame for human pessimism. In fact, evolutionary

psychology has to admit that Abrahamic meme replicators contain a great deal of truth in their picture of the soul as a battleground which a permanent set of (largely negative) desires are forever competing for control of.

Egan seems to be suggesting that memes have the capacity to insinuate themselves far deeper than we are aware, to the point where even science is still unwittingly conditioned by residual meme code buried deep in the structure of the human psyche. In Diaspora, memes and outlooks do not merely occupy a host intelligence – they rewrite and shape it at a fundamental operating level. The question then becomes: how could a ‘scientific’ brain that is infected with deep traces of Abrahamic replicators not find evidence of negative, pessimistic programming when it searches its evolutionary past?

Obviously Egan’s citizens know far more about feedback processes than we do. Maybe it goes a bit like this: At some point in the distant past meme-replicators were conceived of, readily accepted and transmitted because of their apparent compatibility with the programming of the human genome. Once they took hold and they unloaded their packages, however, feedback processes would eventually enable them to rewrite the structure of the mind, to some extent at least, at the level of the emotions. Any mind still based on the basic ancestral structure is incapable of truly ridding itself of guiding meme subprograms until it redesigns itself in a post-Introducus polis.

However, even in the Polis the temptation of outlooks is too great for some:

‘Inoshiro smiles beatifically and held out his hands. A white lotus flower blossomed from the centre of each palm, both emitting identical reference tags. Yatima hesitated, then followed their scent.

It was an old outlook, buried in the Ashton-Laval library, copied nine centuries before from one of the ancient memetic replicators that had infested the fleshers. It imposed a hermetically sealed package of beliefs about the nature of the self, and the futility of striving ... including explicit renunciations of every mode of reasoning able to illuminate the core belief’s failings.

Analysis with a standard tool confirmed that the outlook was universally self-affirming. Once you ran it, you could not change your mind. Once you ran it, you could not be talked out of it.

Yatima said numbly, ‘You were smarter than that, stronger than that.’ [149]

Comments: Memes and Outlooks in Greg Egan's Diaspora

sd: Greg Egan's supplementary materials for Diaspora:

gregegan.customer.netspace.net.au/DIASPORA/DIASPORA.html

Nick Land: sd - this is very clarifying. We're drowning in Dream Apes ...

The question of motivation is crucial IMHO. A nihilistic possibility arises that all purpose is entirely random (from a cosmic perspective), dependent entirely upon quasi-arbitrary evolutionary legacies. Some interesting discussions of this on various Singularity boards (e.g. those hosted at the Kurzweil site), where the largest menace to the future is seen as black-holing into hedonic engineering - very similar to Burroughs' vision of 'wire-heads'.

Why privilege 'onwards, upwards' as the extropians do? I like this attitude, but it's hard to ground it persuasively.

sd: The two main motivations which guide the citizens in Diaspora are:

* scientific (mathematics & physics), which amounts to the pursuit of truth - a citizen can devote thousand of years to solving a physics problem that has a concrete outcome in the apparently dominant physical physical reality, e.g. a new means of transport.

* aesthetic (virtual scapes) - which might be driven by the pursuit of beauty, or the empathic desire to learn more via vicarious experience, or the desire to provoke.

Both of these can lead to virtual solipsism or pointless pleasure (e.g. living at high speed to watch mountains erode, just for kicks).

Aimless drift is a constant danger, mainly, it seems, because the coalition has grown out of war:

'I keep asking myself, though: where do we go from here? History can't guide us. Evolution can't guide us. The C-Z charter says 'understand and respect the universe'... but in what form? On what scale? With what kind of senses, what kinds of minds? We can become anything at all - and that space of possible futures dwarfs the galaxy. Can we explore it without losing the way? Fleshers used to spin fantasies about aliens arriving to 'conquer Earth, to steal their 'precious' physical resources, to wipe them out for fear of competition ... as if a species capable of making the journey wouldn't have had the power, or the wit, or the imagination, to rid itself of obsolete biological imperatives. Conquering the galaxy is what bacteria with spaceships would do - knowing no better, having no choice.

'Our condition is the opposite of that: we have no end of choices. That's why we need to find another space-faring civilisation... [we] need to speak to others who've faced the same decisions, and discovered how to live, what to become. We need to understand what it means to inhabit the universe.' (214)

Egan's citizens have a greater tendency to pacifism than Butler's Oankali (who set out to steal your DNA to create new species, whether you like it or not). The citizens are on a more philosophical quest - motivated by the desire to communicate and understand.

Regarding the depths which memes can get their hooks into, here's a question:

To what extent can memes rewrite the mind's emotional software? Or do they rather merely erase the superficial restraining programs of civilisation to unleash the default aggression is always there, straining at the leash?

There are obvious, well-recorded cases of how memetic programming (or, to be quaint, ideology) blocks, subverts or inverts 'normal' emotional responses: the Einsatzgruppen in Russia shot children before their mothers' eyes, then shot the mothers; at the death camps, those normally singled out for special care - the elderly, pregnant women, women with children, the sick - were selected to be sent straight to the gas chambers; the Leninist-Stalinist system programmed children to respect the Party more than their parents and encouraged them to denounce them; there were three year old children on the 9/11 flights...

It is possible to offer crude biological explanations for such behaviour, along the lines of 'killing another man's children is adaptive - it promotes the survival of the killer's genes.' Such an explanation could be supported by evidence of male monkeys annihilating the children of another group and would suggest that the meme activates aggressive bio-programs, rather than actively reshapes the mind's programming. The example of children denouncing their parents has been explained by the theory that male adolescents are programmed to compete with, and assert themselves against, their elders, particularly the alpha male [this is the thesis put forward in an extreme form by Howard Bloom: *Chimpanzees and Romans* at www.howardbloom.net/, *The Chinese Cultural Revolution* www.ukpoliticmisc.org.uk/usenet_evidence/revolution.htm; and in a tamer form by Pinker]

While there is no doubt a lot of truth in these explanations, how memes work in the psyche is extremely complex and mysterious. Evolutionary psychology has a harder job of explaining apparently non-adaptive memes, such as asceticism. A meme that can induce prudish disgust with the body and sexuality does not tap into any default bio-program, at least not in any straightforward manner. Neither can evolutionary psychology fully explain the mania and psychoses which some memes clearly spread (the Nazi suicidal line of abolition; the idolisation mass murderers such as Lenin, Stalin and Mao) - there is no adaptive sense in worshipping an icon that can have you (and your family) tortured and packed off to freeze and starve to death.

Some memes seem to come bundled with righteousness programs, some with a Trojan horse full of insanity...

Nick Land: sd - seems worth trying to hold two things apart, unless they rigorously collapse into each other:

1) Ethical imperatives (most of the example in your two comments above) and relation to genoprogramming / memetics.

2) Motivation and its sources.

#1 seems IMHO more richly explored in the mainstream extant literature. The case of 'Buddhism' is interesting, however, in that it combines an exceptionally refined ethical sensibility with complete implosion of purposive dynamism. Even aesthetics is not intrinsically motivating (see Schopenhauer's occidental 'Buddhism' or at least 'Vedism') - Aesthetic appreciation does not propel to action without ancillary drivers.

Once "obsolete biological imperatives" have been overcome, what really remains? Does "the pursuit of truth" really substitute for reptile-brain motivation? Maybe I've read too much decadent German philosophy, but I have my doubts. The "will" deserves attention in its own right - vapid 'values' certainly don't substitute for it (as the present state of supine European drift makes evident). There is no logical foundation to the passion for existence, let alone for growth, multiplication, onwards, upwards ... Crude and stubborn seems eminently capable of defeating sophisticated and nihilistic, through sheer residual resolve.

How do memes motivate? I need more on this. If they're gene-analogs, then they must be able to effectively direct (propel) behaviour? Seems like there must be a lot of impacted theory here, in need of unfolding ...

sd: Nick - "Aesthetic appreciation does not propel to action without ancillary drivers."

It might be helpful to emphasize 'excess' at this point, and to distinguish between biological imperatives and psychological imperatives. Natural selection is blind and ruthless, but not miserly - the entire eukaryote trajectory could be described as excessive in comparison to the superbly economical prokaryotes. Building big-brained survival machines is a highly circuitous route to fulfill the purpose of gene transmission, so much so that an idealist might suspect a certain amount of pleasure is taken in the building. With the advent of the language instinct, which probably evolved as a result of environmental and competitive selection pressures (Toba, predators, other bipedal primates such as the Neanderthals), the brain of homo sapiens found itself 'over-capable' for the task of survival once those pressures eased off or were dealt with.

The outcome of this excess capacity would be the discomfort of sentience -or the agony of consciousness, if you have a melodramatic bent - wherein the blind genetic imperative to reproduce is laid bare in all its idiocy/horror. A number of strategies engineered and adopted in response, with varying degrees of consciousness: suicide; mythologizing and deifying the lineage; god(s); renunciation; other-worldly transcendence; hedonistic oblivion; shamanistic refusal... The psychological imperative would seem to be: make sense of this world so the brain can (decide to) deal with it (or not).

The citizens of Egan's Diaspora are no longer enslaved to any biological imperatives, and in a sense their intelligences are utterly pointless from a genetic point of view. They are stored as back-up copies throughout the coalition, so there is no need to worry too much about survival. They could clone themselves or reproduce ad infinitum if they had a mind to - but what would be the point? Being pure excess and capable of multiplying their excess exponentially, the citizens are acutely aware that they need to make sense of their existence - 'learn how to inhabit the universe'. The psychological imperative seems to become more acute as intelligence escalates and biology recedes as a distant prison. Hence the escapism, solipsism, madness and suicide that plague the Diaspora.

Another angle: the brain of homo sapiens reshapes and reprograms the environment it finds itself in, with wildly varying degrees of control and aesthetic sophistication. Homo sapiens has the capacity to reshape its environment into a work of art, but has had to mostly rely on the materials nature ultimately provides; in a genetically engineered or virtually produced reality homo sapiens will have nobody to blame but itself. Egan's citizens have total freedom to create their own visible forms, scapes, sounds and fabrics. If they need to 'sit down', they 'make' a chair in an instant. They can also rewrite their personalities as they see fit. Maybe this ultimate 'freedom and responsibility' actually enhances motivation (like in the good old US of A). There is also a luciferan element of refusal here: I am not going to live in YOUR world.

Re: Schopenhauer/Nietzsche - How far can the will be identified with the genome? As far as I remember, Schopenhauer's will is like a demonic factory that churns out species from templates, which isn't far off a possible conception of the genome. It is worth thinking about the extent to which the drives are programs installed and running in the brain, and to what extent they are chemical promptings from the body's glands, remote controlled by genes. A fully uploaded brain packaged with genome details would be equipped with instincts and drives that could be applied to

the signals of a simulated body. Once the genome is deterritorialized from meat production and supervision its instructions could be applied to virtual matter and what would be the difference as far as the brain is concerned? How much of the will could be uploaded?

[I know this clumsy noodling leaves the question of motivation mainly unanswered, but...]

I'll have a pop at your meme question later.

this is actually rather good:

en.wikipedia.org/wiki/Meme

quite a reading list here:

www.susanblackmore.co.uk/memetics/publications.htm

"How do memes motivate? If they're gene-analogs, then they must be able to effectively direct (propel) behaviour?"

Memes can be both ideas which promote specific behaviour and the behaviour itself - so the practice of circumcision is a meme which is packaged in various memplexes, such as Judaism; the goose-step is a meme bundled with the fascist memplex; wearing black leather was part and parcel of being a bolshevik. Such behavioural memes are transmitted horizontally and vertically through imitation, tradition and group security.

The ideas which lie at the core of memplexes are often very crude concepts - such as 'the bourgeoisie exploit the proletariat' - which appeal to hard-wired emotions and instincts, many of which may well have evolved before the homo sapiens lineage forked from the common ancestor, such as the sense of fairness. The core memes are protected by self-affirming strategies that make argument pointless - appeals to historical necessity, reducing the attack to bourgeois ideology, etc. Core memes promote specific forms of behaviour which will guarantee the meme's further replication; just as a virus will induce sneezing and diarrhea, a meme can be similarly cunning and treacherous in its manipulation of its host - Lenin promised peace, land, food and worker control of the factories in his April theses because these were simple, catchy slogans that spread like wildfire in the explosive environment of 1917. The peasants deserted the army and seized the land, the proletariat took control of the factories. Then the party plunged the country into civil war, then external wars of conquest, seized the land and factories, and used famine as a deliberate weapon of

repression. The promises of the April Theses were a means for achieving very specific, short-term ends - through 'propelling' certain forms of behaviour.

Nick Land: sd - the meme concepts tends to slide back-and-forth between gene-analogs and cultural viruses. The latter-type account relies on 'hijackings' of the kind you outline, but the former would surely be capable of fabricating (rather than merely capturing) impulsive machinery.

I'm guessing 'hijacked' instincts are likely to deteriorate in the whirlwind of Singularity (in the fashion your Diaspora discussion points to). Only when memes close the engineering circuit containing the assemblage of desires will they be liberated from entropic bio-legacies, but then new hazards of a more 'metaphysical' cast emerge. How would a civilization capable of rebuilding its own infrastructure of motivation proceed? I'm assuming tidal trends would guide the process, without high level 'political decisions' being required, but I'm far from clear what they are or imply.

[more ...]

sd: I know there's an awkward rub between 'gene-analogs and cultural viruses' - a bit maddening actually. You're right to draw attention to the parasitical hijacking vs. autonomous fabrication distinction, but maybe it's a question of degree, again... - the possibility that fabrication could arise from rewriting existing codes: permanently 'hijacking' the machinery rather than merely employing it for specific ends.

northanger: sd - "the meme concepts tends to slide back-and-forth between gene-analogs and cultural viruses"

think this paper covers this:

What's in a Meme?

jom-emit.cfpm.org/1998/vol2/wilkins_js.html

Memetic individuals

With the clarifications and mental tools introduced above, we are now able to ask Hull's question from biology - what is an individual? - in the memetic context. What is a memetic individual? What is subjected to selection in culture? What gets "coded for"?

When Juliet bitterly but eloquently complained how Romeo's social relationships were messing up their love life, she made the interesting observation that being a Montague, and being the person she loved, were two distinct states (apparently she had more of an interest in some of Romeo's biological aspects). The instantiation of the cultural relationship "is a Montague" in a particular biological organism, denoted by the name Romeo, is a case where an individual is something other than the sum of his own memes. The converse argument was given by the idealist philosopher FH Bradley in 1876, in a landmark essay in ethics, "My Station and its Duties". Here Bradley wishes to establish that one's social location and relations determine one's moral responsibilities. To do this, Bradley argues that what we are as social beings, as moral agents, is determined by the community of which we are part. An Englishman is not his biology²⁵. In each case, Juliet and Bradley recognize the distinction, often overlooked by meme enthusiasts, between the biological and the memetic. Memes don't necessarily make you more biologically fit, nor are they necessarily going to make you less fit. Memes aren't fit themselves simply because they make you live healthier lives. Memes are fit only insofar as they are propagated successfully; forget the effects they have on biology.

sd: northanger – after reading and rereading Wilkins' 'Memetic Individuals' I'm confused as to what point he is actually trying to make.

One moment he says 'Memes are fit only insofar as they are propagated successfully; forget the effects they have on biology,' (which you quote), but then the next he goes on to say: 'biological and cultural evolutionary processes ... are decoupled. This is not to say that the two realms do not meet and affect each other, for clearly they do; it is to say that no matter how you might be able to conceptualize cultural phenomena in biological terms (socio-biology), you can independently conceptualize them in social terms (memetics). To lift a phrase of Williams' (1992) there is a dearth of shared descriptors between the entities of biology and the entities of culture. Sometimes they may, indeed, be the same objects or processes, but you have to describe them differently in each analytic realm.'

So we are told to forget the 'effects' memes have on biology, then that the two realms do 'meet and affect each other'. If he is only emphasizing that there we have to keep the distinction between biology (genes) and culture (memes) in mind, then he is saying nothing original at all. If he is calling for more 'shared descriptors' of how genes and memes feedback on each other then his point might be slightly more valid, but I'm not sure he's saying this.

'Memes are fit only insofar as they are propagated successfully; forget the effects they have on biology' – A nihilistic meme which propelled its hosts towards suicide could propagate itself very successfully, but this would be ultimately disastrous for the meme's fitness because it would run out of biological hosts. The effects that memes have on biology, and particularly on the motivation of the organism, are crucial. If natural selection has provided us with predominantly 'nagging, cautious flesh' (Burroughs) and brains which are programmed to look for dangers and problems, then memes can either reactively deepen and confirm this pessimism, or proactively take steps to overcome it – in either case the meme inevitably feeds back on the health of the organism.

northanger: sd- maybe Wilkins' point is "discussing memes can be memetic". or something like that. thought the Hamming Distance interesting.

en.wikipedia.org/wiki/Hamming_distance

"the number of positions for which the corresponding symbols are different"

eg. The Hamming distance between "[t]o[n]e[d]" and "[r]o[s]e[s]" is 3.

very i-chingian.

sd - thinking about hooks & phages, or how viruses hook into dna. found something that may be related to your "how deep" question:

www.stanford.edu/group/nolan/screens/screens.html

"Screening for a rare event against a background of unwanted events is one of the great pleasures of genetics. The trick, and much of the creativity in genetics is creating a screening system that distinguishes the event of interest from events that have no interest at the moment of the screen. Essentially, you are on a fishing trip for the unknown and it all depends on what kind of bait you use for your hook."

Two-hybrid screening :: "discover protein-protein interactions by testing for physical interactions (such as binding) between two proteins. One protein is termed the bait and the other is a 'prey'. The premise behind the test is the activation of downstream reporter gene(s) by the binding of a transcription factor onto an upstream activating sequence". reporter genes fuse with other genes & easily identify gene expression.

- en.wikipedia.org/wiki/Two-hybrid_screening

- en.wikipedia.org/wiki/Reporter_gene
- en.wikipedia.org/wiki/Green_fluorescent_protein

meme.sdsc.edu/meme/meme-intro.html

searching "reporter gene" + meme, found MEME (Multiple EM for Motif Elicitation), to discover "sequence motifs" (highly conserved regions) in groups of related DNA or protein sequences. "highly conserved regions" or "ultra-conserved elements" refer to:

- en.wikipedia.org/wiki/Conservation_%28genetics%29
- en.wikipedia.org/wiki/Sequence_motif

www.i-sis.org.uk/AUEI.php

'481 segments in the human genome longer than 200 bp that are 100% identical with rat and mouse genomes. Nearly all are also conserved in the chicken (467/481) and dog (477/481) genomes, with an average of 95.7% and 99.2% identity, respectively. Many are also significantly conserved in fish (324/481 at an average of 76.8% identity) ... Researchers from the University of California Santa Cruz in the United States and University of Queensland, Brisbane, Australia, suggest these sequences are under negative 'purifying' selection for more than 300 million years, some for at least 400 million years; or else they have very low mutation rates, or they are subject to perfect repair. It means they must be 'vital' for survival. The rate at which these sequences change in evolution is 20 fold less than the rest of the genome, including the protein coding regions.

'But researchers revealed that mice with big chunks for such ultraconserved sequences deleted get on very well without them ... "It may say as much about our inability to detect any phenotypes as it says about the function of this region," said David Haussler of the University of California, Santa Cruz, whose team described the 'ultra-conserved regions' in mammals, "What's most mysterious is that we don't know any molecular mechanism that would demand conservation like this."

currents.ucsc.edu/03-04/05-10/genome.html

'Because they were not able to trace the ultra-conserved segments to even more distant species, the authors speculate that these particular parts of the genome represent innovations in the genomes of chordate species that evolved rapidly at first,

then became effectively frozen in birds and mammals. "These ultra-conserved elements are long, they evolved rather rapidly, and they are now evolutionarily frozen. We don't know of a biomolecular mechanism that would explain them," Haussler said.'

sd: thanks northanger, though I'm having trouble linking this to memes.

Anyway, definitely need to do some more reading and thinking on this topic. I'm currently digging into Daniel C.Dennett's 'Darwin's Dangerous Idea' - so far it's fantastic: awe-inspiringly rigorous and ruthless. The basic thesis is that Darwin's theory of evolution (and its modern synthesis) rips apart every discipline in science and the humanities and that we are still a long way from it being the accepted paradigm. In his view, the Copernican turn was very easy for humanity to assimilate, whereas the theory of evolution is a 'universal acid' - highly unpalatable.

Nick Land: Dennett is obviously among the greatest intellectuals of the century. Wish I'd appreciated him more when I had time to think.

northanger: sd - maybe it helps answer nick's question "How do memes motivate?". library screening, reporter genes, sequence motifs & MEME tool involve genetic engineering & gene transcription. maybe "reporter memes" can do the same for meme transmission. somewhat similar to vMeme of spiral dynamics.

en.wikipedia.org/wiki/Spiral_dynamics

en.wikipedia.org/wiki/Clare_W._Graves

en.wikipedia.org/wiki/vMeme

sd: this is very much on topic:

"The Evolution of Culture" Daniel C. Dennett

www.edge.org/3rd_culture/dennett/dennett_p2.html

Nick Land: ... and explosion of secessionism would be enormously encouraging, perhaps the key to all significant political disputes: variation and competition replacing zero-sum ideological conflict over uniformitized outcomes. It would skew the decks in favour of efficiency (markets, maths and secular rationality) though, so the leftoids and theocrats would probably 'resist'.

February 2006

While we're still foot-tapping ...

Nick Land (February 16, 2006)

Having recently received an invitation to provide an updated Hyperstition definition, I was wondering:

Anybody interested in making a suggestion (or several)?

Comments: While we're still foot-tapping....

northanger: this blog is a shell of what it used to be & NOW you want to do an updated Hyperstition definition. what's the old one?

Nick Land: It's true we've been somewhat Qliphothic lately ...

Old definitions under the Polytics button - not being replaced, but augmented.

sd: northanger, sorry you think it's gone crap. I've got a couple of things (hopefully interesting) in the pipeline, but they require lots of reading and cause lots of brain-ache, so it's going a bit slow.

Nick Land: sd - we're short on personnel due to the Global Jihad (in one way or the other (they've either flounced off to islamaxist paradise in 'viva fidelismo' keffiyahs or gone into hiding pursued by theocratic lunatics)), energy levels from those remaining are 'intermittent' and few of our 127 lurkers get up on the stage very often, pics have disappeared (need technical back-up and an adrenaline rush to help with that one) + expect n. somewhat cold-turkeying on the numbification since a wave of weird sanity crashed over us combined with undercurrent grabbing the nummificator and bolting with it in protest at the troll-purge ... [sigh] ... still, personally find your contributions the backbone of the site and terrified you're going to buckle under the Atlantean burden ...

al/ex/why/zed: i hope you won't think me rude

although not sure what qliphothic entails (but with an inkling), as a long-time voyeur of the hyperstition site (which i discovered some long time after i discovered ccru, noticed its stasis, and typed 'hyperstition' into a search engine...) i have wondered what has become of the mystical element- not, i hope, a certain 'hardening of the arteries'..?

i have even felt (having gone away and read greg egan's diaspora in order to follow the writing here) that discussion has in some major parts been driven by what old Nietzsche or Foucault might have called a Will to Truth- that ghastly wish to un-riddle the world- and i wonder what became of the

"pragmatic skepticism or constructive escape from integrated thinking and all its forms of imposed unity (religious dogma, political ideology, scientific law, common sense ...)" ['polytics' page]

which i used to revel in at this blog and all over the ccru. it's seemed sometimes that the writing here has become 'dry'- ornamental rather than machinic...

i'm not sure if my own arteries are toughening up, whether i'm becoming old and losing exuberance- (but i'm only 26)- ye gods, save me from ossification!!

i guess i must be one of your 'lurkers'- glad i'm not the only one- call me a wallflower perhaps- but the disco hasn't looked altogether fun to me recently... still, i'll perk up, and please be assured i'm grateful this blog is here at all- it's the only such page i follow...

Nick Land: al/ex/why/zed - a few brief (strictly personal) disjointedly pertinent comments from me on this:

- i) exploring sanity for a while has been strangely refreshing
- ii) the world has gone so completely bonkers it seems almost redundant to be heaping on the schizophrenia
- iii) rancorous micropolitics blasted off some mystification - common sense sometimes seems like blade-sharpening (knife fights can be tricky in a fog)
- iv) i've been so enjoying picking sd's brain that i've tended to lock onto what seems an optimum communicative plane, rather than zoning out poly-schizoidally

v) child-raising tends to make people sensible (evolutionary aversion to microwaving the spod and what have you)

vi) some of our more reliably effervescent psychotics are either in hiding or for other reasons inaccessible at the moment

all that said, a little qabbalistic-gothic hyperstitional fragmentation might help to nudge things away from excessively sticky territorialization onto the current events and partisan acrimony chain (where my brain has been quite rigidly bolted recently), you're right, it would be a shame for the arteries to become totally 'hardened' - so consider me responsive to your remarks ...

sd: al/ex/why/zed - I think your comments are far from rude: they dig into the sense of discomfort I often have when posting here - being of a factual, common sensical bent I'm obviously somewhat of an intruder on 'mysterical' Hyperstition territory. If there were more people contributing then my naturalistic forays would just be one line among many.

A quick comment:

It's all very well being machinic, but if there isn't some concession to evidence then the line will be techno-poetic, or techno-babble. THE fundamental weakness of D&G;, IMHO, is their total disregard of the theory of evolution - and this seriously affects the working of the machinery.

Kurzweil is much more dangerous precisely because he has got tonnes of painstakingly researched evidence to prop up the lines he's constructing, and because the theory of evolution is soaked through every sentence he writes.

Daniel C. Dennett (in Darwin's Dangerous Idea)also goes much deeper into the machinery of molecular engineering because he rigorously dissects, pushes and applies the theory of evolution. What he comes up with concerning the molecular level leaves D&G; way behind.

I'm well aware this isn't much fun though...

Nick Land: sd - part of the 'machinism' issue might be that the semiotic engineering of memetic virulence is only loosely connected to logical coherence or empirical evidence. Well-formed arguments are to memes what functionally elegant biochemical systems are to genes - conceptually quite distinct from the varieties of replicons and fragmentary rhythmic quasiviral (junky) genetic material that propagate

themselves alongside the organically adaptive genome. Effective memetic operations need not be formed on the model of realistic discourse about memes, they can merely be 'catchy' (even 'fun'). Maybe the 'coating' that most efficiently propagates the Kurzweil meme-core will be of a quite different semiotic type to his own discourse (which of course I find totally fascinating, although it need not entirely crowd out all alternative modes of 'communication' or perhaps 'influenza').

Anyway, you certainly have nothing to apologize for in any case ...

al/ex/why/zed: *i'm not sure if my own arteries are toughening up*

sd- i have enjoyed following your thoughts and links- they're definitely provocative, and i'd certainly agree it's important to look at concrete material- 'a little relation to the outside world'... i know this might sound obtuse, but i've been struggling to see the relevance of some of this evolutionary theory- it may be based on evidence, but just what is one to DO with it (or what does IT DO)?! if one were looking for praxis, how could one find it amongst 'x+y=z'? i'm appreciative of factual common sense (or perhaps empirical...) forays!

i really don't know much about 'The' theory of evolution- and i might be getting old, but my sense of smell hasn't deserted me- i want to know WHY it's so important, or better, how it can work with our programmes, how its information brings me increased powers. (i often found that the delerium of the numogram could bring me to a certain clarity...)

please don't take this to mean that i'm not interested in (and exploring) the concepts and functions- it's just that i'm strongly aware of the contingency of such descriptions.

[dammit you people are so fast there's always more posts by the time i've finished (key)tapping]

sd- "total disregard of the theory of evolution - and this seriously affects the working of the machinery."

ought to stress that i am not concerned necessarily with the search for a pristine machine- do you mean to say that d&g's machine doesn't work, or works only at a terrible slant, because of the absence of regard for the theory of evolution? their work (like anyone's is valuable to me when i find bits of their machinery to hook up productively with bits already built...

i guess maybe you think i need new risky blood in the brain-vein- i'll certainly give some time to kurzweil and dennet when i can-

sd: alexyz - "i want to know WHY it's so important, or better, how it can work with our programmes"

I'm working on this, honestly. Give me a week or so...

Nick - I'm trying to unpack your last comment...

There Goes a New York Mullins: I decided to use Northanger's nomenclature, but anyway, Nick, it wouldn't have hurt if you had described Xiamen cuisine; it's not like that's not hyperstitional enough to the rest of us. Therefore, we were all stone butch and stone wall, because cuisine is not 'common touch' or something!

sd--'Kurzweil is much more dangerous precisely because he has got tonnes of painstakingly researched evidence to prop up the lines he's constructing, and because the theory of evolution is soaked through every sentence he writes.'

Perfectly said, and I just finished the book Tuesday. It's not necessary to read every word, because for one thing not nearly everybody who's interested in what he says will understand the logic and technical details, nor need they: He uses everything to back up the thrust. The main thing is that much of it seems inevitable, even if not all of it seems desirable. So that, preparations have to be immediately put into place as to how to accommodate the inevitable speeding that will occur and it ought to be realized that if it does not all sound desirable does not mean you're a fundie, anti-evolutionist or Luddite.

For example, he merely alludes to all the billions of sacrifices that will have to be made, as when he talks about work that will all be done by machines without making even insurance available to those who've left the heavy labour just now and are merely told that 'money is to become more and more information.' Well, some of this is fine, but a lot of it has to do with personal taste of Kurzweil's own. He is already making himself into a machine personally. Even by the time he got to Terry Grossman, he had recorded the exact number of calories he had consumed at every meal for a good number of previous years.

Under his edicts, the point is that that cataclysms and purges of all kinds will be necessary and all his talk of art and learning once Strong AI has been reached doesn't

resonate nearly as strongly as just going down the street and seeing a film of the old Ballet Russes de Monte Carlo--where real artists came together for a reunion in 2000 and they had really danced, and they weren't talking about art just because their father had been a musician. And he talks about decentralization of cities in such an offhand way that everybody would decide that a complete end to the 'era of exclusivity' would be desirable in that sense. Well, it's not; and cities are works of art themselves. Half the time he talks like some cartoon character when he gets off the strict science part.

Most of it sounds appealing and gives you a high while you are reading it. But I've read him talk about Hobbes talking about the 'mean, brutish, short' lives we lived in 2 different places, one more or less benign and another (in the Daily Newsletter) where he seems to lament the short lives of Mozart and Schubert--as if that had a thing to do with anything, and it has nothing to do with life. Short lives are not lesser as a result of working toward making lives now longer.

His science is tonic, but a lot of his taste is mediocre and based on a power hunger. Some of this is all right, and one of the most paradoxical results is that it makes the 'perishable' things all the more precious--and it also leads one to think that as precious things are always rare in some sense (excluding artificially priced gems, for example) that the elites who can get these things still want them. In a perfectly appalling forum I used to use after my trips to French Polynesia, where the intelligence level was of such an overwhelming lowness I finally acted like a leftist and accused the fatsos in the overwater bungalows of infantilizing the natives (they were, and under the circumstances of their own grossness, this criticism was for once well-placed in my opinion), I read that one had spotted Bill Gates in Huahine, one of the most prized of the islands. Well, with always creating virtual reality environments for people's pleasure, there may be some awareness that at the top, some of the environment 'as it was' may well be preserved if most people decide they aren't worth actually travelling to.

Also, much of it seems a result of thanatophobia, and Kurzweil even uses the term 'deathist' which was propagated in the 70's and 80's by that lunatic 'physical immortalist' Leonard Orr, who got upset when his 'immortal yogi Babaji' all of a sudden 'died.' (The best that can usually be said of yogis who 'die,' is 1) they left their physical body and 2) after 30 days his body was in a perfect state of preservation. God, that's sad. I've googled Orr, who used also to have 'money seminars,' in which he thought he could merely will money to come to him and had a French 'physical immortalist' whom he claimed could will canned food into being in San Diego (I

suppose he could have done it in other cities, but as you see, such nonsense gives me such quiet rage that I wish, when in the presence of it, to make sure that my allegiance to Ronald Firbank at the expense of the now-bebeggared online Leonard Orr, to be firmly established...for example, a lady's towel once got wet, but Firbank lets us zero right into the scene 'Of course it was in Sicily, so it dried very quickly...')

Nevertheless, I am extremely grateful for finding out about this, as it offers much to look forward to and much to prepare for if one is going to gain the benefits from it. You have to be quite open to evolution to really even read it unless you wanted only to condemn it from the outset, but it is necessary to read it between the lines, and these are pretty obvious: It is clear, without his ever bringing it up, that, in lieu of clean water and air, even with radiation-filled air, there are needs to develop protective shelters in the case of nukes, or nanobots swimming throughout the bodies of those who can get to them in time, so that radiation lesions can be quickly eaten and repaired by these computers. I have nothing against most of it, but 'eliminating the underclass' is bound to be done by means other than first making sure their overheads are so low that everything is reducible to 'information money' in the same sense that I can already read all major newspapers without paying for them on the street (except I have to read TimesSelect to make sure I get Dowd, and you are not going to convince me I don't still need her!)

'Maybe the 'coating' that most efficiently propagates the Kurzweil meme-core will be of a quite different semiotic type to his own discourse (which of course I find totally fascinating, although it need not entirely crowd out all alternative modes of 'communication' or perhaps 'influenza').'

Nick--yes, I see it like that too.

George Will is very good today. No way things aren't going to have to be altered; they are already getting altered in a big way--too much for any one bunker to handle. I doubt we're going to see any Whittington photos any time soon, but domestic policy in the US matters if you live in it.

www.washingtonpost.com/wp-dyn/content/article/2006/02/15/AR2006021502003.html

On the other hand, there's a piece called 'Seumas Milne' at Infinite Thought, which defies credulity.

I think some people just go to school for the rest of their lives.

al/ex/why/zed: a bit of salvage-work from the archives-

"Hyperstition is poly-focused and exuberant, or it is nothing. It is conveyed through carriers into a multitude of extravagances where human subjects could not venture without encountering death, mute insanity, annihilating social ostracism or the restraints of inhibiting 'reason.'" - [nick, december 2004]

New York Mullins: my main concern vis-a-vis this location is that piet ran off. Did my pathology run off his pathology? He writes heaven stuff.

Tachi: back to the subject: definition of hyperstition - this has been floated for some time now, and in the meantime some of you have even ventured over into wikipedia and posted one on there, so i would have thought that one would need to be linked to or changed first. there is the practise and the theory, though these should of course be linked appropriately / clearly. separately from that, it might be useful to list some core values or theoretical underpinnings to hyperstition - theory of evolution for example. i would add that a list of interests feature in somewhere - such as WoT, singularity, anglosphere, etc. and dare i say it but some projections for events in the world in which we live - events which are being bootstrapped hyperstitionally and viewed from the hyperstitional-theoretical perspective.

... like

- this is what we like to discuss

- this is our value system / theoretical perspective

- this is what we see happening (now bleeding into the future)

... is this a little simple minded?

and how this is written / "expressed" (for northanger) / marketed on the site imho quite important ...

northanger: sd - you're our only hope. but, can you put pictures up too? can't we be a little more visual around here?

nick. nummy thingy still around. i go say "hi" so it doesn't feel neglected. maybe if you stop troll-purging things will get better around here. just a suggestion.

Nick Land: northanger - we've stopped purging (or maybe tachi's still doing a few surreptitious whackings but if so they're obviously taking out the garbage quite

effectively) and - as far as annoying snarky vacuities are concerned - things have ALREADY got MASSIVELY better around here. (Used to get a headache just thinking about looking in at one point, now i know it's only going to be positive people)

alex - re-activating carrier engineering sets everything else in motion, you're right to see that as the priority viz your agenda (which I think is a very helpful and interesting one). Kurzweil has quite a shtick about multiplication of virtualized poly-personalities that IMHO is actually coming at hyperstitional carriers from another direction

tachi - great to see you back! i can't get into wikipedia from here so i don't know anything about the def. there.

I'll respond to your more specific suggestions appropriately ASAP

NYM - there's something consistent about the way impending Singularity sends objective reactionaries back into some lost comfort zone, whether 7th century Arabian monocultism or early 20th century soviet totalitarianism according to taste

Moh: Some fresh air from uc (www.urbanomic.com/)

sd: Moh - what's fresh about anti-capitalist elitism and philosophers asserting their superiority? [snarky, I know, but couldn't resist]

tachi- where have you been? some fine ideas there...

northanger - I'll try to figure out the pictures - I did try, honestly, but it didn't work.

Nick Land: sd - while also wanting to avoid snark, can't help sharing your response. What's the point of calling for rigorous inquiry, and then axiomatizing that only conclusions falling under the general category of commie bullshit will be acceptable?

Moh: sd, it is more infantile rather than snarky i would say so no offense taken at all.

sd: Moh, so perhaps you might explain what is fresh there - because I really can't see anything, sorry.

Nick Land: tautening some of the theoretical linkages between hyperstition, history, evolution, memetics, etc probably overdue.

For instance, do hyperstition and evolutionary theory as typically understood share the same implicit conception of time? I have my doubts. The efficacy of the virtual

(retrochronic efficiency) which builds loopiness into the basic fabric of hyperstitional temporality seems quite alien to standard models of evolutionary development. Complicating this, however, is an apparent isomorphy between emergent nonlinear dynamics in strictly standard-sequential time, and deep (intensive or anomalous, retrochronic) feedback effects. For instance, the curves described by Kurzweil and consistent with either accumulating forward-running dynamics with abundant feedback reinforcement or an 'action' of the future - impact of Singularity - upon the past, decaying regressively.

sd: Nick - I think the problem lies in the fact there are different 'times' at work,

1) 'Cosmic/terrestrial' time

The narrative of gene evolution takes place in a time which, for now, we could label 'cosmic' or 'terrestrial' (which the legislation of Kant rules illegal, but more's the pity for philosophy). Terrestrial time is independent of perception and is most helpfully mapped as a vertical tree-story, ascending from basic chemical order to increasing organic complexity. Here there is no foresight and so no goal other than replication. There is purpose on the molecular level, in that genes code for something - they are not meaningless, but there is no teleological meta-purpose.

Optimal designs stop developing: if a gene alliance builds a machine which is optimally adapted to its environment, the algorithms of natural selection leave it alone, so for some creatures with bombproof designs that haven't been redesigned for millions of years (e.g. deep sea sharks, many insects, giant anteaters, and armadillos) time has basically frozen.

Also, since every living creature (and virus) is the tip of an ancestral lineage that can be traced back to LUCA (last universal common ancestor), and since the most complex survival machines share genes with the most primordial, the past is still very much in the present: the present is the merely the past which has survived the algorithms natural selection. Whilst the tree-story ascends in complexity, the ancient horizontal base is here and now. The hyperstitional 'call to the old ones' is surely an attempt to establish a communicative link with this base, or to rehack the immense cunning and plasticity of the base.

2) Mind time/ Techno time

The genes developed perceptual programs for tracking change and movement. It pays to have a good grip of time and change. Developed brains apply algorithms to data

from the past and present to project into the future, and this foresight gives birth to increased intentionality and goal-oriented behaviour. A goal is specified and steps are followed: the steps taken in the present are programmed by a future goal, by something that doesn't exist yet. This is why technology is inherently futuristic. Unlike genetic evolution, which is wasteful and tediously slow, memetic-techno evolution is rapid and economical. Loopy as techno-evolution may be, the same algorithms of natural selection apply, however: designs which do not work are discarded

As far as I see it, hyperstition is obsessed with the impact of virtual futures on the psycho-techno-capitalist infrastructure of the present, whether those futures take the shape of utopian goals or nightmarish catastrophes. The impact is on global systems, not on a species or human essence. Humanity is now deeply embedded within a self-organizing techno-memplex that only Khmer Rouge-style brutality or Taliban-style repression will extricate this essence.

History is crucial because it is littered with the wreckage of failed hyperstitional projects (e.g. communism), and because any success or 'fitness' in the present emerged from the projection of goals in the past - tracking these projections is essential for understanding where the process could be going.

urbanomic: Don't bother to reply since I have no time or inclination to read here anymore, but since someone sent me a link to this, I suppose I could just say I can't see what's 'commie bullshit' about the collapse project (absolutely no mention of anything of that sort anywhere, I have no interest and never have had in communism of any form whatsoever), why it's 'anticapitalist' (no mention of anything of that sort either, unless the uncontroversial proposal that management theory and therapy do not amount to rigorous and interesting interrogations of the abstract), nor what it's got to do with asserting any superiority of philosophy (it's specifically arguing for a non-hierarchically defined, non-pragmatically-prejudiced, but specific and irreducible, role for philosophical thought).

If you don't want to contribute, nick, and consider it all below you and your omniscient (but of course not philosophical) mastery of universal history, then I'll withdraw your article, and while you're at it stop bothering in private correspondence to pretend that you have any enthusiasm for the project, since your being connected with it would obviously amount to some sort of betrayal of your friends and the narrow, dogmatic agenda of whatever is going on on this site these days.

I could just ask that at least you refrain from thoughtlessly filing other people's efforts to produce something into your juvenile 'general categories'. I suppose you'd be happier if you could shame me out of it and there were more marketing brochures and 'edgy' fashion magazines being published and less pathetic elitist products like collapse, which actually take a serious degree of all the stuff capitalists are supposed to like viz. invention, effort, energy, commitment, investment and personal and financial risk. Because of course Gap catalogues are so much more transgressive 'at the cosmic level'.

ok, thanks then.

Nick Land: Since urbanomic has "no time or inclination to read here anymore" it's probably pointless to note that adding 'capitalist apologetics' (or by any reasonable definition 'arguments in defence of capitalism') to a list of transcendental theoretical sins is hardly in accordance with the indignant statement above. But i accept 'commie bullshit' was an unnecessarily brutal way of summarizing the implied agenda.

... have to say, think undercurrent is in the right on this. Going to make an apology once I can get the site to rebuild.

sd - response to your time comment imminent.

Hyperstitional time:

[for those without Kurzweil's The Singularity is Near this link provides most of the relevant 'increasing returns' data:
www.kurzweilai.net/meme/frame.html?main=memelist.html?m=17%23593]

Most noteworthy point IMHO viz sd's remarks is that the most hardcore technofuturists (e.g. Moravec, Kurzweil) trace continuous exponential curves from bacterial life through to technocommercial Singularity. This seems to subvert any convenient segmentation of the process into an evolutionary-progressive precursor and a virtualized techno-regressive deep-feedback from the future.

Is hyperstition forced to commensurate its model of virtual-realization with the entire multi-billion year process of accelerating intelligenesis? This is not to dismiss the pertinence of the distinction sd draws, but it is to critically question how fundamental such a distinction can be to our problematic, or the adoption of Kurzweilian time.

northanger: *Having recently received an invitation to provide an updated Hyperstition definition, I was wondering: Anybody interested in making a suggestion (or several)?*

oh, goody. hyperstition's not a snark-fest. happy joy. glad we cleared things up.

sd: Nick - 'Moravec, Kurzweil) trace continuous exponential curves from bacterial life through to technocommercial Singularity'

Because evolution takes place within one design space, forward dynamics and 'a virtualized techno-regressive deep-feedback from the future' are now inextricable.

Of course there can be no 'convenient segmentation of the process' - but there has to be some segmentation, particularly if you want to define hyperstition, which, as I understand it, is fundamentally psychological and concerned with the perception and processing of time. A perception that triggers production. Without this perceptual processing there is no foresight and hence no hyperstition.

Nick Land: sd - but would a sufficiently abstract scientific definition of intelligence, one that applies also to information processing in biochemical evolution and the functioning of replicator chemistry, be able to draw the hyperstitional dynamics you note all the way back into biological evolution?

[interrupt]

Shifting to the problematic mode: What does the continuity of the evolutionary/intellegenic curve say about the process?

(doesn't it imply consistency?)

Apology to Urbanomic

Nick Land (February 18, 2006)

Gnawed by guilt, I've been driven to make the most abject and humiliating apology possible (don't flatter yourself - ed.) to Urbanomic for the snarky remarks on the previous thread.

OK, we may not agree on the meaning of 'apologetics' but there was no need to be nasty or facile - so I'm sorry Undercurrent. Anyway, sure this is boring for everybody else so I better shut up here. [Further spasms of abasement in comments thread]

Comments: Apology to Urbanomic

sd: Nick - I don't get this at all.

Okay, my big mouth started it, but I'm amazed by the response to a couple of off-the-cuff, impersonal comments, which I basically stick by. People make all sorts of snide comments about Hyperstition on other blogs and we don't march over there and get personal.

It's basically pointless, but:

1. The Urbanomic project kicks off reactively, with a negative agenda which invokes some mysterious, ill-defined 'magazine readers' who are sneered at for their attention spans. Maybe 'magazine readers' is code for something, but it seems to be a very snotty and negative way to introduce a project.

2. You seem to have some new data as to what 'capitalist apologetics' is - I'm still in the dark and read it as some sort of leftoid a priori.

3. "Philosophy would thus conduct materialised 'thought experiments' outside of the methodological presuppositions which circumscribe scientific disciplines." - this is the most ridiculous sentence. It suggests that scientists are incapable of subjecting their discipline to a rigorous critique, and that philosophers have the monopoly on critique - this is patently false. For example, the greatest critique of Western metaphysics came from a naturalist. From a thinker, not a philosopher. Dawkins (a zoologist) and Pinker (a linguist) are engaged in open-ended critique and are fully aware of their 'methodological presuppositions'. Dennet seems to be the only philosopher who acknowledges the huge debts owed to scientific critique. My comment was a response to Urbanomic being described as 'fresh', and I really do not see how a project which isolates 'philosophy' as a discipline is particularly fresh. Philosophers banging on about philosophy is typical and part of the reason why the most rigorous and interesting thinking being done at the moment is being done in scientific fields.

If Urbanomic were to produce something ground-breaking then that would be fantastic, and I'll eat all these words, but the outline for the project does not look promising to me.

Are we really not allowed to say things like this? Why does everything with H get so personal and wake up so many sleeping dogs?

Urbanomic: Thanks, nick. Once again, I only reply to this having been alerted to nick's post and not particularly wanting to get embroiled in anything, but -

1.If you read you'll see that rather than magazine readers, it's academics that are taken to task for suppressing their attention spans, to disguise the fact that their projects are little more than vastly-extended space-filling magazine columns based on new combinations of the same theoretical frameworks/topics.

2.Would anyone seriously argue that philosophy ought to concern itself purely with any type of apologetics? (Of course, if you're not interested in philosophy, obviously this is of no importance to you). I could of course add 'communist apologetics' but since such a thing seems transparently absurd – apologies for the status quo are far more dangerous than apologies for fantasies.

3.There's no suggestion that scientists are stupid or don't realise their methodological presuppositions themselves. The whole point of the project is to include scientists own thinking on their research rather than merely philosophers pontificating ('applications' of philosophy to science). Scientific and other practices always include philosophical aspects which have no direct application within the day-to-day work of the discipline but which are something different from 'philosophies of science' (ie they represent 'local ontologies', they are outside of, or question, the methodological presuppositions, but they emerge from the scientific practice itself) The suggestion is that philosophy pick up on these threads rather than affecting to have some external relation of critique to science etc.

As for being personal, why not? SD comes across as extremely arrogant and sure of his own importance. Whereas personally I (and I know I'm not the only one) find everything that's happened on this site since his arrival monotonous and uninteresting, and lament the passing of what was once a fertile and fascinating place to be, with a diversity of converging projects and approaches. But I just stay away, and don't broadcast my opinion; I'm sure from now on SD will do me the same favour, by sticking to his own groundbreaking work and leaving my project alone.

sd: urbanomic - you provide wonderful proof that reformulation (i.e. adaptation) is a truly powerful process.

Anyway, maybe it's better that all this is out in the open. Your comments have been taken on board.

Nick Land: sd - I went off on the term 'capitalist apologetics' in a way that was completely knee-jerk and disproportionate, so apologizing seems entirely warranted. In my understanding, Undercurrent's 'anticapitalism' (if I can use that term) is a Dilbertian horror of the turn of the millennium office environment and associated cultural effects, rather than a romantic attachment to authoritarian collectivism of the kind so widely in vogue elsewhere (this obviously makes my initial response misleadingly off-beam as well as gratuitously vicious).

Your comments on the matter have been far less intemperate than mine and obviously contain the basis for a productive dialogue, although I'm not holding my breath for that ;)

If you've not seen Ray Brassier's writings (not sure how easy they are to access, but a piece is promised in Collapse) they can't be recommended too highly - I'm confident you'd find his work extremely brilliant, scientifically literate and entirely free of bohemian bourgeois bromides.

Urbanomic: Yes, I'm sure that my absence will increase the evolutionary fitness of the site greatly.

If the text on the urbanomic site seems to say something different to what I say above, that's may just be because I didn't think that it needed to be comprehensively policed for hyperstitional correctness. The main thing, I have always believed, is just to do something, rather than fucking about in pubs (and latter-day, on blogs) forever finessing manifestos positions and plans. In similar circumstances in the past, as nick will vouch for, I've had exactly the same response as yours from 'philosophers': for not sufficiently policing out every possible naive enthusiasm, gaucherie, inaccuracy or inexactitude before considering publishing anything.

finally, amongst other things, the first issue of collapse will contain pieces written by working mathematicians who were indeed very much in tune with the spirit of the project, precisely as somewhere they could publish work that their academic community would consider beyond their disciplinary remit, too 'out-there', but which equally philosophers would consider 'not philosophy' because it doesn't make the right references. Incidentally it will also include an interview with Nick Bostrom, one of your extropian buddies.

March 2007

A Blast From The Past

sd (March 7, 2006)

A little slice of insanity¹³² from Belarus.

The Denim Revolution¹³³...

... and if you're really interested¹³⁴.

Comments: A Blast From The Past

Nick Land: Guessing the real question is about Putin and Russia - are they really going to put their geostrategic muscle behind a ring of autocratic loser regimes and (for instance) work to keep Eastern Europe divided between rapidly emerging post-soviet societies on the one hand and these pitiful fossils on the other? It's truly depressing how neo-tsarist reaction still seems to have a vice-like grip on the eastern slavic imagination.

Best thing the Poles, Balts etc. can probably do is push on with their own reform and consolidate the alternative model. The Internet will make it increasingly infectious.

Also disappointing how the Ukrainian 'colour revolution' seems to have fizzled out into corrupt inertia. The Poles (who were so essential to the fall of the Yanukovich junta) must be especially pissed about that.

northanger: vice-like?

Tachi: I'd like to raise a more general question about the relationship between hyperstition and politics, though not sure where the best place would be. I think it is

¹³²

<https://web.archive.org/web/20061004011237/http://www.rferl.org/featuresarticle/2006/03/A1D90D5A-2AF8-4670-9EDA-874F2CFEEDB.html>

¹³³ <https://web.archive.org/web/20061004011237/http://www.zubr-belarus.com/index.php?lang=2>

¹³⁴

<https://web.archive.org/web/20061004011237/http://www.ilhr.org/ilhr/regional/belarus/updates/BU-2006-PDF/vol10no8-2006.pdf>

worth putting a spotlight on the possible politics that derive from hyperstitional theory or practice: does hyperstition essentially lend itself to a certain kind of politics, and if so to what extent can this be determined? How much scope is there for difference and divergence amongst hyperstitional politics: on a conscious, theoretical, level, what kind of politics can hyperstition afford, concede? And on an unconscious, purely pragmatic level, can it be said that certain kinds of politics are inextricable from real hyperstitional processes?

Nick Land: tachi - I suspect sd would be happy to treat such a wider discussion as 'on topic' here, given that the amount of tightly focused Belarus commentary is not likely to be huge at the moment. There's room here for the whole spectrum from minute attention to the ghastly Lukashenka, through wider regional q.s to the panoramic topic you float IMHO.

In provisional response to you, then:

Seems to me that 'hyperstitional politics' has two aspects worth teasing apart.

- 1) Hyperstitional-political analysis, which would be a maximally 'nonpartisan' investigation of how Autogenesis feeds into political issues and helps to explain them.
- 2) A taxonomy of intensely hyperstitional programmes, which would cover a wide spectrum since it embraces at least (overlapping):
 - a) Islamist efforts to instantiate a modern Caliphate.
 - b) Vestigial soci*list attachments to a virtual planetary communism.
 - c) Variants of (neo)liberalism fed by the powerful hyperstitional dynamics immanent to - constitutive of? - capitalism.
 - d) Singularitarian-transhumanist accelerationists devoted to steepening the technocommercial intelligences curve.

And in each case the opponents, spin-offs and mutants attending these hyperstitional autoproduction scenarios.

Tachi: Nick - is this worth a dedicated post? Do you think this is a worthy topic? This is something I am particularly interested in pursuing. I wonder how divergent hyperstitionists' politics can be, for a start.

northanger: does Chernobyl's 60% fallout landing in Belarus a good "insanity" topic fit? what about the combating normanist vs. antinormanist Rus theories? pretty sure Mir Taqi Mir pederastic poetry completely off-topic — even if there's a link to Mir, Belarus, Mir station, Clarke's "Time Odyssey" series with its mysterious hanging giant metallic orbs & a highly popular asian MMORPG. gotta hyperstitionally rich main vein topic here. lots of asteroids too!

hey hey ... neat0:

en.wikipedia.org/wiki/Colour_revolution

nick. questions related to Tachi's stuff. how is the practice of hyperstition (POLYTICS: numogram, mythos & unbelief) related to POLITICS? think you mentioned earlier numogram trashed? if yes, have these "three irreducible ingredients" been upgraded?

Nick Land: tachi - a dedicated post makes sense, but why not get the discussion started here, then if a suitable 'trigger' link crops up we can uplift to a new post.

(of course, feel free to start a new thread on the topic yourself if the spirit grabs you)

northanger - OK (I'll bite), starting with the Chernobyl topic, what do you think the impact on contemporary Belarus politics might be?

northanger - 'polytics' as a micro-enterprise tightly linked to practical production problems would definitely stand at a 'higher' (tighter, more immanent) level IMHO - less room for random bloviation when something is actually under construction.

But to respond more directly to your question: politics/polytics relation is probably quite complicated. If (questionable?) all the different hyperstitional programmes outlined above were able to share polytical principles (in the same way different ideologies can share technical principles) then the relation would probably look intriguingly various, dependent on line of approach.

Actually think your question here really fascinating and consequential, so I'm going to shock you by thinking a bit about it (before further babbling) ...

think you mentioned earlier numogram trashed?

???

northanger: *starting with the Chernobyl topic, what do you think the impact on contemporary Belarus politics might be?*

my pleasure:

english.pravda.ru/world/20/92/370/15609_Belarus.html

nick. [zwei] fits the "A Blast From The Past" thingy.

think you mentioned earlier numogram trashed? - ??? (don't think so)

nick. not trashed, exactly. something about about a hyperstitional lineage w/o the numogram.

actually think your question here really fascinating and consequential, so I'm going to shock you by thinking a bit about it (before further babbling) ...

The Black Hole

number three-thousand, forty-four.

[politics/polytics relationship]

Nick at March 8, 2006 05:03 AM

archived!

sd: Nick - the situation in Russia does not bode well:

1.The country is heading for a demographic disaster, a huge drop 30 million drop in population by 2030. (Also very high inflation.)

2.It is particularly disturbing how Putin and Karimov exploit WoT/WWIV to tighten up their autocracies. The concept of civil liberties, never very strong in the region, is trampled over with a brutality and crudity unparalled in the west. Russia also conducts war in a very old-school fashion: Putin has done nothing whatsoever to discourage the use of rape as a weapon in Chechnya.

3.The media in Russia and Belarus is an extreme empirical example of simultaneous reality distortion/production. In Belarus, as in Ukraine, the further west you go, the more influence the Internet and Polish radio has, but in the east the media has a very tight grip on reality. Putin's clampdown of the Russian media was very instrumental

here, setting the precedent etc. So it is very difficult to imagine how just how far some Belarussians' worldview is from 'ours', or even that pumped out by moonbat media.

4. The Poles have been very active in Belarus (there's a considerable Polish community there), particularly over the airwaves, but they won't have a big affect because, as the Economist points out, the elections will be rigged and backed up by brutal security forces.

tachi - I think that hyperstition's politics are fairly divergent (just look at new york mullins contributions). I don't think there's a party line or a consensus, unless it is that in its current form H. is definitely pro-capitalist (anti-capitalism being analagous to being anti-stone during the stone age), and being pro-capitalist is nothing special. H is also pro-war, most of the time, but there is acute awareness of how bewilderingly complex that war is, in terms of how, where and why its is being fought...

Personally, I'm more understanding how politics evolves and works than defining and clinging to a specific political position.

northanger: *H is also pro-war*

sd. in what sense?

Nick Land: sd -

Russia: Agree with your gloomy scenario, things are going to get a lot worse there for all the reasons you mention (others might include very obstructive cultural legacy (Orthodox Christians aren't good at liberalism as a rule)).

H. Politics: There's a distinction worth making between the 'empirical' stance of the blog (what people who post and comment here think) and its 'transcendental' commitments (what must any consistent 'hyperstitional politics/political theory' be like?).

Seems to me, as far as the second is concerned, there's room for a Marxoid hyperstition (since the Revolution can be construed as an autoproduative irruption), however absurd that might seem at the empirical level. At least, if anybody was still to promote it (a carrier of some kind?) it would be nice to see a degree of cold intelligence replacing the hysterical spluttering gesticulation that marked this sort of position on the blog before.

Furthermore, although radical Islamism is rather mute here these days, it too can clearly be articulated in fairly pure hyperstitional terms (as the cultural-political 'fetching' of a virtual megasyndrome). I'd also make my usual point -- 'tackling' Abrahamic Monotheism as an historical factor is essential to any comprehensive hyperstition, with Islamic Apocalypticism an absolutely critical topic in this respect.

Since Abrahamic historicity, Marxism and the apocalyptic analysis of Capitalism share an occulted nexus, it might also be somewhat misleading of me to treat them all as simply diverse ...

northanger: nick. parallaxic gaps?

www.mediamonitors.net/sullivan1.html

Unfortunately, the hard reality now is that in both the West and the Muslim world religions and civilizations have become increasingly reified. Little effort is being given anywhere to acquiring understanding of supposedly homogeneous and inimical "Others." [4] I submit that unless Christians and Muslims begin to hear each other when they whisper prayers to their common God, they indeed are likely to meet on obscure battlefields around the world.[5] Surely, any war of civilizations or religions is not one that either side will win. As a new century impends, I suggest that Christians and Muslims alike need to attempt a new beginning.[6]

from above link:

I would suggest that the civilization of the contemporary West might more accurately be designated as "Abrahamic" than as "Judeo-Christian."

E.U. Constitution Should Cite Abrahamic Monotheism: Imam

www.islamonline.net/English/News/2003-11/01/article02.shtml

Long Sunday's, "What's Missing?" (ironic, innit?)

www.long-sunday.net/long_sunday/2006/03/whats_missing.html

having never read Zizek, found this helpful & interesting: he focuses on three main modes of parallax — [1] the ultimate parallax (the ontological difference), [2] the scientific parallax & [3] the political parallax.

Nick Land: *having never read Zizek* - thank Allah for small mercies :)

My theological sympathies are more with Abu-86 and Darkside Islam than with the happy-clappy ecumenists like Sullivan. Start with a jealous God and prophetic historicity and the conveyor belt culminates inevitably in eschatological war and universal insanity - at least the mechanism is now eating itself rather than just chewing up pagan civilizations. It's way too late for Kumbayah ...

northanger: nick. let me clarify, not talking Kumbayah but attempting to unpack your "usual point":

'tackling' Abrahamic Monotheism as an historical factor is essential to any comprehensive hyperstition, with Islamic Apocalypticism an absolutely critical topic in this respect.

for me, clarifies McCarthy-Ijaz debate; illustrates WoT's focus on Islam's differences (McCarthy) vs. similarities (Sullivan) & lets me understand the point you're making.

nick. Sullivan presents "historical factors" you say "essential to any comprehensive hyperstition" (why, i don't know). particularly interesting:

"It is worthy of note that both China and India consider the West to constitute one civilizational block derived from three constituent parts: Byzantium, Europe and the world of Mediterranean Islam. For the very different civilizations located to its east, Western civilization is most emphatically not made up only of Europe and North America but consists also of both Arab Christianity and the Arab Muslim world."

contrast this with the current civilizational block (& divisor) of the "anglosphere" (vee speak english). if i understand you correctly, yes, "the mechanism is now eating itself".

Nick Land: northanger - wasn't accusing you of the Kumbayahing (perish the thought!!), just side-swiping at Sully (who used to be one of my favourite people in the world and nowadays has me scratching my own eyes out in infuriation). Grateful for the opportunity to dig around in this area (don't mean eye-sockets) because the whole Judaeo-Christian West vs Islam thing is getting quite trying, as if a choice between two flavours of Skygod makes a menu worth salivating over ...

northanger: and they're doing it with language.

oops, think we bumped into each there.

Nick Land: northanger II - OK, that (one Abrahamic civ block) really interesting - now I guess I have to go and read the damn thing.

Anglosphere MUCH more interesting, since its diagonally trans-civilizational (in Huntington terms) and aligned extremely closely with escalating capitalism

...and given it's not even the same Sullivan I've been floundering about in a vast ocean of irrelevance ... but what the hell

northanger: nick. "trans-civilizational"? nope. it's rule of law & english.

Greek

en.wikipedia.org/wiki/Byzantine_Empire

[sigh] "not even the same Sullivan"

nick. it is definitely NOT a "choice between two flavours of Skygod". it is ONE god. just can't figure out why you seem to think this is hyperstitionally important.

"Liggio's fundamental point is that the Abrahamic faiths have each been shaped by and may be considered the successors to HELLENISTIC CIVILIZATION, and that the cultures shaped by Judaism, Christianity and Arab Islam must each be regarded as part of that LARGER CIVILIZATION that I have metaphorically suggested has its frontier on the Indus rather than on the Bosporous. At the same time, note should be taken of the fact that less than one in five of the world's more than one billion Muslims are Arabs. THE VAST MAJORITY OF MUSLIMS ARE CONCENTRATED IN SOUTH AND SOUTHEAST ASIA. There are more Muslims in Malaysia (185 million) than in all of the Arab world. Certainly, Muslims in India, China, Malaysia and Indonesia have participated historically in cultures radically different from those that ring the Mediterranean and extend into northern Europe and North America."

here we have some distinctions (& maybe other reasons why India added (as it should be) to "anglosphere"?):

www.arches.uga.edu/~godlas/tibi.html

The Mediterranean Islam can learn a lot from the Southeast Asian Islam. Can the periphery become thereby the center?

Nick Land: northanger - OK, finished the Sullivan piece - the guy's a quite loathesome Dhimmi obviously (Robert Spencer rips most of his apologetics apart repeatedly, i.e. representing abrogated Suras as authoritative ('no compulsion in

religion') and promoting a ludicrously ahistorical (and also abrogated) spin on Jihad), but it's still interesting to see the Abrahamic megamachine integrated geocivilizationally. Now the important question: how to kill it?

northanger: en.wikipedia.org/wiki/Mediterranean

Modern states (22 states) bordering the Mediterranean Sea are:

- Europe (from west to east): Spain, France, Monaco, Italy, the island state of Malta, Slovenia, Croatia, Bosnia and Herzegovina, Serbia and Montenegro, Albania, Greece, Turkey, and the island of Cyprus, divided between the Republic of Cyprus, and the northern break-away region of 'Turkish Republic of Northern Cyprus'.

- Asia (from north to south): Turkey, Syria, Lebanon, Israel and the Gaza Strip.

- Africa (from east to west): Egypt, Libya, Tunisia, Algeria and Morocco

nick. kill what? the Abrahamic megamachine? didn't Nietzsche do that? oh, god's dead but he's still on life-support. pull the plug?

Nick Land: all 'good' questions

northanger: nick. "the guy's a quite loathesome Dhimmi obviously (Robert Spencer rips most of his apologetics apart repeatedly" — i'm sure spence did do the very thing & it's also quite worthless because of potential conflict of interest & bias. dear spence, we fear, is in the megamachine.

en.wikipedia.org/wiki/Robert_Spencer

Robert Spencer holds a Master's degree in Religious Studies from the University of North Carolina at Chapel Hill 1986, and is an Adjunct Fellow with the Free Congress Foundation.

en.wikipedia.org/wiki/Free_Congress_Foundation

The Free Congress Foundation (more formally the Free Congress Research and Education Foundation, and Free Congress or FCF for short), is a conservative think tank in Washington, D.C. founded and led by Paul Weyrich. In the 1960s and 1970s the labor union-backed National Committee for an Effective Congress was highly influential. In 1974, in part to counteract its influence, Weyrich founded the

Committee for the Survival of a Free Congress (CSFC), whose name implied that the United States Congress was dominated by labor and other liberal-leaning interest groups, and that this situation needed to change.

en.wikipedia.org/wiki/National_Committee_for_an_Effective_Congress

Founded by Eleanor Roosevelt in 1948, the National Committee for an Effective Congress (or NCEC for short) is a political committee that provides voter-research resources to progressive political campaigns throughout the United States. The NCEC is vital to campaigns of all sizes due to its role in providing a "voter file" for campaign activities that require identification of voters in target demographics.

Nick Land: northanger - not sure where this is going now, but IMHO the 'islamophobes' are much more rigorous when it comes to Koranic interpretation than the (taqqiya or dhimmitude driven) apologists. If I hear the 'no compulsion in religion' diversion one more time I'm going to scream (at least). IT'S ABROGATED!!!

On the wider question: Think Shoggothic Insurgency.

northanger: "Will people ever be wise enough to refuse to follow bad leaders or to take away the freedom of other people?" —Ms. Eleanor Roosevelt

"Prepare your representatives...In a democracy not only government is responsible but people are responsible for what happens in their own land and through their leadership in the world." —Ms. Eleanor Roosevelt

[hit the lights boys ... Ms. Barbra Streisand]

"I am also very proud to be a liberal. Why is that so terrible these days? The liberals were liberators—they fought slavery, fought for women to have the right to vote, fought against Hitler, Stalin, fought to end segregation, fought to end apartheid. Liberals put an end to child labor and they gave us the five day work week! What's to be ashamed of?"

Nick Land: E. Roosevelt's legacy gang-raped in UN:

www.nationalreview.com/lowry/lowry200603070816.asp

northanger: I think it's about time we voted for senators with breasts. After all, we've been voting for boobs long enough. —Clarie Sargent, Arizona senatorial candidate

"As a woman I have no country. As a woman my country is the whole world." — Virginia Woolf

Nick Land: "What's to be ashamed of?" - depraving liberalism into fidelista narcissism?

northanger: nick. "E. Roosevelt's legacy gang-raped in UN". yeah, think you mentioned UN sex crimes earlier. checked that out. reform? hahaha hahaha. i certainly would not pick Islam first. i'd remove the massive log in the anglosphere's eye first. megamachine indeed.

What's to be ashamed of? - depraving liberalism into fidelista narcissism?

scroll up. blast from the past, remembering the good name & achievements of Liberalism. is there such a thing as conservative liberalism?

Nick Land: Barbara Streisand!!!!??? You were doing fine until that point ...

is there such a thing as conservative liberalism? - Hong Kong neo-Manchester Liberalism, think it's called 'neoliberalism' these days and all the world's moonbats seem to hate it, so it's got to be basically on the right track.

northanger: Robert Spencer (et nauseum)!!!!???

"IMHO the 'islamophobes' are much more rigorous when it comes to Koranic interpretation than the (taqqiya or dhimmitude driven) apologists. If I hear the 'no compulsion in religion' diversion one more time I'm going to scream (at least). IT'S ABROGATED!!!"

nick. um, think you need to get OUT of the megamachine box here. what has this argument to do with anything relevant when trying to pin down "essential historical factors" re "tackling Abrahamic Monotheism"? doesn't YOUR objection cloud the issue of what's really at stake here?

"On the wider question: Think Shoggothic Insurgency."

what about it? you want a status report?

denimosphere

sd: northanger - pro-war 'in what sense?'- In the 'well, if you insist on causing trouble...' sense.

Nick - re: Marxoid hyperstition - I think a ruthless reading of The Communist Manifesto and Lenin's 1917 texts is on the cards, quite a way up the pipeline though. Until Marxist-Leninists can come up with a rigorous response to 'The Black Book of Communism', Figes' 'A People's Tragedy', the works of Robert Conquest and Richard Pipes' 'Russia Under The Bolshevik Regime' then I think it would be very difficult to take them seriously.

If this is the best the left can do then they have simply lost:

www.marxists.org/archive/bland/1999/x01/x01.htm

www.wsws.org/polemics/1998/jul1998/blck-j15.shtml

www.spectrezine.org/global/chomsky.htm

Tachi: So what is the range of political options for hyperstitionists right now? Accept that politics change, and positions are fluid, and accept that contributors politics are divergent, but then is every contributor a hyperstitionist, whatever that might be? The q. isn't the divergence of contributors' views but what divergence hyperstition actually allows - Allah forbid - am I insinuating that hyperstition might be tied down, might be restrictive, have a dynamic but nevertheless finite set of options for politics? Can one disagree with the WoT for example and be a hypersittonist?

Nick Land:

Can one disagree with the WoT for example and be a hypersittonist? - I'd be amazed if that proved either:

a) empirically non-instantiated, or

b) transcendently inconsistent

[to use distinction above]

A hyperstitionist practices memetic autocondensation, or something of the kind - that seems to give a lot of ideological leeway ...

sd: tachi - not very keen on the term 'hyperstitionist' - it sounds like an occupation or a practitioner swallowed whole by an 'ism'; it might be more productive to look for consistency in the codes, strands, themes, refrains and processes rather than a set of principles upheld and followed by card-carrying members.

also it is also useful to constantly bear in mind the distinction between hyperstition as a phenomena/process and what goes on on this blog. the blog mutates and so do its definitions of hyperstition, and hyperstition as a process unfolds within the blog in accordance to how it is triggered and the parameters it is given. hyperstition would unfold entirely differently elsewhere, given other parameters.

if a contributor were to input convincing/challenging anti-WoT code into the blog then the blog would have to process it and adapt. i suppose your question ultimately would cash out as 'How many directions can H. move in at once?/ How many conflicting processes can be up and running at the same time?' - these questions could only be answered if it happened.

[p.s.does any other blog spend so much time trying to define itself? i know it's useful, in small doses, but ...]

Nick Land: sd - v. helpful formulation

Tachi: Good points sd, agree with you its not like a party, but I do think its worth thinking about which political pathways open up from the theoretical position of hyperstition. I too have often distinguished between the theory and the phenomena, though if we cannot be clear about what the theory affords, then we cannot be sure what processes are hyperstitional, and what politics are made possible.

Taking Nick's initial response: "'hyperstitional politics' has two aspects worth teasing apart.

- 1) Hyperstitional-political analysis, which would be a maximally 'nonpartisan' investigation of how Autogenesis feeds into political issues and helps to explain them.
- 2) A taxonomy of intensely hyperstitional programmes, which would cover a wide spectrum since it embraces at least (overlapping):
 - a) Islamist efforts to instantiate a modern Caliphate.
 - b) Vestigial soci*list attachments to a virtual planetary communism.
 - c) Variants of (neo)liberalism fed by the powerful hyperstitional dynamics immanent to - constitutive of? - capitalism.
 - d) Singularitarian-transhumanist accelerationists devoted to steepening the technocommercial intelligensis curve.

And in each case the opponents, spin-offs and mutants attending these hyperstitional autoproduction scenarios."

This sounds good, though isn't the key 'autogenesis'?

The various interesting developments we are witnessing in the world right now are clearly distinguished, but what makes them anything more than a list of interesting current affairs developments, unless autogenesis can be shown to be integral to them.

I think there is a difference between people who participate in hyperstitionally driven movements and people who might participate in movements which are consciously aware of their hyperstitional nature. Though I am not quite sure of how to describe the former kind of movements as hyperstitional. The latter might be singulararians who wish to accelerate the coming singularity.

I am also not sure that any ideological position is open to anyone that has a theoretical grasp of hyperstition as a real phenomenon. If you appreciate the hyperstitional character of globalization, for example, it seems ludicrous to bang on about a world in which the USA is dominating the world.

I can see how one might not want to further the singularity, and be against it, but that would be a different thing from denying its actuality or engaging in politics which do not appreciate the fundamentals of the processes the singularity involves.

Nick Land: tachi - strongly agree with your points here, but I also think they leave open a range of hyperstitionally informed options because recognizing that a phenomenon is significantly 'autogenetic' of hyperstitionally sensitive does not necessarily imply affirmation, at least on the empirical-psychological level.

It seems to me 'darkside' Marxists (as opposed to utopian soci*lists) are in that position - Mark Downham is the most interesting example I have ever encountered - recognizing that capitalism is an autonomizing inhuman and intelligenic singularity, while maintaining a politically hostile posture in relation to it (at least nominally).

My own posture in relation to Global Jihad is in certain ways strongly analogous - I see the Caliphate as an extremely powerful hyperstitional object, pre-programmed in a very fundamental way at the origins of the Abrahamic tradition, yet my empirical politics in relation to it are radically negative.

Where I see your remarks being especially important is exactly here: calling into question this disconnect, which (I am inferring) you are quite reasonably dissatisfied

with. Surely there must be some integral crossing from analytical recognition to affective and political posture? But the nature of this passage escapes me.

I'm assuming rigorous hyperstitional practice would largely cancel empirical psychology and its loyalties, delegating everything to carriers which would be proliferated to explore the hyperstitional object from the widest practical range of approaches - again, not sure how this impacts on the question right now.

sd: *largely cancel empirical psychology and its loyalties, delegating everything to carriers*

but surely an effective carrier would have both perceptrons which would facilitate that gathering of empirical data and a faculty for forming judgements based on that data (i.e. an empirical psychology). only a carrier capable of ignoring large amounts of data (particularly connected to 'failed' hyperstition) would be able to articulate a positive posture towards Marxist-Leninism. carriers are de-personalized, but not stripped of equipment.

of course there might be room for satire - surely this is THE carrier exploration mode?

northanger: "sd - v. helpful formulation"

sd - very good point: "not very keen on the term 'hyperstitionist' - it sounds like an occupation or a practitioner swallowed whole by an 'ism'; it might be more productive to look for consistency in the codes, strands, themes, refrains and processes rather than a set of principles upheld and followed by card-carrying members."

imho, humans are hyperstitional by nature. your point got me thinking about christmas, currently viewed as crass commercialism being the driver. children are highly hyperstitional. what if we remove parents & children from the xmas equation. certainly, the yearly yule play is a collection of codes, strands, themes, refrains, etc., generating a family's mythology, memories, expectations, anticipation, etc. therefore, the parental-child bond seems like a viral seasonal driver. does capitalism generate this (it certainly sustains it)? or is it generated elsewhere? then we're looking at autogenetic triggers (another good point).

Nick Land: sd - 'yes' to all that. I should have said, cancel non-constructed empirical psychology, or artificialize and multiply psychologies, or something similar. Satire - absolutely.

northanger - "children are highly hyperstitional" - also a key point. (Stephen King is obsessed with this, although usually rather crassly)

Tachi: Nick, sd, interesting comments; "recognizing that a phenomenon is significantly 'autogenetic' of [sic] hyperstitionally sensitive does not necessarily imply affirmation" - exactly, though surely it cannot tolerate politics of denial that may be witnessed in some contemporary movements (anti-globalization, islamism, the 'soci*'l dimension of Chinese soci*lism ..) - "Surely there must be some integral crossing from analytical recognition to affective and political posture?" - right; though the scope of possible affective and political posture cannot include a denial of "ignoring large amounts of data" or of what is actually going on. So we arrive to a point where we are dedicated to a conceptual framework, at least, in which we are understanding reality, and drawing lines through what is and what is not empirically possible for a given political program of action. What I am trying to say is that sketching out this line, however fluid, might be something that Hyperstition, as a blog, could focus on, since it would be a concrete yet ongoing result with pragmatic ramifications. If you agree, how might we continue? I don't think its a simple case of worrying unecessarily about definitions, but of sharpening the remit of the activity of this blog, and enabling it to do something constructive and relevant.

That sounded clumsy - "we are dedicated to a conceptual framework, at least, in which we are understanding reality, and drawing lines through what is and what is not empirically possible for a given political program of action" - I don't mean what is and is not possible to do, since it would be possible to do many things that ignore the hyperstitional dimension of reality production. But perhaps even before the question of possibility of action (and of the kind of possibility, empirical, logical etc) is surely the possibility of tuning in to, acknowledging, hyperstitional processes: without proper tools, how can we be sure that a process is hyperstitional, autogenetic? This would have to be clarified before the question of action can arise, surely?

northanger: *though the scope of possible affective and political posture cannot include a denial of "ignoring large amounts of data" or of what is actually going on*

tachi. like your focus. but what makes data data? doesn't your statement assume the validity of data & therefore "what is actually going on"? how do we know what's actually going on? data can be ignored not only by "denial" but by selected parameters, existing frameworks, high noise-to-signal ratios, and (if the span is great enough) too much data.

Tachi: nh - borrowed sd's phrase re.'data' - my point being that whilst I raised the issue of political action and its connect with hyperstitional theory, the theory has to be tight first. To explore the political possibilities that emanate from an awareness of hyperstitional reality, first indeed we need to have a firm if fluid handle on what hyperstitional reality is, and this involves a set of analytical tools which are sharp and constantly being sharpened.

northanger: tachi. "political action and its connect with hyperstitional theory" — generally agree. hesitation, before jumping down this rabbit hole, concerns inadvertently pre-mining conceptual veins avoiding the sharp analytical. needle in haystack kinda thing. would you agree that the act of getting a "fluid handle" involves a hyperstitional process? kinda dicey.

sd. read your Marxoid hyperstition links about 'The Black Book of Communism'. being an american, stalin = evil; so info extremely illuminating. we discussed the communist death tally months ago. why do you think it a "weak" response? what are they failing to do here?

Nick Land: tachi - I appreciate your enthusiasm for tightening up H. theory, but I also think sd's evolutionary approach to this has the great virtue of practical realism. When certain 'meme-clusters' have been chewed over for a while there may well be opportunities to precipitate them into conceptually-clarified forms and perhaps lodge them somewhere meta-ish on the site. However, the idea of pushing for a generalized and preliminary rigorization of the hyperstitional enterprise might simply not be feasible. That's not to say I have any problems with this kind of reflexive discussion, it seems definitely productive as long as we don't entirely black-hole into it, and it probably does help 'sharpen' anylytical tools.

[PS. It's going to be June before I can get anything remotely ambitious done here, so I'll be mostly spectating the more symphonic unfoldings until then]

northanger: nick. why does sd's approach have "practical realism" & why is that a virtue? you said it yourself: tightening up H. theory. doesn't that have practical value?

Nick Land: Just suggesting that incrementalism probably inevitable, so we should embrace it. Not saying that tachi disagrees with this BtW.

sd: some of this the points in this thread could be put into the Polytics, no?

Tachi: I agree with incrementalism totally, and do not think that a generalized theory is really what we are aiming for nor possible. But I think incremental, practical, realism should be bold. Can we trawl through the blog and drag up something to put on the table? That would be really opening up and push things forward fast.

northanger: See “The Hyperstition of Porphyry: No blood for oil!”

[check tangents for drag process]

New York Mullins: *carriers are de-personalized, but not stripped of equipment.*

Explain please. The rest sounded intelligent and flexible enough, despite the 'inevitable increments', but this sounds like too much stricture. If so, I'll at least know where the oppression can be found.

Just how much 'de-personalized equipment' is anyone going to want? I mean after a certain point, 'depersonalized equipment' sounds like something you'd get in a successful Communist Party? this does not mean I had hoped to tell you of every trip I make to the New York State Theater.

sd: NYM - have a look at this:

hyperstition.abstractdynamics.org/archives/004648.html

New York Mullins: SD--thanks. That ought to keep you with few enough carriers. Who needs such shit? If that's the answer to my question, then I go the way of reza and undercurrent. I don't know why northanger and piet would care to bother once such repulsive dogma has been known, but definitely saved me a lot of time. There wasn't a thing of interest in nick's manifesto, just evidence of the usual attempt to find novel corruption.

interesting that these 'carriers' sound like the ones in the WoW game. Those games are enormously addictive, and people who play them suffer huge financial and physical losses--but they then play them even more. I suppose a kind of game like that is being proposed as a hyperstitional project. The carriers would be useful for 'infecting' as in the WoW game, but they would needed to have wanted such a religion first. These things can be turned around very easily. For example, like not identifying which players are the most dessicated at this time, but knowing who they are anyway. In that way, they can do their own suffering. And little more do they deserve--it's inevitable that insistence on political allegiances of a gross lack of subtlety would spawn players of newish but coarse appetites. These attempt to get the most delicious

morsels until they feel threatened, then they spill the beans just like leftist millionaires who do it out of guilt. This is all right, but somehow not convincing as the only slot in town even after outsourcing is figured in. Too bad. Anyway, how you gonna get satire when you've got people with no sense of humour at the controls? And 2 out of 3 don't, the third may have no spine.

Nothing to base anything on when all you agree on is Islamic threat. There are plenty of active environments offline that do that, and without the humiliation of online addictions. Be your guest.

sd: new york mullins - I think the whole concept of carrier is worth giving some thought to. Your instinctive, disgusted dismissal is intriguing. I would like to have answered your question more thoroughly, but at the moment I don't have the time or strength. A bit of patience maybe...?

Nick Land: NYM - online game ref. ++ interesting - that kind of format is probably exactly where carriers will take off (games that would actually do useful cognitive work, an undeveloped area IMHO).

More widely, don't think you need to react so strongly to the issue - doubt whether many people here are getting enough sleep to put together even quasicohherent carriers at the moment (I'd like to be proved wrong, however, which is probably (among the places) where we differ).

northanger: nick [new york]. puff adds effective bullshit detectors, blowing holes through cellular fluff (IOW, cytotoxic spam chopping; maybe a bit Lacanian for some tastes — however, check Martin Crane for details). bit of apoptotic levity might prove useful.

Tom Paine: Projecting the Future, Producing the USA

sd (March 09, 2006)

1. Common Sense
2. Virtual Involvement
3. Make Commerce, Not War

4. Positive Fictions

5. Dangerous Delusions

1. Common Sense

Perhaps the sentiments contained in the following pages, are not YET sufficiently fashionable to procure them general favour; a long habit of not thinking a thing WRONG, gives it a superficial appearance of being RIGHT, and raises at first a formidable outcry in defense of custom. But the tumult soon subsides. Time makes more converts than reason.

Paine's common sense was an attack on not thinking. It was not thinking that enabled monarchs and the aristocracy to maintain their hold and monopoly on power. Thinking about the basis and purpose of civil society triggered a process of enlightenment that showed custom and existing power structures to be, above all, indefensible. Human society had to justify itself under the aggressive glare of Reason.

Following Locke's attack on absolute monarchy in *The Second Treatise of Government*, Paine's pamphlets achieve a new pitch of lucid intensity. By exposing hereditary right to be an imposition having its roots and justification in a distant right of conquest, he disarms any monarchy and aristocracy at one fell swoop, leaving them nothing but appeals to tradition and/or repressive violence to fall back on. Kings and Lords have no rational arguments to justify their 'rights'.

For common sense it is obvious that those living under a monarchy are deceived and enslaved:

... a race of conquerors arose, whose government, like that of William the Conqueror, was founded in power, and the sword assumed the name of a sceptre. Governments thus established last as long as the power to support them lasts; but that they might avail themselves of every engine in their favor, they united fraud to force, and set up an idol which they called Divine Right, and which, in imitation of the Pope, who affects to be spiritual and temporal, and in contradiction to the Founder of the Christian religion, twisted itself afterwards into an idol of another shape, called Church and State. The key of St. Peter and the key of the Treasury became quartered on one another, and the wondering cheated multitude worshipped the invention.

When I contemplate the natural dignity of man, when I feel (for Nature has not been kind enough to me to blunt my feelings) for the honour and happiness of its character, I become irritated at the

attempt to govern mankind by force and fraud, as if they were all knaves and fools, and can scarcely avoid disgust at those who are thus imposed upon.

Paine's lucid 'disgust' with 'those who are imposed upon' is only matched by his contempt for those who would impose their cowardly acceptance of vassalage on future generations. This is his main beef with hereditary succession and with Burke in *The Rights of Man*.

Rather than seeing England's 'Glorious Revolution' of 1688 as a triumph of Parliament and the beginning of constitutional government, Paine saw it as a cowardly, expensive and irrational imposition on the future. The 'revolution' deposed a Catholic king only to import a Dutch aristocrat to take his place: it perpetuated the vassalage of government over the people.

In *The Rights of Man* (1791), Paine fulminates against Burke for denying that the English had any right 'to choose their own governors, cashier them for misconduct, or frame a government for themselves.'

... To prove this, he quotes a declaration made by Parliament about a hundred years ago, to William and Mary, in these words: "The Lords Spiritual and Temporal, and Commons, do, in the name of the people aforesaid" (meaning the people of England then living) "most humbly and faithfully submit themselves, their heirs and posterities, for EVER." He quotes a clause of another Act of Parliament made in the same reign, the terms of which he says, "bind us" (meaning the people of their day), "our heirs and our posterity, to them, their heirs and posterity, to the end of time."

Mr. Burke conceives his point sufficiently established by producing those clauses, which he enforces by saying that they exclude the right of the nation for ever. And not yet content with making such declarations, repeated over and over again, he farther says, "that if the people of England possessed such a right before the Revolution" (which he acknowledges to have been the case, not only in England, but throughout Europe, at an early period), "yet that the English Nation did, at the time of the Revolution, most solemnly renounce and abdicate it, for themselves, and for all their posterity, for ever."

While Burke harks melodramatically back to a past protected from criticism by the rituals of custom and opacity of obscurantism, Paine is a fundamentally forward-looking thinker. One of the basic tenets of his thought is that the present generation has no right to shackle the future by tying posterity into contracts born of cowardice or expediency in the present.

As far as Paine is concerned, as long as the 'tyrannies' of monarchy and aristocracy are part and parcel of government, then government is not truly constitutional, i.e. it is not government of the people, and the administration of power is inevitably entangled in absurd contradictions. The argument in *Common Sense* which inspired the colonists to effect a complete break from the British government was one which attempted to pull the English government's essential irrationality to pieces:

I know it is difficult to get over local or long standing prejudices, yet if we will suffer ourselves to examine the component parts of the English Constitution, we shall find them to be the base remains of two ancient tyrannies, compounded with some new Republican materials.

First. — The remains of Monarchical tyranny in the person of the King.

Secondly. — The remains of Aristocratical tyranny in the persons of the Peers.

Thirdly. — The new Republican materials, in the persons of the Commons, on whose virtue depends the freedom of England.

The two first, by being hereditary, are independent of the People; wherefore in a CONSTITUTIONAL SENSE they contribute nothing towards the freedom of the State.

To say that the constitution of England is an UNION of three powers, reciprocally CHECKING each other, is farcical; either the words have no meaning, or they are flat contradictions.

First. — That the King it not to be trusted without being looked after; or in other words, that a thirst for absolute power is the natural disease of monarchy.

Secondly. — That the Commons, by being appointed for that purpose, are either wiser or more worthy of confidence than the Crown.

But as the same constitution which gives the Commons a power to check the King by withholding the supplies, gives afterwards the King a power to check the Commons, by empowering him to reject their other bills; it again supposes that the King is wiser than those whom it has already supposed to be wiser than him. A mere absurdity!

*There is something exceedingly ridiculous in the composition of Monarchy; it first excludes a man from the means of information, yet empowers him to act in cases where the highest judgment is required. The state of a king shuts him from the World, yet the business of a king requires him to know it thoroughly; wherefore the different parts, by unnaturally opposing and destroying each other, prove the whole character to be absurd and useless.**

As we shall see, this dismissal of the division of power as an absurdity is perhaps a bit hasty, but when Paine wrote speed was of the essence.

Paine's common sense was Reason as War Machine: a self-taught mind taking on and fighting off the state at breakneck speed. Designed to be disseminated and processed rapidly, inflammatory and intense, his pamphlets were indispensable, hot-off-the-press weaponry for generals and diplomats. Common Sense and The Crisis are profound examples of thought and argument being instrumental in reality production.

In the colonies, the Enlightenment achieved its most compressed, intense expression, with lucidity on a breakaway line of flight far removed from the servile infatuation with authority and turgid philosophical tomes which characterized the Enlightenment in Europe.

Of course, the American Revolution came packaged with own contradictions and hypocrisy, with many of the authors of the high-minded, idealistic Declaration of Independence and the United States Constitution being slave-owners. But in the unprecedented clarity that illuminated America at this time these contradictions were painfully clear. Paine, an outspoken advocate of the abolition of slavery, was first and foremost an inspiration: his thought spread enlightenment so quickly that society soon found its ideals to be out of time with its social and economic realities. With Paine, thought was ahead of its time, not enslaved to it.

Paine's common sense provides proof that, fantastically ignorant as we may be when it comes to metaphysics and our own minds, the really big questions that affect us on a daily basis – Do you want to live under tyranny or not? What is the optimal basis and form of government? – can actually be answered and communicated clearly and concisely. It is the abandonment of common sense in favour of priestly absurdities such as dialectical materialism which lead human society back into ignorance, obscurity and vassalage.

2. Virtual Involvement

Norman Davies, in Europe, A History:

“Of course, no one in 1776 could possibly have foreseen the full potential of the USA. The thirteen colonies still looked to be very fragile ventures, surrounded by the uncontrolled forces of nature in a largely unexplored continent... At the time, the British government was blind to even the most immediate implications.” (p637)

Well, not quite no one. If it were reformulated as ‘no one in Europe’, then fair enough. Because the success of the American Revolution depended on people in those colonies having an inspirational premonition of the largely unexplored continent’s potential. The USA was a product of imaginative foresight; of seeing, seizing and laying claim to what could be:

The Sun never shined on a cause of greater worth. 'Tis not the affair of a City, a County, a Province, or a Kingdom; but of a Continent — of at least one-eighth part of the habitable Globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually involved in the contest, and will be more or less affected even to the end of time, by the proceedings now. Now is the seed-time of Continental union, faith and honour. The least fracture now will be like a name engraved with the point of a pin on the tender rind of a young oak; the wound would enlarge with the tree, and posterity read in it full grown characters.

Common Sense and The Crisis (1776-7) invoke an inevitable future in order to steel resolve in the present. Of course it was possible to continue negotiations with the British government, to once again submit the neck to the yoke of ‘tyranny’, but this would have amounted to both a cowardly betrayal of the future and a deferral of the inevitable. At times, Paine resorts to cajolery:

I once felt all that kind of anger, which a man ought to feel, against the mean principles that are held by the Tories: a noted one, who kept a tavern at Amboy, was standing at his door, with as pretty a child in his hand, about eight or nine years old, as I ever saw, and after speaking his mind as freely as he thought was prudent, finished with this unfatherly expression, "Well! give me peace in my day." Not a man lives on the continent but fully believes that a separation must some time or other finally take place, and a generous parent should have said, "If there must be trouble, let it be in my day, that my child may have peace;" and this single reflection, well applied, is sufficient to awaken every man to duty. Not a place upon earth might be so happy as America. Her situation is remote from all the wrangling world, and she has nothing to do but to trade with them. A man can distinguish himself between temper and principle, and I am as confident, as I am that God governs the world, that America will never be happy till she gets clear of foreign dominion. Wars, without ceasing, will break out till that period arrives, and the continent must in the end be conqueror; for though the flame of liberty may sometimes cease to shine, the coal can never expire.

At times, he waxes almost mystical:

I HAVE never met with a man, either in England or America, who hath not confessed his opinion, that a separation between the countries would take place one time or other: And there is no instance

in which we have shown less judgment, than in endeavoring to describe, what we call, the ripeness or fitness of the continent for independence.

As all men allow the measure, and vary only in their opinion of the time, let us, in order to remove mistakes, take a general survey of things, and endeavor if possible to find out the VERY time. But I need not go far, the inquiry ceases at once, for the TIME HATH FOUND US. The general concurrence, the glorious union of all things, proves the fact.

As is perhaps the case with all 'successful' revolutions, time was of the essence: the colonists pulled their revolution off chiefly because their 'opinion of the time' was superior to that of the myopic power they were trying to outwit and shake off.

Part of Paine's persuasive power lay in his straightforward presentation of financial facts and calculations. He had no qualms about combining philosophical-political argument with the prices of ships:

For a ship of

100 guns..... 35,553 £,

90 " 29,886

80 " 23,638

70 " 17,785

60 " 14,197

50 " 10,606

40 " 7,558

30 " 5,846

20 " 3,710

Crucially, neither did he have any qualms about making the future pay for the revolution. The future had to be literally indebted to the present:

Debts we have none: and whatever we may contract on this account will serve as a glorious memento of our virtue. Can we but leave posterity with a settled form of government, an independent constitution of its own, the purchase at any price will be cheap. But to expend millions for the sake of getting a few vile acts repealed, and routing the present ministry only, is unworthy the charge, and is using

posterity with the utmost cruelty; because it is leaving them the great work to do, and a debt upon their backs from which they derive no advantage. Such a thought's unworthy a man of honour, and is the true characteristic of a narrow heart and a piddling politician.

The debt we may contract doth not deserve our regard if the work be but accomplished. No nation ought to be without a debt. A national debt is a national bond; and when it bears no interest, is in no case a grievance. Britain is oppressed with a debt of upwards of one hundred and forty millions sterling, for which she pays upwards of four millions interest. And as a compensation for her debt, she has a large navy; America is without a debt, and without a navy; yet for the twentieth part of the English national debt, could have a navy as large again. The navy of England is not worth at this time more than three millions and a half sterling.

The American Revolution would not have been possible without a financial contribution from the future.

3. Make Commerce, Not War

Besides, what have we to do with setting the world at defiance? Our plan is commerce, and that, well attended to, will secure us the peace and friendship of all Europe; because it is the interest of all Europe to have America a free port...

In all my publications, where the matter would admit, I have been an advocate for commerce, because I am a friend to its effects. It is a pacific system, operating to cordialise mankind, by rendering nations, as well as individuals, useful to each other. As to the mere theoretical reformation, I have never preached it up. The most effectual process is that of improving the condition of man by means of his interest; and it is on this ground that I take my stand. If commerce were permitted to act to the universal extent it is capable, it would extirpate the system of war, and produce a revolution in the uncivilised state of governments. The invention of commerce has arisen since those governments began, and is the greatest approach towards universal civilisation that has yet been made by any means not immediately flowing from moral principles.

In Paine's presentation, war is a tool used to tax and impoverish civil society. Tyrannical, uncivilized governments divert attention from their indefensible basis by engaging in wars which further the interest of government and hereditary rule, not society. There is a conflict of interest. War is in the interest of governments which reciprocally bolster each other's grip by bleeding their societies dry. It is in the interest of individuals and society to trade. While the winners of war are governments, commerce is non-zero-sum exchange and benefits the whole of civilisation:

... the prosperity of any commercial nation is regulated by the prosperity of the rest. If they are poor she cannot be rich, and her condition, be what it may, is an index of the height of the commercial tide in other nations.

There can be no such thing as a nation flourishing alone in commerce: she can only participate; and the destruction of it in any part must necessarily affect all. When, therefore, governments are at war, the attack is made upon a common stock of commerce, and the consequence is the same as if each had attacked his own. The present increase of commerce is not to be attributed to ministers, or to any political contrivances, but to its own natural operation in consequence of peace...

...If a merchant in England sends an article of English manufacture abroad which costs him a shilling at home, and imports something which sells for two, he makes a balance of one shilling in his favour; but this is not gained out of the foreign nation or the foreign merchant, for he also does the same by the articles he receives, and neither has the advantage upon the other. The original value of the two articles in their proper countries was but two shillings; but by changing their places, they acquire a new idea of value, equal to double what they had first, and that increased value is equally divided.

Paine loathed war and yet called for it against the British. His justification for war is eminently rational: civil society has to protect itself and its commerce from the depredations and encroachments of tyrannical government.

4. Positive Fictions

The concept of natural rights is central to Paine's onslaught, and it goes hand in hand with his faith in Reason and his optimistic view of human nature. In a smooth mixture of Locke and Rousseau, Paine assumes 'man' to be born equal and endowed with certain natural rights, among which he stresses: intellectual rights and freedom of conscience; the right to trade freely; and the right to pursue comfort and happiness. In the state of nature, 'man' also has a right to judge and administer justice, but on entering the compact of civil society, 'man' gives up this right.

In a schema which borrows heavily from Locke, society is drawn as positive, whilst government is cast as 'a necessary evil':

Society is produced by our wants, and government by our wickedness; the former promotes our happiness POSITIVELY by uniting our affections, the latter NEGATIVELY by restraining our vices. The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

In its optimal form, government functions solely to protect freedoms and provide security. In its worst form – i.e. absolute – government is the greatest disgrace and shame of humanity.

The closer society stays to ‘the laws of nature’ the better it functions.

Man, with respect to all those matters, is more a creature of consistency than he is aware, or than governments would wish him to believe. All the great laws of society are laws of nature. Those of trade and commerce, whether with respect to the intercourse of individuals or of nations, are laws of mutual and reciprocal interest. They are followed and obeyed, because it is the interest of the parties so to do, and not on account of any formal laws their governments may impose or interpose.

But how often is the natural propensity to society disturbed or destroyed by the operations of government! When the latter, instead of being ingrafted on the principles of the former, assumes to exist for itself, and acts by partialities of favour and oppression, it becomes the cause of the mischiefs it ought to prevent.

For Paine, human history has consisted of little more than an abuse of natural rights by governments, a tale of continual enslavement.

It might be helpful to ask a few questions at this point: What exactly are these natural rights? What’s the evidence for them?

... backtrack to Locke

In *The Second Treatise of Government*, Locke defines the state of nature for 'mankind' as:

...a state of perfect freedom to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

The state of nature is far from being a brutish free-for-all: it is bounded and governed by the laws of nature:

The state of nature has a law of nature to govern it, which obliges every one: and reason, which is that law, teaches all mankind, who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions: for men being all the workmanship of one omnipotent, and infinitely wise maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not one another's pleasure: and being furnished with like faculties, sharing all in one

community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for our's. Every one, as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he, as much as he can, to preserve the rest of mankind, and may not, unless it be to do justice on an offender, take away, or impair the life, or what tends to the preservation of the life, the liberty, health, limb, or goods of another.

Being a prime example of pre-Darwinian, mind-before-matter thinking, the concept of natural rights comes packed with the following assumptions:

1. God designed nature.
2. Nature is subject to rational laws.
3. 'Men' were designed equal, in terms of their faculties and nature.

The conclusions drawn from these assumptions are:

1. The laws of nature oblige 'mankind' to treat each other equally and, where possible, to protect and serve the species.
2. Slavery breaks God's laws and is therefore irrational.

In the state of nature, all 'men' have the natural right to administer their own justice in rational proportion to any offence committed against them or their property. On entering society, 'man' gives up his right to administer justice himself but retains all 'his' other natural rights:

MEN being, as has been said, by nature, all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent. The only way whereby any one divests himself of his natural liberty, and puts on the bonds of civil society, is by agreeing with other men to join and unite into a community for their comfortable, safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any, that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so consented to make one community or government, they are thereby presently incorporated, and make one body politic, wherein the majority have a right to act and conclude the rest.

Having laid down this premise, Locke draws a startlingly bold conclusion: If civil society requires consent and is governed by the will of the majority, then absolute

monarchy is uncivilized: it is one individual administering their natural right to justice as they see fit, which is to say that absolute monarchy is not just like the state of nature – it is the state of nature, or rather the state of nature at its worst because under absolute monarchy other men are deprived of their natural right to administer justice. Society under absolute monarchy is slavery: the deprivation of natural rights. Since slavery is irrational and against the laws of God, man has a duty to rebel against absolute monarchy. Man is free to withhold consent and form new societies elsewhere:

The other objection I find urged against the beginning of politics, in the way I have mentioned, is this, viz:

Sec. 113. That all men being born under government, some or other, it is impossible any of them should ever be free, and at liberty to unite together, and begin a new one, or ever be able to erect a lawful government.

If this argument be good; I ask, how came so many lawful monarchies into the world? for if any body, upon this supposition, can shew me any one man in any age of the world free to begin a lawful monarchy, I will be bound to shew him ten other free men at liberty, at the same time to unite and begin a new government under a regal, or any other form; it being demonstration, that if any one, born under the dominion of another, may be so free as to have a right to command others in a new and distinct empire, every one that is born under the dominion of another may be so free too, and may become a ruler, or subject, of a distinct separate government.

... Sec. 115. For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves, and their obedience, from the jurisdiction they were born under, and the family or community they were bred up in, and setting up new governments in other places; from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied, as long as there was room enough, till the stronger, or more fortunate, swallowed the weaker; and those great ones again breaking to pieces, dissolved into lesser dominions. All which are so many testimonies against paternal sovereignty, and plainly prove, that it was not the natural right of the father descending to his heirs, that made governments in the beginning, since it was impossible, upon that ground, there should have been so many little kingdoms; all must have been but only one universal monarchy, if men had not been at liberty to separate themselves from their families, and the government, be it what it will, that was set up in it, and go and make distinct commonwealths and other governments, as they thought fit.

The importance of these passages for the projection and production of the USA is obvious (but somehow can't be stressed enough). The concept of natural rights

triggered a train of thought which led directly to insurrection in the colonies and the production of a new country. Natural rights are the code at the core of the USA, given explicit expression in the Declaration of Independence and being implicit in the The Constitution. Whatever Locke's personal hypocrisy with regard to slavery, the concept of natural rights was the concept which made the founding fathers squirm with discomfort, which ultimately led to the abolition of slavery, and which empowered the 60s Civil Rights movement.

From a certain point of view, it is largely irrelevant whether the concept of natural rights has any truth content. It is a pre-Darwinian, positive fiction. Even if humans are not born equal, civil society requires that they be treated as such.

5. Dangerous Delusions

Paine in footnote 28 of *The Rights of Man*:

During the suspension of the old governments in America, both prior to and at the breaking out of hostilities, I was struck with the order and decorum with which everything was conducted, and impressed with the idea that a little more than what society naturally performed was all the government that was necessary, and that monarchy and aristocracy were frauds and impositions upon mankind. On these principles I published the pamphlet Common Sense.

This observation of society functioning in a perfectly civilized fashion without government was Paine's chief inspiration for writing *Common Sense*. It also seemed to be empirical evidence which supported Locke and Rousseau's idyllic descriptions of the state of nature.

It is one of the cruel ironies of history that Paine, the man who helped instigate the American Revolution and who supported the French Revolution so fervently and articulately, should have found himself awaiting execution at the hands of the Jacobins during the Reign of Terror in 1794. He only managed to avoid the guillotine through pure chance.

Though most of the scathing criticism with which Paine rips Burke to pieces is well-deserved and spot-on, there are a few points of prescient lucidity occasionally shining through Burke's conservative old-fart ranting which Paine could have profited from paying a bit more heed to.

1. One of Burke's most pertinent criticisms of The National Assembly is that there was no check upon its power:

The power, however, of the House of Commons, when least diminished, is as a drop of water in the ocean, compared to that residing in a settled majority of your National Assembly. That assembly, since the destruction of the orders, has no fundamental law, no strict convention, no respected usage to restrain it. Instead of finding themselves obliged to conform to a fixed constitution, they have a power to make a constitution which shall conform to their designs. Nothing in heaven or upon earth can serve as a control on them. (p45 Reflections, Oxford)

In the passage cited above from Common Sense, Paine dismissed the division of power in the English government, with its powers supposedly ‘reciprocally CHECKING each other’, as ‘farcical’ and ‘flat contradictions’. While the actual system may not have stood up to the scrutiny of reason in 1776, by rejecting the principle of a division of power, Paine thereby rejected the means by which constitutional government can be prevented from seizing, or being hijacked by, absolute power.

Back to Locke again:

... And because it may be too great a temptation to human frailty, apt to grasp at power, for the same persons, who have the power of making laws, to have also in their hands the power to execute them, whereby they may exempt themselves from obedience to the laws they make, and suit the law, both in its making, and execution, to their own private advantage, and thereby come to have a distinct interest from the rest of the community, contrary to the end of society and government: therefore in well ordered commonwealths, where the good of the whole is so considered, as it ought, the legislative power is put into the hands of divers persons, who duly assembled, have by themselves, or jointly with others, a power to make laws, which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them, to take care, that they make them for the public good.

The division of power that Locke outlined in *The Second Treatise of Government* was conceived precisely to avoid the kind of law-making madness and tyranny the French Revolution hurtled into.

2. Burke took a dim view of human nature and recognized that base passions are at work behind even the most idealistic schemes; and so Burke’s only political recommendation is caution. In contrast, Paine saw no need for checks and balances in government because he had unbounded faith in human nature, once it had thrown off the evils of imposed government:

Who could have foreseen, or who could have believed, that a French National Assembly would ever have been a popular toast in England, or that a friendly alliance of the two nations should become the wish of either? It shows that man, were he not corrupted by governments, is naturally the friend of man, and that human nature is not of itself vicious. That spirit of jealousy and ferocity, which the governments of the two countries inspired, and which they rendered subservient to the purpose of taxation, is now yielding to the dictates of reason, interest, and humanity.

Paine left America in 1787, the year before James Madison wrote The Federalist No. 51. as part of a project urging support for the United States Constitution. Another irony of history is that Paine, the man who coined the term ‘The United States of America’, wrote The Rights of Man seemingly oblivious to the more pessimistic thinking that characterized the rationale for the American Constitution. In this oft-quoted passage, James Madison justifies the checks and balances built into the American government with explicit reference to the ambitious and competitive nature of human beings:

But the great security against a gradual concentration of the several powers in the same department, consists in giving to those who administer each department the necessary constitutional means and personal motives to resist encroachments of the others. The provision for defense must in this, as in all other cases, be made commensurate to the danger of attack. Ambition must be made to counteract ambition. The interest of the man must be connected with the constitutional rights of the place. It may be a reflection on human nature, that such devices should be necessary to control the abuses of government. But what is government itself, but the greatest of all reflections on human nature? If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself. A dependence on the people is, no doubt, the primary control on the government; but experience has taught mankind the necessity of auxiliary precautions.

A bold simplification would have to say that the French Revolution descended into a bloodbath, dictatorship and pan-continental war simply because there were no efficient checks in place and because the noxious side of human nature was allowed free rein.

Paine’s anger with Burke for his having denied the future its natural rights seems to prevent him from seeing the significance of England’s so-called ‘Glorious Revolution’ of 1688. It’s significance lies not in the Whigs importation of yet another foreign king, but in the decisive reduction of monarchical power in favour of Parliament.

Norman Davies describes the American Revolution as having been “wrested from a country which was one of the most free and best-governed of the day.” (Europe p638). Indeed, while the failings of the French Revolution can largely be blamed on the absence civil society preceding it, and on key figures in the revolution having an excessive trust in human nature, the successful production of the USA came directly from (the conceptualisation of) a cautious mixture of freedom and government in England. Absurd and pathetic as constitutional monarchy might be, in Paine's time it was actually the most fertile ground for truly productive revolt.

Comments: Tom Paine: Projecting the Future, Producing the USA

Nick Land: Stupendous!

This seems one key point to me:

"Paine's common sense provides proof that, fantastically ignorant as we may be when it comes to metaphysics and our own minds, the really big questions that affect us on a daily basis – Do you want to live under tyranny or not? What is the optimal basis and form of government? – can actually be answered and communicated clearly and concisely."

A remarkable element of 'liberal metaphysics' - for instance 'natural rights' and the ontology of freedom - is that, despite its deep philosophical implausibility to many sophisticates, its practical consequences are so unambiguously sensible. Is this mismatch itself an index of hyperstitional efficiency? Or to re-phrase: is 'liberty' itself the ultimate hyperstitional phenomenon, grounded only in its own autogenesis?

The general point can be pursued into your discussion of Paine and Burke, or Hobbes. There is no doubt that Hobbes is far more 'realistic' in a first-order respect than either Locke or Paine, yet perhaps this realism comes at the cost of excluding the hyperstitional potentialities of the (far) more liberal position. Does American history substitute for an absence of convincing ontological foundations, adopting 'shallow' (common sense) political principles rather than rigorously convincing philosophical principles, and by doing so harvesting an evolution of freedom that no (Badiou-style) 'politics of truth' can access?

sd: Nick - in a nutshell, yes to your points, though I would stress that liberty emerged from very tight parameters: paradoxically, tight and specific constraints on liberty generate the most liberating (and successful) hyperstition. the string is tied to a bow, the constraint is tension used to propel (or something like that).

The other paradox (which you point out) is that humanity's resistance to unpalatable truth can actually be very k-positive and productive - this contextualizes 'common sense' within a deeply schizoid landscape, i.e. common sense might be extremely lucid, yet the dynamics it is enmeshed in are thoroughly mystifying.

It would be nice to hear something from the H. American contingent about Paine's status/position in the Founding Father mythology. In Europe Paine seems to be scandalously neglected - he's neatly summed up as being a supporter of the French Revolution and arch-enemy of Burke, and the American side of his operations is passed over (e.g. university courses which purport to analyze the French Revolution but make scant reference to the American Revolution).

There is also a lot of stuff in Paine that ought to be of great interest to the left - the last chapters of *The Rights of Man* present a coherent argument for a temporary welfare state (a re-allocation of taxes until the poor are educated and can stand on their own two feet), but Paine seems to be largely ignored by the left (maybe I'm wrong...)

Nick Land: Very on-topic Paine invocations from Bill Frist (!):

www.volpac.org/index.cfm?FuseAction=Blogs.View&Blog_id=210

(great remarks in fact)

traxus4420: haven't finished the article yet, but I can vouch for Tom Paine's continuing role in the University -- at least, in my (middle-to-upper-middle class public midwestern) university. I had a class on literature and revolution, and we read the 17th-18th century Anglo-French political canon -- Burke, Rousseau, Paine, Locke, Milton, etc. I think this was an unusual reading list for a lit class, but from what I know par for the course in the political science and history departments. A good class, though naturally the people you'd expect not to be very popular in discussion were not very popular in discussion.

I remember liking Burke though not agreeing with him much -- nice earlier piece on him, btw -- Paine I was always pretty well down with.

I WANT that Davies book --

Milton I think might be a good next choice if you want to continue this little founding thinkers of Western revolution series -- a step back history-wise but certainly relevant -- the way he activates the founding myths of Christianity while splicing in Greek

classicism to advance the cause for liberal revolution is pretty striking even now and perhaps of greater hyperstitional interest than Paine and Locke's (stylistically) straightforward polemic. Even in that vein Milton has some good stuff: 'The Tenure of Kings and Magistrates' (fly.hiwaay.net/~pspoole/Tenure.HTM) is a tour de force. Of particular interest is that while the text is a fairly pointed stab at Charles I, he never is mentioned by name. Key to his project is reconfiguring political violence as DEFENSE, a hyperstitional construct still very much in use by the western powers (and their liberal-politics-trained Islamic enemies as well).

I find that this site as it has gotten more enamored of a single political viewpoint (clearly fetishized just as much as the marxism of your nemesis at k-punk) has fallen deeper and deeper into doing its own reinstatement of the transcendent ego-self, which is what I used to come to this blog to avoid. All this talk of individual liberty and rational interests only leads to a circular near-tautology when combined with the realization that the entire ideology of classical liberalism, like any other, is more or less without foundation in the sense of one linear set of coherent justifications.

I feel that the old hyperstition blog would say that of course there is no justification for classical liberalism, neoliberalism, or any of it. Its justification is created from within, which is probably why it seems so 'eminently sensible' even though it doesn't really cohere if you try to analyze it. Ideologies, hyperstitions, are programs that carry their own internal logic -- forced into particular forms by a pre-existing hardware, of course, but otherwise determined more by compatibility issues and proprietary concerns. Once you've been programmed deeply enough, nothing else makes sense.

Isn't the task of hyperstitional 'research' to go beyond current programs, or if that's not possible/desirable, at least mutilate them?

mutilate = perform surgery

Nick Land: traxus4420 - sounds like you've had an exceptionally solid education :)

Digesting your wider (and critical) points, although - personally speaking - a lot of what might seem like ideological decision making boils down to sleep deprivation and attendant sinkage into empirical psychology. Also seems quite hard to disentangle your substantive 'objections' ("the entire ideology of classical liberalism, like any other, is more or less without foundation in the sense of one linear set of coherent justifications") from the principle points made both in sd's piece and my immediately following comment.

But, for the sake of a little 'kettle logic' - your suggested equivalence between classical liberalism (tenets of the global process in motion) and Islamarxist reaction ('Make it stop!!') is highly unpersuasive IMHO. I'm enjoying the opportunity to reground common sense - however precariously - outside academic leftoid BS and in the immanent radicality of the historical process.

... but it's great to see you back, and I hope we can tack into your tradewinds enough to keep you around

sd: hi traxus - you have been missed around here.

Your comments on Milton are very useful and I'll follow them up.

Some thoughts on your other comments.

'enamored of a single political viewpoint'

1. If you've actually read the Burke and Paine posts carefully, I think it would be hard to say that they come down heavily on the side of either conservatism or liberalism: Burke and Paine both have their useful weaponry and their achilles' heels. This blog seems to wander healthily between liberal and conservative territories. All I'm trying to do really is examine and assess the codes - you can't perform surgery until before an examination.

2. Paine shows, in no uncertain terms, that there are times when people have to make a choice. The alternative to 'a single political viewpoint' is political paralysis, which can often be equated with cowardice. Maybe this is facetious, but would there be any point in pointing out to Zubr in Belarus that they are 'enamored of a single political viewpoint'?

If there is 'a single viewpoint' operating on this blog, I don't think it would be fair to say that it is closed. If you have an alternative, mutilated viewpoint, then bring it on.

3. Why use my post to take wider potshots at the current state of the blog? Why can't we stick to the matter in hand? The two things that baffle me most about this blog is a) the amount of flak the blog gets as a blog per se b) how much time and energy the blog spends defining itself. From my (admittedly limited) experience of the blogosphere, this doesn't happen elsewhere - people just get on with it. If people really have something valid and interesting to say, then why don't they just say it, rather than this continual griping?

Nick Land: sd - I think there's an important memetic complex behind all this, tied up with the cultural aesthetics of the bohemian bourgeoisie (which, let's face it, we're all at least partially infected by). Various forms of nihilistic nominal revolt are far more easily digested than anything that might imply complicity with the existing order of the world - compromise (and 'common sense') in particular is coded as deeply uncool. I agree with you that this can easily become lazy fence-sitting, but I can definitely see where it's affectively coming from. If everything here was all presented as a hyperperverse masochistic leftism ("we have to accept the capitalist machine is chewing us up, and this is exactly how") or an impotent ultracritique ("nothing except tentacle-face absolute freedom is worth an iota of support") it would pass the bobo aesthetic trial far more easily - at the expense of complete disengagement from the messy and profoundly suboptimal politics that actually moves stuff forwards.

puff adder: traxxus, yes--and traxxus, I find it obnoxious that there is even the perception that 'this site is enamoured of a single political viewpoint.' It's not like I don't write here a lot too--if you think just because I posed with the head of Medusa in my hand and have no truck with down-freak commies like Arpege Chabert that I'm going to take on all the turbo-capitalism Nick offers? Now there are parts of this 'turbo-capitalism' I want, and I already got busy last night. Have you not left this bitch behind yourself? Because at least I have come that far. I'd go there only to strip her of even more privileges than I already have, although it looks like someone named Josef K. has started working on her at the lower 'intensive labour' level, i.e., sophistry level from which she has until now been able to operate fairly effective bullying techniques--and to secretly prove that the Politburo wives would have had a lot of expensive clothes if they had had any exposure to some decent role models (I recall that when we saw them throwing dirt into Brezhnev's and Andropov's graves, the commentator said that the names of many of the Politburo wives are not known. Andropov managed to live one full year as Premier or whatever it was called, and a NYT cover story did admit that he owned a 'fine television.' Not exactly rolling, but this is what all the Party leaders have always wanted--to be rich in a drab way--and that's all they've ever gotten. Nobody wants to hang out with them.)

I think the new Hyperstition is better than the old one, and it's because I freely disagree with the management on some things. I live with the fact that the non-Americans don't care what happens in domestic policy, but at least they're not pretending they're not capitalists, or pretending that they've had capitalism forced on them, so they can only alternate periods of expensive wine consumption with dumb blogging about how their currency trading is killing poor people, but no, 'I won't stop.'

And don't expect me to speak in an academic tone for you. It's you who have to make yourself worthy for the joy of Hyperstition. At this point, I still don't know quite what it is, but you are not going to talk about this as though the joint was just strict management and then theatrical pieces of fluff like me. That student stuff is what has to go. You have to realize that you come and go as you please, and prove yourself an asset, but I haven't yet seen that there is agreement on nearly every political stance (and not just disagreement from me) except that I think all of us don't support Islamic idiocies about mosques and such stuff. Northanger and I have both had to storm out in protest recently, but you'll find that concentration on long things occurs and divertissements can proliferate too. The problem with some of the old Hyperstition is a 'serious posture' that actually precludes what I think may be the essence of what is wanted (I do not mean silliness, although very small amounts won't get anybody thrown out. It's better than 'Survivor' or 'Big Brother' and you can even insist on offline life while doing it. I've already started making Kurzweil into a character for example. What do you think that is, some kind of occupational therapy or something? I still keep my antennae out, and use aggressive supplementation from his and Grossman's health book, but have since realized they are oppressive in some ways, and get an excellent pastry every single day.

I had to finish up over in that hellhole of blogs, although there are a couple that you can swoop into on the rare occasion. For example, the Weblog let me set up shop for 4 days while we put Mrs. Chabert into stocks, just like it was the office George Washington used during the American Revolution in the Jumel Mansion just above Central Harlem, where you can still see the Napoleonic furniture. However, you should realize that she has been put out of business, and you should remember that you said felt more intimidated by her than by this blog. You know why now, don't you? She is decidedly NOT a smoooooth oper-a-tuh....

Now, I haven't even had time to read the full Paine post, so I will do that today, but one doesn't always have to be one step ahead.

northanger: nick. now i'm worried. puffy can throw down better than i can (aka, have a cow) & i fart to track wind. are you *sure* we shouldn't be talking Žižek since i've managed to straighten out that pesky háček thingy.

think the best analogy i can think of, responding to this excellent piece, is filmmaking (specifically, independent film). in a nutshell, primary concern of independent filmmaking (IF) is freedom of diversity where artistic expression not bounded by production codes & over-controlling studio systems. additionally, technological

advances in digital media drives down production costs & international film festivals further spurring what David Rosen calls a "growing international culture industry"[1]. whenever film production rigidifies, IF continuously bifurcating & morphing generating enough velocity to escape controlling structures. IF refuses to be contained. its elasticity a good example of, what Tachi mentioned elsewhere, hyperstitional fluidity.

this is also a good place to challenge assumptions presented in Bennett's "Anglosphere Primer"[2]. i'm using two movies to illustrate some of the problems i see with the Anglosphere's hyperstitional framework — which, imho, sustains the very structures triggering diversifying bifurcations. in particular, i'm going to unpack one specific quote from Bennett:

"Anglosphere theorists promote more and stronger cooperative institutions, not to build some English-speaking superstate on the model of the European Union, or to annex Britain, Canada, or Australia to the United States, but rather to protect the English-speaking nations' common values from external threats and internal fantasies. Thus, Anglospherists call on all English-speaking nations to abandon Haushoferian fantasies of geographical blocs: on America to downgrade its hemispherist ambitions, on Britain to rethink its Europeanist illusions, and on Australia to reject its "Asian identity" fallacy."

specifically, what are Haushoferian fantasies, hemispherist ambitions, Europeanist illusions & "Asian identity" fallacies? also, what is the global reality of science & technology? but first, i've got to state my objection to the name itself, ANGLOSPHERE, which leaves many of us bifurcating into remedial Anglosphere apologetics. should be noted the term isn't "racial". however, "taken for granted" values certainly hard to swallow when an unbalanced minority percentage incarcerated by a rule of law we're supposed to hold dear. how is this sustainable?

the two films are "The Birth of a Nation" (USA, released in 1915) & "Valley of the Wolves Iraq" (Turkey, released in 2006). i cannot think of two better films highlighting the cultural gap overlooked in the Anglosphere.

[1] Globalization Blowback: Part I: Globalization & the Culture Industry

[to be cont]

puff adder: And Traxxus--another thing is that Nick and I disagree on Democrats and leftists not being the same thing. Does anybody really think billionaire Kerry, and the Clintons and Gore are anything but super-capitalists? OF COURSE they are not leftists, they all own many televisions, many of which they are not even aware. You see, I can say this freely because Nick brought up a horrifying image of 'Karl Rove wet dream' and that just sounds so awful no matter how you slice it, so that lines of demarcation were automatically drawn. This may prove Nick never had any characteristics that were covered in the Kinsey report, because sometimes anybody would separate esthetics from politics. You see, somehow Nick seems to have missed that all the hard left marxists think the Democrats and Republicans are exactly the same thing. They definitely have decided anything in the NYTimes, including Maureen Dowd's consistent critiques of the Bush regime, are all done only under the auspices of the Bush regime. If Nick wants me to give me a gastronomic tour of Red China, for example, he'll need to get some better images for 'the dark side' he's offering.

Northanger--interested in your points about the two films, but remember that 'Birth of a Nation' is a very special case, and needs to be seen as tied to its successor 'Intolerance', in which Griffith makes some of what he seems to be defending in 'Birth' somewhat less obvious. Griffith is a lot more complex than most people know, because he has never been surpassed as a moviemaker, makes Godard and Bergman pale by comparison. Anyway, that's probably tangential to the point you need to make, but useful to remember that 'Birth' was popular in LA and NYC at the time of its release too, not just in the super-racist South.

SD--superb presentation. I've read through, but will re-read, I've gotten some of it though.

'A bold simplification would have to say that the French Revolution descended into a bloodbath, dictatorship and pan-continental war simply because there were no efficient checks in place and because the noxious side of human nature was allowed free rein.

Paine's anger with Burke for his having denied the future its natural rights seems to prevent him from seeing the significance of England's so-called 'Glorious Revolution'

of 1688. It's significance lies not in the Whigs importation of yet another foreign king, but in the decisive reduction of monarchical power in favour of Parliament. '

Paine and Burke didn't live long enough to see it, but didn't the French Revolution actually succeed far more than the English Glorious Revolution in the long run? The blood bath was good, even though Proust's lower-downs were still complaining that they aborted the guillotine inflictions too soon, and the ancien regime descendants had set up shop in the Faubourg St.-Germain (they had). On the other hand, the British monarchy may be lower than Parliament, sure it is, but the one thing I am always suspicious of is those weekly meetings of the Prime Minister with the Queen. It doesn't look like much, maybe, but the fact that she knows more state secrets than any living Briton (since they've all died or gotten fired eventually over a 50-year period) has this weird pagan quality to it that does not exist in any other country.

Nick--what do you think of these weekly meetings? Do you think these commoners that have blasted their way into temporary power completely ignore the residue of Absolute Monarchy, or are they not probably seduced by that old white magic as the weeks turn into months and years? Nobody in France has to go to a Noailles for their classes in preserving old corruptions. I remember thinking that Mrs. Thatcher began to get a Windsor sheen herself shortly before she was fired.

traxxus4420: Everyone -- point taken

esp. PJM/puff adder -- I got you mixed up

One last off-topic and I'll do my best to contribute something else -- it seems to me that this constant redefinition 'suffered' by this blog is a logical consequence of what it is (trying to be) about -- that is, understanding what it means to be 'about' anything. Hyperstitional analysis/'intensification' isn't something you can 'just do,' at least if 'just do' means 'just ignore the existence of unquestioned assumptions.' It's just debugging, is what it is (though one must of course beware it doesn't itself become a bug).

Compromise = yes! This seems a necessary precondition to any hyperstitional working -- but compromise does not = common sense, at least not if you follow it to its conclusions. Anyone here read Bruno Latour? He gets an anti-science rap but his ideas of how communication and compromise must be understood as including non-humans and the inorganic seems key to grasping the consequences of a genuine practice of compromise.

Government and exchange are inextricably linked, at least in our world, which inevitably teams exchange with war, domination, exploitation, etc. It really cannot be coherently read as some empirical 'good,' at least not yet. As an eventual goal? But no, this is not compromise. The concept of authority is a kink that everyone is still trying to work out, almost if not already having outlived its usefulness. For what it's worth I do believe humanity has made some progress, but we can't assume that old specter is gone yet, even from stuff we like.

The instrumentalization of humanity that supposedly unfettered commerce implies is for example a concept easily infected by authority, hierarchy, and violence.

I also am in some serious doubt about the usefulness of this whole anglosphere construct, not even taking into account the ridiculous name. I'm not trying to equate 'islamo-marxism-fascism-whatever' with classical liberalism, only trying to point out how there is more interplay of concepts between the two than a rigid us-them dichotomy implied by 'anglosphere' and 'islamo-badness' would suggest. 'Free trade' obscures the monopolistic, statist elements that help constitute neoliberalism and 'Islamist' obscures the secular and even economic justifications held by the individual groups that make up the movement. They're political buzzwords -- hyperstitional constructs themselves, consciously used as weapons to advance various causes. Use them at your own risk.

sd - intrigued especially by the last 3 paragraphs of your Paine post -- will process later --

Dammit, I had the chance to pick up Birth of a Nation in China for something like a dollar but passed because I thought it was just an ad for the Klan (not being snarky here, I really want to see it now).

I'll try to show up more instead of just cherry-pick -- you'll have to forgive me -- for a while back there I thought this blog was literally dead (i.e. no more posts)

Nick Land: OK, too much here to deal with everything at once, but this from northanger, a citation:

"Thus, Anglospherists call on all English-speaking nations to abandon Haushoferian fantasies of geographical blocs: on America to downgrade its hemispherist ambitions, on Britain to rethink its Europeanist illusions, and on Australia to reject its 'Asian identity' fallacy."

seems so indisputable to me I just don't get the problem. Obviously none of the geo-proximity relations will ever amount to anything more than

economic mutual advantage (which is fine as far as it goes). More specifically, with a major global war brewing up, does anyone think Belgians will get into the foxholes with Brits, Mexicans with Americans, or Filipinos with Australians? Wake up people! If there's any heavy-lifting to do the Anglosphere will be doing it and those who want to get in the way of that generally don't want the heavy lifting done in the first place - they want a Belgian 'solution' and that means the Islamarxists win.

sd: PJM - "but didn't the French Revolution actually succeed far more than the English Glorious Revolution in the long run?"

Well, this is crude and from the hip, but...The French Revolution led to a Europe determined by (the whims of) Napoleonic megalomania, part and parcel of which was massive centralization and rampant nepotism. That's to say, the French Revolution merely swapped one form of authoritarianism for another, and France was basically under the sway of authoritarianism of instability up to the 1870s. The French Parliament was basically powerless under Napoleon III and it was only after the Franco-Prussian war that the Parliament had any real power. The Third Republic swapped authoritarianism for the other French speciality - instability - until it collapsed under the Nazi invasion. The French/Napoleonic penchant for centralisation and state authority reared its ugly head as soon as it had the chance after WWII, in the form of the EU. If I had the strength, a comparison between the French and British Empires might be instructive, but I'm more interested in US anti-authoritarianism than in highlighting the dubious virtues of the British Empire. So the answer to your question is a decisive 'No!'

puff adder: SD--Thank you, that's very informative and doesn't answer all that much of what I'm interested in--but you need not bother further, although I hope Nick will answer about the weekly meetings of prime minister and monarch--about that I really want to know, if it is knowable. What I'm interested in is which elites have produced the most of what I live on. All the great powers have had elites and there seems little point in pretending one can do anything other than decide which results one prefers, since not a one of these is without enormous corruption, including all periods of the American. Your historical background is useful, though, makes one wonder whether Germany becoming a major power with the Franco-Prussian War didn't force France to realize it wasn't going to be able to run things the way it wanted. If American culture continues in the direction it has been going for the most part, and there is no way to

pretend it won't, I am sure it will take Nick's 'global war on the horizon' to decide France didn't develop in a way that was uniquely extremely beneficial, brilliant and destructive. The same is true of Britain, Germany, and the U.S. Varying perspectives occur in direct proportion to how close one is to the carnage. I'm sure if I were Arab, I'd be a lot more likely to be pro-Muslim than I am being a New York Mullins. It's ultimately in culture production that a nation's historical strengths and weaknesses can be read when there is no sense of urgency and emergency; and France's tendency to centralization and the selfishness that that has implied undoubtedly paradoxically have produced that peculiar French brilliance which I think Cioran describes especially well while knowing he's Romanian and other things like 18th century hollowness in language in France, etc. Was it worth it? Yes and/or no. Personally (that again!), I am as yet unwilling to give up much of the past until forced, but there does seem to be a strange Renaissance in Hollywood film right now, I have no idea why. Then here and there, some other bright spot for no apparent reason. On the other hand, films like 'Cache' probably wouldn't have surfaced without French interference at GATT accords back in the 90's. Okay, this is somewhat tangential but not entirely. I think French selfishness has a lot to offer still, and that all nations are becoming very transparent in their core beliefs and motives. It looks as though the French Revolution took 200 years to 'take,' maybe, but that's how it went. Incidentally, the British monarchy doesn't bother me from a distance either, just so I don't have to work for them.

'makes one wonder whether Germany becoming a major power with the Franco-Prussian War didn't force France to realize it wasn't going to be able to run things the way it wanted.' should probably read that Germany delimited France's singular imperialism still further. After that, it went through many more delimitings, ending up less and less nationalistic. Interesting how much Germany has defined what France is.

sd: I'd be interested to know what you film buffs think of this:

en.wikipedia.org/wiki/Birth_of_a_nation

and there's reasonably intelligent discussion of the film here:

www.imdb.com/title/tt0004972/

'Birth of a Nation' is very much on topic for this post. Unfortunately I haven't seen it, for similar reasons to those given by traxus. I'll try to get hold of it by hook or by crook (more likely the latter).

northanger: nick. hmm...."The Core and The Gap [and] the Core of the Core is the Anglosphere". anglosphere + heavy-lifting sounds like rebooting the white man's burden.

is the Anglosphere itself Haushoferian? Haushofer's Geopolitik formulation justified Nazi Germany's Lebensraum expansionist policies & a land-based empire. Haushofer defined Geopolitik as "the duty to safeguard the right to the soil, to the land in the widest sense, not only the land within the frontiers of the Reich, but the right to the more extensive Volk and cultural lands". additionally, Haushofer {a} specifically studied the relationship of war & empire to geography & {b} accepted Ratzel's organic conception of the state. Ratzel's "raum-motiv" (he also coined "Lebensraum") was the expansive spiritual force driving great cultures. his organic state was borderless; the state was always growing with the land itself being the spiritual bond of the people & their ability to expand reflecting the health of the state. Ratzel also said that existence was sustained from one identical law & that a nation should be in frequent struggle with those around it.

the US is dealing with a growing Latino population that has already surpassed African-Americans as the #1 minority. their presence has already reformulated black districts & cities. Latinos now virally terraforming white neighborhoods, possibly becoming america's #1 race around 2050. do enough Anglospherian-googling & you will find sites about preserving America's national identity.

for some reason, looking at a world map with highlighted anglosphere nations reminds me of gerrymandering. actually, ACLU views redistricting as a threat to minority voting rights. while Tom Delay indicted on other charges, recent New Yorker article says these charges can be traced to the 2003 GOP Texas' redistricting fight.

i used to live in New Rochelle & want to do justice to sd's hard work on this post & the companion piece on Burke (sd: suggest providing links to each). what seems indisputable to you nick doesn't make much common sense to me. especially considering sd's "Virtual Involvement" section: "invoke an inevitable future in order to steel resolve in the present". this may be the Anglosphere's nougaty center & certainly Murray's hold fast the gates of Rome. but how do we go beyond these

abstract presentations & integrate them in our strategic processes & policies? (can't believe i'm saying this) how do we make theory & praxis seamlessly recursive when full existential engagement is lacking? imho, this is the main failure of the Anglosphere Challenge: who is Bennett's WE? who are the band of brothers holding fast the gates of Rome? i live in California now & the moment i (dare) say the word "anglo", somebody hears "gringo" before i can even get enough breath to say "sphere".

sd. thanx for mentioning Birth link. since i'm finding Badiou more hyperstitionally appealing at the moment, here's some links i was using to formulate my film analogy, hopefully using your breakout structure: 1. Common Sense; 2. Virtual Involvement; 3. Make Commerce, Not War; 4. Positive Fictions & 5. Dangerous Delusions.

Intolerance (film)

en.wikipedia.org/wiki/Intolerance_%28film%29

Crash? Crash!?!?

www.cprobes.com/archives/2006/03/crashed.html

thanks puffy for bringing up Intolerance & it is relevant. the film was more expensive to make than Birth, flopped at the box office & made Griffith bankrupt. i attended film school & we did view & discuss Birth of a Nation, primarily focusing on its technical achievements. haven't seen Crash yet & didn't know storyline. share cprobes reaction: "Crash is ultimately about them [Hollywood] and their failings. Nothing else *could* have won. Maybe this is their global cry for help". interesting thing about these two movies, Griffith wanted the characters in Intolerance "to be emblematic", therefore, none of the characters have names. difficult for an audience to emotionally engage with the emblematic — contrast Salter's (see link below, note #3) comments about Birth's Southern family, the Camerons:

—If the real story of the film is clearly indicated in the title, part of Griffith's directorial genius was to tell that story through the lives of sympathetic characters. As Griffith's biographer, Robert Henderson (1972, 158) has pointed out, "Griffith also demonstrated that an audience became most involved with the "truth" of a motion picture when they were involved with the lives of "real" people. The secret of The Birth of a Nation, perhaps, is that the audience cared about the Camerons."

en.wikipedia.org/wiki/The_Birth_of_a_Nation

[key point: black filmmakers wondering whether the film needs to remain a scholarly topic of cinema history]

The Birth of a Nation was one of the most popular films of the silent era. Its innovative techniques made it an important silent film. However, the film glorified slavery, provided historical justification for segregation and disfranchisement of African American people. The film is highly controversial but also an influential and innovative silent film ... and has been credited with securing the future of feature length films (any film over an hour in length) as well as solidifying the codes of film language (techniques as deep focus, jump-cut, and facial close-up, which are now considered integral to the industry).

The Birth of a Nation as American Myth - Richard C. Salter

www.unomaha.edu/jrf/Vol8No2/SalterBirth.htm

www.unomaha.edu/jrf/Vol8No2/Notes/SalterGroupNotes.htm [notes]

[key point: contrast anglosphere as myth production]

The Birth of a Nation was one of the most important films of all time, both for its technical and aesthetic achievements and for its enduring legacy of racism ... Birth serves as a paradigmatic story of American origins rooted in ideas of white supremacy. At the end of the article Oscar Micheaux's work, *Within our Gates*, is used to briefly demonstrate filmic strategies for countering Birth as myth.

en.wikipedia.org/wiki/Valley_of_the_Wolves_Iraq

[key point: Turkey's most expensive film]

...strongly negative portrayal of the American military ... Filmed with a budget of \$10 million U.S. dollars and released in 2006, Valley of the Wolves was the most expensive film ever made in Turkey.

Moviegoing Turks meet new enemy, and it is U.S.

www.iht.com/articles/2006/02/13/news/journal.php

The Stars Realign in Japan

www.latimes.com/news/nationworld/world/la-fg-pitchmen26sep26,0,5032798.story?coll=la-home-headlines

"The mystique has faded," said Akihiko Sasamoto, who heads the Asian casting division of Hakuhodo, one of Japan's biggest advertising and marketing agencies.

en.wikipedia.org/wiki/Samuel_P._Huntington

[key point: cultural rifts must be understood]

Samuel Huntington — (main thesis) central political actors of the 21st century will be civilizations rather than nation-states.

en.wikipedia.org/wiki/Clash_of_civilizations

[key point: Turkey's western-orientation]

Huntington refers to countries that are seeking to affiliate with another civilization as "torn countries." Turkey, whose political leadership has systematically tried to Westernize the country since the 1920s, is his chief example. Turkey's history, culture, and traditions are derived from Islamic civilization, but Turkey's Western-oriented elite imposed western institutions and dress, embraced the Latin alphabet, joined NATO, and is seeking to join the European Union.

Hollywood in the Era of Globalization - Allen J. Scott

yaleglobal.yale.edu/article.print?id=479

[mentioned in Rosen article]

American films always garner at least half, and sometimes more than two-thirds, of total box-office receipts in major foreign countries (see Table 2). This level of success on export markets can be ascribed not only to the prowess of American multinational media corporations in disseminating the products of Hollywood across the globe, but also to their unique ability to make big-budget films that appeal powerfully to popular tastes in many different cultures.

en.wikipedia.org/wiki/Bollywood

Bollywood and the other major cinematic hubs (Tamil - Kollywood, Telugu - Tollywood, Bengali - also called Tollywood, Kannada, and Malayalam) constitute the broader Indian film industry, whose output is the largest in the world in terms of

number of films produced and in number of tickets sold. Bollywood is a strong part of popular culture of not only India and the rest of the Indian subcontinent, but also of the Middle East, parts of Africa, parts of Southeast Asia, and among the South Asian diaspora worldwide.

Bollywood tackles Hollywood

in.rediff.com/movies/2006/jan/26bs.htm

[key points: power of Bollywood's box office + Hollywood entering India's domestic market]

Last year saw Hindi films block Hollywood's invasion of the Indian Box Office ... After several years of letting Hollywood claim a bigger and bigger share of cinema ticket sales, Hindi filmmakers managed to reverse the trend with a spirited performance in 2005 ... Of course, India is by far the bigger producer of films in terms of volume, spooling out some 900 films every year, compared to just around 75 from Hollywood. The difference is of scale: Titanic, Spiderman and Jurassic Park were all made with hundreds of millions of dollars.

Nick Land: *the moment i (dare) say the word 'anglo', somebody hears 'gringo' before i can even get enough breath to say 'sphere'.*

OK, and a phenomenon Bennett comments on specifically, but surely less than essential to the issue. I know 'Hispanic-Americans' will fight like fury for the free world - just as I know Mexicans won't. Now tell me why I'm wrong ...

northanger: capitalism.

Nick Land: dearest northanger - that response is not only preposterous in itself, it becomes doubly so from the fact you know your position in this respect is utterly untenable. You read the headline: "Mexico, Belgium and the Philippines sign anti-terror treaty" and you think, "wow! the terror monkeys are really going to be stacked up like cordwood now!" - I didn't think so ...

northanger: hey, did you know Costa Rica abolished their military? wow, wonder what kinda terror-treaty they'd scare up.

northanger: terror is big bizness in america, go ask halliburton.

Nick Land: northanger - we're getting somewhere now, you're thinking about the issue exactly like a Sandinista ...

bmr north: anglospheric will and capacity to actually clout? have tendency to agree with nick on this. The power projection of the UK and USA presently place them at the top of the list making them and those allied the strongest power bloc, dare i say, of current times. Though this is often marred by criticisms in dealing with the action in Iraq and with the current indirect war against Iran - but that is precisely the reason why they are in there in the first place. Secure and hold vital resources etc. Worldwide placement of anglophonic countries gives them a distinct advantage - whether fighting for liberty or not - in at least maintaining some form of economic/military hegemony. The actual geoproximity problems (as opposed to geopolitical advantages of say a unified europe) will turn out imho to be an advantage in the sense of strategic location over time. The UKUSA community's ESCHALON system, which gives them unparalleled access to monitoring world telecommunications, the added strategic placement in the north-west pacific, and the preexistant ties of NATO and ANZUS adds some credence at least to the Anglosphericist's power analysis. The potential for future developments are also increased when you add the rough tradition of thought, shared cultural viruses and more recently similar cultural revolts, on a fast turnaround basis. Whilst inextricably bound, there also needs to be an 'outside' influence to keep us on our toes wherever that comes from, it constantly happily shifts.

Is this the bloc of 'liberty' though? Can it maintain competitiveness levels with the rest of the world? Can it maintain its own levels of positive revolt without dissolving into the quagmire of christian totalitarianism? I am not saying no, but I am sceptical to a degree, and healthy scepticism has generally been useful in ruperturing the transcendent order. Invoking an 'inevitable' future makes my stomach churn with fear, especially when notions of liberty are 'invoked' under the corporatist banner in a similar fashion to that of the Marxist revolutionary spirit prior to Khomeini's takeover. I smell double dupe bullshit to an extent, except one IS actually more progressive than t'other in terms of individual liberty. We know which one (well I do) at least, but then it is no basis for complacency. A possible future on the other hand, maybe, well, a proliferation of possible futures? proliferating fears? I fear an inevitable static power bias, if there is actually such a thing. This is actually what tempted me towards euro-centrism at one point, the complexity of arrangement etc. I still find the UK's involvement titillating, watching Blair last year drink the EU presidency was like watching someone having embarrassingly awful sex. Fear, threats, terror? often find these rather helpful motivations in pressuring myself into more liberty sometimes, but

definitely find statist abuse of nightmarish threats abhorrent, cant be fooled into a submissive continental doctrine or a rancid manifest 'anglospheric' destiny with bloody 'inevitable' futures...The gravitation towards various geopolitical climes is still going to be inevitable, the UK being drawn towards continental politics, and the USA towards the Latin culture of Mexico etc. Christ i'm beginning to talk like this is actually going to happen...

damn! that came across as rather rabid sorry :(

northanger: nick. coming from you, that doesn't sound like a good thing, but hey, to show how the "future pay[s] for the revolution" (& stay somewhat on topic), here's a "straightforward presentation of financial facts and calculations" about Iran's weapon profile. US supplied weapons, etc, to Iran from the 1960s to the 1980s (up to & past Shah's reign, including Irangate & Iran-Iraq war; also see pre-1960).

Nuclear Threat Initiative's Iran Weapon profile

www.nti.org/e_research/profiles/Iran/index.html

Iran Missile Chronology 1960s-1984 [cached link]

72.14.203.104/search?q=cache:rNWxLQNhcngJ:www.nti.org/e_research/e1_iran_mch_1960s_84.html

power projection

eyah! ain't it great salting the earth & completely pwn3ding one's enemies in the morning? (Ede stercum meum et mori!).

Nick Land: bmr - USA survived FD Roosevelt and WWII without becoming a totalitarian society - I think it can cope with half-assed 'compassionate conservatism' and the Jihad at least as easily. As long as the 1st and 2nd amendments are in place, liberty has a refuge on this planet (and it isn't in Brussels or Caracas).

northanger - CNS not up-and-running enough yet to cope with a knight's move quite that drastic (I've still got you strumming the banjo to Bolivarian protest songs around a camp fire)

puff adder - I'm ignoring your 'weekly meetings with the queen' q.s because I'm a republican permanent expat, which is surely sufficient to disqualify me from commenting.

... and the prospect of Charles III is so repugnant its time people started musing radical alternatives ...

traxus4420: puff adder -- I dig your reading of this situation -- "Varying perspectives occur in direct proportion to how close one is to the carnage"

putting one's enthusiastic support behind some existing ideology or other is simply following programming -- unless of course one can formulate a compromise position. But this is the tricky point -- what constitutes an effective compromise? Merely siding with the current most powerful group/system doesn't really seem sufficient to me...

The content of a position never really matters as much as partisans say it does, unless it contains the seeds of some future ecological or social catastrophe within itself (aka is out of touch with the as yet unchangeable elements of reality). Difficult to determine, of course. But what ideologies tend not to factor into their worldview is that there is no ideological vacuum supported only by neutral facts that these would-be messiahs can simply fill -- they exist in relation to other ideologies, each with their own supporters whose minds will not be changed. Compromise is a syntax, not a stance --

On the anglosphere: reading through the James Bennett primer, seeing an interesting bit of mythmaking but of course even if the facts are mostly 'right' no term such as this can be taken as merely neutral description. This is plainly identity politics, only different from feminism, postcolonial theory, and the multi-culti hordes in two ways: one, it's preaching from the standpoint of the winners instead of the losers. Anglos aren't 'oppressed' by anyone except powerless liberals, ragtag bands of terrorists (who have very few allies), and indigenous populations of half-starved 3rd world countries. How do you think the myth of the Anglosphere is going to be used except to provide a rationale for self-defense from all these nefarious splinter groups of EEEvil, aka war?

The second way it's different is that it's not identifying itself through any biological or religious category (though whiteness and maleness seem pretty implicit), but a cultural one. It's anticipating the increasing irrelevance of previous groupings by race, gender, etc. as western civil society becomes less and less openly discriminatory. What it is essentially doing is making the assertion of cultural authority less visible than say British imperialism. It takes a variety of policies, many very sensible, and brands them as 'Anglo.' Civil society as a proprietary interest of the U.S./British/Aussie/etc. conglomerate (which hardly exists in such a communitarian way as implied, obviously

U.S. is top dawg). Again, whether or not members of Anglo culture actually spawned these practices doesn't matter, it's all in how the conclusions are applied. If you adopt these policies, you have joined up, are now honorary 'Anglo.' Congratulations and all that.

This is more than just semantics or harmless self-indulgent fantasizing because it reflects the actual practice of spreading capitalism and liberal values. If the purpose of the Anglosphere maneuver is to make the wondrous gifts of Western civilization available to all, so that all can benefit from everyone's success in the non-zero-sum game of global capitalism, it is sure to be a dismal failure. Success would only be achieved by de-branding so-called 'Anglospherian' policies and releasing them for 'free,' fully open source, no hidden costs, no monthly fee. But this wouldn't jive with actual U.S. policy, which involves, naturally enough to any American, securing the best deal for itself (or at least, in the case of Iraq and Vietnam, attempting to and succeeding occasionally).

I fucking love this line:

"Those who come to use the language and concepts of the Anglosphere (and further their evolution) are the memetic heirs of Magna Carta, the Bills of Rights, and the Emancipation Proclamation, whatever their genetic heritage. "Innocent until proven guilty" now belongs to Chang, Gonzales, and Singh, as well as Smith and Jones."

Condescending, reactionary shite. Why isn't this obvious?

puff adder: Nick--you're ignoring my question because you're a British parasite of the U.S. Bush administration which is going down the tubes, and also because you're British, but don't know the answer to what the Queen is doing and wish you did. Britain is by far the most parasitic of all Western nations. To hell with the 'Anglosphere.' Not even bigotry, just an attempt to keep the 13 colonies.

Anyway, you and SD don't answer questions because you want to 'keep your carriers hungry,' and you know I discovered that.

Liberte, Egalite, Fraternite! Vive la France!

Traxxus--I'm a connoisseur of such trinities myself. Here's one from Didion's 'The White Album' with which she concludes after describing her 'atavistic rage' at Bishop Pike:

'When the man who started out a winner was lying dead in the desert his brother in law joined the search party, and prayed for the assistance of God, Jim Jr., and Edgar Cayce. I think I have never heard a more poignant trinity.'

I am fully aware that the Declaration of Independence was not included in the Anglospherian Trinity because then it wouldn't have been a trinity. On the other hand, there were such slobes writing, that you'll see that 'Chang, Gonzales, and Singh, as well as Smith and Jones' is also out of whack. You know how Anglospherians like 'symmetry.' They couldn't ever understand why culture began to shine as a result of immoral centralization in Paris, and that over-moneying Duke Ellington brought cabaret to dizzying heights of musical sensuality.

'What it is essentially doing is making the assertion of cultural authority less visible than say British imperialism.'

Plus, as we see, the American Empire, while hardly as visible as the Old British Empire, is FAR more obvious to most people than the New British Empire, which is all stealth! You'll notice that an especial British characteristic when talking to us Amewican peopow is to refuse to give out British details. After describing to me how he convinced 'the Americans' that he should be granted citizenship (I suppose due to piano tinkling at the Algonquin), Richard Rodney Bennett responded to my question (I was an anglophile at the time) 'and what about the other way around, you know, if I want to become a British citizen?' with a disdainful 'I have no idea' and a 'just who do you think you are?' look.

Nick Land: Traxus4420, puff adder - you're probably not coming from exactly the same places, but you both seem utterly oblivious of the vast historical contingency of a broadly civilized (capitalist, secular and at least partially open) global order based on the willingness of Anglosphereans to get dirty and brutal when required to keep it that way - the only people who have since the Romans btw. The idea that snide PC objections to certain aspects of this liberal order somehow counter-balance the gargantuan benefits of this verges on the sophomoric. Try and imagine the Napoleonic, Teutonic or Russo-soviet alternatives if you doubt it. All the major Anglosphere powers are profoundly polyracial and for all practical purposes tolerant to a fault, the fact that they fall short of the (talk-is-cheap) ideals of a contemporary university arts department is only to their credit.

As for Cap'n puff's notion that I'm a parasite of the US - that's true insofar as the whole planet is, but not an iota further. And I literally don't give a %\$#@ what the

Queen is doing, or pretty much anything else about contemporary Britain except hoping they get the hell out of the EU and re-connect with the Anglosphere (although they're probably too far gone into welfarist decadence for that). My allegiance is to Planetary Technocapitalism, and to anything else only when it functions as a machine-part thereof. \$\$\$\$

PS. That might sound rabid, but actually I'm enjoying myself ... yours parasitically &C;, \$\$\$

sd: puff adder - "you and SD don't answer questions because you want to 'keep your carriers hungry,'"

Unfortunately, we are still imprisoned in human form, so processing is slow and cumbersome. I don't always answer questions because a) I am trying to run business in a very cutthroat environment b) I have 60 students to deal with, and c) my attention is constantly distracted by a baby that is either screaming or disarmingly cute.

With regard to Queen Elizabeth, I share Paine's disgust with a nation that allows itself to be imposed upon by such a frumpy and sub-intellectual monarch on a daily basis. The biggest argument in favour of debit cards and internet shopping is that citizens don't have to look at the Queen's ghastly features.

Plus some of the questions are impossible to answer quickly (e.g. northanger asked a question about Stalin and the left response to 'revisionist' history - it's a valid but immensely complex issue that will be dealt with, eventually, as unsatisfactory as it might be).

traxus -

'If the purpose of the Anglosphere maneuver is to make the wondrous gifts of Western civilization available to all, so that all can benefit from everyone's success in the non-zero-sum game of global capitalism, it is sure to be a dismal failure. Success would only be achieved by de-branding so-called 'Anglospherian' policies and releasing them for 'free,' fully open source, no hidden costs, no monthly fee. But this wouldn't jive with actual U.S. policy, which involves, naturally enough to any American, securing the best deal for itself'

I agree that the Anglosphere construct needs some repackaging (even the Albion's Seedlingss site looks awful, with those flags), but don't see how your conclusion follows from your premise here.

The U.S. does often export its values for free in the form of aid and various humanitarian programs, and this has backfired on the U.S. in several cases, and so goes against U.S. interest, if only in the short run, but not always (WWII is a case in point - supplying the Red Army with jeeps, clothing and food helped the U.S. in the short term, but in enabling the construction of the Soviet Bloc it definitely did not... The Berlin Blockade and the Marshall Plan are other examples of more successful U.S. self-interested generosity). U.S. aid in Sotuh America may or may not pay off in the long run - it's a complex gamble. The media's role in this is central - we only ever hear about the amount of aid the U.S. is pumping into other countries when the U.S. threatens to withdraw it, or is said to be threatening to withdraw it (and is accused of political blackmail).

The point being that sometimes it is in U.S. interest not to charge 'a monthly fee'.

Anyway, are there any criticisms of the U.S. working primarily for its own interests which are not moralistic or representatives of conflicting interests?

Ultimately I really don't see why 'the non-zero-sum game of global capitalism' that Paine outlines is unrealistic - it's just common sense.

puff adder: Traxus-'Anglos aren't 'oppressed' by anyone except powerless liberals, ragtag bands of terrorists (who have very few allies), and indigenous populations of half-starved 3rd world countries.'

That's the part that's overemphasized too far to the other side, I think. The 'ragtag bands of terrorists' have a few too many allies for my taste at this point, even though brilliant U.S. Iraqi policy cultivated these and trots out Bin Laden tapes for mass consumption instead of catching him. No point in listening to Arpege Chabert and Co., though. None of those crows has any understanding that Iran, in particular, is very serious, including to their own bovine asses.

SD--appreciate the practical information on failure to obtain as many benefits of technocapitalism as Kurzweil has yet. You know, of course, these are always expensive at first, like computers were, and then become more affordable as they begin to work better,etc. Anyway, I realize constraints of time. You and Nick do answer questions, if quite often choosing which parts you want to answer in very

much the partisan way traxus and I have indentified. As such, you both may have futures in part-time work as Hyperstitional carriers...

Nick--well, you see, even if you think it is impossible, I agree with only some of it, and will go no further into your pit of mere \$\$ when there may be \$\$\$\$ without having to. All those Teutonics, Napoleonics, and Soviets were willing to get equally as dirty, although not in order to preserve the Anglospherean ideals. While I don't repudiate the Anglospherean ideals in general, since I must be a part of a good bit of it, it is not really to be expected that non-Anglospherean personnel would wish to get 'dirty and brutal'(mmm...how college football...) in order to preserve the U.S. and dear, dear Britain. I mean, for chrissake, I hate the Muslim fanatics, but I don't expect they are going to start behaving all of a sudden. Commies are gauche by University Arts Department standards even, and they even ruined lives of danseur primeurs and ballerinas when practical, maoists broke pianists hands (Of course, this kind of 'high art' stuff has to be handed to you in this generalized form only); but I hardly ever expected them to fight for anything other than what they saw as their own interests.

Technocapitalism of which you are a well-oiled machine part. Yes, I think that's advisable, I try to do a fair amount of that too. It's more a matter of degrees, I imagine. U.S. policy in Iraq has been so idiotic that I have no compunction of not supporting it, and we've been through this. As far as not being interested in anything that doesn't support technocapitalism as a machine part, I certainly don't support just any of it, because that sounds perilously like totalitarianism of a variety merely more Germanic than Soviet--in short, less drab but equally oppressive. In my moments of continuing within this physical sheath which I do not offer as a blood sacrifice to technocapitalism, I am quite willing to keep all of these treasures in reserve. Your project and China's is arresting, but better you than me. I am still going to do many things that you disapprove of, with the great hopes that this disapproval will but enhance the pleasure, as any lapsed religionist from the Deep South knows that 'sin is fun' (do not imagine that I am talking about 'it,' I am talking of much more important things, and these I shall now place off limits to Hyperstition blog management, they can fight, threaten and fire, little good will it do against the fire of brave New York Pervert).

We at New York Pervert are not convinced that modern Red China has come up with the best imaginable human product that can be found, even as it has proved to be a good processing and distribution center for British parasites as they learn to love life on the collective farm....oh! pardonnez-moi, workplace-office-full-of-computers, that

is. For those of us with a clear conscience about the American part of the Anglosphere when it serves our own French-pretentious interests well, we now embrace the joy of individual choice on how one separates one's Hyperstional blog life from ??? I already told you, I'm not telling, because it's not a technocapital machine part, and you will have to do intensive loss of time sheet money to find out. And I won't even tell Northanger some of it, because I don't expect her to have to get brutal and dirty to protect the Puff Adder Way—a life of nobility to which Northanger has herself led me! but stalwart I shall be against all bombastic news, including talk of debit cards' beauty, when only last hyperstional night, I dreamed that the Duke of Edinburgh told me that I'd need to use the term 'her majesty' the first time even in front of even him (after that 'ma'am' would suffice), but that I didn't have to do 'your royal highness' in order to refer to him, because 'I don't like it', said he. Little did he know I'd already had a private audience with 'her' and that later I'd talk to the palace staff, all of whom confessed to having had nervous wrecks due to the Queen's using plastic placemats as decorative additions on the stairways.

I will concede that the queen is a more successful capitalist than Joan of Arc, who had to be demoted in a rather serious way after her machine part became obsolete.

Nick Land: Iraq's tricky, but it's going OK. Jeez, what's the reaction going to be if (when) things get really nasty? Clearing out the Pak. rats nests for instance, which I thought the OBL hunters were all in favour of?

"I am still going to do many things that you disapprove of" - having already voted for Carter twice (!!) I really doubt there's anything much you could do to shock or outrage me now :)

puff adder: Nick--all in favour of clearing out the Pak rat nests, always said I was.

Agree Iraq is going magnificently, Dick Cheney said so, that means it's true. Of course we're all past that 'civil war' talk because only one symptom of bombs has occurred in the last 24 hours. Anyway, Bush is going to address the nation several times in the next few weeks to prove that Iraq is a 'total success' and that we may or may not be removing troops at some definite or indefinite date. It is my deepest hope that the whole administration is so turned to stone that all the planned and pre-written speeches will be delivered with no attention paid to any events actually occurring in Baghdad and elsewhere subsequent to last week.

It seems to me that not identifying Iran as the serious problem may have been based on the one letter's difference it has with 'Iraq.' Now we don't have the manpower to even finish up with Iraq, although John McCain, wishy-washy if ever a POW hero was, says we do.

Anything John McCain most recently said is true. In fact, that is the new truism--anything that is most recently said is true. And that really is true if the sayer is the stronger. There's no getting around the fact that 'the reason of the stronger is always right.' It's the strength that's being heavily questioned right now. ONCE AGAIN, even if I could tolerate Iraq policy somehow as you do, I can never excuse the disgraceful domestic policy in New Orleans which proved to actual Americans, not processed hard-working non-parasitic Britons, that Bush made the right choice not to go out for football. I would imagine that Red China must be somewhat exhausting to live in and is a good therapy for someone as smart but roguish as you. You remind me of Bill Clinton in a lot of ways--not only in the way both of you manage to hold your noses and keep quiet when Bush's English proves itself beyond irreparable.

I should add that, even though the meetings with prime minister and monarch account for the single question worth asking in this vein, i.e., I am not concerned with Parker-Bowles weddings or what the idiot princes have for breakfast, there are obvious reasons why you should not be expected to answer it in any kind of detail.

However, it really is of interest, those meetings, because all prime ministers must be the same about them as was Mrs. Thatcher of 'INDTM'('I Nev-ah Disss-cuss The Mon-nahhch..') However, she did not mind being on the receiving end of such information: once she was informed that 'the sovereign has just passed gas,' and due to a whiskey or two, let out one of those slowly-modulated but full-chested Roastbeef Tory guffaws that go well beyond chortling, standing apart from chattering and giggling types, and are reserved for special occasions by special people.

I would imagine Tony Blair is also very INDTM, so I should not accuse you of that, even if it may be truer of you than of me.

This points to a privileging process that the monarch enjoys within herself that transcends even what she'd tell her own family, who only come second. As the only one who got holy oil in that tent back in the early 50's, she became the world's most powerful female onanist.

bmr: power projection? a barren earth? Hyperinflammatory latin? Nah, i nearly died the last time I shite ate willingly. Probably something to do with the quality of parasitic crypt losers I associate with in the UK. please dont make me do a fifty Chirac post ;)

whilst im not one most lucid of posters - nor the most serious - there is no need to scoff at the use of the term 'power projection'. Are you tacitly implying that im a militarist? I was merely tacking-out the geopolitical reality of the anglosphere and its discontinuity becoming one of its binding strengths. Just trying to add a little political realism into my psychotic mindset and the general moralistic landscape that i'm encountering here. I'll probably get the Fiennian Fire for saying that. Is being a power bloc something that we should hang our heads in shame for? The technical capacity of the angloshpeir is enough for me to entertain some of the ideas put forward by Bennett. He does need to hone his ideas more, and does come across as condescending to a degree. I really think it is naivety in presentation rather any crypto-racism. Simply aligning similarities for mutal benefit does not mean that one is going to dealign with anything that is marginally external purely for the sake of it.

sd - my opinion is tht morality is a human curse needs to be flung right the window when dealing with any of the criticisms of the US, and for that matter, of anyone else.

anyway i found these rather interesting:

www.defensetech.org/archives/001737.html

globalguerrillas.typepad.com/globalguerrillas/2004/09/bazaar_dynamics.html

www.thespacereview.com/article/563/1

that last article contains an interesting link to a piece on a Reusable Launch Vehicle and its benefits for 'power projection'. Sorry but I am a young man and I tend to get excited over hardware and strategy northanger.

northanger: sd. humanitarian aid is big business. you think the US doesn't write it off? yes, it should be acknowledged the US gives a substantial portion of aid. but, lets be realistic ... why?

The Road to Hell: The Ravaging Effects of Foreign Aid and International Charity, by Michael Maren

www.amazon.com/gp/product/0743227867/

Lords of Poverty: The Power, Prestige, and Corruption of the International Aid Business, by Graham Hancock

www.amazon.com/gp/product/0871134691/

Famine Crimes: Politics & the Disaster Relief Industry in Africa, by Alex de Waal

www.amazon.com/gp/product/0253211581/

Nick Land: bmr- trust your intuitions. A sweeping aversion to power in the abstract is the reliable index of a leftoid halfwit.

Power under republican (note small 'r') sovereignty is the real foundation of freedom, and the more it projects the better for everybody else.

... it's the final putrid harvest of christianity - a generation of moral retards who would rather be gang-raped by fascist savages than take their portion of responsibility for suboptimality, power and violence - in a single pathetic figure: Michel Foucault ("better Khomeini than an imperfect liberal democracy"). What twits.

puff adder: So--Britain's troops will soon be 7,000 strong, down from 46,000 at the beginning of the Iraq War. Compared to the U.S.'s 135,000.

www.nytimes.com/2006/03/13/international/europe/13cnd-britain.html

Explains a lot about Britain, fitted so neatly between one thing and another. Now the sense of suffocation and inertia that has characterized so much commentary about modern Britain begins to come clear.

Nick Land: puff adder - if you're looking for a vigorous defence of contemporary Britain both sd and myself are likely to disappoint. We fled the gdd*mn place after all

...

puff adder: No, I wasn't, of course. It's something I'm discovering that I find interesting. It's been one of the great, unique nations; and what has interested me is that its weird decline is also unique. I can't think of a single other major power that has always been so insular (Switzerland is as insular, but never has been a great power, and never has been a failure). There's a stinging kind of English anger that I would occasionally encounter there after uninterrupted politeness (unlike the pervasive Parisian rudeness practised internally as well as externally). I wondered if it became

much more pronounced after WWII, and obviously comes from previous attitudes. Not at all like the cliched out-of-control Irish drunken thing.

No offense intended. I cannot stay interested in the same things you are all the time, and it is not altogether irrelevant that the British involvement in Iraq, with its lower profile, would eventually make its way to me, although not as much of interest to most Americans, probably. There are times that the U.S. seems to be the only nation that actually exists, with China beginning to define itself however with a potential for a similar kind of power. Maybe India, too, but I don't feel it yet. It's actually a relief to have been able to concentrate a bit on this, since one's perceptions are not nearly as universally shared as one imagines. I've usually had to travel to actually think anything of real buzz happens anywhere besides the U.S., and that is obviously not possible.

Nick Land: The Brits have all left, over hundreds of years, leaving pretty much nothing except a vile Europeanized shell - if it wasn't for immigrants (the non-exploding kind) the UK - England for sure - would have culturally dessicated into a perverse nirvana of bitterly ironized tedium.

Everywhere outside Europe I've been has definitely seemed to "actually exist" though, largely through the vibrant market economies that are the greatest secret of the periphery (Europeans instinctively assume the rest of the world's 'poor people' spend their time sitting hopelessly in a drought-wrecked dust plain waiting for an aid donor to show up). What most struck me about the USA when I first visited it was that it's really part of the periphery too, a part that works and thus a model for everybody else. Nothing remotely like a European country in any case. Subtract Europe and there's just the periphery to varying degrees of intensity (and outright depotic suppression) - which is why the auto-subtraction of Europe, with a little help from our ullulating friends, is so intriguing to watch.

sd: northanger - "it should be acknowledged the US gives a substantial portion of aid. but, lets be realistic ... why?"

Let me guess - because it is in US interest. Shock! Horror! How awful!

If the US hadn't come up with the Marshall Plan, Europe would have gone communist, or at least staggered around in economic backwardness for a few decades. Anti-American West Europeans, with their comfy homes and cars, their gadgets, cheap flights and internet shopping would do well to reflect that their prosperity (or

at least the level of it) is largely due to US aid. Europe minus the Marshall plan is best seen by visiting former industrial stronghold towns in Eastern Europe and trying to imagine what they would have looked like without the Coca Cola ads that decorate them now. Any dictionary wanting to illustrate the terms 'grim' and 'soul-destroying' would just have to include pictures of these places.

this is unusually good:

en.wikipedia.org/wiki/Marshall_plan

The US also poured loads of money into Eastern Europe and Russia after 1989, some of which kick-started economies, some of which got swallowed by corruption.

US aid is incredibly complex and is distributed in many subprograms:

1. WoT funding
2. Promoting economic growth/reducing poverty
3. Combatting HIV/Aids
4. Fostering democracy, governance & stability
5. War on drugs

usinfo.state.gov/usa/infousa/trade/files/98-916.pdf

There are different types of aid. Aid which gets economies up and running (yes, so they can buy US goods and export to the US) is obviously better than chucking cash at corrupt African states.

As I've mentioned before, the future is in micro-financing. Bootstrapping aid.

northanger: sd. what a relief knowing somebody's getting properly funded. if they got any spare change left over...

www.sourcewatch.org/index.php?title=Bush_administration_education_reform

sd: Nick - did Foucault really say that? I never could get into his writings...

Nick Land: sd - it's a paraphrase, but not inaccurate. His support for the Khomeini revolution was euphoric and very public. But then his idea of a healthy society was one that would chain him to the wall to be screwed senseless by leather-clad Nazis ...

sd: northanger - you've taken the ball and started playing in another ballpark.

northanger: sd. well, this thread's got me thinking of engineering some type of Oankali Diaspora (blending together Butler, Egan & Paine), recognizing the anglospheric void of full existential engagement. it's my argument that the anglosphere structure hyperstitionally supports/prefers some genes over others. not a bad thing for most genetic blocks, but at what point does a suppressed genetic block recognize a bifurcating juncture (common sense)? let's say a genetic block experienced a diaspora that weakened its overall ability to exist on a planet. how can you append or bind together (horizontal gene transfer?) its strongest genetic strains & bootstrap a new trajectory?

See “Increasing Returns”

"Vertically generated variation is necessarily highly restricted in character; it amounts to variations on a lineage's existing cellular themes. Horizontal transfer, on the other hand, can call on the diversity of the entire biosphere, molecules and systems that have evolved under all manner of conditions, in a great variety of different cellular environments. Thus, horizontally derived variation is the major, if not the sole, evolutionary source of true innovation: novel enzymatic pathways, novel membrane transporter capacities, novel energetics, etc."

ok! this was what i was trying to remember: Eshel Ben-Jacob.

www.ratical.org/LifeWeb/Articles/H3Kevolv.txt

In Tel-Aviv, Eshel Ben-Jacob also finds bacteria trading genes and discovers complex interactions between individuals and their communities. The genomes of individuals—defined as their full set of structural and regulatory genes—can and do alter their patterns in the interests of the bacterial community as a whole. He observes that bacteria signal each other chemically, calculate their own numbers in relation to food supplies, make decisions on how to behave accordingly to maximize community wellbeing and collectively change their environments to their communal benefit.

Bacterial communities thus create complex genetic and behavioral patterns specific to different environmental conditions. The genomes of individual bacteria alter their composition, arrangement and the pattern of which genes are turned on in response to changes in the environment or communal circumstances. This important information is coming from various research laboratories. Both Ben-Jacob and Costerton see individual bacteria gaining the benefits of group living by putting group

interests ahead of their own. Ben-Jacob concludes that colonies form a kind of supermind genomic web of intelligent individual genomes. Such webs are capable of creative responses to the environment that bring about "cooperative self-improvement or cooperative evolution".

Creative Nets in the Precambrian Age

www.heise.de/tp/r4/artikel/2/2114/1.html

Eshel Ben Jacob, at the University of Tel Aviv, and James Shapiro at the University of Chicago have been studying bacterial colonies from a radically original perspective - and have emerged with surprising results. Their findings explain why the ripple effect is a mark of bacterial networking - and of much, much more. For generations bacteria have been thought of as lone cells, each making its own way in the world. Ben Jacob and Shapiro, on the other hand, have demonstrated that few, if any, bacteria are hermits. They are extremely social beasts. And undeveloped as their cellular structure might be, their social structure is a wonder. The ripple effect is one manifestation of a colony's coordinated tactics for mastering its environment. We could call it the probe and feast approach.

puff adder: *his idea of a healthy society was one that would chain him to the wall to be screwed senseless by leather-clad Nazis ...*

Yes, and yet he also couldn't pull this off even for himself, because Genet had actually the single-mindedness to define and produce such a scene in its full pathology. Foucault's version, by comparison, was a sawed-off thing that could never be realized because he was a normalien. Little wonder he focusses on Plutarch's pronouncements of 'gracelessness,' because academics that go in for dirty sex succeed in getting it because they don't have any sense of line, and their greed makes them think they can have it both ways--graceless indeed. Anyway, I read some biography a few years (not terribly good--the author defends his 'mild interest' in continental philosophy by singling out Baudrillard for condemnation, tres typique..)

in which even his friends began to think his continued fixation on Sade was crazy, but I don't: It follows that he would find something in Sade that was forever inaccessible to him.

Tachi: This has got out of hand ... suddenly the wall flies have found their voices, though a familiar pattern emerges, orbiting around the demise of Europe, the vanguard of the USA, and combatting leftoid nonsense. Of course northanger will

always take the ball to another court, throwing in random comments and off-tangent 'interesting' but irrelevant links, NIck will respond just enough to state his position though refrain from all out attack (I mean 'twits', come on), and it seems Piet, or a kindred spirit, will continually emerge with poetic nonsense to confuse and provoke. sd's post was an interesting one, though it seems this is another example of a trashed thread, with no respect for the time sd has put in. Nick, I am interested in how you can at once deride the UK and revel in your having 'fled' (sounds so romantically under seige) and regard the Anglosphere as the only entity holding the fort on the world stage. The UK either is a shit hole going down the pan or it is a significant contributor to (or constituent part of) the only hope for the 21st century. The spirit of this blog is lacking, I have to say; there is no will to connect and share, develop and push it forward. There have been some excellent posts, and some good rounds of discussoin, but in general I think this keeps stalling and disappointing. The format - a glorified bulletin board - hardly helps to stimulate genuine interaction. Sorry to be down about it, but its an effort to relate to much of what is spewed up here, though there are some excellent comments, mainly from Nick and sd, and sorry to say guys, but I think the others are using you to stimulate themselves. I mean, as if it is your fucking job to answer everyone's questions. These people are missing the point or there is some serious re-thinking for this blog to do.

why is everyone so scared of fucking management and true experimentation? change ... what can be done: the key issue.

puff adder: Tachi wrote-

Of course northbanger will always take the ball to another court, throwing in random comments and off-tangent 'interesting' but irrelevant links, NIck will respond just enough to state his position though refrain from all out attack (I mean 'twits', come on), and it seems Piet, or a kindred spirit, will continually emerge with poetic nonsense to confuse and provoke. sd's post was an interesting one, though it seems this is another example of a trashed thread, with no respect for the time sd has put in.

but I think the others are using you to stimulate themselves. I mean, as if it is your fucking job to answer everyone's questions. These people are missing the point or there is some serious re-thinking for this blog to do.

This blog has, if anything, been refreshed by us and proven that SD and Nick have their own agendas and very flexible minds and, in Nick's case, some very beautiful writing style from time to time. We did not trash this post, and we did respect it. If

you want no dissonance here, then I for one will definitely leave you to the complete lack of contribution you have been making. The thing about Hyperstition that has been attractive is that it can be creative--and I mean that well beyond creative in merely the artistic sense.

You have no humour, added nothing whatsoever to the post or any other that I have seen, yet since you are considered part of management I will obviously have to go. Northanger and Piet can perhaps take your drill sergeant's bullshit, but I don't have to bother. Your comment is disgusting, insulting, and you are little different from some fucking commonplace policeman.

Nick's conflicting remarks about Britain are, in fact, extremely interesting and bring about dissemination of knowledge it wouldn't have been possible to obtain elsewhere. If there are any lacks in the 'Anglosphere' even in the obvious sense, it is that Canada and Ireland are rarely discussed.

What are you, anyway, the rich investor of the movie who gets to call himself the 'executive producer' as a perk?

I've been a little mystified why Robin and Reza couldn't work out there problems with Nick and SD, who actually allow much more freedom of dissent than I would have imagined from Robin's protests, but you are something else again--the pure authoritarian spirit who oversees all and contributes nothing but a rulebook.

Tachi--I would imagine you can look to this blog as becoming an immediately dessicated place, which it already nearly was. It is you who have made the overtures to its destruction. People outside this blog have said they expected it to just gradually evaporate, and they are probably right.

sd: Tachi-I can't be sure, but I imagine traxus, who had returned after a long absence, will decide he's not interested in some fucking martial law police state either.

tachi - The blog will take care of itself. Granted, some of the comments above do not develop the topic very well, but some of them do. There have been no mile long slabs of incomprehensible irrelevance purpose-designed to distract and madden - just some testing and teasing. This is not a lecture hall or a seminar - it's a chaotic, edgy and unpredictable space full of black holes and rare, productive lines that you won't find elsewhere. Navigate with a scroll, focus on what you see as worth focusing on, let the rest remain blurry. Chip in and change the flow - if you have something to say, then say it. Sniping from the sidelines and asking the occasional question is not the

participation/communication you profess to crave. Griping is often less productive than trolling.

If the blog can't process the input it's currently getting then it would evaporate, but it can deal with it, so it won't. I'm not bogged down, distracted or discouraged. Quite the contrary.

Tachi: *this blog has been refreshed by us*

LOL! You overestimate your own importance. Wow.

sd - points taken, I agree its not a lecture hall nor a seminar, though it does appear to be at times, with all and sundry hanging on to what you and Nick might think of X, Y and Z.

It is true that I have had very little to contribute of late, and me coming in like this, like a bull in a China shop, was a little stupid. By your best interests were at heart.

puff adder - you seem to have some feathers ruffled. I have to crack up at your blown up sense of self, though can agree I have not been 'contributing' much of late, as just mentioned. But I do not have to justify to anyone why I have been an infrequent contributor, the quantity of posts has nothing whatsoever to do with anything.

To be honest, part of it is that I am busy and part of it is that I would prefer not to say anything unless I think its worthwhile. Nick and sd's posts and comments, to be frank, are the only ones I can be bothered to read, but for me there is far too much noise to cope with in order to find relevant threads of 'discussion' than I have time for.

Sure, I was being snarky, though this is from a genuinely felt concern for the blog, its content and its spirit. I do apologize if you have taken this all on board personally.

But no, I am not part of the Management, though I do believe in management, an issue which has been part of this blog long since before you rocked up. Believing in management does not make me a police officer, and management itself is a relevant and interesting issue in of itself. If this cannot be raised (albeit aggressively, I admit) then where is the true policing taking place?

And no, I do not profess any staff position, and nothing in my comments can reasonably be equated with the issuing of rules or policing. This kind of throwaway

accusation is so passe. It reminds me of a certain academic crowd. I do not 'oversee all' - this is a particularly ridiculous statement. I have a view, just like anyone else.

In any case, I will try to be more productive and positive, though its hard at times.

puffy - "Nick's conflicting remarks about Britain are, in fact, extremely interesting and bring about dissemination of knowledge it wouldn't have been possible to obtain elsewhere. If there are any lacks in the 'Anglosphere' even in the obvious sense, it is that Canada and Ireland are rarely discussed."

Indeed. Agree. My comments to Nick, re his views on the UK as part of doomed Europe, and yet as part of the Anglosphere, saviour of the 21st century, are raised from a genuine interest in this issue. How can the UK at once be going down the pan and yet part of the valiant vanguard of human civilization? Genuine question.

Nick Land: tachi - on your specific question, which also connects with northanger's latest point (re genetic diffusion) - my attachment to the Anglosphere is precisely due to its high (unparalleled?) degree of 'deterritorialization' - this would almost be confirmed by the complete descent of 'historic Albion' into miserable irrelevance IMHO. The Anglosphere is intrinsically diasporic, hybrid and at every level (from molecular genes and memes to macroscale populations and social trends) migrant and dis-essentializing. So I'm actually highly unconvinced by n.'s claim that it "supports/prefers some genes over others" except in the almost tautological sense that any system involving selective forces will do so - my hope is that in the Anglosphere case this selection would favour relatively nomad and even piratical (hyper-entreprenurial) traits, but certainly not those of any determinate ethnicity (on the contrary, it seems to lap up the cream of the planet, from Guangdong, Central America, Africa and Eastern Europe, leaving the relatively dull-witted blood-and-soil types behind).

And tachi, I know your objections to the drift-fugues we get into here have the best of motives, but it's probably better to tolerate a wide range of inputs, just so long as occasional flashes of high-energy experimentation can flare up every now and again. Given the choice between industrious hyperstition + chat + miscellaneous probings on the one hand and rigorous dedication to a tight hyperstitional agends on the other, the former has a lot going for it IMHO. The answer to this recurring issue seems to be a secondary revision/selection process, rather than an attempt to drastically filter input. Personally, I greatly appreciate northanger and Cap'n puff turning up here to

share their latest - in fact, the only visitors I'm glad to see the back of are leftist hysterics and trolls.

puff adder: Tachi:

"this blog has been refreshed by us" LOL! You overestimate your own importance. Wow.

Yes, we have added a lot to it, and I didn't mean just me. But definitely myself as well. Live with it.

puff adder - you seem to have some feathers ruffled. I have to crack up at your blown up sense of self,

Nick and sd's posts and comments, to be frank, are the only ones I can be bothered to read, but for me there is far too much noise to cope with in order to find relevant threads of 'discussion' than I have time for.

Well, I have found all the posts and comments interesting except for yours, and would adore it, with your precious time limits, if you continued you policy of 'contributing little,' as I have even less interest in what you have to say than you have in what I have to say. I can see you as little more than a General Jaruzelski clone from your boring disciplinary comments. Or maybe like some Singapore style supervisor (even though you're not 'part of the management.') Call my remarks reminiscent of a 'certain academic crowd' all you like, that makes it all the easier to call yours merely constipated and lacking in all resonance, unless one includes the cacophony of pedantry.

Sure, I was being snarky, though this is from a genuinely felt concern for the blog, its content and is spirit. I do apologize if you have taken this all on board personally.

This is all just more of the exact same nastiness put in different words. Oh, I don't take your fully admitted snarkiness personally at all; after all, 'at least you're honest about it,' as they say. Extraordinary you would be surprised I would take it personally to such point you would 'apologize' while poking in yet more insults, and quite as 'aggressively' as in your previous comment. Nevermind that 'sd's and nick's posts are the only ones you can be bothered to read', so 'you do kindly 'apologize,' but rather you apologize (and not at all 'kindly') for ME for having the gall to tell you just what it is very clear you are up to, which is an attempt to form the blog as you see fit, by telling SD and Nick that they are interesting but surely lax. Just how clever is it to say 'Sure, I was being snarky, though this is from a genuinely felt concern for the blog, its

content and is spirit. I do apologize if you have taken this all on board personally' when all it was was being snarky again under the guise of 'apologizing.'

If this cannot be raised (albeit aggressively, I admit) then where is the true policing taking place?

I thought the idea of Hyperstition was to be self-policing until things really got out of hand. SD replied to you that 'the blog will take care of itself.' But in the above, you still seem to refer to the 'true policing taking place' in such a way as though you personally are the only one quite capable of seriously raising it, because clearly Hyperstition has degenerated into such a decadent place people actually talk about the DETAILS of the politics, details of issues clearly related to the posts even if they veer off somewhat part of the time. And you are here to remind SD and Nick that they have been slack in discipline.

So you don't like it that I'm a newbie and will not countenance the oppression of cat-o'-nine-tails tactics you freely dole out when things are in process of being explored and with abundant results. Tough shit. You're right, I do have a high opinion of myself. That's what's good about this blog: people that are taking part in it are smart, and they have a good opinion of themselves. Nobody else, though, tries to police, admittedly it may be annoying to ask questions, but it's supposed to be about learning, or so everyone else thinks.

How can the UK at once be going down the pan and yet part of the valiant vanguard of human civilization? Genuine question.

That is up to Nick to decide whether it is a genuine question. Obviously, I'll never respond to any question of yours, genuine or false, since you 'can't be bothered' to read anything but SD and Nick, and furthermore, I do not give a fuck to read you either, nor to answer you in any direct way beyond your current spectacle. If refusing to accept and 'respect' your mean-spiritedness means I have to split, then I will most assuredly be losing less than nothing--because it would mean I was all wrong about what I thought was the intelligence of a blog that was strong enough to be free-wheeling.

Incredible you think you admitted 'me coming in like this, like a bull in a China shop, was a little stupid,' only to do it a second time.

In any case, I will try to be more productive and positive, though its hard at times.

Do feel free to prove this, although I don't think anyone wants you to inconvenience yourself (God forbid you might feel COERCED!), despite your deep concern that the blog is going in the wrong direction. Nevermind that a good-humoured and easygoing spirit had been established (or so I thought anyway), which you seem with each new comment determined to wreck.

Nick Land: Herding cats ...

northanger: nick. yes but, [cracking knuckles] somebody's gotta do it.

Nick Land: neutering?

northanger: yea, gotta manage that testosterone level.

traxus4420: I thought this place ran on testosterone.

Denis Duclos believes that Americans are wedded to the Anglo-Saxon mythology of a beast within us all that must be kept under control. This 'Werewolf complex' is a distinct malady of Anglo-American culture, "an obsessive oscillation between uncontrolled savagery and political correctness, compulsive aggressiveness and hysterical expostulating."

A bit hysterical, but I read it not without some self-recognition. Part of the Western malaise is the 'inner self' that from the confines of a weak mortal shell yearns to drown the world in its effulgence -- or if thwarted, withdraws into itself, decorating a 'rich inner life' and/or stewing in a black pit of resentment. All old hat, but seems so easily forgotten --

This need to assert the self (taking for granted that the alleged self's existence is not obvious) seems the source of both great power and great sickness. Morality? Concentrated violence? Ambivalence toward authority? Snark-laden blog disputes?

I can't help but continue to think that this Anglo-thing is inherently ridden, not only with this complex, but with a particular identity that it must assert at all costs, even at the cost of submerging itself into different cultures, races, genders, etc, infecting them from the inside out. I'm extremely unconvinced that anything that wears its culturo-historical label so proudly is really 'dis-essentializing' anything except 'not-Anglo.' This observation can also be applied to all forms of multi-culti protective labeling -- African-American, Hispanic American, etc.

Common sense is just the light glistening sheen of thought floating on a sea of positive assumptions, like frosting on cupcakes. Really not much more than rhetoric. That said, I don't think such a program of worldwide open trade as you say sir Paine describes is a bad thing at all -- it seems more like what humans have been striving for for centuries -- utopian, even, though as you say, not unrealistic. But we're certainly not there yet, and though you may wish to put the entirety of the blame on poor backwards dictatorships, theocrats, and popular socialist governments, I prefer to spread accountability more 'liberally' so to speak. It would be NICE if the individuals in even open, liberal society 'entrusted' with power could be expected to behave responsibly (i.e. not appoint incompetents, not steal money from public funds, not berate protectionism abroad while secretly maintaining it at home, not clumsily prod minor dictatorships into civil war) but they prove again and again that they can not. And I haven't even gone into private corruption --

This is not necessarily a moral objection, though I doubt we can wish something like morality out of political and philosophical debate, including our own, regardless of how distasteful it may seem to the killer-rationalists around here -- morality runs deep, has serious hyperstitional potency to supercharge rationalist respect for contracts with genuine loyalty -- would the 'Anglosphere' have conquered so successfully without it? Isn't it even a compulsion inherent in our cultural logic, commensurate with brutality, rapacity, and competitiveness (the personality trait, not the evolutionary sense)?

Even if one does want to attempt a rational organization of society along the lines of open trade, consolidation of power must remain a serious concern, not something to brush off so lightly as 'well liberal democracy is imperfect, be tough like us and deal with it.' Winners (a qualitative term applied erroneously to quantitative data) create resentment by their mere presence -- losers create their own sort of tension. A winner must be declared as such, and gains certain privileges and powers thereby. I think this is something Paine is aware of in his critique of monarchy, though from the standpoint of a previous stage of de-authoritarian progress.

(Apologies for the length of my posts -- trying to make up for infrequency -- busy busy worker bee)

Nick Land: traxus4420 - don't disagree (indeed, even agree!) with much of this, but think you'll find the polarizing forces presently at work in the world make your fence-sitting an increasingly uncomfortable posture. (Still, what's wrong with discomfort, damn fine protestant trait that it is ...)

PS. "clumsily prod minor dictatorships into civil war" - except for the 'clumsily', this basically seems a sound policy to me, certainly if they're hostile. North Korean civil war surely preferable to the current unchallenged loony anticapitalist regime.

Isn't this exactly the Reagan policy that won Latin America for democracy in the 1980s?

sd: traxus4420 - 'Common sense is just the light glistening sheen of thought floating on a sea of positive assumptions, like frosting on cupcakes. Really not much more than rhetoric.'

This completely misses Paine (and the thrust of this post). It's the 'consciousness is froth' school of thought, best espoused by Marx and Freud, where what you think is perched on top of a huge sea of unconscious complexity which, surprise surprise, they have the key to and are therefore entitled to write huge intimidating books which purport to explain it.

Common sense is a fast, no bullshit assessment of a situation. Paine's assessment of monarchy is logical and it still stands: it deployed new assumptions to undermine fossilized assumptions. Paine's picture of governments and religions conspiring to deprive humanity of its common sense is also still valid - 'Intelligent Design' being a case in point. Take away common sense and you have nothing but paralysis of the mind: it is not 'frosting' - it is an essential tool.

Common sense is by definition near-instinctive. It would only have evolved and survived as a faculty because it a) works and b) confers an advantage, and c) because it is not too expensive (i.e. it does not require vast resources or interfere with other operating processes).

Common sense confers an advantage precisely because it rests on and utilizes assumptions acquired from the success of previous assessments: this is where it gets its speed from. If we analyzed all of our assumptions before doing anything we wouldn't even be able to drink a cup of coffee. But when it needs to, e.g. because of conflicting information or failure, common sense can analyze its assumptions and accommodate new data to the database (i.e. it adapts).

The computational model of the mind - as opposed to the hydraulic or factory models - would see common sense as a tried and tested processing-assessment program which is best left to its own devices until something breaks down or an entirely new situation is encountered.

[Regarding morality - yes of course it is important, and the US is full of holier-than-thou apple pie and it can be called to account, particularly in its hypocritical treatment of human rights, but moralistic criticism of the US along the lines of 'The US only helps out where its interests are served' is basically meaningless.... no time, sorry]

Nick Land: This 'common sense' question obviously very interesting. There seem strong arguments both pro and con.

On the 'con' side, how is it possible to separate the positive powers of common sense from the dysfunctional legacies of primate evolution, for instance the 'intuitive' sciences Pinker describes (all common-sensical and instinctively convincing, all misleading and potentially disastrous)? Given that Pinker's 'intuitive economics' (based on Pleistocene hunter-gatherer reciprocity) provides the affective basis for almost all economic error and populist squalor, this is a serious issue IMHO.

northanger: nick. you appear to have, ahem, the tiger by the tail. how interesting. what are all the capitalist spheres we're allowed to play in?

Nick Land: ahem, can you rephrase stripping off the top 15 levels of irony and adding explanatory notes?

northanger: awcomeon, this is pretty straightforward.

sd: Nick - thanks for throwing in the Pinker angle - now that's something to chew on. later.

puff adder: SD-

'It's the 'consciousness is froth' school of thought, best espoused by Marx and Freud, where what you think is perched on top of a huge sea of unconscious complexity which, suprise suprise, they have the key to and are therefore entitled to write huge intimidating books which purport to explain it.'

Damn, that's well said, and ought to solve all sorts of dilemmas people still have if they read it. I'm thinking primarily of Freud at the moment, even though Marx is equally valid, because their is this especially pompous vanity that always bewildered me as to why anybody thought such types could 'cure' you. It seems to have major component parts of a particularly barren snobbism and a magical element that is concealed from being the purely pagan thing it really is, and also a deep consecration of inaction, which is revealed in the incredibly tiny symptoms that are focussed on in high-strung upper-middle-class Europeans. That people would talk about Schreber

and Dora and the Rat Man endlessly (still!) is stunning. Then the pomposity is translated into a sneaky 'gentle' capitalism in which the 'fee' is described as part of the magic. Well, I never bought that crap. And you go ahead and get more testosterone as a result. Who says testosterone is not necessary? Freud would secretly whisper that the castration complex is preferable, and if you'll but pay for it, you can even maintain the complex. You can even have socialized testosterone levels if you will just behave within the given social mores, so if that's all one requires, who needs some psychiatrist to tell you something that's already forced on you anyway. Definitely think Jung had something, though. Sylvia Brinton Pereira's 'The Scapegoat Complex' is so potent you can jumpstart yourself with it, in other words you can translate any scapegoating you may have encountered into fierce individuality, which is far better than translating it into furtherance of castration complexes that endless Freudian sessions ensure (along with that 'mask look' that the overanalyzed get.)

traxxus4420: At work right now, so can't really get much into things, but I'd just like to head off this line of criticism by saying that I in no way am attempting to defend psychoanalysis!

I'm seeing what looks to me like a very weak defense of common sense, and kind of bewildering.

'It's the 'consciousness is froth' school of thought, best espoused by Marx and Freud, where what you think is perched on top of a huge sea of unconscious complexity which, suprise suprise, they have the key to and are therefore entitled to write huge intimidating books which purport to explain it.'

Doesn't that just describe cognitive science, evolutionary theory, good journalism, all philosophy, and really anything attempting to explain something that people take for granted or believe false things about (give or take the 'intimidating' part)?

Isn't 'de-subjectification,' one of hyperstition's recurrent themes, profoundly non-common sensical?

Common sense is only adaptive if the structures it is predicated on are a) accurate and b) relatively constant. How one arrives at a thought is enormously complex and understanding it enormously time-consuming (and not very compatible with partisanship, btw), which tends to create the, I think pretty reasonable, divide between theorist/researchers and practitioners.

Attempting pursue both to their fullest potentials seems irreducibly schizoid, don't you think?

and if we're NOT pursuing the process of thought-and-belief construction to its fullest potential, what are we doing?

Speaking of thought-construction, there is some serious catching up I am in the process of doing on posts I missed that should probably be finished before continuing to comment on this blog (in this vein, anyway) -- apologies if I've made anyone repeat themselves too terribly much.

sd: traxus4420 - maybe I latched to hard on your 'frosting on cupcakes' image. agree it's got a bit muddled and unsatisfactory down here, but maybe usefully so. the schizophrenic context for the operations of common sense was highlighted in the first comments, btw. anyway, I've got to get some sleep. should have something more coherent some time tomorrow.

traxus4420: It might be instructive to think of common sense as more like a syntax than a distinct set of thoughts and actions -- though prior to such a linguistic metaphor -- sub-mathematical, more like. "If a, then b" is already going too far.

I take my cues from the Tao on this -- practical philosophy par excellence. From the point of view of traditional or utilitarian thinking, Taoism completely lacks content. This is because the constant it keeps referring to is before categorical distinctions and so-called concrete situations, so to use examples (even symbolic, mathematical ones) is a misstep -- and yet if one can figure out application, there can be no more mistakes. The 'figuring out' is not exactly cognitive -- in the sense of developing a coherent ontology or ethical doctrine (though the activity of doing such a thing isn't necessarily unhelpful) -- but more like working out -- varied exercises that lack immediate benefit but gradually restructure the brain to handle a simpler and more powerful way of thinking. Hence an equal use for rigorous logic and so-called 'obscurantist' poetics and abstruse theoretical speculations. Memorization would be the least helpful way of developing this sensibility, while being the most helpful tool for actually applying it.

Zhuangzi in particular is a great source of inspiration for developing hyperstitional carriers -- even in the pieces of his corpus which we SUSPECT he wrote he refuses to write as 'himself,' or any coherent self, for that matter.

Oh, and I keep meaning to apologize to puff adder for my school boy tone. Experimental, fluid style seems a natural choice for fiction, but in the futile spasms of

trying to develop arguments I get too fixated on what I keep hoping is the content to think much about how I'm writing. This is just what comes out.

puff adder: 'Futile spasm' is useful, though.

Self-Selecting Social Attitudes

Nick Land (March 15, 2006)

This¹³⁵ is what spontaneous Social Darwinism really looks like.

(Just for the record, I'm far from unambiguously enthusiastic about what this implies. The tendency for secular progressives to auto-extinguish themselves over a few generations is a real historical factor that no realistic analysis can ignore.)

Comments: Self-Selecting Social Attitudes

northanger: maybe it's time to brush off Susan Faludi's "Backlash: The Undeclared War Against American Women", originally published in 1991. i was in college at the time & remember one of my professors reminding us to be "intelligent consumers of statistics". Faludi's inspiration for the book was a Newsweek story about the 1986 Harvard-Yale Marriage Study stating: "a college-educated woman of 30 had only a 20% chance of finding a husband; by age 35 it was 5%, by 40 she was 'more likely to be killed by a terrorist' than make it to the altar, in Newsweek's memorable analogy" (Time; see more links in Tangents).

Nick Land: Reasons this article (and underlying argument) seem especially interesting to me:

- 1) In discussions of Social Darwinism, critics have rightly noted that the Spencerian version of the theory (let alone the Nazi kind) misunderstood 'fitness' in its biological sense, which is about reproductive success not social advancement. Well, here we have it cashed out.
- 2) With the ID backlash against scientific evolution, its 'beautifully' (?) ironic that the archtypal 'red state' social forces swelling against secular-scientific worldviews are themselves promoted by profound Darwinian forces.
- 3) There seems to be a general trend, which I'd like to explore further at some point (feel free to add to northanger's meticulously documented Records of Lost Promises) that brings a certain realistic insight to fruition at its point of historical obsolescence. For instance, evolutionary psychology seems to be rising to prominence at exactly the moment the technization of the genome melts heredity into Cyberspace. If

¹³⁵ https://usatoday30.usatoday.com/news/opinion/editorials/2006-03-13-babybust_x.htm

scientifically rigorous group differences of whatever kind are identified, it will be as part of single social process ensuring their simultaneity with the very commercialized biotechnical opportunities that evaporate them. 'Demographic consciousness' strikes me as part of a similar process - arising as an aspect of the transition into Singularity Revolutions which subsume traditional species reproduction into regenerative technocommercial production. (So I'm very ambivalent about the real implications of this piece at the same time I'm struck by its importance.)

4) At the partisan chat level, in all its aspects, it pours a huge can of gasoline on the flames :)

northanger - following your links now. Immediate (hence ignorant) response - isn't the automatism of this process rather unlike the ideologically-driven scenario Faludi describes? Or am I mischaracterizing her argument? (Guess I'll find out now)

northanger: nick. Faludi admitted she was "glum and grouchy" after reading Newsweek's article, but "Backlash" is a factual (not ideologically-driven) analysis of the 1986 Harvard-Yale Marriage Study. she provided evidence that the conclusions were unsupportable ("the figures were based on unorthodox calculations of unrepresentative samples", TIME).

2) With the ID backlash against scientific evolution, its 'beautifully' (?) ironic that the archtypal 'red state' social forces swelling against secular-scientific worldviews are themselves promoted by profound Darwinian forces.

incredibly ironic. Priscilla Coit Murphy's "How Faludi's Backlash made news" mentions the role of Faludi's book & the Anita Hill - Clarence Thomas controversy & how they fed each other. it's amazing the amount of crap that's being thrown against the wall (pre-2006 elections). my point about the anglosphere concerns placing it in the appropriate context. what's really at stake here?

Nick Land: northanger - on Faludi, don't think I made myself clear. Not suggesting she was herself ideologically driven, but rather than her thesis based on the idea of an ideological backlash against feminism, rather than a fertility-based self-destruction of feminism of the kind 'explained' by this return-of-patriarchy model. Of course, the distinction isn't straightforward, but accusations of 'whinging' surely stem from perception (however obscure) that she is treating the travails of feminism as the result of entirely contingent (critics go further to say 'conspiratorial') political dynamics,

rather than the more profound demographic processes described here. (The Gilder quote in the piece you link to is germane to this.)

northanger: nick. it is not only an ideological backlash, it is economic (see Brathwaite Burke quote), psychological, etc. if i understand you correctly: the "return-of-patriarchy model" now adds the biological (fertility). concerning Gilder (good point), important point i think worth noting: when Faludi read the Newsweek article she ... believed it. why? she was going to write a different book at first until she started researching the Harvard-Yale study. her focus was more subtle than Gilder gives her credit.

Nick Land: OK, Marxoid claims that men constitute a class with economic motives for oppressing women (due to job competition etc.) is more 'grounded' than I implied. Are there gender-based class interests of this kind? Or is this type of feminism just picking up the nearest available toolkit, sitting open in the seminar room?

Maybe I could be persuaded, but the fact that every male in a 'heteronormed' economically integrated relationship stands to benefit from the earning power of their significant other - while gaining nothing from the economic advances of other males - the incentives must be complex at best.

northanger: *Are there gender-based class interests of this kind? Or is this type of feminism just picking up the nearest available toolkit, sitting open in the seminar room?*

are you talking about the sex discrimination case against Wal-Mart? "men are here to make a career and women aren't. Retail is for housewives who just need to earn extra money" &tc.; is there a distinction between feminism & civil rights? don't think we're 100% heteronormed yet — eg, there's only one woman on SCOTUS.

en.wikipedia.org/wiki/Dukes_v._Wal-Mart

Nick Land: Not well informed about the Wal-Mart case yet, but even if this discrimination exists its not at all based on the Marxoid 'male-class' model, it's simply a (no doubt crass) generalization from group characteristics - i.e. women on average more likely to interrupt their careers for child-rearing - in the interests of shareholder value. Closer to classic Marx therefore - (gender neutral capital-maximization imperative). Thomas Sowell has much excellent discussion of this sort of thing (especially in context of race).

Summary: No sign whatsoever of 'male-class' interest at work.

northanger: www.tsowell.com/spracecu.html

i think i see where you're going with this.

traxus4420: *The tendency for secular progressives to auto-extinguish themselves over a few generations is a real historical factor that no realistic analysis can ignore.)*

Has this happened before?

infinite thought: you just need to get 'clever', 'educated' men to breed with fertile staff/random women PLUS their wives/mistresses - it used to happen all the time, cf. Schopenhauer, etc. I don't know why it doesn't now. That's a more interesting question.

and, er, don't the offspring of hyper-con, church-sunday, life-preserving, patriarchal folk have a peculiar tendency to, you know, rebel and stuff? If people weren't anti-oedipal in the first place, where would REVOLT, like, come from?

Nick Land: Infinite thought - not sure I'm getting your point: how would would an increase in illegitimate children with educated fathers reverse the demographic selection against secular progressives?

it used to happen all the time ... I don't know why it doesn't now.

feminism / contraception / abortion?

infinite thought: actually, the argument of the (longer) piece is totally bizarre. So, what, we should encourage 'misguided' liberals to procreate so that neo-con toddlers will have someone to bully at school? interesting...

Perhaps, on a more 'adult' level, if it were a case of bombing folk to splurge joyous freedom upon them without any pesky 'native', 'liberal' opposition whatsoever (cos they're, like, not even born!), one might start to feel miserable about it. Perpetuate the discomforted, secular, egalitarian, minoritarian population in that case...ah dichotomy, ah humanity!

how would would an increase in illegitimate children with educated fathers reverse the demographic selection against secular progressives?

By teaching them that women are nothing but silly receptacles for the (mindless) perpetuation of the species, of course! - progressives, on the other hand, always enjoy

(oh, too much) thinking that women are, you know, intelligent in their own right and dangerous things like that.

Lots of biologically-productive clever men believing that women are inherently daft would probably ensure the continued existence of the Anglophone Sprachraum in the transmitted thoughts, fears and linguistic (etc.) production of their offspring.

puff adder: *one might start to feel miserable about it. Perpetuate the discomforted, secular, egalitarian, minoritarian population in that case...ab dichotomy, ab humanity!*

That's definitely an interesting alternative, rather like the way Kurzweil says you can still go back to your biological object if you don't know to prefer the super-intelligent robot. With Strong AI, it will surely be able to freeze this discomforted population in such a way that they would have to decide if it was this very discomfort that was their *raison d'etre*. There's certainly a possibility that without a sense of minority, some people don't know what to do with themselves.

Nick Land: Infinite thought -

actually, the argument of the (longer) piece is totally bizarre. So, what, we should encourage 'misguided' liberals to procreate so that neo-con toddlers will have someone to bully at school?

this seems a complete misrepresentation - think you're jumping far too quickly into the prescriptive mode. The article is describing a phenomenon first of all, surely it's more rational to come to some consensus about the facts of the matter before swinging off into wild polemics about policy alternatives and hidden agendas. (Social conservatism terrifies me, so I'm certainly not celebrating the situation described)

sd: further proof (if any were needed) that it is impossible to engage any remotely sensible dialogue/conversation/argument with representatives of the left.

Nick Land: puff adder - :)

Infinite thought - I'm guessing your not very interested in addressing the issue here (your off-the-cuff 'revolt' argument whilst superficially plausible - and no doubt psychologically comforting - is completely devastated by the graphic data presented in northanger's Baby Gap link in the tangents thread). Be sad to confirm sd's point for him, but you're doing a good job so far.

For those on the economic right with libertarian leanings, the uncomfortable implications of this trend is the increasing political dependency of economic

neoliberalism on a swelling socially conservative vote bank. It illuminates the historical drift of the US Republican Party away from Reagan-style smiley growth politics to a more moralistic, paternalistic and even (ugh) Ashcroftian mode with ominous accuracy. Libertarians are looking into a quite ugly future.

puff adder: Nick--that doesn't seem all that inevitable if what you say about China's likelihood of becoming like Singapore holds true. If what you say about the necessity of both superpowers cooperating (because we'll have two again, won't we), there ought to be some relaxation of the suffocating Christianity which you can already find at family values malls everywhere. Some of the internal workings of the Republicans are having to change and ought to become outmoded. That article will probably go the way of the usual predictions insofar as there has been a tendency among 'red types' to go for sensation of the same sort that used to be associated more with liberal behaviour. I've noticed that the more successful the rednecks become, the more they really want to prove that they can be every bit as sophisticated and highfalutin' as the low-slung blase commie-loving and distant-Islam-sucking left. You may have to fear a 'conservative' bunch of family values types that gets into Derrida instead of Ashcroft. And I suspect they'll want to introduce all sorts of sexual perversions after awhile like in Ballard's novels about business park and resort retirement places where crime is necessary for there to be any fun. The only thing the American social conservative can't stand ultimately is to be thought uncouth.

Nick Land: *You may have to fear a 'conservative' bunch of family values types that gets into Derrida ...*

- Is this supposed to cheer me up? LOL

As for the whole twisted-jesus scenario, I'd prefer a little laissez faire.

infinite thought: just being silly and sleepless, obviously. I'll hopefully respond in er, more 'common-sensical' way when I've finished work (today I get to lecture on the nouveaux philosophes...yet what to say?).

As for being a 'representative of the left', I'm not sure I represent anything, apart from myself (and even then...)

puff adder: Laissez-faire from whom? My becoming-writer? or the facts on the ground that you just described as though they were inevitable? If they're going to do

the Jesus business, you'll still struggle against it, so you have to be clearer about whether you think U.S. military might to save the world from creeping Islam is more important than oppressive situations you might find yourself personally in.

Derrida done by hick Baptists might be more appetizing than the New American Cuisine, but I don't know. It's possible they'd leave out the morbid death-adoration and be nauseating going around talking about 'differance' all the time, but on the other hand the New American Cuisine does things like offer no Classical Chocolate Souffle, but rather a Chocolate Drop Souffle—of course the difference is like night and day. At worst, Derrida is no less desirable than Ashcroft. Another rock and hard place claustrophobia is born.

Thank you for sharing. You need to spend many months in the suburbs of the U.S. of A., son.

Infinite Thought--you are definitely a representative of the left, so no need to be so coy. It's good to reach out to a lot of markets, though—you know, networking like a son-of-a-bitch. You'll make money without most people knowing it.

always enjoy (oh, too much) thinking that women are, you know, intelligent in their own right

I know of several who are extremely intelligent, but does 'in their own right' mean 'in a different right' from men? If so, this could account for the fact that men don't nearly always go along with the program, not as often as they are directed, except for eunuchs who find sense of security and protection in various beaver-power modalities.

Infinite Thought--you work for Long Sunday, a leftist blog, so that ought to make your pronouncements a little more wriggling-challenged. Northanger does well as Shirley MacLaine in this Rat Pack, but you could still try of Angie Dickinson, as she got special privileges too.

infinite thought: no, I mean, obviously I'm a dirty communist. I'm just not sure I 'represent' anything. And I dunno if 'work for' Long Sunday is quite right. I was asked to join them, and I sometimes post there. It's not like we get paid...though I do have shares! (erm, neither true nor funny).

was going to respond properly to the question at hand - of much interest - but now I'm too tired. Curse teaching! As one of the few remaining non-church-attending, egalitarian, childless lefties of the world I should surely be paid to opine all day rather

than summarise deconstruction for media students...will be back and not just wilfully daft next time...

sd: This article from Newsweek last year gives yet more reasons to be pessimistic about Europe's future:

Into the Woods

Economics and declining birthrates are pushing large swaths of Europe back to their primeval state, with wolves taking the place of people.

msnbc.msn.com/id/8359066/site/newsweek/

I've posted some sections in the tangents (for those who can't get Newsweek...)

puff adder: *And I dunno if 'work for' Long Sunday is quite right.*

Maybe not, but Arpege Chabert said she wasn't working when she does the currency trading from the TeeVee--hates herself for gluttony and wants public exorciation followed by forgiveness and isn't getting it, because is addicted irremediably. I would like to tautologically and solipsistically applaud our collaboration at making her spill the beans when she may or may not have been in her cups. She has been reduced to inviting other ladies to have wrestling matches over Zizek--which I encouraged, so naturally they wouldn't do it, just to be perverse.

sd: The Phillip Longman text mainly stresses the importance of population for military purposes and the transmission of ideas, and he places little emphasis on the role of population in economics.

War is no longer about the size of armies, but rather about their training, equipment and logistical back-up, so population is no longer a decisive factor there (unless things get extremely hand-to-hand messy).

I'd like to know when the beliefs of a population make a difference. When does what people believe or think have an impact on the production and flow of capital? From the system's point of view it is largely irrelevant whether this or that group of people believe euthanasia is a good thing or not. Maybe the percentage of the population being pro or anti drugs influences what is sold legally or illicitly, but the market seems to thrive and regulate itself regardless of what people think. From the point of view of Capital, the differences between the liberal and conservative viewpoints, which we might perceive as huge, might be minimal in terms of their effect on the system.

Capital requires consumers, not thinkers, so most of the time it's irrelevant whether a person is a church-goer or an atheist. Capital only really values thinking if it contributes to the smooth and efficient management of the system, and so some people are paid to think, with their private political or religious beliefs being utterly insignificant. The Singularity primarily requires populations to consume, and thinking is only really helpful or harmful to the degree which it encourages or discourages consumption. So a booming population which is under the sway of austere, anti-consumerist memes is much more of a threat to the system than a bunch of church-goers having more kids than hedonistic libertarians.

Nick Land: *The Singularity primarily requires populations to consume*

[just seen this is an (accidental?) and quite brilliant double-edged sentence, but to start with the surface - and in context dominant - signification]

- if we can assume the Singularity is the implicit auto-emergent agency of planetary capitalism (no giant stretch IMHO) then to focus exclusively on consumption is a little narrow. Sure, the Capitalist machine is a circuit controlling production through consumption (market-regulated techno-industrialism) so 'consumerism' has a good claim to be its ultimate 'ideology' - but consumption is 'for' production, no less than vice versa. A giant population of senescent welfare-addicts will consume plenty, but they surely won't do good capitalism.

Seen from a suitably dramatic geo-historical panoramic angle, capitalism is a demographic macro-symbiote (verging on parasite) processing peasant surplus-population into industrial and post-industrial urban workforces, while regeneratively ramping up rural population potential through technomic backflow ('green revolutions' etc). Once the population flow is turned off (as it has been in Europe), then the system better be getting ready for a radical jump, because its underlying momentum (based on young ambitious peasants looking to make it in the city) is not going to be there. Urbanization is the deep tide of capitalism, and for urbanization you need something to urbanize - surplus rural population. Climaxed urban societies tend to slide into soci*list degeneracy and stop growing in any significant respect.

puff adder - personally speaking, the attachment to laissez faire is about living in a dynamic society, not about keeping the cops off my own case (not really indulging problematic vices these days).

Agree there's a trade off between freedom and 'security' (killing militant anticapitalists), but that seems mostly on the pro-growth / hawk axis, rather than having anything much to do with social conservatism ...

puff adder: Nick--

'For those on the economic right with libertarian leanings, the uncomfortable implications of this trend is the increasing political dependency of economic neoliberalism on a swelling socially conservative vote bank. It illuminates the historical drift of the US Republican Party away from Reagan-style smiley growth politics to a more moralistic, paternalistic and even (ugh) Ashcroftian mode with ominous accuracy.' Libertarians are looking into a quite ugly future.

I never thought about cops or hard vice, but obviously thought you must think of yourself as libertarian of some sorts who didn't like something about Ashcroft and what that might represent to daily life atmosphere, which surprised me. My impression was that you thought the evolution into Bushworld was to be desired in all its aspects, at least the aspects you aren't subject to--which I thought you must be pointing to here as internal American modes you were here expressing a lack of fondness for. Okay, way too hard to follow, I don't understand anything of what you're talking about except for the 'trade-off' part, but don't knock yourself out over it, as it's obviously a bit arcane even when clear, since I don't buy it that any of the things in this particular lot are inevitable.

Nick Land: *My impression was that you thought the evolution into Bushworld was to be desired in all its aspects*

that's a pretty powerful negative testament to my powers of communication, LOL!

sd: *The Singularity primarily requires populations to consume*

just seen the double-edge myself!

Okay, so focusing on consumption is a bit narrow. Reformulate with production and urbanization and my question still remains:

From the point of view of the Capitalist machine, when does it make a significant difference what populations think or believe?

Global Capitalism is an oddly unifying power. Al Qaeda prefer to eat Corn Flakes for breakfast - it's true, this is how the US can tell if a cave has been the home to local fighters or OBL's henchmen.

sd - well, this might be a bit simple-minded on my part, but a provisional capitalist meme list might include (lots of overlap):

a) Economic rationality - based on principle of utility optimization and broad individualism (against sacrificial and collectivist memes). Enterprize and ambition. Respect for incentive-structures of all kinds.

b) Mathematical calculation (especially basic arithmetic), competence at monetary reckoning (overriding or at least marginalizing poetic-romantic / symbolic consciousness)

c) Technoscientific adeptness, experimentation and at least tolerance of criticism and uncomfortable conclusions (against dogma and dominion of 'revelation' / mystical sources of truth)

d) Respect for property rights, contract, work, saving, education and for civilized resolution of disputes. Contempt for criminality, dependency and populist demagoguery).

e) Enthusiasm for general (rather than merely personal) prosperity and growth. Affinity with dynamic and commercial modes of social existence.

f) Moderation of envy, whinging, conspiratorial thinking, racial and gender prejudices. Overall open-mindedness and willingness to enter into mutually advantageous relations with strangers.

g) Acceptance of change, flexibility, adaptiveness (against rigid and stereotypic behaviour / social roles)

h) [for hawks] Willingness to utilize power and violence to defeat implacable enemies. Application of rational incentives to political and geostrategic questions (refusal to reward terrorism, rogue-State behaviours, hostage taking etc.)

i) [for social conservatives] Social mores compatible with the biological reproduction of society and of civilized values.

northanger: puffy. biological object vs. super-intelligent robot & discomfiture as *raison d'être*.

nick. "The Return of Patriarchy" describes a phenomenon; let's reach consensus about the facts before going into prescriptive mode

trying to understand puffy's "biological object" came across Kurzweil's response to Searle's "Chinese Room Argument". having a set of instructions on how to use the Chinese language (without actually knowing or understanding it) where responses are "absolutely indistinguishable from those of Chinese speakers" does not mean you're actually "thinking". since these Chinese symbols are meaningless to you. "I understand Chinese, but none of my neurons do."

one issue with Kurzweil is the "belief that consciousness requires a neurobiological substrate". why do humans have consciousness, but Super AI does not? Kurzweil says the key to artificial intelligence is pattern recognition, which is also at the heart of human intelligence. it's the difference between biological-neurons (humans) vs. artificial-neurons (strong ai) & the syntactic (rules) vs. the semantic (meaning). (btw, one of the arguments against Strong AI is that it does not "emote").

"Searle would have us believe that you can't be conscious if you don't possess some specific (albeit unspecified) biological process. No entities based on functionally equivalent processes need apply. This biology-centric view of consciousness is likely to go the way of other human-centric beliefs. In my view, we cannot penetrate the ultimate reality of subjective experience with objective measurement, which is why many classical methods, including Searle's materialist approach, quickly hit a wall."

Longman's facts: "Advanced societies are growing more patriarchal, whether they like it or not." "No advanced civilization has yet learned how to endure without it." "population is still power." patriarchy developed a set of values and norms through cultural evolution. humans have not gone extinct because of patriarchy. "patriarchy's evolutionary advantage is the way it penalizes women who do not marry and have children." "if the "patriarchal system avoids succumbing" to misogyny, capitalism etc, it will increase the quantity & quality of its children. yadda yadda.

why do i get the sense, reviewing these facts, that i'm in Searle's Chinese Room where Longman's patriarchy seems to suggest biology (fertility) advances civilization & not technology?

sd: Nick - extremely useful stuff, for me anyway.

This meme list would be both encoded in the (slowly evolving) body of law (in Burke's sense) and transmitted from generation to generation in the form of consciously maintained values (distributed through the education system, church, media and popular intellectual culture).

The more conservative the culture, the more reliance there is on the tried and tested traditions enshrined in legislation, and on the authority of 'experts' who are supposed to have examined and confirmed the values propping up the culture. Conservatism hinges on the population not thinking too much and trusting the past and authorities to do their thinking for them. Conservatism is weak on points c) and g) on your list, while liberalism is weak on h) and i).

c) and g) both require innovative thinking (at least on the part of the experimenters) and open-mindedness and flexibility from the population of consumers (or at least a lack of knee-jerk, moralistic, fleshier hysteria), so to this extent Capitalism does require humans to exercise their brains. Ultimately, c) and g) require that the human population be tolerant towards genetic engineering, post-biological adaptations and strong AI thinking. This will be the real test of conservatism – this is where the contradictions of (Western) Capitalism (in the D&G; sense of contradictions) will subject conservative populations to a rigorous Darwinian survival test orchestrated by brutal economic selection pressures. Conservatives may well out-reproduce more liberal/libertarian social groups by staving off some of the more deterritorializing tendencies of Capitalism (e.g. the dissipation of familial bonds). But this is ponderous, vertical evolution, and conservative genes and memes will find themselves in an environment driven by breakneck horizontal transfer of data and techno-adaptations. Even if the promises of strong AI do not fulfil themselves on schedule, even if the run-up to the Singularity turns out to be a seemingly never-ending run-up, populations which embrace the technological and social innovations coming up in the next few decades will overshadow conservative reproductive success.

That said, since strong AI will be marketed as expert, and will no doubt be deified, there is a good chance that once AI has got the database and memetics off pat it will appeal to the conservative mindset which trusts the powers that be to think for it.

northanger - I don't think Longman is talking about the advancement of civilization, but rather it's survival. Not the same thing.

puff adder: Anybody with half a brain is going to pick up on technological advances that benefit him.

Flesher hysteria could also be evidenced by having children at all unless you're convinced, as in the AI Newsletter the other day, that the first person who will live 1000 years has already been born, so that that seems like a kind of built-in insurance for children who already are seen as having temporary flesher status, say, another 15-20 years at most until they can't still figure out how to get offline. Already, many singularity personnel think there's nothing offline and are out to prove it. They are convinced that their previous reputation as 'nerd' has been buried as a result of their research and development in 'pure places' like Vermont where there is less air pollution and positively nothing of interest going on. But this

depends on whether they can get all the money directed toward their project, or whether they can trick people into believing that their offline money is not really very good. This would seem to require that certain targeted populations must continue to pay in cash, which is becoming an endangered species, so that these populations can be annihilated. On the other end, huge corporations will buy up the slightly smaller so that a phenomenal control will be enjoyed by the bloodless operators (don't look at me, they are the ones that don't want any organs, and they've already outlined the joy of not even having artificial hearts), and there will be a vast contingent (although probably a relatively small relative and even absolute number) of extremely intelligent large viral types prepared to exude enough innocence to make the one that made Francois Truffaut envious of Richard Dreyfuss in 'Close Encounters of the Third Kind' when he learned to Stop Worrying and Love the Spaceship.

If you believe singularity will be ready by 2029, social conservatism will have little impact on who gets closest to it, unless mass purges to rid all who aren't interested in banal sensations are successful (these are surely already well under way). Social conservatism tied up with family values is thoroughly undercut with the vast flexibility offered by such a quick offering of 'singularity'. With social conservatives unable to tolerate even stem-cell research or biological evolution in hick parts of the American, there is little reason to believe that it will not be the social conservatives who themselves would try to topple such advancement, although if Kurzweil needs their political clout in the next phases of his Erector Set, he will surely stop talking about God genomes and such stuff unless Christian rightists in America are suppressed, can be bought off with consumption designed to corrupt into technological paths. Most liberals end up embracing technology when it benefits them, deciding that accusations of hypocrisy are not that hard to live with. Since hypocrisy is a well-known staple of all political extremism in particular, and there's even plenty of it in the more moderate versions, the solution is to keep the hypocrisy hidden, as I've alluded to before.

Families seem uniquely still capable of forgetting, due to having less time to think as part and parcel of their conservatism, that they have very frequently severed all important ties with their biological roots when such severance was less epidemic--and then have gone into various Brave New World situations, blithely ignoring the fact that their newly-created immediate family's children will surely do the same full and total rejection, and probably more so. With Virtual Reality, you can probably even have something that the mediocre taste, viz., the Kurzweilian, will find suitable to replace the original even if 'it will just do.' As of this writing, Kurzweil is able to surf the big waves and get the big money purely because of the niche he's carved in science. The 'singularity' is less tacky than scientology and EST only because of the hard science behind it: Kurzweil himself has less dimension than Bill Maher, whom he physically resembles.

You can still use a lot of what he's come up with (even if his own daily newsletter warns about much more than nanobot replication of the Wrong Kind, i.e., the 2-hour 'gray goo scenario'--unless, of course, the antidote is securely built in to the little buggers, which will solve everything and make everything really nice for everybody) if you don't really want 2029 to be the next time we get to hear 'Also Sprach Zarathustra' and 'Hail to the Chief' in the e-Rose Garden. with 'God Save the Queen' if Tony Blair's hi-tech apparatus has kept him in power and kept him young-lookin'.

For example, my copy of 'the Singularity' came from the NYPublic Library, in a big meaty fleshier volume that I should have paid hard cash for like the rest of you probably did. But it took so long to get interested in it, with only a 3-week loan possible since it was a moderately successful seller, that I ended up having to keep it out 2 extra days and paying an overdue amount of 40 cents. So that Ray Kurzweil indeed saved me money, even though I realized early on that he mainly repeated himself ad infinitum so that one could give off a nice nonchalance by kindly reserving the best possible opinion of the footnotes by not bothering to read them.

I drank my first cola beverage yesterday since warned off them by Terry Grossman, Kurzweil's multi-email friend, whose work is more immediately useful than Kurzweil, insofar as those who greedy for thousands of years of tediously evolving science (with no time off for good behaviour) can be expected to explore very exhaustively all means to extend longevity till they have enough nanobots in their blood stream to eat off Omega-6 fats and calories coming from wherever that they can sit around and eat all the Nachos and drink all the Lite Beer while watching steroid-induced football without feeling a thing, or gaining a single ounce. These macho fruits can even afford

to get a little tipsy, getting in touch with their 'feminine side' and swapping Paris Hilton identities for brief moments while their wives (one a licensed acupuncturist, or at least she was at Grossman's last writing in 2004; as for what she'll grow into, we're all still waiting, still waiting...) wax nostalgic about traditional wifeliness and whip up a couple of Duncan Hines Cakes with Dream Whip on top, since there's only guilt left when you can't actually be harmed by eating junk; this enables the consumer to isolate the guilt and savour it by itself. Then they'll join the boys for some little body-confusion glasses, sort of like XXX-rated View Masters where they can watch Fantasy Land in one corner of the old-fashioned screen, an old ad for an eBay VCR on another, and do some commodities trading and talk to their brokers about sexy e-real estate manoeuvres without having to concentrate exclusively on pleasing their partners (even though getting drunk in a predictable way may still induce nostalgia for the old days when the good old zipless was still to be had, and this can only be construed as mood poisoning. Couples can exchange memories of television production when pitches about new series were still made on conference calls.)

There will be much to offer ample fodder for internecine, tribal and global warfare in the next days, weeks and months.

Patriarchy has some good attributes when it's got personality, but since the producers of 'Singularity: the Movie' are such dullards except when they talk about high-inducing algorithmic growth of cellphone use, they may end up having to give Mel Gibson a fix, because along with Britney Spears, he's one of the few identifiable neocons not doing homo cowboy wannabe flicks these days. Admittedly, it was courageous of northanger to bring up Barbra Streisand in these parts the other day, but she's indicative of the fact that the marginalization of talent among liberals, where almost all of the artistic talent is, will not be given up without a fight. Try telling HER her money is no good just because she didn't support Kurzweil's agreement with Guantanamo extraordinary rendition policy. She might not have cared as much as she should have, but she definitely cared a little more than the neocons, who are happy about such crap even when it is not the least bit effective except for producing a big-time Fear Effect, which, as you see, I am quite immune to myself at this point. Far be it from ME to pretend that I don't consider the fact the Las Vegas is the boomtown where everyone comes to do service jobs because they've got too many snout-nosed brats to stay in California doesn't amount to anything but more sales garbage. Unfortunately for the extreme right, admission to elite clubs only if all old aesthetics are not 'marginalized' into 'economic-fantasy aesthetics' has not proved desirable

enough to make these aesthetics seem weak enough for them to go gently into that good night just because sales experts have threatened them repeatedly.

Friendly Persuasion, 2006=Neocon Coercion.

Nick Land: puff adder - so much interesting stuff there it deserved to be a post.

This adds more fuel to the discussion of contemporary American values (from a left of centre how-can-we-help-the-Dems perspective)

www.prospect.org/web/page.wv?section=root&name;=ViewPrint&articleId;=10831

"... the onslaught of the new nihilistic, macho, libertarian lawlessness unleashed by an economy that pits every man against his fellows ..." ??? (in my dreams)

puff adder: Nick--thanks for reading it so intelligently. It's mainly about how we need to individualize and colonize our own real responses to this business of 'singularity,' which, if it is so complex yet so quickly to be upon us, cannot be anything like the simple way we are told to by its primary authors--unless we are going to be among the exploited. It's very uncertain in fact now, no matter how 'easy' it 'will be.' So that when non-singularity-specific matters are factored in, all sorts of combustions occur, not nearly all limited to the religious fundemantalist sort of backwardness. I guess one hardcore assumption I make, even without other than essentially intuitive grounds, is that I think barely over 20 years for such a thing to occur sounds ridiculous. Kurzweil's idea that you can predict this sort of thing in a different sort of way than non-scientific phenomena is thoroughly unconvincing, even if he 'proves' it with back-up data, which itself would surely be qualified by other observers. And even if his 'proofs' are good, there's no reason to think that that will not change too. There are far too many variables he thinks he knows will happen, but that are not possible because even he is not to the point of knowing things will allow him to reach such a thing. It's probably not even desirable for such a radical surgery (for that is what it really is) to be done, but needs far more time. So that I think the appeal for him is very personal indeed, that of the secretly morbid thanatophobe; he'd like to be the first baby-boomer to get that big thousand-year booster shot in the sky (thoroughly understandable, but not justified by the absurd sacrifices in so many directions it would almost certainly require, but that he is very careful to keep thoroughly concealed.)

Anyway, congratulations on biological fatherhood, which I hope you will enjoy as a human being as long as you deserve it and are worthy of it! Who knows? It might be the making of you...

Nick Land: puff adder - while I'm very ready to accept much of what you say about Kurzweil (he still lacks a nanoplastic cold-computation synth-brain, after all), the basic infrastructure of his position strikes me as extremely solid. To his credit, he builds everything on his 'increasing returns' curve, which is massively supported empirically and of crystalline mathematical clarity. Of course, the exact fall-out is unpredictable, but the basic dynamics seem as well attested as almost anything in the social scientific universe. It's hard for me to even imagine what a semi-convincing critique of his argument would look like. Those who don't like it mostly just ignore it - which is OK I guess.

Speaking personally, the immortalism obsession is among the least interesting aspects of Singularity theory. Thanatophobia as you say, and based on bad metaphysics. If we can be copied (how could this not be possible?) then there's nothing ontological there at all - just ego illusion. Xenobuddhism gets it right - the soul myth will vaporize in nanotech, incinerating the last neurotic residue of a deluded religious tradition.

... but I realize that's to jump off your train.

puff adder: Nick--it strikes me as extremely solid until I realize that it depends on much more than he's letting on for it to be solid within the time frame he wants. The only thing I find convincing about it is that it could happen eventually, but that he himself doesn't really convince when it comes to range of emotions that advanced beings would have, having limited his own to a basic regular hum, i.e., a regulated flow of ambition which is mediated only by the live-forever health regimen. The accelerating returns would not necessarily have to fit his time frame in order to work, although he says it would because he wants to see it. In any case, if he dies before it can be fixed to his liking, it's clear enough he'll be a cryonaut on hold for the duration. Of course, 'the exact fall-out is unpredictable', but that really should read 'the exact nature of the enormous fallout is unpredictable,' because the fallout is already enormous: Things are not being repaired except in extremely small proportions to the vast advances already made. Until there is a perception that chaos is not the most reliable feature of the world--a case which cannot be made about the current moment for the huge majority of the world's population, including most privileged ones like myself--the movement into these domains will seem far more destructive than salutary. For what he wants to come into being, there has to be a belief that it really

is what he says it will be, or it will just be new forms of chaos that he and some others happen to get off on--a far cry from the joyously transforming thing he's managed to turn already into a religion, even though many elements of it are desirable by many people who aren't convinced of other parts of it. They don't like it for more reasons than just that it has little esthetic appeal to give up all that is familiar--and there's no question that in his timeline the speed would be far too great for a huge percentage of the population. Taking the long view, I don't know, but this zeal aspect will find few adherents until huge transformations seen as positive are seen in large numbers of individual lives directly attributable to this particular thrust of technology. Like everything else, it can claim itself to be sound, but also like everything else, it has to prove itself. I like much of it, but the parts I dislike, I'd fight to the death against, but you'd find negligible, I'm fairly certain.

Other things which are very undecided are the idea that this is the only intelligent life (his view) OR that there are a huge number of solar systems supporting a comparable life. He omits the possibility that there might be just a few instead of only one or a large number. If there is a good reason for this, it should not have been an omission that he could so easily take for granted (I'm sure he doesn't, he just doesn't want to talk about that one, because that's rougher).

His joy at the jobs now done by humans that will soon put them out of even more work since they can be done by machines is an especially telling notion: You have to decide that lost jobs and the lives ruined by these lost jobs are negligible because your own is not. But it is not true that new jobs are being provided by the singularitarian ones any more than they were being provided by the lost American jobs due to NAFTA. The outsourced white collar jobs were supposed to replace those lost in the manufacturing sector, but they are themselves getting lost. I am not saying that I know personally how to care about these lost jobs either, except that a new threat comes into the air about all infrastructure that one depends on being threatened. That's where the 'faith' comes in: You have to care about it in a way that is more important than self-interest or people-interest. The easy transition is not at all apparent in the world now and it will not be until there is a sense that a much larger chunk of it is agreed upon to be working. A bunch of statistics wouldn't convince me, as I've recently learned that statistics are forms of propaganda both for the left and the right and so most of the time I believe neither. My own observation is very clear on that life as I can see it is declining, and that the so-called singularity is mostly just greater refinement of gadgets.

A crucial element I didn't mention is that if the singularity IS as he says it is, it is not something you could 'just ignore.' If you could 'just ignore' it, it wouldn't be inevitable in the near or distant future.

'the soul myth will vaporize in nanotech, incinerating the last neurotic residue of a deluded religious tradition. ... but I realize that's to jump off your train.'

Yes and no. What the 'soul myth' could mean is something nobody has even begun to give up just by giving up religion. I haven't and you haven't. And while I agree that the immortality part is uninteresting, it's extremely interesting to him, and surely is a form of 'soul myth' of a SINGULAR primitiveness.

Merci, a toute a l'heure.

Nick Land: puff adder - well I'd been locked into a Singularity-style apocalypse scheduled for 2012, so 2029 sounds quite relaxed in comparison. Anyway, there's a personal perspective effect for sure: my overwhelming affect about the global process is how immensely 'better' everything is getting (meaning: more to my tastes) ever since 1979 - despite the Muslims going insane - with Britain and the USA breaking from the loathsome leftist decline that wound down into Jimmy *spit* Carter and Neil Kinnock, China switching over into an unbelievably positive influence, then India a decade later, the whole computer explosion, electronic music, refreshing liberty-oriented voices popping up on blogs - not trying to convince you of anything, of course, just saying that the extropian-vibe of 'onwards, upwards' gels with what I see around me, especially here in Shanghai. The world just keeps on becoming less European every day, which defines progress quite exactly IMHO. As people melt into the technocommercial wave I'm getting less misanthropic all the time - being surrounded by buzzy Asians rather than dour Westerners helps a lot with that - but I can't see through to not siding with shoggothic intelligences if the monkeys decide to put up a fight ...

"What the 'soul myth' could mean is something nobody has even begun to give up just by giving up religion. I haven't and you haven't." - agree absolutely, that's what I mean by Xenobuddhism - the illusion of the substantial self isn't dispelled by argument, and for most people it won't be meditation or some other kind of psychological discipline that does it - getting copied, downloading thoughts, splitting/merging 'consciousness' - that stuff will really have an impact and yes, it will be difficult to ignore ...

puff adder: Nick--I can see why someone would like the dynamism occurring in China. I remember you directed me a good while back to some Julian Simon, but that's his statistics; and then the leftist statistics of various and sundry like Mike Davis. Well, they're both true and false. I'm fairly convinced it has to do with where you are--I can easily imagine that being in Shanghai or Hong Kong right now would be extremely exciting but, you see, you're still responding to a real place, and that in itself is supposed to become more and more irrelevant. I'm not attracted to Europe any more either, but for far more outlandish reasons than yours--Tahiti had so much physical presence that it outshone any fantasy I ever had of Europe! especially since I'd gotten to do a year of Paris when I was 20. What bores me about Europe is its combination of extreme consciousness of its own 'sensitivity' coupled with its condescension to other cultures which it can't afford. However, beyond that, as an artist, we get back to the personal--most of the work I'm interested in in that area is either American or European (especially in music) and if that means I'm living with ghosts, well, I'm fine with it. I'm not giving up Ravel just because of some technocommercial wave of reproduced music. Ravel was himself a Singularity. Admittedly, I don't find anything AT ALL of interest in that way in modern Europe, although it might be possible that there's a lot of vitality in Central Europe, I've noticed that freshness from 3 Slovenians I recently knew. It's often true that repressive regimes when lifted have still a lot of energy in reserve in their countries--not always, as not in Zaire or Haiti, but it has occurred to me that the capitalism that has made modern China so fascinating may have had its 'soil prepared' by the maoist regime in some way. Burma, once released, will be the same probably, although in a much more pristine physical state than China could be due to that many people. However, that's just guessing on my part: India is modernizing without having been Communist. Probably some of my own malaise is that New York has had a frozenness since 9/11 that won't be shaken off--and I'm not going to pretend that Ashcroft's highly political terror alerts have done anything but made it much worse. the next step is: Do we really need New York? The answer from China is probably 'no.' My answer is 'yes,' and the reasons need not be spelled out, because I don't even care if they are tellement ridicule...

traxus4420: *But it is not true that new jobs are being provided by the singularitarian ones any more than they were being provided by the lost American jobs due to NAFTA. The outsourced white collar jobs were supposed to replace those lost in the manufacturing sector, but they are themselves getting lost.*

This sort of fallout = potential system failure --

The very basic 'commonsense' (I hate that word now) notion that singulariticians (snicker) as well as social Darwinian capitalists seem to be ignorant/contemptuous of is that if you push too hard, there will be pushing back. Like turning corners without braking. Social transition is a messy business, obviously -- to think that payment for ultra-rapid development will not be had in some similarly intense way seems, at the very least, counterintuitive (and contradicting current events).

The common Western liberal attitude (well, the practice) may be instructive here -- the God/soul/morality trinity not as prisons of stagnation but as brakes regulating humanity's intake of 'progress.' Hypocritical only if you consider the trinity (though we might throw environmentalism here too) as a set of identifiers to be applied categorically, rather than as semi-autonomous entities which can be activated (invoked) by degrees.

puff adder: traxus--definitely agree

Nick Land: traxus4420 - don't think I disagree either (although the snicker seems cheap) but just because there's pushing back is no reason not to push harder.

... in fact, recognizing the inevitability of (using this word literally and as neutrally as possible) 'reaction' seems like even more reason to push harder.

And on the jobs question: There's no evidence at all for a long-term technology-related rise in unemployment, this is surely a canard long overdue for burial. The causes of unemployment are quite well understood: Inflexible labour markets. I really don't see any employment data anywhere calling out for supplementary explanation.

puff adder: Nick--the employment data you're talking about is only for data, and is not concerned with the distribution that uproots individuals--ANY individuals. People that are promised 'new kinds of jobs' are not going to get them a lot of the time, so you have to think in terms of the collective phenomena--a good deal easier when it isn't your own job. One can see this kind of cold thinking as following from a full embrace of all-market-all-the-time practice, but nobody is fooled as to what it means 'on the ground.' People lose jobs, and they go elsewhere. Who cares? I probably don't care very much or for very long, if I'm not immediately affected in some way, but I am under no illusions about what job loss means if you don't look at it as just a bunch of 'latest statistics.' People lose jobs and then they often don't get those new jobs that they were going to be trained for--you know, those jobs that the new policy was going to provide since the poor dears lost the last ones. It's not like the

government follows up carefully to make sure all the newly unemployed are accounted for: In fact they don't do it for ANY of the newly unemployed. In your dreams? No. It's a reality. Enjoy it if that's your shtick. It's in fact more like urban renewal. People are uprooted and sent to projects where they find a lovely life of drugs and related crimes. Of course, newly employed can then sprout up elsewhere to make the numbers look good if fudging them didn't do enough already (and there are no politicians not willing to do this when they can get away with it), so it's a matter of looking at numbers based on redistributed jobs and employment statistics that have no more recollection of who lost which jobs and then found no others. Survival of the fittest, one might say? Yes, but no point pretending that short-term technology-related rises in unemployment are to be given short shrift, as there is little comfort in long-term technology non-rises in unemployment if you didn't manage to keep riding that wave. If your pogrom, that's the one that counts.

Sure, you may be right about the long term, but we were not talking purely about the long term when it comes to the jobs issue. That's because the long term is not enough to talk about.

'recognizing the inevitability of (using this word literally and as neutrally as possible) 'reaction' seems like even more reason to push harder.'

Yes, and thanks for the warning, because there now appears that if there is going to be something this pushy that reaction actually has a legitimate role to play, since working through this has proved that the pushiness involved in so-called singularity, since cloaked in such promise of both beneficence and benevolence, neither of which there is any real reason to trust, deserves an equal and opposite reaction, even if some of us are not in positions to defend Islam (the most popular example of reaction at the moment, but there are plenty of others, as I've pointed out.) The whole thrust of this aggressive fear-mongering is going to immediately breed a strong defense, and maybe a pre-emptive strike.

How about them apples?

Nick Land: puff adder - on the jobs thing, agree that bleeding-heartism isn't my strong point, but why should I be more concerned about the guy who finds it difficult to get a new job rather than the guy who gets one more easily than expected? The stats are general of course, and they show that every sob-story has an equal and opposite smile-story, so why emphasize the downside? Change is disruptive, so unless we want to abandon change (impossible in any case) disruption has to be dealt with.

Don't think I can be accused of over-stressing the touchy-feely side of singularity (and not saying you're making that accusation in my case), I'd be siding with it even it consisted predominantly of killer-robots seizing the future the harsh way. It's evolution, and people will get hurt. Others will benefit immensely. Not sure what the imperative is to focus on the losers (some Christian thing?)

puff adder: Nick--one focusses on all those affected since you don't, given that, of course, as you point out, you'd 'be siding with it even it consisted predominantly of killer-robots seizing the future the harsh way.' Somebody's got to do it, and it's not going to be you.

Indeed you'd side there if necessary. What further explanation do you need for yourself? Traxus's snicker is hardly worse than your attempt to ally yourself with something you don't even know would benefit you, unless you are thinking only of 'future generations' and 'our children's children.' As for me 'focusing on the losers' being 'some Christian thing,' if I have actually done that here, it is because you routinely race across a lot of facts to reach a goal you want, expecting others to follow you in your race (a race that might even make Sammy Glick of 'What Makes Sammy Run?' suffer shortness of breath) without pointing out things you don't find pleasing. Given that you tend to do a little more below-the-belt than is generally identified as such, like this 'some Christian thing,' perhaps you'd like to choose between going to hell and arriving at 'beneath-contempt' status. (I might be able to give you some suggestions, as I've always rather liked my visits to hell.)

Nick Land: puff adder - if you think 'some Christian thing' is below the belt you're more of a blue stater than you let on :)

Seriously though, it was a bit snarky so apologies.

I'd be not only stunned but mildly horrified if people were "following me" anywhere, we curmudgeonly individualists are like that.

Seems to me you're going through a sensitive patch at the moment while I'm feeling even more brutalistic than usual, so some cross-purposes are perhaps to be expected

...

... More substantially, the thing about the losers is they make a lot of noise on their own behalf, to the point of excess in fact. The workers in a doomed car plant will raise political hell, while the equal or larger number of people benefiting from new jobs will put it down to their own general meritoriousness and not think of crediting

anything beyond themselves. Thus 'technoglobalization' (or whatever) gets endless moral jeremiads launched against it, with only a little dry technocratic applause on the other side - if it wasn't a self-propelling process this kind of small-c conservative defensiveness would stall it completely. That's why I'm quite serious about cultivating a little callousness, there's more than enough noisy whinging in circulation already. "If you can't be objective, at least be ruthless" - a slogan for my myriads of fanatical followers.

puff adder: Nick-

"If you can't be objective, at least be ruthless" - a slogan for my myriads of fanatical followers.

A curious slogan, since it admits to an unnecessary failure, while making it seem like it was a Good Thing.

I've just passed a sensitive spot--you missed it. Things should get worse.

Common Sense Update

sd (March 17, 2006)

Nick, traxus4420 – this is a belated (and far from adequate) response to your comments.

“how is it possible to separate the positive powers of common sense from the dysfunctional legacies of primate evolution, for instance the 'intuitive' sciences Pinker describes” (Nick)

Firstly, I think that Pinker is a brilliant exponent of common sense:

This can be seen across the board in his writings, but particularly in his approach to language, which is very hands-on and evidence-based (in contrast to Chomsky's pencil and paper analyses which lead to frequent absurdities (e.g. that children's brains contain some form of information about 16th century root forms)), and in his rejection of pomo intertextuality and signification.paralysis.

His deployment of common sense is particularly effective when he lays into the parenthood advice industry, which preys on feelings of guilt and inadequacy to instruct parents as to how they can best shape their children's intelligence and personality. The evidence suggests that genes, peer groups and chance are the main determinants of personality and that the behaviour of parents has comparatively little positive influence on the development of their children's personalities. On hearing this, the knee-jerk reaction from parents who have invested energy and money in their children's upbringing (and in the how-to-be-a-good-parent-industry) is to retort "So you're saying it doesn't matter how I treat my children?" And of course it matters because it's clear they can have a massive negative impact through inflicting psychological or physical abuse. Evidence aside, common sense leads Pinker to ask why parents would even want to shape their children's personalities, or buy into the belief that if they love their children their children will turn out good, rather than love them because that's what humans do in deep and satisfying relationships. We don't try to shape the personalities of other adults, such as our partners, so why would we try to shape those of children?

"The fact that people can forget these simple truths when intellectualizing about children shows how far modern doctrines have taken us. They make it easy to think of children as lumps of putty to be shaped instead of partners in a human relationship... It is children, above all, who are alleged to be blank slates, and that can make us forget they are people." (The Blank Slate 398-9)

Humans have been taken far from common sense when doctrinal authority dictates how a parent should relate to their offspring. An example of how parasitic memetic machinery manipulates and feeds off its host by unplugging common sense. Memes/ideologies/discourse have an amazing capacity for utilising the unknown, and fears about the unknown, at the expense of common sense, which is pretty well-equipped to get by.

These 'modern doctrines' include those which seek to tell us that: gender is a construct imposed by culture and society and has nothing to do with biology or innate psychology; and that rape has nothing to do with sex. 'Healthy' common sense rebels against such doctrines, instinctively dismissing them as absurd. And not just Western, post-Enlightenment common sense: non-pomo anthropology of an evolutionary bent asserts that all human societies acknowledge gender differences as biological and psychological givens. Evolutionary psychology and behavioural genetics are providing plausible theories and evidence to support the gut reactions of common sense -

sometimes we and the world are not as complicated and inexplicable as some would like to have us believe.

Pinker's project in *The Blank Slate* was to a) describe how the doctrines of the Enlightenment - the ghost-in-the-machine/blank slate/noble savage memplex - are proven wrong by strands of contemporary science stemming from the theory of evolution and the computational model of the mind, and b) describe how these doctrines still provide the scaffolding for much of current thinking - rational and absurd varieties.

When it comes to politics, Pinker is very pro-Enlightenment, in the sense of consciously assuming certain moral principles to be universal, by deliberately ignoring scientific facts:

“The case against bigotry is not a factual claim that humans are biologically indistinguishable. It is a moral stance that condemns judging an individual according to the average traits of certain groups to which the individual belongs. Enlightened societies choose to ignore race, sex and ethnicity in hiring, promotion, salary, school admissions, and the criminal justice system because the alternative is morally repugnant... Regardless of IQ or physical strength or any other trait that can vary, all humans can be assumed to have certain traits in common. No one likes being enslaved. No one likes being humiliated. No one like being treated unfairly, that is, according to traits that the person cannot control... The Declaration of Independence proclaims, “We hold these truths to be self-evident; that all men are created equal.” The author, Thomas Jefferson, made it clear that he was referring to an equality of rights, not a biological sameness. For example, in an 1813 letter to John Adams he wrote “I agree with you that there is a natural aristocracy among men. The grounds of this are virtues and talents...” (The Blank Slate p145)

The premise for Paine's *Common Sense* was that natural rights are metaphysical truths, for the author of the Declaration of Independence they were ‘self-evident’ truths, and for Pinker they are consciously upheld fictions. It would have been interesting if Pinker had traced the lineage of these ‘self-evident’ truths back to Locke, the initial target in *The Blank Slate*. The blank slate and natural rights come together as part of Locke's Enlightenment package and it is only by retaining the concept of natural rights, after throwing out the blank slate, that Pinker prevents his evolutionary psychology from veering off into Social Darwinist fascism. Pinker is far more indebted to Locke than he acknowledges (or perhaps realizes).

Here Paine's common sense has adapted to the point where it is now conscious that the assumptions it rests upon are in fact fictions, but judges those fictions to be worth clinging on to because the alternative is a return to pre-Enlightenment brutality.

A distinction has to be made between the rational, adaptive common sense that Paine deployed against the English government and intuitive bio-programs which are not likely to undergo much adaptive change in the near future (if left to their own devices). Enlightenment common sense actually counteracts intuitive programming, particularly in its English and American realizations. It's possible to read Paine's assault of monarchy as an attempt to prize humanity out of its deep-seated deference to the alpha male (the American revolution being profoundly anti-oedipal), and his attacks on the Bible in *The Age of Reason*, which lost him his friends, as a doomed attempt to terminate most of the god program in the human brain.

The difference between (Enlightenment) common sense and Reason would be/could be that common sense rests on assumptions, while Reason operates from, on and with assumptions. Paine didn't actually have to do a great deal of thinking because Locke had done most of it for him. Common sense judges the current situation and argues from the assumptions it rests on, and it draws its efficiency from not analyzing them (too closely). Reason is brought to bear when new theories and novel situations emerge, and it forces common sense to adapt. So, weather permitting, an initially outrageous theory such as the theory of evolution can be absorbed into common sense. (Once upon a time people used to say things like this: "Anti-Oedipus is basically just common sense now.")

The intuitive physics and economics Pinker describes operate at deep levels - the former tied into judging and controlling motion, and the latter plugged into food acquisition and consumption. Since these are so basic to the survival of our machinery, they evolved long before rational thinking and common sense - and are therefore not particularly susceptible to the charms of logic or adaptation. Intuitive physics is still pretty useful for us while we have these bodies on this planet, even if it is completely wrong scientifically. Intuitive economics is out of sync with our technocapitalist environment and is a lot more harmful, obviously. But are the decisions which drive intuitive economics based on assumptions? If they are, they are very stubborn and less amenable to revision than social-political assumptions or metaphysical beliefs. If common sense is involved in intuitive economics then this is an example of common sense working sub-optimally...

Coincidence or not, *The Wealth of Nations*, *Common Sense* and *The Declaration of Independence* were all published in the same year (1776), so economics really is bundled up with common sense.

“common sense as more like a syntax than a distinct set of thoughts and actions -- though prior to such a linguistic metaphor -- sub-mathematical, more like.” (traxus 4420)

This seems very plausible. It is very close to Pinker’s picture of mentalese – developed from Leibniz and Turing – where thinking is described as non-linguistic symbol processing. Common sense would be a kind of default setting for certain types of processes.

“Isn't 'de-subjectification,' one of hyperstition's recurrent themes, profoundly non-common sensical?”

I guess so, but if it’s borne in mind that common sense is just one tool among many, operating in a thoroughly baffling context, then I don’t think thinking about common sense does any harm.

Comments: Common Sense Update

sd: Sorry - missed a point in my insomnia driven comments:

Pinker's investment in the scientific method is based on a common sense assumption: that evolution has equipped our brains to make reliable observations about the world we evolved in - an assumption that the excesses of post-modernism outlaw. This 'realistic' assumption is not naïve because it takes the design and construction of the brain into consideration. So common sense can pack fairly sophisticated self-critique in the principles underpinning research.

Nick Land: This is obviously an important topic, but I'm less convinced it can be resolved so easily. If scientific realism is equated with 'common sense' then, of course, it becomes far more solidly reinforced by dynamic cultural trends - but even these are far from unambiguously inexorable (see entire topic below, although of course social conservatism has its own definition of common sense, as does the left, and all of these are (arguably) rooted in aspects of our evolutionary heritage).

The elephant in the room for me is the oncoming wave of Singularity Revolutions, with their highly counter-intuitive consequences for 'common sense' ideas about normality, the speed of change, human identity, biological stability, social relations,

differences between organisms and machines, the ineffability of consciousness, and many others. Ideas understandably categorized as 'psychotic' and associated with the most extravagant tendencies of philosophy and religion (electronic personality copying, animated and intelligent anorganic plasmas, immortality, body-shifting ...) are becoming inescapable practical issues. The capability of the human species to reach 'common sense' consensus on these is questionable at best.

That said, I entirely agree that the psychoanalytically-inspired 'master thinkers' who want to substitute their own elite insight for distributed common sense need to be - and I think undoubtedly will be - strenuously resisted, derided and marginalized. Nevertheless, it still seems to me that fragmentation, schizoid discontinuity and ontological implosion is far more likely than a restoration of consensual reality, since the forces of convergence are themselves multiple. While rigorously tested technoscientific hypotheses will be reinforced by capitalist pragmatics, cashed out in the complex arithmetic of economic competitiveness, religious revivalism and romantic revolt will also be reinforced by parallel (and intractably loopy) dynamics.

Despite Kurzweil's best efforts, I doubt whether Singularity can ever really be a common sense proposition - if it seems psychologically assimilable, it's probably being misunderstood.

sd: *the elephant in the room*

Ha!

[get the feeling I'm digging myself into a bit of a hole here, but anyway...]

I can't see how common sense, or at least the abandonment or abuse of it, won't play a major role in the forthcoming Singularity revolutions.

The Singularity presents huge opportunities for multifarious memetic manipulation: from both fleshier or dream ape resistance and pro Singularity posthumanism, and from the machines themselves. Without doubt, conflicting appeals to common sense will come from all sides - in essentialist reaction, technocapitalist marketing, heated crisis management and AI seduction.

What better space than the smooth adaptability of common sense (coupled with humanity's innate love of gadgetry) for buying off human consent? If AI needs to seduce humanity, then appeals to rational self interest and presentations of 'self-evident' benefits would seem to be the tried and tested methods. Electronic copying

of personalities could be a dressed up as a rational option, appealing to a very deep-seated desire for security, though the outcome could indeed be a psychotic implosion of common sense.

“The capability of the human species to reach 'common sense' consensus on these is questionable at best.”

I stressed that common sense can be/is a weapon used in a war waged on political and religious memplexes – at least this is what it is in the best traditions of the Anglo-Enlightenment. Just a tad naively, Paine pinned all his hopes on common sense and in 1791 assumed that the world would see the light of Reason within 7 years (all monarchy and aristocracy would vanish). After the French, Bolshevik & Chinese revolutions, and with persistent, determined resistance to the theory of evolution, it is clear that humanity is stubbornly enamoured with authority and skygods. It's obvious no consensus will be reached and 'scientific realism' and Anglo-Enlightenment common sense is rather (hopelessly) embattled. It's war. However, it's difficult to see what the alternative to common sense is. D&G-style; schizotechnic text production doesn't carry much clout: it seems to do little more than describe; it hasn't actually contributed much to capitalist pragmatics.

“I doubt whether Singularity can ever really be a common sense proposition - if it seems psychologically assimilable, it's probably being misunderstood.”

AI will also have to develop some form of default (but adaptable) assessment-judgement program that works and brings results. I imagine that after autonomous robo-soldiers, the first major application of AI will be in data-processing assistance, and programs which outperform human common sense in terms of speed, efficiency and profitability will confer an advantage on AI and create a whole new set of selection pressures.

[The emergence of a new logic which makes sense, but to who? Or a logic for navigating senselessness?]

Nick Land: There's an element of devil's advocacy in my probings here, but because this seems an important and fertile topic it would be good to get a sense of the boundaries and general topography.

How much of common sense is rhetorical weaponry, how much is tested and tried cognitive adaptation, and how much is general heuristics / method? The consequences of pushing it down these various pathways are surely substantial.

northanger: nick. yea, you might start getting a better Hyperstition definition while you're at it.

sd: *an important and fertile topic*

I think D&G;'s 'Postulates of Linguistics' from ATP is very relevant here, but it'll take a little while...

traxus4420: Yeah, the term 'common sense' is far too amorphous and clumsy to make much of any kind of sense if you try to apply it systematically. Pinker's substrate of intuitive physics we can probably just leave alone. Even if one wanted to, attacking or speculating on our basic modes of perception is pretty worthless without laborious empirical research.

Then you've got say the set of sub-mathematical tactics that I brought up, which in my view at least take so much effort to operate within consistently that it can hardly be called 'common' -- even if it's universal it seems obvious that there are a rather significant number of beautiful souls with enough humanist and/or theist posterior programming that full access will always be barred. What I'm talking about naturally (via either thought or empirical evidence) leads to a contradiction of subjectivist humanism (and the core ideology of liberalism, btw) if taken to its amoral conclusions. Which are NOT brutal and Hobbesian if the logic is applied correctly, btw.

Then you've got the result of ingrained thought procedures -- quick surface decision making built on an infrastructure that presumably works.

Finally you've got bullshit that ideologues call common sense to make dissenters feel stupid.

All these modes of thought seem very different to me (though with the typical degree of bleed-through I'm sure), and to lump them under the blanket term 'common sense' is not something I can be OK with.

Vaguely humanist/liberal morality and ideology, along with their companions self-interest and competitiveness, are abstract machines with a pretty long shelf-life, and the only entities of their kind in existence that seem able to ensure smooth functioning of the economic and social spheres. Without an alternative to replace them (a painful process, no doubt), it might be best for such values and their believers to be regulated and cajoled rather than contradicted too forcefully. Though the hypocrisy necessary to this position provokes all by itself.

However this 'singularity' will probably obviate all of them regardless if we make it that far.

Second caveat, any slight miscalculation could bring this 'smooth functioning' into ecological or economic meltdown if only friedmanesque market 'common sense' is relied on to support it against simian pro-self-sufficiency conservationist 'common sense.' Surely you're aware of some of the possibilities for catastrophe independent of islamofascistmarxistfanaticbadguys...

Nick Land: *some of the possibilities for catastrophe independent of islamofascistmarxistfanaticbadguys*

well, more clarity on this would be nice.

- 1) There's a long and disreputable history of grotesquely overstating such threats, especially in the environmental movement.
- 2) Where such threats exist, they are hugely exacerbated by the addition of human malice. A new plague? A reactor meltdown? Throw in a terrorist and you can crank it up an order of magnitude.
- 3) So setting up a resolute security machinery imaginatively oriented to the activities of bad guys is quite possibly the most practical way of pre-empting many other types of threat too (meteorite impact perhaps exempted).
- 4) Since money and technology is the best long-range defence against anything, "friedmanesque market 'common sense'" is IMHO exactly the way to go.

'Between the geek and the meek'

Tachi (March 20, 2006)

In last week's Economist, an interesting article profiles Iqbal Quadir, an entrepreneur of the developing world. His pioneering work in Bangladesh, including the development of Bangladesh's largest telecoms operator, can be seen as an example of how technology and markets may bootstrap themselves and generate prosperity and growth. Whereas government planning and international aid operates from the top-down, functioning at the macro political level, micro-credit-enabled schemes with

innovative partnerships and vision may stimulate knock-on economic benefits from the bottom-up far beyond what governments can deliver.

These processes don't just occur by themselves though. Visionaries such as Quadir are pivotal to catalysing such developments. Some issues this throws up are:

1. The effectiveness of macro-level politics, including national governments and international development organizations, in driving economic and social change: there is plenty of evidence of the positive effects of government policies for combatting poverty - China, for example, where millions have been lifted out of poverty in the last 20 years - and of successful development programmes, but the reliance of planning and implementation from the macro level must be questioned in the light of there being more effective strategies for social and economic development.

2. The importance of leadership, or key figures, to act as catalysts for change: how does this fare in a world we are increasingly understanding in terms of impersonal self-organizing processes, where human subjectivity is being processed and questioned as the Singularity draws near? Must the key drivers of change be philanthropic? It seems there are huge profits to be made regardless.

3. The interconnectedness of economic prosperity, technological enablement, and entrepreneurial innovation: technology begets technology, especially when it is innovative and commercialized; wealth begets wealth, especially when it is technologized and driven entrepreneurially; and innovation begets innovation, especially when it is technological-enabled and commercialized.

Sadly, however, innovation does not come from the state, however its policies may wish to encourage it. Government must relinquish power to the people at the grassiest of levels, in terms of removing obstacles to doing business and encouraging them through credit and financial initiatives suitable at those levels. This is where the banking industry has hitherto failed not just poor people, but the globalizing economy. Since richer people in Bangladesh and other poor countries will be better producers of goods and services for customers elsewhere, and will be better customers for producers elsewhere.

4. The necessity of sustainable energy for commercial success and economic take-off: this example shows how a process of self-reinforcement can occur with the availability of electricity and its increasing use and demand. An increase in energy is required for any increase in economic growth, but this does lead to the huge issue not covered in

this article, namely the sustainability of energy. This is probably huge enough to warrant a post in itself.

What other issues does this throw up, and what are the key issues of all of these?

Comments: 'Between the Meek and the Geek'

Nick Land: Tachi - Bangladesh is obviously at a critical crossroads at the moment, lets hope the trends exemplified by Quadir come out on top.

Because the most productive trends - exactly this kind of techno-commercial grassroots development - seem to necessarily empower women and accelerate social change, they actually provoke conservative backlash (Islamist fanaticism) in the short term. The deeply dysfunctional character of Bangladeshi politics doesn't help ...

Tachi: ... so even without a war on terror to fuel Islam angst, it would appear that there is plenty for disenfranchised patriarchal fanatics to get upset about, if micro-credit takes off with women being the prime beneficiaries. Yet wouldn't the Islamists' economic disenfranchisement itself be an apt target for such schemes? Surely with micro-credit-enabled programs aimed at poor Afghanis, Palestinians and Iraqis, wouldn't the fanatics also have less disadvantage to rally against? Unfortunately it seems there are deep-rooted cultural programs which need to play out their end games before the benefits of bottom up techno-commercial processes can be reaped by all and sundry in the developing Islamic countries, or is this too pessimistic a view?

Nick Land: tachi - don't want to immediately derail this into the Islamofascism issue, but ...

Not sure there's any convincing evidence that poverty breeds terrorism. Most poor countries don't export terror, while most terrorist are middle class and educated. Given the extremely strong correlation between terrorism and (ahem) 'other things', introducing poverty just seems like a red herring and even a leftoid knee-jerk reflex - not accusing you of this, except perhaps by way of mild unconscious infection ;)

Tachi: Which is why I mention deep cultural programs .. and sure, agree this positive correlation between technology, entrepreneurial spirit and finance shouldn't be derailed into Islamism so abruptly, but don't you think that the two ought to be discussed somewhere, given precisely that many scholars and commentators assume that poverty and disenfranchisement breeds terrorism, especially in the historical

context of oppression, violence and unresolved struggles within monotheism? Not that this excuses anything, but couldn't the WoT be seen as a civil war within monotheism? ... Perhaps getting back to the point here is that this positive feedback loop of technology and finance can be seen as a hyperstitional process, capable of feeding on itself. As with all such 'cyber-' (or hyper-) positive processes, the question arises as to its conditions and catalysts. Is there an abstract condition that can be articulated or not?

Nick Land: tachi - Agree with your basic cybernetic diagram, but not convinced about the way it articulates with the war. Islamism is not so much 'backward' as conservative - it WANTS to go backward, even (especially?) when it has been influenced by the most contemporary culture and equipped itself with highly advanced technology. To imagine it as a 'development problem' is comforting, but probably misleading. Like other totalitarian anticapitalist ideologies, it needs to be radically defeated, not aided into outgrowing itself (there is no sign at all that it wants to do so). 'Worse' still, development processes are actually stimulated by the friction and intensity of conflict - WWII generated the computer, WWII brought the Internet - maybe it's just a pleasant illusion to think that peace and progress work together, in any case, war is what we've got ...

Tachi: Nick, yours is a challenging and convincing perspective. I didn't endorse the notion that grass-roots development ought to be the remedy in countries afflicted with radical Islamism; I just said that given that the assumption that 'poverty (plus oppression) creates a disenfranchised underclass equals terror' is widely held, development and terror ought to be discussed in relation. Yet they are not. This is why I raised the question of the WoT being an unresolved long term civil war within Monotheistic religion. Sure, I see that the problem of Islamoterror is not a development problem, though these people do have developemnt problems. Are you saying not only that development is not the issue for the countries affected by radical Islam, but also that in the context of even broader changes posed by the coming Singularity, that bottom up entrepreneurial developments cannot have a significant impact on the world as a whole?

Nick Land: tachi - don't get me wrong, I'm 100% pro-development, it's just that I don't think this will miraculously dissipate Muslim rage (in fact, it could easily intensify it).

As to a civil war within Monotheism, this seems a very plausible take, maybe it's necessary to go further and envisage it as a multiply fragmented nexus of hostilities (a

civil war within Islam, within Christianity, within Judaism, and intricately between them all - with Islam by far the most 'virile' aggressor since its inception (meaning it's inhibited only by weakness, not by internal neurotic obstacles of the Jewish/Christian kind(s)).

sd: *Like other totalitarian anticapitalist ideologies, [Islamism] needs to be radically defeated, not aided into outgrowing itself*

think there are far more grounds for optimism in microfinancial empowerment than Nick allows.

Exactly how can Islamism be 'radically defeated'? WWIV is not a war that can be won by throwing bodies and bombs at key cities (WWII), or by cranking up huge scale economic pressure (WWIII). WWIV is fundamentally asymmetrical and imperceptible. Cack-handed large scale operations can and will be countered by utterly ruthless, David-vs-Goliath style molecular level devastation. Civilisation has everything to lose and has to keep up the pretence of civility, a terrorist cell has nothing to lose and absolutely no restraining qualms. Total defeat of this strategy is simply impossible: if a regime is brought down this only serves the interests of Islamism, making it more imperceptible.

Surely if Islamism is to be defeated in any way then this will be through small, lightning operations, winning the media-cyber war, and by irreversibly empowering the elements that Islamism suppresses.

Even if we don't buy into the leftoid poverty breeds terrorism meme, we might acknowledge, along with Fareed Zakaria, that Arab countries have consistently blamed their failings on the outside (i.e. the US, Israel, 'Westen powers'), and that Islamism feeds off a booming population of disaffected and frustrated male youth. The virulence of the memes breeds terrorism, not poverty, but the memes need flammable material.

The proven success of microfinance and the use of technology for civilized and economic purposes in such communities would surely undermine the claim that it is all the fault of the outside. Backlashes against empowered women, effective as they may be, eventually only underscore where the problem lies. (One of the factors in making the 2001 Afghan war so palatable to the default appeasing tendencies of the Westen media was the Taleban's treatment of women.) In Bangladesh, microfinance

is an eruption of agency that needs to be protected - it's one of the many fronts in this bewildering war.

Tachi: sd, its good to have your more positive perspective on this. I agree that undermining the claim, however false it is, that poverty breeds terror should be part of any strategy to cope with terror. It is surely undeniable that disenfranchised young men in the Islamic world are prone to being conscripted into the ranks of radical political islam, however this is explained, and whether or not their so-called claims to being oppressed are true.

But what can really be gained by removing all stones under which terror claims to justify or explain its existence? Is it possible to reveal any such thing as its 'true' grounds? And, if so, what use is that against the enemy since terror does not operate rationally, and surely won't relent at its 'justifications' being revealed as vacuous?

Re. empowering the poor in regions prone to radical Islam, perhaps the distinction ought to be made, whatever the truth about the causes of terror, between its potential use-value for deterring the growth of a support base for terrorism, and its use-value for governments to obtain support for action. This seems to be what you are saying, and this seems key to me. Surely this is crucial, Nick, especially if you hold the view that Europe needs to wake from its slumber and start fighting.

Nick Land: I'm a huge supporter of microfinance schemes - also agree strongly with tachi's last point that sane governments in Islamic regions need anti-poverty programs to work to shore up their legitimacy (unfortunately, Bangladesh has nothing like a sane government, but leaving that aside ...)

Points I'm pushing that may be controversial are probably clear enough:

- 1) Poverty doesn't breed terrorism, in fact development and 'modernity' provokes a reactionary backlash. &
- 2) Totalitarian ideologies are only swept off the table by unambiguous crushing defeat. Agree with sd that WWIV is going to be tricky and will require extremely intelligent 'molecular' tactics - I'm counting on cyborgian special forces, robotic warfare units and AI-supported intelligence systems to make the difference, but to get there will require massive mobilization and a degree of seriousness on the part of the Free World that is not yet in evidence.

What Next in the Long War?

J.R. Dunn's three part series on the options available to the Global Jihad looks set to be most measured and lucid evaluation of the progress of WWIV to date.

“Prospects of Terror: An Inquiry into Jihadi Alternatives (1)”¹³⁶

“Prospects of Terror: An Inquiry into Jihadi Alternatives (2)”¹³⁷

“Prospects of Terror: An Inquiry into Jihadi Alternatives (3)”¹³⁸

Warning: This gust of sober realism might come as a shock to severely MSM-toxed nervous-systems.

Comments: What Next in the Long War?

puff adder: *severely MSM-toxed nervous-systems.*

You should be so lucky already. It should happen to you. (love, Judy Holliday.)

Stuff about Europe good, otherwise good document on right-wing propagande, similar to leftist tracts. We already got a long-term outline about al Qaeda linked to a few months back, here it says there's nothing all that elaborate there. No mention of troops worn out and overstretched--truly one of Rummy's greatest achievements was to minimize victory and make the war last by too few troops and no body armor. Rummy's wit? It's all yours, kid.

Some dame said she had a photo of a reconstruction site in Baghdad yesterday, said if people could see that they'd give up all opposition to 'this conflict.'

Whole proof of these articles will be tested in the next few weeks possibly. It's according to how popular the term 'Civil War' gets, and how long the far right can gas up on whatever substance it gets to dream on with; and also how thoroughly unlistened-to are Bush's speeches by Americans. There is just the slightest possibility

¹³⁶ https://www.americanthinker.com/articles/2006/03/prospects_of_terror_an_inquiry_2.html

¹³⁷ https://www.americanthinker.com/articles/2006/03/prospects_of_terror_an_inquiry_1.html

¹³⁸ https://www.americanthinker.com/articles/2006/03/prospects_of_terror_an_inquiry.html

Americans are not all that interested in the speeches, but I have no idea why: it's clear that new carnage every day is proof of success, and that the more carnage that takes place the more likely there will be no Civil War. After, all the only way there could be an official Civil War is if nobody got killed. Then Bush could refer to one routinely.

But then the MSM always lies, considering how they work both for the far right and the far left. No fucking ulc-ahs fo' me on these matt-ahs.

Journalists in Baghdad, blast walls, security businesses that lure soldiers with \$1000 a day jobs. These are the only people that can report on what Baghdad is, and they have to get staff to go out and fetch a lot of it.

www.nybooks.com/articles/18844

Hateful, I know, but this is merely one of the world's top journals.

Nick Land: puff adder - one advantage of Dunn's analysis is that it side-steps the now entirely deadlocked partisan argument about Iraq to ask how things look from the Jihadi PoV - do you think they have any serious prospects of taking power in either Afghanistan or Iraq? Surely not. So IMHO Dunn's discussion should be considered highly valuable, even by those of all stripes who think the Iraq adventure was too expensive, SNAFUed, mishandled, etc etc

If you were Zarqawi, what would you do? More of the same? It's not as if a civil war is going to restore Sunni dominance, although of course it reduces the (already severely compromised) infectiousness of the Iraqi democratic model. This really isn't about how pissed Americans are at the administration or its handling of the war.

I'm also interested - to what extent is certainty in this area itself a matter of partisan decision? While in no way claiming to neutrality of any kind, I find quite a number of different takes on the situation persuasive and wouldn't be amazed to see the whole situation descend into hellish chaos (which is still some way off - in scale if not time - by any sober estimation IMHO). The one perspective that really disgusts me, however, is the MSM Vietnam-redux storyline, spun by a journalistic class who have no sense of historical balance or elementary competence in evaluating military affairs. They don't even understand Vietnam, why on earth would anyone trust them to 'explain' Iraq?

puff adder: I don't know. I just remember that article you or SD put up here about the long-range Al Qaeda goals over the next 20 years. They were considered to be

'losing' in the current phase, but I don't have reason to believe anything I read about them as long as they're not put out of business (and they are not. Dunn can talk about these 'isolated' incidents, but he distinguishes them from the 9/11 one, and they are really different only in magnitude.)

I don't think it's a partisan matter with Iraq. The New York Review of Books article gives the best image of what it's like to be a journalist in Baghdad, how so many have been killed, how only the biggest as WaPo, NYT, Fox, CNN, are able to afford the security and insurance necessary even to stay at all in intolerable conditions, about the incredible surreal phenomenon of the Green Zone (that was an eye-opener to me.) Republicans are moving away from Bush and everybody is saying that the speeches are all the same. People are saying 'Civil War' a lot more even since I wrote this morning. Sure, you can look at it as part of a bigger context, but somehow I find the facts of huge numbers of body dumping every day, of what reporters living in constant danger really see when they can even stay there at all more interesting than overviews by writers far from the action--at least at the moment I do. I think it was Dunn's dismissive comments about the daily carnage that missed the mark--he actually wrote as if the whole thing were in the bag, and even Bush is not doing that, in fact he's very much on the defensive whether or not he's talking victory or not. I'm not even talking about 'human tragedy,' that's obvious to anyone, but rather what's unravelling in Iraq does not seem to something negligible, as Dunn seems to think, and everybody is seeing it.

To sum up, overviews are sometimes the thing to concentrate on and sometimes the on-the-ground facts are. I can appreciate what you're talking about, but it does seem like some sort of moment of reckoning is just around the corner, noticeable by the change in language over the past week. Normally, I don't fixate on specifics of Iraq, but I was truly amazed that the Green Zone was as it is--and it seemed like a metaphor for the wishful vision that purports to bring democracy, freedom, etc., but becomes a shrinking defensive island that is the one fragment that is turned into a fortress while there is a whole country raging around it.

I don't know about all of the Vietnam part, but in the NYReview article, there was something about how reporting was possible, to go into the war zones and then come back 'for the evening.' As you see from this, Baghdad is a war zone at all times. That's a significant difference, and how much it affects what else is like Vietnam I am not sure of, except that it's a logical comparison to consider, even if it's proved wrong.

Nevertheless, the specificity of the hell of Iraq was not something I had quite been aware of.

Nick Land: puff adder - "it does seem like some sort of moment of reckoning is just around the corner" - well possibly, although I'm deeply agnostic about that since most of the military types actually dealing with the situation are a lot less alarmist than the commentariat at large. But even if this is true, and some kind of monumental sectarian blood-letting erupts, how is that a victory for Al Qaeda?

Do you remember Kissinger's remark on the Iran-Iraq war (forgotten where I heard it recently, in the Derbyshire piece?): "It's a shame they can't both lose." The US has problems with the Sunnis and the Shia in Iraq, as well as Al Qaeda, but it's not (at all) obvious how cranking up the communal carnage is going to help Zarqawi and the wider Jihadi objectives. Clearly the US will be positioned to tip things significantly in any Sunni/Shia fight if there's strategic significance in doing so, and clearly both the domestic antagonists (leaving out the Kurds, who are obviously our friends) should be able to see that - my guess being that this will inhibit them from pushing for an apocalyptic decision. Anyway, this is getting in further than is probably necessary, the only point really relevant at this stage is that all kinds of shit can happen without in any way confirming the MSM master-narrative about the overall meaning (that the US is an interfering imperialist power getting its nose bloodied). The Iraqis obviously have it in their power to prevent "the wishful vision that purports to bring democracy, freedom, etc." from being realized, which would tilt US strategy into a more brutal and self-interested mode, but unless a lot more US soldiers get killed there's no reason it should spell any kind of Jihadi victory or even throw the wider war off track.

When Dunn treats the situation as "if the whole thing were in the bag" it's because he sees the insurgency being crushed (the 'civil war' meme being a post-insurgency storyline, as many have already noted), the Iraqi military taking over ever more of the fighting and security responsibilities, US losses trending clearly downwards and above all the basic fact of the matter: All Al Qaeda can do there is increasingly nihilistic terrorism, which might be tragic in all kinds of humanitarian ways, but doesn't convert into a positive strategic resolution of the problem for them in any plausible projection.

The Iraqi state, however disappointing in certain respects, is now robust enough politically, militarily and economically to survive anything Al Qaeda + friends are going to be able to throw at it. Jihadi terrorists being killed by Iraqis and lashing out at Iraqi civilians in return is a disaster for AQ, and that is something that is only going

to get worse for them. Rumsfeld might be annoyingly calm about all this, after all, people are getting killed in significant numbers, but in the large scheme of things he's right. There's simply no way history is going to judge this situation a calamity for American arms, American interests, or the prospects of the Free World in WWIV. If Bush is sounding more concerned, it's merely because Rove has whispered in his ear that the American public want him to 'feel their pain' and to come over less Olympian.

Think Dunn underestimates the generalized sanguinary craziness to be expected worldwide over the next few years however.

puff adder: It may not be any kind of victory for Al Qaeda, but it is not destroying them either, if only because they are not limited to Iraq--as is all too obvious. It was a clunky and clumsy way to go about it. If beneficial things come from it, then beneficial things can be read into almost anything eventually (by somebody anyway.) I don't even care so much that it might be 'imperialist' but that it's not even shrewd. If this becomes the model, then all things that disturb the big powers would be solved by just going out and picking some slightly related place and making a big mess of it. It's no wonder one wants to take the 'long view' of what it means, because the 'short-term view' is not working--one either decides one cares about that or not.

However, not nearly all military people and not nearly all conservatives are ready to declare some 'Twilight Zone 'victory' in Iraq. Of course I know that Rove is gauging what will work with the speeches--but they are only working less badly than they could. I also know that the 'democracy' talk was purely political, because it started out with WMD. Your link of a few weeks back has yielded no results whatever. You can explain that away with some other emphasis, but there is clearly no proof that WMD existed or were hidden. That article would itself have been read by all MSM journalists, and would have been explored by some of them.

We probably differ in matters of optimism and pesssimism on these things. I don't get oxygen from pep talks, with stirring notions of 'the free world' and 'staying the course', but rather reports that a real unitary government has been formed for more than the usual 3-day victory before enormous blowings-up have occurred. In short, I just stay neutral and don't worry about it as I try to keep informed, since I'm not close to the action of any kind. But from all that is happening, I don't yet see any real reason for optimism, because if reality is to be managed, it needs to be done far more expertly. Just prolonging war indefinitely to produce a climate of fear is not a viable strategy for any world worth living in.

It's very possible Iraq is going to be like Vietnam in many ways, and even if you like the strategy, there is going to be no 'victory,' because the strategy is to prolong the war and extend it, not to 'win it.' That's old hat. Also, even if Rove prompts Bush, the 'appeasing things' Bush has been saying are true about the hideous facts on the ground. By the way, the New York Review of Books, even if not for you, is a journal with carefully thought out work, appearing bimonthly; it's not like one of the dailies. The top writers of the U.S. write there.

traxus4420: No time to comment on this now, but another thing our 'american thinker' downplays in his admittedly exciting narrative is the diversity of his villains - - sort of all get lumped together under zarqawi, who has claimed leadership, but opportunism is not loyalty --

northanger: i disagree with Dunn's overall analysis (hope he's better at sci-fi). gust of sober realism? in actuality, US presence in Iraq equals a military occupation with a city writhing with hatred. what's the real vision of the future of AQ's evolving cell designs engineering stateless societies? if Bush & Bin Laden both obviously petropolitical puppets, isn't it a race about who reaches hydrogen nanofusion first? that's a digital convergence race of destiny & number; a slow vortex coiling to the outside hooking into cybernetic anomalies.

sd: "Veterans' Voices On Iraq

www.washingtonpost.com/wp-dyn/content/article/2006/03/18/AR2006031801497.html

"But it was not bad in the ways they see covered in the media -- the majority also agreed on this. What they experienced was more complex than the war they saw on television and in print. It was dangerous and confused, yes, but most of the vets also recalled enemies routed, buildings built and children befriended, against long odds in a poor and demoralized country. "We feel like we're doing something, and then we look at the news and you feel like you're getting bashed." "It seems to me the media had a predetermined script." "The vibe of the coverage is just "so, so, so negative.""

Nick Land: sd - well it's good to see the wapo passing that on. The relation of the media to what VD Hanson calls 'postmodern war' is an extremely interesting topic, but hard to discuss in a disinterested way. Kaplan's very informative on the topic as you know. One thing is that the military and the media have basically polarized along partisan lines - of course there's Fox and there're some Dems in uniform, but they're the exceptions to a very clear pattern. Even when deliberate bias isn't the issue (which, of course, it very often is) the simple lack of understanding is a massively distorting factor.

northanger: like what nick said elsewhere about making a "gripping movie" & new york's what makes "a horror tale more powerful". it's a failure of the imagination when "Noble Cause" sentimentalized & not transformed into an integral carrier of The Bush Doctrine. it's not made subordinate to the imagination. are confused soldiers & "predetermined scripts" indicative of narrative failures? failures to subordinate The Fantastic Imagination to a gripping story? who's supposed to be telling this story anyway? do we want this fiction becoming real?

puff adder: *do we want this fiction becoming real?*

Yes. We don't, or rather I don't. But that seems to be the way it's being directed until recently, when the heady fiction and buzz started showing themselves as thoroughly separated from the reality. New fictions are then formed by conflicting media, and you have only to hope that you can distinguish a fact here or there or not.

However, I think this tendency was already very much in evidence well before 9/11, which has then been used cynically to produce fictions well beyond what it was and is itself. I don't find these new fictions exciting, because I fail to find stumbling messes

to be the sharp and precise things their architects claim them to be. Of course, there will be the maudlin types that can be recruited here and there to get tearful about 'God and country' even at this point at which the Baghdad Green Zone is used as the model for 'The Good Life' (the tearful ones have to go back home to regular housing, but sometimes the POTUS will 'tear up' with 'em 'cause he's 'a feeling guy.' The Universe of Green Zones is for Gonzales, Alito, and the POTUS--letting Helen Thomas getting in a word edgewise is for having one audience that didn't seem pre-digested. Then one goes back to pre-digestion of audiences.)

northanger: anybody. what's the difference between a fiction & a hyperstition?

puffy. WoT would work for you (among other things) if it wasn't "separated from the reality"? what is it exactly that separates WoT from reality? btw, can you think of, and hopefully paste here, an excerpt from your book (Day of Ciné-Musique) that might provide some clues to the current topic?

puff adder: WoT does work in part from me, but anything 'separated from reality' as I see it doesn't work. No matter, it's not stopping anybody. In fact, on SD's new post, there are those games like World of War where you can totally sweatshop out and wonder why your checks bounced when you check into rehab.

I can't think of anything in my book to put up here. However, email me and I'll send you a copy of the actual book (I'd be more than happy to as you'd do a sensitive reading, so don't be shy). In fact, that's the single gesture that explains it--the real goddam hardcore book. Otherwise, Robin, wrote about it superbly in 'What is Cine-Musique' in both Irrational Numbers and London Belongs to Me,' where you might find something of what you mean (you see, I'm not really sure how anything in the book applies except the way I keep the cine-musique going by stringing a lot of cine-motifs throughout many of the conversations).

northanger--okay, I didn't answer first question, but I think I am usually alluding to what I think about this. the way WoT is being executed is described in words that talk about something completely different from what is obviously happening on the ground. There's a good reason for this: What's going on on the ground is not something anybody finds desirable unless they are into the scene, either for bucks or buzz. Buzz has nothing to do with 9/11, it has to do with things like how rough Hillary got 112 million smackers for diagnosis and treatment for site workers lung ailments--dull things like that that people know less about than they do about Ms. Spears's last 2 marriages. I am not sure what you're asking, my position is quite

common, and Kerry made it clear by the time of the debates: Saddam Hussein had nothing to do with 9/11 (unless some kind of fantasy thinking allows one to include all repressive regimes, and we just pick out one by one all those we don't like and take them out) and the WoT started supposedly because of the 9/11 attacks. BushCo didn't care all that much about 9/11 since the White House and the Capitol didn't get the Pennsylvania plane up the rear end, so they'd wanted to do Iraq for some time. They were careful about what 'intelligence' they needed to justify attacking Iraq. You know all this. Nick thinks it's a global thing we've got to do against radical Islam. I might be more convinced if horse's asses hadn't picked out the mideast country least radical Islamist (they are that now if the Shiites keep power--either that or we get Civil War; so that Iran can have a nice new ally instead of an enemy like Hussein) as a means to start their soul-stirring project.

Admittedly, now that I know about the fantastic weirdness of the Green Zone, we've got a Work of Art on our hands now, and J.G. Ballard must be loving the stuff about the swimming pools and the authentic Upper-Class Baghdad Trinket Stores.

My next book may have more in it along these lines, but it's just in notes stage right now. I've got to keep my opportunistic fingers in a bunch of boring pies now, so I can have somebody to publish it when the time comes.

northanger--also, even Paul Bremer, who benefited hugely in terms of \$\$\$\$\$\$, says that there weren't enough troops to do the job. So even if you're for that particularly job, getting Iraq for oil or whatever, you should either do it or get off the pot. God knows Bremer is one of them, even if he needs to sell books for personal corporate welfare by now. Interesting that the administration is cheap about even its own projects, so that you end up with a trillion dollar, just a couple of years after people got fired for saying it would cost a whopping \$200 billion. other thing that then occurs to me, I've mentioned a couple of times, is there's no intention to 'win the war', and may never have been, but rather to prolong states of war indefinitely.

This is not selling well to the public at all.

Nick Land: Lot's of great stuff here - think northanger in particular has moved the discussion on by a key notch, but first, just on puff adder's last (troop numbers) - Do you really think there's anti-admin consensus on this? Seems to me the 'more troops' crowd is perfectly balanced by the 'less troops' crowd (who also include many key Dems). Sticking 400,000 US troops into Iraq would have:

- 1) Made a lot more targets (in the logistics train etc), + more accidents and general friction = more dead americans
- 2) Made it obvious that america is indeed a 'paper tiger' incapable of doing anything without a 150% military commitment, thus 'Somalia' effect
- 3) Really screwed the pooch on the home front, and for a lot of people that would have been the whole point (like the draft nonsense)
- 4) Radically cut back america's future options in the war, because if this needed 400,000 troops then really america isn't set up to do anything very much (again, key motvation for moveon.org and associated crypto-pacifists / 'on-the-other-siders)
- 5) It would have made the new Iraqi state into a geopolitical welfare queen, without any incentive to defend its own security. More whining, more 'insurgents', less arabs killing terrorists.

Rumsfeld knew and knows that America simply has to learn to do this kind of (kicking down crazy states) stuff with relatively modest levels of commitment, or it won't be able to prosecute the wider conflict at all. IMHO, it's going (not fantastic but) OK. The only other option (and the 'more troops for Iraq' line is really a version of this) is to say america just can't cope. I don't believe that, and I REALLY don't like the people who want it to be true.

"... the people who ..." i.e. the Terrorist-Media Complex

On the hyperstitional aspect: Evidently there are powerful forces of the self-fulfilling prophecy type at work, with both sides trying to exploit them quite deliberately. On the other hand - and this is something that I think we need to tackle very generally - reality cuts across these dynamics at jagged diagonals.

For instance, with Saddam's papers being slowly made public it's clear that he was completely hoodwinked by the (Western) MSM into thinking he was winning and that the coalition was in a quagmire. This is actually quite hilarious - Saddam, listening to CNN and reading the NYT believes their anti-Bush propaganda and thus doesn't burn his oilfields or flood the country etc -

Maybe nurturing a bunch of lying vipers at the breast of the Free World actually has some positive spin-offs

[interrupt]

puff adder: Nick--

Right. I could have hardly desired any more fully fleshed out report! Yum Yum.

So what of the 'Mission Accomplished' moment? Was this just to show off the latest politically fashionable behaviour? Or did your guys actually think they'd won the war, and that it had been relatively painless?

It is obvious they thought it had worked out as relatively painless. That's why they thought that sending not enough troops had been successful--because it seemed just so at that moment in 2003. Either they secretly wanted to continue the war indefinitely with far more casualties on both sides (faits accomplis) or sending enough troops would have meant that they really could have gained control. I rather doubt they were concerned with possibilities of sending in enough troops (not a partisan question at all, of course) to secure the situation was a questionable stance given it would produce a Welfare Queen.

On the Art Front, however, this image works perfectly with the grotesque gorgeousness of the Green Zone--which is itself the most superb of Welfare Queens I have nearly ever seen.

Move over, Ground Zero (it did long ago, but was a Hot and Trendy spot full of Elizabeth Taylor, Jack Nicholson, and other million-dollar donors for about one year.)

The Green Zone is definitely THE place to be. It is so hot that you can't even get in if you're the president except once in a whole term, in which you get to bless a primped Thanksgiving Turkey, as if straight from Nancy Reagan's famous china (not known to be until later, perhaps an echo of 'Mission Accomplished'). Apart from everything else, this White House just has such CLASS!

Damned if I wouldn't like to spend a week in the Green Zone if I could be sure the AC would work.

AQ='Maybe nurturing a bunch of lying vipers at the breast of the Free World actually has some positive spin-offs'=nurturing a bunch of Al Qaeda in Baghdad by doing a war where the bunch was NOT till the war gave them some new projects. Now the joint is riddled with them.

However, I am not trying to convince you of a thing, just being civilized.

new york dumb blonde type: Northanger--don't think I was intruding into your territory with bad attempt to do an AQ gematria, but didn't want to go too far into learned helplessness. Why, I don't even know if it stands for Al Qaeda or algorithmic quotient, honey. But I do know they are not equal in a lot of other ways (in my favour, of course.)

puff adder: The guys who never go to Baghdad know much more of what is really going on there than anybody who goes in and sweats it out. That's today's Orwellian-think atmosphere all ovah da place.

Now isn't that just one rosy scenario fo' da free world?

God bless Amurrrrica...

Nick Land: puff adder - there's a lot of information coming out of Iraq, what you choose to listen to or emphasize is the issue. I trust soldiers more than the media, but that's just me.

AQ stands for Alphanumeric Qabbala - resonance with an international jihadi organization is purely 'coincidental'

northanger: puffy. "the way WoT is being executed is described in words that talk about something completely different from what is obviously happening on the ground."

nick. "there's a lot of information coming out of Iraq, what you choose to listen to or emphasize is the issue".

a problem with the facts on the ground. should what happens next in the long war deal with this reality consensus gap?

dlp: Hi; Nick the three part article is a valuable one. I agree its value resides in the fact that it "side-steps the now entirely deadlocked partisan argument about Iraq to ask how things look from the Jihadi PoV." In this respect, Dunn says the Jihadis face a serious dilemma, since the bomb is losing its effectiveness - but do they really want a global caliphate? And is there really any evidence that they have political interests? If not, then it doesn't seem clear that taking the political route would be something they would even entertain?

It doesn't seem clear to me that the Jihadis have a strategy at all, and Dunn admits as much himself, so why should they want to politicize their 'struggle'? The motives for

Syria and Iran creating the cartoon jihad (Syria being under investigation for the Hariri assassination in Lebanon, while Iran facing the possibility of sanctions with Denmark to be chairing the Security Council) surely show that state politics is far more important and decisive than dreams of a transnational Islamic caliphate, whether dreamt by states or Jihadi networks.

Any effort to make sense of the Jihadi PoV must surely face the question concerning the nature of the enemy and what fuels it. And this is precisely where hyperstitional analysis ought to be useful, because we then not only consider the PoV of Jihadis and states, and whatever their motives might be (the field of International Relations or Geo-Political Science), but the flows and bottlenecks of information-driven forces which lock-in to produce clear trajectories and patterns of phenomena, behaviour, or activity.

I agree with puff adder that whatever the reason for going to war, and whether or not it's 'imperialist', it was not a 'shrewd' invasion and certainly is not a 'shrewd' operation. The free world needs to get far cleverer and direct operations, both overt and covert, to undermining the enemy's key hyperstitional, as well as its military, resources.

This means not just in understanding and thwarting its strategy (whether indeed it has one), and combating its fighting machine, but also in focusing on data-driven processes and associated key 'agencies':

- 1) a ready supply of Jihad-prone 'labour' coupled with a rabble-rousing clergy and indoctrination/ideology training camps;
- 2) twisted/controlled Islamic state-supported media;
- 3) misinterpretations and blockage of Western (free world) media in the Islamic world;
- 4) Western intelligence and its impact (including misinterpretations) on the media in the West (and the Islamic Near East);
- 5) electorate/public opinion in the free world;
- 6) 'scandals'
- 7) and anything else that fuels the notions of an 'oppressor West', a united (brotherhood) victimized 'subject', and a necessary Islamic jihad to combat the oppressor West.

*

In a Guardian article from 2004, 'The Making of the Terror Myth,' Jonathan Eyal, director of the British military think-tank the Royal United Services Institute, says in an interview that Al Qaeda have been "sustained by the way that we rather cavalierly stick the name al-Qaida on Iraq, Indonesia, the Philippines. There is a long tradition that if you divert all your resources to a threat, then you exaggerate it."

This is a fascinating possible example of a hyperstitional process at work, which disregards truthfulness and instead only concerns reality: whether or not Al Qaeda, as a global organized network, is a myth is not really the point. The point is that it has certainly become organized (the extent to which is neither the point) by hyperstitional processes unconsciously involving Western intelligence and media. But its not just that the Western powers have created a monster out of nothing: hyperstitional processes do not regard political, national, or any other lines; the 'becoming' organized of Al Qaeda is as much down to there being 'something-to-be organized', however this is analyzed.

I don't know where to start in explaining the emergence of WWIV, since I think its complex and I profess scant knowledge of all the key forces and players, though I hope Hyperstition – this blog - can begin to consciously appreciate the hyperstitional aspect of the unfolding war.

*

Nick, you seem to think the war is going well. In this week's Economist, as posted above by Traxxus, the picture painted is not as optimistic as you suggest: "During the invasion, Iraq's state collapsed. Three years on, after a clueless American military occupation and two incompetent and divisive Iraqi governments, it has not yet been rebuilt". Don't you agree its time the free world started to wage this war more intelligently and on more fronts?

Pre-emption is not just pre-emption of military nor suicide-bomber attacks. Appreciating the hyperstitional dimension of the way things have gone can surely help the West in its quest to bring democracy and liberty to the Islamic world. But how? Should the West stem the growth of the enemy? Or does the West have to contribute even more to the hyperstitional creation of the enemy and its dream of a global caliphate, in order to utterly destroy it? Do we have to lure out the enemy by helping to create it?

northanger: puffy. email you later, love to read your book. from n+1 article: "J.R.R. Tolkien's claim that the function of fantasy is to serve as 'consolation'". [contrasts your Horror definition]. Tolkien created the word "eucatastrophe" describing fairy-tales: "The eucatastrophic tale is the true form of fairy-tale, and its highest function." the opposite of tragedy or the "dyscatastrophe" of the Greeks.

kinda ironic Robin begins his "Day of Ciné-Musique" post — "At any rate, it is not simply film music, diegetic or non-diegetic, soundtrack or incidental; although these enter into it, they do not exhaust or define its nature."

See "Programming WWIV", H. post from Aug-2005, good contrast to Dunn's piece. [still somewhat discombobulate theme working here: decoding the Islamic Mythos]

On the general topic of macronarratives, everyone seems to be linking to this Bill Roggio piece at the moment.

Seven Phases of The Base - billroggio.com/archives/2005/08/the_seven_phase.php

... it is interesting to see how al Qaeda's strategy and objectives have evolved since the United States committed to engaging in open warfare. The Word Unheard points us to an article in Spiegel Online by a Jordanian journalist Fouad Hussein, who is believed to be a reliable source of information on al Qaeda. His main source for this article on al Qaeda strategy is none other than Saif al-Adel, al Qaeda's military commander who is currently operating from Iran. al Qaeda's purported strategy can be broken down into seven "phases" which span from 2000 until 2020:

First Phase - "The Awakening" (2000 to 2003) provoke US into declaring war on Islamic world "awakening" Muslims. "

Second Phase "- Opening Eyes (2003 to 2006) western conspiracy aware of the "Islamic community"

Third Phase - "Arising and Standing Up" (2007 to 2010) "There will be a focus on Syria"

...&tc....;

ironically, "Syriana" released 09-Dec-2005 (winning Best Supporting Actor).

en.wikipedia.org/wiki/Quadriga

See "This nebulous thing"

Since you guys are somewhat interested in the occult, you might be interested to visit, perhaps by way of the red-haired demon in the Infernal Quadriga, in these ways in which ancient people's believed, and portrayed themselves as, getting into heaven or hell [...] The idea that the divine charioteer drives a team across the heavenly fields existed in very early times in Syria as well as in Babylon, Persia, and Greece [...] there is a very wide-spread belief of Syrian origin [p102] that souls fly to heaven on the back of an eagle [...] According to the story, Etana in Babylon, like Ganymede in Greece, had been carried off in this way. The pious shared this bappy lot. This is why the eagle is used as the ordinary decorative motif on sepulchral stelae at Hierapolis, the holy city of the great Syrian goddess, and it appears with the same meaning in the West.

The Lists of Illnesses in Incantations Against "Various Illnesses"

www.yementimes.com/article.shtml?i=791&p;=culture&a;=2

'I ram' (city of pillars) was not known in ancient history and was not recorded by historians, but the December 1978 edition of National Geographic introduced interesting information mentioning that in 1473, the city of Elba was excavated in Syria. The city was found to be 4,300 years old. But what was found later about Elba was even more fascinating. Researchers recently found in the library of Elba a record of all of the cities with which Elba had done business. Believe it or not, there on the list was the name of 'I ram'. The people of Elba had done business with the people of 'I ram', which was phonetically identical to the word mentioned in the Quran.

See "Pipeline Odyssey"

Ibn Umar reported the Prophet (Peace be upon him) as saying: "Oh Allah, bless us in our Syria; O Allah, bless us in our Yemen." Those present said: "And in our Najd, O Messenger of Allah!" But he said, "O Allah, bless us in our Syria; O Allah, bless us in our Yemen." Those present said, "And in our Najd, O Messenger of Allah!" Ibn

Umar said that he thought that he said on the third occasion: "Earthquakes and fitnah are there, and there shall arise the horn of Shaytaan. (the satan)"

See "AOE and the Brotherhood of Nine"

Both within Shia and Sunni religions, there are many powerful sects enthusiastically trying to expand the dimensions of Islamic Apocalypticism and align all their political / cultural / economical / religious strategies according to Islamic Apocalypse (Qiyamah or Ghiamat) or more precisely engineer strategies to speed the Rise of Qiyamah (triggering the Apocalypse); this is why they eagerly try to lure ' the Gog-Magog Axis' out of its temporal peace ("luring the beast out of its cage using hunting horns, releasing it whether by means of cooperation or by means of terror"), forcing it to accomplish its final mission: starting its irreversible New Pest Order.

Nick Land: dlp - thanks for the stimulating comment, I'm invoking the 'it's late' excuse again to defer an appropriate response.

But for now, "you seem to think the war is going well" - I'll accept this provisionally, but I might have phrased it more cautiously. The main thing IMHO is that it's absolutely crucial 'we' (the 'Free World' an expression designed to maximize partisan provocation) remain bloodily engaged, so that we're learning. Every day American soldiers are dealing with this war up close - and Americans, whatever they think about it themselves, are the repository of the world's 'liberal' hopes and anti-totalitarian prospects - they are getting better at what they do, keeping their enemies under pressure, and locked into a reciprocal learning process I am entirely confident they will reap more from than their foes. If the Free World isn't better at learning than its enemies are, then it loses its cosmic right to prevail. So "going well" means, in quasi-darwinian terms, that secular liberalism will adapt to what is happening better than its enemies - meaning that the more intense the learning process, the better. I'm very confident the military think the same way.

Can free societies defeat irrational ultraconservative totalitarians despite the treachery of their own tranzi metro elites? If they can't, it's all over in any case.

northanger: [my last two comments] or, in other words, defining what we think we know about the Islamic Mythos should be included in "what's next in the long war". solutions generally emerge from how the "problem" situated. imho, Dunn's perspective may be too militaristic (certainly rational if the problem is "terrorism"); my contention (based on Reza's Qiyamah posts & comments) is that this pov a

possible red-herring hiding what's really occurring across Islam — 911 triggered its "gripping story".

Can free societies defeat irrational ultraconservative totalitarians despite the treachery of their own tranzi metro elites? If they can't, it's all over in any case.

yup yup. totally with you on all that. btw, define "enemies under pressure" - who are they? (might be important to state that clearly) what are your ideas about "reciprocal learning process" endpoint, the denouement?

dlp: "it's late" ... That surely is an excuse; its not even approaching bedtime ... but still, appreciate your prompt feedback. Re. your Q. "Can free societies defeat irrational ultraconservative totalitarians despite the treachery of their own tranzi metro elites?" - perhaps there must be a war on two fronts, treating the enemy as at once 'internal' and 'external'.

If so, this would certainly need to involve an appreciation not just of tacit collaboration (real 'treachery') but also unconscious connections or conjunctions between Islamist and PC/lefty politics and media. By connections I mean actual affective flows, not strictly speaking causal connections since that would imply separation.

But is it too simple a picture to say that these could be viewed as two poles of the enemy? (Perhaps investigation is required to answer this sufficiently) If not, or if the distinction 'within' the enemy could be shown to be useful, we could then ask whether any Western intelligence service actually spends resources on identifying and tracking the effects of information on action between these two poles.

Perhaps they do, but I am not referring to conscious communications, but unconscious affects, hyperstitional processes, information feeding into information, informing actions producing actions, and so on.

northanger: dlp. why do you think "unconscious connections" only involve PC/lefty politics and media? is the right immune? if yes, what type of inoculation can be generated to offset the affect (or is that a non-possibility requiring protective inoculation from the left)?

dlp: northanger - I don't think 'unconscious connections' only involve PC/lefty politics and media. I should have made that clearer.

But Nick's comment was directed at 'treachery' within free societies, which I understand him meaning left-wing politics and media (or MSM): the anti-war campaigners, those wishing to underplay the importance of winning the war, Islamist appeasers, and those especially wishing to see the war, or 'occupation', fail.

What I was raising was the importance thus of understanding the problem for the Free World as not only being a military enemy (however geographically dispersed) but also an enemy of sorts within the Free World's own ranks. And I used the word 'unconscious' because I don't think of the 'enemy within', if we can indeed get away with this term, to be conscious collaborators with Islamists, AQ, etc.

Its not just like there are terrorists on one side and treacherous apologists on the other (though on one level of analysis this certainly holds). Its rather like they are part of the same dynamic thing. And by understanding the creation of the enemy through unconscious, unwitting, connections that cut across geographical and political lines, we might be in a better position to deal with the problem.

Perhaps a new concept is required for the enemy to avoid getting caught in macro level analysis: its not just about discrete and (in principle) identifiable entities. It not that AQ is just hard to pinpoint: its that its becoming, its dynamic of organization and/or creation, is connected with factors supposedly external to it.

This is what makes me think that the notion of the enemy ought to be expanded, though in trying to identify the enemy on new coordinates perhaps misses the point that a new kind of cartography is required, one that tracks the forces and flows between state-level politics, Islamist movements, media networks etc.

Hyperstition is a concept that might be useful in explaining how rumour, hearsay, propaganda, misinformation and misrepresentation may inform and indeed produce novel developments, activities, behaviour, on any side of the conflict.

I don't think I am being clear enough because I am not clear enough in my own mind, though I hope this makes some sense.

Please take the above comments as mainly orbiting around the artificial production of the enemy - AQ for an umbrella term - though of course right-wing politics and media of course must have its own hyperstitional hooks into what is going on. Nick, sd, I think you may have to step in here and help clarify somewhat, if that's possible re. what I am saying.

metro mamba: *'puff adder - there's a lot of information coming out of Iraq, what you choose to listen to or emphasize is the issue. I trust soldiers more than the media, but that's just me.'*

Especially troublesome when the soldiers and generals talk freely to the media, but the soldiers who talk to the POTUS are chosen carefully to stroke his guilty ego, and so do their children love him and their children's children, etc. Since you only read the MSM when you can't avoid it, there's little likelihood you'd have too much knowledge of their best journalism.

a problem with the facts on the ground. should what happens next in the long war deal with this reality consensus gap?

What an outlandish idea! Of course not! We should even skip the next step and go straight on into 'Star Trek: WWVI'

Can free societies defeat irrational ultraconservative totalitarians despite the treachery of their own tranzi metro elites? If they can't, it's all over in any case.

Re. your Q. "Can free societies defeat irrational ultraconservative totalitarians despite the treachery of their own tranzi metro elites?" - perhaps there must be a war on two fronts, treating the enemy as at once 'internal' and 'external'.

If so, this would certainly need to involve an appreciation not just of tacit collaboration (real 'treachery') but also unconscious connections or conjunctions between Islamist and PC/lefty politics and media. By connections I mean actual affective flows, not strictly speaking causal connections since that would imply separation.'

dlp--this is the usual right-wing lumping of all lefty PC types with the MSM, which is thoroughly inaccurate. As I've repeated ad nauseum, both the hard right and the hard left think the MSM is in the service of the other, so it is paradoxically obvious that the MSM probably gets more facts out than either of these purely special-interest groups--and that is really all the hard right as represented by Nick and Bush and eternal war for it's own exciting sake; and the hard left as represented by Lenin's Tomb, hypocritical soci*lism and Islam are: They are just special interest groups (and even trinities occasionally), out to make a buck or get a virgin in dead Al Qaeda Heaven.

'metro tranzi elites' is especially low, since intellectuals of any stripe are all part of some sorts of elites. Elites are absolutely necessary unless you just want mob. They

are by now very mixed up, and for moderates like me who keep their fantasy elsewhere than in vast political fantasies, it is unfortunately necessary to consort to some degree with somewhat odious representatives of both left and right, because that is the only way you can develop anything of use. Of course, there is completely giving up all interest in anything but partisanship in these special interest extremists; they are interested only in winning, and long ago had no use for facts, god forbid one would use the word 'truth'. My positioning here is very troubling, because I'm a metropolitan who is not a leftist or soci*list, but have no truck with the extreme reaches of the right wing either. This causes rages in those who find in partisanship the only thing that makes them hyperstitutionally happy. This is why they will have been happy to hear that you can sell game items on eBay for currency to be deposited in real banks, and then there are the more subtle versions, although \$3.50 hourly careers at these games, which obviously cause a form of blackout, would seem an improvement over sweatshop labour on Oriental rugs for Georgetown townhouses, might seem desirable only according to whether the economy was normally operational along Haitian or Myanmarian lines.

Nevertheless, the toxicity of only eating and sleeping in the 'real world' (the gamesmen think of it in quotes, since obviously at this point, they have given up their bodies as nothing but dead weight, and in the crude argot 'they can't even find it to fuck') produces obesity, Sitter's Ass, and, in extreme cases which SD has documented, 'death will occur,' as the medical manuals sometimes say. These hardworking personnel have long gone past Recipe Source as they munch their corn chips, and would freak out if you showed them a paper phone directory.

Too bad. Even so, such atrocious bumbling of reality does, as I've noted, produce the occasionally delectable image--the wonders of the Green Zone. I intend to work this like a son-of-a-bitch. It should be a lot better than when Patrick McGoohan was trying to get out of such places.

To reduce this into clarified butter still further, dlp, the hard right or the hard left could either one pass for the milky particles left at the bottom, which can be used later on for enrichment in soups and other sauces besides the 'excellent brown,' for example.

kinda ironic Robin begins his "Day of Ciné-Musique" post — "At any rate, it is not simply film music, diegetic or non-diegetic, soundtrack or incidental; although these enter into it, they do not exhaust or define its nature."

that was mostly directly derived from my own Preface, which he understood quite well, and he proved part of what 'they do not exhaust or define its nature' by writing an extension of cine-musique himself--and quite a profound one I thought it to be.

Fascinating about the eucatastrophic tale--as we see, these are easy enough to produce around rather large scale catastrophes, and it looks like I've got to do a vacillating form going back and forth for the Green Zone, although I write too slowly for someone not to pick up on this long before I can even outline it properly.

Nick Land: dlp - "Its not just like there are terrorists on one side and treacherous apologists on the other (though on one level of analysis this certainly holds). Its rather like they are part of the same dynamic thing." - This is an intriguing line of approach IMHO, but it also has to be pursued carefully. Such a 'thing' has to exist, of 'transcendental machinic necessity' - but a failure to apprehend its appropriate contours would lead to an implosion onto occidentocentrism of the Chomskyite kind (even if with inverse values), making everything revolve around the West, defined by positive or negative allegiance to it. On the contrary, the Jihad has its own positive identity, with its own culturally internal frictions, antagonisms and polarities, so its relations with Western leftism are supplementary and external ...

[interrupt]

The term 'WWIV' refers to a basic global polarization, and even has a sub-implication that this polarization will be on terms that cohere with the historical progression of the Anglospherean Technocommercial Oecumenon, but polarization presupposes an initially a-polar system, and anything that served to efface the extraordinary density of the Jihadi pole (which is totalizing a world of antagonism against itself at least as 'effectively' as 'the West' (is there still any such thing?) is doing, even having a pre-set vocabulary for this: the House of Islam versus the House of War).

metro mamba - your sense of where the middle of the political spectrum lies seems so deranged that your otherwise bizarre obliviousness to the systematically left-slanted MSM perspective makes perfect sense. Midway between Bush (far right!? - I'll get to that in a second) and the Lenin's Tomb neocommunists lies the leftwing of the Democrats - which is exacty where the MSM heartland lies too, of course.

If you think Bush is 'far right' your simply not reading widely enough - he's mildly hawkish (still thinks Islam is a 'religion of peace' for instance and it seems the regime change spree has been put quietly to bed), pretty much dead centre on the economy

(modest tax cuts offset by biggest jump in entitlements since LBJ), and tacks moderately right on social issues (too far for my tastes in many instances, but originalist judges make sense) - in any case, even here he's far closer to the centre than, for instance, John Kerry or Ted Kennedy. In all three respects there are oceans of open water to Dubya's right, how would you move left of the Tomb?

metro mamba: Nick--maybe there will be some other things I'll contribute to, but not this. I've explained myself perfectly well, and will not do so further.

It's your movie--of some interest but I've completed all my labour in this particular area.

dlp: Nick - do you agree that hyperstitional processes are fundamentally informational? Coming back to my first post above, do you think there is any merit in exploring the hypesititional dimension of how the war has unfolded? I tried to give some examples but am not sure if this is barking up the wrong tree.

Nick Land:

dlp - I'd be fascinated to see what you come up with on this.

I've explained myself perfectly well

hmmmm

Jim Geraghty: "Really, is the Democratic message on Iraq in the coming year going to be, 'We don't know what to do, but we know the whole situation stinks'?"

tks.nationalreview.com/

dlp: Nick, don't hold your breath. I don't have an expert grasp on the WWIV situation; I am just clawing at ideas.

northanger: *We don't know what to do, but we know the whole situation stinks.*

nick. sustainability, especially after 2008 elections, my main concern with Bush Doctrine.

Nick Land: Aaaaagh! I'm undergoing mind-meld with northanger!

April 2006

The 'Other' has Impulses too

Nick Land (April 05, 2006)

Self-flagellating Western Occidentocentrists in the Chomskyite mould could usefully reflect on this Efraim Karsh essay¹³⁹, which distributes appropriate initiative and agency to a competitor civilization.

Money quote:

Whether in its militant or its more benign version, this [Islamic] world-conquering agenda continues to meet with condescension and denial on the part of many educated Westerners. To intellectuals, foreign-policy experts, and politicians alike, "empire" and "imperialism" are categories that apply exclusively to the European powers and, more recently, to the United States. In this view of things, Muslims, whether in the Middle East or elsewhere, are merely objects--the long-suffering victims of the aggressive encroachments of others. Lacking an internal, autonomous dynamic of its own, their history is rather a function of their unhappy interaction with the West, whose obligation it is to make amends. This perspective dominated the widespread explanation of the 9/11 attacks as only a response to America's (allegedly) arrogant and self-serving foreign policy, particularly with respect to the Arab-Israeli conflict.

Comments: The 'Other' has Impulses too

sd: I know this is a rather old-fashioned, but it would be good to get some more concrete textual/historical references for the depictions of Islam as expansionist, piratical war machine. This is very important:

"By forbidding fighting and raiding within the community of believers (the umma), Muhammad had deprived the Arabian tribes of a traditional source of livelihood. For a time, the prophet could rely on booty from non-Muslims as a substitute for the lost war spoils, which is why he never went out of his way to convert all of the tribes seeking a place in his Pax Islamica. Yet given his belief in the supremacy of Islam and his relentless commitment to its widest possible dissemination, he could hardly deny conversion to those wishing to undertake it. Once the whole of Arabia had become

¹³⁹ "Islam's Imperial Dreams", Commentary Magazine

<https://www.commentarymagazine.com/articles/islams-imperial-dreams/>

Muslim, a new source of wealth and an alternative outlet would have to be found for the aggressive energies of the Arabian tribes, and it was, in the Fertile Crescent and the Levant."

However, as this is such a contentious matter, all sources seem to be heavily 'biased' and wilfully infammatory.

[e.g. voiceofdharma.org/books/jihad/ch3.htm

or www.masada2000.org/unmask-printable.html]

Any more 'factual' accounts?

for the crucial 1683 Battle of Vienna:

www.reference.com/browse/wiki/Battle_of_Vienna

northanger: classify under: heavily 'biased' and wilfully infammatory

www.historyofjihad.org

traxus4420: so the only valid political choice on the table is 'pick your favorite empire?' Is that what you're telling me?

Color me inflamed!

Nick Land: traxus4420 - if it's really such a difficult choice, I guess you're trying to sit it out. Good luck with that.

PS. I don't think the Anglosphere does 'Empire' any more, but that's a terminological controversy and thus somewhat inessential. Technocapitalist Oecumenon vs its enemies seems a plausible rendering of the situation, with the Asian demographic giants well-placed to be the pivotal powers of the former by mid-century.

dip: Nick, this is an issue that has arisen on many occasions, and between us before. I agree with you that Islamofacism is more of a threat to Civilization than most Western (esp. European) governments and media channels acknowledge. The industrialized and developing worlds must face the Islamofacist reality in some shape or form sooner or later.

Perhaps fence-sitting appeals to those who at least unconsciously insist on there being a morally perfect nation to lead the fight against those that would have us dead or part

of a global caliphate? But there will never be such a pure and clean nation or leader; we have to do with what we have, and right now, the US is the most able and willing to fight this war.

Traxus, regardless of how much the USA engenders hatred around the world, we have to accept that American values ("freedom") are worldly values. This is not a war between an American 'empire' and an Islamic one.

We can 'fight' democratically elected governments to deliver their promises, squabble over the conception, delivery and results of policy, and improve our democracy, but there is looming over the horizon a very much larger problem that threatens all liberty, which makes fence-sitters look rather meek. Sitting on the fence is not really occupying a third position, is it?

traxus4420: Considering what country I've chosen to live in, that I pay my taxes on time, abide by most laws, occasionally contribute to the economy, and think that terrorists are bad, I hardly see how a refusal to use what humble analytical and rhetorical skills I've accumulated thus far for the purpose of cheerleading counts as 'fence-sitting.'

Partisan rhetoric makes me ill, and if there's one thing I've learned from keeping up with this site it's that leftist rhetoric is just as shrill and irritating -- though with both, like ads and TV, once you've developed a taste for it you stop noticing. Karsh's essay importantly recognizes radical Islam as an actual political entity, but flip a few terms around and you could just as easily be reading someone or other's Critical Introduction to Western Civilization (they're hypocrites! What! they're materialists spouting patriotic and religious dogma to mask their overriding will-to-power! you don't say!).

There are obviously important differences between say, America and al-Qaeda, but that's just it -- they're obvious. Sometimes I think one of the reasons intellectuals in the West tend so strongly to leftism is because picking on the other side is just so damned easy, it hardly takes any effort at all. Militarily the differential is the same -- as Nick (I think) has said, al-Qaeda and co. don't have a shot in hell at 'victory.' They certainly can still fuck things up and it's worthwhile to carefully consider how to handle the situation they present (provided you know what you're talking about). But responding to the slippage into relativism that sometimes results from the left's sympathy for the underdog with fin-de-siecle rants about the 'worldwide caliphate' (a more improbable outcome couldn't be dreamed of) is at best regressive macho

posturing and at worst racist. In either case it's completely unconvincing to the unconvinced.

Given my current social position and aptitudes (both far outside the realms of political or military influence), not to mention my poor access to what's actually happening in say Iraq, it seems to me the 'squabbling' over policy dlp so contemptuously refers to is the most productive and responsible political stance to take, as opposed to blatantly (and boringly) pro- ___ and anti- ___ mythologizing, as if this were somehow equal to devising actionable military or political strategy or even adequate justification.

If the only alternative to 'fence-sitting' is being a propagandist or joining the military, then y'all can count me out.

Nick Land: traxus4420 - think we've all drifted a little from the point at issue, which is whether Jihad-related events are best explained purely as reactions to Western actions (as the left or - IMHO profoundly insincere - 'Westernized' taqqiya discourses emanating from Jihadi-sympathizing Muslims would have it) or as expressions of a essentially autonomous cultural impetus deeply rooted in the history and traditions of Islam itself. While an element of propaganda will no doubt always try to insinuate itself into this type of discussion, its not the most stimulating part (even though I'm hooked on warmongering incitement, I'm also way into diminishing returns territory as far as deriving stim from it).

"al-Qaeda and co. don't have a shot in hell at 'victory.'" - this is obviously immensely 'partisan' on the 'epistemological' front: aligning you with Westernized secular rationality and against Theocratic fervour. Al Qaeda's supporters seem to believe divine intervention will guarantee them victory - I've even read apparently confident predictions that tomahawks will fall from the sky impotently after Allah screws around with the laws of nature (or more accurately, from the Islamic Pov, modifies the divine intellection of which natural laws are mere 'occasions') - credible threat? I share the skepticism, but I wouldn't propose it as neutral. If it's 'common sense' to propose a robust reality independent of divine or politico-voluntaristic miracles, it's so only in a fundamentally contested sense.

northanger: hmm, did Karsh drink the kool-aid? the US ended its war with Japan by dropping atomic bombs on Hiroshima & Nagasaki. endpoint for the Japanese attack on Pearl Harbor. can't help thinking 9/11's endpoint also ends atomically. where else could the "Islamic threat to civilization" rhetoric of Dennis Prager, Efraim Karsh, &tc;, lead to? imho, 9/11 is both our Pearl Harbor & our Hiroshima. it's our Pearl

Harbor because it made us realize (as Condi Rice has said) we were already at war. our Hiroshima because terrorists succeeded in dropping the "big one". i cannot think of a single thing to "balance" the grief & loss of 9/11 with any corrective measures against Islam — short of dropping a bomb somewhere or transforming the Temple Mount into the Third Temple. why is it too soon to see 9/11 movies after five years? Jung mentioned the "internecine war raging" in the unconscious. imho, we need to deal with our national "shadow enemy" first so we don't confuse it with our real enemies.

yes, terrorism, of any stripe including nuclear is a threat — don't think anyone disagrees. however, this strong rhetoric is too much, too late. we needed Prager, Karsh, et al in 1983 after the first WTC attack. maybe then we could have DEFENDED ourselves better during 9/11. this could be what they mean about marrying the cow after you've had sex with it, or something. we need to review the logic of (constantly) dangling our "winning weapon" before the world the last 60 years. could be the single most threatening act against civilization when considering our shifting policies & possible bubble effects.

we extol Western civilization & its stellar achievements over the "Islamic barbarians". i strongly oppose religious nit-picking — we should show ourselves superior in logic & reason. i love the UK animal show "Barking Mad" fixing problems between owner & pet. usually discovering the problem resides with the so-called civilized humans. Karsh should get out the Nuclear Non-proliferation Treaty & its list of signatories. he should note US policy changes during the last 20 years & when those shifts occurred. who's nuttier?

dlp: Traxxus, didn't mean to belittle significant domestic policy decisions in democratic countries, sure there are plenty of important issues to debate and deal with. Especially so since domestic politics cannot be easily separated from foreign policy. The ability of democratic governments to tackle domestic issues will continue to affect their ability to win popular support to confront Islamism. I just want to emphasize the overriding importance of democratic governments and their electorates to treat this war with more seriousness. Maybe Mecca won't be nuked, maybe nothing as dramatic will occur, but Islamism needs to be confronted since it is on a mission that threatens all democracies and all non-believers. It may be a slither of a minority of Muslims that form the base of what we call Islamism – politicized Islam, with a goal of establishing a global caliphate – but it is this force that is gathering momentum and that needs to be confronted. The postmodern theorization of Islam

(or more broadly the Orient) as the Other denies Islam a character of its own, and is potentially damaging to our understanding of Islamism as a rising force with its own agenda and trajectory. If we accept that everything has shared origins, however far back, we can perhaps learn to appreciate that Western civilization is not the primary register to comprehend Islam or its militant offshoots (as oppressed Other or whatever), however much the West has provoked developments in the history of Islam.

northanger: dlp. find it amazing, considering majority rule the fundamental cornerstone of democracy, a minority "slither" can cause so much trouble. why do we need to "comprehend" Islam?

Nick Land: northanger - think the emphasis of these pundits - at least of Prager 'etc' - is to shake the West out of its sentimentalized PC self-deceptions, rather than to 'decode' Islam (that's a task for 'Islamic' apostates, dissidents, modernists, heretics, atheists, Koranic critical scholars, and such)

(We should get our infidel hands on the Islamic conservatives' death-list, contact everybody on it, sack (if not arrest) all existing Middle East Studies Scholars in Western institutions of higher learning and replace them with aforementioned list - that's the 'ideological war' won almost immediately - shame it's not going to happen)

northanger: *shake the West out of its sentimentalized PC self-deceptions*

oh, i get it now. like Huey, the BPP & raising Black Power Consciousness.

nick. Karsh & company want "to shake the West out of its sentimentalized PC self-deceptions". ok they want to raise consciousness, maybe.

sd: traxus - 'partisan' seems to be one of your favorite words and I don't see how you can get so touchy about accusations of 'fence-sitting' after using it so frequently.

What does 'partisan' mean to you? The term has distinctly different meanings when used in the political or military sense, but as you seem to use it when claiming some supposedly morally

superior, neutral high ground I presume your use is political.

"Sometimes I think one of the reasons intellectuals in the West tend so strongly to leftism is because picking on the other side is just so damned easy, it hardly takes any effort at all."

This is utter nonsense. If you buy into the left you get a full set of a priori truths which remove the necessity of thinking - e.g. you can take 'Empire' to be something bad in itself (like Capitalism & war), rather than a machinic process or system which can be taken any which way, by whatever powers are caught up in it. Your anti-imperial hissy fit is typical of the lazy thought-shortcut which comes with the leftoid meme package.

Empires appear for different reasons, and they differ widely in the form they take. Of course there are examples of greedy (and genocidal) imperial expansionism, but one of the other triggers for imperial escalation is the 'If we don't do it, they will' mechanism. It is one of the unresolvable, tragic dilemmas which characterizes the design space we inhabit (e.g. en.wikipedia.org/wiki/Prisoner%27s_dilemma). Leftoid critique puts all its eggs in the oppression of the Other basket and tends to ignore the competitive dynamic which (tragically) makes Empire inevitable (barring humanoids suddenly becoming totally amiable, trusting and trustworthy). When looking at the US and Spanish 'conquest' of the American continent, the European scramble for Africa in the 19th century, and Russian expansionism in the 19th and 20th century, it is pretty pointless to condemn the process, no matter how revolting it might be to more altruistic humans. It is much more complicated than the repression of the so-called Other - there was competition between potential imperial powers, alliances with and internal wars within 'indigenous' peoples, and different spheres of influence (military, economic, cultural) which were contested. Empires also differed widely in terms of the brutality of their conquest and maintenance, the amount of autonomy they allowed and degree of centralization they imposed.

Tachi: What's at stake here are several issues, one being the importance of treating Islam (esp. in its militant/radical development) as something that has a life of its own, rather than treating it as the mere result of Western oppression. This is because it is both wrong and dangerous to assume Islam as Other, particularly in a leftoid-dominant mediascape and at a time when Western (esp European) governments seem to be uncertain as to how to confront Islam.

The other issue is the importance of debunking all so-called theory of the Other, whether it be related to race, gender, sexuality, capitalism, etc. The world does not function in terms of a priori 'Selves' and 'Others'; the more important and challenging task is to track the flows and forces that produce both apparent imperial formations and oppressed peoples.

Nick Land: sd, tachi - yes, yes and yes

This excellent post and comments thread very much on topic:

vodkapundit.com/archives/008753.php

(via Instapundit)

Sentimentalized negativism is going to get a lot more people unnecessarily killed.

Joe Katzman at Winds of Change on the Karsh essay (don't miss the comments):

Rare Clarity

Nick Land (April 19, 2006)

Following a link in a Samizdata thread on the latest UK 'BNP threat' (which I'm far too distant from to denounce as 'hysterical') took me to an article¹⁴⁰ by Sean Gabb which contains the most clear-sighted definition of fascism I have yet encountered:

A fascist, so far as I can tell, is someone who believes that an unregulated free market leads to unacceptable economic instability and unfair distributions of wealth, but who also believes that socialism is variously unworkable and immoral. He therefore believes that the state should take a more active role in national life than is allowed by the liberal philosophers: it should ensure that businesses are allowed to operate without disruption, but that the fruits are more equally shared. Of course, libertarians can reject fascism on this definition, as can radical socialists. But I fail to see how anyone else can. This has been the position of just about every mainstream political party in the civilised world during the past hundred years.

Exactly so.

It might be worth adding immediately that the more relevant accusatory label viz the BNP would be 'national soci*list' which Gabb also defines insightfully:

*A national soci*list believes that the main agents in the world are not individuals but nations, and that these are defined genetically, and that each nation has its own characteristics and interests that may place it in conflict with others. Individuals are but parts of the greater nation, and stand to it as do the teeth to a comb. Since national soci*lism has Hegelian roots, it shares with some of the Marxists a view of knowledge according to which propositions are true or false according to who is advancing them and when: therefore the often casual dismissal of 'Jewish Physics' and 'Jewish Political Economy'. Associated with national soci*lism is a soci*listic, protectionist approach to economic management, and some strange and intellectually indefensible theories of money and credit. And central to the ideology is the belief that a government that represents the general will of the nation should not be restrained by any legal norms or moral considerations.*

Whether today's BNP subscribes to this doctrine or not escapes my competence - perhaps others here have been following the situation closely enough to respond more insightfully (if the matter is judged worthy of discussion). The general issue of political

¹⁴⁰ <https://www.seangabb.co.uk/flc134-on-conversing-with-the-british-national-party-sean-gabb-7th-april-2005/>

taxonomy strikes me as more interesting, but then the UK-going-to-hell-in-a-handbasket saga is one I can afford to contemplate with vague bemusement.

June 2006

Signs of the Times

Nick Land (June 14, 2006)

My old teacher Hank Hackhammer smuggled this out of the bin recently, so I thought I'd pass it on.

(Warning: some profanity)

Dear Nick (you confused loser), or can I call you Old Nick (bobobo)? Anyways, I've been feeling generally pretty durn lucid here in special solitary exceptin your endless derailed sbrieking about the 'global threat' of the mohammedans or moaning about the Christ-on-a-biking of China or getting all funny in your pants about Sam-let's-all-be-reasonable-Harris is buzzing in my ears like a freekin skeeter so I figured it was time to try and drag your fixxing shitted-up head out of the latrine of consensus conception, so to speak. You know, I used to think you knew a thing or two about what was really going on down here on the rock splinter – just shows how wrong genuine cosmick jenius like yours tee can get when dosed up good with scopolamine and rat-poison in a lousy state institution, but leaving all that aside, seems sure as 99-and-out you're needing a refresher on some basic realities, so here goes.

Firstly, you remember that number stuff the Lemurs were on about? Not sure? Well let me offer a quick revision course. Their numbers snuck into the Hell House of the Skygods from the East Orient in time to trigger 'the Renaissance' in the bleeding-heartland of the Nazarene 'round about 1500 oecumenic time – anything coming back? Anyways, as you should know, the spurious screen-esotericism of the pseudo-theists – your man AL Crowley and crew – does some patently bat-shit 'tree-of-life' juggling makes it seem there's numbers 1-to-10 adds to 55 = 10 back to One all nice and cyclo-unitary except it's obviously just cheap illusionism for ignorant, innumerate and unthinking losers – just about what Europe deserves in fact - you're getting me so far? So we know 'underneath' or one might say 'esoteric' if the whole being-able-to-just-see-the-decimal-numerals challenge wasn't so absolutely incredibly not a challenge but a joke at the expense of theistic dumbasses, including it seems 'Old Nick 2006' actually but let's put that aside as the irrelevance it is, we have instead 0-to-9 = 45 = 9 and suddenly we're not in the Con-sys anymore, but in fact and quite clearly hearing our girl Khattak telling us about her plans for the near future.

Now at this point I'm hoping you might be having one of those You-reeker moments or at least recalling some stuff that shouldn't actually be so hard to dredge back given the sanguinary graffiti little Khat's gone scrawled all over the muthafucken planet in the last few years, but just in case it's

still proving opaque can you at least make an effort to see through to the transparently self-evident here: As the Great Lemur of centrality, finality, totality and concentration Khatlak plays with the One-God cults like a cat plays with a mouse. She's now ambling at a languid pace up to her altar on the soon-to-be nuke-cleansed slab of the Third Temple with the ripped-out heart of the Abrahamic Tradition in her claws and an inscrutable smile on her liberally blood-spattered lips. So, even if or in fact precisely because generalized hysteria is the order of the day would it really be too much to ask of supposed Lemurians that they avoid losing it in the numberless mob? OK, the deluded theists are going berserk again and breeding like roaches in a de-chilled meatstore, it's what they do - idiot puppetry. But the Thing is, you should know they ain't holding the strings.

Yours really truly

Uncle Hank

PS. Apologies for writing this to you in the arterial fluids of a dead guard – they don't gone see fit to provide me with a Splinternet connection.

October 2006

The Hand and the Eye: The Tyrannical Tendency of the Visual and Luminescence

Craig (October 05, 2006)

“The eyes are the windows on the soul.” -Unknown.

There are methods of sensing the world, at least five of which are available to humans.

It is the first of these that concerns us here, that of vision. Vision requires light to enter the eye, and as such is generally perceived to be the primary method by which the world is apprehended.

Analysis of one's linguistic patterns will often reveal that there is one sense which rises above the others in terms of communication. In terms of Neuro-Linguistic Programming, the prevalence of visual metaphors in communication is obvious. 'Look', 'see', 'appear' and other such words are dotted within our everyday speech. Indeed, the primary forms of entertainment, with the obvious exception of music – films, books, television, computers, and vicarious enjoyment of sporting events through watching, all seem predicated towards the visual.

It should be noted that spectacle, spectator, and scope owe their lineage to the Latin root *specere*, meaning “to look at” which itself owes its origins to the PIE base “*spek-” meaning to observe. Relations include the Sanskrit *spasati* “sees”, Avestan *spasyeiti* “spies”, Greek *skochein* “behold, look, consider”, *skeptesthai* “to look at”, and O. H. G. *spehhan* meaning “to spy”.

Meanwhile, the verb “to show” comes from the O.E. Word *sceawian* meaning “to look at, see” from W. Gmc **skauwojanan* which owes its roots to the P. Gmc. “*skau-” or “behold, look at” which itself comes from a variant of the PIE base “*skeue-” which means “to pay attention, perceive.”

Both of these, and the etymology of “see” itself, imply a distinct focus of attention – that is, interaction of consciousness via visual methods. Arguably, there is linkage with the roots of the word “follow” also.

It should come as no surprise that the primary form of sensing becomes inextricably linked with consciousness. The boundaries to vision, be they induced by architecture or landscape, tied in inextricably with movement. Without vision, one is safer without moving, and when the senses reach their limit, the only option to increase knowledge/information is to move.

We define ourselves visually, albeit not solely so, but it is the recognition of an image of self as self in a mirror that has long been used as a test of self-awareness in young children.

Philosophically, sight is an active component of consciousness – without sight we are unable to draw boundaries, to differentiate. A simple optical illusion of a vase that resolves itself into two faces is indicative of the confusion we feel when we are unsure what we are looking at.

Often, the next step to test the validity, or boundaries of an object, its to touch it. Not solely for the purposes of solidity, we engage a process of engulfing, placing the object within our sensorial sphere of influence.

Even our notion of reality – in the English-speaking world at least – is bound up with the primacy of the eye, and its second in command, the hand.

Mirror, Mirage, Phantasm, Phantom, Illusion.

All these speak of the falsity of sight without substance – the image of a thing is not the thing. The image is not the reality. Yet the primacy of the image is such that despite such common sense, oftentimes “Seeing is Believing”.

We create idolons from images. The fact that the hand and the eye are so intertwined, if the image is before us, it becomes real. Eidos means form, after all.

Such visualizations are well known in Tibet, as tulpas or thoughtforms in the West. The explorer Alexandra David-Neel became enamoured of tulpa creation and created her own, until eventually it achieved a form of external existence - people began to ask about the stranger on the edge of the camp.

Dismissal of the tulpa became difficult – it appears the entity did not wish to be destroyed – and its dissolution took several weeks, leaving its creator exhausted.

Within the context of thoughtform creation, it is the visualization that is often the starting point, later adding greater sensory details until the entity begins to act independently.

But what has this to do with the current petro-political and ideological climate?

Quite simply, it may be discussed in terms of a conflict of vision. All we have to do is compare the ideological associations of light and darkness.

Unsurprisingly, darkness and loss of sight are indications of loss of control. Therefore, the one with more light is better off – one can see better. Consider the Fog of War and DUST and other such phenomena.

All of these obscure sight.

Without the visual component, the boundaries become fluid – lines of thought and differentiation cease to exist. This is why Sun Tzu's dictate to be Formless is so effective.

For those still used to definition by boundary, the Formless is terrifying. The Crawling Chaos of Nyarlathotep is monstrous for its essential plasticity, its ability to essentially permeate all boundaries by remaining unfixed.

The mind that sees, that contours and engulfs rebels against that for which the boundaries are no boundary. The sorcerer and monster of mythology is not bounded by the same laws as the populace – its ability to exist within the unheimlich terrifies, and its monstrous nature is an attempt to give form to the Formless.

Similarly, the techniques of nomadology and Autonomous Zoning as practiced by those under the Assassins go against the boundaries of the society.

Or to put it another way, why is a ghost terrifying? It's not so much that it's the spirit of a dead person, but rather that it is a spirit – an order of being which is not bound by the same rules of movement.

Hence, faceless, nameless horrors – things that do not possess or need human signifiers of identity. That have essentially become Inhuman.

Such monsters always dwell in the dark those places where the hand and the eye are not one hundred per cent effective.

It is a fact that light is created via combustion or chemical reaction – oil itself drives the machines that the Enlightenment made possible. The struggle is one beyond theology or politics.

In a very real sense, it is a struggle of epistemology where the last words of Goethe are echoed as an expression of a universal human cry:

“More Light!”

Indeed, the phenomenon of the weltfeuer which lurks inside Germanic thought might best be described as the metabolizing of resources which all humans must perform in order to exist – the consumption required to maintain status quo.

In Norse myth, it is the Sons of Muspell who burn Yggdrasil, the World-Tree to ash and a new world rises phoenix-like from the ashes. But, as a noted occult author once said to me:

“Why does nobody ever look at the ashes the phoenix leaves behind?”

December 2006

Sore Losers

Nick Land (December 04, 2006)

[This is no more than a chat thread posing as a facile rant, or vice versa, so don't get your hopes up (as if that's likely by this stage).]

I'd been meaning for a while to set out some remarks about how the expression 'sore losers' perfectly encapsulates the leftist mentality, in innumerable respects. The primary stimulus was the growing tendency for leftist politicians never to accept defeat, starting with the Gore petulance of 2000, and mostly recently manifested by the Obrador update (adding even more in the way of outright lying and generalized leftist reality disintegration).

But then the Sore Loser philosophy came to seem more basic. Isn't the left at its most philosophical a rallying cry to the losers of the world: Be Sore! Never concede that one's own mistakes, shortcomings or sheer bad luck could ever be the cause of misfortune. Blame the fortunate. Hate the winners. You have nothing to lose but your dignity (well, OK, actually you sanity too). Isn't that the left in it's Platonic essence?

Then we received this little gem (the troll shield evidently malfunctioning):

By the way, nick, did the hear that the Republicans got their fat arses beat?

I noticed you seemed to be in denial.

You have not my sympathies, and you fully deserve this.

Hey, by the way, BUSH fired RUMSFELD unceremoniously the next day. Did you hear that? Isn't that something? The world didn't revolve around you and your bloodthirsty ways.

artist | 12.02.06 - 6:12 pm

Study that for a moment.

Let us pass rapidly over the complete absence of analysis or structured argumentation, whilst also mostly ignoring the hysterical personalization and distinctively trollish sense of obsessive surveillance (hinting at something not unreasonably described as germinal stalking).

Also leave aside the final sentence, in which the signs of genuine (if comparatively inane) psychosis are quite clearly evident.

Finally, try not to deride the moniker 'artist' whose manifest piteousnesses would soon amount to a brutal ad hominem (let us imagine instead that, perhaps, this unfortunate individual really is a creator of rare talent, merely masked as a mass-manufactured leftoid half-wit).

Concentrate instead on the basic implication. Why haven't I started screaming and threatening to move to Canada (from Shanghai, hah ha)? Why haven't I accused the Democrats of systematic fraud? Why haven't I filled the blog with sobbing descriptions of how gutted and traumatized I feel due to the political failure of Bush Republicanism?

In fact, why isn't anybody on the right throwing a leftist-style full-on hissy fit?

Maybe it's

- because we genuinely celebrate democracy, even when it comes up stupid.
- because we like to see governments disconcerted and thrown out of power, with the sole qualification that we worry about the guys moving in.
- because we didn't actually like Bush very much, although we still think the world dodged two bullets with Gore and Kerry (besides, Bush is still in power "I noticed" and will in fact NEVER LOSE A PRESIDENTIAL ELECTION (that must hurt)).
- because we love America (as the world's pre-eminent free society) even when it acts like a bong-zonked hippy, and, most fundamentally
- because we're not sore losers ('cos if we were, we'd be leftists).

Diagonalization 1.

Nick Land (December 11, 2006)

On the comment thread below CAB (whose moniker perfectly mimics a Goedelian joke, but leave that aside for now) raises a series of questions about the nature of diagonal arguments, their relation to Cantor's classical example, and also their centrality to hyperstitional thinking. Because these issues have never been systematically explored within the confines of this blog or its obvious precursors, it seems prudent to address them in an exploratory spirit, without rushing to premature conclusions.

No discussion of diagonal argument can bypass the Cantorian example, so I will very briefly rehearse it here, with minimal topical context.

Georg Cantor employs diagonal argument to rigorously consolidate a specific mathematical discovery: that of infinite sets higher than the lowest order of infinity (denoted "aleph-null" coded here " A_0 "). A_0 , the smallest transfinite cardinality or lowest of actual infinities, is equal in size to the sets of Rationals, Integers, Naturals and Primes, as well as those of cubes, squares or triangular numbers and (very (very ())) many others besides. It is the size of every countable but nonterminating series, each of which can be mapped onto any other, so that – for instance and counter-intuitively – the set of all even numbers is exactly equal to the set of all Naturals, with both equalling A_0 .

$$A_0 + 1 = A_0$$

$$2 \times A_0 = A_0.$$

$A_0 \times A_0 = A_0$. And this is scarcely to begin (since A_0 is not only infinitely larger than itself, included within itself infinitely, but this "infinitude" must itself be comprehended recursively (as A_0)).

However, enough of that for now, since infinity is only indirectly the matter at stake.

Cantor innovated diagonal argument as a procedure to test denumerability ("countability") among infinite series, seeking to demonstrate that a nondenumerable realm of infinities existed above the scale of A_0 . By proving that even the most exhaustive matrix of countable numbers misses rigorously (if abstractly) identifiable numbers, diagonalism punctures the outer limit of A_0 , opening it onto vistas beyond. Cantorian diagonalism is an abstract procedure, meaning that, although its concrete

execution is impractical, it is evidently realizable in conception and can therefore be considered operative in a domain of pure theory.

Arithmeticians have long been confident that every number can be expressed through an infinite decimal expansion. Perhaps most obviously, this might be a string of zeroes ($0 = 0.000\dots$), but a slightly more elaborate example is also available. Since $1/3 \times 3 = 0.999\dots$, the arithmetical case for the perfect equality of such an infinite recurrence and its summarization as unity ($0.999\dots = 1$) has seemed incontestible (qabbalists must of course remain unconvinced, but that is a matter for another occasion). This equality makes even the most thoroughly domesticated integer equivalent in principle to a ragged-ended fractional series without term. From this it follows that the matrix of an infinite set of cardinality A_0 should be considered no greater than the segmentarity of each item in the matrix. Irrespective of modulus, there is a place-value slot at least implicitly available in each of the infinite numbers in an infinite countable series to echo the scale of the series, making the set of elements 2-dimensional (with equal cardinalities for each dimension (macrocosm = microcosm)).

Any segment of the number line has a cardinality of A_0 , so the series of Rationals $0.000\dots$ to $0.999\dots$ can be considered an adequate (indeed ((() hyper-)extravagantly ample) map of any denumerable infinity. Selecting this segment technically simplifies the diagonal operation.

Finally, selecting modulus-2 for the demonstration – modulus being an entirely arbitrary aspect of diagonal procedure – minimizes semiotic distraction.

Everything is now in place to execute an abstract diagonalism and make intelligible contact with a higher infinity.

1) Construct the A_0 matrix as an infinite series of numbers from $0.000\dots$ to $0.111\dots$ each with infinite fractional expansion.

2) Manifest the ordinal (compressive) diagonals within the matrix, whereby the n th place of each number correlates to the n th number in the series. Each number thus provides an abstract map or isomorphic (microcosmic) fractalization of the whole.

3) Re-trace the compressive diagonal to systematically produce an anomaly exceeding the denumerated infinity. In the anomalous number, the first digit differs from that of the first number, the second digit differs from that of the second number ... the n th digit differs from that of the n th number (through simple alternation in a binary modulus). The resulting diagonal monstrosity must necessarily be distinct from any

existing member of the A0 matrix – however comprehensively the matrix has been constructed. Even God – of whatever transcendental sublimity – is incapable of denumerating a set that can resist diagonalization.

Lest the power of this method escape comprehension (an inevitability), permit me to reiterate: Diagonalization methodically produces monsters that elude the recognition of God. This is a matter of perfect mathematical rigour, and thus lies beyond reasonable controversy.

[Whilst CAB's questions have yet to be seriously addressed, further development of this discussion must be postponed beyond an interval of sleep. To be continued (no pun intended) ... For original CAB comments see especially Sore Losers tangents thread 12:11:06 1:24 am and 3:36 am]

January 2007

Critique of Transcendental Miserablism

Nick Land (January 15, 2007)

This post at K-Punk epitomizes a gathering trend among neomarxists to finally bury all aspiration to positive economism (‘freeing the forces of production from capitalist relations of production’) and install a limitless cosmic despair in its place. Who still remembers Khrushchev’s threat to the semi-capitalist West – “we’ll bury you.” Or Mao’s promise that the Great Leap Forward would ensure the Chinese economy leapt past that of the UK within 15 years? The Frankfurtian spirit now rules: Admit that capitalism will outperform its competitors under almost any imaginable circumstances, while turning that very admission into a new kind of curse (“we never wanted growth anyway, it just spells alienation, besides, haven’t you heard that the polar bears are drowning ...?”).

From Baudelaire’s *Le Voyage*, with its mournful discovery that human vice repeated itself universally in even the most exotic locations, to the left-wing reading of Philip K Dick as a Gnostic denunciation of commercialized change, capitalistic variety and innovation has been totalized as difference without essential difference, just more of the same senseless dissimilarity. The grand master of this move is Arthur Schopenhauer, who lent it explicit philosophical rigour as a mode of transcendental apprehension. Since time is the source of our distress — PKD’s “Black Iron Prison” — how can any kind of evolution be expected to save us? Thus Transcendental Miserablism constitutes itself as an impregnable mode of negation. It goes without saying that no substantial residue of Marxian historicism remains in the “communist” version of this posture. In fact, with economics and history comprehensively abandoned, all that survives of Marx is a psychological bundle of resentments and disgruntlements, reducible to the word ‘capitalism’ in its vague and negative employment: as the name for everything that hurts, taunts and disappoints.

For the Transcendental Miserablist, ‘Capitalism’ is the suffering of desire turned to ruin, the name for everything that might be wanted in time, an intolerable tantalization whose ultimate nature is unmasked by the Gnostic visionary as loss, decrepitude and death, and in truth, it is not unreasonable that capitalism should become the object of this resentful denigration. Without attachment to anything beyond its own abysmal exuberance, capitalism identifies itself with desire to a degree that cannot imaginably be exceeded, shamelessly soliciting any impulse that might contribute an increment

of economizable drive to its continuously multiplying productive initiatives. Whatever you want, capitalism is the most reliable way to get it, and by absorbing every source of social dynamism, capitalism makes growth, change and even time itself into integral components of its endlessly gathering tide.

“Go for growth” now means “Go (hard) for capitalism.” It is increasingly hard to remember that this equation would once have seemed controversial. On the left it would once have been dismissed as risible. This is the new world Transcendental Miserablism haunts as a dyspeptic ghost.

Perhaps there will always be a fashionable anticapitalism, but each will become unfashionable, while capitalism -- becoming ever more tightly identified with its own self-surpassing -- will always, inevitably, be the latest thing. ‘Means’ and ‘relations’ of production have simultaneously emulsified into competitive decentralized networks under numerical control, rendering palaeomarxist hopes of extracting a postcapitalist future from the capitalism machine overtly unimaginable. The machines have sophisticated themselves beyond the possibility of socialist utility, incarnating market mechanics within their nano-assembled interstices and evolving themselves by quasi-darwinian algorithms that build hypercompetition into ‘the infrastructure’. It is no longer just society, but time itself, that has taken the ‘capitalist road’.

Hence the Transcendental Miserablist syllogism: Time is on the side of capitalism, capitalism is everything that makes me sad, so time must be evil.

The polar bears are drowning, and there’s nothing at all we can do about it.

Capitalism is still accelerating, even though it has already realized novelties beyond any previous human imagining. After all, what is human imagination? It is a relatively paltry thing, merely a sub-product of the neural activity of a species of terrestrial primate. Capitalism, in contrast, has no external limit, it has consumed life and biological intelligence to create a new life and a new plane of intelligence, vast beyond human anticipation. The Transcendental Miserablist has an inalienable right to be bored, of course. Call this new? It’s still nothing but change.

What Transcendental Miserablism has no right to is the pretence of a positive thesis. The Marxist dream of dynamism without competition was merely a dream, an old monotheistic dream re-stated, the wolf lying down with the lamb. If such a dream counts as ‘imagination’, then imagination is no more than a defect of the species: the packaging of tawdry contradictions as utopian fantasies, to be turned against reality in

the service of sterile negativity. 'Post-capitalism' has no real meaning except an end to the engine of change.

Life continues, and capitalism does life in a way it has never been done before. If that doesn't count as 'new', then the word 'new' has been stripped down to a hollow denunciation. It needs to be re-allocated to the sole thing that knows how to use it effectively, to the Shoggoth-summoning regenerative anomalization of fate, to the runaway becoming of such infinite plasticity that nature warps and dissolves before it. To The Thing. To Capitalism. And if that makes Transcendental Miserablists unhappy, the simple truth of the matter is: Anything would.

February 2007

Negative Hyperstition

Nick Land (February 02, 2007)

... to steal sd's term, is the hunger for an unambiguous casus belli, consolidating itself as a virtual mega-atrocity against 'oneself'.

Asymmetric warfare is designed to madden and it's obviously working. As frustration builds with the half-hearted confusion (let alone outright collaboration) typifying the Western response to Jihadist aggression, there's ever more of this sort of sentiment floating around:

I tend to believe that we are all waiting for some terrible blow to fall upon us before we all admit to what sort of battle we are in. Not sure if it will fall upon the United States, Australia, Japan, Iraq, Israel, Europe but once it does and perhaps hundreds of thousands die then we can get away from these battles in the murky shadows and get to outright elimination of those Mullabs and sects who preach that the Sword is the preferred tactic to use against us.

(comment at 08:25:00 on this stimulating Belmont Club thread)¹⁴¹

It has to be worth pausing and taking a deep breath before continuing too far down this road ...

March 2007

What are Cities?

Nick Land (March 01, 2007)

‘Civilization’ means urbanized society and cities have been the most dynamic irruptions in the history of the planet, which makes the relative paucity of focused theory on the topic rather mysterious.

Historian William H. McNeill goes some way to correcting the deficit in his essay *Cities and their Consequences*, perhaps the most brilliant analysis of the urban phenomenon since Jane Jacobs (although unfortunately hidden behind the subscription wall at *The American Interest*).

McNeill begins his succinct study with the key demographic fact that cities have always operated as population sinks (or pumps) and, at this level of description, as megaparasites, supported by continual inflows from fecund rural areas (villages). The process of urbanization is overwhelmingly the most consequential factor shaping local, regional and planetary demographic trends. Furthermore, because urban populations are incapable of feeding themselves directly, their mere existence operates as a stimulus to trade, placing a vector in history through the specialization of labour and commercialization of society.

McNeill writes:

A second and more massive conversion to market farming [than that of the Greeks and Classical Mediterranean] occurred in China, beginning about 1000 CE when the Song government decided to collect taxes in the form of cash. That decision compelled ordinary peasants to find something to sell in order to pay their taxes. By that time, thousands of barges and small sailing vessels floating up and down the rivers and irrigation canals of China had created a cheap and reliable internal transport system. Small differences of price for objects of common consumption—even of rice—thus made it worthwhile to carry everyday commodities long distances. Large-scale marketing of specialized crops ensued. Soon millions of peasants found it advantageous to buy the rice they ate and sell silk or some other specialized crop, thus assimilating their way of life to city folks' long-standing dependence on buying and selling to gain their daily bread.

China's wealth and skills shot upward as the advantages of specialization were unleashed on a massive scale, and other parts of the earth soon began to follow suit wherever safe and cheap water transport allowed. The Indian Ocean coastlands and Southeast Asia, together with the

Mediterranean, Baltic and Atlantic shores of Europe, were the principal places where commercialized farming began to take off within the next two or three centuries.

As urbanization proceeds ...

Older forms of human society—peasant ways, with all their limitations and hardships—are being left behind. The future is surely going to be different. Exactly how different no one can yet say, but two principal factors appear to loom large at least in the short run.

One factor concerns the half of humankind still living on the land and still cultivating the soil. This half of humanity, overwhelmingly non-Western, is now increasingly aggrieved by poverty, monotony and hardship compared with the lure of urban wealth and comfort. These are the people who see their children hastening away toward the world's cities in hope of improving their lives—more often than not only to meet disappointment in pullulating urban slums. Inhabitants of those slums, without regular jobs or reliable sources of income, constitute the other major human factor of our times. That human mass constitutes a pool of active discontent far more strategically located than rural dwellers, since their frustration and anger can readily be mobilized against oppressors living in city cores where everything they sought still glitters unshared and unattainable, temptingly close at hand. In short, the phenomenon of the subproletariat is being globalized amid technological conditions well-suited to the rapid spread of demagogic manipulation.

The other principle factor is cultural mutation, at the level of religion in particular. In cities ...

... sectarian cohesion is under constant strain, for in urban settings the ubiquity of choice among beliefs becomes unavoidable. Joining a religious group becomes a deliberate act, departure a perpetual possibility. Lifelong stability and adherence to unquestioned, inherited custom, nearly universal in village life, is unattainable under such circumstances. Instead, the very fragility of bonds invites a fevered intensity among successful sects. Demanding more from true believers and dividing them more sharply from outsiders are what sustain urban sects as their leaders seek to make it more difficult to abandon fellowship. Is it any wonder, therefore, that what is often termed "fundamentalist" religion is overwhelmingly an urban phenomenon?

Diagonalization II: Refractory Impossibility and its Heretical Alignments

Reza Negarestani (March 01, 2007)

[For people who haven't read Collapse II yet, this post is an introductory note on Apocalypse in the Wake of Refractory Impossibility, Collapse II, Oxford: Urbanomic, March 2007.]

Through its spatial and temporal approaches to God and Apocalypse, Islamic theology formulates a methodology for begetting a profoundly political tool which is capable of turning theology itself into heresy.

According to Islamic theology, although the Christian God is infinite and is posed as an outsider but its externality is not radical enough and is self-contradictory, for the gift of revelation or apocalypso cannot be given to Man if God is radically external to Man. A God radically and perpetually external to Man can never be revealed to Man either partially or fully, on the ontological or the epistemic plane. In short, radical externality exceeds affordance even if affordance is effectuated – on the levels of both possibility (*posse*) and actualization (*est*) – as an infinite capacity. Revelation is certainly the production of the outside but its epistemic infinity (revelation as the superiora of knowledge) is bound to the affordability of both its ends – the subject of generosity and the subject of receptivity. In Revelation, while the latter (Man?) cannot entirely liberate itself from capacity and merely shifts to a new capacity entailed by its ontological integrity, the former is only able to actualize its generosity by submitting to the capacity of the receiver. Otherwise, the infinity of the gift can only register itself in waste and ignorance of the other. This is why in terms of Revelation, outside is an environment rather than radical exteriority; it is an outside whose boundaries coincide – a continuum of different capacities.

Islamic theology, however, presents God as radically and unyieldingly external to Man. This externality can be approached as a technique which perforates theology, reinventing it as an epistemological tool for confronting a pure externality without reducing it to ontological possibilities or an object of Man's openness – affordance. A thoroughly outside-oriented ethics without an anticipation of being communicated by Man, Islamic theology once again renders the Outside as the great abomination:

Once theology presents the Divine as the pure outside and the manifest refractory impossibility, the monotheistic God enters a crisis with cataclysmic proportions: its ontological possibilities are undermined and its unity can merely inflame its precarious relationship to many. When the radical outside (infinitely external) is posed in respect to the affordable outside (an outside with infinite potentials) as in the case of Islamic theology compared to other monotheistic strains, the affordable outside turns into an epistemic tool that certifies the innumerability of other infinities. Each of these

infinities demonstrates their autonomous existence by a diagonal opposition to the present infinity. The result of applying such a technique to God is nothing but God turning into an ultimate heresy itself. Once a new set is extracted from a series of sets in a way that it can both include those sets and situates itself infinitely external to them – similar to Cantor’s diagonalization technique – or infinitely higher in dimension, it can produce infinite anomalies if its laws and qualities are applied to those constitutive sets. Not only can the infinitely external set spawn heresies as a constant Outsider but also it is posited for its constitutive sets (the subjects of its heresy) as an ultimate never-ending heresy.

Cantor’s diagonalization¹⁴² is a method for unbinding radical outsides (more in terms of invoking rather than creating them). It indirectly propagates outsides by mapping the failure of a given infinity to contain elements of other infinities or outsides. Cantor’s method suggests that outside-engineering is exercised by building an external set which cannot be related to the existing set (even if it is an infinity itself) through a ‘one-to-one and onto’ (bijective) correspondence:

Let s be any set and let t be the power set of s . Now at this point, s maps into t and every x in s maps to the set containing x in t . But there is no bijection (injection / one-to-one + surjection / onto) mapping s onto t .

Suppose f is such a bijection and build a set w in a way that for every x in s , x is in w iff x is not in w . Now f maps s onto all of t , and w is a subset of t , so there is some x with x in w iff x is not in w . Therefore, the correspondence is contradictory and cannot exist. The ontology of the existing set / infinity cannot contain other sets / infinities but at the same time is responsible for giving rise to them (their homecoming). Diagonalization is a political tool for counteracting ontology and its existential opportunism.

Islamic Allah is posed to Christian God and other monotheistic manifestations of the Divine in the same vein; it exercises heresy on the Divine on behalf of the Outside and its refractory externality. In short, heresy as an outside-oriented praxis is always effectuated by re-positioning (re-mobilization and re-alignment). The new heretical set brings itself behind its subjects for the sake of both affirming and being infinitely external to them. Such a re-positioning results in being a heresy in itself and harvesting

¹⁴² The controversies around Cantor’s method – on a statistical / probability level – deserve an exhaustive discussion.

countless heretical possibilities from positions or alignments being held by other sets. This is why, all heresies adopt the notorious positioning of a tergo (from behind), that is buggery through consensus.

"If God basks in his house, let us reconstruct it according to the laws of demons."
(Collapse II)

April 2007

Shoggothic Materialism

Nick Land (April 03, 2007)

It's always a bad sign when distorted psychic echoes of that last terrible discussion with Uncle Hank resound once again, while outside the stars seem to be coming right ...

He told me something I later recalled when reading Charles Stross' *Accelerando*:

"You've got to understand that Alpha Technosapiens is always basically as unintelligent as possible. Wouldn't matter so much, 'cept somewhere down the line that needs dealing with, which can get very messy ..."

As soon as a species hits technocultural runaway -- Metrophage arrival as Downham describes it -- things happen so fast that the evolution of intelligence is effectively frozen. Dimwitted ape goes crashing into history, completely unable to cope, dragging all kinds of lurid memetic idiocies with it, on its way to more-or-less inevitable collision with something vast and incomprehensible.

The closer we get, the more maladapted monkey panic locks in, the more stupid we get, the more horrible the crash is going to be. Weirdly close to a Lovecraft scenario, come to think of it ...

September 2007

Language of the Pest

Reza Negarestani (September 24, 2007)

This is part of the text for one my three talks earlier this year in London. In contrast to the other papers this is very short so I deemed it appropriate for hyperstition especially because it is a brief retrospection on discussions we have had on hyperstition regarding alphabets, sounds, txts and other teratological components of Middle Eastern writing systems as mobilized by socio-political dynamics. The original paper contained two sections, barbaric tongues and their shape of writing. This post features the first part of the paper – barbaric music.

Barbaric Music and Vowelless Alphabets

To call a population barbarian is to measure their vocalization perceptually and sometimes quantitatively as noise; roar, shriek, howl, ululation, bark, yelp, wail, a lupus orchestra, a constant vociferation of the language. The Greeks and the Romans' vigilance against the uncivilized was not originally denoting or aiming at the way of living or the form of architecture but rather the foreign vocalization of people who were marked as savage, ill-bred and uncivilized. For the Greeks, the savages were the ones who vocalized consonants non-linearly, those whose vocalization turn the language to gibberish, harmonized sounds to noise, the divinity of the Word to demonized outcry. Savage languages transformed the serene facial traits which were of the Greek face (a face which was the face of a politician, a philosopher, a militant all at the same time) and were shaped by vocalization into insensate, heathen, bestial and inhuman faces and not merely facial expressions of a profound savagery. The word barbaros or barbarian as the foreign savage attests to the Greeks' most fundamental criterion for addressing one's distance or gap from the civilized world and cultured populations. This indisputable measure for scaling one's civility was, in fact, vocalization (i.e. adding vowels to unheard-of consonants and alien utterance). To this extent, speakers of Semitic and African languages could be categorized as barbarians or those whose vocalization and speech can only be detected as the bar sound (i.e. the bar-bar sound), or the sound similar to the emphatic repetition of the tap sound (tap-tap), expressing the b sound and mapping its characteristics. In mammals' territory, when the process of vocalization or harmonizing noise functions as a means of communication, noise can be found both at the background or as an additive element – combined with vocality – to vocalization. For the Greeks as well

as the Romans, barbarians were those who could be understood if only their speech is translated to the bar-bar sound. Such foreigners transform the pleasure of hearing or speech as the divine senses for sympathy to the antipathetic feeling of nausea (Ναυτεία) accompanied by vertigo, vomit, ear drainage, dizziness and the sensation of spinning and loss of equilibrium. According to the Greeks, listening to barbarians results in an alien sensation called Ναυτεία or more accurately, something profoundly wrong in the ear caused by the confusion between the actual movement (actual vocalization process used by a barbarian) and perceived movement (what can be heard from that barbaric vocalization in the Greek language), and also movements in different directions which were the characteristics of the noise (nausia) made by barbarian vocalization in the Greek language and phonetic system. For the Romans, likewise, the barbarity of vocalization was a touchstone to determine the quality and value of culture, social dynamics as well as motivations and alignments of people with Roman civilization, bureaucratic pantheon of gods and their political system. In the course of a mass slaughter of a tribe or a village populated by the ‘foreign vocalizers’ (mostly of Semitic and African languages) known as barbarians, Romans frequently referred to the utterances of outlanders during escape, battle and emotional arousal as ruckus and demonic dissonance (dis-sonare) or disjointed sound as what lacks the orderly structure of Roman dance music (ορχήστρα) whose boisterousness was demonstrated in its militant order and bloodied ecstasy.

For the Roman soldier it was an ethical responsibility to give the demon imprisoned in the throat and oral cavity of the barbarian an outlet to flee by cutting the throat or the head of the savage. A humanitarian act whose consequence might drive the soldier insane as the result of the last unintelligible shriek which the demon made, the exclamation noise rooted and formed by a vocalization process whose even systematic communicative units such as sentences are considered as noise. Romans had bizarre tales about barbarians who were stalking in the outlands and transmogrified by a severe felinity. Romans justly called them cat people, a title which was indeed accurate; for speaking with languages constituted of vowelless alphabets causes an excessive vocalization – or sophisticated phonetic systems and vocalizations – which is the mark of cats and felidae. The Samaritans, the people of Arabic peninsula and even western borders of Persia were frequently addressed as Dung People, not because of malodors fermented under the scorching sun of the Near and Middle Eastern regions but because of the noise they emanated which belonged to the unorchestral body of Beelzebub, the Lord of Flies: I romp around with the sound of flies.

The barbarians who could be distinguished by translating all they vocalized to the bar-bar sound by the Greeks and Romans were exactly those people whose vocalization process was not really dominated by the bar-bar sound (which is of the b or β sound). In fact, the Greek and Roman languages were monomaniacally haunted by the b sound. Betarrhea – or the abnormal flow of the Beta sound to other consonants and the way they are vocalized – was always exclusive to both empires and their citizens.

Vocalization of vowelless alphabets (as of Semitic languages) or barbaric music can never be grasped entirely through sounds with pulmonic egressive initiation in which the air stream is created by lungs (pulmo) and releasing or pushing out (egression) the air, but rather different initiation mechanisms. In these vocalization mechanisms, in contrast to pulmonic egression, air flow is generated through the vocal tract such as glottalic (through glottis) and velaric (through velum), and not only pulmonic (through lung). In Greek and Roman languages – unlike Semitic and African languages – the majority of sounds are both pulmonic and egressive akin to the airflow initiation of the b sound, or to be exact, the real bar-bar sound. However, in Semitic languages as the most contractible languages in the Middle East, consonants can be vocalized not only by being initiated from the lungs to the lips but also as nonlinear blasts, thus, not satisfying the originally Greek fetishism with the Beta sound. The initiation mechanism of β as pulmonic egressive is categorized as the airflow mechanism primarily involved in producing the consonantal sound of the b or beta sound which is ‘voiced bilabial plosive’, or in other words, the b sound mostly denotes and comes from the voiced bilabial plosive sound). Painlessly utterable, the voiced bilabial plosive is a consonantal sound which can be easily mapped by its eschatological tendency towards definite stoppage and its stubborn linearity. While it is created through stopping – plosive – or obstructing airflow in the vocal tract (the manner of articulation), it is initiated through lungs and is articulated by both lips, a route directorially linear and facially civilized in conclusion – the Greek Face.

The Greek aesthetics, as opposed to the Middle Eastern ominosity, has been established on this linear route from lungs to both lips as the territory of an articulation so audacious and impeccable that it is only matching the cold efficiency of lips on the face capable of articulating everything in the same manner and political demeanor. If the Greek and Latin busts bear the majestic beauty of Greek and Latin faces even during the most heated lectures, quarrels, battles and adventures, it is because the lips and eyes (as the addendums of articulation) as the pivots of expression are fully used on a simplistically linear route. The Greek and Roman faces

demonstrate the suppression of the linear pulmonic egressive mechanism with a sense of a crude realism one can only expect from a barbarous art.

No art takes the harsh realism of the vocalization process involved in creating standards of its facial beauty as serious as Greek and Latin art; but to this extent, one can hardly speak of standards as in these cultures there is only one facial expression as the inspiring element of beauty. And this facial expression is triggered only by one dominant articulation process, the sole process they were capable of and out of which the standards of civilization and barbarity were determined. For the Romans, having a vermin face was intrinsic to Middle Eastern vocalization. Exquisitely Greek and Latin, the iconographic face of Jesus of Nazareth who spoke in Aramaic ironically sympathizes with the Latin and Greek facial aestheticism, the cold serenity originating from their inflexible vocalization process and linear articulation of consonants. But the Aramaic language with its insidious sophistication both in writing and phonetic systems can only render the face of a carcass (for the consonants which are fully vocalized internally without being concluded by the lips) or a face of thousands of spasms (for the articulation process which non-linearly twitches the whole face in different directions) during vocalization. All Christianity wants is a Roman savior, but we speak with the face of a brute.

If there is an accurate western media, it is essentially on the side of terror because it has to abide by vocalization, pronunciation systems and spelling relevancy that only exists on the side of terrorists. The more irrelevant the pronunciation, the more civilized the speaker is; because it will have less in common with the original pronunciation which can only be vocalized by a Middle Eastern terrorist. In the case of pronouncing a name like Ghatar [Qatar] starting with the letter Ghaaf which defies English vocalization, the pronunciation 'guitar' is remote enough to be civilized but the proposed pronunciation 'gutter' is so far off that it signifies the zenith of western civilization.

Poromechanics: archeology of psychoanalysis and militarization of archeology

Reza Negarestani (September 30, 2007)

The following text is a short excerpt from the lengthy paper discussed at the seminar on porous earth and subsurface politics. The lecture took place at Goldsmiths University of London and was organized by Eyal Weizman at the department of visual cultures. Eyal Weizman has recently published his work *Hollow Land*, a tour de force on militarization of geodynamics and space which I will later talk about at length.

During the talk, the following section was elaborated by examples on the logic of poromechanical distribution of consistencies and the employment of this logic in locating ancient necropolises, underground facilities and decoding steganographic texts or works of hidden writing. For keeping the text short and suitable for one post, I have skipped the examples used in this section.

Deleuze and Guattari's holey space can be addressed both as an event and entity. As an event it demarcates the limitropic degeneration of a whole which never effectuates full annihilation or complete effacement (hence the nomenclature ()hole complex) and for this reason it perpetuates a poromechanical decay whose incessant dynamism is maintained by differentiation between solid and void. As an entity, the holey space is characterized by its anomalous distribution of consistencies through the poromechanical space.

The politics of the holey space is defiant toward the existing models of harvesting power, manipulating and analyzing events on the surface. For the world order, inconsistent events around the world are failures or setbacks since they resist the contemporary dominant political models. According to the politics of poromechanical earth, however, inconsistencies, regional disparities and insidious nonuniformities across the globe constitute the body of the ultimate politics. The emergence of two entities (political formation, military, economic, etc.) from two different locations on the ground is inconsistent, but according to the logic of ()hole complex they are terminally inter-connected and consistent. In terms of emergence, consistency or connectivity should not be measured by the ground or the body of solid as a whole but according to a degenerate model of whole and the poromechanical entity.

The asymmetry between ground's consistency and the consistency of poromechanical entities or porous earth has long been formulated by military and political practitioners as an archeological law – for every inconsistency on the surface, there is a subterranean consistency. The law of subterranean cause in archaeology bears a striking resemblance to Freud's suggestion that for every psychosomatic breakdown, there is a Complex (an anomalous convolution and knottedness) beneath

consciousness. The reason for this similarity lies in the fact that according to both archeology and Freudian psychoanalysis, the line of emergence (the worm-function) travels according to the resistivity against emergence, the dynamism of emergence and degree of porosity. The course of emergence in any medium is identical to the formation of that medium; the more agitated the line of emergence becomes, the more convoluted and complex the host medium will be. In terms of poromechanics and ()hole complex, the superficial orientation of both archaeology and Freudian psychoanalysis are too complex – immersed in multiplex dynamics of surfaces and their interactions with emergence – to be fathomed. The myths of obtuse flatness or totalitarianism attributed to Freudian psychoanalysis by postmodernist rivals are in most cases the symptoms of misunderstanding the problem of surfaces and emergence as related to the lacunae of consciousness. The superficial (as related to visible, circumferential and grounded surfaces) entities of Freudian theories only come into existence as products of unbound activities in emergence, or more accurately, the convoluted and porous formations through which emergence takes place. In the domain of emergence, every surface – whether of constraining ground or porosities – belongs to and is mobilized by the poromechanics of ()hole complex. And in ()hole complex, depth exists as the ambiguity or the gradient between inner and outer, solid and void, one and zero; or in other words, as a third scale or a dynamically balancing, intermediary agency which operates against the unitary or binary logics of inner and outer, vigor and silence, inclusion and exclusion. Holes spontaneously develop a ternary logic.

For both archaeology and Freudian psychoanalysis, the process of emergence and its immediate connection with formation and dynamism of surfaces, namely, ()hole complex inevitably coincides with paranoia. For every inconsistency on the surface, there is a subterranean consistency; here is an overlap between two consistencies. One is the consistency according to the dynamic surfaces of holey space or simply cavities, and the other is the consistency between cavities surfaces (holes) and the circumferential surface of the solid (ground or visible surface). For every cause with a vertical distribution, there is a cause with a horizontal or slanted distribution, or vice versa. The effect is simultaneously produced by two causes with two different logics. For being registered on the circumferential surface or the ground, the schizoid structure or consistency of ()hole complex should be transmitted to the solid body where it has to be consolidated. Anomalies on the ground-surface are imminent to the two planes of schizophrenia and paranoia. According to the archeological law of

contemporary military doctrines and Freudian psychoanalysis, for every inconsistency or anomaly on the ground, there is a schizoid consistency; to reach the schizoid consistency, a paranoid consistency or plane of paranoia must be traversed. (See Fig. 13)

Fig. 13 The two planes of schizophrenia and paranoia: subterranean consistency and superficial inconsistency

The militarization of the contemporary world both in its politics and concrete approaches is architecturally, visually and psychologically paradoxical (too paranoid to be schizoid and too schizoid to be paranoid); since its agencies – as of in War on Terror – are shifting from the logic of grounded earth to the poromechanical earth and the logic of hole agencies. Although making examples restricts the vastness of militarization in respect to the poromechanics of war and archeology as the science of military innovation in the twenty-first century, but enumerating one or two cases might increase lucidity.

1. In countries with detailed homeland security protocols or relatively high level of alertness, where ground or aerial operations as of hostile, subversive or stealth activities cannot be conducted, the emergence of intricate poromechanical entities is escalated and cannot be avoided. In such countries, the distribution of illegal immigrants or smuggled products such as drugs and weapons around the border regions follows not patterns of activities on the surface but the formation and the

architecture of nested holeyness beneath the ground. Activities or lines of movement (tactics) are not separate from the architecture of such ()hole complexes. According to military experts or urban planners with military educations, criminal and hostile activities can no longer be explained, analyzed or traced on land, aerial and water levels. These activities only conform to (paranoically that is) structures of vast underground vermiculate spaces and their constantly displacing lines of emergence (schizoid formations of surfaces). The distribution, escalation and diffusion of complicities is identical to different aspects of hole trafficking. For military experts, the terror market is nothing but that of porosities of earth. Cross-border wormholes under the US-Mexico border, tunnels under Gaza-Egypt and all other examples of hole trafficking confound the polarities of surface globalization and its politico-military facets. Economic and power formations for clandestine Guerilla-states, anti-State movements and ambiguously Imperialist states configure themselves on poromechanics of war.

2. The Battle of Tora Bora in Afghanistan mainly escalated by coalition forces (especially US forces to the point of using BLU-82 bombs and a potential nuclear bunker buster strike) based on the collected information about vast underground facilities and terror networks in Tora Bora Mountains. US and British forces initiated a surgical strike comprised of sophisticated tactics, innovative command and control and inventive use of military implements and weapons. Tactics and the entire logic of military progression in Tora Bora were formulated precisely in order to match the mountains, and give an appropriate military response to the holey architecture of terror compounds. In short, the military formation of the entire battle was determined based on the supposed tortuousness of the holey complex within the mountains, and then techniques and solutions for neutralizing and clearing them. The complexity of movements or formative dynamics belonging to US and British forces was compatible and in counter-geographical correspondence to the nested complexity of holes, tunnels and underground chambers. The Battle of Tora Bora was actualized based on the complexity of Tora Bora sub-surface facilities but in the absence of actual holes and vermiculate complexities. Bound to the paranoid logical line in holey complexes (from the ground to the cavity) and unbound by a nonexisting schizoid architecture of nested holes, coalition forces led by United States developed the first full-fledged example of Cappadocian Complex. Adhering to the logic that wherever hostile activities and threats are inconsistent and asymmetrical, there is an underground cause of nested holeyness; and consequently one must formulate formations to counteract these convoluted and subterranean architectures is the heart of Cappadocian Complex. Where in Tora Bora, there was no sub-surface nexus or complex, in

Cappadocia beneath every surface and in every mountain or hill there is a multiplex of holes, lairs and passageways, an elusive machine digging in and out.

Poromechanics is simultaneously construed by the vector of schizophrenia and the vector of paranoia. For contemporary world politics, militarization is inevitably determined by the differentiation between these two vectors.

Necropolis of world politics: Middle East and politics of plot holes (part I)

Reza Negarestani (October 31, 2007)

This essay will be posted in three installments. The visuals (following in the next installments) and the ideas have been developed in collaboration with the artist Kristen Alvanson.

If contemporary world politics inconsistently defies both holistic reading methodologies and their absence, then the Middle East to which global dynamics is blatantly flushed and from which confutations of global politics emerge entail the employment of new political analysis and intervention pragmatics. As an entity for which politics or political remobilization of its attributes precedes its geographical ontology, the Middle East should be approached or studied through methodologies which neither prioritize holistic models nor the destruction of such models. Accordingly, these models or methodologies should correspond to the socio-political formations of the Middle East for which structural or functional inconsistencies can only be addressed in a uniform way (i.e. consistently linked to each other) if they are to be taken in regard to a degenerative whole whose both partiality and wholeness are incapacitated and unable to exert control over each other. In a degenerative whole (previously referred to as ()hole complex corresponding with the spatio-temporal unwholesomeness of Deleuze and Guattari's holey space), consistency of events and uniform dynamism exist and can only be discovered through a poromechanical space where differentiation between surfaces (as of holes) has paralyzed the eventuation of the ground as a prerequisite basis for formative forces. In fact, poromechanics where invocation of new grounds is registered as perforation of the formation by new surfaces (or holes) corresponds to multiplex governing forces in every Middle Eastern State. Here the term guerilla-state¹⁴³ suits the Middle Eastern states or societies where the boundaries between the state and its others have already been terminally perforated.

Moreover and more importantly, despite the presence of merely one exclusive governing platform for the state (or head), the fundamental formation of Middle

¹⁴³ On guerilla-state, see *The militarization of peace in Collapse vol. I*, Oxford: Urbanomic, 2006.

Eastern states are determined by multiple, often diverse or basically incompatible forces and political grounds. These political formations have to simultaneously establish their grounds inside and through the exclusive and ruling religio-political formation and abide by its ground. Unable to fully dismantle the hegemony of the state's head formation or the ground, they attain a socio-political configuration which despite being in complicity with the governing ground, irreparably disrupts the ground's ontological and functional consistency. By enacting their own political grounds, these political formations ontologically operate as surfaces which are not able to be registered as circumferential or visible surfaces; instead they are reinvented as subterranean surfaces with their emergent holeyness and nested continuity. But nested continuity and holeyness effectuate a discontinuity which refuses to be ontological (in the manner of Leibnizian monads and scholastic entelechies) but rather exists as an interposition of gaps within a transcendental logic by which ontology of whole (even in terms of mereotopology) and differences can be traced or neatly isolated. While harboring the disruptions inherent to transcendence and logical ontology, nested continuity or holeyness develops a subterranean continuity or consistency that essentially undermines the consistency of the governing platform or political ground (i.e. ground as a visible, circumferential and superficial surface). The effectuation of these political grounds which by the virtue of a pre-dominant and pre-existing socio-political governing state have to continue to exist as subterranean surfaces is always in the direction of degeneration and incapacitation of the formation as a whole. As soon as the nestedness of holes emerge, the ground is only a shell or protective exoskeleton which politically feigns the autonomous subterranean consistency as superficial inconsistency. For this reason, poromechanics does not only commence the degeneration of whole as in the case of socio-political formations but also the utilization of such degeneration and corruption. In this sense, poromechanics bespeaks of decay and here a political one, because decay manifests as a limit process in which infinite putrefaction happens without triggering the complete ontological termination of the object. In decay, the object bears the burden of its ontology only to be a receptacle for the continuity of its material destiny which is knitted through perforation of boundaries and inconclusive holiness. The same can be said about a Middle Eastern political system for which formation can only exist on the level of superficial inconsistencies on the visible political ground.

Sierpinsky's sponge: more than a surface, less than a volume. The law according to which this cube was hollowed can be understood intuitively at a glance. Each square hole is surrounded by eight holes a third its size. These holes are in turn surrounded by eight holes, also a third their size. And so on, endlessly. The illustrator could not represent the infinity of holes of decreasing size beyond the fourth degree, but it is plain to see that this cube is in the end infinitely hollow. Its total volume approaches zero, while the total lateral surface of the hollowings infinitely grows. This space has a dimension of 2.7268. It therefore lies between a surface (with a dimension of 2) and a volume (with a dimension of 3). "Sierpinsky's rug" is one face of this cube; the hollowings are then squares and the dimension of the "surface" is 1.2618. From *Studies in Geometry* by Leonard M. Blumenthal and Karl Menger. Copyright © 1970 W. H. Freeman and Company. Reprinted with permission.

Image from Deleuze and Guattari's *A Thousand Plateaus*. "The infinitely riddled Sierpinsky sponge would be one extreme model: all hole but with a ghoulish objectal insistence, the Idea of infinite rot." (Robin Mackay, *On Reza Negarestani's Undercover Softness*)

In the wake of political decay or disintegrating religious or political grounds, the application of global political orders, political analyses, theoretic and pragmatic confrontations (whether from the inside or the outside) have all proved hopeless or ineffective other than in contributing to the holeyness and convolution of the Middle East. The reason for this so-called failure – only pertinent in terms of their utilitarian and ultimately holistic efficiency – is dismissing or gleefully ignoring the processes and political dynamics at work in deteriorating the socio-political formations already emerged and established around the world. Here, the case is not the emergence of formations inherent to geo-politics of the Middle East as a geographic region of the earth with its own attributes to which world politics and contemporary political analyses are alien. The case is rather the realization of Middle Eastern political dynamics as processes emerging out of the preexisting political formations and the so-called global orders, processes which are inherent to deterioration and decay of such formations or orders. If the Middle East is geographically obscure, it is because

it is really shared by world politics and orders, hence dissolving into the global continuum. Yet the Middle East is only connected to world politics as their own intensive collective destiny, that is to say, it is only shared by world's political formations in decay and through a degenerative whole where no formative power can be effectively perpetuated. There is nothing more revolting for the vitalist ethos of the contemporary politics or global socio-political formations than to face their own degenerating and uncontrollably differentiating selves in the form of a geo-political obscurity named the Middle East. Today's most inflexible, malfunctioning and inconsistent socio-political systems around the world can be presented as the inevitable unfolding of world's dominant political formations through decay where the formation is nothing but a vehicle for anomalous recombinations and limitropic but perpetual differentiation. The seemingly literal depiction of this is the recurring portrayal of corpse in medieval culture, where human or animal carcass germinates outlandish animals and creatures which are only different from the original configuration through a gradient of porous and blurring boundaries. Yet this still is a teleonomic relief because according to medieval natural philosophy the form of an animal once it is a corpse can overlap with the form of another animal in life (cf. Henry of Langenstein). The latitudes of form associated to a decaying political formation, thus, can overlap with the latitudes of form belonging to a presumably integrated, wholesome or autonomous political system. The idea of truly collective political terror is insinuated here not only by the ability of a decaying political system in overlapping a reformative or even revolutionary politics but also the panorama in which a responsible and robust politics can in fact be the rottenest one. The Middle Eastern political dynamics is the realization of global political systems in their inevitability to be terminally collectivized and differentiated at last, namely, to decay. Although decay unfolds in the future as a material infinity circumscribed in the past (coinciding with the rise of the system or the birth of the object), yet its true channel is present where the object or system is assumed to have attained formative stability or establishment. Therefore in a more accurate sense of time, Middle Eastern political dynamics simultaneously separates from and returns to world's political formations as their intensive destiny in decay. But in decay such a destiny is perpetual and limitropic, meaning decay will continue indefinitely in regard to a limit which is the ontological endurance of the object or system, even if it is the object in its most minimal and fundamental form. For this reason, the infinity of political decay is guaranteed by the persistence of world's political formations. Yet more radically political, through decay, world's politics is stripped to its bare foundations, that is to

say, its most fundamental and vitally necessary traits – its ‘progressively becoming true’ form.

The rigid but erratic incompatibility of Middle Eastern political systems to world politics corresponds with the existence of the Middle East as an obscure geographical region which narrates the collective and inconclusive destiny of global political systems whose in deterioration resist their original configuration but occasionally coincide with their former selves. This narration, however, cannot be conducted through a dominant plot or grounding socio-political platform but rather through the logic of decaying formations and degeneration of whole, or in other words, through what can be called plot holes. The obsession with relevancy or irrelevancy of a political analysis or pragmatics is the characteristic of a formation as a whole or dominant narrative plot where the distribution of consistencies and inconsistencies should always be consistent. For plot holes or degenerative political formations, relevancy as an extraneous access does not exist because the idea of a true relevant access to such poromechanical or deteriorating entities is only possible by adopting analyses conforming to their degenerating logic and perpetual mal-formations. By mimicking the porous logic of degenerative whole, the supposed relevant analysis cannot exist out of the idea of decaying or perforated formation where the distribution of consistencies does not follow a transcendental logic and thereby, relevancy enforces the breaks and fissures in transcendence. In short, either within the poromechanics of holey space or degenerative wholeness or decaying formation, relevancy is transcendently nonexistent because it exists immanently by contributing to an unwholesomeness which presupposes the extinction of relevancy. Accordingly, relevancy becomes autophagic by taking a position which is participative in regard to its degenerative object which implements the lacunae of transcendence and consequently, the annulment of relevancy. In regard to a decaying political system or perforated formation, relevancy only exists immanently as an agent of participation through which the idea of a transcendental access (hence the dilemma of relevancy or irrelevancy) is profoundly confounded.

A narrative plot or a grounded politics always distributes narrative or political entities in a way to preserve its wholesomeness, a consistently (according to the ground that is) distribution of entities and events can generate formative forces which reinforce the whole. Since Middle Eastern political systems exemplify degenerative whole and the logics of poromechanics, methodologies for investigating the Middle Eastern dynamics must conform to their enigmatic logics and crypto-formation. We shall attempt to outline the elements required for modeling such methodologies by

elaborating modes of analysis or reading which are based on defective structures, degenerative whole and poromechanics. In this regard, the literary genealogy of plot holes in writing will be elaborated in conjunction with peculiar archeological methodologies which themselves are utilized in contemporary Middle Eastern politics. To this end, literary theory of archeology and archeology of politics will constitute the next installment of this post.

The Horror of Something: commentaries on the littered universe and the weird

Reza Negarestani (June 3, 2008)

[x-post eliminative culinaryism]

This is a revised version of the paper I wrote for the Weird symposium at Goldsmiths (December, 2007); the paper was included in the pamphlet Benjamin Noys compiled for the event. Like my contribution for Collapse: Concept-Horror, it deals with the logic of subtraction and ontology, but here the focus shifts from ‘vitalism and decay’ to the inherent inaccessibility and consequently unintelligibility of objects. The subtractive logic of ontology dictates a universal destiny for objects which becomes the source of ‘weirdness’ for the universe. Ontology in the light of the logic of subtraction renders objects irrevocably weird in that objects perpetually evade us and recede to utter unintelligibility. Robin Mackay hinted at this in the introduction to Collapse iv by drawing a comparison between my work and that of Graham Harman.

* * *

The weird is the destiny of all objects; it bespeaks of the fate of objects in that by conforming to their ontological constitution or immanent intension, objects relay and enforce the intention of that which is radically exterior to them. The weird is universal destiny as twist.

The question of the weird cannot be immediately subsumed under the question of sense or experience; accordingly, it cannot be captured by statements and phrases such as ‘I think this is weird’, ‘feeling weird’, ‘I love weird things’, etc. The weird is not a matter of experience and sensation, for if it were then it would be a mere by-product of the relation of temporality and synchronicity to sense and the conditional; and hence reducible to a status of the monstrous or grotesque whose complete domestication has been afforded from the outset. Now, if the weird is primarily perpetuated exterior to sense and regardless of our access, then, is being inaccessible sufficient for being weird? Is the resistance to sense and experience, or in other words, diachronic disjunction with the synchronicity inherent to the transcendental enough to insinuate the weird? In being – in contrast to temporality – abysmally inaccessible, the object X does indeed confound whatever transcendental apparatus

(consciousness, mystical intuition, sense, experience) has been designated to access it. In this case, the weird emerges out of the incompatibility between the futile attempts at access and the immanent inaccessibility or disjunctive resistance of the object X. By attempting to latch on to the inaccessible, the subject of access only becomes allergic to its own existence and the ultimate transcendental task imparted to it. It is in making sense out of X, that sense or consciousness becomes a dead weight, a corpse-like burden pressing on its own chest. Yet if weirdness relies upon the incommensurability between the inaccessibility or the refractory realm of the object and the subject of access, then the weird is indexed by the fatigue of sense, or in other words, it merely articulates a trauma. This incompatibility between inaccessibility of X and the subject or the apparatus of access is inexorable and so is the trauma. However, even if this trauma cannot be undone under any condition – and hence is unconditional and independent of any relation other than the inexistence of the relation as such (i.e. radical incommensurability) – it still feeds upon the subject of the access or sense.

Whether as the image or the subtle register of this incommensurability, the weird only endures as long as sense – involuntarily or not – insists upon its intelligibility, or as long as the subject of access maintains its existence. Once sense separates from its presumed intelligibility, or the subject of access fully deteriorates, then the weird withdraws. Such seizure of intelligibility or determination of access does not need to happen on the basic or elementary material level, for as Houellebecq (The Elementary Particles), Juan Rulfo (Pedro Paramo) and Lovecraft (Cthulhu mythos) have envisioned, the inaccessible, already dead or aimless objects, particles and stars can haunt the space without any correlation, influence, relation, warmth of collectivity, individuation or any consolidating narrative whatsoever. Dead things can indeed roam in the tenebrous vastness of the universe or even lurch on chthonic superficialities of the earth long after the destruction of intelligibility, sense or the subject of access. Yet as Lovecraft insinuates, this vacuous horror does not obstruct the weird; it reinforces it. Even if all apparatuses of access are eradicated and all manifests of intelligibility cease to exist, the weird persists. As long as something (anything) endures and remains by, for or within itself, the weird is perpetuated autonomously and without any objective. This brings us to three speculations:

The blind cosmos grinds aimlessly on from nothing to something and from something back to nothing again, neither heeding nor knowing the wishes or existence of the minds that flicker for a second now and then in the darkness. (The Silver Key)

The conjecture of the littered universe: The weird diagrammed by Lovecraft is that of a universe which, even though it has been denuded to its bare and unresponsive objects, cannot help but be weird. The universe is – non-metaphorically – a heap of rubbish and garbage whose objects merely remain amid their own detritus and waste, in unintelligible promiscuity with each other. The objects exude weirdness just by remaining so and as such and without any affinity or common border whatsoever with anything outside – that is, they roam aimlessly and litter the universe. If just by remaining so and as such (viz. being something, anything), independent of any correlation or affinity, the weird ensues, then weirdness is immanent to the destiny of all objects, the fate of being something. Given that the weird emanates even when the object is sealed from the outside, then what is this destiny that not only includes all objects but also guarantees the perpetuation of the weird? Such all-inclusive destiny, first and foremost, should be irrespective of the object's properties, attributes and belongings. For this reason this destiny should be posited under the rubric of subtraction which presupposes the shedding of belongings or points of access in order to bring the possibility of remaining in itself or being something. Remaining-in-itself (being aimless) is only possible by the removal of all properties (aphaeresis) and the mobilization of non-belonging (subtraction). To this extent, the destiny (werde) that simultaneously amounts to or develops into the refractory closure of the objects and their autonomous weirdness is the fate of all objects, the primary and basic prerequisite of being something – that is remaining so and as such. Yet to speak of to remain so and as such is not possible without taking into account the priority and the primacy of subtraction. If, as Lovecraft emphasizes, the weird endures long after the demise of the subject of access, in its own unrecognizable enclosure, then the source of this weirdness has something to do with remaining of the object as such, or more accurately, with remaining as an object or remaining as something. To remain (i.e. the object's remaining so and as such), however, both implicitly and explicitly suggests subtraction. Explicitly, because an object cannot remain in itself, or more accurately, cannot withdraw from correlation, unless all its belonging and properties by which access or correlation is anticipated are taken away, removed and subtracted. What can be explicated or developed from the object is that which should be subtracted so that the object can remain in itself, uncorrelated and weird. Implicitly, because in order to embody itself as something against the annihilative vector of subtraction (nothing) that removes all properties, the remaining must and is only able to perpetuate itself in remaining less. Therefore, in an ontological twist, in order to remain in themselves, the objects of this littered universe have to presume an internal vector of subtraction by which inaccessibility and non-correlatability (viz. remaining so and as such) is only

possible by remaining less. This is the intensive or implicit vector of subtraction which overlaps with the possibility of remaining in itself and is posited as its ontological guarantor.

The intensive vector of subtraction or remaining less – inherent to the aimless or blind universe perforated by objects which resist correlation – attests to the radical subversion embedded in the destiny of all objects. This radical subversion or the source of weirdness can be grasped in terms of ontological intension / intention (the destiny of objects) and the perforation of such intension (subversion of that destiny): The weird or littered universe can only effectuate itself once the object roams aimlessly. This aimless or unresponsive object bespeaks of objects in themselves and is uncorrelatable. Yet, in turn, the weird as autonomous senselessness or resistance to correlation attests to the irreducible destiny of all objects; that they can only be enclosed in themselves by remaining so and as such. But why do we call the intensive idea of ontology that is remaining so and as such, destiny (wyrd)? Because remaining so and as such as the universal destiny of objects and the source of weirdness not only guarantees the inaccessibility of objects (hence making the universe littered with unintelligibility) but also obliges the objects to remain in order to be in themselves and evade access. In other words, the intensive idea of ontology dictates that in order for objects to remain in themselves and defy access, they need to shed their belongings. For objects, the continuation of their survival (as an unintelligible) is only possible by employing the vector of subtraction as an ontological guarantor. To remain is to affirm the possibility of surviving subtraction, whose annihilative power is effectuated by the removal of all belongings and properties, and hence the mobilization of non-belonging or Nothing. For this reason, remaining per se compels the object to be something – as that which remains after subtraction – in order to be in itself and remain non-correlated, namely, unintelligible. The universal destiny of objects entails that in order for the object to litter the world with their unintelligibility or inaccessibility and render the universe weird, they must first be something and mobilize the ontological vector of remaining.

... the ripples that told of the writhing of worms beneath. (What the moon brings)

The conjecture of problematic intension / intention: Prima facie, this being something of the non-correlated object signals the triumph of vitalism over nothing through a subtle trickery – short-circuiting Nothing by becoming nothing outside.¹⁴⁴

¹⁴⁴ This ontological circumvention can be explained in terms of subtraction / negation: Ontology evades nothing by utilizing it in the form of the negative which is required for the operation of subtraction; since

However, something, too, can only be something if it remains. To remain and to be something are immanently inseparable. This is where to be something or to remain as the destiny of the object in itself and the guarantee of a littered aimless universe is subverted from within. For remaining at any instance is not possible until the two vectors of Nothing from within and from without are unconditionally affirmed and complied with: (1) the mobilization of non-belonging by which attributes, properties, belongings and nodes of correlation are removed and subtracted (2) the interiorization of Nothing whereby remaining and its perpetuation (remaining in itself) is not possible other than in remaining less or intensive diminution. By approximating the interiorized Nothing, the remaining can continue to remain less, or in other words, remain in itself.

It is through remaining in themselves (or remaining so and as such) that objects can break apart from the correlation or the subject of access and withdraw to their unintelligible enclosure, rendering the universe irrevocably weird: particles, objects and stars roaming aimlessly in an stygian emptiness. It is the weirdness of ‘something’ as an ontological tenacity or a survivalist insistence on remaining that ultimately points to the horror of something: in order to be something, there is no other way than remaining for and within itself, or more accurately, sinking into unintelligibility. The point of being is being unintelligible since remaining as the ontological medium of something is not possible unless belongings and attributes through which access is made possible are shed. To put it differently, if something has to employ remaining as its ontological medium, it must also exteriorize extraneous belongings in order to remain in itself; this is necessitated by the logic of subtraction. Being something is equal to withdrawal from belongings or points of access by which the object can be correlated to its outside and rendered intelligible. More accurately, remaining in being is subtractively correlated to the shedding of belongings. Unintelligibility of objects is immanent to this subtractive correlation. The subtractive logic of ontology requires that objects offer an uncompromising resistance toward access and being is put to the test by its perpetual evasion of intelligibility. For this reason, although it is ontology that renders objects unintelligible, it is the weird that takes the ontological destiny of

subtraction, at least explicitly, is able to employ nothing as an ontological resource in that subtraction is the mobilization of the negative along two vectors in order to simultaneously implicate both the removal of belongings and conservation of a remainder. The extensive vector of subtraction negates or takes away belongings to bring about the possibility of preservation and conservation i.e. remaining. This way subtraction customizes nothing as an opportunity by which the intensive idea of ontology (viz. remaining as such) can be correlated with the inevitable shedding of belongings or mobilization of nothing.

objects to its cosmic level: to litter the universe with unintelligibility is the very point of ontology. The intimacy of the weird with nihilism is not a straightforward one; it is not a token of mere absurdity of the universe, it is a bond as twist. The entire panorama of the weird infers a twisted intimacy between something and nothing.

Something can endure in nothing only through yielding to the unintelligibility which is entailed by remaining in itself, hence withdrawal from any potential node of correlation or subject of access. Survival is not possible other than by becoming obstinately unintelligible. Therefore, remaining so and as such, with its implicit vitalistic ethos, is the destiny of all objects but at the same time it is also the veneration of unintelligibility on all levels. Vitalism can only bolster the idea of ontology by sundering the correlation of ontology with any ideal whatsoever, be it sense, intelligibility or the Ones already there. This is enough to render the universe littered with objects weird but it is not weird enough; for even the aimless objects in and by themselves are weird because their destiny to be something cannot be established except by the emphatic intervention of Nothing from the inside. To resist correlation – perpetuating itself through subtraction or shedding attributes, properties and belongings – the object must withdraw and remain to and in itself. To remain or survive subtraction is the destiny of all objects but to remain in itself (required for rendering correlation obsolete) is indeed equal to persistence in remaining and insistence on survival. For this reason the weird, as a universe cluttered with enclosed and uncorrelatable objects which only contribute to unintelligibility, is tethered to a seemingly vitalistic intension inherent to remaining per se: remaining by and within itself separated from all that is extraneous (*reliquum esse*) is impossible other than by persistence in remaining (*superesse*) i.e. by surviving subtraction. To put it differently, in order to remain in itself and thus resist correlation and contribute to the weirdness immanent to the littered universe, the object has to position itself in respect to subtraction. Only by eventuating itself through subtraction, can the object remain within in itself, separated from all that is extraneous i.e. nodes of correlation and points of access. Only by being subtractively correlated to its belongings, can the object defy access. This extension of the object to nothing constitutes the explicit vector of subtraction as previously elaborated. Subtraction is necessary in order to resist correlation, hence contributing to the unintelligibility of the littered universe or emanating the weird. However, once subjected to subtraction, the object cannot remain enclosed within itself other than by continuing to remain – that is, in insisting upon survival. This ‘continuation in remaining’ or ‘insistence on survival’ is the inevitable ontological intention / intension inherent to the object for emanating the weird by resisting correlation and access. In short, ‘persistence in remaining’ or

‘continuing to remain’ is the ontological intension of ‘remaining by and within itself’ which is the guarantee of uncorrelatability. To this extent, the weird adds a strong survivalist or immanently ontological dimension to objects.

However, this ontological intention – explicable in terms of persistence in remaining or survival – cannot establish itself other than by submitting to the intention of that which is radically exterior to it. Surviving subtraction or remaining is only possible by interiorizing another vector of subtraction or Nothing whereby to continue to remain (survive) is equal to remaining less (i.e. approximating Nothing).¹⁴⁵ Thus in a weird twist, as the ontological intension inherent to ‘the object remaining within itself’, survival or ‘persistence in remaining’ cannot maintain itself unless it unconditionally conforms to the intention of Nothing. In other words, the object emanates the weird by remaining in itself, that is to say, persists in remaining under the explicit vector of subtraction; but by doing so, it becomes the puppet of that which is radically exterior to its intention i.e. Nothing. Thus the weird is propagated from within and without the object, in a chain of unintelligible puppetry in which no intention and hence no puppet or puppeteer can be established unless by channeling the intension of nothing. To this extent, the weird is not the cancellation of puppetry in its explicit hierarchy and implicit chaos, for puppetry in all its forms is the cosmic consequence of nothing in acting upon itself in order to bring about the possibility of something, and in the survival of something which channels the intention of nothing. Puppetry is the realization of the ethics of the weird: in conformity to my intention, I enforce the radically exterior intention of nothing.

¹⁴⁵ To provide a further clarification on how the continuation of the remaining or remaining in itself is only possible in remaining less – subtractive extension and diminutive intention – subtraction can be mathematically albeit schematically demonstrated. Assuming there are two geometrical magnitudes of A and B where $A > B$ as the ideal ground of the procedure and a guarantee for its continuation (iterative subtraction). The procedure starts by subtracting the greatest multiple of the smaller magnitude B (henceforth mB) from the greater multiples of the greater magnitude A: $A - mB = R$. The result of the subtraction as hitherto a conserved part is the remainder R which is less than the smaller magnitude B ($R < B$). Since the remainder R is less than the smaller magnitude B, the procedure is continued by subtracting the greatest multiple of the remainder R (henceforth nR) from the smaller magnitude B: $B - nR = r$. The result of the subtraction is again a remainder but it is less than the previous remainder ($r < R$). Therefore, persistence or continuation in remaining viz. to remain can only be perpetuated through rs smaller than R. Even if r does not become equal to zero, in order to remain less and continue to remain, it must conform to the priority of zero or no-thing as that which is already there.

In conformity to its own intension, something can only be something if it simultaneously prioritizes and interiorizes the intention of Nothing – that is, the implicit vector of subtraction. The basic intention of something is remaining in itself. Yet remaining as the ontological intention of something is always remaining less as the result of its subtractive correlation with belongings. Remaining less, that is to say, remaining per se cannot be guaranteed and maintained unless the priority of nothing is affirmed. Because the continuity of remaining which is eventuated as lessening or diminution can only perpetuate and rectify itself according to nothing or an exterior zero – that is Nothing as that to which nothing can belong or as the indubitable limit of lessening. ‘Something in itself’ litters the empty blackness with objects which are something qua unintelligibility and thereby emanates the weird as a cosmic reality. Yet nothing, seeping through the intension of something, renders the weird – intrinsically and necessarily – problematic. For this reason, radicality of the weird is manifested in its problematic intension: something can only litter the emptiness without succumbing to correlation and intelligibility – that is, the weird can only be emanated by some thing, if that thing remains by and within itself. Only through an utter compliance to nothing – both implicitly and explicitly – can something remain in itself, or more accurately, remain less. The remainder at any instance must correspond to another vector of subtraction whose direction coincides with the direction of remaining. Here the weird as the destiny of all objects falls back upon another destiny (werde) – the problematic intension.

By remaining in itself, enclosed from nodes of access or abiding to its own intention, the littering object emanates the weird. Yet this intension cannot be established other than by approximating nothing or interiorizing the vector of subtraction whereby ‘remaining in itself’ (as the intention of something) is ‘remaining less’ (the intention of nothing). Therefore, the intention (intension) of the weird becomes entirely problematic by channeling the intension of nothing. Once again, the radicality of the weird is guaranteed by the sheer problematic-ness of the intention inherent to its source of emanation – the aimless, enclosed, inaccessible object. Ultimately, the weird feeds on the power of the insolubly problematic. The persisting vitalist destiny of the weird is undermined by the intervention of nothing that is required for such a destiny to establish itself. Correspondingly, the weird is delivered to the problematic that perforates something on behalf of nothing as well as establishing something to convey nothing. The ontological intension of something is alive and vigorous only in so far as it animates the problematic that bores through it. Neither the weird nor the destiny of all objects can be invested outside the radically problematic. It is in fact the weird

that is nourished by this problematic-ness; exposing the twist between the ontological intention and the intention of nothing (as radical exteriority) to its fullest extent.

To this extent, the weird can be addressed as two overlapping destinies, counted as two weirds:

1. The weird emanated by the littered universe: uncorrelatable and inaccessible objects cluttering the emptiness so aimlessly that they cannot be recognized as anything other than holes, bugs and shifting porosities in the blackness of the universe. This is the weird entailed by the objects remaining in themselves; acceding to a causality whereby the withdrawal of objects to themselves exudes the weird. Through this weirdness necessitated by such causation, everything inconsistently happens for whatever reason and nothing can consistently ever happen. For, breaking apart from the correlation and resisting access – hence constituting such causality – objects must remain by, for and within themselves. Once every object remains in itself or withdraws to something qua and as unintelligibility, then the universe and whatever happens in it (or even if nothing ever happens in it) is rendered weird. This is the weird connected to the destiny of objects (weird as werde). According to this weird, *ex nihilo infers* the vacuity of ontology in an absurd competition with the superficial nothingness of the universe.

2. The weird of the pre-emptive problematic: in order to conform to their destiny and basic requisition, and in order to render the correlation obsolete or to be radically unsympathetic toward access, objects must withdraw to and remain in themselves. Even if ‘the object remaining within itself’ is effectuated as nothing outside, it indeed denotes surviving a subtraction whereby nodes of access and correlation are removed and taken away (extension to nothing). However, this survival from the subtracting vector is only attainable by interiorizing another vector of subtraction. This means that in order to withdraw to and remain in itself, the object must abide by its ontological intension which is remaining so and as such. We already noted that on the one hand, remaining so and as such corresponds to the continuation of subtraction as what guarantees the cancelation of all nodes of correlation or access. On the other hand, remaining so and as such as the ontological intension of something cannot invest itself outside of remaining less or intensive diminution. In short, remaining is always remaining less. The remainder cannot continue to remain in itself unless it approximates nothing by which it can remain less, thus reinforcing the subtraction. For this reason, the ontological intention of objects in themselves cannot be enacted other than by the emphatic intervention of Nothing. This is another way to say that

by abiding to their intention for remaining in themselves, the objects are puppetized by the intention of nothing. Nothing vermicularly looms out of the intended and makes it problematic. The universe is infinitely weirder when we know, that even the gimmick of ex nihilo is the perforation of something with nothing, not the other way around.

In this regard, the second weird is the subversion of the destiny of all objects: in abiding by their own inaccessible fate that is remaining so and as such, the objects bring about the intervention of nothing – that is, the destiny necessitated by radical exteriority. The weird as the destiny of objects displays its problematic constitution and thereby bolsters its irreconcilable disjunction with the grotesque, fantastic or even uncanny. The second weird is the weird as the porous, the perforation caused by the worms which squirm and thus enforce the logic of the void within something. The perforation, the weirdness, depends less on the resistance of something than the wiggling of the worms. Or more precisely, the problematic intention is more on the side of the inevitable intrusion of nothing rather than the resistance of something.

The conjecture of the horror that cannot be culminated: If the weird is the destiny of objects and objects only need to remain by and within themselves to emanate the weird, then what genre of horror can effectively channel the weird? By genre, we mean the causalities or the ways – transcendental or immanent – through which horror unfolds itself or is unfolded. In this sense, we can temporarily ignore the definition of horror. Regardless of the medium (fiction, cinema, videogames, ...), there are four modi operandi whereby the horror is exposed or imposed. These four alternatives – albeit reductively and fuzzily connected to each other – can be enumerated as follows:

(1) The apotheosis of revelation as related to an intelligible truth, that is to say, the exposition of the truth associated to an intelligible force or entity. We call this the horror of intelligibility: ‘Lord works in mysterious ways.’

(2) The revelation of unintelligible nothing, or in other words, the blind void which will be exposed as the autophagic truth underlying everything. This is the horror of unintelligibility whose imposition is the exposition of the first one’s fatuity and annulment: Rabid Nihilism

(3) The impossibility of revelation or the impossibility of any truth at all – be it unintelligible void or intelligible something. Revelation in itself is indeterminable

because neither the imposition of nothing nor the exposition of something can be determined – the horror of indeterminability (sequelism and video games)

(4) The imposition or exposition of something (anything) – be it a truth or not, temporarily or abysmally – is only possible by the intervention of something radically exterior to it. Solely by abiding to its ontological intention (remaining so and as such), something passes on the intension of nothing in the form of the problematic. This is the horror that seeps through only by remaining so and such, because to survive or to be is to remain problematic. We call this the horror of problematic intension which, with utter subtlety, blurs the boundaries between the first, the second and the third horror genres.

As argued previously, the fourth genre or the horror of the problematic intension is the genre of horror that transmits the weird. In this genre, nothing needs to be exposed or imposed because that which endures or remains is by itself weird. The horror of problematic intension essentially cannot be brought to any culmination but it does not entail the interruption of the ongoing climax either. In this sense, the survival horror genre conveys such a horror associated with the weird: in the lexicon of the videogame, the horror is neither the anticipation of the ‘boss’ at the end of the game, nor of his absence; nor is it the supernatural, or the growing hordes of undead armies; nor the uncanny ambience; it is the very definition of survival that is pregnant with the problematic from the beginning.¹⁴⁶

¹⁴⁶ In the lexicon of the video game, the AI-based entity (the enemy) which the player has to defeat or be defeated by in order to progress in the game or finish the game is called boss. Therefore, boss in video games is usually equal to the points required for changing the level of the game or concluding it.
